Tugs: Compulsory. Number of tugs required depends on size of vessel. Tugs meet vessel outside the breakwaters. Tugs require 4 hours notice and 2 hours cancellation notice at night, otherwise a charge is made.

Berthing: Stocknord and C.R.D. Berths for handling LPG in Bassin de Mardyck.

Stocknord is the Western of the 2 piers. The berth is capable of accepting the largest gas and product carriers. Vessel berthed head in.

Ethylene is handled at Berth No. 4 at the North West end of Stocknord Pier. A mooring boat is available for running lines. Vessel berthed with 2 headlines and 2 springs, fore and aft.

Cargo: Ethylene storage 5,000 cu.m. C2, C3 and C4 are imported and exported. The shore liquid arm is 8 in. (150 ASA) with automatic disconnect coupling fitted with a 6 in. (300 ASA) reducer. The vapour return line is a 6 in. (150 ASA) flexible hose. Shore supply the reducer and connect/disconnect the lines. The rate of discharge varies according to what the plant is doing with production. Sometimes one pump is used and at other times 5 pumps are used.

The shore plant places a telephone on board for communication with the Loading Master.

The surveyor, who came from Terneuzen, stays on board most of the time.

Fresh Water: Available.

GRANVILLE: 48.50 N. 01.37 W. (See Pla

DOCUMENTS: See "Calais".

PILOTAGE: Pilotage not compulsory for ships of less than 45 m. lengt except for those carrying dangerous cargo. Pilots board from fishin boats carrying regulation marks of a pilot boat, and maintain position Videcoq buoy when a vessel is expected.

Limits of Granville pilotage are: 1. On entering, towards the West, th line joining "la Pierre d'Herpin", and Chausey lighthouse. To the Nort alignment of Chausey lighthouse and "le Pignon". 2. On leavin alignment of Mont. St. Michel through Champeaux Point. Ships boun Granville required notify ETA 18 hours in advance.

Telegraphic address: Telex 170002 SCAC Granville – Ship's Agen – Handling. Telex 170777.

1.5 hours before to 1.5 hours after high tide contact with Port Offic (Tel: 33.50.12.45 and 33.50.17.75 Granville) can be established by rela through "Coastal" Stations. During same hours contact can be mad with pilot boat and with Port Office by VHF Channel 12 (port wave ban 156.6).

ANCHORAGE: At landfall buoy of Le Videcoq.

RESTRICTIONS: Draft restrictions apply at neap tides. Width of Lock 20 m. Length – 40 m.

MAX. SIZE: Vessels 115 m. long, 18 m. wide and with a max. draft 7.50 m. may enter the tidal basin during 6 days, twice a month w effect from a tidal coefficient of about 80.

For a vessel of this size, it is recommended to give advance notic of arrival as far ahead as possible at the commencement of tides w a coefficient of 80.

Entry of a deep draft vessel may make it necessary to close the tid basin more quickly after high tide.

Speed in the channel, the fore port and the tidal basin is limited 5 knots.

HEALTH: Pratique arranged by Customs.

RADIO: Boulogne Radio for ships coming from the North. Brest-Conquet Radio for ships coming from the South.

TUGS: Port not equipped with tugs. Pilot boats used as "pushers" port manoeuvres, or for carrying hawsers to tying-up points.

VHF: Port Authority on Channels 16 and 12 during working hours.

BERTHING: Determined according to nature of cargo.

Tidal Basin: 3 electric cranes (2×7 tons and 1×6 tons) serve the Sou quay, and 1×10 tons serves the North and East quays.

Open areas, warehouses and storage silo capable of receiving goods in bulk, bags or packages.

Internal transport: rail and road.

Fore Port: Open area and mobile cradle capable of hauling up vess up to 100 tons. 1×5 ton crane on cradle. Repair yards.

West Quay: Between tidal basin and fore-port – solely for fish dischar and auction. Quay to be lengthened by 110 m. and widened by 14

STEVEDORES: Work hours 0800/1200, 1400/1800. Overtime possib

MEDICAL: Hospital available. Tel: 33.50.11.37. Also Medical Centr

TANKERS: 2 berths for unloading domestic fuels through 8 in. pipe

DENSITY: 1025.

FRESH WATER: Available at all quays, international connections.

FUEL: Available from tanker lorry to commercial vessels at 48 ho notice.

CONSULS: None.

REPAIRS: Possible. Also radio repairs.

OPENING/CLOSING HATCHES: Carried out by crew.

GANGWAY/DECK WATCHMEN: Available on request.

CUSTOMS ALLOWANCES: Tobacco. 200 cigarettes. Wines spirits. 1 bottle spirits.

REPATRIATION: Paris, 3.5 hours by train.

AIRPORT: 10 km. from the port at Breville. Air-taxi and commer flights.

TIME: Local Time GMT plus 1 hour in Winter and GMT plus 2 hour Summer (1st April – 1st October).

HOLIDAYS: See "Calais". Local holiday, Mardi Gras afternoon.

POLICE/AMBULANCE/FIRE: Police Tel: 33.50.11.16; Fire Service Ambulance 33.50.11.37.

GENERAL: Marina with 1,050 berths at Herel. Max. length 15 m. Max. depth available 2.75 m.
AUTHORITY: Le Commandant de Port, Port de Granville, Terre-Plein de l'Ecluse, 50400 Granville, France. *Tel:* 33.50.17.75 or 33.50.12.45. *Contact:* R. Ragel, Port Officer.

HONFLEUR: 49.25 N. 00.14 E. (See Plan)

DOCUMENTS: See "Rouen".
PILOTAGE: Served by "Pilotage de la Seine" (address: 9 Chaussee Kennedy, 76 le Havre). Ships bound for Honfleur are received on the Carosse Roads (Rade de la Carosse) where the following signals should be made for summoning a Pilot. By day – flag "G" of the international code of signals. By night – in Morse by signalling lamp.

Complementary signals which can be used on arriving on the roads. By day – globe or ship's national flag hoisted at masthead. By night – red light at main masthead. At all times, sound signal of 5 long blasts.

Advice of ETA and draft in salt water is to be given to Rouen Port at least 5 hours prior arrival roads, as well as to Agent.

Similarly, vessels anticipating a delay of more than 2 hours after their reported ETA should notify Rouen Port or the pilot boat of this at least 3 hours before the time originally reported.

Before arriving on the roads, ships should call pilot station "Rouen-Pilot" which keeps a permanent VHF watch on Channels 16 and 11.

A Pilot is obligatory for every ship of more than 55 m. length.
RESTRICTIONS: Access to port made through channel 100 m. wide, protected by 2 dykes about 500 m. long, which leads to outer harbour. A tidal port, Honfleur possesses 3 basins:

Dock	*Length*	*Width*	*Sluice width*
West Dock	128 m.	77 m.	10.50 m.
East Dock	295 m.	71 m.	16.50 m.
Carnot Dock	788 m.	108 m.	13.00 m.

East Dock joins outer harbour: ships of more than 70 m. long must anchor in Carnot Dock which spans from East.
MAX. SIZE: Port can receive ships 100 m. long and 15.50 m. wide berthing in East Dock; but with Carnot Dock, only ships less than 12.50 m. wide can enter. Drafts vary according to tides: 6.00 m. with average spring tide, 4.70 m. in average slack water, and subject to variations because of silting up of harbour which necessitates frequent dredging.

The "Quai en Seine" can receive ships of LOA 200 m. and over 8.0 m. draft, according to tides, without dredging difficulties.
HEALTH: Bill of Health is under the jurisdiction of Customs office of Honfleur. Hospital nearby.
RADIO: Boulogne Radio, Brest Radio or St. Lys Radio. A permanent watch is maintained by Rouen Port on Channels 16 and 73. Disengagement frequency after call on Channel 16 is Channel 75.
TUGS: If necessary are provided by "La Societe des Abeilles" of Le Havre.
BERTHING:

Harbour Office at La Ciotat, Tel: 42.08.62.90.

LA NOUVELLE: 43.01 N. 03.04 E. (See Plan)

DOCUMENTS:
1 Passenger List.
4 Crew Lists.
2 Stores Lists.
1 Cargo Manifest.
Bill of Health.
Safety Certificates.
I.O.P.P. for Tankers.

PILOTAGE: Vessels call Pilot on VHF Channels 12 and 16. 3 pilot boats available. International Code pilot signals used.

MAX. SIZE: For port entry: Length 150 m., beam 25 m., draft 8.0 m. Tanker sea line: Max. draft 18 m.

HEALTH: Pratique is given by Customs Officers who board vessel on arrival. In case of suspected disease on board, Master should radio Agents advising details before arrival.

TUGS: One tug available. There are several launches to assist in mooring.

BERTHING: Effected in the order in which vessels arrive. Specialised berth for Roll-on/Roll-off available.

STEVEDORES: Arranged by consignees.

MEDICAL: Doctors available at La Nouvelle. Nearest hospital is at Narbonne, 27 km. away.

TANKERS: 1 sea line berth at buoys in depth of water greater than 18 m. 4 dolphin berths in the oil dock, max. draft 8.5 m. One of these berths is used for LPG cargoes. Slop disposal facilities available if requested 48 hours prior to arrival.

DENSITY: 1025.

FRESH WATER: Supplied at all town berths.

FUEL: Available from several suppliers.

FIRE PRECAUTIONS: Usual safety regulations strictly applied. A barrage can be positioned across the channel to contain burning oil.

CONSULS: No local representation.

REPAIRS: Not possible ashore, except very minor ones.

OPENING/CLOSING HATCHES: Optional, performed by stevedores or crew.

CUSTOMS ALLOWANCES: Each crewman allowed to retain only sufficient for his own consumption while in port. It is forbidden to take alcohol ashore.

AIRPORT: Perpignan (Internal and Charter flights). Marseille (International flights).

REPATRIATION: No difficulties.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: In principal, no work done on legal holidays.

POLICE/FIRE/AMBULANCE: Police, 68.48.00.11; Fire, 68.48.00.17; Ambulance, 68.48.10.13.

TELEPHONES: No connections can be made on board.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Any person going ashore should carry a passport or identity card.

CRANES: *Basin:* North Quay: 2×5 tons at 18 m., 3×10 tons at 15.5 m 1 × 12 tons at 16.5 m.

South Quay: 6×6 tons at 18 m., 1×3 tons at 18 m.

Dry Dock: 1 Titan crane×20 tons at 25 m.

Fore Port: Chef de Baie: 3×33.5 tons at 22 m.

Mole D'Escale: East Side: 5×12 tons at 16.5 m., 1×5 tons at 14.5 m

West Side: 3×15 tons at 31 m., 2×33.5 tons at 20 m., 1×10 tons at 15

STEVEDORES: Normal working hours for stevedoring are: 0800 1200 hrs. and 1400 – 1800 hrs. 2 hours overtime may be worked fro 1800 – 2000 hrs. When a quick despatch must be given to a vessel, 8-hour shift can be arranged, from 0500 – 1300 hrs. and 1400 2200 hrs. during the week, and 0500 – 1300 hrs. on Sundays a holidays.

MEDICAL: All facilities available. Advance notice should be given assistance required on arrival.

TANKERS: Only refined products are discharged at La Pallice. Fr installations can receive cargo at both berths (West or East). Petro de l'Ouest, Total and Raffinerie du Midi use the same pipe-line of 16 with a metal arm of 10 in. on each side. The Picoty installation has own pipe-line of 12 in. with a metal arm of 12 in. on West side and o of 10 in. on East side.

All shore tanks are 3 km. to 4 km. from oil jetty.

Also see "Berthing" and "Max. Size".

FRESH WATER: Available from all wharves. Loading rate 15 t.p.h. barges available.

FUEL: Supplied by tank trucks only. Diesel oil available locally. Li fuel oils available with sufficient notice. Tankers must stop pump during bunkering.

FIRE PRECAUTIONS: Smoking is prohibited on the oil jetty. Entra to the oil jetty is controlled by watchmen.

CONSULS:

Denmark	Tel: 46.41.10.66	Netherlands	Tel: 46.42.61
Finland	Tel: 46.44.15.07	Panama	Tel: 46.42.13

Italy	Tel: 46.41.35.94	Sweden	Tel: 46.42.13

EPAIRS: All kinds of deck, hull and engine repairs can be carried out y S.T.I.M.A.

Vessels not exceeding 21 m. beam may be repaired in the inner basin. arger vessels are repaired at berths outside the inner basin.

RY DOCKS: 2 dry docks in Inner Basin: 176 m.×22 m. and 07 m.×14 m.

PENING/CLOSING HATCHES: Performed by ship's crew.

ANGWAY/DECK WATCHMEN: Available from shore if required.

ankers: An automatically–moving shore gangway is available providing at the ship's deck has a sufficient clear surface.

USTOMS ALLOWANCES: 200 cigarettes and bottle wine/spirits per an.

EPATRIATION: Can be arranged without difficulty.

ME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer. pril–September).

OLIDAYS: New Year (1st January), no labour available; Easter unday, possibility of labour with overtime; Easter Monday, no labour vailable; Labour Day (1st May), no labour available; Ascension Day, ossibility of labour with overtime; Whit Sunday, possibility of labour with vertime; Whit Monday, no labour available; National Day (14th July), labour available; Assumption Day (15th August), no labour available; Saints' Day (1st November), no labour available; Armistice Day (11th ovember), possibility of labour with overtime; Christmas Day (25th ecember), no labour available.

N.B. Every Sunday and day marked "possibility of labour with vertime" can be worked at the rate of 100% extra.

OLICE/AMBULANCE/FIRE: Police Secours 17; Commisariat Central .41.92.44; Ambulance 18; Fire Service 18.

ELEPHONES: Telephones are available at all berths at the mole.

HORE LEAVE: Allowed, no restrictions.

ENTIFICATION CARDS: Crewmen going ashore should carry assports or identity cards.

ENERAL: Old harbour at La Rochelle is used only by fishing vessels d pleasure craft.

EVELOPMENTS: Cereals quay to be lengthened and facilities to be graded. Vessels up to 100,000 d.w.t. will be able to be commodated.

UTHORITY: Capitainerie des Ports de La Rochelle, Terre-Plein de Ecluse, B.P. 2042, La Pallice, 17009 La Rochelle Cedex, France. *Tel:* .42.60.12. *Telex:* Capipor 791780 F. *Contact:* J. Le Quilliec, ommandant du Port.

E HAVRE (Including Antifer): 49.30 N. 00.07 W.

(See Plan)

OCUMENTS: At arrival in-bound bill tendered by Pilot to be filled up nd signed by Master specifying ship's data and dangerous cargo on oard. After berthing: The Master must also complete the inwards eclaration as soon as the Pilot comes onboard. Any abnormality must e reported to the Harbour Master (VHF Channel 12).

or Customs Officers

1 Crew List.
1 Crew Declaration List (personal effects, camera, radio set, cigarettes, cigars, tobacco, etc.).
1 Ship's Store List.
1 Passengers' Manifest (disembarking).
1 Passengers' Manifest (in transit).

or Health Officers

1 Crew List.
1 Health Declaration.
Derat Certificate.
1 Passengers' Manifest (disembarking).
1 Passengers' Manifest (in transit).
Individual International Certificates of Vaccination.

or Customs Broker

1 Crew List.
1 Crew Declaration List (personal effects, camera, radio set, cigarettes, cigars, tobacco, etc.).
1 Ship's Store List.
1 Certificate of open space occupied by cargo.
1 Passengers' Manifest (disembarking).
1 Baggage Manifest (unaccompanied).
Tonnage Certificate.

For Agents

1 Crew List.
2 Passengers' Manifests (disembarking).
2 Passengers' Manifests (in transit).
2 Baggage Manifests (accompanied).
2 Baggage Manifests (unaccompanied).
2 Dangerous Cargo Manifests and usual cargo documents.

For Immigration Office

1 Crew List.
1 Passengers' Manifest (disembarking).
1 Passengers' Manifest (in transit).

PILOTAGE: Pilotage is compulsory for all vessels over 70 m. in length and those vessels carrying dangerous cargoes or not equipped with VHF. Under certain conditions car ferries of less than 135 m. in length may be exempt from pilotage.

ETA to be sent to Harbour Master (see "Radio"). Advisable then to confirm directly to "Havreport" between 24 and 12 hours before arrival (see "Radio"). Pilot boats have orange hull with "Pilote Havre" in black letters on both sides, green flag with white anchor on fore-mast.

Pilot boards in the vicinity of:

(a) The LHA Lt. buoy for deep draft vessels.
(b) The HP Lt. buoy for other vessels, including those carrying dangerous cargoes.
(c) The A5 Lt. buoy for vessels bound for Antifer.

Vessels may anchor near LHA Buoy, South of entry alignment in good weather and further off in bad weather.

Light or sound signal to be made by vessels requiring a Pilot, letter "G" in morse code.

Pilots also board by twin-screw helicopters. This method is most frequently used to bring the Pilot(s) to large tankers (only during the day), and Pilots are landed either by the craft landing on the deck or being winched down if the vessel has no landing area.

Pilots on VHF Channels 16, 12 and 20. Tel: 35.42.28.32.

Shipmaster's Report: June 1988.

Master, after having sent his ETA by telex or cable, has to contact Le Havre Port by VHF at least 4 hours before arrival and confirm his ETA.

Usually 3 hours before arrival is accepted, but, when coming from the North, it is very difficult or impossible due to distance to have contact by VHF with Le Havre Port. In good weather conditions, Master will be able to contact Le Havre 1 hour to 2 hours before pilot station.

To avoid difficulties with Le Havre Port and Pilot, Master can send a cable through Boulogne Radio giving and confirming his ETA. This cable is free of charge.

ANCHORAGES: Anchoring forbidden in the channel between both parallels 100 m. South and North of channel and in a zone 1 nautical mile long and 500 m. wide in prolongation of channel.

RESTRICTIONS: Depth in main channel 15.5 m. LW. Depth in tidal basin 14.5 m. LW.

Main lock entrance to enclosed basins, length 400 m. width 67 m., depth 14.5 m.

Vessels berthing in tidal docks (Bassin Theophile Ducrocq) dependent on tide if draft in excess of 10 m.

Quinette de Rochemont Lock open from 2 hours 20 minutes before high tide until 40 minutes after. During this period vessels of max. length 210 m. and max. breadth 26 m. may pass through. Otherwise max. length authorised is reduced to 180 m. In some circumstances some locks are completely closed around low tide.

CIM Berth No. 10 may receive tankers up to 280,000 d.w.t. with draft varying between 19 m. and 20.7 m. depending upon tide. Such vessels enter only by daylight and must arrive at Le Havre Buoy at least 3 hours before HW.

MAX. SIZE: Tankers: Length 392 m., draft (approx.) 20 m. subject tide.

Berths of Compagnie Industrielle Maritime (C.I.M.): Max. draft recorded 20.73 m. Another vessel with following dimensions has also berthed – length 391.83 m., beam 68.05 m., 423,699 d.w.t.

Antifer (East and West Berths): Max. dimensions recorded: Length 414 m., beam 79 m., 555,051 d.w.t., draft 28.85 m.

Bulk Carriers: 194,226 d.w.t. (coal). draft 17.16 m.

HEALTH: Free Pratique automatic for vessels coming direct from Continent or Italy and "Q" flag not to be flown. From other countries including Spain and Portugal usual applies. Free Pratique may be obtained by radio message to Sanipor Le Havre specifying name of vessel – where coming from – total number of Crew members, number of Crew members vaccinated (yellow fever, cholera).

Tankers: For tankers it is advisable to ask Free Pratique by radio in order start operation as soon as vessel berths.

RADIO: Masters of ships are requested to send to Le Havre Harbour Master their expected time of arrival at Le Havre Light Buoy and maximum draft.

The message will be sent through radio stations of: Boulogne-Radio/FFB (working frequencies 1771 kHz and 2747 kHz) or Brest le-Conquet Radio/FFU (1806/2726 kHz). 24 hours before arrival and confirmed 3 hours before arrival

It will give the date and time GMT of ETA, and the maximum draft. It will be sent about 12 hours before arrival and corrected by another message if necessary. This service is free. Same stations of Boulogne and Brest to be used to contact Agent and in addition Saint Lys/FFL. This ETA must be confirmed to Le Havre Port by VHF, 3 hours before arrival in the roads.

Port Operations Radio Service: The "Havreportradio" station keeps a permanent watch on the following frequencies: 156.6 MHz (Channel 12); 156.8 MHz (Channel 16); 157.0-161.6 MHz (Channel 20 duplex). This station sends and receives all messages for the port operations control.

Ships call "Havreportradio" directly on Channels 12 or 20. Ships mooring, leaving or moored on roads *must keep watch on Channel 16.*

Ships with Pilot on board must keep watch on Channels 12 or 20 from Pilot on board until arrival at berth, and from departure of berth until disembarking Pilot. Havreportradio/FFY keeps watch on 2182 kHz. This frequency will be used only in a radius of 22 miles from Havre Light Buoy and only when it is not possible to use VHF.

Public Correspondence Service: Ships fitted with VHF can obtain telephone calls through the Le Havre Radio Station.

Telephone calls are admitted with ships on berth.

Ships must call "Le Havre Radio" directly on Channels 23, 26, 28 and 82. "Le Havre Radio" calls ships on Channel 16.

BERTHING: Agents generally inform Master by radio of berthing prospects, arrival time limits and any special requirements.

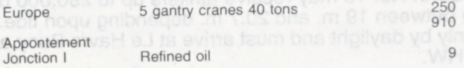
*Access Conditions:
Mean level 4.57 m.
Unit of Height 3.45 m.
Width of the Outer Channel 300 m.
Depth of the Outer Channel under Chart Datum 15.5 m. on the shipping route.
Inner Channels and Swinging Areas, depths under Chart Datum 15 m.

Level Reading: The levels quoted represent those of the bottom or of a piece of work in comparison with the zero on marine charts.

The zero of the charts is the reference point defined by the level of the lowest possible sea.



Contrary to marine customs signs (+) correspond to a height above zero. Signs (−) correspond to a height below zero.

A quarterly timetable gives for each tide the maximum admissible draft for large ships calling at the port.

Calculation is Based on the Following Principle: The vessel must ke a keel clearance equal to 10% of the admissible draft.

As a guidance, in Spring Mean Tide:

Example:

Coefficient	95
High Water	7.7 m.
Depth of the Outer Channel under Chart Datum	15.5 m.
Depth of the Inner Channel under Chart Datum	15.0 m.
Water depth	22.7 m.
Maximum admitted draft	20.65 m.

RADAR/VHF: Radar assistance may be obtained by calling Le-Havr Radar on Channel 16 (156.80 MHz). Then working frequencies a Channels 14 and 22. Radar coverage is from 20 km. to the West of th Light-Buoy and 40 km. to the West of Antifer.

Le Havre Port on Channels 16, 12 and 20. Antifer Port on Channe 16 and 22. Also see "Radio".

TUGS: 12 tugs available, from 1,000 to 4,800 h.p. Normally join vess inside the jetties in outer harbour. Ship's lines or tug's lines used ship's option. Extra charge for use of tug's line. 2 tugs are equipped fire fighting.

BULK HANDLING FACILITIES: *Minerals:* 9 berths with crane outreach 15 m. – 37 m. Able to accept vessels up to 300 m. LOA an 150,000 d.w.t. Depths up to 16.0 m. Discharge rates up to 2,400 t.p. *Grain:* Quai Hermann du Pasquier for ships up to 28,000 d.w.t. Grain (theoretical output) 2 gantry cranes for loading cereals in bags 150 t.p.h 3 gantry cranes import/export 280 t.p.h., 1 gantry crane import 300 t.p. Max. LOA 210 m., max. draft 8.83 m. – 10.65 m.

Quai Joannes-Couvert: For ships up to 60,000 d.w.t., 2 elevato (grains – export gantries) theoretical output 600 t.p.h. Max. draft 11.7 – 14.2 m.

Quai des Arachides: For ships up to 6,000 d.w.t. Max. LOA 130 Max. draft 7.3 m.

Sugar: Handled at "Silagro" Terminal at Quai Hermann du Pasquie 2×15,000 ton silos. Bagged products can be loaded on vessels 30,000 d.w.t. at the Northern end and bulk products can be loaded vessels of 80,000 d.w.t. at the Southern end. Loading rate 700 t.p.h. *Fruit:* 7 berths available (2 banana berths). Depths up to 6.30 Max. LOA 300 m.

Containers: Quai de l'Atlantique: Length 800 m., 3 berths for larg vessels. Depth −12 m.

4 gantry cranes of 40 ton capacity with 35 m. extension, at quay edge. 2 French Railway's gantries for handling on to wagons. 1×7,00 sq.m. shed under construction near to terminal for container groupag and breaking bulk. 16 hectares open air areas. Extensive parkin facilities. LASH facilities also available.

Quai de l'Europe: Length 1,160 m. 4 berths for large vessels, 3 which are equipped to handle Roll-on/Roll-off traffic.

5 gantry cranes of 40 tons with 40 m. extension, at quay's edge. 1 she 10,108 sq. m., 1 shed of 7,023 sq. m., already used for groupage an break-bulk of containers and 1 shed of 10,000 sq.m. under constructio

2 S.N.C.F. gantry cranes for loading and unloading of wagon 45 hectares of open air areas. Extensive parking facilities.

Quai de Bougainville: Actual length 1,625 m. Equipped with 5 gantrie for containers of 40 tons and 5 cranes 6 – 10 tons.

Roll-on/Roll-off: Four berthing places in the tidal basin, five berths in th wet dock, eight berthing places in the non-tidal docks.

Liquid Chemicals: At the berths of "Societe Normandie de L'Azote "Sogestrol", and "Petrochimie" along the Grand Canal du Havr 7 berths available, depths 0.5 m. – 5.0 m. For vessels of 80 m. – 240 LOA and 7,000 – 45,000 d.w.t.

LPG: 4 berths available, depths up to 9.0 m. For vessels up 75,000 cu.m. and LOA of 240 m.

CRANES: Also see "Berthing".

71 wharf cranes of 2.5 tons – 10 tons.
3 floating cranes 8, 90, 200 tons.
24 electric gantry cranes 6 tons – 40 tons.
1 land sheer legs 650 tons.
4 grain elevators 280 t.p.h. – 300 t.p.h.
2 gantry cranes for loading cereals in bags 150 t.p.h.

BRIDGES: No special restrictions. Opened upon request. Master w be informed as above in case any bridge stopped for repairs.

STEVEDORES: 2 Normal shifts (0700 – 1400 hrs. and 1500-2100 hrs possibility of 2 hours overtime) every week-day including Saturday. Nig shift on overtime 2100-0600 hrs. For fruits and reefer cargo a passenger ships possible working 2 hours overtime before morning sh to start at 0600 hrs. subject ordering gang the previous day at 0600 hrs with 23 hours notice to stevedores. Night gang ordered the same d at 1400 hrs. with 9 hours notice to stevedores (same consequen involves 36 hours and 12 hours notice to Agents for morning and nig overtime respectively).

Vessels completing loading/discharging may order 2 hours overtim from 1400 to 1600 hrs., after morning shift or only 1 hour overtime fro 2300 to 2400 hrs., after afternoon shift. No possibility of dividing the sh of 8 hours. Consequently time lost between completion of work and e of shift is charged to the vessel at the cost of about Frs. 560.00 per ho (depending upon type of cargo).

No work possible on Sunday and legal holidays nor during night betwe Sunday or holiday and next working day. Necessary to give Agent soon possible accurate ETA and hatch partition in order to enable his arrang work at the best, keeping in mind that shift cannot be split.

Work done with shore crane. Ship's derricks used only exceptional No hatch tents available from shore.

It is compulsory to put a net under the gangway before starting wo for lack of which stevedores refuse to go on board.

MEDICAL: It is not necessary for Agent to receive advance notice required medical attention except when Master requests a doctor board. The Master must after berthing inform Agent of number of patie and nature of disease, name of patient, rank, in order Agent may arra corresponding appointment with doctors, dentists, specialists, Hospital facilities available provided admission ordered by local doc

Inoculation: Yellow fever – effected only at the hospital once per week on Thursdays 1400 to 1500 hrs. Other inoculations may be effected by local doctors (with appointment).

TANKERS: Diameter of connections at different berths of C.I.M.: No. 3, 4 and 5, 10 in.; 6 and 7, 12 in.; 8 and 10, 16 in.

9 additional berths available for refined products. Max. LOA 270 m. (50,000 tons), depth 6.0 m.

Tankers calling first time at Le Havre recommended to inform Agents of position of manifold connection. Slop reception facilities available up to 1,000 t.p.h.

*Level: For explanation see "Berthing".

Report: *Port Approaches:* After having rounded the Barfleur Cape, at least 7 miles off the French coast for tankers carrying dangerous cargoes, vessels approaching Le Havre have to take care of the heavy traffic coming from this port or from the River Seine.

In Port: As the approach channel is tidal, attention must be paid to cross currents when transitting and especially outside the breakwater entrance (250 m. wide) where the setting effects can be very important. Drift allowance to counteract the current will vary from about 5° on Neap tides with no wind to 20° on Spring tides with strong cross winds. Inside the harbour there is practically no current from 2 hours before HW time up to 1 hour after. No vessel is permitted to anchor in any part of the port except in an emergency or for docking purposes.

Berthing: The Avant port is entered between two breakwaters about 860 ft. apart, and tankers bound for the CIM Berths proceed through a second set of breakwaters into the tidal basin Theophile Ducrocq, where those bound for CIM Berth Nos. 6, 7, 8 and for SHMPP Berth MCT 3 are swung, assisted by tugs, in the first turning basin, and those for CIM Berth 10 in second turning basin.

It is a difficult manoeuvre, particularly for VLCCs' to slow the vessel down and connect tugs within the time and space available from passing the breakwaters till the turning basin is reached. It is, therefore, important that engine response is prompt and that personnel and equipment are ready to connect up the tugs.

General: The CIM Berths are located on the South side of the tidal basin. Berth Nos. 1 to 7 are aligned at a 45° angle and the VLCC Berth Nos. 8 and 10 are parallel to the basin.

On the North side of the tidal basin, facing the CIM Berth No. 8, is the SHMPP Berth MCT 3, on the South side of the Mole Central. Two other SHMPP Berths, Junction 2 and 3 are located in the Constant Level Dock, facing the new Lock Francois Ier, which is at the Eastern extremity of the tidal basin.

Water density in the port averages 1024 – 1026.

Tugs:

Number usually used

Vessel (k.d.w.t.)	Up to 40	50/60	70/80	90/120	190/250
Berthing	2	3	3/4	4	4
Unberthing	2	2	2	2	2

4 tugs are recommended for mooring VLCCs. The 3 most powerful tugs available are used.

2 tugs are made fast on the hook forward and aft and 2 others are secured alongside. On ships bound for CIM Berth Nos. 6, 7, 8 and for SHMPP Berth MCT 3, which will swing in the first swinging area, it is very important to expedite the making fast of tugs, and only good heaving lines and messengers should be used.

Especially for VLCCs, it is recommended to use tug lines putting eye over bitt.

Berthing Procedure:

(a) CIM Berth Nos. 1, 2, 3, 4 and 5: Tankers bound for these berths are, after having made tugs fast, moved directly into berth, mooring head in. Starboard side alongside Berth Nos. 1, 3 and 5; and port side alongside Berth Nos. 2 and 4.

(b) CIM Berth Nos. 6, 7, 8 and SHMPP Berth MCT 3: Tankers bound for these berths are swung in the first turning basin and towed stern first into the berth mooring head out with starboard side alongside Berth No. 7 and SHMPP Berth MCT 3, and port side alongside Berth Nos. 6 and 8.

(c) CIM Berth No. 10: A tanker bound for this berth is, assisted by tugs, swung in the second turning basin just upstream of the berth, then moved into position parallel to the berth about 100 m. off and pushed alongside by the tugs, mooring with port side alongside.

Exceptionally, when 2 VLCC's have to be berthed during the same HW tide, they can be berthed at CIM No. 8 and 10 starboard side to, this saving 30 – 40 minutes corresponding to the swing.

(d) SHMPP Berths JON 2 and 3: Tugs (usually 1 forward and 1 aft) are made fast while vessels are proceeding through the tidal basins.

Locking time is about 45 minutes, port side or side under the wind alongside, with 1 head line and 1 spring line forward and aft. After leaving the lock, vessels are berthed port side alongside at Jonction 3 and starboard side alongside at Jonction 2.

Also see "Report" dated June 1982.

Antifer:

The Port of Le Havre – Antifer, attached to the Port of Le Havre which covers it administratively, is a port on the coast located 4 km. South of Cape Antifer, at Saint-Jouin-Bruneval.

It is an oil terminal, designed to accommodate vessels of 550,000 d.w.t. and of 28.5 m. draft (Also see "Max. Size").

The port comprises: A breakwater 3,500 m. long protecting the port in its Northern area and starting at Groin Point, 3 km. South of Cape Antifer. A manoeuvring zone. A dry-land area of 35 hectares at the foot of the cliffs intended for hydrocarbon storage and for port operation installations. A 8 hectare service port. A mooring installation with 2 positions for tankers. The oil discharged into storage tanks is pumped away to installations in Le Havre port, by means of a pipe-line of 42 in. dia. and 25 km. long.

Tides and Currents: At Antifer, the influence of the Seine estuary is much less than at Le Havre. The tidal curve is of the sinusoid type, without, however, being perfectly symmetrical. Slack water only lasts a short while (about 20 minutes). With winds from the North to East, there is a drop of about 0.25 m. to 0.50 m. increasing with the amplitude of the swell.

With winds from the South to N.W., passing through a Westerly point, there is either a slight drop (0.15 m.) or a rise corresponding to the extent of swell and sometimes reaching 0.75 m.

Tidal currents are alternating in their direction and generally parallel to the coastline. With Spring tides they reach a speed of 3 knots.

The breakwater protects the port from the action of ebb currents.

A Waiting Area has the approach route on its Southern edge. It has the form of a trapezium 2 miles in length. The Western commencement of the large base of this area incorporates 2 anchoring areas: the N.W. area for vessels of more than 25 m. draft, and the S.E. area for vessels of less than 25 m. draft. The 2 areas are separated by Buoy "A5".

A Connecting Area trapezoidal in shape and 2.5 miles in length, connecting the approach route to the approach channel.

An Approach Channel, 1,000 m. wide, marked on its Northern edge by Buoys "A8", "A14", "A16", "A18", and on its Southern edge by Buoys "A7", "A9", "A17". This channel is orientated in the same direction as the approach route on a bearing of 118.5°. Buoys "A7", "A8" and "A9" form at the entry of the channel a triangle easily identifiable by radar.

An Access Channel 3.5 miles long, 700 m. and then 550 m. wide and on a bearing of 127.5°. It is marked by 4 pairs of buoys: "A19/A20", "A21/A22", "A23/A24", "A25/A26". Its depth is 25 m.

A Separation Area adjacent to and to the South of the access channel, allowing vessels on entering to make a half-turn to come out of the channel and then come if necessary to the waiting area. The centre of this area is marked by Buoy "DA".

A Swinging Area sheltered by the main breakwater, marked to the South by buoy "A27", and to the East by Buoy "A29". This area is dredged to a depth of 24.70 m.

The conditions of current (direction and force) and the height of the tide determine, in terms of the drafts of vessels, the periods during which the port may be entered, and which are somewhere between full and low tides.

Vessels must, therefore, on leaving the separation area, follow entry instructions given to Masters by the Pilots, with the agreement of the Port Captaincy of Havre-Antifer.

Pilotage: The Pilot is taken onboard in the waiting area in the disengagement area by means of a pilot boat, a launch or the helicopter allocated to the Le Havre pilotage service.

Port: To the North of the swinging area, is the mooring area dredged to 26 m. allowing access to 2 alongside berths which have depths of water of 29.80 m.

The service port is reserved for the mooring of tugs, pilot boats, anti-pollution equipment (booms) and servicing equipment.

Arrival Advice: Masters of vessels destined for Antifer, as well as those whose vessels may enter either Le Havre or Antifer, must send to the Harbour Master of Le Havre a message stating the date and time GMT of their arrival at the Antifer landfall buoys or at the Le Havre lightship and stating the draft of their vessel.

This message must be sent via a coastal station at least 12 hours in advance and confirmed by a VHF message 3 hours prior to arrival at the landfall buoys of Antifer or at the lightship. In return, the vessel will receive from the Havre Port station all information and necessary instructions.

Radio: The Antifer Port Control (call sign Havre-Antifer) listens out permanently on the following frequencies:

156.8 MHz	(Channel 16)	VHF
157.10 – 161.7 MHz	(Channel 22)	

If Channel 22 is not available on board the vessel, Channel 14 (156.7 MHz) can be used after having first called up on Channel 16.

Radio communications are used for: Port operations (movements of vessels) and guiding vessels during times of fog.

Radar Assistance: During times of fog, radar assistance is supplied to vessels by the radar located on La Heve lighthouse (guidance provided by the Semaphore Lookout of Le Havre) as well as by the radar of the Oil Terminal (guiding provided by the Captaincy of Antifer from the Buoy "A–16"). Vessels requiring radar guidance must start by requesting it on the call-up frequency (Channel 16). Only after an affirmative reply can they switch in to the connections affected by radar, taking necessary precautions (listening out in advance) not to disturb a guiding process already taking place. Assistance is given in strict rotation of requests. Information is supplied free of charge in French and in no way renders the Port Authority responsible. Such information covers the following: route clear or not, vessels anchored or under way in the vicinity, successive positions in relation to the landfall buoys, possible position of the pilot vessel, then guidance in the channel as far as the swinging area and mooring area.

Syledis: A system of aid to navigation and to manoeuvring, covering the receipt on board the vessels of parameters covering in particular the position, the speed, is in the course of being tried out. It requires the Pilot bringing on board a small transmitter/receiver.

Aids to Manoeuvring: In order to facilitate swinging manoeuvres and mooring of large tankers, the Port of Antifer has 3 lights of different colours, the positions and characteristics of which are as follows:

Access guiding light (on the open storage area at the foot of the cliffs) – light with red, white, green sectors, regularly flashing (4 secs.) the red sector to the North the green to the South.

Guiding lights for coming alongside (on the breakwater).

West light (position 3) – light of red, white, green sectors, regularly flashing (4 secs.) – Red sector to the East, green to the West.

East light (position 2), light of red, white, green sectors, flashing twice (6 secs.), red sector to the West, green to the East.

Each quay berth is equipped with aids for mooring comprising luminated panels showing the distance to the berthing point of the bow and the stern of the vessel; the speed (in cm./sec.) of approach or pulling away of the bow and stern of the vessel in relation to the berthing point.

Fuel: Supplied by pipe-lines on the berth (S.H.M.PP. depot).

Cranes: 2 cranes of 2.5 tons capacity on the berth (1 per position). Berth for heavy items in the service port – handling by mobile crane.

Floating Equipment: Pontoon for transporting heavy items.

Tugs: Stationed in the service port are 1 or 2 tugs of 4,000 h.p. or 4,900 h.p. Other tugs required for manoeuvring come from Le Havre.

Pollution: Barrages laid on pontoons in the service port can be very quickly placed into service.

General Information:

The Port Captaincy is situated on the open land area of the Service Port.

Tel: 35.21.74.00 Extension (92) 403 or (92) 404 or 35.20.71.70.

Pilot's office: At Le Havre Pilot's Office.

Customs: In the C.I.M. operational building (1st floor).

Towing: The Les Abeilles Company on the pontoon in the service port.

Police: In the C.I.M. operational building (1st floor).

C.I.M. Depot: 35.26.51.05.

S.H.M.PP. Depot: 35.24.11.77.

Communications: By buses from Saint Jouin. The airport of Le Havre – Octeville is 16 km. to the South of Antifer.

DENSITY: In outer port and tidal docks: salt water. In inside docks brackish. Density depending upon season and amount of fresh water brought in by river Seine and Canal de Tancarville.

FRESH WATER: Most berths supplied by shore hydrants. Otherwise by barge minimum quantity invoiced then being 50 cu.m. Overtime charged in addition. Late cancellation of barge invoiced.

FUEL: All grades available, viscosities from 200 sec. to 3000 sec. Redwood. Minimum 48 hours advance notice required to prepare barges.

FIRE PRECAUTIONS: Dangerous cargo must be declared on "Inbound Bill" and in order not to delay vessel's entry it is highly recommended to inform Agent of quantity and exact nature of dangerous cargo on board 48 hours prior to arrival, thus enabling Agent to get in touch with Harbour Master and take necessary steps which may go from a single smoking prohibition up to a fire-picket on the quay during all the call.

Tankers: A "Notice to Master's of ships loading/unloading hydrocarbons" is handed to Master upon arrival. This notice specifies *inter alia:* repairs, ventilation/cleaning of tanks, handling of goods subject to Harbour Master's authorisation. All naked lights and fires prohibited, boiler furnaces and galley ranges excepted, such exception cancellable on simple order of Harbour Master or Depot Manager.

CREW IDENTIFICATION CARDS: Not required. Recommended to have Passport or Seaman's Book to go ashore.

CONSULS: The following countries have representatives at Le Havre:

Argentina	Guatemala	Panama
Belgium	Haiti	Peru
Brazil	Honduras	Portugal
Chile	Italy	Salvador
Colombia	Ivory Coast	South Africa
Costa Rica	Japan	Spain
Denmark	Liberia	Sweden
Dominica	Madagascar	Switzerland
Ecuador	Mexico	United Kingdom
Finland	Netherlands	Uruguay
Germany F.R.	Norway	Venezuela
Greece		

REPAIRS: 11 berths for vessels up to 350 m. Depths up to 10.0 m. 2 berths can accept vessels up to 550 m. LOA.

Societe Nouvelle des Ateliers et Chantiers du Havre (SNACH), 30 rue Jean-Jacques Rousseau, 76090 Le Havre. Tel: 35.26.81.77. Telex: 190 322 F.

Specialises in: Ship repairs (boilers, engineering, fitting out, electricity); Alterations and conversion; Jumboisation.

Compagnie Generale de Reparation (COGER), Route du Mole Central, P.O.Box 1359, 76065 Le Havre Cedex. Tel: 35.25.35.43. Telex: 190 964 F COGER.

Specialises in: Ship repairs (boilers, engineering, fitting ou electricity); Alterations and conversion; Jumboisation.

Siren – Route du Mole Central, B.P.1286, 76068 Le Havre Cede Tel: 35253543. Telex: 190964 F.

New floating dock, capacity 220,000 tonnes. Lifting capacity 50,00 tons.

SURVEYORS:

Bureau Veritas, 71 bd. de Strasbourg, 76600 Le Havr Tel: 35.22.69.23.

American Bureau of Shipping, 4 rue Andre Caplet, 76600 Le Havr Tel: 35.42.39.83.

Det Norske Veritas, 19 quai George-V, 76600 Le Havr Tel: 35.42.26.05.

Germanischer Lloyd, 110 rue Gustave Flaubert, 76600 Le Havr Tel: 35.43.75.18.

Lloyd's Register of Shipping, 7 rue Pierre Brossolette, 7660 Le Havre. Tel: 35.42.42.15.

GANGWAY/DECK WATCHMEN: Compulsory, by ship's crew. Swor watchmen in uniform and equipped with a VHF set may be obtaine from the Port Authority per hour for day and night, working days an holidays. Some other companies may also supply watchmen (not swor at lower prices.

OPENING/CLOSING HATCHES: May be done by stevedores at th same price as shifting of cargo depending upon the type of cargo an consequent number of men included in the gang.

It is highly recommended to carry out opening by the crew befor beginning of shift to avoid both loss of time and expensive charges an also risk of accident to stevedores who are sometimes not well awa of vessel's closing system.

It is emphasised that for reefer cargo stevedores wait for cold exhau half an hour after opening hatches before getting down in the hold Consequently it is strongly advised to stop ventilation and start openin hatches with crew about 1 hour before beginning of shift keeping in min that for reefer cargo, the morning shift may commence at 0500 hrs.

CERTIFICATES:

Tonnage Certificate.

Safety Construction Certificate.

Loadline Certificate.

Safety Radio Certificate.

Safety Equipment Certificate.

Derat Certificate.

Cargo Gear Register.

(Fresh water analysis certificate may also be requested.)

CUSTOMS ALLOWANCES: 200 cigarettes or 200 grammes tobac plus 1 bottle spirit (must be mentioned on Crew Declaration List). Cre members may obtain extra allowance but only after 5–6 days' call.

CARGO GEAR: Cargo handling usually carried out by means of sho cranes. Hatch-tents to be supplied by vessel.

REPATRIATION: Except if airplane chartered by Owners, all crew ha to pass through Paris.

TELEPHONE: Possible at most berths. Apply to ship's Agent prior arrival.

POLICE/FIRE/AMBULANCE: Emergency (Fire) 18; Emergency (Fi Aid) and SAMU 15; Police 17 or 35.21.77.00.

AIRPORT: Le Havre Airport 7 km. from the centre of the town, with runway of 1,800 m. × 40 m. may receive chartered planes up to 40 to total weight (50 tons with special authorisation). Regular flights from a to Orly (Paris Airport) twice a day, holidays excepted.

TIME: GMT plus 1 hour from last Sunday in September to last Sund in March and GMT plus 2 hours last Sunday in March to last Sunday September.

HOLIDAYS: New Year's Day (January 1st); Easter Monday; Labour D (May 1st); Victory Day (May 8th); Ascension Day; Whit Monday; Nation Holiday (July 14th); Assumption B.V. Mary (August 15th); All Saint's D (November 1st); Armistice Day (November 11th); Christmas D (December 25th). No work possible except for passenger ships a tankers the latter being loaded/discharged round the clock every da

SHORE LEAVE: Authorised within port and town area. Foreign seam wishing to go further and more especially to Paris must obtain pol authorisation and consequent pass.

REGULATIONS: Vessels carrying dangerous cargo must when roads or in the entrance channel, show the red flag by daylight or 1 r light by night-time. When leaving the port they must keep their Pilot to the end of the channel.

Vessels arriving with hazardous cargoes must declare same to P Control 48 hours prior to arrival.

General: When the Pilot comes on board, he hands to the Master a containing:

A leaflet showing a map of the port, the position of the fire brig points, call-up points in the event of fire, fire-fighting hydrants, a lis important telephone numbers, a list of VHF Channels monitored by Captaincy.

One copy, with map, of the the Maritime Prefect's decrees cove the circulation of vessels in the roads and channel, and in particula tankers.

An entry declaration which the Master must complete and which enables a check to be made that the hazardous material transported has already been the subject of a prior declaration to the Captaincy.

On berthing, instructions are handed to vessels:

- either by the ship's Agent where conditioned goods are involved.
- or by the operator of the berth for bulk carriers (liquid or liquified hydrocarbons, chemical products).

Furthermore, for these vessels, a check-list in accordance with that recommended by the IMO must be completed and signed jointly by the vessel and the terminal, prior to commencement of commercial operations.

DEVELOPMENTS: *Rapid Turnaround Port:* 1×500 m., 1×375 m. and 1×325 m. container berth with depth of 13.5 m. to be constructed downstream from Francois 1 Lock. Completion of first berth expected early 1990. 6 gantry cranes will be available.

REPORT: June 1982 (Updated 1988).

Requirements When Vessels Call to Load/Discharge LPG at Norgal:

Further to difficulties encountered for some months now in receipt or despatch of vessels, we would like the associates of NORGAL (or their customers) to let us know by telex, as soon as possible and for each operation, information of a general, technical and administrative kind, *those sections which are an obligatory nature being preceded by the sign (+).*

1. *General Information:*

+ Name of vessel and its ETA (expected date of arrival in the roads).
+ Nature of the operation (import, export, transit under Customs control).
+ Approximate quantity in tonnes and product and possibly the breakdown of capacity confirmed by a telex from the interested associate.

Name of consignee (if possible).

2. *Technical Information:*

+ Temperature of product.

On board pressure.
Hourly pumping capacity.
Height of manifold in relation to water level.
Dimension and series of manifold flanges.
Laydays and possibly demurrage.

Receiving Possibilities at NORGAL

Propane:

a) If temperature = 42°C and max. pressure 30 mb. (with return of gas) : 1,000 tonnes per hour.
b) If temperature = −10°C and max. pressure 3 bars : 300 tonnes per hour.
c) If full pressure : 80 tonnes per hour.

Butane:

a) If temperature = 10°C and max. pressure 30 mb. (with return of gas) : 1,000 tonnes per hour.
b) If full pressure : 70 tonnes per hour.

Characteristics of vessels:

Maximum length : 240 m.
Total displacement : 67,000 tonnes.
Depth of water : 12.0 m (39 ft. 04 in.).

Quality if Product Admissible:

French commercial standards, for butane, the temperature must not be less than −8°C for a tv of 0 bar (effective).

3. *Administrative information (for Customs).*

a) *Imports:*

+ Product origin.
+ Price per tonne and currency of invoicing.
+ Kind of contract (f.o.b., c. and f., c.i.f.). If contract is f.o.b. state the amount of freight and insurance per tonne. If contract c. and f. state amount of insurance.
+ Invoice weight (at level acceptable to Customs).
+ Bank domiciliation (name of bank, number of pay office, number of domiciliation file) or the bank domiciliation file.

Note: The invoice and possibly the original of the Certificate of Origin justifying exemption form Customs duty (T2L, Certificate type "A", Certificate EUR1) must be sent to us *as quickly as possible* to be attached to the Customs entry or to put right this entry as quickly as possible.

b) *Exports:*

+ Consignee of the invoice and final destination.
+ Price per tonne and currency of invoicing.
+ Kind of contract (f.o.b., c. and f., c.i.f.). If contract is c. and f. or c.i.f., state f.o.b. value.
+ Invoice weight (as recognised and acceptable to Customs).
+ Name of domiciling bank and number of pay-office.

Note: The export invoice must be sent to us urgently for settlement at the end of the month.

c) *Transit Under Customs Control:*

(i) *Receipt.*

+ Declaration of Transit A42, if it has not been able to be placed on board.
+ Amount of freight per tonne for payment of VAT, where a foreign vessel is involved.

(ii) *Despatch.*

+ Consignee and Customs Office of destination.
+ Number of derogation of flag monopoly if a foreign vessel is involved. This number is required by Customs before loading.

SHIPMASTER'S REPORT: June 1987.

Berth: Berth ATO 2 at Gonfreville.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (including bond, ship's stores, currency, etc.).
1 copy Health Declaration.
2 copies Cargo Manifest.

Pilotage: Le Havre Pilot boards in the vicinity of LH14 Buoy from a high speed launch. Helicopter can be used in poor weather.

Approaches: Vessels can cross Antifier Channel after obtaining clearance on VHF Channel 22.

Vessels cannot cross East of Buoys A21/22. Pilots advise just West of A17/18.

Tugs: Not required for our vessel inward or outward except if high winds blowing.

Locks: Vessel locked into canal system after passing through Francoise Premier Lock. Time in lock about 20 minutes. Vessels can be delayed up to 1 hour if other ships lock-in at the same time.

Berthing: Vessel berthed port side to Berth ATO 2 on the North side of Grand Canal du Havre, which is about 20 minutes from the lock.

For ethylene loading an 8 in. 150 ASA loading arm and a 6 in. 150 ASA vapour return line are provided. The vapour return line can only return on completion of loading. Chemical handling using Chicksan arms is also possible on the berth.

The shore tanks have 0.6 kg./sq. cm. pressure relief valves. Maximum loading rate 250 t.p.h.

If port side to, vessel can only use After liquid line/After vapour line. If starboard side to, use Forward liquid/vapour line.

Moorings at this berth consist of 2 head lines and 2 springs forward and aft.

Depth alongside 10.4 m. Maximum size vessel accepted at the berth is 30,000 cu.m.

Shore gangway provided.

Fresh Water: Available from the pier ex-hydrant.

Stores: Lorries delivering ship's stores may proceed to within 50 m. of the vessel.

Also see "Shipmaster's Report" dated December 1988.

SHIPMASTER'S REPORT: December 1988.

The following is an update of Shipmaster's Report, dated June 1987.

Anchorage: Waiting Area No. 1 is a small area for a port the size of Le Havre. The anchorage runs into Rouen Anchorage. Do not anchor within 1 mile of Le Havre Fairway which is radar controlled. The anchorage is exposed to all winds.

Pilotage: Small vessels without tugs are allowed to berth in very low visibility, dependent on Pilot/Master and vessel's radar. Vessels requiring tugs must have 250 m. visibility.

Tugs: Tugs not required in or out for smaller vessels, except if there are high winds. The tugs are powerful and the tug wire is used. One hour's notice required.

Locks: Vessels can also proceed to Gonfreville by way of the old locks at Rochemont/Vetillart (max. LOA 160 m., max. beam 22 m. and max. draft 8.0 m.) and Canal du Havre. The time taken from Buoy LH05 to Berth ATO2 via the old system is 3 hours.

Berthing: Vessels can also berth starboard side to at Berth AT02, but landing gangway is difficult.

Chemical Chicksans also available on berth. Max. loading rate 250 t.p.h.

General: Telephone: Nearest public telephone is at Sogestrol Office or at the car loading facility, about 1 mile down the road towards the lock. It is possible to telephone the agent or the chandler from the jetty office.

Airport: Le Havre Airport is about 30 minutes by road from the berth. There are daily flights to and from Gatwick.

Rail Link: There is a good rail link with Paris, time of journey about 90 minutes.

AUTHORITY: Port of Le Havre Authority, Terre-Plein de la Barre, B.P. 1413, 76067 Le Havre Cedex. *Tel:* 35.21.74.00 *Telex:* 190663 Port Havre. *FAX:* 35.21.74.51.

Harbour Master's Office: Boulevard Kennedy, 76600 Le Havre. *Tel:* 35.21.74.37/35.21.74.38. *Telex:* 190663. *Cables:* Havreport.

LES SABLES D'OLONNE: 46.29 N. 01.47 W.

(See Plan)

PORT LIMITS: Entrance to wet dock constitutes port limits.

DOCUMENTS:

2 copies Crew and Passenger Lists.
2 copies Personal Effects Lists.
2 copies Stores Lists.
1 copy Cargo Manifest from ship's papers for Customs Authorities and all Bills of Lading, Ship's Papers, etc.

PILOTAGE: Pilotage is compulsory for all vessels equal to or exceeding 50 m. in length and for all oil and gas tankers.

The compulsory pilot boarding points are two straight lines from "La Petite Barge" Buoy (Lat. 46° 28.9′ N., Long. 01° 50.6′ W.), to "Le Phare des Barges", and to "La Peruse" rock.

Confirmation of ETA can be given to the Agent or Pilot. Tel: 51-32-60-97.

Channel 12 VHF is continuously watched as soon as Pilot is on board. Pilot boat is 9 m. long (black and white hull).

ANCHORAGES: Vessels awaiting Pilot may anchor in the waiting area with sand bottom. They can use pilot services in bad weather.

MAX. SIZE: Vessels up to 110 m. LOA and beam 16 m. Draft 4.8 m. to 6.2 m., dependent on tides.

HEALTH: Customs take action against suspected diseases or fever on board when vessel arrives.

RADIO: Saint Nazaire & Arachon Radio. All ETA and other messages should be in local time.

VHF: Harbour Authorities keep watch on Channel 12 during opening of lock gates. At neap tides, the watch is kept for 1 hour 30 minutes before and after HW.; at Spring tides for 2 hours before and after HW.
RADAR: There is no Port Control Radar.
TUGS: None, pilot boat assists.
BERTHING: Max. beam 16 m. to allow passage through lock gates. Max. LOA 110 m.
BRIDGES: None.
CRANES: Mobile cranes 15 tons – 30 tons.
STEVEDORES: Working hours from 0700 – 1200 hrs. and 1200 – 1900 hrs. No work on Saturdays.
MEDICAL: Full hospital facilities available.
FRESH WATER: Available in unlimited quantities, with 6 to 12 hours prior notice.
FUEL: By lorry from Nantes or La Pallice.
REPAIRS: Small repairs carried out if sufficient spares available.
SURVEYORS: None.
HATCHES: Opening/closing carried out by vessel's crew.
CUSTOMS ALLOWANCES: 200 cigarettes and 2 litres of spirits per person.
REPATRIATION: Possible.
AIRPORT: At Nantes, 87 km. distant. 6 – 7 flights daily.
TIME: GMT plus 1 hour. Summertime GMT plus 2 hours (March to September).
HOLIDAYS: Port is open all year round.
POLICE/AMBULANCE/FIRE: Police, 17; Ambulance, 51 951953; Fire, 18.
SHORE LEAVE: When Immigration and Customs requirements have been satisfied, there is no restriction on crew shore leave so long as they rejoin the vessel before departure.
SERVICES: Compass adjusting.
DEVELOPMENTS: None.

LIBOURNE: 44.55 N. 00.15 W.

Port closed. All vessels proceed to Izon.

LORIENT: 47.45 N. 03.21 W. (See Plan)

DOCUMENTS:
Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
6 Crew Lists.
3 Passenger Lists.
Health Declaration.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.

PILOTAGE: Compulsory for all vessels over 60 m. length. Vessels must contact pilot station advising ETA at least 6 hours before arrival by radio to the pilot station. On arrival at the Outer Roads or Groix vessels should call Pilot by VHF Channel 16. The pilot launch will be standing by from 1 hour before to 1 hour after the ETA previously advised by the ship. The pilot station is manned 24 hours per day. Pilot station telephone number 371480.
ANCHORAGES: The Outer Roads of the port are open to winds from the S.E. to S.W. Vessels waiting to enter the port may anchor in depths of 15 m. – 20 m., sand and shell bottom, good holding ground.

Mooring buoys are positioned off Port Tudy on the North coast of Ile de Groix. These buoys are reserved for the use of the French Navy. There are prohibited zones for anchoring due to presence of submarine cables, marked on chart.

RESTRICTIONS: There are 2 entry channels to the port. The South Channel, depth 3.6 m. is used exclusively by local fishing boats. The West Channel is marked by the alignment of 057°. The depth in this channel is 8.0 m. (March 1988). Both channels are very well marked.

Traffic signals are hoisted at Port Louis Citadel as follows: Red flag or red light – entry prohibited. Green flag or green light – exit prohibited. Red over green flags or lights – port closed.

Tankers: Vessels carrying more than 500 cu.m. of hydrocarbons, or other dangerous cargoes in bulk, intending to navigate North of Les Trois Pierres Tr., should report 6 hours in advance to "Marine Lorient" and Port Captain giving details of cargo and of any defects which may affect manoeuvrability. Such vessels should establish contact with Vigie Port Louis giving ETA at Les Trois Pierres on arrival, or Keroman Mole (Lat. 47° 43.7′ N., Long. 3° 21.9′ W.) on departure. Other vessels may obtain information about such movements on Channel 16.

HEALTH: Pratique given by Customs Officers who board on arrival. If any case of suspected disease on board or any reason why vessels should not receive Free Pratique, Master should radio Agent before arrival, advising full details.
RADIO: Use local station Radio Conquet or Radio Saint-Nazaire.
VHF: Port Captain on Channels 16 and 12.
TUGS: 1 tug of 1,000 h.p., 2 tugs of 700 h.p., 3 tugs of 250 h.p. belong to the French Navy.

1 tug of 1,740 h.p. at the fishing port (Morbihan Chamber of Comme & Industry) and 1 tug of 1,800 h.p.

1 tug of 700 h.p. and 1 tug of 2,556 h.p. also available.

BERTHING: Kergroise Quays, 568 m. Max. length of vessels 250 Depth of water 10.5 m.

One new berth, length 150 m. Depth of water 10 m.

2 discharge gantries, 500 t.p.h. and 750 t.p.h., serving a silo and ro rail transit station.

11 cranes. 6×10 tons at 30 m. and 5×6 tons at 22 m. Also 1 mob crane of 6 tons.

TANKERS: The Oil Jetty is 112 m. long and can accommodate tanke up to 180 m. length, max. draft 10 m.
FRESH WATER: Can be supplied from the quays at Kergroise and the Oil Jetty. Rate 10 t.p.h.
CONSULS: Norway, Denmark, Netherlands and Sweden.
REPAIRS: Minor deck and engine repairs can be carried out. Slipwa can accommodate 6 fishing boats at the same time. There are 3 d docks the largest of which is 186.20 m. long×26.33 m. wide.
MEDICAL: All facilities available. Local maritime and civil hospitals.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: New Year (1st January, no labour available); East Sunday (possibility of labour with overtime); Easter Monday (no labo available); Labour Day (1st May, no labour available); Ascension D (possibility of labour with overtime); Whit Sunday (possibility of labo with overtime); Whit Monday (no labour available); National Day (14 July, no labour available); Assumption Day (15th August, no labo available); All Saints' Day (1st November, no labour available); Armist Day (11th November, possibility of labour with overtime); Christmas D (25th December, no labour available). N.B. Every Sunday and d marked "possibility of labour with overtime" can be worked at the ra of 100%.
POLICE/FIRE/AMBULANCE: Police Tel: 97.21.19.16; First Aid Tel: 1 Ambulance Tel: (97) 65.33.44; Fire Tel: 18.
IDENTIFICATION CARDS: Crewmen going ashore should ca passport or identity card.
DEVELOPMENTS: A new Ro/Ro berth will be available 1990/1991.

(c) Fos

(a) OLD PORT TO ESTAQUE

DOCUMENTS:
Inward Declaration (Printed Form presented by Pilot on boarding
Ships Register.
Declaration of Health.
3 Crew Lists.
2 Provisions Lists.
2 Lists of Passengers in Transit.
2 Lists of Passengers disembarking.
1 List of Ports where cargo is loaded for Marseilles.
Cargo Manifests and Bills of Lading.
1 List of Crew Personal Effects.

Entry Procedures: On arrival, French Authorities do not visit the sh systematically. However, as circumstances require, Police, Customs Health may do inspection on board.

Free Pratique by radio is possible be sending cable to "San Marseilles" through Marseilles Radio before arrival on roads.

Inward Declaration, duly filled in by Master must be delivered to Authority upon arrival.

Other formalities are completed by shipbrokers and consignees.

PILOTAGE: *Arrival:* Contact port authority by VHF on Channel 12 one hour before arrival ("Marseilles Port"). Compulsory. 21 pilot launches, mostly painted black, wooden hulls with white anchor insignia on the bow.

Contact pilot station and pilot boats by VHF Channel 8, one hour before arrival.

Southern Entrance: Pilot boards between "Le Frioul" and "Chateau d'If" island. Max. recommended draft 28 ft. 06 in. in good weather.

Northern Entrance: Pilot boards at Estaque roads. In case of strong N.W. winds or for all deeper draft vessels the Northern entrance is preferred.

Vessels anchoring in roads without a Pilot will still incur full pilotage fee.

On departure, 15 to 30 minutes notice sufficient to order Pilot and tugs.

ANCHORAGES: Marseilles North, Saint Marie and Endoume.

MAX. SIZE: Draft dependent on berth depth up to max. of 14.5 m.

HEALTH: Free Pratique automatic for vessels coming direct from continent or Italy and "Q" flag not to be flown. From other countries – including Spain and Portugal – usual procedure applies. Unless special arrangement for passenger liners, Free Pratique not given by radio, also practice of issuing Health or Customs Clearance on sailing now discontinued.

Free Pratique by Radio: Send cable to "Saniport Marseilles" through Marseilles Radio between 0700 hrs. and 1900 hrs., containing the following information:

Ship's Name, ETA Marseilles, from (last 3 ports in reversed order) number of crew.

Then "ZT" (my Maritime Declaration of Health has negative answers concerning the 6 health questions).

Date of Derat (exemption) Certificate.

Then "ZS" (my ship is healthy and I ask for Free Pratique).

Example: Balder Antwerpen ETA 17/2300 Malaga, Hamburg, Bremen crew 25 stop ZT stop 06/07/81 stop ZS. Regards Master.

From 0700 hrs. to 1900 hrs., answer of Saniport will be: "ZY" (Free Pratique is granted).

If Free Pratique is requested and granted by radio, no sanitary officials will board the vessel, no declaration must be filled in, and crew members are granted shore leave without delay. Furthermore, the "Q" flag must not be flown on arrival.

The above information was supplied to a Ship's Master by the Port Health Officials.

RADIO: Within 150 miles Marseilles Radio/FFM – otherwise St. Lys/FFL.

VHF: Port Authority on Channels 12. Tugs on Channel 6.

RADAR: Port and approach radar station.

TUGS: About 5 tugs available, from 1,200 h.p. to over 3,000 h.p. Ship's lines normally used.

BERTHING: When specific side alongside berth required. Agents radio Master prior arrival also advise Pilot. Otherwise side alongside at discretion Master after conferring with Pilot.

CRANES:
Public Quay Cranes: 1×3 tonnes; 5×3 – 5 tonnes; 42×6 tonnes.
Public Mobile Cranes: 1×4 – 8 tonnes; 4×6 – 12 tonnes; 6×15 tonnes; 3×40 tonnes.

14 dry dock cranes, largest has a lifting capacity of 150 tonnes.

2 floating cranes for public use, owned by the Port Authority, capacities 90 tonnes and 150 tonnes and one floating derrick owned by the Port Authority, capacity 500/600 tonnes.

BULK HANDLING FACILITIES:

Cereals:

President Wilson Dock: Berth Nos. 24/25. Storage: The Madrague Silo, owned by the Societe Fonciere et Commerciale du Silo de la Madrague, has a capacity of 30,000 tonnes in 143 cells. The silo is connected to the berth by covered conveyors. The silo is outside the port area. 1 suction unit, rate 600 t.p.h.

Grande Joilette Dock: Used for storage only. The silo, owned by the Marseilles Port Authority, is within the port area and has a capacity of 22,000 tonnes in 99 cells.

Minerals in Bulk:

National Dock: Berth Nos. 47 and 48. Specifically for bulk traffic, handled by bucket-cranes. Storage: 4,000 sq.m. (43,040 sq.ft.) in the open, beside the East Quay. 2 cranes, rate 300 t.p.h. or 150 t.p.h. per crane.

3 berths on the Seaward Breakwater, Berth Nos. 109, 110 and 111. Theoretical length 151 m. each, max. draft 12 m. Storage capacity 50,000 tonnes.

These berths are equipped with 5 bucket cranes of 7 tonnes and facilities for storing clinker.

President Wilson Dock: Berth No. 14. Allocated specifically for alumina. Storage: 2 silos, with a total capacity of 11,000 tonnes, constructed by and belonging to Pechiney Cie. and Ugine Cie., to facilitate the import/export of dehydrated alumina in bulk.

There is an additional warehouse with 1,000 sq.m. on Mole "D" which is used for hydrated alumina. Vessels are handled via Berth No. 47 (National Basin). Storage capacity 3,000 tonnes.

Leon-Gourret Dock: Berth No. 8. Allocated specifically for bulk traffic that can be handled by grab-bucket. Storage: An open area of 4,000 sq.m. (43,040 sq. ft.) at the quayside; suitable for import/export.

Liquids in Bulk:

Mourepiane Dock: Berth Nos. 151 and 148. For vegetable oils and chemicals. Storage: The private company, Marseilles Vrac, which operates this depot, has 32 vats of 125 to 1,640 cu.m. (4,412 to 57,892 cu.ft.), with a total capacity of 24,500 cu.m. (864,850 cu.ft.). There are pipelines to the quay for discharging tankers. Berth No. 143 operated by Mediaco Vrac has a maximum permitted draft of 9.50 m.

Import and Export: The major import is vegetable oil; export is chemical products in bulk.

Berth Nos. 104 and 104A for wine in bulk.

Sugar:

President Wilson Dock: Berth Nos. 19 and 20. Storage: The silo, which has a capacity of 24,000 tonnes is within the port area and is owned by the Port of Marseilles Authority. Sugar is discharged by bucket-crane into hoppers which feed the conveyor belts to the silo. The total conveyor capacity is 250 tonnes per hour.

SPECIALISED CARGO HANDLING FACILITIES:

Heavy Load Berths:

In Mirabeau Basin there is a special berth (No. 161) designed to receive barges loading and unloading heavy loads. This berth is located between Berth No. 160 and the Leon Gourret Mole and consists of a quay 80 m. long into which has been built a barge basin 50 m. long by 20 m. wide with a depth of 2.5 m.

Apart from this special berth, there are 29 Ro/Ro berths in operation in the Port of Marseilles which permit direct loading of heavy loads into Ro/Ro ships. There are also numerous conventional berths that can be used for vertical loading and unloading of heavy loads, with the assistance of the port's "Atlas" and "Goliath" floating cranes, which have a lifting capacity of 90 and 150 tonnes respectively and can be coupled to lift a maximum of 220 tonnes.

In addition to these floating cranes, the following floating equipme is also available:

The Port Authority's floating derrick, "Protis", which has a lift capacity of 500 to 600 tonnes.

Various types of private floating equipment with capacities rang from 40 to 60 tonnes.

Various public or private heavy load barges.

The Port Authority's submersible seagoing barge.

This barge is designed for transporting heavy loads, or for putt them into the water in the case of floating loads (within the limits of deadweight capacity of 1,800 tonnes; the loading and unloading of hea floating loads of 1,800 to 2,000 tonnes must be carried out in dry dock The barge can be loaded vertically, horizontally (Ro/Ro), or by float the load into the hold in the case of a floating load.

Also see "Berthing".

CONTAINER HANDLING FACILITIES: Various quays are devoted container traffic: At the Leon Gourret Mole (14.5 m. permitted draft, lar open areas, railway tracks); at the Mourepiane quay, in the Mirabe basin, where there is a new terminal:

3 public berths, Berth Nos. 155, 156 and 157, each of which has theoretical length of 154 m. and a max. draft of 11.7 m. By the end 1990 the container terminal will extend to Berths No. 152, 153 and 15

Container handling equipment: 2×40 tonne Caillard gantry cran 4×30 tonne at 30 m. mobile cranes.

Railed tracks: 2 railway tracks alongside the quay; 1 railway tra behind warehouse 20; 2 railway tracks at the Eastern limit of the den storage area behind warehouse 20.

Area alongside the quay 35 m. wide comprising: A working area 15 wide equipped with 2 railway tracks and a trailer movement area storage area for short periods, 17 m. wide (under the rear jib of t gantries).

Storage areas covering a total of 90,000 sq.m.

BRIDGES: Turning bridge near Southern end of port – Pont d'Arenc opened on request.

Bridge further North – Pont de la Pinede – closed to navigation fro 0700 hrs. – 0800 hrs., 1115 hrs. – 1345 hrs. and 1630 hrs. – 1800 h It may be opened in cases of emergency.

STEVEDORES: Enable Agent order gangs important obtain in go time accurate ETA from vessels. Latest times to order gangs; norm and deferred shifts 0530 hrs. same morning – night shift 1600 hrs. sa day – Saturday and Sunday, 1600 hrs. Friday. Failure to give prec ETA may result in ship losing 12/24 hours also cost gang waiting ti includes waiting vessel's arrival – Free Pratique – opening/clos hatches – rain – shifting cargo or dunnage – crane or derrick bre downs – time lost between finishing and end of shift. Work can arranged on following official holidays – New Year's Day, Easter a Easter Monday, Whitsun, 14th July, 15th August, 1st Novemb Christmas Day, 1st May holiday when no work takes place, Stevedor hours (normal shift) Monday to Saturday, 0630 – 1300 hrs. and 133 2000 hrs. (Two shifts). Sunday, 0630 – 1300 hrs., if required – one s 0800 – 1115 hrs. and 1300 – 1615 hrs. Night work if required or sh night work 2015 – 2330 hrs. No work allowed Sunday night. necessary gear supplied by stevedores except rain tents which ves must supply.

MEDICAL: Yellow fever inoculations only in hospital (Tuesdays a Friday). Masters to advise by radio prior arrival if medical attendan required aboard.

TANKERS: See "Port de Bouc" and "Fos".

DENSITY: About 1028.

FIRE PRECAUTIONS: Special harbour fire-fighting corps, with two fi fighting vessels.

10	465	84.00	10.00	3×25 – 1×150	10,800t/h	12 line possib

Fresh water and power available at all berths.

FRESH WATER: Can be obtained from hydrants or quays or from water-boats. When delivered by barge, minimum quantity invoiced is 50 tons. Preferable order prior arrival to avoid delays. Minimum pumping rate 50 t.p.h.
FUEL: Ordinary fuel, also fuel oil max. 1000 secs., diesel and gas oil. Deliveries by barge only.
WATCHMEN: Available but not compulsory.
HATCHES: Crew allowed open and close.
SHIP CERTIFICATES: On first call Registered Tonnage Certificate; thereafter not required unless gross/net tonnages changed.
CUSTOMS ALLOWANCES: About 200 cigarettes and limited amount spirits per man.
CARGO GEAR: No additional requirements; all gear supplied by stevedores except rain tents.
AIRPORT: Marseilles-Provence is the second largest airport in France with 18 air companies serving 60 national and international destinations.
The international airport of Nimes-Garons (50 km. from Fos) serves the West region of the Marseilles district.
POLICE/FIRE/AMBULANCE: Police (disturbance of peace): Tel: 17. Marine Fire Brigade (fire, ambulance, injury, explosion, flooding, man overboard, etc.) Tel: 18. Police and Marine Fire Brigade can also be called through the Central Watch Tower (VHF Channel 12) or Telephone: 91.56.15.00 (Marseilles Port).
SERVICES: Deballasting and degassing services can be provided on request in the Ports of Fos and Lavera (only deballasting).
Vessels coming for repairs in Marseilles can discharge their slops, if any, under particular conditions.
IDENTIFICATION CARDS: Not required.
DEVELOPMENTS: Tracked electric cranes to be reduced from 75 to 60.

AUTHORITY: Port Autonome de Marseilles, B.P. 1965, 23 Place de la Joliette, 13226 Marseilles Cedex 02, France. *Tel:* 91.39.40.00. *Telex:* 440746 Portauto Marsl. *FAX:* 91.39.45.00. *Cables:* Portauto Marseilles. *Contact:* Harbour Master.

(b) **PORT DE BOUC,** including Port de Lavera 43.23 N. 05.00 E., Port de Berre 43.27 N. 05.10 E., Port de la Mede 43.24 N. 05.07 E. Caronte 43.24 N. 05.02 E. **(See Plan)**

DOCUMENTS: On arrival:
Inward Declaration (presented by Pilot on boarding).
1 Cargo Manifest or manifest in ballast.
Bill of Lading.
Ship's Register (if required).
6 Crew Lists (8 if Spanish or U.S.S.R. ship or ship bound for these countries).
3 Passenger Lists.
Health Declaration.
Derat Certificate.
Bunker's Supply (3 forms).
1 Crew Declaration of Personal effects – cameras, binoculars, radios, cigarettes, tobacco, etc. If on inspection articles or quantities not in conformity or in excess, Master held responsible, articles removed and heavy fines imposed.
PILOTAGE: Pilotage is compuslory for tankers over 50 m. LOA and other vessels over 70 m. LOA.
Call "Port de Bouc Control" direct on Channel 12 for traffic. Pilot must be taken to enter Port de Bouc, Fos and Port St. Louis du Rhone. Contact by Marseilles Radio or pilot boat VHF (Channel 16 for calling, Channel 14 for traffic). Pilot boards in the Roads between 2 and 2.5 miles S.W. of Bouc Tower or further out if required, for entering Port de Bouc and Fos. Motor launch black hull, white cabin, white anchor on bow, "H" flag.
ANCHORAGE: It is recommended to ask for Pilot before anchoring in Outer Roads to avoid forbidden places for ships bound for Port de Bouc and Fos. Permanent watch on VHF Channel 12 is compulsory.
RESTRICTIONS: No entry restrictions for Lavera. Night transit of Caronte Canal to Etang de Berre forbidden to tankers above 6,000 g.r.t. Transit of Caronte Canal to Etang de Berre is forbidden for vessels over 180 m. (598 ft.) overall and over 24 ft. draft.
Notice: *"Port Authorities instructions concerning Fos/Lavera Tanker Areas.*
Special Notice No. 94/81.
Re: Berthing of Tankers Loaded with Naphtha or Gasoline.
Taking into account the recurring risks encountered with tankers discharging naphtha, super gasoline, gasoline or condensate, until further notice, it has been decided that only one vessel at a time, carrying said cargo, will be allowed to discharge in above areas of Port Autonome de Marseille.
For the time being these restrictions do not apply to coasters.
Furthermore, vessels concerned, whatsoever the year of building, will only be allowed alongside providing that pump room is clean, gas free and that no product is leaking at ship's valves or pumps.
Should above conditions not be fulfilled vessels could not be accepted in above areas".
MAX. SIZE: Lavera: LOA 275 m., draft 12.80 m.
Caronte: LOA 170 m., draft 8.84 m.
Berre: LOA 160 m., beam 24 m., draft 7.0 m.
La Mede: LOA 180 m., beam 24 m., draft 7.2 m.
HEALTH: Pratique given by Customs Officers who board on arrival. In case of suspected disease on board, notify Agents by radio before arrival.
Also see "Marseilles".

RADIO: Within 150 miles traffic through Marseille Radio/FFM, otherwise St. Lys (FFL).
VHF: Port de Bouc Radio (Harbour Office) VHF used for navigation purposes only – Channel 12 for calling and traffic.
RADAR: Port and approach radar station.
TUGS: 8 tugs available from 90 h.p. to 3,000 h.p. Normally join vessel in entrance channel off Port de Bouc. Tow lines furnished if required.
BERTHING: Lavera: 19 berths (Total berthing length 3,088 m.) for public and private use. Permitted drafts: 3 berths of 2 m. to less than 3.6 m.; 4 berths of 3.6 m. to less than 5.5 m.; 1 berth of 5.5 m. to less than 6.1 m.; 5 berths of 10 m. to less than 11 m.; 3 berths of 11 m. to less than 12.5 m.; 3 berths of 9.9 m.
1×12 tonne public mobile crane.
Lavera Harbour has been specifically designed and equipped to handle refinery products and the discharge of oil tankers.
Each berth has flexible pipe connections, with articulated metal arms, supported by special cranes. The type of pipework depends on the product handled (crude or refined) and is connected to the storage tanks of:—

C.F.R. and Shell
S.F.P. – B.P. Refinery at Lavera
The maritime terminal of S.P.L.S.E., which supplies the Esso Refinery at Fos.

Berths A1, A4, H Bis, H and K1 have been designed to handle the loading and unloading of propane and chemical products.

Crude: 8 public berths in 4 basins.

Name of Berth	*No. of Berth*	*Max. Length* (m.)	*Max. Draft* (m.)
B	721	325	12.00
C	722	325	12.00
D	723	325	11.89
E	724	325	12.20
F	725	325	12.80
G	726	325	12.80

Refined Products: 12 public berths.

Name of Berth	*No. of Berth*	*Max. Length* (m.)	*Max. Draft* (m.)
A1	711	210	10.10
A2	712	210	9.90
A4	714	240	12.20
B	721	325	12.00
C	722	325	12.00
D	723	325	11.89
E	724	325	12.20
F	725	325	12.80
G	726	325	12.80
K1	701	100	6.10
K2	702	88	3.90
K5	705	100	5.30
K6	706	100	5.20

Liquid Gas: 6 public berths.

Name of Berth	*No. of Berth*	*Max. Length* (m.)	*Max. Draft* (m.)
A2	712	210	9.90
A4	714	240	12.20
G	726	325	12.80
H	727	200*	11.80
H Bis	—	120*	11.00
K1	701	100	6.10

*Usable length 100 m.

Annual capacity of loading or discharge: 600,000 tons based on the 4 multi-purpose berths being exclusively used for discharge of vessels bringing propane gas.

Average output per quay 600 cu.m./h. (300 t.p.h.)

Storage capacity: The storage capacity of propane gas of the Societe GEOGAZ is 120,000 cu.m (60,000 tons).

Chemical Products (exclusively): 3 public berths.

Name of Berth	*No. of Berth*	*Berthing Length* (m.)	*Permitted Draft* (m.)
A4	714	240	12.20
H	727	200*	11.80
H Bis	—	120*	11.00

*Usable length 100 m.

Berth A4 is also equipped for crude oil traffic, refined oil products and for the importation of liquid gas.

Berths G, H and H Bis can also accept liquid gas.

Annual capacity of loading or discharge: 2,700,000 tonnes if these 2 berths are exclusively used for chemical product traffic.

Discharge rate using vessels' pumps: 150 t.p.h. Loading rate using land pumps 150 t.p.h. to 300 t.p.h.

Storage capacity: Societe NAPHTACHIMIE: factory. Societe MAVRAC: 53,000 cu.m. Density 0.80 – 1.62.

Report: Berthing Procedures: Tugs are made fast between the 2 buoys "Lavera" and "Les Tasques", using the "On the Hook" method. Tugs watch VHF Channel 6.

Loaded or ballasted tankers are berthed heading outwards. Ships are swung off the head of the pier and backed alongside stern first. On request (ship's manifold too far, only gangway available, weather conditions, etc.) they may be moored directly and swung on departure.

Anchors are only used in case of emergency or when the ship's bow overhangs the pier's end.

Port Authorities do not advise anchoring method for safety reasons (delay if emergency departure needed).

No shore gangway is available at this terminal. Vessels must use their own gangway with safety nets and lifebuoys.

Port de Bouc/Caronte: Quay berths reserved exclusively for commercial operation of sea-going vessels: Berth Nos. 780 to 786 and 2 berths for river barges.

Total length of quays: 763 m.; Usable berthing length: 1,000 m.; Permitted draft: 2 berths for barges with draft of less than 4 m.; 5 berths of 8 m. to less than 9 m.

Berths reserved for repairs afloat (Agglomerate Quay No. 787): Total length of quays: 250 m. Max. draft 4.5 m.

Equipment:

Quay cranes: 2 cranes of 3–6 tonnes
3 cranes of 6–12 tonnes
2 cranes of 12 tonnes

Seven cranes, private, forming part of the installations of the Etablissement Maritime de Caronte et de Fos (CARFOS)
Quay gantries: 2 gantries of 10–20 tonnes, private (CARFOS) used for ores, stacking and removal from stock. Lifting capacity of the most powerful: 15 tonnes.
1 phosphate reloading gantry (CARFOS) with a capacity of 400 t.p.h.

Cranes allocated to naval repairs afloat, at the Agglomerate Quay: 2 private cranes from 6 to less than 15 tonnes. Lifting capacity of the most powerful: 4–8 tonnes.
Floating cranes: 1 private crane, with a lifting capacity of 100 tonnes.

Storage:

Quay-side sheds	8,200 sq.m.	(private)
Other sheds or warehouses	4,875 sq.m.	,,
Quay-side open areas	16,000 sq.m.	
	10,000 sq.m.	(public)
Other open areas	8,000 sq.m.	(private)

Bulk Liquids: Vegetable or animal oils and chemical products:
1 public quay under private use (Favat installation) (Berth No. 780): Verminck Quay. Useful berthing length: 120 m. Permitted draft: 7.50 m.

Discharge of oils is effected by shipboard pumps and the relay pump of the land installations – rate 200 t.p.h.

Storage capacity: 6,000 tonnes.

The Favat storage installations located outside the port area, on private property, have a total capacity of 12,000 cu.m. These installations are connected by a network of 3 pipelines of 200,150 and 100 mm. to the discharge points at the quayside. Storage Shed: 4,000 sq.m.

Chemical products exclusively: 1 private berth (Berth No. 786): Kuhlman Quay (Ets. Kuhlman). Useful berthing length: 140 m. Permitted draft: 7.10 m. Factory storage capacity: 2,500 tonnes.

Bulk Solids: Ores, coal, heavy minerals:
5 berths at the Caronte Quay (Berths Nos. 781–785) private use granted to Etablissement Maritime de Caronte et de Fos (CARFOS).

Usable berthing length: 650 m. Permitted draft: 8.40 m.

1 quay berth for loading phosphate barges, located between berth No. 785 and berth No. 780. Berthing length: 80 m. Permitted draft: 3.50 m.

The Caronte Quay has a specialised installation comprising:
3 transporting units and weighing hoppers with a unit output of 135 t.p.h.
1 transporting unit and specialist weighing hopper specialised in wagon loading: output 150 t.p.h.
2 weighing hopper towers – unit capacity: 1,200 tons per day.
2 weighbridges (40 and 80 tonnes).

The 7 scoop cranes are emptied into weighing hoppers which in turn discharge on to convoyor belts which terminate either above wagons to be loaded, into sheds or open storage areas. Hourly capacity per crane 120 t.p.h. – 150 t.p.h.

The quay is also equipped with 2 gantry cranes of 10 to 20 tonnes used for stacking and reclaiming minerals and 1 gantry crane with a capacity of 400 t.p.h. used for reloading phosphate.

Storage capacity: 63,000 tonnes.

The CARFOS storage installations include:
3 phosphate sheds of 6,800 sq.m.
1 ilmenite shed of 550 sq.m.
1 open area of 6,000 sq.m.

Oil seeds – oil cake: 2 berths (No. 784 and No. 785) at the Caronte Quay, private use granted to CARFOS

Available berthing length: 170 m. each. Permitted draft: 8.84 m.

Storage capacity: 10,000 tonnes. These berths are also used for ores, coal and heavy minerals.

Installations and equipment: Identical to those on the quays for ores, coal and heavy minerals.

Etang de Berre/La Mede:
Available berthing length: La Mede – 70 m. Berre – 560 m.
La Mede: 1 berth. Berre: 4 berths.

Port of La Mede: Cie de Raffinage et de Distribution (C.R.D. Total). Berth No. 744.

Name of Berth	*Berth No.*	*Type of installation*	*Available berthing length (m.)*	*Permitted draft (m.)*
4	744	Pier	70	5.40

The installations of the C.R.D. Total permit loading or unloading of 100–600 cu.m./h. according to product.

The installations of C.R.D. Total are connected to tanks by pipelines of varying sizes under the waters of the Berre Lake and Canal from Marseilles to the Rhone.

Storage capacity: Depot of the Refinery of C.R.D. Total – 1,510,000 tons of refined products to which may be added 346,500 tons of crude brought by pipeline from the berths at Lavera and Fos to the Refinery.

Port de La Pointe de Berre: Cie. de Raffinage Shell Francaise (Bert No. 751 to No. 754). Refined oil products. 4 private berths.

Berth Name	*Berth No.*	*Max. length (m.)*	*Permitted draft (m.)*
A	751	160	7.31
B	752	160	7.01
Salins Berth	754	160	7.01
South West (coasters)	753	80	3.60

The berthing installations of the Cie. de Raffinage Shell Francais S.A. have connections to its tanks by specialised pipelines for the variou products. They provide loading and discharge outputs from 120 2,500 cu.m./h. according to product.

Storage capacity: Depot of the Port de La Pointe de Ber 154,000 tons.

Storage area of the Shell Refinery 1,572,000 tons.

To the above capacities should be added 303,000 tons of crude brought by pipeline to the Shell Refinery from the Lavera and Fos berth

BRIDGES: 1 railway bridge and 1 road bridge across Caronte Can each having special times for opening. Ships of less than 21 m. heig clearance may pass below the railway bridge. Motorway bridge ov Caronte Canal with 44.00 m. clearance.

STEVEDORES: To enable Agent order gangs important obtain accura ETA between 24 hours and 48 hours in advance. 2 shifts 0500 1300 hrs. and 1300 to 2100 hrs. normally 6 days a week. Confirmatio to be made at 0900 hrs. for afternoon shift, and 1700 hrs. for ne morning.

MEDICAL: All hospital and medical facilities. Yellow fever inoculatio made by appointed doctors. Masters to advise by radio prior arrival medical attendance is required on board.

TANKERS: See "Berthing".

DENSITY: About 1028. Variable in Canal de Caronte and Etang de Ber owing to discharge of hydraulic plant of St. Chamas.

FRESH WATER: Available generally by pipes and hoses at the berth Water barges available from Marseille.

FUEL: By barges for cargo ships and vessels in the Roads. Tankers Lavera refuel by pipe-line at the berths. All grades available.

FIRE PRECAUTIONS: Oil Harbour fitted with a system of 203 mm (8 in.) or 254 mm. (10 in.) sea water pipes at 5 bars permanent pressure It may be increased by pumping station up to 9 bars, and supp 500 cu.m./hr. Each wharf has 5 fire hydrants with first-aid equipmen fire hoses and spray nozzle, foam nozzle with powder cans. If fire break out on a ship, the hose handling gantries are protected by a screen sprayed water. All fire equipment and installations are painted red.

There is a special fire-fighting Corps with fire vessel. Call for fireme 06.21.29 or in case of fire call Port de Bouc Control – phone 06.22. or 06.63.39 or VHF Channel 16.

CONSULS: Norwegian, Swedish, Danish and Spanish consuls at Po de Bouc. Others at Marseille.

REPAIRS: Permission must be granted by Harbour Master only.

DRY DOCKS: Nearest at Marseille.

GANGWAY/DECK WATCHMEN: Available but not essential.

OPENING/CLOSING HATCHES: Always by crew.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes every 5 days wine/spirit: limited amount per man.

REPATRIATION: All facilities for crew change and repatriation railway or planes.

AIRPORT: Marignane Airport 40 km. and Nice Airport 230 km. (Nice SAS lines).

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Same as "Marseille".

POLICE/AMBULANCE/FIRE: Police, 42.06.23.74 or 42.07.03.31; Fire 42.06.21.29 or 42.06.28.37.

TELEPHONE: On application can be connected on board at Lavera Telephone ashore in other places.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen going ashore should carry passpo or identity card.

SHIP SUPPLY SERVICES: *Auxiliaire Maritime:* Monsieur Segu Technical Manager – Tel: 42.06.09.89, 20 Cours Landrivon, 13110 Po de Bouc, France. Telex: 430 274. Regular and spot launches service *Port Service:* Monsieur Erick Ganaye, Operations and Technic Manager, Place de Narvik, Port Petrolier, 13117 Lavera, France. Te 42.81.62.30, Telex: 401 305. Shinc boat service, Interpreters, sp helicopter service, watching.
Societe Citerna: Anse Aubran 13110 Port de Bouc, France. Te 42.06.09.90, Telex: 420 730. Bunkering (with no limits of tonnage).
Societe Ouvrages Sous-Marins et Portuaires: Monsieur Boscolo Director, Anse Aubran, 13110 Port de Bouc, France. Tel: 42.06.22.4 Telex: 400 035, SHinc diving operations – wet docking. Speakin English, German and Spanish.

SHIPMASTER'S REPORT: October 1987.
Berth: Berth No. A1 at Lavera.
Documents:
6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (including bond, ship's stores, currency,etc.).
1 copy Health Declaration.
The agent assisted with all formalities.

Anchorage: The vessel anchored in Fos Bay about 1 mile West of Lave North Breakwater (Port de Bouc). Pilot now compulsory for anchorin Under certain circumstances vessels can vent off gas at anchor if wi from North. Use West anchorage. Normally for venting have to 12 miles off coast.

Pilotage: Pilot boards off Lavera Buoy from a fast launch.

Reporting: Report to "Couronne" Signal Station on VHF Channels and 10 when inbound at Omega Buoy and when outbound leavi Lavera or Fos. They require details of vessel, cargo type and tonna and destination.

Currents: There are strong currents in the Basin off Lavera piers due to outflow from Etang de Berre through Canal de Caronte. Eddies encountered in the vicinity of Berth A4. Vessels often experience strong cross current off Port de Bouc entrance.

Tugs: Tugs not normally required by small vessels, except in strong winds.

Berthing: Vessel berthed at Berth A1 for loading ethylene, this being the nearest pier inside the harbour. If vessel is loading vinyl chloride monomer (VCM) Berth A4 is used. This berth is just behind Berth A1. Butadiene and propylene are also loaded at Berth A1.

There are good fenders at both berths.

Moorings consisted of 3 head/stern lines and 2 springs forward and aft.

A shore telephone is connected and an English speaking deck watchman is compulsory whilst working cargo only.

Fresh water is available at both berths.

Storing: Lorries delivering stores to Berth A1 may proceed to within 60 m. of the ship's rail. However, at Berth A4 storing is difficult as lorries are not allowed within 200 m. of the vessel.

Cargo: Ethylene (Berth A1) and VCM (Berth A4) are handled through 8 in. liquid and vapour Chicksans.

The loading rate for ethylene is about 150 t.p.h. Digital temperature readout available.

VCM is loaded at an approximate rate of 230 t.p.h.

At Berth A1 vapour return up to a back pressure of 3 Bar was obtained with ship's compressors. However, if vessel is careful, 2 compressors can be used to facilitate loading rate/cool down.

At Berth A4 the shore stop was on the exact quantity. A tonnage check is given about 1 hour before completion. Anything in the 3 km. shore line must be taken on board. This was stated to be 140 tonnes but can be over or under by 10 tonnes.

The GECO Surveyor is in constant attendance at both berths and the office is close at hand. The surveyor speaks fairly good English.

Nitrogen can be taken from shore line at ambient temperature at both berths, rate about 500 cu.m.p.h.

There are no shore foremen.

The maximum venting to atmosphere that is allowed by Port Authority is 10% of lower explosive limit of Cargo Vapour in tanks.

General: The nearest airport is Marseilles Marinagne, which is about 8 miles away.

Berth A1 telephone number from UK is 010 33 42.81.55.70.

Berth A4 telephone number from UK is 010 33 42.81.56.36.

Nitrogen can also be taken at H Bis Berth at far side of harbour. No meter on tank volume. Telephone from UK 010 33 42.81.84.44.

Nitrogen also taken at "K1" Berth on the other side of pier from 'A4'. Again, no meter on tank volume. No telephone available.

No V.R.L./vent line at H Bis and K1 Berths, hence 100% LEL atmospheric venting.

Port side to both berths.

K1 Berth only for small vessels, stern protrudes.

Also see Shipmaster's Report dated December 1988.

SHIPMASTER'S REPORT: December 1988.

The following is an update on Shipmaster's Report, dated October 1987.

Berthing: Good fendering at both berths, except at Berth A1, one fender aft has a steel face which can cause damage.

At Berth A1 vessels berth head-in starboard side alongside. At A4 Berth vessels usually berth starboard side alongside.

Cargo: At Berth A1, the VRL for ethylene is now a 6 in. flexible steel hose.

Fuel: Gas Oil available from shore line at Berth A1. Bunkering not allowed during cargo operations, but may be allowed during cooling down, depends on Shift Supervisor.

PILOTAGE: Compulsory. Contact by Marseilles radio or direct to pilot boat by VHF Channel 16 for calling, Channel 9 for traffic. Pilot boards in the roads between 2 and 2.5 miles S.W. of Bouc Tower or farther out if required. Motor launch, black hull, white cabin, white anchor on bow, flying "H" flag.

Port de Bouc Port Control, call on Channel 12, Channel 12 for traffic. Pilot boat on Channel 16 for calling and Channel 14 for traffic.

ANCHORAGE: It is recommended to ask for Pilot before anchoring in outer roads to avoid prohibited anchorages. Permanent watch on VHF Channel 12 compulsory.

RESTRICTIONS: When large tankers are proceeding in the Fos Channel, other vessels' entrance may be delayed.

Access channel for very large vessels dredged to 22 m. over a width of 250 m.

Notice: *Port Authorities Instructions Concerning Fos/Lavera Tanker Areas.*

Special Notice No. 94/81.

Re: Berthing of Tankers Loaded with Naphtha or Gasoline.

Taking into account the recurring risks encountered with tankers discharging naphtha, super gasoline, gasoline or condensate, until further notice, it has been decided that only one vessel at a time, carrying said cargo, will be allowed to discharge in above areas of Port Autonome de Marseille.

For the time being these restrictions do not apply to coasters.

Furthermore, vessels concerned, whatsoever the year of building, will only be allowed alongside providing that pump room is clean, gas free and that no product is leaking at ship's valves or pumps.

Should above conditions not be fulfilled vessels could not be accepted in above areas.

MAX. SIZE: Max. draft at Oil Jetty 22.25 m.; Solmer in Dock No. 1 – 18.6 m.; Mineral Quay in Dock No. 1 – 14.93 m. Dock No. 2 – 17.07 m. Dock No. 3 – 14.93 m.

HEALTH: Pratique given by Customs Officers who board on arrival. In case of suspected disease on board, notify Agent by radio before arrival. See also "Marseilles".

RADIO: Within 150 miles, traffic should be routed through Marseilles Radio, FFM, otherwise via St. Lys. FFL.

VHF: Channel 12 for calling and traffic.Channel 14 for pilot.

RADAR: Port and approach radar station.

TUGS: Tugs normally join vessel in the entrance channel. Ship's lines are used, or from tugs if required.

GENERAL CARGO FACILITIES: *End of the Mole between Docks 2 and 3:* 1 berth (No. 870). Serviceable length: 110 m. Max. draft: 6.50 m.

This berth permits sea-going barges to come alongside and is reserved for stern-loading Ro-Ro vessels.

Gloria Basin: On the East side of the basin: The Brule Tabac Quay for miscellaneous traffic.

3 berths (Nos. 871-873).

Berth 871: Serviceable length: 221 m. Max. draft: 11.50 m.

It is equipped with a floating ramp for Ro/Ro traffic.

Berth 872: Serviceable length: 222 m. Max. draft: 11.50 m.

Berth 873: Serviceable length: 222 m. Max. draft: 10.80 m.

It is equipped with a floating pontoon, permitting access for stern-loading Ro/Ro vessels.

Equipment: 1 quayside railway for direct transhipment; 2×15 tonne mobile cranes; 1×8 tonne mobile crane; a storage area of 170,000 sq.m.; a transit shed of 9,000 sq.m.

In addition to the above equipment, the Port Authority's 500/600 tonnes floating derrick "Protis" is available for use in the harbour areas of Marseilles, Port Saint Louis du Rhone and Fos.

On the West side of the basin: A deep-water quay, the Gloria, will be able to receive vessels of ever-increasing size which cannot be accommodated at the quays of Port Saint Louis du Rhone. (Phase 1 completed).

Berth 821: Solmer finished products dispatch quay.

South Dock: Length 360 m. Max. draft: 12.00 m. Equipped with 2 cranes of 50 tonnes at 26 m.

Berth 859: Private berth at the end of Dock 2, serving the installations of the Compagnie Francaise d'Entreprises Metalliques (CFEM).

Length: 120 m. Max. draft: 6.10 m.

BULK HANDLING FACILITIES: Fuel, solid minerals, ores: 3 public berths and 2 private berths.

Public Berths:

3 berths Q1 (No. 851), Q2 (No. 852) and Q3 (No. 853) in Dock 1, West Quay: Total length of quay: 884 m. Usable length of quay: 850 m. Max. depth of water at quay side berth: 16 m.

Largest admissible ship: Deadweight capacity: 100,000 d.w.t. (approx.). Length: about 300 m. Max. draft: 49 ft. (14.93 m.).

Equipment: (Capacities for products of density = 1.3).

For discharge: 2×20 tons bucket gantry cranes (P1.P2) (2×700 t.p.h. peak output). 2×15 tons at 30 m. reach, bucket cranes (K1.K2) (2×600 t.p.h. peak output). 2×70 cu.m. hoppers connected to cranes.

For loading: 1 continuous loading gantry C1 (Aluminium Pechiney) (1,500 t.p.h. peak output). 1 continuous loading gantry C2 for ships up to 50,000 d.w.t. (1,600 t.p.h. peak output). 1 assembly loader (tilting conveyor with feeder) for ships up to 25,000 d.w.t. (1,500 t.p.h. peak output). 1 loading berth for river barges (800 t.p.h. peak output).

Conveyors: 1 fixed reversible longitudinal conveyor belt L1 (2 speeds: 1,600 and 2,000 t.p.h. nominal). 1 fixed reversible transversal conveyor belt T1 (1,600 t.p.h. nominal). 1 train of 7 mobile conveyors (PMA) with stacker (1,600 t.p.h. nominal). 1 fixed longitudinal conveyor belt LP supplying loading gantry C1. 1 fixed import transversal conveyor belt T2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 fixed reversible longitudinal conveyor belt L2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 reversible fixed longitudinal conveyor belt L3 (1,600 t.p.h. nominal). 1 second train of 7 mobile conveyors with stacker (CARFOS) (2 speeds: 1,600 and 2,000 t.p.h. nominal. 3 mobile conveyors of 36 m. (1,600 – 2,000 t.p.h. nominal).

Storage: Buffer stock: approx. 7 acres. Storage area: approx. 21 ha. Covered storage: 3,840 sq.m. shed. Whole storage capacity: approx. 900,000 cu.m. (excluding buffer stock. 25,000 tons aluminium silo (Aluminium Pechiney).

Commercial throughput subject to product specific gravity and grade, type of vessel, operating conditions.

Discharge: Three shifts daily (20 hours work) commercial rate for products from specific density 0.8 (coal) to 1.3 (bauxite, sulphur): Using 2×20 ton bucket gantry cranes: 12,000 to 16,000 t.p.day. Using 2×15 ton bucket cranes: 7,000 to 10,000 t.p.day.

Loading: Hourly commercial output for products of 0.8 to1.3 specific density: With the loading gantry C1: 600 to 1,000 t.p.h. With the loading gantry C2: 800 to 1,300 t.p.h. With combined use of assembly loader (inclinable conveyor) and feeder: 300 to 600 t.p.h. On the river barge berth: 600 t.p.h.

Annual terminal throughput capacity between 4.0 and 4.5 million tonnes per year consisting of:

3.0 to 3.5 million tonnes incoming cargo. 1.5 to 1.0 million tonnes outgoing cargo.

DEVELOPMENTS SINCE 1983.

Maximum water depth on Berth Q2: Deepened to 17.50 m.

Largest admissible vessel: Deadweight capacity: 140,000 d.w.t. (approx.). Draft: 55 ft. (16.76 m.).

Equipment: For discharge: 1 Five Cail Babcock continuous unloader (P+) for vessels up to 150,000 d.w.t. Peak output: 2,200 t.p.h. (coal). 2,700 t.p.h. (bauxite).

River barge loading berth. A new river barge loading berth with commercial output reaching (100 m. long North End): 750 t.p.h.

Conveyors. 1 fixed transversal export conveyor belt T3 supplying either conveyor belt L3 to loading gantry C2 or river barge berth.

Discharging commercial output. Three shifts daily (20 hrs. work) commercial rate on a 140,000 d.w.t. bulk carrier for product of specific density 0.8 (coal). Using: 1 continuous unloader (P+) plus 1 train of mobile conveyors: 22,000 t.p.day. Using 1 continuous unloader (P+) plus 2×15 ton bucket cranes (K1.K2) plus high capacity storage installation: 28,000 t.p.day.

Annual terminal throughput capacity. Between 5.0 and 6.0 million tonnes per year consisting of: 4.0 to 5.0 million tonnes incoming cargo. 2.0 to 1.0 million tonnes outgoing cargo.

Until the high capacity storage installation is put into service, this traffic capacity can only be reached by increasing the turnover rates of existing storage areas.

A further quay and equipment is planned to handle much larger vessels.

DRY BULK EQUIPMENT: P.M.A. equipment:

2×20 tonne bucket gantry cranes. 2 cranes of 15 tonnes at 30 m. 6 fixed conveyors. 10 public and 7 private mobile conveyors. 2 stackers on tyres. 3 feeders with a capacity of 1,500 t.p.h.; 1 of these is privately owned. 1 ship loader of 1,000 t.p.h. capacity. 1 continuous unloader with a capacity of 28,000 tonnes per day has also been brought into service.

Private equipment: 2 discharging gantry cranes on the Solmer import quay. 2 cranes of 50 tonnes at 26 m. on the Solmer export quay. 1 loading gantry crane of 1,500 t.p.h. conceded to a private firm (Pechiney Co.) with the obligation to give public service on the ore quay.

Private Berths: Two private berths (Nos. 811 – 812) in Dock 1 – Eastern Quay. Ste. Solmer reception quay.

Available berthing length: 640 m. Permitted draft: 18.60 m.

Annual capacity of loading or discharge:

Solid minerals, fuels – Coal: 3,000,000 tons/year.
Ores: 4,000,000 tons/year.

The Societe Solmer Quay is equipped with 2×40 ton gantries, each having an hourly rate of discharge of 2,000 tons.

Storage Capacity: Fuel, solid minerals, Coal: 350,000 tons.
Ores: 1,000,000 tons.

Societe Solmer has a quayside open area of 360,000 sq.m. for the receipt and storage of coal and ores.

LNG FACILITIES:

At Dock No. 1. (Berth No. 830) (Owned by Gaz de France).

Length available for berthing 180 m. Max. draft 9.75 m.

2 storage tanks, for LNG in the liquid phase (−160°C.), each with a capacity of 35,000 cu. m. (1,235,500 cu. ft.) and 1×80,000 cu.m.

The pumps on the LNG Carrier discharge through articulated pipes of 300 mm. diameter (11.8 in.), 3 are specifically for discharge; one is to return the methane, in the vapour phase to the carrier.

After warming up from the liquid phase, with the addition of nitrogen to conform with the value in the French Gas Grid, the gas, in the vapour phase, is despatched by pipe-line to the underground storage at Tersanne, 214 km. from Fos (134 miles), and to Marseilles and the Cote d'Azur.

LPG FACILITIES: *Propane:* Geogaz's underground storage of 120,000 cu.m. at Lavera is connected directly by pipe-line to the oil refineries and the port

Butane: Underground storage of Geobutane at Lavera. Capacity of 170,000 cu.m. can now be raised to 230,000 cu.m. following a positive geological survey.

Reshipment Traffic: The port has established an international reputation for its technically delicate operations.

CHEMICAL PRODUCTS: 2 privately managed berths on the East quay of Dock 2.

Facilities of the ATOFOS Company (Berth 858):

Serviceable length: 90 m.; Max. draft: 11.30 m.

This berth is reserved for the export of chemical products such as vinyl monomer chloride and washing soda.

Arco Terminal:

Serviceable length: 135 m. Max. draft 11.30 m.

This berth is reserved for the export of different products (MTBA, MTBE, Oxynol, Oxide Proplyene, etc.).

CONTAINER HANDLING FACILITIES:

5 berths (Nos. 862–866) in Dock 2, Graveleau Quay.

Available berthing length: 1,060 m.

Permitted draft: 13.00 m. (Berth No. 866 – max. draft 13.00 m.

Annual loading or discharge capacity: 150,000 containe i.e. 2,500,000 tonnes (approx.) (20 ft. and 40 ft.)

P.M.A. equipment: 5 Paceco quayside gantry cranes of 40 tonne capacity 20 – 25 containers p.h. and 2 Caillard gantry cranes 40 tonnes.

Private equipment for handling containers on ground surfaces:

2 transtainers (on tyres) capable of stradling 6 rows, 4 high, plus service road and of lifting 40 tonnes; 15 front-lifters with 40 tonne liftin capacity; 6 fork-lift trucks with 12 tonne lifting capacity; 2 fork-lift truck with 10 tonne lifting capacity; 10 fork-lift trucks with 3 tonnes liftin capacity; 32 park tractors with adjustable couplers; 77 skeleton trailer for containers.

Storage capacity: 15,000 containers i.e. 225,000 tonnes (approx (20 ft. and 40 ft.). Users have at their disposal a storage area with total surface of 27 hectares.

Annual capacity of output or input: 150,000 containers (20 ft. an 40 ft.) i.e.: 2,000,000 tonnes (approx.) by lorries or railway. The Frenc Railways Transcontainers terminal has 2 gantries on open areas wi lifting capacity of 40 tonnes.

The terminal also has: A control centre of 2,000 sq.m.; 2 service area of 200 m.×70 m.; a stuffing and unstuffing area of 3,200 sq.m comprising 2 sheds of 25 m.×20 m. each.

MEDICAL: All hospital and medical facilities. Yellow fever inoculatio made by appointed doctors. Masters to advise by radio, prior arrival, medical attendance required on board.

TANKERS: Chicksan loading/discharge arms fitted at all berths. Ballas discharge ashore through pipe-line. Tank cleaning slop or oil residu not accepted through shore line, but can be disposed of by barge fro Marseilles. Possibility of crude cleaning for vessels with inert gas syste if cleaning does not exceed time of discharging operations.

Crude: 6 public berths, of which 2 are multi-purpose 0 and 0 Bis (Nos 800 and 807).

Designation	*Berth No.*	*Berthing Length (m.)*	*Max. Draft (m.)*
0	800	250	12.40
0 Bis	807	250	12.80
1	801	370	20.58
2	802	350	17.90
3	803	420	22.25
4	804	420	14.00

Berths 0 and 0 Bis (800 and 807) are equipped to handle either expo or import of refined products, or the loading of crude oil from a tanke moored at one of the Berths 1, 2 or 3 (Nos. 801, 802, 803)

Berths 1, 2 and 3 (Nos. 801, 802, 803) are for receiving crude oil onl Berth 2 (No. 802) is specially equipped to tranship, by using speci pipe-lines, crude oil from a vessel alongside at Berth 1 (No. 801) an No. 3 (No. 803).

Specialised lines, dependent upon the nature of the products, conne these berths to the oil depot of Fos, to the CRAU depot (Shell-C.F.R B.P.) to the Esso refinery and to the S.P.S.E. terminal, all located in Fos

Shipmaster's Report: October 1986.

On Berth Nos. 1, 2 and 3 the outboard lifeboat is to be lowered dow to the embarkation deck and rigged ready for immediate use.

Storage Capacity:

S.P.S.E. Terminal	2,660,000 cu.m.
CRAU Depot	1,910,000 cu.m.
Esso Refinery	1,040,000 cu.m.
Total:	5,610,000 cu.m.

Berth 4 (No. 804): Located at Mole No. 2 of the oil terminal, offers a primary stage a depth of water of 15 m. The berth is intended fo berthing in ballast of vessels of 550,000 d.w.t. for washing out tank prior to repair.

It also permits the reception of crude oil imports and the transhipme of crude from tankers moored at Berths 801, 802 and 803.

The maximum permissible draft is at present 14 m.

The berth is connected to the new deballasting station by a 20 i diameter pipe-line. During the current first phase of development, th station treats only ballast of low oil content.

The berth can also be used for discharging crude from tankers wi drafts up to 14.02 m., and is equipped with one 42 in. diameter discharg pipe and two 16 in. diameter discharge arms.

During the current first phase of development, this berth is n equipped with refuelling pipes or boarding towers.

This berth is also used for transhipment from ship to ship (alongsi each other) for crude and gas operations.

Refined Products: 4 berths of which 2 are multi-purpose – 0 and 0 B (Nos. 800 and 807).

Designation	*Berth No.*	*Berthing Length (m.)*	*Max. Draft (m.)*	*Remarks*
0	800	250	12.40	Public
0 Bis	807	250	12.80	Public
C.2	808	100	6.30	Public
Solmer	821A	100	5.50	Private

Independently of the receipt of crude oil, berths 0 and 0 Bis a equipped to handle either refined product import or export traffic, or th loading of crude oil from tankers berthed at berths 1, 2 and 3 (801, 80 803).

Berth C.2 (No. 808) specialises in loading refined products on coas vessels and the Solmer berth specialises in the receipt of fuel oil.

Storage capacity:

Fos Oil Depot	522,000 cu.m.
Esso Refinery	1,023,000 cu.m.
Total:	1,545,000 cu.m.

Report:

Berthing Procedures: Tugs are secured in the dredged channel between Buoy Nos. 3 to 7, using the "On the Hook" method. Tugs watch VHF Channel 6.

Loaded or ballasted tankers are usually berthed starboard side to the berth and are swung on departure. But on request (ship's manifold too far displaced or only one gangway available) or in some weather conditions (S.E. winds), ships may be berthed port side alongside. The swing is always difficult and requires careful attention.

Usual parallel landing method is followed for Berths 0 – 0 Bis and 4, and ship's anchor may sometimes be used in special weather conditions.

When instructed to Berth at No. 1 or 2, Masters should be aware that the speed has to be carefully checked and agreed with the Pilots. When passing the last buoy of the channel (No. 11), the engine has to be put "full astern" and the effect of the propeller may bring the vessel approximately parallel to the jetty. The berth approach is then conducted at an angle of less than 30° with tugs' control.

Only Berth No. 4 is equipped with an approach velocity indicator which may be moved to No. 3 in the future.

For all the berths, ships' lines are taken ashore by mooring launches and lifted by hand on to the bollards or quick release hooks.

Spring lines are sent first, then breast lines and tugs will come alongside to push. Mooring boats make VHF contact on Channel 6.

Shore gangways are available only on Berth Nos. 1, 2 and 3, put on the ship's deck forward of the manifold (ships' lifebuoys used). On the other berth ships' gangways are needed with safety nets and lifebuoys.

Berths: Managed by the "Port Autonome de Marseilles", the berths consist of concrete platforms with rubber fenders. All are equipped with counter balanced hard arms, bolted connections. Shore personnel carry out connections/disconnections and a permanent watch is maintained on the berth. This watch may be made from a control room where video surveillance is carried out for the berths by one camera mounted on the arms and another one watching the entire berth.

The outside arms can be used for bunkering and for discharge of ballast.

Storage for ballast is up to 80,000 cu.m. and discharge rate to 5,000 cu.m.p.h.

Shore lines have *No Non-Return* valves, and ships are advised to carefully close their manifold gate valves during any stops.

Port Regulations give maximum cargo temperature allowed for discharging heated cargo using crude oil lines: in these special cases, 55°C (131°F) may not be exceeded.

BALLAST: *deballasting station:* This station is situated to the rear of the oil jetties; in the current phase of development it treats ballast of only low oil content.

Its main characteristics are as follows:

Primary separation: 4,000 cu.m/hr., with apparatus for removing sediment and the oil recovered.

Intermediate storage in a basin of 80,000 cu.m., 320 m. long by 108 m. wide by 3.50 m. deep.

Secondary separation capable of rejecting water containing less than 5 p.p.m. of crude oil and petroleum products (by infra-red measurement) with a throughput of 250 cu.m/hr.

Storage of oil-rich mixtures (slops) 4×360 cu.m.

Auxiliary installations (fire).

Storage of oil-rich mixtures, 4,520 cu.m. will shortly be in service.

FRESH WATER: Available by pipe-line at all berths.

FUEL: Available by barge only.

FIRE PRECAUTIONS: A special fire fighting corp. operates at Fos. Tel. 42.06.21.29 or Port de Bouc Control on VHF Channel 12 or Telephone 42.06.63.39.

CONSULS: Norwegian, Swedish, Danish and Spanish Consuls at Port de Bouc. Others at Marseilles.

REPAIRS: Ore berth can be used as a repairs berth when not required for cargo operations. Permission must be obtained for tanker repairs. No tankers repairs if vessel is not gas free. Permission given by Harbour Master only.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes every 5 days. Wine/Spirits: limited amount allowed per man.

AIRPORT: Marseilles/Marignane Airport about 60 km. distance.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

TELEPHONES: On application, telephones can be connected on board.

SHIPMASTER'S REPORT: August 1987 (updated 1990).

Berth: ATOFOS Berth.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.

Pilotage: Pilot boards at No. 3 Bis Buoy, 1.5 miles North West of Lavera Buoy. The vessel is to call Port de Bouc Control 2 hours before arrival and on passing Omega Buoy. The distance from No. 3 Bis Buoy to the berth is 5 miles.

Berthing: ATOFOS Berth is a private facility at the North East end of Dock 2. The depth alongside is 12 m. The berth is capable of handling 30,000 d.w.t. vessels. Products handled are vinyl chloride monomer (VCM) and caustic soda.

The berth has a 50 m. face with mooring/fender dolphins either side giving a flat fendering of about 100 m. The vessel berthed port side to, head out. The mooring dolphins are fitted with large rubber fenders.

Tugs: No tugs are required by small vessels, mooring to the dolphin and the shore is carried out by use of a launch.

Cargo: VCM is handled through an 8 in. Chicksan with a 6 in. vapour return line attached. Caustic soda is also handled through a Chicksan on the North end of the pier. The VCM Chicksan is in the centre of the pier.

Vapour is returned to the shore tanks.

VCM intake temperatures average −8°C and the loading rate is approximately 260 cu.m.p.h. VCM storage not inhibited. Inhibitor added to each ship's tank through loading arm, after first foot samples taken.

The ship makes the stops. After completion ship blows back ashore.

The plant/berth works in tandem with Berth A4 at Lavera. If Lavera berth is occupied and the ATOFOS berth free, ships berth at ATOFOS.

Storing: Diesel trucks are allowed to back-up to within 50 m. of the vessel. Fuel tankers and lub. oil tankers are not allowed near the vessel while the arm is connected.

General: Fresh water is available at the quay. There is no charge made.

Developments: A new chemical complex and berth are under construction for ARCO Chemical Company 3 cables South East of ATOFOS. It is anticipated that the berth will handle 1 vessel a day and average about 300 vessels per year.

AUTHORITY: Port Autonome de Marseille, Capitainerie des Bassins Ouest, B.P. 200, 13528 Port de Bouc Cedex. *Tel:* 42.06.22.26. *Telex:* 42.44.01.64 Porfos. *Cables:* Porfos. *Contact:* Harbour Master.

NANTES: 47.14 N. 01.34 W. (See Plan)
ST. NAZAIRE: 47.17 N. 02.12 W.
DONGES: 47.18 N. 02.04 W.
MONTOIR: 47.18 N. 02.08 W.

DOCUMENTS:

Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
6 Crew Lists.
3 Passenger Lists.
Health Declaration.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.

PILOTAGE: Compulsory for vessels longer than 75 m. Pilotage is not compulsory for vessels under 75 m. LOA if they are equipped with radar and VHF and have no hazardons cargo onboard. Pilotage starts about 4 miles North of lighthouse of Le Pilier, on lightbuoy "SN 3". Pilot boat on station day and night, if weather conditions permit, West of a line drawn between "SN 3" lightbuoy and lightbuoy of "La Couronnee" about 2 miles N.N.E. If Pilot unable to come aboard he may invite ship to follow his boat until they have reached better shelter. Ships heading for one of the Loire estuary ports should give ETA at least 24 hours before arrival to Port Captain of Saint-Nazaire. Approximate time of arrival at "SN 3" buoy, the onward destination and speed should be given. VHF contact can be made direct with St. Nazaire pilot boat or "Estuaire de la Loire" pilot station.

ANCHORAGE: When Pilot service withdrawn, anchor near "SN 3" lightbuoy or in "Rade des Charpentiers". In rough sea ships heave to off harbour. In case of doubt contact pilot boat by VHF or phone. Vessels are not allowed to anchor before Quay Emile Cormerais and Chevire Power Station Embankment (cables).

MAX. SIZE:

St. Nazaire: South Entrance Lock: Max. LOA 210 m. Max. draft 8.50 m. Max. beam 28 m.

Montoir: Length 300 m., max. draft 16.1 m.

Donges: Length 350 m., max. draft 16.1 m.

Nantes: Length up to 225 m., max. draft 10.05 m., minimum 8.55 m.

HEALTH: Pratique given by Customs Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique Master should radio Agent before arrival, advising full details.

RADIO: St. Nazaire Radio operates on 1687 MHz. It keeps a continuous watch on VHF Channel 16 and 2182 kHz.

VHF: VHF Radiotelephone must be used for giving information and obtaining clearance to navigate from the Harbour Master.

The following Channels and frequencies are used:

Channel 16 Frequency: 156.8 MHz
Channel 12 Frequency: 156.6 MHz
Channel 6 Frequency: 156.3 MHz

The Pilots can be contacted on VHF Channels 16 and 12.

A continuous watch is maintained on Channels 16 and 12.

RADAR: The radar service can be contacted on VHF Channels 16 and 12.

TUGS: *Nantes:* 4 "Abeille" tugs 500 h.p. to 1,000 h.p.

Donges – Montoir – St. Nazaire: 6 tugs 2,000 h.p. to 4,500 h.p. They are provided by Societe Nazairienne de Remurguage.

BERTHING: St. Nazaire: Is a port with locks. Max. draft: 28 ft. (vessels up to 20 – 25,000 d.w.t. in the best conditions of tides).

Dock Water Density: 1003 to 1025.
Length of Quay: 2,700 m.
Number of Berths: 15.
Numerous cranes up to 12 tons and a 400 ton derrick.

Traffic: Timber, heavy loads, metallurgical products, refined products, fertilizers, grain (capacity of the grain silo: 10,000 tons. Loading rate 400 t.p.h.), oil seeds, phosphates. Tanker berth – Deballasting station. Ro/Ro operations can be carried out.

Montoir: Port Authority use own steel cables to supplement ship's ropes.

Dock Water Density: 1000 to 1020.

Specialised Facilities: Ro/Ro Berth – Max. LOA 140 m. Warehousing and 36,960 sq.m. of back up land.

LNG: 2 privately managed berths can receive gas-carriers up to 125,000 cu.m. Also see "Shipmasters Report" dated "June 1980".

Port de Bouc/Caronte: Quay berths reserved exclusively for commercial operation of sea-going vessels: Berth Nos. 780 to 786 and 2 berths for river barges.

Total length of quays: 763 m.; Usable berthing length: 1,000 m.; Permitted draft: 2 berths for barges with draft of less than 4 m.; 5 berths of 8 m. to less than 9 m.

Berths reserved for repairs afloat (Agglomerate Quay No. 787): Total length of quays: 250 m. Max. draft 4.5 m.

Equipment:

Quay cranes: 2 cranes of 3–6 tonnes
3 cranes of 6–12 tonnes
2 cranes of 12 tonnes

Seven cranes, private, forming part of the installations of the Etablissement Maritime de Caronte et de Fos (CARFOS)

Quay gantries: 2 gantries of 10–20 tonnes, private (CARFOS) used for ores, stacking and removal from stock. Lifting capacity of the most powerful: 15 tonnes.

1 phosphate reloading gantry (CARFOS) with a capacity of 400 t.p.h.

Cranes allocated to naval repairs afloat, at the Agglomerate Quay: 2 private cranes from 6 to less than 15 tonnes. Lifting capacity of the most powerful: 4–8 tonnes.

Floating cranes: 1 private crane, with a lifting capacity of 100 tonnes.

Storage:

Quay-side sheds	8,200 sq.m.	(private)
Other sheds or warehouses	4,875 sq.m.	,,
Quay-side open areas	16,000 sq.m.	,,
	10,000 sq.m.	(public)
Other open areas	8,000 sq.m.	(private)

Bulk Liquids: Vegetable or animal oils and chemical products:

1 public quay under private use (Favat installation) (Berth No. 780): Verminck Quay. Useful berthing length: 120 m. Permitted draft: 7.50 m.

Discharge of oils is effected by shipboard pumps and the relay pump of the land installations – rate 200 t.p.h.

Storage capacity: 6,000 tonnes.

The Favat storage installations located outside the port area, on private property, have a total capacity of 12,000 cu.m. These installations are connected by a network of 3 pipelines of 200,150 and 100 mm. to the discharge points at the quayside. Storage Shed: 4,000 sq.m.

Chemical products exclusively: 1 private berth (Berth No. 786): Kuhlman Quay (Ets. Kuhlman). Useful berthing length: 140 m. Permitted draft: 7.10 m. Factory storage capacity: 2,500 tonnes.

Bulk Solids: Ores, coal, heavy minerals:

5 berths at the Caronte Quay (Berths Nos. 781–785) private use granted to Etablissement Maritime de Caronte et de Fos (CARFOS).

Usable berthing length: 650 m. Permitted draft: 8.40 m.

1 quay berth for loading phosphate barges, located between berth No. 785 and berth No. 780. Berthing length: 80 m. Permitted draft: 3.50 m.

The Caronte Quay has a specialised installation comprising:

3 transporting units and weighing hoppers with a unit output of 135 t.p.h.

1 transporting unit and specialist weighing hopper specialised in wagon loading: output 150 t.p.h.

2 weighing hopper towers – unit capacity: 1,200 tons per day.

2 weighbridges (40 and 80 tonnes).

The 7 scoop cranes are emptied into weighing hoppers which in turn discharge on to conveyor belts which terminate either above wagons to be loaded, into sheds or open storage areas. Hourly capacity per crane 120 t.p.h. – 150 t.p.h.

The quay is also equipped with 2 gantry cranes of 10 to 20 tonnes used for stacking and reclaiming minerals and 1 gantry crane with a capacity of 400 t.p.h. used for reloading phosphate.

Storage capacity: 63,000 tonnes.

The CARFOS storage installations include:

3 phosphate sheds of 6,800 sq.m.

1 ilmenite shed of 550 sq.m.

1 open area of 6,000 sq.m.

Oil seeds – oil cake: 2 berths (No. 784 and No. 785) at the Caronte Quay, private use granted to CARFOS

Available berthing length: 170 m. each. Permitted draft: 8.84 m.

Storage capacity: 10,000 tonnes. These berths are also used for ores, coal and heavy minerals.

Installations and equipment: Identical to those on the quays for ores, coal and heavy minerals.

Etang de Berre/La Mede:

Available berthing length: La Mede – 70 m. Berre – 560 m.

La Mede: 1 berth. Berre: 4 berths.

Port of La Mede: Cie de Raffinage et de Distribution (C.R.D. Total). Berth No. 744.

Name of Berth	*Berth No.*	*Type of installation*	*Available berthing length (m.)*	*Permitted draft (m.)*
4	744	Pier	70	5.40

The installations of the C.R.D. Total permit loading or unloading of 100–600 cu.m./h. according to product.

The installations of C.R.D. Total are connected to tanks by pipelines of varying sizes under the waters of the Berre Lake and Canal from Marseilles to the Rhone.

Storage capacity: Depot of the Refinery of C.R.D. Total – 1,510,000 tons of refined products to which may be added 346,500 tons of crude brought by pipeline from the berths at Lavera and Fos to the Refinery.

Port de La Pointe de Berre: Cie. de Raffinage Shell Francaise (Ber No. 751 to No. 754). Refined oil products. 4 private berths.

Berth Name	*Berth No.*	*Max. length (m.)*	*Permitted draft (m.)*
A	751	160	7.31
B	752	160	7.01
Salins Berth	754	160	7.01
South West (coasters)	753	80	3.60

The berthing installations of the Cie. de Raffinage Shell Francai S.A. have connections to its tanks by specialised pipelines for the vario products. They provide loading and discharge outputs from 120 2,500 cu.m./h. according to product.

Storage capacity: Depot of the Port de La Pointe de Ber 154,000 tons.

Storage area of the Shell Refinery 1,572,000 tons.

To the above capacities should be added 303,000 tons of crude brought by pipeline to the Shell Refinery from the Lavera and Fos berth

BRIDGES: 1 railway bridge and 1 road bridge across Caronte Car each having special times for opening. Ships of less than 21 m. heig clearance may pass below the railway bridge. Motorway bridge ov Caronte Canal with 44.00 m. clearance.

STEVEDORES: To enable Agent order gangs important obtain accura ETA between 24 hours and 48 hours in advance. 2 shifts 0500 1300 hrs. and 1300 to 2100 hrs. normally 6 days a week. Confirmatio to be made at 0900 hrs. for afternoon shift, and 1700 hrs. for ne morning.

MEDICAL: All hospital and medical facilities. Yellow fever inoculatio made by appointed doctors. Masters to advise by radio prior arrival medical attendance is required on board.

TANKERS: See "Berthing".

DENSITY: About 1028. Variable in Canal de Caronte and Etang de Ber owing to discharge of hydraulic plant of St. Chamas.

FRESH WATER: Available generally by pipes and hoses at the berth Water barges available from Marseille.

FUEL: By barges for cargo ships and vessels in the Roads. Tankers Lavera refuel by pipe-line at the berths. All grades available.

FIRE PRECAUTIONS: Oil Harbour fitted with a system of 203 mm (8 in.) or 254 mm. (10 in.) sea water pipes at 5 bars permanent pressur It may be increased by pumping station up to 9 bars, and supp 500 cu.m./hr. Each wharf has 5 fire hydrants with first-aid equipmen fire hoses and spray nozzle, foam nozzle with powder cans. If fire break out on a ship, the hose handling gantries are protected by a screen sprayed water. All fire equipment and installations are painted red.

There is a special fire-fighting Corps with fire vessel. Call for fireme 06.21.29 or in case of fire call Port de Bouc Control – phone 06.22.2 or 06.63.39 or VHF Channel 16.

CONSULS: Norwegian, Swedish, Danish and Spanish consuls at Po de Bouc. Others at Marseille.

REPAIRS: Permission must be granted by Harbour Master only.

DRY DOCKS: Nearest at Marseille.

GANGWAY/DECK WATCHMEN: Available but not essential.

OPENING/CLOSING HATCHES: Always by crew.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes every 5 days wine/spirit: limited amount per man.

REPATRIATION: All facilities for crew change and repatriation railway or planes.

AIRPORT: Marignane Airport 40 km. and Nice Airport 230 km. (Nice SAS lines).

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Same as "Marseille".

POLICE/AMBULANCE/FIRE: Police, 42.06.23.74 or 42.07.03.31; Fir 42.06.21.29 or 42.06.28.37.

TELEPHONE: On application can be connected on board at Laver Telephone ashore in other places.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen going ashore should carry passpo or identity card.

SHIP SUPPLY SERVICES: *Auxiliaire Maritime:* Monsieur Segu Technical Manager – Tel: 42.06.09.89, 20 Cours Landrivon, 13110 Po de Bouc, France. Telex: 430 274. Regular and spot launches service *Port Service:* Monsieur Erick Ganaye, Operations and Technic Manager, Place de Narvik, Port Petrolier, 13117 Lavera, France. Te 42.81.62.30, Telex: 401 305. Shinc boat service, Interpreters, spo helicopter service, watching.

Societe Citerna: Anse Aubran 13110 Port de Bouc, France. Te 42.06.09.90, Telex: 420 730. Bunkering (with no limits of tonnage).

Societe Ouvrages Sous-Marins et Portuaires: Monsieur Boscolo Director, Anse Aubran, 13110 Port de Bouc, France. Tel: 42.06.22.4 Telex: 400 035, SHinc diving operations – wet docking. Speakin English, German and Spanish.

SHIPMASTER'S REPORT: October 1987.

Berth: Berth No. A1 at Lavera.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (including bond, ship's stores, currency,etc.).
1 copy Health Declaration.

The agent assisted with all formalities.

Anchorage: The vessel anchored in Fos Bay about 1 mile West of Lave North Breakwater (Port de Bouc). Pilot now compulsory for anchorin Under certain circumstances vessels can vent off gas at anchor if wi from North. Use West anchorage. Normally for venting have to 12 miles off coast.

Pilotage: Pilot boards off Lavera Buoy from a fast launch.

Reporting: Report to "Couronne" Signal Station on VHF Channels and 10 when inbound at Omega Buoy and when outbound leavin Lavera or Fos. They require details of vessel, cargo type and tonnag and destination.

Currents: There are strong currents in the Basin off Lavera piers due to outflow from Etang de Berre through Canal de Caronte. Eddies encountered in the vicinity of Berth A4. Vessels often experience strong cross current off Port de Bouc entrance.

Tugs: Tugs not normally required by small vessels, except in strong winds.

Berthing: Vessel berthed at Berth A1 for loading ethylene, this being the nearest pier inside the harbour. If vessel is loading vinyl chloride monomer (VCM) Berth A4 is used. This berth is just behind Berth A1. Butadiene and propylene are also loaded at Berth A1.

There are good fenders at both berths.

Moorings consisted of 3 head/stern lines and 2 springs forward and aft.

A shore telephone is connected and an English speaking deck watchman is compulsory whilst working cargo only.

Fresh water is available at both berths.

Storing: Lorries delivering stores to Berth A1 may proceed to within 60 m. of the ship's rail. However, at Berth A4 storing is difficult as lorries are not allowed within 200 m. of the vessel.

Cargo: Ethylene (Berth A1) and VCM (Berth A4) are handled through 8 in. liquid and vapour Chicksans.

The loading rate for ethylene is about 150 t.p.h. Digital temperature readout available.

VCM is loaded at an approximate rate of 230 t.p.h.

At Berth A1 vapour return up to a back pressure of 3 Bar was obtained with ship's compressors. However, if vessel is careful, 2 compressors can be used to facilitate loading rate/cool down.

At Berth A4 the shore stop was on the exact quantity. A tonnage check is given about 1 hour before completion. Anything in the 3 km. shore line must be taken on board. This was stated to be 140 tonnes but can be over or under by 10 tonnes.

The GECO Surveyor is in constant attendance at both berths and the office is close at hand. The surveyor speaks fairly good English.

Nitrogen can be taken from shore line at ambient temperature at both berths, rate about 500 cu.m.p.h.

There are no shore foremen.

The maximum venting to atmosphere that is allowed by Port Authority is 10% of lower explosive limit of Cargo Vapour in tanks.

General: The nearest airport is Marseilles Marinagne, which is about 8 miles away.

Berth A1 telephone number from UK is 010 33 42.81.55.70.

Berth A4 telephone number from UK is 010 33 42.81.56.36.

Nitrogen can also be taken at H Bis Berth at far side of harbour. No meter on tank volume. Telephone from UK 010 33 42.81.84.44.

Nitrogen also taken at "K1" Berth on the other side of pier from 'A4'. Again, no meter on tank volume. No telephone available.

No V.R.L./vent line at H Bis and K1 Berths, hence 100% LEL atmospheric venting.

Port side to both berths.

K1 Berth only for small vessels, stern protrudes.

Also see Shipmaster's Report dated December 1988.

SHIPMASTER'S REPORT: December 1988.

The following is an update on Shipmaster's Report, dated October 1987.

Berthing: Good fendering at both berths, except at Berth A1, one fender aft has a steel face which can cause damage.

At Berth A1 vessels berth head-in starboard side alongside. At A4 Berth vessels usually berth starboard side alongside.

Cargo: At Berth A1, the VRL for ethylene is now a 6 in. flexible steel hose.

Fuel: Gas Oil available from shore line at Berth A1. Bunkering not allowed during cargo operations, but may be allowed during cooling down, depends on Shift Supervisor.

AUTHORITY: Port Autonome de Marseille, Capitainerie des Bassins Ouest, B.P.200, 13528 Port de Bouc Cedex. *Tel:* 42.06.22.26. *Telex:* 440164 PORFOS. *Cables:* PORFOS. *Contact:* Harbour Master.

DOCUMENTS:

Inward Declaration (Presented by Pilot on boarding).

1 Cargo Manifest or Manifest in Ballast.

Bill of Lading.

Ship's Register (if required).

6 Crew Lists (8 if Spanish or U.S.S.R. ship or ship bound for these countries).

3 Passenger Lists.

Health Declaration.

Derat Certificate.

3 Bunker Supply Forms.

Declaration of crew personal effects, cameras, binoculars, radios, cigarettes, tobacco, etc.

If on inspection, articles or quantities not in conformity or in excess, Master held responsible, articles removed and heavy fines imposed.

Shipmaster's Report: October 1988.

1 copy Inward Declaration.

1 copy Outward Declaration.

1 copy Cargo Manifest.

1 copy Ship's Register.

6 copies Crew List.

3 copies Passenger List.

1 copy Maritime Declaration of Health.

2 copies Personal Effects Declaration.

2 copies Stores List.

2 copies Transit Cargo List.

PILOTAGE: Compulsory. Contact by Marseilles radio or direct to pilot boat by VHF Channel 16 for calling, Channel 9 for traffic. Pilot boards in the roads between 2 and 2.5 miles S.W. of Bouc Tower or farther out if required. Motor launch, black hull, white cabin, white anchor on bow, flying "H" flag.

Port de Bouc Port Control, call on Channel 12, Channel 12 for traffic. Pilot boat on Channel 16 for calling and Channel 14 for traffic.

ANCHORAGE: It is recommended to ask for Pilot before anchoring in outer roads to avoid prohibited anchorages. Permanent watch on VHF Channel 12 compulsory.

RESTRICTIONS: When large tankers are proceeding in the Fos Channel, other vessels' entrance may be delayed.

Access channel for very large vessels dredged to 22 m. over a width of 250 m.

Notice: *Port Authorities Instructions Concerning Fos/Lavera Tanker Areas.*

Special Notice No. 94/81.

Re: Berthing of Tankers Loaded with Naphtha or Gasoline.

Taking into account the recurring risks encountered with tankers discharging naphtha, super gasoline, gasoline or condensate, until further notice, it has been decided that only one vessel at a time, carrying said cargo, will be allowed to discharge in above areas of Port Autonome de Marseille.

For the time being these restrictions do not apply to coasters.

Furthermore, vessels concerned, whatsoever the year of building, will only be allowed alongside providing that pump room is clean, gas free and that no product is leaking at ship's valves or pumps.

Should above conditions not be fulfilled vessels could not be accepted in above areas.

MAX. SIZE: Max. draft at Oil Jetty 22.25 m.; Solmer in Dock No. 1 – 18.6 m.; Mineral Quay in Dock No. 1 – 14.93 m. Dock No. 2 – 17.07 m. Dock No. 3 – 14.93 m.

HEALTH: Pratique given by Customs Officers who board on arrival. In case of suspected disease on board, notify Agent by radio before arrival. See also "Marseilles".

RADIO: Within 150 miles, traffic should be routed through Marseilles Radio, FFM, otherwise via St. Lys. FFL.

VHF: Channel 12 for calling and traffic.Channel 14 for pilot.

RADAR: Port and approach radar station.

TUGS: Tugs normally join vessel in the entrance channel. Ship's lines are used, or from tugs if required.

GENERAL CARGO FACILITIES: *End of the Mole between Docks 2 and 3:* 1 berth (No. 870). Serviceable length: 110 m. Max. draft: 6.50 m.

This berth permits sea-going barges to come alongside and is reserved for stern-loading Ro-Ro vessels.

Gloria Basin: On the East side of the basin: The Brule Tabac Quay for miscellaneous traffic.

3 berths (Nos. 871-873).

Berth 871: Serviceable length: 221 m. Max. draft: 11.50 m.

It is equipped with a floating ramp for Ro/Ro traffic.

Berth 872: Serviceable length: 222 m. Max. draft: 11.50 m.

Berth 873: Serviceable length: 222 m. Max. draft: 10.80 m.

It is equipped with a floating pontoon, permitting access for stern-loading Ro/Ro vessels.

Equipment: 1 quayside railway for direct transhipment; 2×15 tonne mobile cranes; 1×8 tonne mobile crane; a storage area of 170,000 sq.m.; a transit shed of 9,000 sq.m.

In addition to the above equipment, the Port Authority's 500/600 tonnes floating derrick "Protis" is available for use in the harbour areas of Marseilles, Port Saint Louis du Rhone and Fos.

On the West side of the basin: A deep-water quay, the Gloria, will be able to receive vessels of ever-increasing size which cannot be accommodated at the quays of Port Saint Louis du Rhone. (Phase 1 completed).

Berth 821: Solmer finished products dispatch quay.

South Dock: Length 360 m. Max. draft: 12.00 m. Equipped with 2 cranes of 50 tonnes at 26 m.

Berth 859: Private berth at the end of Dock 2, serving the installations of the Compagnie Francaise d'Entreprises Metalliques (CFEM).

Length: 120 m. Max. draft: 6.10 m.

BULK HANDLING FACILITIES: Fuel, solid minerals, ores: 3 public berths and 2 private berths.

Public Berths:

3 berths Q1 (No. 851), Q2 (No. 852) and Q3 (No. 853) in Dock 1, West Quay: Total length of quay: 884 m. Usable length of quay: 850 m. Max. depth of water at quay side berth: 16 m.

Largest admissible ship: Deadweight capacity: 100,000 d.w.t. (approx.). Length: about 300 m. Max. draft: 49 ft. (14.93 m.).

Equipment: (Capacities for products of density = 1.3).

For discharge: 2×20 tons bucket gantry cranes (P1.P2) (2×700 t.p.h. peak output). 2×15 tons at 30 m. reach, bucket cranes (K1.K2) (2×600 t.p.h. peak output). 2×70 cu.m. hoppers connected to cranes.

For loading: 1 continuous loading gantry C1 (Aluminium Pechiney) (1,500 t.p.h. peak output). 1 continuous loading gantry C2 for ships up to 50,000 d.w.t. (1,600 t.p.h. peak output). 1 assembly loader (tilting conveyor with feeder) for ships up to 25,000 d.w.t. (1,500 t.p.h. peak output). 1 loading berth for river barges (800 t.p.h. peak output).

Conveyors: 1 fixed reversible longitudinal conveyor belt L1 (2 speeds: 1,600 and 2,000 t.p.h. nominal). 1 fixed reversible transversal conveyor belt T1 (1,600 t.p.h. nominal). 1 train of 7 mobile conveyors (PMA) with stacker (1,600 t.p.h. nominal). 1 fixed longitudinal conveyor belt LP supplying loading gantry C1. 1 fixed import transversal conveyor belt T2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 fixed reversible longitudinal conveyor belt L2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 reversible fixed longitudinal conveyor belt L3 (1,600 t.p.h. nominal). 1 second train of 7 mobile conveyors with stacker (CARFOS) (2 speeds: 1,600 and 2,000 t.p.h. nominal. 3 mobile conveyors of 36 m. (1,600 – 2,000 t.p.h. nominal).

Port de Bouc/Caronte: Quay berths reserved exclusively for commercial operation of sea-going vessels: Berth Nos. 780 to 786 and 2 berths for river barges.

Total length of quays: 763 m.; Usable berthing length: 1,000 m.; Permitted draft: 2 berths for barges with draft of less than 4 m.; 5 berths of 8 m. to less than 9 m.

Berths reserved for repairs afloat (Agglomerate Quay No. 787): Total length of quays: 250 m. Max. draft 4.5 m.

Equipment:

Quay cranes: 2 cranes of 3–6 tonnes
3 cranes of 6–12 tonnes
2 cranes of 12 tonnes

Seven cranes, private, forming part of the installations of the Etablissement Maritime de Caronte et de Fos (CARFOS)
Quay gantries: 2 gantries of 10–20 tonnes, private (CARFOS) used for ores, stacking and removal from stock. Lifting capacity of the most powerful: 15 tonnes.

1 phosphate reloading gantry (CARFOS) with a capacity of 400 t.p.h.

Cranes allocated to naval repairs afloat, at the Agglomerate Quay: 2 private cranes from 6 to less than 15 tonnes. Lifting capacity of the most powerful: 4–8 tonnes.
Floating cranes: 1 private crane, with a lifting capacity of 100 tonnes.

Storage:

Quay-side sheds	8,200 sq.m.	(private)
Other sheds or warehouses	4,875 sq.m.	,,
Quay-side open areas	16,000 sq.m.	,,
	10,000 sq.m.	(public)
Other open areas	8,000 sq.m.	(private)

Bulk Liquids: Vegetable or animal oils and chemical products:

1 public quay under private use (Favat installation) (Berth No. 780): Verminck Quay. Useful berthing length: 120 m. Permitted draft: 7.50 m.

Discharge of oils is effected by shipboard pumps and the relay pump of the land installations – rate 200 t.p.h.

Storage capacity: 6,000 tonnes.

The Favat storage installations located outside the port area, on private property, have a total capacity of 12,000 cu.m. These installations are connected by a network of 3 pipelines of 200,150 and 100 mm. to the discharge points at the quayside. Storage Shed: 4,000 sq.m.

Chemical products exclusively: 1 private berth (Berth No. 786): Kuhlman Quay (Ets. Kuhlman). Useful berthing length: 140 m. Permitted draft: 7.10 m. Factory storage capacity: 2,500 tonnes.

Bulk Solids: Ores, coal, heavy minerals:

5 berths at the Caronte Quay (Berths Nos. 781–785) private use granted to Etablissement Maritime de Caronte et de Fos (CARFOS).

Usable berthing length: 650 m. Permitted draft: 8.40 m.

1 quay berth for loading phosphate barges, located between berth No. 785 and berth No. 780. Berthing length: 80 m. Permitted draft: 3.50 m.

The Caronte Quay has a specialised installation comprising:

3 transporting units and weighing hoppers with a unit output of 135 t.p.h.

1 transporting unit and specialist weighing hopper specialised in wagon loading: output 150 t.p.h.

2 weighing hopper towers – unit capacity: 1,200 tons per day.

2 weighbridges (40 and 80 tonnes).

The 7 scoop cranes are emptied into weighing hoppers which in turn discharge on to conveyor belts which terminate either above wagons to be loaded, into sheds or open storage areas. Hourly capacity per crane 120 t.p.h. – 150 t.p.h.

The quay is also equipped with 2 gantry cranes of 10 to 20 tonnes used for stacking and reclaiming minerals and 1 gantry crane with a capacity of 400 t.p.h. used for reloading phosphate.

Storage capacity: 63,000 tonnes.

The CARFOS storage installations include:

3 phosphate sheds of 6,800 sq.m.
1 ilmenite shed of 550 sq.m.
1 open area of 6,000 sq.m.

Oil seeds – oil cake: 2 berths (No. 784 and No. 785) at the Caronte Quay, private use granted to CARFOS

Available berthing length: 170 m. each. Permitted draft: 8.84 m.

Storage capacity: 10,000 tonnes. These berths are also used for ores, coal and heavy minerals.

Installations and equipment: Identical to those on the quays for ores, coal and heavy minerals.

Etang de Berre/La Mede:

Available berthing length: La Mede – 70 m. Berre – 560 m.

La Mede: 1 berth. Berre: 4 berths.

Port of La Mede: Cie de Raffinage et de Distribution (C.R.D. Total). Berth No. 744.

Name of Berth	*Berth No.*	*Type of installation*	*Available berthing length (m.)*	*Permitted draft (m.)*
4	744	Pier	70	5.40

The installations of the C.R.D. Total permit loading or unloading of 100–600 cu.m./h. according to product.

The installations of C.R.D. Total are connected to tanks by pipelines of varying sizes under the waters of the Berre Lake and Canal from Marseilles to the Rhone.

Storage capacity: Depot of the Refinery of C.R.D. Total – 1,510,000 tons of refined products to which may be added 346,500 tons of crude brought by pipeline from the berths at Lavera and Fos to the Refinery.

Port de La Pointe de Berre: Cie. de Raffinage Shell Francaise (Ber No. 751 to No. 754). Refined oil products. 4 private berths.

FIRE PRECAUTIONS: Oil Harbour fitted with a system of 203 mm (8 in.) or 254 mm. (10 in.) sea water pipes at 5 bars permanent pressur It may be increased by pumping station up to 9 bars, and supp 500 cu.m./hr. Each wharf has 5 fire hydrants with first-aid equipmen fire hoses and spray nozzle, foam nozzle with powder cans. If fire break out on a ship, the hose handling gantries are protected by a screen sprayed water. All fire equipment and installations are painted red.

There is a special fire-fighting Corps with fire vessel. Call for fireme 06.21.29 or in case of fire call Port de Bouc Control – phone 06.22.2 or 06.63.39 or VHF Channel 16.

CONSULS: Norwegian, Swedish, Danish and Spanish consuls at Po de Bouc. Others at Marseille.

REPAIRS: Permission must be granted by Harbour Master only.

DRY DOCKS: Nearest at Marseille.

GANGWAY/DECK WATCHMEN: Available but not essential.

OPENING/CLOSING HATCHES: Always by crew.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes every 5 days wine/spirit: limited amount per man.

REPATRIATION: All facilities for crew change and repatriation railway or planes.

AIRPORT: Marignane Airport 40 km. and Nice Airport 230 km. (Nice SAS lines).

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Same as "Marseille".

POLICE/AMBULANCE/FIRE: Police, 42.06.23.74 or 42.07.03.31; Fir 42.06.21.29 or 42.06.28.37.

TELEPHONE: On application can be connected on board at Lavera Telephone ashore in other places.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Seamen going ashore should carry passpo or identity card.

SHIP SUPPLY SERVICES: *Auxiliaire Maritime:* Monsieur Segu Technical Manager – Tel: 42.06.09.89, 20 Cours Landrivon, 13110 Po de Bouc, France. Telex: 430 274. Regular and spot launches service

Port Service: Monsieur Erick Ganaye, Operations and Technica Manager, Place de Narvik, Port Petrolier, 13117 Lavera, France. Te 42.81.62.30, Telex: 401 305. Shinc boat service, Interpreters, spo helicopter service, watching.

Societe Citerna: Anse Aubran 13110 Port de Bouc, France. Te 42.06.09.90, Telex: 420 730. Bunkering (with no limits of tonnage).

Societe Ouvrages Sous-Marins et Portuaires: Monsieur Boscolo Director, Anse Aubran, 13110 Port de Bouc, France. Tel: 42.06.22.4 Telex: 400 035, SHinc diving operations – wet docking. Speakin English, German and Spanish.

SHIPMASTER'S REPORT: October 1987.

Berth: Berth No. A1 at Lavera.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (including bond, ship's stores, currency,etc.).
1 copy Health Declaration.

The agent assisted with all formalities.

Anchorage: The vessel anchored in Fos Bay about 1 mile West of Lave North Breakwater (Port de Bouc). Pilot now compulsory for anchorin Under certain circumstances vessels can vent off gas at anchor if wi from North. Use West anchorage. Normally for venting have to 12 miles off coast.

Pilotage: Pilot boards off Lavera Buoy from a fast launch.

Reporting: Report to "Couronne" Signal Station on VHF Channels and 10 when inbound at Omega Buoy and when outbound leavi Lavera or Fos. They require details of vessel, cargo type and tonna and destination.

Currents: There are strong currents in the Basin off Lavera piers due to outflow from Etang de Berre through Canal de Caronte. Eddies encountered in the vicinity of Berth A4. Vessels often experience strong cross current off Port de Bouc entrance.

Tugs: Tugs not normally required by small vessels, except in strong winds.

Berthing: Vessel berthed at Berth A1 for loading ethylene, this being the nearest pier inside the harbour. If vessel is loading vinyl chloride monomer (VCM) Berth A4 is used. This berth is just behind Berth A1. Butadiene and propylene are also loaded at Berth A1.

There are good fenders at both berths.

Moorings consisted of 3 head/stern lines and 2 springs forward and aft.

A shore telephone is connected and an English speaking deck watchman is compulsory whilst working cargo only.

Fresh water is available at both berths.

Storing: Lorries delivering stores to Berth A1 may proceed to within 60 m. of the ship's rail. However, at Berth A4 storing is difficult as lorries are not allowed within 200 m. of the vessel.

Cargo: Ethylene (Berth A1) and VCM (Berth A4) are handled through 8 in. liquid and vapour Chicksans.

The loading rate for ethylene is about 150 t.p.h. Digital temperature readout available.

VCM is loaded at an approximate rate of 230 t.p.h.

At Berth A1 vapour return up to a back pressure of 3 Bar was obtained with ship's compressors. However, if vessel is careful, 2 compressors can be used to facilitate loading rate/cool down.

At Berth A4 the shore stop was on the exact quantity. A tonnage check is given about 1 hour before completion. Anything in the 3 km. shore line must be taken on board. This was stated to be 140 tonnes but can be over or under by 10 tonnes.

The GECO Surveyor is in constant attendance at both berths and the office is close at hand. The surveyor speaks fairly good English.

Nitrogen can be taken from shore line at ambient temperature at both berths, rate about 500 cu.m.p.h.

There are no shore foremen.

The maximum venting to atmosphere that is allowed by Port Authority is 10% of lower explosive limit of Cargo Vapour in tanks.

General: The nearest airport is Marseilles Marinagne, which is about 8 miles away.

Berth A1 telephone number from UK is 010 33 42.81.55.70.

Berth A4 telephone number from UK is 010 33 42.81.56.36.

Nitrogen can also be taken at H Bis Berth at far side of harbour. No meter on tank volume. Telephone from UK 010 33 42.81.84.44.

Nitrogen also taken at "K1" Berth on the other side of pier from 'A4'. Again, no meter on tank volume. No telephone available.

No V.R.L./vent line at H Bis and K1 Berths, hence 100% LEL atmospheric venting.

Port side to both berths.

K1 Berth only for small vessels, stern protrudes.

Also see Shipmaster's Report dated December 1988.

SHIPMASTER'S REPORT: December 1988.

The following is an update on Shipmaster's Report, dated October 1987.

Berthing: Good fendering at both berths, except at Berth A1, one fender aft has a steel face which can cause damage.

At Berth A1 vessels berth head-in starboard side alongside. At A4 Berth vessels usually berth starboard side alongside.

Cargo: At Berth A1, the VRL for ethylene is now a 6 in. flexible steel hose.

Fuel: Gas Oil available from shore line at Berth A1. Bunkering not allowed during cargo operations, but may be allowed during cooling down, depends on Shift Supervisor.

AUTHORITY: Port Autonome de Marseille, Capitainerie des Bassins Ouest, B.P.200, 13528 Port de Bouc Cedex. *Tel:* 42.06.22.26. *Telex:* 440164 PORFOS. *Cables:* PORFOS. *Contact:* Harbour Master.

DOCUMENTS:

Inward Declaration (Presented by Pilot on boarding).
1 Cargo Manifest or Manifest in Ballast.
Bill of Lading.
Ship's Register (if required).
6 Crew Lists (8 if Spanish or U.S.S.R. ship or ship bound for these countries).
3 Passenger Lists.
Health Declaration.
Derat Certificate.
3 Bunker Supply Forms.
Declaration of crew personal effects, cameras, binoculars, radios, cigarettes, tobacco, etc.

If on inspection, articles or quantities not in conformity or in excess, Master held responsible, articles removed and heavy fines imposed.

Shipmaster's Report: October 1988.
1 copy Inward Declaration.
1 copy Outward Declaration.
1 copy Cargo Manifest.
1 copy Ship's Register.
6 copies Crew List.
3 copies Passenger List.
1 copy Maritime Declaration of Health.
2 copies Personal Effects Declaration.
2 copies Stores List.
2 copies Transit Cargo List.

PILOTAGE: Compulsory. Contact by Marseilles radio or direct to pilot boat by VHF Channel 16 for calling, Channel 9 for traffic. Pilot boards in the roads between 2 and 2.5 miles S.W. of Bouc Tower or farther out if required. Motor launch, black hull, white cabin, white anchor on bow, flying "H" flag.

Port de Bouc Port Control, call on Channel 12, Channel 12 for traffic. Pilot boat on Channel 16 for calling and Channel 14 for traffic.

ANCHORAGE: It is recommended to ask for Pilot before anchoring in outer roads to avoid prohibited anchorages. Permanent watch on VHF Channel 12 compulsory.

RESTRICTIONS: When large tankers are proceeding in the Fos Channel, other vessels' entrance may be delayed.

Access channel for very large vessels dredged to 22 m. over a width of 250 m.

Notice: *Port Authorities Instructions Concerning Fos/Lavera Tanker Areas.*

Special Notice No. 94/81.

Re: Berthing of Tankers Loaded with Naphtha or Gasoline.

Taking into account the recurring risks encountered with tankers discharging naphtha, super gasoline, gasoline or condensate, until further notice, it has been decided that only one vessel at a time, carrying said cargo, will be allowed to discharge in above areas of Port Autonome de Marseille.

For the time being these restrictions do not apply to coasters.

Furthermore, vessels concerned, whatsoever the year of building, will only be allowed alongside providing that pump room is clean, gas free and that no product is leaking at ship's valves or pumps.

Should above conditions not be fulfilled vessels could not be accepted in above areas.

MAX. SIZE: Max. draft at Oil Jetty 22.25 m.; Solmer in Dock No. 1 – 18.6 m.; Mineral Quay in Dock No. 1 – 14.93 m. Dock No. 2 – 17.07 m. Dock No. 3 – 14.93 m.

HEALTH: Pratique given by Customs Officers who board on arrival. In case of suspected disease on board, notify Agent by radio before arrival. See also "Marseilles".

RADIO: Within 150 miles, traffic should be routed through Marseilles Radio, FFM, otherwise via St. Lys. FFL.

VHF: Channel 12 for calling and traffic.Channel 14 for pilot.

RADAR: Port and approach radar station.

TUGS: Tugs normally join vessel in the entrance channel. Ship's lines are used, or from tugs if required.

GENERAL CARGO FACILITIES: *End of the Mole between Docks 2 and 3:* 1 berth (No. 870). Serviceable length: 110 m. Max. draft: 6.50 m.

This berth permits sea-going barges to come alongside and is reserved for stern-loading Ro-Ro vessels.

Gloria Basin: On the East side of the basin: The Brule Tabac Quay for miscellaneous traffic.

3 berths (Nos. 871-873).

Berth 871: Serviceable length: 221 m. Max. draft: 11.50 m.

It is equipped with a floating ramp for Ro/Ro traffic.

Berth 872: Serviceable length: 222 m. Max. draft: 11.50 m.

Berth 873: Serviceable length: 222 m. Max. draft: 10.80 m.

It is equipped with a floating pontoon, permitting access for stern-loading Ro/Ro vessels.

Equipment: 1 quayside railway for direct transhipment; 2×15 tonne mobile cranes; 1×8 tonne mobile crane; a storage area of 170,000 sq.m.; a transit shed of 9,000 sq.m.

In addition to the above equipment, the Port Authority's 500/600 tonnes floating derrick "Protis" is available for use in the harbour areas of Marseilles, Port Saint Louis du Rhone and Fos.

On the West side of the basin: A deep-water quay, the Gloria, will be able to receive vessels of ever-increasing size which cannot be accommodated at the quays of Port Saint Louis du Rhone. (Phase 1 completed).

Berth 821: Solmer finished products dispatch quay.

South Dock: Length 360 m. Max. draft: 12.00 m. Equipped with 2 cranes of 50 tonnes at 26 m.

Berth 859: Private berth at the end of Dock 2, serving the installations of the Compagnie Francaise d'Entreprises Metalliques (CFEM).

Length: 120 m. Max. draft: 6.10 m.

BULK HANDLING FACILITIES: Fuel, solid minerals, ores: 3 public berths and 2 private berths.

Public Berths:

3 berths Q1 (No. 851), Q2 (No. 852) and Q3 (No. 853) in Dock 1, West Quay: Total length of quay: 884 m. Usable length of quay: 850 m. Max. depth of water at quay side berth: 16 m.

Largest admissible ship: Deadweight capacity: 100,000 d.w.t. (approx.). Length: about 300 m. Max. draft: 49 ft. (14.93 m.).

Equipment: (Capacities for products of density = 1.3).

For discharge: 2×20 tons bucket gantry cranes (P1.P2) (2×700 t.p.h. peak output). 2×15 tons at 30 m. reach, bucket cranes (K1.K2) (2×600 t.p.h. peak output). 2×70 cu.m. hoppers connected to cranes.

For loading: 1 continuous loading gantry C1 (Aluminium Pechiney) (1,500 t.p.h. peak output). 1 continuous loading gantry C2 for ships up to 50,000 d.w.t. (1,600 t.p.h. peak output). 1 assembly loader (tilting conveyor with feeder) for ships up to 25,000 d.w.t. (1,500 t.p.h. peak output). 1 loading berth for river barges (800 t.p.h. peak output).

Conveyors: 1 fixed reversible longitudinal conveyor belt L1 (2 speeds: 1,600 and 2,000 t.p.h. nominal). 1 fixed reversible transversal conveyor belt T1 (1,600 t.p.h. nominal). 1 train of 7 mobile conveyors (PMA) with stacker (1,600 t.p.h. nominal). 1 fixed longitudinal conveyor belt LP supplying loading gantry C1. 1 fixed import transversal conveyor belt T2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 fixed reversible longitudinal conveyor belt L2 (2 speeds: 1,600 and 3,400 t.p.h. nominal). 1 reversible fixed longitudinal conveyor belt L3 (1,600 t.p.h. nominal). 1 second train of 7 mobile conveyors with stacker (CARFOS) (2 speeds: 1,600 and 2,000 t.p.h. nominal. 3 mobile conveyors of 36 m. (1,600 – 2,000 t.p.h. nominal).

Storage: Buffer stock: approx. 7 acres. Storage area: approx. 21 ha. Covered storage: 3,840 sq.m. shed. Whole storage capacity: approx. 900,000 cu.m. (excluding buffer stock. 25,000 tons aluminium silo (Aluminium Pechiney).

Commercial throughput subject to product specific gravity and grade, type of vessel, operating conditions.

Discharge: Three shifts daily (20 hours work) commercial rate for products from specific density 0.8 (coal) to 1.3 (bauxite, sulphur): Using 2×20 ton bucket gantry cranes: 12,000 to 16,000 t.p.day. Using 2×15 ton bucket cranes: 7,000 to 10,000 t.p.day.

Loading: Hourly commercial output for products of 0.8 to1.3 specific density: With the loading gantry C1: 600 to 1,000 t.p.h. With the loading gantry C2: 800 to 1,300 t.p.h. With combined use of assembly loader (inclinable conveyor) and feeder: 300 to 600 t.p.h. On the river barge berth: 600 t.p.h.

Annual terminal throughput capacity between 4.0 and 4.5 million tonnes per year consisting of:

3.0 to 3.5 million tonnes incoming cargo. 1.5 to 1.0 million tonnes outgoing cargo.

DEVELOPMENTS SINCE 1983.

Maximum water depth on Berth Q2: Deepened to 17.50 m.

Largest admissible vessel: Deadweight capacity: 140,000 d.w.t. (approx.). Draft: 55 ft. (16.76 m.).

Equipment: For discharge: 1 Five Cail Babcock continuous unloader (P+) for vessels up to 150,000 d.w.t. Peak output: 2,200 t.p.h. (coal). 2,700 t.p.h. (bauxite).

River barge loading berth. A new river barge loading berth with commercial output reaching (100 m. long North End): 750 t.p.h.

Conveyors. 1 fixed transversal export conveyor belt T3 supplying either conveyor belt L3 to loading gantry C2 or river barge berth.

Discharging commercial output. Three shifts daily (20 hrs. work) commercial rate on a 140,000 d.w.t. bulk carrier for product of specific density 0.8 (coal). Using: 1 continuous unloader (P+) plus 1 train of mobile conveyors: 22,000 t.p.day. Using 1 continuous unloader (P+) plus 2×15 ton bucket cranes (K1.K2) plus high capacity storage installation: 28,000 t.p.day.

Annual terminal throughput capacity. Between 5.0 and 6.0 million tonnes per year consisting of: 4.0 to 5.0 million tonnes incoming cargo. 2.0 to 1.0 million tonnes outgoing cargo.

Until the high capacity storage installation is put into service, this traffic capacity can only be reached by increasing the turnover rates of existing storage areas.

A further quay and equipment is planned to handle much larger vessels.

DRY BULK EQUIPMENT: P.M.A. equipment:

2×20 tonne bucket gantry cranes. 2 cranes of 15 tonnes at 30 m. 6 fixed conveyors. 10 public and 7 private mobile conveyors. 2 stackers on tyres. 3 feeders with a capacity of 1,500 t.p.h.; 1 of these is privately owned. 1 ship loader of 1,000 t.p.h. capacity. 1 continuous unloader with a capacity of 28,000 tonnes per day has also been brought into service.

Private equipment: 2 discharging gantry cranes on the Solmer import quay. 2 cranes of 50 tonnes at 26 m. on the Solmer export quay. 1 loading gantry crane of 1,500 t.p.h. conceded to a private firm (Pechiney Co.) with the obligation to give public service on the ore quay.

Private Berths: Two private berths (Nos. 811 – 812) in Dock 1 – Eastern Quay. Ste. Solmer reception quay.

Available berthing length: 640 m. Permitted draft: 18.60 m.

Annual capacity of loading or discharge:

Solid minerals, fuels – Coal: 3,000,000 tons/year.
Ores: 4,000,000 tons/year.

The Societe Solmer Quay is equipped with 2×40 ton gantries, each having an hourly rate of discharge of 2,000 tons.

Storage Capacity: Fuel, solid minerals, Coal: 350,000 tons.
Ores: 1,000,000 tons.

Societe Solmer has a quayside open area of 360,000 sq.m. for the receipt and storage of coal and ores.

LNG FACILITIES:

At Dock No. 1. (Berth No. 830) (Owned by Gaz de France).

Length available for berthing 180 m. Max. draft 9.75 m.

2 storage tanks, for LNG in the liquid phase (−160°C.), each with a capacity of 35,000 cu. m. (1,235,500 cu. ft.) and 1×80,000 cu.m.

The pumps on the LNG Carrier discharge through articulated pipes of 300 mm. diameter (11.8 in.), 3 are specifically for discharge; one is to return the methane, in the vapour phase to the carrier.

After warming up from the liquid phase, with the addition of nitrogen to conform with the value in the French Gas Grid, the gas, in the vapour phase, is despatched by pipe-line to the underground storage at Tersanne, 214 km. from Fos (134 miles), and to Marseilles and the Cote d'Azur.

LPG FACILITIES: *Propane:* Geogaz's underground storage of 120,000 cu.m. at Lavera is connected directly by pipe-line to the oil refineries and the port

Butane: Underground storage of Geobutane at Lavera. Capacity of 170,000 cu.m. can now be raised to 230,000 cu.m. following a positive geological survey.

Reshipment Traffic: The port has established an international reputation for its technically delicate operations.

CHEMICAL PRODUCTS: 2 privately managed berths on the East quay of Dock 2.

Facilities of the ATOFOS Company (Berth 858):

Serviceable length: 90 m.; Max. draft: 11.30 m.

This berth is reserved for the export of chemical products such as vinyl monomer chloride and washing soda.

Arco Terminal:

Serviceable length: 135 m. Max. draft 11.30 m.

This berth is reserved for the export of different products (MTBA, MTBE, Oxynol, Oxide Proplyene, etc.).

CONTAINER HANDLING FACILITIES:

5 berths (Nos. 862–866) in Dock 2, Graveleau Quay.

Available berthing length: 1,060 m.

Permitted draft: 13.00 m. (Berth No. 866 – max. draft 13.00 m.

Annual loading or discharge capacity: 150,000 containe i.e. 2,500,000 tonnes (approx.) (20 ft. and 40 ft.)

P.M.A. equipment: 5 Paceco quayside gantry cranes of 40 tonne capacity 20 – 25 containers p.h. and 2 Caillard gantry cranes 40 tonnes.

Private equipment for handling containers on ground surfaces:

2 transtainers (on tyres) capable of stradling 6 rows, 4 high, plus service road and of lifting 40 tonnes; 15 front-lifters with 40 tonne liftin capacity; 6 fork-lift trucks with 12 tonne lifting capacity; 2 fork-lift truc with 10 tonne lifting capacity; 10 fork-lift trucks with 3 tonnes liftin capacity; 32 park tractors with adjustable couplers; 77 skeleton traile for containers.

Storage capacity: 15,000 containers i.e. 225,000 tonnes (appro (20 ft. and 40 ft.). Users have at their disposal a storage area with total surface of 27 hectares.

Annual capacity of output or input: 150,000 containers (20 ft. an 40 ft.) i.e.: 2,000,000 tonnes (approx.) by lorries or railway. The Frenc Railways Transcontainers terminal has 2 gantries on open areas wi lifting capacity of 40 tonnes.

The terminal also has: A control centre of 2,000 sq.m.; 2 service area of 200 m.×70 m.; a stuffing and unstuffing area of 3,200 sq.m comprising 2 sheds of 25 m.×20 m. each.

MEDICAL: All hospital and medical facilities. Yellow fever inoculatio made by appointed doctors. Masters to advise by radio, prior arrival, medical attendance required on board.

TANKERS: Chicksan loading/discharge arms fitted at all berths. Balla discharge ashore through pipe-line. Tank cleaning slop or oil residu not accepted through shore line, but can be disposed of by barge fro Marseilles. Possibility of crude cleaning for vessels with inert gas syste if cleaning does not exceed time of discharging operations.

Crude: 6 public berths, of which 2 are multi-purpose 0 and 0 Bis (No 800 and 807).

Designation	*Berth* No.	*Berthing Length* (m.)	*Max. Draft* (m.)
0	800	250	12.40
0 Bis	807	250	12.80
1	801	370	20.58
2	802	350	17.90
3	803	420	22.25
4	804	420	14.00

Berths 0 and 0 Bis (800 and 807) are equipped to handle either expo or import of refined products, or the loading of crude oil from a tank moored at one of the Berths 1, 2 or 3 (Nos. 801, 802, 803)

Berths 1, 2 and 3 (Nos. 801, 802, 803) are for receiving crude oil onl Berth 2 (No. 802) is specially equipped to tranship, by using spec pipe-lines, crude oil from a vessel alongside at Berth 1 (No. 801) an No. 3 (No. 803).

Specialised lines, dependent upon the nature of the products, conne these berths to the oil depot of Fos, to the CRAU depot (Shell-C.F.R B.P.) to the Esso refinery and to the S.P.S.E. terminal, all located in Fo

Shipmaster's Report: October 1986.

On Berth Nos. 1, 2 and 3 the outboard lifeboat is to be lowered dow to the embarkation deck and rigged ready for immediate use.

Storage Capacity:

S.P.S.E. Terminal	2,660,000 cu.m.
CRAU Depot	1,910,000 cu.m.
Esso Refinery	1,040,000 cu.m.
Total:	5,610,000 cu.m.

Berth 4 (No. 804): Located at Mole No. 2 of the oil terminal, offers a primary stage a depth of water of 15 m. The berth is intended f berthing in ballast of vessels of 550,000 d.w.t. for washing out tank prior to repair.

It also permits the reception of crude oil imports and the transhipme of crude from tankers moored at Berths 801, 802 and 803.

The maximum permissible draft is at present 14 m.

The berth is connected to the new deballasting station by a 20 diameter pipe-line. During the current first phase of development, th station treats only ballast of low oil content.

The berth can also be used for discharging crude from tankers wi drafts up to 14.02 m., and is equipped with one 42 in. diameter discharg pipe and two 16 in. diameter discharge arms.

During the current first phase of development, this berth is n equipped with refuelling pipes or boarding towers.

This berth is also used for transhipment from ship to ship (alongsi each other) for crude and gas operations.

Refined Products: 4 berths of which 2 are multi-purpose – 0 and 0 B (Nos. 800 and 807).

Designation	*Berth* No.	*Berthing Length* (m.)	*Max. Draft* (m.)	*Remarks*
0	800	250	12.40	Public
0 Bis	807	250	12.80	Public
C.2	808	100	6.30	Public
Solmer	821A	100	5.50	Private

Independently of the receipt of crude oil, berths 0 and 0 Bis a equipped to handle either refined product import or export traffic, or t loading of crude oil from tankers berthed at berths 1, 2 and 3 (801, 80 803).

Berth C.2 (No. 808) specialises in loading refined products on coas vessels and the Solmer berth specialises in the receipt of fuel oil.

Storage capacity:

Fos Oil Depot	522,000 cu.m.
Esso Refinery	1,023,000 cu.m.
Total:	1,545,000 cu.m.

Report:

Berthing Procedures: Tugs are secured in the dredged channel between Buoy Nos. 3 to 7, using the "On the Hook" method. Tugs watch VHF Channel 6.

Loaded or ballasted tankers are usually berthed starboard side to the berth and are swung on departure. But on request (ship's manifold too far displaced or only one gangway available) or in some weather conditions (S.E. winds), ships may be berthed port side alongside. The swing is always difficult and requires careful attention.

Usual parallel landing method is followed for Berths 0 – 0 Bis and 4, and ship's anchor may sometimes be used in special weather conditions.

When instructed to Berth at No. 1 or 2, Masters should be aware that the speed has to be carefully checked and agreed with the Pilots. When passing the last buoy of the channel (No. 11), the engine has to be put "full astern" and the effect of the propeller may bring the vessel approximately parallel to the jetty. The berth approach is then conducted at an angle of less than 30° with tugs' control.

Only Berth No. 4 is equipped with an approach velocity indicator which may be moved to No. 3 in the future.

For all the berths, ships' lines are taken ashore by mooring launches and lifted by hand on to the bollards or quick release hooks.

Spring lines are sent first, then breast lines and tugs will come alongside to push. Mooring boats make VHF contact on Channel 6.

Shore gangways are available only on Berth Nos. 1, 2 and 3, put on the ship's deck forward of the manifold (ships' lifebuoys used). On the other berth ships' gangways are needed with safety nets and lifebuoys.

Berths: Managed by the "Port Autonome de Marseilles", the berths consist of concrete platforms with rubber fenders. All are equipped with counter balanced hard arms, bolted connections. Shore personnel carry out connections/disconnections and a permanent watch is maintained on the berth. This watch may be made from a control room where video surveillance is carried out for the berths by one camera mounted on the arms and another one watching the entire berth.

The outside arms can be used for bunkering and for discharge of ballast.

Storage for ballast is up to 80,000 cu.m. and discharge rate to 5,000 cu.m.p.h.

Shore lines have *No Non-Return* valves, and ships are advised to carefully close their manifold gate valves during any stops.

Port Regulations give maximum cargo temperature allowed for discharging heated cargo using crude oil lines: in these special cases, 55°C (131°F) may not be exceeded.

BALLAST: *deballasting station:* This station is situated to the rear of the oil jetties; in the current phase of development it treats ballast of only low oil content.

Its main characteristics are as follows:

Primary separation: 4,000 cu.m/hr., with apparatus for removing sediment and the oil recovered.

Intermediate storage in a basin of 80,000 cu.m., 320 m. long by 108 m. wide by 3.50 m. deep.

Secondary separation capable of rejecting water containing less than 5 p.p.m. of crude oil and petroleum products (by infra-red measurement) with a throughput of 250 cu.m/hr.

Storage of oil-rich mixtures (slops) 4×360 cu.m.

Auxiliary installations (fire).

Storage of oil-rich mixtures, 4,520 cu.m. will shortly be in service.

FRESH WATER: Available by pipe-line at all berths.

FUEL: Available by barge only.

FIRE PRECAUTIONS: A special fire fighting corp. operates at Fos. Tel. 42.06.21.29 or Port de Bouc Control on VHF Channel 12 or Telephone 42.06.63.39.

CONSULS: Norwegian, Swedish, Danish and Spanish Consuls at Port de Bouc. Others at Marseilles.

REPAIRS: Ore berth can be used as a repairs berth when not required for cargo operations. Permission must be obtained for tanker repairs. No tankers repairs if vessel is not gas free. Permission given by Harbour Master only.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes every 5 days. Wine/Spirits: limited amount allowed per man.

AIRPORT: Marseilles/Marignane Airport about 60 km. distance.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

TELEPHONES: On application, telephones can be connected on board.

SHIPMASTER'S REPORT: August 1987 (updated 1990).

Berth: ATOFOS Berth.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.

Pilotage: Pilot boards at No. 3 Bis Buoy, 1.5 miles North West of Lavera Buoy. The vessel is to call Port de Bouc Control 2 hours before arrival and on passing Omega Buoy. The distance from No. 3 Bis Buoy to the berth is 5 miles.

Berthing: ATOFOS Berth is a private facility at the North East end of Dock 2. The depth alongside is 12 m. The berth is capable of handling 30,000 d.w.t. vessels. Products handled are vinyl chloride monomer (VCM) and caustic soda.

The berth has a 50 m. face with mooring/fender dolphins either side giving a flat fendering of about 100 m. The vessel berthed port side to, head out. The mooring dolphins are fitted with large rubber fenders.

Tugs: No tugs are required by small vessels, mooring to the dolphin and the shore is carried out by use of a launch.

Cargo: VCM is handled through an 8 in. Chicksan with a 6 in. vapour return line attached. Caustic soda is also handled through a Chicksan on the North end of the pier. The VCM Chicksan is in the centre of the pier.

Vapour is returned to the shore tanks.

VCM intake temperatures average −8°C and the loading rate is approximately 260 cu.m.p.h. VCM storage not inhibited. Inhibitor added to each ship's tank through loading arm, after first foot samples taken.

The ship makes the stops. After completion ship blows back ashore.

The plant/berth works in tandem with Berth A4 at Lavera. If Lavera berth is occupied and the ATOFOS berth free, ships berth at ATOFOS.

Storing: Diesel trucks are allowed to back-up to within 50 m. of the vessel. Fuel tankers and lub. oil tankers are not allowed near the vessel while the arm is connected.

General: Fresh water is available at the quay. There is no charge made.

Developments: A new chemical complex and berth are under construction for ARCO Chemical Company 3 cables South East of ATOFOS. It is anticipated that the berth will handle 1 vessel a day and average about 300 vessels per year.

AUTHORITY: Port Autonome de Marseille, Capitainerie des Bassins Ouest, B.P. 200, 13528 Port de Bouc Cedex. *Tel:* 42.06.22.26. *Telex:* 42.44.01.64 Porfos. *Cables:* Porfos. *Contact:* Harbour Master.

NANTES: 47.14 N. 01.34 W. (See Plan)
ST. NAZAIRE: 47.17 N. 02.12 W.
DONGES: 47.18 N. 02.04 W.
MONTOIR: 47.18 N. 02.08 W.

DOCUMENTS:

Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
6 Crew Lists.
3 Passenger Lists.
Health Declaration.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.

PILOTAGE: Compulsory for vessels longer than 75 m. Pilotage is not compulsory for vessels under 75 m. LOA if they are equipped with radar and VHF and have no hazardons cargo onboard. Pilotage starts about 4 miles North of lighthouse of Le Pilier, on lightbuoy "SN 3". Pilot boat on station day and night, if weather conditions permit, West of a line drawn between "SN 3" lightbuoy and lightbuoy of "La Couronnee" about 2 miles N.N.E. If Pilot unable to come aboard he may invite ship to follow his boat until they have reached better shelter. Ships heading for one of the Loire estuary ports should give ETA at least 24 hours before arrival to Port Captain of Saint-Nazaire. Approximate time of arrival at "SN 3" buoy, the onward destination and speed should be given. VHF contact can be made direct with St. Nazaire pilot boat or "Estuaire de la Loire" pilot station.

ANCHORAGE: When Pilot service withdrawn, anchor near "SN 3" lightbuoy or in "Rade des Charpentiers". In rough sea ships heave to off harbour. In case of doubt contact pilot boat by VHF or phone. Vessels are not allowed to anchor before Quay Emile Cormerais and Chevire Power Station Embankment (cables).

MAX. SIZE:

St. Nazaire: South Entrance Lock: Max. LOA 210 m. Max. draft 8.50 m. Max. beam 28 m.

Montoir: Length 300 m., max. draft 16.1 m.

Donges: Length 350 m., max. draft 16.1 m.

Nantes: Length up to 225 m., max. draft 10.05 m., minimum 8.55 m.

HEALTH: Pratique given by Customs Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique Master should radio Agent before arrival, advising full details.

RADIO: St. Nazaire Radio operates on 1687 MHz. It keeps a continuous watch on VHF Channel 16 and 2182 kHz.

VHF: VHF Radiotelephone must be used for giving information and obtaining clearance to navigate from the Harbour Master.

The following Channels and frequencies are used:

Channel 16	Frequency: 156.8 MHz
Channel 12	Frequency: 156.6 MHz
Channel 6	Frequency: 156.3 MHz

The Pilots can be contacted on VHF Channels 16 and 12.

A continuous watch is maintained on Channels 16 and 12.

RADAR: The radar service can be contacted on VHF Channels 16 and 12.

TUGS: *Nantes:* 4 "Abeille" tugs 500 h.p. to 1,000 h.p.

Donges – Montoir – St. Nazaire: 6 tugs 2,000 h.p. to 4,500 h.p. They are provided by Societe Nazairienne de Remurguage.

BERTHING: St. Nazaire: Is a port with locks. Max. draft: 28 ft. (vessels up to 20 – 25,000 d.w.t. in the best conditions of tides).

Dock Water Density: 1003 to 1025.
Length of Quay: 2,700 m.
Number of Berths: 15.
Numerous cranes up to 12 tons and a 400 ton derrick.

Traffic: Timber, heavy loads, metallurgical products, refined products, fertilizers, grain (capacity of the grain silo: 10,000 tons. Loading rate 400 t.p.h.), oil seeds, phosphates. Tanker berth – Deballasting station. Ro/Ro operations can be carried out.

Montoir: Port Authority use own steel cables to supplement ship's ropes. Dock Water Density: 1000 to 1020.

Specialised Facilities: Ro/Ro Berth – Max. LOA 140 m. Warehousing and 36,960 sq.m. of back up land.

LNG: 2 privately managed berths can receive gas-carriers up to 125,000 cu.m. Also see "Shipmasters Report" dated "June 1980".

Dry Bulk: Length of quay 818 m., cranage 2×15 tons, 5×15/30 tons average throughput per crane 500 t.p.h. Storage facilities and grain silo with gantry crane.

Traffic: Oil seeds, oil cakes, timber, coal, soya pellets, fertilisers.

Liquid Chemicals: Connections for acids and liquids, molasses average throughput: 600 t.p.h.

Container Terminal: Length of quay: 360 m., max. draft 12.0 m. Storage facilities, 2×25 ton cranes and one gantry crane. Ro/Ro vessels with side ramps also berth. 24 power points for refrigerated containers.

Coal: A coal berth is operational to receive ore carriers up to 140,000 d.w.t., rate 2,500 t.p.h.

Donges: Mooring of vessels to Dock No. 3 is performed with ship's ropes. On Dock Nos. 4, 5, 6 and 7, Port Authority use own steel cables to which ship is secured to supplement her own ropes.

Berth Nos. 5, 6 and 7: To reduce the time of mooring a special mooring gang can be put at Master's disposal for arrival and departure. Arrangements must be made 48 hours in advance of this service. Permanent watch on VHF Channel 16 is recommended.

Tanker Berths: Can receive fully loaded tankers of 120,000 – 140,000 d.w.t. or the 280,000 d.w.t. lightened. Number of berths 7.

4 berths are designed for handling refined products and LPG. Throughput: 1,500 to 5,000 cu.m./hr.

3 berths are designed for discharging crude oil. Throughput: 10,000 cu.m./hr.

Crude Connections: No. 5 Berth 4×12 in. Chicksan arms, 12 holes type 150 lbs. No. 6 Berth 5×12 in. No. 7 Berth 5×16 in. Chicksan arms. 12 holes type 150 lbs. Reducers available, notice required prior to arrival.

Bunkering Lines: No. 5 Berth 8 in. Chicksan arm with 6 in. connection. No. 6 Berth, 6 in., 8 in., or 12 in. No. 7 Berth 16 in.

Camet: Berth for tankers up to 180 m. LOA.

Nantes: Vessels may be moored with bow facing up or downstream. During heavy flood periods, however, bow to face upstream.

Dock Water Density: 1000.

Quai Chevire: Traffic: Timber and containers. 3 berths. Cranes up to 25 tons. Two 15 to 25 ton cranes are able to operate together, providing a 25 ton to 45 ton lifting capacity. Spreader available for handling 20 ft. containers (about 20 containers per hour). Storage facilities.

Quai Wilson: Length 1,472 m., 13 berths. Traffic: Heavy loads and containers in the Eastern part.

Phosphates, coal, pyrites, sulphur, salt, sugar, fruits and vegetables. Storage facilities. Numerous cranes up to 60 tons capacity.

Quai Roche-Maurice: 6 berths. Cranes up to 6 tons capacity. Discharging: phosphates, grains (loading rate 700 t.p.h.), molasses, fertilizers. Storage capacity of the grain silo: 80,000 tons.

Additional facilities for discharging oil and coaltar, chemical products, wine and various cargoes, length of quays: 1,500 m.

CRANES: 60 ton heavy lift crane at Nantes. 400 ton derrick at St. Nazaire.

BRIDGES: Vessels coming up the river to Montoir, Donges and upstream pass underneath the St. Nazaire bridge: Clearance 61 m. at lowest water.

Clearance under Chevire Bridge (under construction) is 56 m.

STEVEDORES: Available.

MEDICAL: Facilities available at any time.

TANKERS: See "Berthing".

Degassing and deballasting operations possible at St. Nazaire, capacity 1,700 cu.m.p.h.

FRESH WATER: Available at docks.

FUEL: Available in any grade or viscosity. Advance notice of at least 2 days must be given if vessel has to bunker on Saturday or Sunday. Otherwise, delivery within 36 hours by barge.

FIRE PRECAUTIONS: Usual precautions for tankers in neighbourhood of refineries. No fire, no smoking, Ground wire for ship.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Done by crew.

CONSULS:

Algeria	40.74.38.19	Netherlands	40.47.16.31
Belgium	40.71.57.10	Norway	40.71.33.35
Brazil	40.47.72.21	Portugal	40.73.05.04
Denmark	40.22.41.46	Spain	40.48.67.95
Denmark	40.71.89.13	Sweden	40.34.00.67
Finland	40.75.53.08	Switzerland	40.71.67.66

Greece	40.73.46.13	United Kingdom	40.71.08.50

REPAIRS/DRY DOCKS: Very good facilities exist for all types of repairs.

St. Nazaire: "L. Joubert" graving dock, length 350 m., width 50 m. Dock can accommodate ships up to 240,000 d.w.t.

Dry Docks: No. 1 Ships up to 40,000 d.w.t. No. 2 Ships up to 1,500 d.w.t. No. 3 Ships up to 6,000 d.w.t.

Nantes: One careening unit of 1,700 ton accommodating ships up to 100 m. long.

CUSTOMS ALLOWANCES: Tobacco: 300 cigarettes or 75 cigars. Wine; 7 pints. Spirits: up to 22° – 5.3 pints, beyond 22° – 2.7 pints. Coffee: 26 ozs. Tea: 5 ozs.

AIRPORT: *Nantes:* Good connections with French internal network (Air Inter) and also international, mainly with stop-over Paris. 5 daily flights to the capital. Direct flights to Bordeaux, Lorient, La Rochelle, Lyon, etc. *St. Nazaire:* 2 daily flights to Paris.

TIME: GMT plus 1 hour, seasonal alteration.

HOLIDAYS: New Year (1st January, no labour available); Easter Sunday (possibility of labour with overtime); Easter Monday (no labour available); Labour Day (1st May, no labour available); Ascension Day (possibility of labour with overtime); Whit Sunday (possibility of labour with overtime); Whit Monday (no labour available); National Day (14th July, no labour available); Assumption Day (15th August, no labour available); All Saints' Day (1st November, no labour available); Armistice Day (11th November, possibility of labour with overtime); Christmas Day (25th December, no labour available). N.B. Every Sunday and day marked "possibility of labour with overtime" can be worked at the rate of 100%.

POLICE/FIRE/AMBULANCE: Police 17; Fire 18; Ambulance 18.

TELEPHONE: Arrangements are possible.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not needed.

SHIPMASTER'S REPORT: June 1980.

Montoir: (Discharging ammonia) – See "Plan".

Approaches: B.A. 3216, 2989 and 2647, outer coverage not very goo Arrived in good visibility so shore lights gave good positions. Ile de Ye does not show up very well on the radar until only about 16 miles of The light on Ile de Yeu is listed on different charts as having differe characteristics and in fact agreed with that in the Light List. The mainlan showed up for some considerable distance but no worthwhile detai were identified until well up to "SN1" Buoy (Racon).

The light on "SN2" was seen about the same time as "SN1" and much brighter. Both buoys were seen on radar at ten miles. As ther are many fishing vessels, identification of these buoys in poor visibil would require a great deal of care.

Once in the "tanker channel" proceed to the pilot station as indicate on the chart.

NOTE: Remember the standard message to "Surnav France" for tanker carrying hydrocarbons.

Pilotage: Contact made on Channel 16, working Channel 12. Goo communications.

Pilot cutter is a large vessel which will come close alongside and sen away a small boat. Pilot ladder virtually to the water.

The cutter surprised us by steaming towards us at full speed and w eventually met some 3 miles West of the boarding area.

Vessel may only berth (and unberth) at slack water at Montoir. Bein loaded means having to arrive at the top of the tide, although if in ballas one may sail at low slack water. Should any supertankers be moving a that time, presumably having booked their tide first, vessel will not b allowed to sail. The Pilot could not confirm whether incoming ships ha priority.

NOTE: Unberthing tugs and Pilot to be booked by 1800 hrs. for th following morning. Vessel charged if unable to meet that particular slac water after ordering.

Three tugs used for berthing and unberthing; tugs lines, 1 forwar 1 aft and 1 pushing amidships. Backsprings sent away first.

When unberthing vessel moves upstream to turn.

Mooring boat to handle ropes.

NOTE: There were a lot of buoys which are not marked on the cha due, no doubt, to extensive dredging operations and spoil groun dumping.

Length of pilotage to first line ashore 1 hour 30 minutes.

Berth: Consists of a small "T" jetty with a line of dolphins standing prou of it by 1.5 m. These extend from just forward of the accommodation t No. 1 tank dome, 150 m. approx.

Mooring arrangements were adequate and the linesmen wer reasonably adept.

Shore gangway must be used.

It is necessary to rig the low extension to the liquid manifold as th shore chicksan has insufficient upreach. Invariably berthing port sid alongside.

Storing: Prior to this call the berth operators allowed vessels to take o provisions and foodstuffs but port regulations forbid the loading o machinery items or heavy lifts during discharge.

The derrick only plumbs the after corner of the "T" jetty and all item have to be manhandled from the gate to the derrick hook.

If any items of machinery are to be landed or loaded, it is necessar to do this either before discharge or after completion; the port authoritie insist on the chicksan being disconnected, merely stopping discharg is not sufficient.

Similarly they will not allow a fork lift truck to operate on the ber during pumping operations.

Lube oils were taken at this call and we were able to continue th during discharge, simply because the lines were connected before th chicksan and the lorry was still parked outside the jetty access.

However, after discharge, protest was made against the very lo discharge rate and frequent stoppages; the berth operators were mos upset by this and have sworn that NO STORING will be allowed the in future. This situation will obviously have to be checked very thorough in the event of having a large storing/lube oil programme. Barges a not allowed alongside during discharge.

Discharge: As already noted the low load/discharge line must be rigge on the port side prior to arrival.

There is no vapour return line. Ship supplied 10 in. reducer.

Storage capacity ashore is about 25,000 tonnes.

On arrival there was only a reported 2,000 tonnes in the shore tan and they were therefore warm with consequent problems for the initi discharge. Apparently these tanks are loaded from the top, the liqu being allowed to free fall to the bottom. In the first 24 hours the discharg rate was little more than 80 t.p.h. and there was a total of 5 hou 29 minutes stoppages at shore request. We could not discover whethe this was usual or if it was due to some uncommon machinery defect.

On boarding, the receivers quoted a maximum rate of no more tha 400 t.p.h. and probably no more than 300 t.p.h. In fact, once the sho problems were resolved we rapidly increased to 550 t.p.h. and then u to 800 t.p.h. at times. At all times ship discharged to shore requiremen shore personnel at the chicksan communicating with the officer of th watch, but only by coming on board. No telephone contact, no walki talkie.

A telephone was put on board by the Agents.

Port Regulations require ship to maintain continuous VHF watch o Channel 16.

Receivers originally requested vessel to blow through lines o completion but this was not required.

Overall discharge rate 365 t.p.h.

Surveyor: Redwoods, figures taken on gauging of ship's tanks.

General: Fresh water available from quay, not costly.

Bunkers must come by barge, usual restrictions.

No film exchange possible unless with another vessel. If the depots at out ports have sufficient it may be possible to carry out an exchange if ample warning is given.

Chandler was quite good but closes over the weekend, plenty of warning should be given for unusual items.

Access to St. Nazaire by taxi, about 50 francs.

Papers: 2 Crew Declarations. 2 Stores and Bonded Stores Lists. Port Health Form; their own form, spares supplied. 1 Passenger Declaration, made up on board.

Applied for Radio Pratique but this was not granted prior to arrival.

Agents: Very good, very helpful with good representation on board. Local office in Donges, main office at Nantes.

Ballast: The river water is very dirty indeed, flood only being marginally less so than the ebb. High injection points only should be used.

If at all possible ballasting should only be carried out from about half flood to just beyond HW to minimise the amount of deposits within the ballast tanks. Even then an immediate programme of flushing tanks should be put into effect on clearing the river.

Density varied between 1025 and 1010.

SHIPMASTER'S REPORT: August 1989.

Donges. Berth No. 7.

Vessel: 268,000 tonnes d.w.t.

We arrived at Donges after a part discharge elsewhere with a draft of 11.8 m. The pilots advised us that they take vessels up to 15.0 m. draft, and if conditions and tides permit, up to 16.0 m. draft at Donges. A VLCC of more than 300,000 tonnes d.w.t. has been handled in a lightened condition.

Approaches: The approaches are quite straightforward as the vessel can only be berthed at Donges at slack water, and in daylight for vessels of this size.

The vessel anchored in the waiting area until the pilot boarded, which was 2.5 hours before high water at Donges.

Pilotage: The pilot boarded from a small launch from the cutter which comes close alongside in the waiting area. We were instructed to have the anchor aweigh and to provide a good lee. It was not necessary for the vessel to steam to the usual pilot boarding station.

Tugs: 5 tugs were used, they approached the vessel after passing under the bridge.

Moorings: The moorings were as per "plan" (See "Plan" Section), namely 2 head lines, 2 stern lines, 2 breast lines forward and aft and 2 spring lines forward and aft. Ship's lines are sent away first, after which mooring gang boards by the shore gangway to assist the ship's crew to take up the 6 shore wires.

Loading: The berth is equipped with 4 × 16 in. Chicksans for crude oil and 1 × 12 in. Chicksan for bunkers.

Departure: Unberthing is performed at slack water and is normally in daylight for vessels of this size as vessels are berthed port side alongside and have to be swung after unberthing. Slack high water is preferred for unberthing, but for vessels which can achieve a light draft it is sometimes possible to unberth at slack low water.

When we were ready to sail the tugs were not available as they were shifting a new ship at St. Nazaire Shipyard and the Port Authorities would not permit us to depart at night, so we had to wait nearly 24 hours after completion of discharge before sailing. This particular set of circumstances does not occur very often.

Repatriation: Easily undertaken via Nantes Airport which is about one hour by taxi from Donges. The local airport at St. Nazaire is visible from the berth, but was not convenient as there were no weekend flights, also crew members undertaking international flights would have to change at Paris.

Garbage: Garbage disposal can be arranged by the agent, we had a large skip (30 cu.m.) left on the quay during our stay.

Cranes: There is a small hydraulic crane on the jetty which is used for positioning of the shore gangway, it may also be used for loading small quantities of stores and laundry and off-loading of garbage, etc. The driver must be ordered from the Port Authority in advance and there is a charge for this service.

AUTHORITY: Port Autonome de Nantes – St. Nazaire, B.P. 3139, 44031 Nantes Cedex 04. *Telex:* 700425 F. *Contact:* Harbour Master – Upstream: 18 quay Ernest Renaud, 44000 Nantes. *Tel:* 40.44.20.20. *FAX:* 40.44.20.01.

Downstream: 3 bis, boulevard de Verdun, B.P. 422, 44606 Saint-Nazaire. *Tel:* 40.00.45.20. *Telex:* 700912.

NICE: 43.42 N. 07.17 E. (See Plan)

PORT LIMITS: The Port is situated in the N.E. part of the Baie des Anges (Bay of Angels) between the castle hill and the Boron Mount which form at the Nice Cape a rocky promontory towards the South.

DOCUMENTS: The Master of a vessel, when he arrives, is required to fill out an entry declaration, a copy of which is handed to him by his Agent or by the Port Captaincy.

A Crew List and a List of Passengers intended for the Port Commissariat must be drawn up before arrival at the port.

All documents required by marine regulations, i.e. health declaration, manifest, vessel's safety plan etc., . . . are required by the port services.

PILOTAGE: The pilot station operates 24 hours a day and is attended by 2 licensed Pilots. Pilotage is obligatory for vessels of LOA 50 m. and over. Pilotage is exempt for vessels of less than 50 m., and if they are equipped with VHF, vessels of less than 70 m. The licence of Pilot is valid for vessels of a length equal to or greater than 120 m. equipped with a bow thruster and VHF. Specialised vessels carrying liquid oil, gas, and toxic products are subject to pilotage.

The pilotage area of Nice-Villefranche extends as far as 3 miles from the coast between the meridians of the left bank of the Var (07° 12′ E.) and of Cap Ferrat (07° 20′ E.). Vessels must, if possible, give warning of their arrival 24 hours in advance, particularly if they intend arriving during night-time hours.

Pilots may be called up by regulation signals during the day and night or by radiotelephone to Grasse Radio or Monaco Radio both stations on VHF Channel, telephone Nice Station (93 85 52 41) or to the Port Captaincy (Tel. 93 89 50 85).

ANCHORAGE: The coast being very rocky, does not allow anchorage close to the port. The Villefranche Roads, on the other hand, offers a sheltered zone, giving very good anchorage facilities. In the Villefranche Roads, 2 buoys can be used with the permission of the Nice Captaincy, by vessels merely calling at the port or waiting for a place on the quay at the Port of Nice. There is access for vessels of all dimensions.

RESTRICTIONS: The transport and handling of dangerous or infected materials, within the limits of the Nice Port, are subjected to the requirements of decree of the 1st February 1951 which controls the transport and handling of dangerous materials in maritime ports. There is no operation in this respect at night.

All operations, prescriptions, order and stipulations as laid down in the general regulations and the local regulation covering "Port Services" are governed by the Port Commandant.

MAX. SIZE: The commercial port is accessible to vessels of 145 m. in length and 7.0 m. draft.

HEALTH: Health control at the frontiers is subject to the measures prescribed by the international health conventions; the functions of health police and health guard are entrusted to an Agent in the service of Health. Urgent medical help can be obtained through the intermediary of the radio stations of Monaco and Grasse who establish contact directly with the department concerned.

VHF: Port Officer is on duty 24 hours a day and listens on Channel 16. Working on Channels 12 and 9.

There are two Channels, i.e. 9 and 12 for communication purposes. No communication of a private nature may be handled.

RADIO: Monaco Radio.

RADAR: None.

TUGS: 1×1,000h.p.

BERTHING: Length of usable quays 1,600 m. having a depth of 5.0 m. – 7.50 m. and 10 berths available.

CRANES: Quai Infernet: 2×5 tons cranes on rails (scoop and hook).

Commerce: (Commercial Quay) 2 cranes on rails of 6 tons capacity (scoop and hook).

Commerce: (Commercial Quay) 2 hoppers of 50 cu.m. capacity – on rails. 2 Nellen cranes on tyred wheels, capacity 4.2 tons at the end of the jib and 8 tons at 6 m. (with tackle block), and 1×10 ton capacity Gottwald crane with rubber tyred wheels.

CARGO HANDLING FACILITIES:

Material Handling Equipment: All the handling equipment is supplied by the stevedores. 1 forklift of 4 tons capacity and 11 forklifts between 4 and 8 tons capacity.

Storage Facilities: 45,000 sq. m. of open air areas. Specialised equipment for the discharge of bulk equipment (pyrite, clinker, mineral etc.)

Unloading or loading capacity – cement 1,400 tons per day; various: 400 tons to 700 tons per day and per gang; ores in bulk: 1,200 tons per day with 2 hoppers, 2 cranes and 2 gangs.

Facilities for Specialised Goods: 4 platforms for Ro-Ro traffic. Height of quays 1.23 m. and 3.06 m.

BRIDGES: None.

STEVEDORES: 67 professional dockers; 10 occasional dockers.

Employer – Bureau Central de la Main d'Oeuvre (B.C.M.O.) of the Port of Nice.

MEDICAL: Hospitals are situated in the town and give excellent treatment in the case of accidents or illnesses of any nature whatsoever.

Passengers coming from foreign countries are required to abide by the prescriptions of international agreements (vaccination certificates, health certificates, etc.).

TANKERS: No facilities.

DENSITY: *Salinity:* Varies between 34 gm. and 38 gm. per litre.

FRESH WATER: It is possible to take on fresh water at all quays by connection to the main supply. Average rate of supply 15 t.p.h. – price 8.55 Fr. per ton.

FUEL: All types available by truck.

FIRE PRECAUTIONS: The town provides fire fighting facilities. The fire station is close to the Port.

CONSULS: Algeria, Germany F.R., Austria, Belgium, Brazil, Colombia, Ivory Coast, Republic of Benin, Denmark, Dominican Republic, Spain, United Kingdom, U.S.A., Finland, Gabon, Greece, Ireland, Iceland, Italy, Liberia, Luxembourg, Mauritania, Monaco, Niger, Norway, The Netherlands, Peru, Philippines, St. Marino, Sweden, Switzerland, Tunisia.

REPAIRS: All possible deck and engine repairs can be carried out. There is no dry dock. Hull careening is carried out by underwater procedure.

SURVEYORS: Lloyd's of London, The Coasting Mediterranean Company, The Venturer Company, Weir (S.A.), Societe Azureenne de transports et d'affretements Maritimes, Societe Nationale Maritime Corse, Mediterranee, Pittaluga & Co., Martini & Co., Cie Charles le Borgne, Cie Fabre, Cie Fraissinet, Cie Messageries Maritimes, Nautilus Line, Barry Rogliano et Cie.

HATCHES: Hatches are opened and closed by crew.

CUSTOMS ALLOWANCES: 30 cigarettes per person per day; 1 litre of aperitif per 6 persons per day.

REPATRIATION: Airport and railway network in the town.

AIRPORT: International Airport 4 km. from the Port. Principal countries are served by international airlines.

TIME: GMT plus 1 hour (Winter). Summertime kept from April to October.

HOLIDAYS: These are staggered as far as dockers are concerned so that there is continuity of operation.
POLICE/AMBULANCE/FIRE: Police Tel: 17; Ambulance Tel: 18 or 93.92.55.55; Fire Brigade Tel. 18 or 93.86.16.11.
TELEPHONES: Telephones can be installed on board at Papacino Quay, Entrecasteaux Quay, Quai du Commerce, Quai de la Traverse, and Quai Ribotti.
SHORE LEAVE: Crew members may disembark after checking with Police.
IDENTIFICATION CARDS: For foreign seamen a permit to come ashore is issued by the Port Police.
GENERAL: There is a bus and taxi service very close to the port also there are coastal trading entities within the Port precincts.
AUTHORITY: Capitainerie du Port de Nice, 2 Quai d'Entrecasteaux, B.P 3, 06300 Nice. *Tel:* 93.89.50.85. *Contact:* Captain F. Guivarch, Port Captain.

PARIS: 48.51 N. 02.20 E. (See Plan)

PORT LIMITS: Within 1 km. of loading or discharging berth or, if occupied by another vessel, where the Pilot will place the vessel in agreement with the consignees.
DOCUMENTS: As Rouen is considered as the frontier port for vessels entering or leaving the Seine above this port (estuary to Rouen is known as "Seine Maritime", Rouen to Paris and beyond as "Seine Fluviale"), documents relating to vessel, crew, passengers, cargo, health, etc., are exactly the same as for Rouen and must be presented to the Agent on arrival in this port. If the vessel has never traded to ports inland from Rouen, technical inspection may be carried out in Rouen on first voyage.
PILOTAGE: As for Rouen, except that in spite of Rouen Agents being notified by Rouen pilot station of vessels' time of entry into Seine and ETA Rouen, also in most cases of the final destination of vessel, Masters should notify by radiotelephone Rouen Agents before entry into Seine of the final destination so that "Seine Fluviale" Pilots are waiting to take the vessel from Rouen to inland destination.
ANCHORAGE: See "Rouen".
RESTRICTIONS: Above Rouen, night navigation possible on request to Rouen Agents.
MAX. SIZE: 120 m. length, 15.5 m. beam, 3.5 m. draft up to Paris; beam reduced to 11.4 m. and draft to 3.0 m. on River Oise and River Marne up to Bonneuil or even 2.8 m. on River Seine beyond Paris; airdraft is limited at 8.75 m. up to Gennevilliers, at 6.0 m. beyond Paris, on River Marne up to Bonneuil and at 5.5 m. on the upper section of River Seine (Montereau facilities) and on River Oise.
HEALTH: See "Rouen".
RADIO/VHF: Vessels arriving in Seine Estuary are automatically notified to Rouen Agents. Any special messages to inland Agents or Receivers should be made by radiotelephone direct or via Rouen Agents, or by VHF to Rouen Agents when in "Seine Maritime". Pilot can always help Masters to send these messages via pilot stations. In the "Seine Fluviale" all locks have VHF and telephone by which messages can be relayed in case of accident, breakdown or delays. Pilot notifies inland Agents by telephone of such incidents.
RADAR: There is no radar service in the "Seine Fluviale". Bridge piles are equipped with radar reflectors.
TUGS: No offical tug service on "Seine Fluviale", but in case of breakdown, local tugs may be hired.
BERTHING: Many public or private facilities may be reached; main public ones are:

Quay	*Quay Length (m.)*	*Depth (m.)*	*Shed Capacity (sq.m.)*	*Remarks*
Bonneuil	3,500	3.0	33,000	Container terminal with 40 ton mobile crane.
Gennevilliers	8,000	3.5	107,000	Container terminal with 30, 12 and 6 ton lift trucks; Ro/Ro and heavy lift facilities.
Conflans-Ste Honorine	1,400	3.5	2,000	
Limay	1,700	3.5	24,000	3×20 ton travelling cranes; Ro/Ro facilities.
Saint-Ouen l'Aumone	200	3.0	—	
Bruyeres-sur-Oise	600	3.0	—	

CRANES: All types of cranes available from leasing or handling firms.
BULK CARGO FACILITIES: 2×1,000 t.p.h. bucket wheels for coal unloading at Vitry-sur-Seine and Champagne-sur-Oise.
SPECIALISED CARGO HANDLING FACILITIES: Containers handled at Gennevilliers and Bonneuil-sur-Marne; Ro-Ro facilities at Limay, Gennevilliers (cars) and Evry (heavy loads); reinforced quay for heavy loads at Gennevilliers.
BRIDGES: See "Max. Size".
STEVEDORES: Available.
MEDICAL: See "Rouen".
DENSITY: River fresh water beyond the first lock.
FRESH WATER: Available at most quays.
FUEL: One barge delivers fuel and water.
CONSULS: Nearly all countries represented in Paris.
REPAIRS: *Main Yards:*
Chantiers Navals d'Acheres, La Croix d'Acheres 78260 Achere Tel: (1) 3911.02.27. Telex: 697703 Cnacher.
Societe Francaise de Construction Navale, 66 quai Alfred Sisle 92390 Villeneuve-la-Garenne. Tel: (1) 4794.64.46. Telex: 6109 Fracona.
Chantiers Navals de la Haute-Seine, rue des Voeux Saint-George 94290 Villeneuve-le-Roi. Tel: (1) 4597.31.60. Telex: 691674 Auseine
DRY DOCKS: Slips in the yards above. 1×1,250 ton synchrolift Acheres (73 m.×13 m. platform).
SURVEYORS: Bureau Veritas, Lloyd's, American Bureau of Shippin and Norske Veritas have surveyors in Rouen or Paris.
GANGWAY/DECK WATCHMEN: Not normally considered necessar
HATCHES: Normally opened by crew.
CUSTOMS ALLOWANCES: Same allocation per man per day Rouen with allowance made for inland voyage.
AIRPORT: Paris "Charles de Gaulle" and "Orly".
TIME: GMT plus 1 hour (Winter), GMT plus 2 hours (Summer).
HOLIDAYS: See "Rouen".
TELEPHONES: Not available, but telephone always within shor distance of quays.
SERVICES: Compass adjusting may be arranged by Rouen on outwar trip.
SHORE LEAVE: Seamen's Book sufficient.
AUTHORITY: Port Autonome de Paris, 2 quai de Grenelle, 75732 Par Cedex 15. *Tel:* (1) 40.58.28.70. *Telex:* 204487 Poronom. *FAX:* (45.78.08.57. *Contact:* Bruno Grange, General Manager. Remi Lot Head of Maritime Operations.

PORT-VENDRES: 42.31 N. 03.07 E. (See Plan

DOCUMENTS:
3 Crew Lists.
5 Passenger Lists.
2 Store Lists.
1 Maritime Health Declaration.
4 Cargo Manifests.
2 Bills of Lading.
Ship's Papers: Nationality Act, International Tonnage Certificate.
PILOTAGE: Three long blasts. ETA required for Agent, Pilot usual taken on outside unless in very bad weather. Call Pilot on Channel 1 30 minutes before arrival.
MAX. SIZE: Max. length 150 m. max. draft 25 ft.-26 ft.
HEALTH: Usually Customs give Free Pratique. In event of suspecte disease or fever on board must advise naval doctor.
RADIO: Marseille Radio (or St. Lys Radio) or Perpignan Radio.
TUGS: None available.
CRANES: 1 shore crane available only of 55 tons.
SPECIALISED CARGO-HANDLING FACILITIES: 2 Roll-on/Roll- berths, 1 refrigerated warehouse 11,000 cu.m., and 1 warehouse 1,200 sq.m. with temperatures regulated at 10° centigrade.
STEVEDORES: ETA to be given to Agent in order to arrange gang (usual rate per day. 8 normal working hours). 200 tonnes per gang.
MEDICAL: Perpignan Hospital (30 km. away).
TANKERS: Berth for wine tankers with pipe-line.
DENSITY: Salt water.
FRESH WATER: Supplied by Chambre de Commerce, Port-Vendres
FUEL: For small craft only, otherwise delivery by trucks.
REPAIRS: Minor repairs only.
DRY DOCK: 1 travelift for craft up to 150 tons.
SURVEYORS: Available from Sete or Marseilles.
OPENING/CLOSING HATCHES: Normally to be carried out by crew (as per charter party if any).
CARGO GEAR: Load/discharge effected by ship's gear.
GANGWAY/DECK WATCHMEN: Recommended if loading dangerou cargo.
CERTIFICATES:
Load Line Certificate.
International Tonnage Certificate.
Derat Certificate.
CUSTOMS ALLOWANCES: See "Calais".
AIRPORT: Perpignan Rivesaltes (30 km.)
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: As for whole France – cargo work can be arranged those days as overtime.
POLICE/AMBULANCE/FIRE: Tel. 17 or 82.00.60 or five long blast Officier du Port: 82.12.00.
EMERGENCY CO-ORDINATION CENTRE: Crossmed Toulon.
SERVICES: Workshop for small repairs, radio/radar repairs availab ship chandler for bonded stores, laundry.
STORING: Vessels can be stored by truck only, which are able proceed alongside the berth. Fork lift trucks available. Custom Regulations in force.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Only Seaman's Book required.
AUTHORITY: Service Maritime-Capitainerie du Port, 66660 Port Vendres. *Tel:* 82.12.00.

PROPRIANO: Corsica, 41.40 N. 08.54 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
1 Provisions List.
1 Cargo List.
1 List of Articles (new and Customs-barred) in possession each crew member – cameras, binoculars, radios, cigarettes, spirits, etc.
1 Health Declaration.

PILOTAGE: Not compulsory.

ANCHORAGE: Outside port for cruise vessels.

MAX. SIZE: Draft 5 m.; length 160 m. (Ferry Berth).

RADIO: Within 50 miles call Ajaccio Radio VHF Channel 16. Then connected over Channel 23 to telephone network.

TUGS: None available.

BERTHING: 3 basins, depths 4.0 m., 6.0 m. and 3.7 m. New Marina with 370 berths. Facilities include fresh water, electricity, telephone. Crane (12 tonne) available for lifting pleasure craft. Engine repairs also possible.

STEVEDORES: 24 hours accurate ETA necessary for ordering gangs. No work on Sundays and official holidays.

CARGO GEAR: Only a few nets and slings available; all other gear must be supplied by ship. Ship's derricks used.

FRESH WATER: Available at very slow pumping rate.

FUEL: Available. Tel: 95.76.12.37.

REPAIRS/CONSULS: None.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

AIRPORT: Propriano Tavaria 6 km. Direct flights to Marseilles, Nice and Lyons in Summer. Daily connections Airport Campo del Oro/Ajaccio.

POLICE/AMBULANCE/FIRE: Tel. Gendarmerie Propriano 95.76.00.17.

AUTHORITY: Administration du Port de Propriano, Quai St. Erasme, Propriano. *Tel:* 95.76.10.40. *Contact:* Captain A. Duval, Port Captain.

QUIMPER CORNIQUEL: 47.58 N. 04.07 W.

DOCUMENTS:
Crew List.
Passenger List.
Customs Documents.
Port Health Documents.
Manifest of Cargo.
Stores on Board.
Ship's Papers.

PILOTAGE: Compulsory for vessels over 50 m. LOA. Pilot Station, Tel: 910640. Contact via Le Conquet Radio or St. Nazaire Radio. Pilot M. Pernes, Tel: 98.58.85.05

If vessel's ETA changes, telephone either the Agent or the Pilot at least 3 hours before arrival.

The pilot boat is a small black launch, white bulwarks with anchor painted on bow of each side, white cabin at the stern, one mast.

Only one Pilot on duty, but will meet ship at the time given in their ETA. Pilot boards either on the bearing 346° with Lighthouse of Benodet and du Coq in alignment, or on the bearing 000° with Lighthouses of Benodet and Combrit in alignment. Vessel should come as near as possible to the entrance, Vessels are anchored at the port entrance, or in the river, and await the tide, or proceed directly to the port.

In case of bad weather, when the Pilot may not embark, vessel to follow the pilot launch on the bearing 346° up to Plage du Trez, where boarding is possible. Vessels at anchor awaiting Pilot should get under way to approach the pilot boat on the bearing 346° when they see the launch approaching.

ANCHORAGE: Depths of 11 m. in position with the Taro Tower, bearing 245°; distance 0.8 miles.

Depths of 6 m. in position with the Point of Combrit bearing 000°; distance 0.5 miles.

Depth of 9 m., bottom sand and mud, in Du Trez Anchorage at the mouth of the Odet.

RESTRICTIONS: Vessels arriving at night must anchor outside the port entrance. It is dangerous to enter the river at night as there are no lights, and the channel is restricted by yachts at anchor.

MAX. SIZE: At spring tides: length 78 m.; breadth 12 m.; draft 4.95 m. At neap tides: length 72 m.; breadth 12 m.; draft 3.40 m.

RADIO: The Port Superintendent requires 24 hours notice of arrival.

TUGS: No tugs available.

BERTHING: At one quay there is 226 m. length for coasters. One quay of 120 m. length for discharging sand. 3 cranes available for discharge of cargo and one for discharge of gravel.

TANKERS: There is a fuel/oil depot at Quimper Corniquel supplied by coastal tankers from Donges. Max. draft for tankers at Quimper is 3.50 m. to 4.10 m.

FRESH WATER: 5 drinking-water hydrants situated on the quay, loading rate 12 t.p.h.

FUEL: Can be supplied by various companies from tanker lorries.

AIRPORT: Airport of Pluguffan situated 5 km. from the port. 2 regular daily flights to Paris.

AUTHORITY: Monsieur l'Ingenieur des T.P.E., Conseil General, Subdivision Departmentale Maritime Sud, Quai Pors Moro, B.P. 124, 29120 Pont L'Abbe, France. *Tel:* 98.87.27.33. *FAX:* 98.87.06.25. *Contact:* J. J. Quinquis, L'Ingenieur des T.P.E.

ROCHEFORT SUR MER: 45.56 N. 00.57 W. (See Plan)

For all general information refer to Tonnay-Charente.

MAX. SIZE: Max. permissible length: 116 m; breadth: 16.5 m. (ships must pass through a lock of 18 m. width).

Max. draft is 5.6 m. at Neap tides, 6.3 m. at Spring tides.

Max. Size using Lock: LOA 100 m. Beam 16.5 m. Vessels enter 3 hours before to 3 hours after HW.

BERTHING: Lock Quay: Open storage area 1,900 sq.m.

South Quay: 2 berths, length 100 m. and 250 m. Public storage 4,200 sq.m. and private storage 9,200 sq.m.

West Quay: 2 berths, length 110 m. each. Public open storage 7,900 sq.m.

Bachelar Quay: 2 berths, 110 m. each. Public open storage 2,500 sq.m., private warehouse 4,000 sq.m. and public warehouse 2,900 sq.m.

CRANES: 2×5 ton electric cranes on rails, 2×5 ton mobile cranes and 2×10 ton mobile cranes.

POLICE/AMBULANCE/FIRE: Police 17; Ambulance 46.87.10.33.

AUTHORITY: Direction de l'Amenagement du Department de la Charante-Maritime B.P. 125, Avenue William Ponty, 17306 Rochefort-Sur-Mer Cedex. *Tel:* 46.99.44.93. *FAX:* 46 87 64 37. *Contact:* M. Verbieze, Surveillant de Port.

ROSCOFF: 48.43 N. 03.59 W. (See Plan)

PILOTAGE: Send ETA at least 24 hours in advance. Pilot and Harbour Master listen on VHF Channel 16, 0700 – 1100 hrs., 1300 – 2200 hrs. Pilotage compulsory for vessels over 150 n.r.t.

Pilot boards 0.5 miles East of Astan Buoy.

ANCHORAGE: Anchorage and laying-by can be carried out in an area sheltered from S.E. and N.W. winds, bounded on the East by the "Basse Bloscon" and on the West by the "Menk" and "Duons" Reefs.

VHF: Pilot and tugs on VHF Channel 16 throughout 24 hours.

Signal Station on the Isle of Batz: Tel: 98.61.76.06 or VHF Channels 12 and 16.

Signal Station at Brignogan: Tel: 98.83.50.84 or VHF Channel 16.

Signal Station at Ploumanach: Tel: 98.23.21.50 or VHF Channel 16.

BERTHING: Safely accessible pier 194 m. long with 7 m. of water at lowest tides.

Quay 90 m. long with 3.5 m. of water at lowest tides.

Quay 120 m. long with 5.0 m. of water at lowest tides.

Storage warehouses (1,200 sq.m.).

Weighbridge (50 tonnes).

20 acres of parking facilities and other space.

Cranes available on request.

Electric power supply on all quays.

With strong N.E. winds, conditions in the harbour can be uncomfortable.

Minimum depths as per "Plan". Range of tide 9.6 m. maximum.

Cargoes Handled: Car Ferries – Inward: Fish and shellfish, milk, china clay, meat and cattle, steel, machine parts, paper, etc.

Car Ferries – Outward: Vegetables, fruit, meat, paper, machine parts, plastics, ship's stores, etc.

Freighters – Inward: Sand and marine aggregates, ammonia sulphate, fertilisers, seed potatoes, shellfish, etc.

Freighters – Outward: China clay, scrap iron.

CRANES: Mobile cranes of 25 tonnes and 72 tonnes.

FRESH WATER: Piped on to quays.

FUEL: By road tanker.

AIRPORT: Airport at Morlaix, 13 miles away. Airport at Brest, 35 miles away, flights to London and Paris.

TELEPHONES: Payphones available at the Ro/Ro terminal.

SERVICES: Laundry available at Roscoff.

Chandler at Brest. The Agent can arrange for small quantities to be delivered from the hypermarket at St. Pol de Leon, 2 miles.

GENERAL: Customs are based at the Ro/Ro terminal.

Daily car ferry service to Plymouth, weekly to Cork. Local train service.

AUTHORITY: Chambre de Commerce et d'Industrie de Morlaix, 14 Place des Otages, B.P. No. 6, 29201 Morlaix Cedex, France. *Tel:* 98.88.61.74. *Telex:* 940696. *FAX:* 98.88.80.55. *Contact:* Roscoff Port Office, Tel: 98.61.27.85.

Roscoff Harbour Master, *Tel:* 98.61.27.84. *FAX:* 98.61.11.81. VHF: Channels 16 and 12.

ROUEN: 49.28 N. 01.04 E. (See Plan)

DOCUMENTS: Cargo Manifest or Manifest of Ballast. Certificate of Cargo Space. Bills of Lading. Ship's Register. 6 Crew Lists. 3 Passenger Lists. Health Declaration. Derat Certificate or Exemption. Declaration of Crew Personal Effects. Certificate of Insurance for Oil Pollution Damages (tankers over 2,000 tons).

PILOTAGE: Vessels proceeding to the ports of Rouen and Honfleur are met by Pilot on La Carosse Roads (Rade de La Carosse). Pilotage is compulsory between the mouth of the Seine and Rouen. Vessels of 55 m. length and less can be exempt from the obligation for the lower sector of the river, and vessels of 45 m. and less for the upper sector, on condition that such vessels be equipped with suitable radar, with VHF sets and able to speak French, and that they are not carrying dangerous goods. Each vessel taking a Pilot for the downriver stage between La Carosse Roads and Caudebec, or vice-versa, and a Pilot for the upriver stage between Caudebec and Rouen, or vice-versa.

The following signals should be made for summoning a Pilot on La Carosse Roads: By Day: flag "G" of the International Code of Signals. By Night: in morse by signalling lamp. Failing this, the vessel should hoist her national ensign at the foremasthead.

The following additional signal can be made: 5 prolonged blasts (– – – – –) to call attention to Pilot.

The radio station "Rouen-Pilot", located in the radar tower at Honfleur keeps a permanent watch day and night on VHF Channels 16 and 73. Masters are requested to call this station when arriving on the Roads.

Vessels leaving harbour or shifting berth should apply for a Pilot to the Pilotage Office, 21 Avenue du Mont-Riboudet, Rouen (Tel: 35-71-68-50).

Helmsman: Masters and Owners are advised that temporary crew members including helmsmen for the river are available from the Boatmen Association of Rouen. In the case of an incoming ship, they should be requested by cable to Harbour Master at least 6 hours before arrival in roads.

ANCHORAGE: In the outer roads at La Carosse.

One waiting berth on buoys at Villequier and one on dolphins at Vatteville, for vessels going down the river and awaiting the tide.

RESTRICTIONS: The height of water above chart datum at Le Havre is broadcast by Honfleur VHF radar station on request.

MAX. SIZE: Vessels over 280 m. length have entered. Draft approximately 3.5 m. more than height of tide at Le Havre. Maximum about 37 ft. Port accessible to vessels of 40,000 d.w.t. fully laden and 110,000 d.w.t. partly laden.

HEALTH: Pratique given by Customs Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique, Master should radio Agent before arrival, advising full details.

RADIO: Vessels are obliged to give their ETA and draft in salt water at least 5 hours before arrival to Rouen Information Centre via Brest – Le Conquet Radio or Boulogne Radio. The Port of Rouen Authority has introduced a VHF network of frequency modulation for port needs working on the following frequencies: Channel 16 (156.800 MHz); international safety and watch frequency. A permanent watch is maintained on this frequency at the Information Centre of the Port of Rouen.

Channel 73 (156.675 MHz) compulsory frequency to be used by all ships, boats, ferries . . . . in movement between the pilot boat station and Rouen. Call on Channel 73 in case of fire, injury, sickness, etc. (24 hours).

Channel 68 (156.425 MHz) upper part of river, Channel 15 (156.750 MHz) down part of river, secondary working frequencies.

Special Process for Tankers and Vessels Carrying Dangerous Goods in Bulk: For oil tankers it is compulsory, before entering the 12 miles limit, to have a VHF contact with Rouen-Pilot or with Rouen-Port, and to keep permanent VHF watch till the ship is back out of this limit.

Tankers over 250 m. length or 12 m. draft must wait for Pilot 7 miles from shore, others can come to La Carosse Roads, passing half mile South of Buoy LHA and remaining always South of a line marked by the buoys LHA and RN.

They have obligation to announce every fault in engines, anchors or windlass, steering gear, radar, mooring gear, and their Masters must sign an inquiry paper given by the Pilot when coming on board.

PORT RADAR: Two radar stations are located respectively at the East of Honfleur and on the right bank of the river 12 miles upstream at Radicatel.

Both stations are operated from Honfleur and work as navigational aids between the first buoys of the channel and Aizier, from 2 hours after until 8 hours after low water Le Havre.

To obtain information call on VHF Channel 16 (156.800 MHz) or 73 (156.675 MHz).

Information given by this radar, at ship's option, is considered as an aid only and implies no responsibility either to the Port Authority or its Agents in any subsequent recourse to such information, which is given free of charge.

TUGS: Permanently available in the Port of Rouen. Tug assistance in the River Seine is available on request.

MOORING: See "Notice".

STEVEDORES: From Monday to Friday:

General working schedule; 0730 – 1130, 1330 – 1730, with possible overtime.

Special working schedule 0730 – 1330, 1330 – 1930, 1930 – 0130 or 1930 – 0430, 0130 – 0730.

On Saturday: for all ships 0730 – 1330 and 1330 – 1800.

BERTHING: The main Maritime Port of Rouen extends from the Guillaume le Conquerant Bridge as far as La Bouille over a distance of 11 miles. Quays and wharves cover the length of both banks of the Seine. There are also 5 basins in direct connection with the river without the interposition of any locks.

On the Right Bank: St-Gervais Docks; on the Left Bank: the Timber Dock, the Rouen-Quevilly Dock, the Floating Docks tidal basin, and the "Bassin aux Hydrocarbures" at Petit-Couronne.

The extent of quayage in the Maritime Port is about 38,000 ft., and in the river docks 5,900 ft.

Between the downstream limits of the Port of Rouen and the sea are a number of maritime establishments serving local requirements. The most important of these, all of them managed by the Port Authority of Rouen, being the petroleum terminal at Port Jerome and the quays of St. Wandrille (2,000 ft.) and Radicatel (1,380 ft.).

Containers: 2 berths at the Quai de l'Ouest (St.-Gervais Dock) with 2×25 ton cranes, 2 berths at Rouen Quevilly Dock with 2×25 ton cranes and 2×35 ton gantry cranes.

2 berths at Grand Couronne Moulineaux with 2×35 ton gantry cranes.

One private berth at Radicatel Quay with a gantry crane.

Roll-on/Roll-off: 4 berths in service of which 2 Roll-on/Roll-off berths at Petit Couronne and Quai de Rouen – Quevilly able to load or unload rolling heavy lifts up to 400 tons (max. draft: 10 m.)

Dock	*Quay*	*Facilities*	*Length* (m.)	Dept at lo wate (m.)

Radicatel	Radicatel	20,000 d.w.t. ships One gantry crane.	420	10.0
Honfleur	Honfleur	Forest products	122	9.0

MEDICAL: All facilities available. Vaccination Certificates required vessels coming from a North African port. Yellow fever inoculatio required if vessel coming from South of parallel 30° N.

TANKERS: Petit Couronne, Shell, 3 berths. One berth for vessels u to 250 m. length and 11 m. draft. CPA, 3 berths for refined oil (one w 11.0 m. draft.)

Port Jerome, Esso and Mobil Oil, 2 berths for vessels up to 11 draft (7 berths total).

Honfleur, Miroline – 1 berth.

Deballasting facilities available at all berths (Except CPA 3).

Report: 1982.

Petit Couronne (Butane/Propane): Max. LOA 170 m. Bollards 40 downstream from loading arm and 30 m. upstream from loading ar Vessels berth with bow to seaward. Max. draft 28 ft. (8.5 m.). Height manifold above waterline 10.0 m. Max. distance between edge a manifold of ship 4.9 m. There is no special connection for the gas phas Diameter of discharge arm 6 in. (300 ASA).

Report: 1985.

Port Approaches: Tankers carrying dangerous cargo, when approaching River Seine Ports need to be aware of the heavy traffic. When sailing inside the French Territorial Waters, these vessels have to follow special French Regulations as mentioned in Sailing Directions. For example, navigation is forbidden inside a 7 mile limit off the French coast without Pilot, except for anchoring in emergency or in some dedicated places; no crossing of Antifer, Le Havre entrance channels permitted within this 7 mile limit or during a VLCCs transit, etc.

In-Port: The Port Jerome berths' main short-comings are: The strong tide currents and the passing ships' effect when berthing/unberthing. VHF contact with Pilots of passing ships are very important as these can disturb the manoeuvre.

When berthed, moorings have to be strictly and frequently checked; they must be maintained tight as passing ships' effect is very significant, especially at LW. See "Notice" – "Special Regulation for tankers in Port Jerome".

Tidal Entry: The "River Seine Pilotage" issues a monthly recommended maximum draft for each HW for vessels proceeding to and sailing from River Seine ports.

Water heights may be influenced by atmospheric (winds) and Hydrologic perturbations (flow of the river).

Ships have to use the tide to enter the river taking into account ship's draft, tidal currents and the possibility to moor the tanker at Port Jerome starboard side to during the last hour of flood stream. Tide also to be used when leaving Port Jerome berths.

Vessels may proceed by day or night.

In consideration of all above conditions, Pilot will advise any modification of the permissible draft taking into account a 2 ft. underkeel clearance.

DENSITY: Except at Honfleur, all berths are in fresh water.

FUEL: All grades available by barge.

CONSULS: The following countries are represented in Rouen: Algeria, Belgium, Denmark, Finland, Germany F.R., Greece, Ireland, Italy, Ivory Coast, Korea, Morocco, Netherlands, Norway, Poland, Portugal, Senegal, Spain, Sweden, Turkey, U.K. and U.S.S.R.

REPAIRS: All deck, engine and radio repairs can be effected.

DRY DOCKS: One floating dock, length 180 m., 25 m. wide for vessels up to 14,000 tons.

SURVEYORS: Bureau Veritas, Lloyd's Register, Registro Italiano, Det Norske Veritas, A.B.S. and Germanischer Lloyd.

WATCHMEN: Recommended to employ watchmen on board tankers and vessels handling dangerous cargo.

HATCHES: Opening and closing hatches always performed by ship's crew.

AIRPORT: Nearest Rouen-Boos. Le Havre – Octeville, 80 km. away. Paris – Orly or Paris – Roissy, 120 km. away.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Spring and Summer.

HOLIDAYS: No labour available on the following days; New Year (1st January); Easter Monday; Labour Day (1st May); 8th May; Ascension Day; Whit Monday; National Day (14th July); Assumption Day (15th August); All Saints' Day (1st November); Armistice Day (11th November); Christmas Day (25th December).

POLICE/FIRE/AMBULANCE: Police 17; Fire 18; Ambulance 15 or by VHF via Rouen-Port on Channel 73 (24 hours). Tel. 35.52.54.00.

TELEPHONES: Can be connected on board at some berths.

IDENTIFICATION CARDS: Crewmen going ashore should carry passport or identity card.

SHIP SUPPLY SERVICE: In case of emergency (sick crew members, exceptionally urgent stores) a liaison can be established by launch with a ship when passing off Port-Jerome or off Caudebec.

NOTICES:

Special Regulations for Tankers at Port Jerome (Esso Terminal):

Mooring: Due to weather / tide conditions and river traffic it is compulsory for each ship to provide moorings as follows:

L.O.A less 100 m.	2 head and 2 stern lines. 2 breast lines, fore and aft. 2 spring lines, fore and aft.
L.O.A. Between 100 m. and 160 m.	3 head and 3 stern lines. 2 breast lines, fore and aft. 2 spring lines, fore and aft.
L.O.A. Between 160 m. and 210 m.	3 head and 3 stern lines. 3 breast lines, fore and aft. 2 spring lines, fore and aft.

Lines having same purpose must be of same material.

All lines must be in good condition and kept tight at all times.

To avoid slipping of lines remaining on drum, winches must be on brakes, out of gear and never in automatic function.

Starboard side alongside is compulsory for ships of more than 110 m. length. Ships less than 110 m. length can be berthed port or starboard side alongside.

Ship/Shore Access: Ship's gangway is compulsory but shore gangway can be used under ship's watch and Master's responsibility.

Arm connection: Manifold to be ready for arm connection on arrival (one arm per product).

No adapter available on terminal.

Shore Flanges:

Berth 3:

Gas Liquid	6 in., Serial 300 ANSI Standard.
Gas Return	4 in., Serial 150 ANSI Standard.
Petroleum Products	12 in., Serial 150 ANSI Standard.
Bunkering IF 380	6 in., Serial 150 ANSI Standard.
Bunkering LDO	6 in., Serial 150 ANSI Standard.

Berth 2 (Upstream and downstream):

Petroleum Products	6 in., Serial 150 ANSI Standard.
Bunkering LDO	Self Service-Flexible Hose: 10 cu.m/hr.

Berth 1 (Downstream):

Petroleum Products	6 in., Serial 150 ANSI Standard.
Gas Liquid	6 in., Serial 300 ANSI Standard.
Gas Return	2 in., Serial 300 ANSI Standard.
Bunkering LDO	Self Service-Flexible Hose: 10 cu.m/hr.

Berth 1 (Upstream):

Petroleum Products	6 in., Serial 150 ANSI Standard.
Gas Liquid	6 in., Serial 300 ANSI Standard.
Gas Return	6 in., Serial 300 ANSI Standard.

If mooring regulations (above), which were agreed by Port of Rouen Authority, are not complied with, arms will not be connected and ship's operations will be delayed or stopped and expenses will be to ship's account until Port Jerome Regulations are complied with.

Notice to Masters:

General Instructions: Masters shall in all circumstances comply with Port Officer's orders either verbal, written, or given through the medium of Pilots and especially the orders regarding manoeuvring in the port, towage, berth, and mooring.

Mooring: The attention of Masters is particularly drawn to the provisions contained in Section 6-01 of the Police Regulation in the Port of Rouen and River Seine (issued June 26th 1974), which stipulates as follows:

1. Vessels can moor either bow upstream or downstream, unless particular orders are issued by the Port Officers.
2. Vessels must moor with a sufficient number of bow and stern ropes, breast ropes and springs according to their deadweights.

   If possible each line must be fastened on a different fixed point.
3. The mooring must be homogeneous, this means that the lines having the same function must have the same mechanical qualities.
4. The lines must be in good condition.
5. Keep a permanent watch upon the lines and their slack must be hauled at any time if necessary, and especially before the Spring tide flow.

   According to the position of the berth and to meteorological conditions, when the expected height of high water in Le Havre exceeds 750 cm. (approx. tide coeff. 90), risk of bore exists. In this case moorings must be heaved tight one half hour before the expected time of local low water and ship's main engines must be available for immediate use.

   It is recommended that a Pilot be on board at this time.

   Further information may be obtained from either Pilots of Port Officers.
6. According to the deadweight of their vessels, the situation of the berths, the height of high water in Le Havre, Masters must take all necessary precautions as the tide is arriving.
7. Vessels which, to make their berthing easier have dropped their anchor, must, unless contrary to Port Officer's orders, heave it up, if they are berthed in the basins.
8. Vessels must have adequate fenders along the quay, these fenders must have a sufficient diameter to prevent the vessel being in direct contact with the quays and the cranes.
9. A sufficient free space must exist near the hatch-coaming to allow easy access to the gangway.

Gangway Ladders, Foot-Bridges Giving Access to Dry Land: The link between shore and vessel must comply with the International Convention No. 32, signed in 1932 concerning the protection of people working on board ships.

Action in Case of Accident or Fire: Anyone discovering a fire, or seeing an accident, should immediately give the alarm:

to the Harbour Master on VHF Channels 73 or 16, call sign ROUEN-Port).

Measures to be Taken on Board Vessels: Fire-fighting will be under the direction of the Master, but the operating crews from shore, especially the fire-brigade, will be under the orders of their respective chiefs.

The vessel's crew should be able to guide the assistants from shore. Plans of the ship, the cargo plan, and stowage of hazardous cargo on board, should be available on their arrival.

The Harbour Master can decide upon the shifting of the vessel, or that of neighbouring vessels. No decision such as scuttling, beaching, overloading to upset the stability, nor in general any action which may have an effect on the working of the port equipment, can be taken without the consent of the Harbour Master.

Oil tankers, or vessels loaded with dangerous cargoes, should always have a hanging wire tow-line each end ready to be hooked by a tug boat.

Cleanliness: In order to preserve the River Seine and our shore cleanliness please use plastic bags for your ship's domestic wastes.

Full bags closely fastened should be laid at the place marked by "garbage" signal. These bags will be delivered on request to your Agent.

Injury or Sickness On Board: In case of serious injury, call the fire brigade in the same way as in case of fire or the Rouen Port Station (VHF Channel 73).

In case of sickness, a doctor can be obtained quickly by VHF Channel 73.

Radio Communications: Masters of vessels are advised that they can get communications by radio-telephone with telephone subscribers ashore on metric wave-lengths (VHF).

They must call:

when below Tancarville – LE HAVRE-Radio direct on Channels 26, 28, 82 or 23 Semi-duplex;

when above Tancarville – ROUEN-Radio direct on Channels 25, 27 duplex or 21 Semi-duplex.

Do not use Channel 16 for these communications.

These radio communications are authorised when alongside berth.

Furthermore it is useful to keep watch on Channels 16 or 73. LE HAVRE-Radio and ROUEN-Radio stations use Channels 16 or 73 when they call vessels.

Notice to Masters of Vessels Proceeding to Le Havre and to Rouen: The attention of Masters of vessels bound to or from the ports of Le Havre and Rouen is drawn to the regulations laid down in by-law No. 190 of the Marine Superintendent of the 1st District appertaining to anchorage and navigation of vessels in the Le Havre roadstead dated August 21st 1972.

Masters of vessels bound to or from Rouen, without calling at Le Havre, are particularly concerned with the terms of Article 2.

BORE:

1. The bore is the name given to the phenomenon caused by the arrival of the tidal wave in the river at times of high tides. The current is reversed, going from ebb to flow.

The rise in water is then very rapid, and the level of the river can rise 1 m. in less than 10 minutes.

The greater the tidal coefficient and the lower the river flow, the greater the phenomenon.

Basically, it starts to be felt in the Seine when the full tide height at Le Havre reaches or exceeds 7.6 m., i.e. for tidal coefficients equal to or greater than 90.

It is generally stronger when the coefficients are falling than when they are rising, and it is greater in Summer than in Winter.

It is also stronger when atmospheric pressure drops and West winds produce tidal heights greater than normal.

In Winter, the Seine is in flood, and the very considerable river flow attenuates considerably the effect of the bore.

On the other hand, in Summer the relatively low level of the river favours the rise in water, and the bore is then much stronger.

The bore is experienced between Caudebec and downstream of the Port of Rouen. It then weakens by virtue of various structures in the river and some basins. Upstream of the port, it is no longer present except for high tidal co-efficient.

2. Vessels berthed at quays or discharge/loading points are subject to the effect of the bore all the more when they are heavy and loaded.

Downstream of the port, vessels are wherever possible positioned with their bows downstream. They can be assisted during the passage of the flood by a Seine Pilot and possibly tugs.

The arrival of the bore is announced on VHF by the Rouen Port Station giving the time when it will pass La Bouille, which is the downstream limit of the Port of Rouen, and where a recorder is installed. It is then easy to forecast the time of its passage at different points in the port, by knowing the time taken for the flood to go from La Bouille to different berths:

Moulineaux Roulier: 4 minutes.
MRM Silo: 8 minutes.
Sogema Quay: 10 minutes.
Petit-Couronne Quay: 15 minutes.

Rouen Port Station now also announces the time the bore passes Duclair, when normally occurs 36 minutes before passing La Bouille.

In principle, it occurs at the time of local low-tide, but according to circumstances, it can be advanced by almost half an hour over the theoretical expected time.

3. During very high tides, the measures to be taken before the passage of the flood are as follows:

To be well berthed and tied up and to ensure opportunely that all lines are working in the same way.

Take up the gangway.

Stop handling operations in order to disengage cranes or gantries, or disconnect tankers.

Have engines ready for manoeuvring (30 minutes before theoretical time). Engines must be started up before the flood arrives and manoeuvred so as to counter the effect of the bore during its passage. Once the bore has passed, no risks exist.

The Harbour Masyer's Office carries out continuous watch on VHF Channel 73, and can give at any time all information to vessels on the bore and its strength.

DEVELOPMENTS: Dredging operations in order to accommodate vessels of 60,000 d.w.t. at Port Jerome and Honfleur.

SHIPMASTER'S REPORT: June 1987 (Updated 1990).

Port: Port Jerome.

Anchorage: Vessel anchored in Rouen waiting area, just South of Le Havre fairway in a depth of 12 – 13 fathoms.

Documents:
6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest (including bond, ship's stores, currency, etc.).
1 copy Declaration of Health.
2 copies Cargo Manifest.
Customs Officers board after arrival.

Pilotage: Pilot boards in the anchorage area from a high speed launch.

Passage: It is about 2.5 hours from the anchorage to Port Jerome berth, which is just beyond Tancarville Bridge.

Inward transit is made from about 3 hours before to 3 hours after high water at Le Havre. Time of leaving the anchorage depends upon the vessel's draft.

The outward transit from Port Jerome is again from about 3 hours before to 3 hours after high water at Le Havre. Time of leaving Port Jerome depends upon the draft of the vessel.

The maximum draft to Rouen is 11.5 m. inwards and 10.0 m. outwards.

Berthing: Tugs not used for berthing. Vessel berthed starboard side to at Esso No. 1 to load ethylene. Vessel used starboard anchor to swing in river.

Moorings were made up of 2 head/stern line, 2 breast lines and 2 springs forward and aft. It is advisable to use long lines as the rise and fall is about 4.5 m. Fendering consists of large wooden buttresses with protruding bolts.

Ship's gangway constantly on the move due to tidal range and has to be constantly shifted.

Cargo: 6 in. liquid and vapour arms connected. Ship's reducer required for vapour arm.

The SGS surveyor attended.

A control box was placed onboard which regulates the loading valve at the base of the Chicksan arm.

Rate of loading is about 90 t.p.h. with 1 shore pump. A second pump can be used on the line to increase the rate to 120 t.p.h.

If necessary, the rate can be reduced to 20 t.p.h. Cargo can be stopped in about 12 seconds.

A dead man arm is incorporated in the control box. This stops cargo loading if it is not pressed every 12 minutes.

The manifold temperature during loading was −93°C. Two compressors were run returning vapour ashore throughout loading. The temperature on completion of loading was approximately −98°C after which one plant was put on internal cooling with one compressor still running ashore. This was maintained for 9 hours until temperature reached −101°C.

The terminal personnel were generally very helpful. If required, they would backload liquid after the vapour return but the initial plug would be hot after sitting in the line.

General: All services are provided from Le Havre.

AUTHORITY: Port Autonome de Rouen, Capitainerie, 34 Boulevard de Boisguilbert, B.P. 4075, 76022 Rouen Cedex. *Tel:* 35.52.54.00. *Telex:* 770865 Capipor. *Cables:* Poronom-Rouen. *FAX:* 35.52.54.02. *Contact:* R. Fossaert, Le Commandant du Port.

ST. LOUIS DU RHONE: 43.23 N. 04.48 E. (See Plan)

DOCUMENTS:

1 Cargo Manifest or Manifest in Ballast.
Ship's Register.
Bills of Lading.
6 Crew Lists (8 if Spanish or U.S.S.R. or ships bound to these countries).
3 Passenger Lists.
Health Declarations.
Derat Certificates.
3 Bunker Supply forms.
1 Declaration of Crew Personal Effects. If on inspection articles or quantities not in conformity or in excess, Master held responsible, articles removed and heavy fines imposed.

PILOTAGE: Compulsory for vessels exceeding 70 m. LOA (50 m. for tankers). Contact Pilots by Marseilles Radio or by VHF Channel 12 for calling Fos Port Control. Pilot boards off Lavera Buoy.

River Pilot required by vessels loading salt in the Rhone river, boards at the locks entrance to Port St. Louis basin off Lavera Buoy.

ANCHORAGE: Suitable anchorage outside Port St. Louis keeping well clear of Fos channel.

RESTRICTIONS: The St. Louis Canal is 3,300 m. long and 63 m. wide, with a depth of 26 ft. 6 in. The lock has a length of 135 m., width 22 m., and depth 18 ft. Max. ship size: Length 95 m., beam 16 m.

No entrance allowed between 2100 hrs. and 0500 hrs. except in emergency, although entrance may be effected up to 2400 hrs. if ordered before 2100 hrs.

Entrance may be delayed when large tankers are proceeding in the Fos Channel.

HEALTH: Pratique given by Customs officers who board on arrival.

RADIO: Within 150 miles use Marseilles Radio FFM, otherwise St. Lys FFL.

TUGS: Two tugs available of 1,060 h.p. Ship's lines are normally used.

SPECIAL CARGO FACILITIES:

Company	*Berth* No.	*Length* (m.)	*Max. draft* (m.)	*Remarks*
C.R.E.A.	924	100	4.5	2 berths – Military, refined products.
Frahuil	925	80	6.7	Capacity 17,550 tons. Refined products.
Medistock	919	100	6.5	Natural Gas – Loading and discharging. Berth also used by Medistock.
Sedipa	921	100	4.0	Public berth, storage capacity 9,000 tonnes. (Chemicals, vegetable and animal oils). (Not in use.)
Soterm	923	150	7.0	Private berth (destroyed 1982) used by Soterm, Mazout and Deleup. Storage Capacity (still available): Mazout 15,000 tons. Deleup and Soterm 30,000 tons.
Gedemer (H.G.D.)	916	100	6.7	Private berth. Storage Capacity: 5,000 tonnes. (Liquid tar).

Basin	*Berth* No.	*Length* (m.)	*Max. draft* (m.)	*Remarks*
Port St. Louis/Rhone	904	110	5.2	Ro-Ro
	909	130	6.0	Ro-Ro
Tellines	951	130	7.92	Ro-Ro.
"	952	147	7.92	—
"	954	147	7.92	Ro-Ro, heavy lifts. (4 ton/sq.m. – 6 ton/sq.m.).
"	953	160	7.92	Heavy lifts (4 ton/sq.m.) Private crane, 544 tonnes capacity and Port Authority floating derrick 500/600 tonnes capacity located at this berth.

BERTHING:

Quays	No. of Berths	Draft
Quai Ouest	3	6.00 m.
,, Nord	2	6.00 m.
,, East	3	5.20 m.
,, Hardon	1	5.50 m.
,, de la Suisse	3	7.92 m.
,, Charles	1	7.92 m.

STEVEDORES: Shifts are 0800 – 1200 hrs., 1300 – 1730 hrs. Saturday afternoon, Sunday and Holidays in overtime. Shifts of 0600 – 1200 hrs. and 1300 – 1900 hrs. count as a day each.

CRANES: Also see "Berthing".

Quay cranes: 5×6 tonnes (Quay de la Suisse). One private crane at heavy lift berth, capacity 540 tonnes.

Mobile cranes: 1×6 tonnes, 1×12 tonnes.

Floating crane: Marseilles Port Authority operate a floating derrick, capacity 500-600 tonnes.

Front Loaders: 1×30 tonnes for containers.

FRESH WATER: Available from hydrants on the quays at a rate of 10 t.p.h.

FUEL: Available only by barge or railcar.

AIRPORT: Marseille-Provence Airport distant 70 km.

AUTHORITY: Port Autonome de Marseille, 23 Place de la Joliette, 13002 Marseille, France. *Tel:* 91.91.90.44. or 91.91.90.66. *Telex:* 440746 Portauto-MARSL *Contact:* M. Pechere, Director. Captain Malpote, Harbour Master.

ST. MALO: 48.38 N. 02.02 W. (See Plan)

PORT LIMITS: A vessel is considered to have arrived within the Port limits, when it is within a radius of 3 miles to the North of the Grand Jardin lighthouse.

DOCUMENTS:

Ship's Register.
Store List in duplicate (ship's stores).
2 Crew Declarations of Bonded Stores.
Health Declaration.
Manifests and B/Ls.
3 Crew Lists.
3 Passenger Lists.

One Security Form (Inwards Declaration) with vessel's details to be handed to Port Captaincy when passing through the lock.

PILOTAGE: Compulsory for vessels over 45 m. LOA and over 150 n.r.t..

(1) During tidal hours, 2.5 hours before and after high water, vessels may enter into direct contact with the Pilots on VHF Channel 12. Call Sign "Pilot – St. Malo".

(2) Outside tidal hours and during working hours, vessels may call the Port Office on VHF Channel 12. Call sign "Port Control – St. Malo".

When waiting for the Pilot, vessels anchor near the "Shore Buoy" and report their arrival to the Port Office.

In good weather, the Pilot boards near the "Shore-buoy". In bad weather when the wind is from N.E. or N.W. the Pilot may guide the vessel as far as Dinard Roads, where the Pilot will come aboard.

Pilot Cutters: One cutter ("Nepture" – length 13 m., speed 9 knots) fitted with radar, relief cutter ("Pilote Vayva" – length 10 m., speed 18 knots) both fitted with radio-telephone and VHF Channels 6, 12, 14, 16, 24 and 25.

ANCHORAGE: Large vessels with draft greater than 13 m. anchor by the land-buoy. Smaller vessels may anchor in St. Malo Roads, there is sufficient swinging room for vessels with draft of 7 m. It is recommended to use a Pilot to come into this anchorage.

RESTRICTIONS: Vessels are allowed to enter from 2.5 hours before to 2.5 hours after high water. To be certain of mooring, vessels should arrive at the lock (Naye Lock: Length 150 m., width 25 m.) at least 1 hour after high water.

Depth available 20 ft. to 22 ft. at Spring tides for the Bouvet and Duguay Trouin Basins.

No movements during foggy weather. Large vessels (length greater than 100 m.) approach the lock at high-tide. Tankers lock in by themselves (no other vessel allowed in the same lock) in daytime only. Movements are carried out day and night.

Vessels with hazardous cargo and large vessels (more than 135 m. LOA) enter in daytime only.

MAX. SIZE: The height of the tide, the length of the lock and width of the channel must be taken into account.

Cargo Vessels:

(a) Overall length 150 m., beam 20 m. or
(b) Overall length 135 m., beam 21.5 m.

Max. Draft: Spring tides 9 m. Neap Tides: Equal to the depth of water in the access channel according to the tide (height of water above zero of French charts) at the time when the vessel passes through the access channel to the lock (normally 8.5 m.), 2 tugs required.

Characteristics of the Channels: Permissible dimensions for vessels:

St. Malo Channel linking the Vauban Docks to Duguay Trouin and St. Servan Channel linking the Vauban Docks to Bouvet. Length 120 m., breadth 16.5 m. Depth in the docks 5 m. (sill of the channels: 5 m.)

Jacques Cartier Channel linking the Vauban Docks to Jacques Cartier. length 150 m., breadth 21 m. – at the moment – depth of the docks 3 m.

Tankers: Length 147.50 m. (443 ft.), beam 20 m. (65.6 ft.), draft see "Cargo Vessels" above. 2 tugs required if vessel not fitted with bow-thruster.

HEALTH: Customs Officers are appointed as Health Officers and deliver Pratique. In case of suspect disease, Masters must declare it at once by radio to their Agents who will contact authorities.

RADIO: Vessels coming from West use Brest le Conquest Radio, call letters FFU. Vessels coming from North should go through Boulogne Radio, call FFB.

Arrival Advice: The requirements on arrival of large vessels must be given to the Port Captaincy 8 days in advance.

For vessels with a length less than 100 m., 48 hours notice must be given.

The precise ETA mst be sent 24 hours before arrival in the Roads.

VHF:

(a) Port Office: Channels 12 and 16, 24 hours
(b) Pilot: Channels 6, 12 and 16, when awaiting a vessel.
(c) Tugs: Channels 6, 12 and 16, at the time of high tide.
(d) St. Nazaire Radio: Channels 1 or 2, for telephone communications.

Vessels call Pilot and tugs on 12 or 16 and change to Channels 6 or 8 for working.

TUGS: 3 tugs are available at St. Malo (1,500, 650 and 650 h.p.). Usually joins vessel at the end of breakwater. Ship's lines are usually used.

Towing is obligatory on entering or leaving the docks for vessels which have a length greater than 80 m., as well as for oil tankers and vessels carrying hazardous cargo whatever their size.

BERTHING: 1 Ro/Ro berth outside lock for car ferries.

Duguay Trouin Dock: Length 2,000 (commercial), 2 Ro/Ro ramps for vessels less than 120 m. (Berths No. 6 and 7).

1 wine store house (Berth No.13).
1 berth for molasses (Berth No. 1).
1 grain silo (Berth No. 10) 6,000 tons.

Vauban Docks: St. Louis Quay: 360 m. – marina: 700 berths.

Corsaires Quay: 385 m. comprising:
1 continuous discharging apparatus for phosphates.
2 discharge points for molasses.
1 discharge point for hydrocarbons.
1 discharge point for phosphoric acid – (1,000 t.p.h.).
2 cranes on rails – 12 tons at 14 m.
1 dry dock: 120 m. × 15.5 m.
1 Ro/Ro ramp: In the North part of the Corsaires Quay.

Bouvet Dock: 641 m. for commercial trade.
260 m. for discharging fish.
850 m. for activities connected with fishing.
1 slipway – for vessels less than 500 tons.
1 slipway for yachts.

Jacques Cartier Dock: Length 300 m., comprising:
1 dockyard (ACM).
2 electrical cranes of 24 tons.
Numerous sheds – vats for molasses and acid (6,000 cu.m.)

The installations of this quay will be clarified in due course. 2 cranes on rails are envisaged.

Grain Silos: 1 of 6,000 tons capacity with loading possibilities of 130 t.p.h. and 2 of 6,500 tons capacity each with loading possibilities about 100 t.p.h. each are situated in Bassin "Duguay Trouin".

CRANES: 8 mobile cranes, 5 – 12 tons and 9 electric cranes (on rails) 8 – 24 tons.

STEVEDORES: In order to have workers ready on arrival, Masters are kindly requested to give as accurate as possible ETA the day before arrival, especially if there are many ships discharging at same time.

Normal working hours 0800 – 1200 hrs., 1200 – 1800 hrs. and 2000 – 2400 hrs. from Monday to Saturday, except holidays. There is no night overtime. Dispensations may be made to finish a vessel so that she may catch the tide.

MEDICAL: Notice is required to obtain an appointment with doctors or dentists. Hospital is available in St. Malo.

TANKERS: Tanker quay, extension of Quai des Corsaires, length 130 m. Diameter of discharge pipe 200 mm., one mobile arm, vessels to supply reducers. Max. discharge rate, 650 cu.m./hour.

No deballasting facilities. Tankers wishing to effect repairs must leave port and wash out their tanks and obtain a gas-free certificate.

On completion of operations tankers must leave on the next tide. If a second tanker is waiting to berth she must wait in the roads.

Safety instructions are issued when the vessel passes through the locks.

BERTH ALLOCATION: Dependent upon goods to be discharged and characteristics of vessel. Bearing in mind the widths of the channels, their depth and dimensions at the foot of the quays, the height of the dock which varies on average between 11 m. and 12.5 m.

The largest vessels tie up at Quai des Corsaires.

It is recommended that an advance notice be sent via Agents to the Port Office 15 days prior to arrival, so that the vessel may be received under the best possible conditions.

BRIDGES: 3 bridges can be passed during tide vacation, otherwise, notice required to open.

DENSITY: Average density is 1022.

FRESH WATER: Can be delivered from quay. Rate 3 t.p.h. – 10 t.p.h.

FUEL: Bunkers delivered at St. Malo (with notice varying, depending on the Company – Shell 2 days, Esso 1 week, etc.) come from Donges by road lorries and cost of haulage is supported by the ship (expensive). D.O. can be obtained from local suppliers but out of contract.

FIRE PRECAUTIONS: Usual non-smoking precautions (a watchman is compulsory for tankers). In case of fire call Port Captain on VHF Channel 12.

CONSULS:

Netherlands		(16-99) 56.07.21.
Denmark	(Vice-consul)	(16-99) 56.07.21.
Norway		(16-99) 56.07.21.
Finland	(Vice-consul)	(16-99) 56.31.57.

REPAIRS: Deck and engine repairs can be carried out by shipyard or workshops. Electricians are also available. RAMAC Agency can repair radars and radios, also Radio-Ocean agency.

DRY DOCKS: One dry dock. Max. length admissible 120 m., breadth 16.0 m. and draft 8.0 m. One slipway, 500 tons. Length admissible 45 m., breadth 9 m. With sufficient notice.

GANGWAY/DECK WATCHMEN: Watchmen are not compulsory except for tankers.
OPENING/CLOSING HATCHES: This work is normally carried out by crew. Stevedores' cranes may help for the beams, but dockers will not touch them.
CERTIFICATES: As per International Conventions, all Safety Certificates, Load line, Radio, etc.
Important: All vessels entering the port must be up to date with safety certificates as required by international conventions. An attestation must be handed in by the Master when he passes through the lock.
CUSTOMS ALLOWANCES: 200 cigarettes, or 200 grams of tobacco, and 1 bottle of spirit per crew member.
REPATRIATION: Can be effected from St. Malo by train or plane.
AIRPORT: Pleutuit/Dinard Airport 10 km. from port. Wintertime, services to Jersey (C.I.), with onward flights to England and Wales. Summertime, several times per day to Jersey, London, and to Paris except weekends.
TIME: Local time is GMT plus 1 hour. From April till September GMT plus 2 hours. ETA messages must specify GMT or Summer Time.
HOLIDAYS: French legal holidays. Stevedores do not work on Sundays or public holidays.
POLICE/AMBULANCE/FIRE: Police, 40.85.80 and 17; Ambulance and Fire, 18. Port Captaincy, Tel: 56.23.86, or VHF Channel 12.
TELEPHONES: None.
SERVICES: Compass adjusting, radar or radio repairs can be carried out.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Crew members must have an identification card or their Seaman's Book when going ashore.
DELAYS: Berthing delay will only be due to tide. For loading or discharging, it depends what kind of cargo is handled.
Deadlines: All vessels must leave the quay once unloading has terminated. They may be towed away to another waiting berth – if need be.

Vessels are admitted to port as soon as their berth is vacant, and providing nautical conditions permit.

Time limits for loading or unloading depend on the quantity of the nature of the goods. There is no special rule governing purely port operations.

It is rare for vessels to wait in the roads.

Special Cases: Vessels are not authorised to enter or to leave the port in fog.

In storms, starting at force 8 – Pilots cannot embark, nor disembark from vessels, without danger.

With strong N.W. winds (8 to 9) the port may be ordered to be closed to prevent damage to the lock gates and to structures (bridges).
AUTHORITY: L'Ingenieur Charge de l'Arrondissement de Saint Malo, 1 Rue de la Crosse, 35400 St. Malo. *Tel:* 56.55.45. *Telex:* Dde-Atm-950-197 F. *Contact:* J. Lannou, Port Commandant, Ecluse du Naye, 35400 St. Malo. *Tel:* 81.62.86.

SETE: 43.24 N. 03.42 E. (See Plan)

PORT LIMITS: The seaward boundaries of the Port within which a vessel is considered to be an "Arrived Vessel" are indicated as follows: To the South by a line with the red light of Eastward end of breakwater bearing 257°; to the East by a line with the church tower of Frontignan bearing 005°; to the North by coastline.

A second zone is a circle of 1 mile radius centered on a point located on the bearing 310° and at 2.8 nautical miles from Eastward end (Red Light) of breakwater. This zone is connected from a landing buoy (Lat. 43° 14.9′ N., Long. 03° 53.7′ E.) by a channel 1 nautical mile wide steering 326°. This channel is compulsory for tankers and chemical carriers who must report to French Navy (Toulon) before entering or leaving.
DOCUMENTS:
Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
3 Crew Lists.
4 Passenger Lists.
Health Declaration, eventually vaccination list.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.
2 Provision Lists.
IOPP Certificate – National Certificate of Insurance for Oil Pollution Damage for tankers and "Fitness Certificate" for chemical carriers.

PILOTAGE: Request Pilot by international signals (sound, flags, light signals) or telephone through Marseilles Radio or VHF Channel 19, Tel: 91.25.26.24 (or pilot boat VHF Channel 12). Description of pilot boats; motor launch with black hull, white band, white anchor on hull at bow. Pilot embarks between 1 and 2 miles South of breakwater in good weather. In bad weather he embarks in the shelter of l'Epi Delon (Eastern Entrance). In any case, permission to enter is to be requested by VHF Channel 12 to "Sete Port Traffic".
ANCHORAGE: In Roads from 0.5 miles to 3 miles to South of breakwater. (See "Port Limits" and "Tankers").
RESTRICTIONS: *Commercial Harbour:* In the Canal Maritime, length max. 145 m., breadth 20 m., draft 7.0 m. (23 ft.).

Bassin a Petrole – see "Berthing".
MAX. SIZE: C.B.M.: Tankers up to 100,000 d.w.t., lightened draft 13.1 m. (43 ft.).

Bassin a Petrole: New Tanker Berth (P2) – 35,000 d.w.t., length 225 m., draft 11 m. (36 ft.) P1 – length 140 m., draft 33 ft. P3 – Barges.

Darse No. 2 for ore carriers 225 m. length; 13.18 m. draft (43 ft. 2 in.)

Commercial Harbour up to 11.0 m. draft (36 ft.).

Commercial Harbour in the Canal Maritime: max. length 140 m.; breadth 20 m., draft 6.85 m. (22 ft. 6 in.).

BERTHING:

Bassin du Midi:	
North Quay:	Berths No. 16, 17, 18, 19 and 20
	Draft 6.50 m. (21 ft. 04 in.)
	Cranes: 4 Fives Lille, 7.5 tons at 22 m. with scoop and hook.
	All berths: Ore.
South Quay:	Berth No. 14 Draft 7 m.
	15 Draft 6.10 m. Ro/Ro
	Cranes: 2 Fives Lille, 7.5 tons at 22 m.
	All berths: Livestock and general cargo.
Canal Maritime:	
Quai Paul Riquet:	Berth No. 10 Draft 5.50 m.
	11 Draft 6.40 m.
	12 Draft 6.40 m.
	13 Draft 6.10 m.
	All berths: Wine and general cargo.
	Cranes: Nil.
Quai Vauban:	Berth No. 24 Draft 3.70 m.
	25 Draft 4.60 m.
	26 Draft 4.10 m.
	Berths No. 25 and 26: Wine.
	Cranes: Nil.
Quai Francois Maillol:	Berth No. 27 Draft 5.80 m.
	28 Draft 5.20 m.
	29 Draft 5.20 m.
	All berths: Wine.
	Cranes: Nil.
Quai d'Orient:	Berth No. 7 Draft 5.50 m.
	8 Draft 5.50 m.
	9 Draft 5.50 m.
	5 Draft 5.00 m.
	6 Draft 4.60 m.
	Restriction:
	Berths No. 5 and 6: Breadth = 15 m.
	All berths: Wine and general cargo.
	Cranes: Nil.
Quai de la Republique:	Berth No. 30A Draft 5.20 m.
	30B Draft 4.30 m.
	All berths: Wine.
	Berths No. 31 and 32 – Tugs.
	Berth No. 33 – Fishing repairs.
	Cranes: Nil.
Quai d'Alger (Algier Quay):	Berth No. 34 Draft 8.20 m.
	35 Draft 8.20 m.
	36 Draft 8.20 m.
	All berths: Wine.
	Passenger Quay:
	Length 200 m., draft 8.20 m.
	For example: German m.v. Europa.
Quai du Maroc (Morocco Quay):	Berth No. 37 Draft 7.60 m.
	(Ro/Ro) Length 130 m.
	Passengers and wine.
	Line: Morocco.
Bassin Orsetti:	Max. Length: 170 m.
	Berth B1 Draft 8.25 m.
	B2 Draft 8.25 m. Ro/Ro
	B1 and B2: Passengers
	General cargo.
	B2 Ro/Ro Gare Maritime Orsetti.
	Line: Baleares (Spring and Summer).
	Cranes: 1 Fives Lille, 6 tons at 22 m.
	Berths: D1 Draft 8.55 m.
	D2 Draft 8.55 m.
	D3 Draft 8.25 m. Length 152 m. Ro/Ro.
	All berths: General cargo.
	Cranes: 4 Caillard 6 tons at 22 m.
Mole Masselin:	Cereals
	1 berth on 180 m. of quay.
	Draft: 10.36 m.
	1 loading gantry of a capacity of 550 t.p.h.
	2 storage silos of 22,000 tons capacity. (annual 100,000 tonnes).
Dock No. 1 or Colbert Dock:	Berth E3 Draft 10.40 m. Ro/Ro.
	E2 Draft 10.40 m.
	E1 Draft 11.00 m.
	All berths: Containers – general cargo.
	Wood pulp and sawn timbers.
	Cranes: 3 Caillard 6 tons at 22 m.
	9 tons at 19 m.
	7.5 tons at 22 m.
	1 container gantry crane 35 tons at 35 m.
	Berth G1 Draft 7.50 m. Ro/Ro.
	G2 Draft 11.00 m.
	G3 Draft 11.00 m. Ro/Ro.
	All berths: Sawn timbers – logs and general cargo.
	Cranes: 3 Callaird and 2 Peiner
	7.5 tons at 22 m.; 8 tons at 30 m.
Dock No. 2 or New Dock:	Berth H2 Draft 13.18 m. Ro/Ro.
	No crane.
	Berth I3 Draft 13.18 m. Ro/Ro.
	Named berth for all ponderous bulk cargoes
	Max. length 235 m. (Panamax).
	Cranes: 1 Delattre Levivier 20 tons at 44 m.
	2 Peiner 12 tons at 30 m. – all with scoop and hook.

Also see "Developments".

HEALTH: Pratique given by Health Officers or by Custom's Officers who board on arrival. If any case of suspected disease on board or any reason why vessel should not receive Free Pratique, Master should radio Agent before arrival, advising full details.

RADIO: Marseille Radio VHF Channel 19. Sete Port Traffic on VHF Channel 12. Port Authority Telex No. 480220.

TUGS: 3 tugs (2×1,200 h.p. and 1×2,200 h.p.) to be ordered from Compagnie Setoise de Remorguage. Tel: 67.74.64.49 or VHF Channel 12. Tow line to be furnished by ships. Vessels taken in tow near the breakwaters on the North side.

TANKERS: Frontignan Sea Line Terminal North Berth (C.B.M.) 1 berth for tankers up to 100,000 d.w.t. lightened draft 13.1 m. (43 ft.). 2×12 in. hoses for crude oil discharge. Submarine pipe-line 28 in. diameter.

Commercial Port: 1 berth for tankers up to 35,000 d.w.t. draft 11 m. (36 ft.). 3 loading/unloading arms for refined products, 1 unloading arm for methanol and 1 unloading arm for slops and dirty ballast. 1 old berth for tankers up to 140 m. length or 10,000 d.w.t., draft 10.1 m. (33 ft.). Slop disposal facilities available up to 1,000 cu.m.p.h. Also see "Max. Size".

Shipmaster's Report: March 1985.

Berth: Vessel berthed at C.B.M. berth which is a multiple buoy mooring just outside the East Harbour Entrance in position: Lat. 43° 24.3′ N., Long. 03° 44.6′ E.

Pilot boards just S.E. of the yellow light buoy (Lat. 43° 22.2′ N., Long. 03° 46.8′ E.), together with Mobil Representative, Cargo Surveyor and a mooring gang of 7 men. At the same time, 3 slings of equipment are placed on board on the port side, including chain stoppers for mooring aft and discharge monitoring equipment.

One tug is used, through the centre lead aft; using ship's lines (2). Vessel approaches the berth on course of approximately 030°; ship's log was used for assessment of ship's speed, the Pilot preferring to drop the first anchor at a speed of between 1.0 – 1.5 knots.

Starboard anchor is dropped first and allowed to run to 10 shackles on deck as the vessel is canted to starboard to a heading of 045°. When about 10 shackles have run, the port anchor is let go and then engine and tug used to manoeuvre the stern towards a group of 3 mooring buoys. 3×42 mm. diameter wires are picked up from these buoys, then 2 further wires from submerged clumps and finally 2×42 mm. wires from submerged clumps are secured forward. Both anchors are then hove in to about 8.5 shackles each to tension the moorings aft, vessel's head being finally 135°. Moorings, distances and dimensions are as per the berth drawing in *Guide to Port Entry* – "Plans". Mooring was very competently accomplished, the anchors being very accurately placed close to 2 small marker buoys (not on chart).

Discharge: The berth has very recently been converted to clean products only. 2×12 in. hoses are connected to the port side manifolds. Each of these is fitted with a butterfly valve, however, a noticeable amount of the previous cargo ran into the drip trays while the hoses were being connected. Connection of hoses was made by the mooring gang.

The sea bed line is 28 in. and maximum pressure permitted is 9 bar. This line has previously received crude oil at rates of up to 5,000 tonnes/p.h. so it was not surprising when vessel did not make this pressure, even at full speed. Discharge of 30,000 tonnes took a total of 15.8 hours, giving a final rate of 1,900 tonnes/p.h. This included approximately 2 hours slow pumping at the start and all the stripping time.

A 30 minute water plug was requested before discharge commenced. Mobil normally expect a vessel to be ballasted within 6 hours of completion of discharge; on this occasion, extra ballast was taken as the vessel would be unmooring in a 30 knot wind.

The Mobil Representative, Cargo Surveyor, Pilot and the 7 man mooring gang all remain on board until after completion of unmooring. Meals and accommodation should be provided.

General: Charterer's Agent, Mobil Oil Francaise, is in Paris (Telex: 610417). Agent attended on berthing and for remainder of stay contact was maintained by portable VHF which proved to be quite satisfactory.

Up to 6 boats per day for shore leave, etc. can be provided; if all 6 boats are taken the cost is high – 7,000 francs. However, for vessel's requirements some boats were required in any case.

Port Health, Immigration and Customs did not attend at any time, all their paper work being carried out by the Agent.

BRIDGES: To proceed to or leave, the Bassin du Midi bridges have to be opened. Request to be made to Capitainerie du Port (Tel: 67.74.88.20/67.46.00.81) before 1700 hrs. Friday, when arrival or departure is expected during weekends.

FRESH WATER: Available on most quays or by lighter of 140 tons capacity during working hours. Advance notice required for Saturdays and Sundays.

FUEL: All qualities available subject to advance notice given.

REPAIRS: Claverie: Tel: 67.48.62.52 – Mechanical workshop for heavy repairs and boiler repairs.

Di Biase: Tel: 67.74.32.12 – general repairs.

C.R.M.: Tel: 67.74.06.83 – Electronic and radio aids to navigation repairs.

Touat: Tel: 67.48.62.37 – Electrical and generator repairs.

Farre: Tel: 67.53.41.28 – Under water work.

CONSULS:

Denmark	Tel: 67.74.30.20	Norway	Tel: 67.74.31.83
Finland	Tel: 67.48.63.16	Sweden	Tel: 67.48.63.16
Netherlands	Tel: 67.48.63.16		

Others at Marseilles.

WATCHMEN: Service necessary for ships loading or unloading dangerous merchandise. Optional for other ships. (Tel: 67.80.22.02).

CUSTOMS ALLOWANCES: 40 grammes tobacco per day per man (calculated in accordance with the length of voyage undertaken by the ship). Amount of alcohol fixed by Customs in accordance with the crew, and length of ship's stay in port. It is a matter of tolerance and not of right.

REPATRIATION: Repatriation and crew changes are easily arranged.

AIRPORT: Airport (Class B) at Montpellier-Frejorgues, located 30 km. from Sete, (30 minutes by car on the motorway), and has services to Paris, Nice, Bordeaux, Clermont-Ferrand and London. The international airport of Marseilles-Marignane is 160 km.

IDENTIFICATION CARDS: Crew men going ashore should carry passport or identity card.

TIME: GMT plus 1 hour – alteration from end of March to end of September to GMT plus 2 hours.

HOLIDAYS: No labour days: 1st May and St. Louis Day (late August).

Days with possibility of labour at overtime rates: 1st January, Easter Monday, Ascension Day, Whit Monday, National Day (14th July), Assumption Day (15th August), All Saints' Day (1st November), Armistice Day (11th November), Christmas Day (25th December).

N.B. Every Sunday and days with possibility of labour at overtime rates can be worked at the rate of 100%.

DEVELOPMENTS: Berth J in Dock No. 2, is available for oil products, length 130 m., depth 9.0 m.

A signal mast is to be erected near the Eastern Entrance and is expected to be operational late 1989.

AUTHORITY: Capitainerie du Port de Sete, Quai du Maroc, 34207 Sete, France. *Tel:* 67.74.88.20. *Telex:* 480220. *Contact:* Commandant Pierre Guillard, Commandant du Port de Sete (Harbour Master).

STRASBOURG: 48.34 N. 07.42 E. (See Plan)

PORT LIMITS: In Strasbourg (Lat. 48° 34′ N., Long. 7° 42′ E.), the Port Autonome extends from the Km. 285 to the Km. 297 upon the Rhine, occupying an area of 1059 ha., of which 205 ha. are water areas including 15 docks (7 have a constant level, 8 a variable level), and 2 fore-harbours.

Out of these limits, the Port Autonome de Strasbourg includes 13 branches designed for the handling of building materials and cereals, and 2 ports, Marckolsheim (at Km. 242) and Lauterbourg (at Km. 349), all the branches and ports being on the left bank of the Rhine.

DOCUMENTS: The ships must hold some documents, which they have to keep at disposal of the administration or the inspection authority when required, as following:

Certificate of Survey.
Certificate of Tonnage.
Certificate of Registration.
Log-Book.
Booklet of Verification of the used oils.
Attestation for Equipments of liquified gases.
Customs Documents for the carriage of goods.
Fluvial Bill of Lading.
Rhine Manifest.
Certificate of Ability to steer the ship.
Police Regulation for the Navigation on Rhine.
A.D.N.R., regulation for carriage of dangerous goods.
the documents relating to the boilers and other tanks under pression.

PILOTAGE: Pilotage is not compulsory on the Rhine and usually Masters do not ask for a Pilot except for Gebirge and the Haut-Rhin. A Pilot can be obtained in the Port of Kehl by dialling 19 – 49.7851.20.70.

ANCHORAGES: The ships have at disposal an area of about 10 ha. in the North and South fore-harbours to take anchorage. Depth of water at least 5.20 m.

RESTRICTIONS: Restrictions to navigation are published by the Nautical Corporation of the Inland Water Transport.

MAX. SIZE: The max. sizes of ships allowed on the Rhine are as follows: Length: 110 m., – breadth: 11.4 m. Ships on the Rhine do not exceed a draft of 4.0 m.

Dimensions of the locks: – North lock: length 125 m., breadth: 13.5 m., South lock: length 125 m., breadth: 13.5 m.

In the constant level docks, the water depth is 3.5 m., but only along the North-South axis of the port; if not there, the water depth is 2.5 m.

In the variable level docks, which are the docks with a direct communication with the Rhine, the minimum depth is 4.30 m.

These depths are given, the Rhine being supposed at its lowest bench-mark: 135 m.

HEALTH: There is no Health Service for the Rhine.

RADIO: All communications on the Rhine are performed by radio-link and radiotelephony:

VHF Channels 10 and 13: used for ship to ship communications.

VHF Channels 20 and 22: used for transmitting of nautical advice in the way shore-ship and in the reverse order.

VHF Channels 24, 25, 26 and 27: used for public communications.

RADAR: There is no radar station on shore.

TUGS: The Port Autonome de Strasbourg put at disposal of customers two tugs and one 600 C.V. pusher according to their needs.

BERTHING: 10 km. of quays can be used for mooring. Some of these quays are situated in the constant level docks (max. draft 2.5 m.), some are in the docks that link with the Rhine (max. draft 4.30 m.). Tankers berth only in the Oil Dock Harbour.

SPECIALISED CARGO-HANDLING FACILITIES: Containers up to 40 tonnes; heavy packages up to 350 tonnes.

The two operations are carried out at the container and heavy loads terminal at Adrien Weirich Dock and utilise a length of 180 m. of quay. Regular Rhine container lines to the North Sea ports.

A plurimodal international transport centre, "Eurofret Strasbourg", is being developed in the Southern sector of the port, close to the container terminal and including a road transport centre (10 ha.), a warehousing area (20 ha.) and an area grouping various activities (12 ha.).

BULK CARGO FACILITIES: Grain elevators: 2 berths for loading, and 2 berths for discharging.

Loading of gravel on the Rhine by belt-conveyors (11 facilities).

Loading and unloading of hydrocarbons in the Oil Dock Harbour by 18 facilities operating each at the rate of 300 cu.m./hr.

BRIDGES: The head room under the bridges reaches 8.8 m. in the constant level docks.

MEDICAL: Civil Hospital, 1, place de l'Hospital, 67000 Strasbourg, Tel: 88.16.17.18.

DENSITY: The density of water is about 1000.

FRESH WATER: Fresh water is supplied by Ets. Koejac, Tel: 88.61.26.78.

FUEL: Bunkering can be arranged with the m/s *Robertsau*, G.P.S., Tel: 88.61.68.32 or m/s *Jumbo*, Ets. Koejac, Tel: 88.61.26.78.

CONSULS:

Germany F.R.	88.32.61.86
Belgium	88.35.43.63
U.S.A.	88.35.31.04
Netherlands	88.61.00.29
Switzerland	88.35.00.70
Austria	88.35.13.94

REPAIRS/SLIP: All the repairs can be carried out at: C.M.S., 101 rue du Rhin Napoleon, 67100 Strasbourg. Tel: 88.79.02.00.

Any vessel capable of using the port can use the Forge-de Strasbourg slip.

SURVEYORS: Surveyors of the Commission de Visite, named by the Commission Centrale pour la Navigation du Rhin, can be obtained by the Master.

WATCHMEN: Ship's crew, if required.

OPENING/CLOSING HATCHES: Opening and closing of the hatches are performed by the crew or by the staff of the company freighting the ship, as any other handling. Dockers do not exist in the port of Strasbourg.

REPATRIATION: All the facilities exist for effecting crew changes and arranging any necessary repatriation.

AIRPORTS: Distances from Strasbourg: Strasbourg-Entzheim: 15 km. Strasbourg-Mulhouse: 130 km. (airport Mulhouse Bale). Strasbourg-Francfort: 220 km.

HOLIDAYS: Work is stopped during the weekends and the statutory holidays. Labour can be obtained on these days if necessary.

POLICE/AMBULANCE/FIRE: Police: 17 – Ambulance (with doctor) 88.33.33.33. – Firemen: 18.

TELEPHONES: Office of the P et T, 5, rue du Port du Rhin, 67000 Strasbourg. In case of emergency: La Capitainerie du Port, 5, rue du Port du Rhin – North Lock of the Port, quai Jacoutot, can be contacted at any time. Tel: 88.32.49.15. There is also a public call box at the disposal of anybody at any time.

SERVICES: For the ship: Tank cleaning: SITAL, 14, rue de Rouen, 67000 Strasbourg, Tel: 88.39.60.04

Supplying of material: Koejac, quai des Belges, 67000 Strasbourg, Tel: 88.61.26.78.

Electronic repairs or supplies: Radio-Metzger, 17, rue de Dunkerque, 67000 Strasbourg, Tel: 88.35.45.42.

For the crew and various formalities (customs): La Capitainerie du Port, 5 rue du Port-du-Rhin, 67000 Strasbourg, Tel: 88.32.49.15.

REGULATION: The Reglement Particulier de Police du Port is very helpful to the Master and will let him know the particulars of the Port of Strasbourg.

SHORE LEAVE: The Master must introduce himself, within the 2 hours following his arrival, to the Commissariat Special du Port, 5 rue du Port du Rhin, 67000 Strasbourg, and produce the passports of the crew. The passenger ships have to comply with the regular supervision of authority. Each member of crew must be holder of an identification card or a passport when he is ashore.

DELAYS: The commercial operations begin and finish at the dates and hours shown upon the fluvial bill of lading. Every delay is subject to the payment of penalties. Except for the passenger ships, ships do not give notice of their arrival to the authority, before they enter into the port.

AUTHORITY: Port Autonome de Strasbourg, 25 Rue de la Nuee Bleue, F-67081 Strasbourg Cedex. *Tel:* 88.32.49.15. *Telex:* 880476 F Poronome Strbg. *FAX:* 88.23.56.57. *Contact:* M. Georges Delmas, Port Director.

TONNAY CHARENTE: 45.57 N. 00.53 W. (See Plan)

DOCUMENTS:

2 copies Crew List.
2 copies Ship's Stores Lists.
2 copies Crew Manifests (Tobacco List).
2 copies Passenger List (if any).
1 Declaration of Ballast.
Manifest form Last Port.
1 copy Bill of Lading (in case of any cargo to be landed).
Ship Register to be shown.
Derat Certificate or Exemption.

PILOTAGE/ANCHORAGE: Vessels have to proceed to about half a mile S.S.W. Isle of Aix Lighthouse and to drop anchor in the No. 115 alignment when safe anchorage is open (lowest tides; minimum depth of water 26 ft.).

River Pilot joins ships there, about 3 hours to 1 hour before HW, depending on draft and size of vessel concerned.

Pilot boat is equipped with VHF.

RESTRICTIONS: As the River Charente is unlit, movements are not possible at night. However, vessels may leave anchorage in dark and come up river at daybreak (anchorage area is about 5.5 miles from the mouth of the river). Sailing up river possible 0300 hrs. – 2100 hrs. and sailing down river possible 0400 hrs. – 2100 hrs.

MAX. SIZE: Max. permissible LOA 120 m.; max. permissible draft 5.7 m. at Neap tides, 6.4 m. for sailing at Spring tides and 6.6 m. for entering at Spring tides.

HEALTH: Free Pratique is to be obtained on arrival at port. Usual yellow flag signal to be raised.

RADIO: Ships coming from South: Bordeaux-Arcachon Radio Station. Ships coming from North: Saint-Nazaire or Brest le Conquet Radio Stations.

VHF: Vessels arriving in the roads must keep watch on Channel 16.

TUGS: No tug is available. In case of need, tug may be obtained from La Rochelle-Pallice (about 20 miles).

BERTHING: 1 private berth for grain loading, which can take vessels up to 100 m. length. 1 berth 200 m. long for handling general cargo. 3 waiting berths. The central waiting berth can be used for handling small cargoes from 500 tonnes to 1,000 tonnes. Depth of water along the quays is an average of 6 m.

CRANES: 2×5 tonne cranes, 1×3 tonne crane, 2×5 tonne mobile cranes. All the cranes are capable of working with hooks or scoops.

BRIDGES: The Rochefort Bridge clearance over highest water is about 98 ft. (30 m.).

STEVEDORES: A 24-hour notice is required in order to arrange loading unloading operations.

Discharge rates:	Coal – about 1,200 tons per day of 8 hours' work.
	Phosphates – about 1,500 tons per day
	Zinc concentrates – about 1,400 tons per day.
Loading rates:	Grain 2,000/2,500 tons per day.

OPENING/CLOSING HATCHES: This is the responsibility of the crew.

MEDICAL: The nearest hospital is at Rochefort (about 4 miles).

FRESH WATER: Fresh water may be obtained alongside, from hydrants, at the rate of about 10 t.p.h.

FUEL: Must be obtained from La Pallice (about 20 miles) by lorries.

REPAIRS: Small repairs may be carried out by local workshops. Nearest shipyard is at La Pallice.

REPATRIATION: Changing crew and necessary repatriation formalities may be effected.

AIRPORT: The nearest airport is La Rochelle (about 30 miles). Possible to reach Paris airports in a few hours by train.

POLICE/AMBULANCE/FIRE: Police: Rochefort H.Q. – Tel: 17; Tonnay-Charente Gendarmerie: Tel: 46.88.20.38; Ambulance: Tel: 46.99.30.69. Fire: Tel: 18 or 46.88.20.38.

AUTHORITY: Direction Departementale de l'Equipement de la Charente-Maritime, Service Maritime, B.P. 125, Subdivision "Maritime-Hydrologie", 17306 Rochefort-Sur-Mer Cedex.

Contact: M. Drieu, Sous-Lieutenant de Port.

Mairie de Tonnay-Charente, Rue Alsace-Lorraine, 17430 Tonnay-Charente, France. *Tel:* 46 88 78 11.

TOULON: 43.07 N. 05.55 E. (See Plan)

DOCUMENTS:

Cargo Manifest or Manifest of Ballast.
Certificate of Cargo Space.
Bills of Lading.
Ship's Register.
6 Crew Lists.
3 Passenger Lists.
Health Declaration.
Derat Certificate or Exemption.
Declaration of Crew Personal Effects.

PiLOTAGE: Pilot station is situated on Est Quay, address: B.P. 137, Toulon. Tel: 94.41.03.28. Pilotage compulsory for vessels over 150 g.r.t. and over 45 m. LOA. Pilot boards 100 m. North of the semaphore station at Cap Cepet.

RESTRICTIONS: Entry can be made by day and night except for vessels loading with refined petroleum or dangerous cargoes which are not allowed to enter between sunset and sunrise.

MAX. SIZE: The port is approached by a channel 125 m. wide. The docks can accommodate without tug assistance ships up to 250 m. length and 10.0 m. draft.

Renovation of the Gare Maritime is underway but there is no change in the draft available.

HEALTH: Pratique given by Customs Officers who board on arrival. I any case of suspected disease on board or any reason why vessel should not receive Free Pratique, Master should radio Agent before arrival, advising full details.

VHF: IMPORTANT – To get authorisation to enter Toulon Harbour, ships should call the Naval Signal Station "CEPET" on Channel 16, one hour before arrival at the Pilot Station.

TUGS: Naval Tugs. There are many harbour tugs up to 1,000 h.p. and several deep sea tugs up to 2,000 h.p. controlled by the French Navy which may be called on for assistance by the Harbour Master or Pilots.

Commercial Tugs: 1×500 h.p. and 1×1,500 h.p.

BERTHING: President Fournel Quay, 345 m. length, depth alongside 10.0 m.

East Quay, 170 m. length, depth alongside 10.0 m.

Minerve Quay, length 128 m., depth alongside 7 m.

La Seyne – Bregaillon: One Ro/Ro Berth, depth 9.60 m. Ore quay berths), length 215 m., depth 9.50 m., 2×26 tonne cranes.

TANKERS: Tankers discharge at naval installations at Milhaud and Lazaret.

Total Terminal: 1 jetty berth for tankers up to 7.0 m. draft, and a buoy berth for vessels up to 15,000 tons displacement.

STEVEDORES: There is a permanent working force of 14 dockers which can be increased by casual labour to 60 men if required. Shifts are available for 4 hours, 8 hours or 9 hours with possibilities for overtime.

FRESH WATER: Available from hydrants.

FUEL: Available by tanker lorries and by barges from Port de Bouc companies (Sanara or Citerna).

REPAIRS: Serra Fres: Floating dock 1,700 tons, length 85 m.

All types of repairs can be carried out at the Naval Dockyard.

DRY DOCKS: Several dry docks available in the Naval Dockyard, of which 3 can accommodate vessels in excess of 250 m. length.

AIRPORT: The Toulon-Hyeres Airport is 23 km. from the centre of Toulon. There are 4 flights daily to Paris where passengers may transfer to national or international flights.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: New Year (1st January, no labour available); Easter Sunday (possibility of labour with overtime); Easter Monday (no labour available); Labour Day (1st May, no labour available); Ascension Day (possibility of labour with overtime); Whit Sunday (possibility of labour with overtime); Whit Monday (no labour available); National Day (14th July, no labour available); Assumption Day (15th August, no labour available); All Saints' Day (1st November, no labour available); Armistice Day (11th November, possibility of labour with overtime); Christmas Day (25th December, no labour available). N.B. Every Sunday and day marked "possibility of labour with overtime" can be worked at the rate of 100%.

IDENTIFICATION CARDS: Crew men going ashore should carry passport or identity card.

AUTHORITY: Direction Departementale de l'Equipment, Capitainerie du Port de Toulon, B.P. 1202, 83070 Toulon Cedex. *Tel:* 94.03.27.60 (during working hours) and 91.97.18.34 (mobile telephone of Officer on duty outside office hours). *Telex:* Equip Toulon 430742. *Contact:* C. Mansire, Harbour Master, Tel: 94.91.84.47.

TROUVILLE-DEAUVILLE: 49.23 N. 00.05 E. (See Plan)

The port situated on mouth of River Touques, is composed of 2 parts: Trouville for small fishing vessels, and Deauville including 2 docks for cargo ships and pleasure boats.

DOCUMENTS:

1 Crew List.
1 Passenger List.
Tonnage Certificate.
2 Cargo Manifests.
Bills of Lading.
1 Crew Manifest.

PILOTAGE: Pilotage on entry and leaving is carried out by the Seine Pilots. Request for a Pilot must be made 12 hours in advance by radio or telephone, either to the Port Captaincy of Trouville-Deauville or to the Pilotage Office for the Seine at Le Havre or at Rouen. Vessels bound for Trouville/Deauville anchor in the "Rouen Waiting Area" Roads at Carosse where they take on the Pilot.

It is recommended to anchor near the pilot boat of Rouen and contact her by VHF for instructions.

ANCHORAGE: The best one is Rade de la Carosse (Lat. 49° 27′ 30″ N., Long. 0° 01′ E.).

RESTRICTIONS: No restrictions at night time. Draft allowed 2.80 m. Neap tides, 4.0 m. Spring tides, Entrance is dangerous with wind from N.W. to N. over force 6.

Access channel has a depth of 2.80 m. and dries out (zero on French charts). Lock gates are opened about 2 hours before time of commencement of flood tide at Le Havre. Lock gates are closed 2.5 hours after time of commencement of flood tide at Le Havre. The fore port and river quays at Trouville are uncovered at low water. The Trouville fishing port is one where craft are beached.

MAX. SIZE: Length: 210 ft. (64 m. OA); breadth: 45 ft.

RADIO: Radio-Boulogne FFB.

TUGS: No tugs available.

STEVEDORES: Loading and discharge by shore crane.

MEDICAL: All hospital facilities available.

DENSITY: 1025.

FRESH WATER: Available from quay.

FUEL: Small quantity by tank-lorry on demand.

CONSULS: See "Caen" or "Le Havre".

REPAIRS: Small repairs only.

AIRPORT: Deauville St. Gaitien 3 miles away.

AUTHORITY: Commandant du Port, Capitainerie du Port, Boulevard Cornuge, 14800 Deauville. *Tel:* 31.88.28.71.

NOTES

Please also advise Shipping Guides Ltd.

Gabon

CAPE LOPEZ: 00.38 S. 08.43 E. (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
4 Lists of Ports of Call.
4 Manifest of Ship's Stores.
Clearance from Previous Port.
4 Arms and Ammunition Lists.
4 Narcotics Lists.
4 Birds and Animals Lists.

PILOTAGE: No official radio station. Pilotage not necessary to approach Port Gentil Roads.

Pilotage to Cape Lopez Terminal is assumed by Elf-Gabon Pilots, while pilotage to Pointe Clairette Terminal depends on Port Gentil Harbour Authority.

For the private tanker ports at Pointe Clairette and Cape Lopez, pilotage is compulsory. On Cape Lopez Roads Pilot will board vessel 1.5 miles offshore on a line with Cape Lopez Lighthouse bearing 255° True, distance 2.4 miles in a launch carrying proper Pilot signals. The Mooring Master will stay on board throughout the vessel's time in port to assist in mooring, hose handling and loading operations.

ANCHORAGES: The waiting anchorage position is 2 nautical miles in a 075° direction from Cape Lopez Lighthouse. Depth of water 55 m.

It is necessary to guard against violent tornadoes occurring between December and May coming from the East or the North. These tornadoes occur very suddenly and are extremely strong.

MAX. SIZE: 250,000 d.w.t. and LOA 340 m. Max. draft 20.50 m. (67 ft.).

Minimum size of vessel: LOA: 215 m. (Approx. 35,000 d.w.t.).

If vessel arrives with a part cargo from another loading port the maximum arrival deadweight acceptable is 160,000 metric tons.

RESTRICTIONS: Berthing is effected day and night, however, certain vessels may be berthed in daylight only. Unberthing is effected by day or night. Vessels must arrive with sufficient ballast and correct trim in order to manoeuvre safely.

Ballast should not be less than 30% of deadweight. Fresh water and stores are not considered as ballast; draft on arrival should not be less than 50% of loaded draft. Elf Gabon reserve the right to leave vessels which do not comply with these regulations at anchor.

Berthing is not effected in rough weather. At the berth mooring lines must be in good condition and well tended. In case of storm or tornado loading operations must cease and vessel be prepared to leave the berth if so directed by the Terminal Superintendent or Pilot.

HEALTH: Formalities carried out on berthing by Police Forces. However, ships remaining at anchor may have Customs and health formalities carried out through their Agent.

RADIO: *Elf Gabon Terminal:* VHF watch on Channel 16 or 72. The working Channel of the terminal is Channel 72.

When a ship is expected, a permanent watch on VHF Channel 16 is kept by the terminal for short distance communications.

All ships must contact the terminal in advance of their arrival. Elf Gabon will inform the vessel whether berthing will take place on arrival or whether it should anchor.

Arrival Advice: Advise Agent 48 hours and 24 hours before arrival, also if any appreciable alteration thereafter.

VHF: Before vessel's arrival watch is kept on Channel 16. During loading and mooring, watch is kept on Channel 72.

BERTHING: Anchors are not required for mooring operations but must be ready for emergency case. Vessel berths port side alongside on 6 dolphins, heading 044° True. Depth of water along the berth is 25 m. Mooring ropes used as follows: fore and aft 3 head/sternlines, 3 breastlines, 2 springs. 2, 3, or 4 tugs are used for mooring operations, in accordance with the d.w.t. Vessel's engines must be ready for immediate operation all the time vessel is at the berth. 2 or 3 tugs will remain standing by. Ship's gangway is not required, an automatic one is supplied by Terminal.

Connecting Hoses: Connection and disconnection is carried out by Elf Gabon personnel with the assistance of the crew.

The vessel's cargo derricks are not used except in the case of absolute necessity or in the case of breakdown of the platform hoisting gear.

The 4 loading arms are 16 in. diameter, with hydraulic couplers for 16 in., 14 in. and 12 in. flanges. The arms are located on either side of the dolphins' centreline.

Reducers shall be provided by the ship for the other flange diameters.

Before connecting arms, the ship will be connected to the ship-shore bonding wire, and disconnected only after loading arm uncoupling.

Hose Handling: 5 arms. Crude: 4 × 16 in. arms. Loading rate: 12,000 cu.m./hr. Finished products (Diesel and Naphtha) are loaded by means of a 5th loading arm; 2 loading arms can be used for Fuel Oil.

Loading: Communication between ships and shore loading installations, in any case (loading, fire, etc.), will be effected on VHF Channel 72.

An Elf Gabon representative, responsible for loading and safety is on permanent watch at the berth. The Master must supply him with all relevant information and assistance required to ensure operations run smoothly.

The Master will be held entirely responsible for operating the valves and for safe loading on board his ship. If necessary, pumping speed can be reduced.

At least 10 minutes before loading is finished, the terminal should be notified of the moment pumping should be stopped.

When loading is completed, the tank ullages will be taken by a ship's officer in the presence of an Elf Gabon representative.

Average samples taken from each tank from which the crude was pumped will be furnished to the ship by the terminal.

These samples will be numbered, sealed and labelled showing the origin of the crude.

Notice of Readiness: To Elf Gabon.

TUGS: Compulsory. Owned by Elf-Gabon, can be contacted on VHF Channel 72. Ship tow lines are not required, 3 tugs are available up to 3,200 h.p. There are 2 launches for handling mooring lines.

BALLAST: Vessels must arrive with clean ballast only. There are no facilities for discharging dirty ballast at the terminal. In no circumstances should dirty ballast be pumped overboard.

MEDICAL: Doctors and hospital facilities available. All vaccinations can be arranged.

DENSITY: Varies between 1021 and 1025.

FRESH WATER: Fresh water supplies can be obtained within a few hours from a 120 ton barge. Apply to Port Gentil.

FUEL: 1,500 secs. and 3,500 secs. fuel can be supplied by barge subject to 48 hours' notice. No barges allowed alongside during loading operations.

CUSTOMS ALLOWANCES: No restrictions for quantities tobacco and spirits held on board the ship. It is prohibited to allow dutiable articles to leave the ship.

CONSULS: France, German F.R. and United Kingdom.

REPAIRS: There are facilities for hull and engine repairs for barges and river craft. Slipway for vessels up to 300 tons.

REPATRIATION: Facilities available. Contact ship's Agent.

AIRPORT: Can be reached in 15 minutes by road. Regular services to Europe every day.

TIME: GMT plus 1 hour all the year round.

HOLIDAYS: Holidays do not affect tanker working.

POLICE/FIRE/AMBULANCE: Police tel. 17; Fire tel. 18; Ambulance tel. 23-33.

SHORE LEAVE: Crew members are allowed ashore. There is no regular immigration control but identification papers should be carried. Bathing alongside the ship and the berth is strictly prohibited.

SAFETY: During the whole time the ship remains at the loading berth, the Master shall:

Maintain on board sufficient number of crew members to carry out any manoeuvre without difficulty, and to enable first fire fighting measures to be taken; maintain engines ready for manoeuvring; ensure that mooring is satisfactory without undue wear on mooring lines.

Fire Precautions: It is forbidden: To smoke, use naked flame or tools likely to create sparks outside the zones generally authorised for tankers to carry out repairs or handling operations on deck; to turn the propellers; to use in danger areas any equipment or tools not of a type approved by a competent organisation. Elf Gabon reserve the right to take any steps considered necessary in case of danger and, in particular, to suspend loading; loading of bunkers, supplies, water, etc., will be submitted for the approval of Elf Gabon.

During loading:

All hull valves should be shut, except for those required for water circulation; all scuppers of main deck should be sealed; two fire hoses will be connected and set up, one at the bow. the other at the stern of the ship. The fire main shall be maintained under pressure at all times; two long robust steel safety ropes should be placed on the starboard side of vessel, one at the bow and one at the stern. The eyes should be maintained at the right distance from the water so that tug boats can easily catch hold of them.

Movement Restrictions:

It is forbidden to enter the zone of Elf Gabon installations without due authorisation. Smoking or use of lighters or matches are strictly prohibited.

In case of fire on board a ship moored to the loading berth, the Shipmaster shall give the alarm by sounding a series of short blasts on the siren and advise Terminal on VHF Channel 72. He is responsible for organising fire fighting and ensuring the stability and safety of his vessel, taking all the necessary steps in this respect.

Elf Gabon may order any safety measures to be taken in the general interest of everyone.

If considered necessary, during a storm, the loading operator may suspend loading and disconnect the loading arm.

Safety Look-out:

Elf Gabon have a permanent look-out on the loading platform under the orders of the chief loading operator.

Equipment at disposal of ship:

Stand-by tugs (2×2,000 h.p. minimum); mooring launches 140 h.p. equipment permanently available at berth (water screen, hoses, etc.)

A Kleber anti-pollution barrier 500 m. in length can be launched within a few minutes.

A "Vortex" device can be used to re-pump the crude oil spilt in the sea. This crude oil is then collected in plastic tanks.

When a ship pollutes the sea, the above action and use of these devices will be charged to the vessel.

WEATHER:

Meteorology: From June to September the prevailing wind comes from S.S.E. and can reach force 6. From October to end of May, and especially during February, March and April there is a risk of tornadoes. They can come from any direction and are always very dangerous.

Tide: Mean amplitude of Spring tide is 2.20 m.

Swell: The terminal is protected from ocean swell. Wave height created by tornadoes can reach 2.50 m.

Current: Generally less than 0.5 knots but can reach 1 knot. Average direction 040° and 215°.

GENERAL: *Ships spares:* Customs require originals of invoices for clearing spares. Copies are not acceptable.

SHIPMASTER'S REPORT: 1977. (Updated 1988).

This vessel is an OBO carrier of 159,250 d.w.t. and called for a part cargo of 85,000 tons of Mandji Crude.

Mandji Crude has an API of between 30.0 and 30.4 and was on this occasion loaded at 97°F.

It appears to be wax-free and has a slight suspended water content.

Vessel size: Accepts vessels from 35,000 d.w.t. to 250,000 d.w.t. max. sailing draft is 67 ft.

Berth: Berth face about 420 ft. long with connected mooring posts. "Floating" type fender piles. Pilots are cautious of impacts as berth is piled into very deep soft mud. Moorings on our visit were: Forward: 3 head lines, 3 breast ropes and 2 springs. Aft: 3 stern lines, 3 breast ropes, and 2 springs. (See "Plan").

The springs were sent ashore first, fore and aft.

All lines are run, 1 at a time, by mooring boat, and there is no problem running wire rope moorings.

There is a shore gangway mounted on a tower.

Load Rate: Total max. rate of 12,000 t.p.h. using 4 Chicksan loading arms. The connections are 16 in. and hydraulically coupled.

Berthing: Straight forward operation, no significant currents, vessels tie up bow out, port side to jetty.

Berthing Operations: From end of passage to all secure was accomplished in just over 3 hours, from Pilot aboard to secure took 2 hours. Connection of the loading arms used by this vessel took 1 hour.

From commencement of singling up to Pilot away took 1.5 hours.

Tugs: There are 2 modern 3,000 h.p. Kort Nozzle tugs and 1 older tug of 2,000 h.p. stationed in the port. The larger tugs made fast fore and aft, and the smaller pushed midships. On sailing only one of the larger and the smaller tug were used. The tugs normally use their own lines and remain fast until mooring is completed.

Weather: Mild and pleasant apart from tornadoes which occur from October to May, but especially February, March and April.

These spring up without notice to very violent winds in minutes, and though it is understood loading may be suspended, the tugs are used to assist vessel to remain on the berth if required.

Bunkers: A bunker line is being installed on the jetty, a barge is used temporarily, but it is understood that delays can be expected in taking bunkers, and they must be ordered beforehand from Elf Paris.

Fresh Water: Said to be available by barge from Port Gentil.

Usage: According to the Pilot, about 12 ships a month use the berth.

Slop Reception: There are no facilities, vessels must arrive with clean pumps and clean lines.

Radio: Tugs and Pilot are on VHF 16/72 and Marine and Terminal Operations are on VHF 72.

Repairs: Doubtful if any repairs could be undertaken, possibly in emergency the refinery workshops would assist.

Communications: There are regular daily flights to Libreville, and connections from there worldwide with minimal delay. Flight time Cape Lopez to Paris is said to be 7 hours.

Crew Changes: Could be carried out easily from a point of transportation, Port Gentil only has 2 hotels (Novotel and Meridien) and 3 guest houses.

Medical Service: Could not be obtained because vessel berthed on Saturday. However, there is a hospital.

Chandler: The port has a chandler, but there is no local produce whatsoever, all vegetables, etc., being airlifted from France and prohibitively expensive.

Cargo: Mandji Crude at loading temperature 95° to 100°F., API 30.25, has slight percentage suspended water.

Shore Leave: Permitted, but walking through the installation is forbidden for security reasons, and transportation is apparently difficult to obtain.

General: I understood no clearing or formalities are completed until vessel is berthed.

Pilotage: Mooring Master now performs pilotage only and leaves after berthing.

Accommodation: No longer required to provide accommodation for shore personnel.

SHIPMASTER'S REPORT: November 1981.

Agency listens on VHF Channel 16 during normal working hours and they also listen at 0900 and 1500 LMT on frequency 2506 kHz. Cargo papers usually take 2 hours after completion of loading. There was no problem with crew going ashore.

SHIPMASTER'S REPORT: January 1988.

This vessel calls frequently at the port.

The updates from Shipmasters are generally correct, but Pilots state that they do not berth vessels during darkness. Usual hours for berthing are from about 0700 hrs. until about 1800 hrs. The decision whether or not to berth any particular vessel outside those times is made by the Pilot, depending upon vessel's size, weather conditions, etc. It is considered highly unlikely that they would berth a large vessel after dark.

In addition to the latest papers required, we have also been asked for one copy of List of Vaccination Dates and one copy of Crew Personal Effects Manifest.

Customs and other formalities are usually only effected alongside after berthing. Usually two officials and Agent board. No problems encountered.

Documentation on completion of loading usually takes about 4 hours.

Fresh provisions are available from chandler in Port Gentil, but as they are mostly imported, prices are about three times those in Europe. They are of good quality and variety, cost being the only problem.

We have always found that mail posted in this port reaches its destination properly, (7–10 days to Europe).

AUTHORITY: Elf Gabon, B.P. 525, Port Gentil, Gabon. *Tel:* (241) 75-60-00. *Telex:* 8210 – 8216 Go Elferap. *Contact:* J.M. Grouvel, Operations Manager.

Terminal: Cape Lopez Terminal, B.P. 524, Port Gentil, Gabon. *Tel:* 75.63.09. *Telex:* 8210, 8216. *Contact:* Mr. Panbou, Terminal Manager.

AGENT: Socopao-Gabon, BP 560, Port Gentil. Tel: 752491, 750101. Cables: "Freight Portgentil". Telex: 8223. Fax: 750751.

GAMBA: 02.52 S. 09.59 E. (See Plan)

SEA TERMINAL: SBM.

DOCUMENTS:

Last Port Clearance.
3 lists of Last Ports (during last 3 months).
3 Stores Lists.
4 Crew Lists.
3 Personnel Effects Lists.
3 Lists of Vaccinations.
4 Arms and Ammunitions Lists.
2 Animals Lists.
2 Narcotics Lists.
2 Passenger Lists.
1 Notice of Readiness.

APPROACHES/AIDS TO NAVIGATION: Approaches to the berth are direct from the sea, stemming the predominant current which usually runs Northward parallel to the coast.

Gamba Lighthouse: Lat. 02° 47.0′ S., Long. 10° 01.4′ E.
Red and white lattice tower.
Height 47.0 m.
GP. FL. (2) W10 seconds. 18 miles.

W. Cardinal Buoy : Lat. 02° 51.6′ S., Long. 09° 55.8′ E.
Height 6.0 m.
GP. FL. (9) 15 seconds. 6 miles.

SBM : Lat. 02° 51.6′ S., Long. 09° 58.2′ E.
Yellow.
FL. W 0.3 second every second. 5 miles.

Radio Beacon : Lat. 02° 46.8′ S., Long. 10° 02.3′ E.
An aircraft radio beacon is in operation at Gamba airfield. Signals are sent continuously.
Frequency 359 kHz.
Call sign GZ.

PILOTAGE: All tankers using the SBM must use the Shell Gabon pilotage service for both mooring and unmooring. The Berthing Master boards in a position approximately 2 miles North of the SBM. Berthing takes place both day and night, any delays to vessel's account.

Pilot ladder should be rigged on the port side as per standard requirements with the accommodation ladder 6.0 m. above the water level.

Vessels should arrive with derrick rigged and topped on the port side (minimum SWL 7.0 tonnes) in order to lift on board the mooring equipment and for the floating hose connections. The maximum stern trim of the vessel should be 8 ft.

The Berthing Master and his assistant, who remain on board throughout the loading, also acts as the ship's Agent and is the focal point for liaison with shore, communications being by VHF.

The pilot boat/mooring launch will assist mooring/unmooring and will stand-by throughout loading. If required, a mooring rope should be provided aft by the tanker. Ship's engines should be kept ready for use at any time at the Berthing Master's request.

ANCHORAGE: Vessels must anchor without assistance. The recommended anchorage is in a location 1.5 miles N.W. of the SBM in a water depth of 82 ft. (25 m.).

READINESS: Notice of Readiness will be accepted by the Berthing Master either:

(a) At the vessel anchoring time, if delayed at the request of the terminal, provided the vessel is within her date range.
(b) On completion of mooring if vessel is berthed on arrival.
(c) On commencement of the laydays if the vessel is berthed before the commencement of laydays.

RESTRICTIONS: Heavy swell and tornadoes (October to May tornadoes can come from any direction and are always dangerous).

MAX. SIZE: Max. ship size 150,000 tonnes d.w.t., weather permitting. Max. distance bow to manifold – 465 ft. Max. draft 17.25 m.

HEALTH: When advising ETA include in message whether any sickness on board. In case of emergency vessels should call before or after loading at Port Gentil for medical attendance or for crew changes. For this purpose send separate message to "Marine Gamba" and to Agency.

RADIO/VHF: *Arrival Advice:* The initial ETA should be sent to "Gamba Marine" via Gamba Radio at least 4 days before arrival. Subsequent confirmatory ETA messages should be passed to Gamba Radio.

Telecommunications: Telexes can be sent to "Shell Gabon OSU-24/241". Shell Gabon's Telex No. is 8206-GO.

Telephone communcation is also available with the following numbers: (Country code 241) Tel. No. 75 83 60 or 75 84 65.

If no telex is available then all messages to be sent to Gamba Marine (OSU/2.4) through Gamba Radio "TRP 8", which is a private station operated free of charge by Shell Gabon.

Telegraphy: Telegraphy A1. Power 500 Watts. Frequency 500 kHz. Watch from 0700 hrs. to 0900 hrs. on request by Gamba Marine.

Telegraphy Al. Power 2 kilowatts. The general calls to ships are made on the station's working frequencies at the following hours:

13,070 kHz : General calls and traffic list at 0900.
Listens on 12 MHz band from 0900 to 0930.
Listens on 16 MHz band from 0930 to 1000.
Range about 6,000 miles.

6,510 kHz : General calls and traffic list at 1300.
Listens on 6 MHz band from 1300 to 1330.
Listens on 8 MHz band from 1330 to 1400.
Range about 1,000 miles.

VHF: Power 50 watts. Call sign "Gamba Marine". Watch on Channel 16/12. Working Channels 12 and 6. Range about 30 nautical miles.

Watch in English language during office hours (0600 – 1100 and 1300 – 1800).

Pilot launch: Watch on Channel 12 (when at sea). Range about 20 nautical miles.

Note: All times are GMT (local time is GMT plus 1 hour).

BERTHING: Berthing takes place both by day and by night. If a Shipmaster refuses to berth by night, delays will be charged to his vessel. *SBM Description:* The buoy is 11 m. in diameter, 5 m. high. A double 16 in. manifold is provided on the turntable (one pipe is blanked) 90° clockwise from the tanker securing point. The SBM is moored by means of 6 chains which are secured to the seabed by 200 tons holding power anchors.

MOORING: Vessels moor with 2×15 in. nylon ropes (length 45 m.) from SBM secured on board ship by 2×76 mm. stud link chain. Berthing Master will advise on mooring procedure.
Mooring Procedure: Prior to the vessel's approach to the buoy, the mooring launch will have carried out the following:

(i) All cargo valves on the SBM opened, i.e. 2 PLEM valves, 2 well valves and 2 floating line valves.
(ii) Both floating hoses turned back and attached to the SPM.
(iii) Starboard mooring line turned back around the buoy.

The mooring launch will then connect a 150 m. long, 250 mm. circumference polypropylene messenger to the mooring chain pick-up rope by means of a special screw type shackle and then stand-by to receive the tanker at the end of the floating hose line. During night time operations the mooring launch can assist by illuminating the position of the floating hose.

When the tanker is within range, launch will connect the messenger to the ship's rope and the vessel will then be manoeuvred up towards the SPM until the mooring chain is on board and stoppered.

On no account should the vessel be warped up to the buoy by means of the winches and at no stage should excessive weight be allowed to come on to the messenger, especially during adverse swell conditions. Whenever possible, AKD stoppers should be used forward and when only one is available, the starboard rope should be made fast clear of the water, but at a lesser tension.

LOADING: A derrick should be rigged with double whip and topped on the port side for loading mooring equipment and hose lifting.
Shore Line System: SBM – 1×30 in. submarine pipe-line (total length to Terminal 10.3 km. (33,790 ft.)). Reduced to 2×16 in. for connection to ship's manifold (total length of floating hoses: 860 ft. and 895 ft.).
Rabi Export Blend Crude Characteristics:

Density at 15° C	:	0.8535
A.P.I. at 60° F	:	34.2
B.S.W.	:	0.005
Salinity	:	20 – 30 PPM
Temperature	:	40° – 45° C
Loading Rate	:	3,600 cu.m/hr.
Pour Point	:	20° – 24° C

Deballasting: There are no facilities for discharging ballast or slops ashore. Vessels must therefore arrive at the loading terminal with clean ballast on board.
Connection/Disconnection of Hoses: Connection and disconnection is carried out by the ship's crew with advice from the Berthing Master or his assistant. The hose is connected to the port side manifold using a 16 in. ASAB 165 flanged connection. A secure mooring point for the hoses is needed 1.0 m. to 3.0 m. from the rail.

If there are no suitable reducers on board, the terminal should be advised by radio, giving the size of the ship's manifold and the pitch of the bolt holes.
Loading Procedure: During the loading the Berthing Master remains on board and acts as Loading Master and maintains permanent contact with the terminal on VHF Channel 6.

If required, the loading rate can be adjusted for topping-off tanks and for completion of loading, or at any time if required. The Loading Master should be advised at least 1 hour before the completion of loading. A watchman must be stationed on the forecastle and in the manifold area throughout loading.

The nominal loading rate is 2,500 cu.m.p.h. and the maximum loading rate is 4,500 cu.m.p.h.
Documentation: All documentation will be completed by the Berthing/Loading Master approximately 1 hour after the completion of loading on receipt of the shore figures.
Engines: Engine immobilisation is forbidden at the SBM. Engines should be kept ready for use at any time at the Berthing Master's request.

MEDICAL: No medical or dental facilities at Gamba (See "Health").

DENSITY: 1025.

FRESH WATER/FUEL: Not available.
CONSULS: None, French consul in Port Gentil.
REPAIRS: No facilities available.
BALLAST: There are no facilities for discharging ballast ashore. Vessels must arrive at the loading terminal with clean ballast only, apart from contents of the slop tank.

GANGWAY/DECK WATCHMEN: Not required.
CUSTOMS ALLOWANCES: No restrictions on Tobacco/Wine.
REPATRIATION: Not permitted.

AIRPORT: Gamba airport is local airstrip and is connected to Port Gentil by daily service (Except Sunday). Port Gentil airport is connected to Libreville International Airport by daily services. Mail reaches any European country within seven days.

TIME: GMT plus 1 hour throughout the year.
SHORE LEAVE: Not allowed.
IDENTIFICATION CARDS: Not required.
DELAYS: Occasionally the berth is subject to heavy swell delays and from October to May tornadoes can be experienced from any direction and can be particularly dangerous.

GENERAL: *Deck Watch:* When on the SBM, a responsible officer mu be present on deck and a permanent watch must be maintained on th forecastle.
Territorial Waters: The sovereignty of the Republic of Gabon extend up to 200 nautical miles from the lowest sea water mark along the coas
Mail: Mail will reach any European country within one week.
Ship's Spares: Customs require originals of invoices for clearing spare Copies are not acceptable.
AUTHORITY: Shell Gabon, Gamba Marine (GMA), B.P.146, Port Gent Republique du Gabon. *Tel:* 752651 (ext.8465). *Telex:* 8206 Go., 821 Go., 8249 Go. and 8260 Go. *Cables:* Shell Gabon Port Gent *FAX:* 751050. *Contact:* Captain J.W.N.Holmes, Marine Department.

AGENT: See "Port Gentil".

LIBREVILLE: 00.23 N. 09.26 E.

PORT LIMITS: The seaward boundaries of the port within which a vesse is considered to be an "arrived ship" and (subject to C/P terms) laytime will commence is 2 miles off shore at Libreville Harbour.
DOCUMENTS: See "Port Gentil".
PILOTAGE: None available.
ANCHORAGES: Bottom of roads in Libreville slopes very gently dow towards open sea. The greater the vessel's draft, the further out it mus moor. e.g., ship of 7 m. to 8 m. draft will be moored approx. 1,500 m from Harbour Pier. Ship 5 m. – 6 m. draft will be able to approach th Harbour Pier as near as 500 m. to 600 m. For reasons of safety forbidden to come nearer, particularly during tornado season – Februar to May and September to December.
RESTRICTIONS: No restriction imposed on entering or leaving th Estuary. Channel marked by 5 buoys provided with radar reflectors an flashing lights. Sixth buoy, called a "landing buoy" moored in roads where vessels moor.
MAX. SIZE: *Shipmaster's Report:* March 1980. Max. draft 7.4 m.
HEALTH: If there is sickness on board, Health Service warned b Consignor of vessels. Health Service can go on board to check state o crew's health. Immigration Service can also board to check crew list an condition of passengers, if any.
RADIO: *Libreville Radio:* Radio-telephony from 0600 to 1800 hrs. GM on 2182 kHz, Radio-telegraphy from 0600 to 1800 hrs. GMT on 500 kHz call sign TRA 22; from 0800 to 0830 hrs.on 13101 kHz, call sign TRA 8 from 1630 to 1700 hrs. GMT on 8722 kHz, call sign TRA 8.
TUGS: Tugs intended only for towing lighters, horse power 150 to 250 unsuitable for any harbour towing.
BERTHING: Only for lighters and small coasters with a draft of les than 3 m. Crews working unloading or loading of vessels in road supplied by Consignor of the ship. Harbour Services have no radi apparatus. Shipping companies all have radio-telephone extensions which allows them to be in permanent contact with vessel moored i roads. Unloading or loading operations of goods carried out by lighter which, towed by small tugs, ensure rotation between vessel in operatio and quay. All this equipment belongs to shipping companies dealin with consignment of vessels in the roads. Every vessel arriving in road must have its consignor.
STEVEDORES: Available.
MEDICAL: Hospital available, and in case of necessity, patient o patients will be admitted.
FRESH WATER: Water supply real problem, as there is no tanker t transport it. Therefore strongly recommended that any ship touchin Douala coming from the North or Pointe Noire coming from Sout should fill up at one of these ports.
FUEL: There are fuel-tankers belonging to shipping companies. Th tanker which provisions Libreville two or three times a week is broug alongside buoys in roads, (position: Lat. 0° 23′ 51″ N Long. 9° 25′ 42″ E.); fuel is transhipped by sea-line to tank on shore.
FIRE PRECAUTIONS: No special precautions.
CONSULS: None.
REPAIRS: Small repairs possible.
GANGWAY/DECK WATCHMEN: Carried out by crew.
OPENING/CLOSING HATCHES: This is done with the tacit agreeme of the ship's Officer and the Consignor.
CARGO GEAR: Ship's own gear used.
DRY DOCKS: None.
REPATRIATION: No facilities.
AIRPORT: 9 km. from the harbour. Links with French-speaking Afric Switzerland, and France, also Johannesburg.
TIME: GMT plus 1 hour.
HOLIDAYS: 17th August, Independence of Gabon; 1st May, Labo Day – these are the only holidays in force.
SERVICES: None.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
DELAYS: First come, first served method.
GENERAL: *Ship's Spares:* Customs require originals of invoices f clearing spares. Copies are not acceptable.
AUTHORITY: Capitainerie du Port.

AGENT: Socopao-Gabon, B.P.4., Libreville. Tel: 70.21.40 and 70.21.5 Telex: 5212. Cables: "Freight Libreville". Fax: (241) 70.23.34.

LUCINA MARINE TERMINAL: 03.40 S. 10.46 E.

(See Plan)

LOCATION: Lucina offshore development consists of 6, four pile production platforms linked by submarine pipeline to the Floating Storage Unit (FSU) "Banio", which itself is linked to an export SBM. The production platforms are:

LD1	Lat. 03° 41.0′ S., Long. 10° 44.3′ E.
LD2	Lat. 03° 41.8′ S., Long. 10° 45.0′ E.
LD3	Lat. 03° 42.5′ S., Long. 10° 46.0′ E.
LD4	Lat. 03° 41.9′ S., Long. 10° 44.6′ E.
LD5	Lat. 03° 42.2′ S., Long. 10° 45.8′ E.
LWD1	Lat. 03° 41.4′ S., Long. 10° 43.7′ E.

These production facilities are linked via LP1 (connected by bridge to LD1). The 85,000 tonnes FSU "Banio" (Ex-tanker "Sitala") is moored by means of 10 anchors in position Lat. 03° 40.0′ S., Long. 10° 45.8′ E. The FSU is connected with the export SBM by a 20 in. × 1.0 km. submarine line.

DOCUMENTS:

Last Port Clearance.
3 Lists of Ports for last 3 months.
3 Store Lists.
4 Crew Lists.
3 Vaccination Lists.
3 Personal Effects Lists.
4 Arms and Ammunition Lists.
2 Animals Lists.
2 Narcotics Lists
2 Passenger Lists.
1 Notice of Readiness.

APPROACHES: *Navigation Aids:*

LD-1	:	Conspicuous flare, Morse "U" white 15 seconds.
LD-2,3,4,5.	:	2 lights Morse "U" white 15 seconds.
LWD-1	:	2 lights Morse "U" white 15 seconds.
SBM Buoy	:	QK. FL. White 2 seconds, 5 miles.
FSU "Banio"	:	Floating storage unit shows: (a) All deck lights operational at night. (b) 2 lights, Morse "U" 15 seconds, 1 forward and 1 aft.

PILOTAGE: All tankers using the SBM must use the Shell Gabon pilotage service for both mooring and unmooring. The Berthing Master boards in a position approximately 2 miles North of the SBM. Berthing takes place both day and night, any delays to vessel's account. Standard Pilot ladder regulations apply and ladder should be 3.0 m. from the water and secured to the accommodation ladder.

Vessels should arrive with derrick rigged and topped on the port side (minimum SWL 7.0 tonnes) in order to lift on board the mooring equipment and for the floating hose connection. The maximum stern trim of the vessel should be 8 ft.

The Berthing Master and his assistant, who remain on board throughout loading, also acts as the Ship's Agent and is the focal point for liaison with FSU and the shore, communications being by VHF.

The pilot boat/mooring launch will assist mooring/unmooring and will stand-by throughout loading. If required, a mooring rope should be provided aft by the tanker. Ship's engines should be kept ready for use at any time at the Berthing Master's request.

ANCHORAGE: Vessels must anchor without assistance. The recommended anchorage is in a location 1.5 miles North West of the FSU in a water depth of 19 fathoms (17.3 m.).

READINESS: Notice of Readiness will be accepted by the Berthing Master either:

(a) At vessel anchoring time, if delayed at the request of the terminal, provided the vessel is within her date range.
(b) On completion of mooring if vessel is berthed on arrival.
(c) On commencement of lay-days if vessel berthed prior to commencement of lay-days.

RESTRICTIONS: No draft restrictions. Depth of water is 114 ft.

MAX. SIZE: Max. ship size 130,000 tonnes d.w.t., weather permitting. Max. distance bow to manifold – 465 ft.

RADIO/VHF: *Arrival Advice:* Initial ETA should be sent to "Gamba Marine" via Gamba Radio at least 4 days before arrival. Subsequent confirmatory ETA messages should be passed to Gamba Radio.

Telecommunications: Telexes can be sent to "Shell Gabon OSU/24/241". Shell Gabon's Telex No. is 8206-GO.

Telephone communication is also available with the following numbers: (Country code 241) Tel. No. 75 83 60 or 75 84 65.

If no telex is available then all messages to be sent to Gamba Marine (OSU/2.4) through Gamba Radio "TRP 8", which is a private station operated free of charge by Shell Gabon.

Telegraphy: Telegraphy A1. Power 500 Watts. Frequency 500 kHz. Watch from 0700 hrs. to 0900 hrs. on request by Gamba Marine.

Telegraphy A1. Power 2 kilowatts. The general calls to ships are made on the station's working frequencies at the following hours:

13,070 kHz:	General calls and traffic list at 0900. Listens on 12 MHz band from 0900 to 0930. Listens on 16 MHz band from 0930 to 1000. Range about 6,000 miles.
6,510 kHz:	General calls and traffic list at 1300. Listens on 6 MHz band from 1300 to 1330. Listens on 8 MHz band from 1330 to 1400. Range about 1,000 miles.

VHF: Power 50 watts. Call sign "Banio".

Watch on Channel 16 and 12. Working on Channel 12. Range about 30 nautical miles.

Watch in English language during office hours (0600 – 1100 and 1300 – 1800).

Pilot launch: Watch on Channel 12 (when at sea). Range about 20 miles.

Lucina Terminal: Watch on Channel 12.

Note: All times are GMT (local time is GMT plus 1 hour).

HEALTH: Any sickness on board should be reported in the ETA. No facilities are available for medical or dental treatment at Lucina. Vessels should therefore call at Port-Gentil before or after loading.

BERTHING: *SBM Export Facility:*

Position	:	Lat. 03° 39.6′ S., Long. 10° 46.2′ E.
Moorings (to buoy)	:	2×15 in. nylons × 45.0 m.
Moorings (to ship)	:	2×76 mm. stud link chain with 2×3.25 in. wires.
Buoy diameter	:	8.0 m.
Buoy height	:	4.0 m.
Buoy connection	:	Connection to submarine lines on free rotating centre swivel section.
Buoy mooring	:	8 Chains with 120 ton holding power anchors.
Floating hose	:	865 ft. × 16 in. diameter hose.
Submarine hose	:	2×150 ft. × 16 in.
Submarine line	:	1,100 m. × 20 in. diameter line from FSU.
Loading rate	:	Maximum 2,700 cu.m.p.h.

MOORING: *Mooring Procedure:* Prior to the vessel's approach to the buoy, the mooring launch will have carried out the following:

(i) All cargo valves on the SBM opened, i.e. 2 PLEM valves, 2 well valves and 2 floating line valves.
(ii) Both floating hoses turned back and attached to the SPM.
(iii) Starboard mooring line turned back around the buoy.

The mooring launch will then connect a 150 m. long, 250 mm. circumference polypropylene messenger to the mooring chain pick-up rope by means of a special screw type shackle and then stand-by to receive the tanker at the end of the floating hose line. During night time operations the mooring launch can assist by illuminating the position of floating hose.

When the tanker is within range, launch will connect the messenger to the ship's rope and the vessel will then be manoeuvred up towards the SPM until the mooring chain is on board and connected.

On no account should the vessel be warped up to the buoy by means of the winches and at no stage should excessive weight be allowed to come on to the messenger, especially during adverse swell conditions. Whenever possible, AKD stoppers should be used forward and when only one is available, the starboard rope should be made fast clear of the water, but at a lesser tension.

LOADING: *Lucina Crude Oil Characteristics:*

Density at 15° C	:	0.8300
A.P.I. at 60° F	:	39.06
B.S.W.	:	0.02
Salinity	:	40 PPM.
Cloud Point	:	33° C
Loading Rate	:	2,700 cu.m/hr.
Pour Point	:	27° – 32° C.

Deballasting: There are no facilities for discharging ballast or slops ashore. Vessels must therefore arrive at the loading terminal with clean ballast on board.

Connection/Disconnection of Hoses: Connection and disconnection is carried out by the ship's crew with advice from the Berthing Master or his assistant. The hose is connected to the port side manifold using a 16 in. ASAB 165 flanged connection.

If there are no suitable reducers on board, the terminal should be advised by radio, giving the size of the ship's manifold and the pitch of the bolt holes.

Loading Procedure: During the loading, the Berthing Master remains on board and acts as Loading Master and maintains permanent contact with the terminal on VHF Channel 12.

If required, the loading rate can be adjusted for topping-off tanks and for completion of loading, or at any time if required. The Loading Master should be advised at least 1 hour before the completion of loading. A watchman must be stationed on the forecastle and in the manifold area throughout loading.

Documentation: All documentation will be completed by the Berthing/Loading Master after the completion of loading on receipt of the shore and ship's figures.

MEDICAL: See "Health".

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities. Engines not to be immobilised whilst at the SBM.

REPATRIATION: Not permitted.

TIME: GMT plus 1 hour throughout the year.

SHORE LEAVE: Not allowed.

GENERAL: *Ship's Spares:* Customs require originals of invoices for clearing spares. Copies are not acceptable.

Territorial Waters: The sovereignty of the Republic of Gabon extends up to 200 nautical miles from the lowest sea water mark along the coast.

Mail: Mail will reach any European country within one week.

AUTHORITY: Shell Gabon, Gamba Marine (GMA), B.P. 146, Port Gentil, Republique du Gabon. *Tel:* 752651 (ext. 8465). *Telex:* 8206 Go, 8214 Go, 8249 Go and 8260 Go. *Cables:* Shell Gabon Port Gentil. *FAX:* 751050. *Contact:* Captain J.W.N.Holmes, Marine Department.

M'BYA TERMINAL, (Mayumba): 03.53 S. 10.56 E.

LOCATION: The terminal is approximately 35 miles Southwest of Mayumba, in position Lat. 03° 53.4′ S., Long. 10° 55.8′ E.

PILOTAGE: All tankers mooring at the M'Bya loading buoy must use the Elf Gabon Pilot who should also be called upon in respect of all manoeuvres and unmooring operations.

ANCHORAGE: *Temporary Anchorage:* Situated 2,000 m. West of the loading buoy.

Ships shall come to anchor without the assistance of the Pilot. Depth of water 30 m. Nature of sea floor is sand and mud.

Under no circumstances shall vessels anchor in the prohibited zone.

MAX. SIZE: 150,000 d.w.t. Max. draft 18.0 m.

For tankers on second loading, the displacement shall not exceed 100,000 tons.

Depth of water at the loading buoy is 30 m. at mean lowest tide.

HEALTH: *Sanitary Inspection:* This is carried out on arrival. However, ships remaining at anchor may have Customs and Health formalities carried out through their Agent.

RADIO: *Notice of Arrival:* Tankers shall have their arrival at M'Bya notified by their agency representative 72 hours, 48 hours and 24 hours in advance.

Hereafter, they shall notify any appreciable change in the anticipated time of arrival.

Elf Gabon Terminal (Port Gentil):

Permanent watch by radiophone 2,182 kHz (400 watt).

(7,895 kHz information wavelength).

When a ship is expected, a permanent watch on VHF Channel 16 is kept by the Mayumba Terminal for short distance communications.

Ships must contact the Terminal in advance of their arrival. Elf Gabon will inform the vessel whether berthing will take place on arrival or whether it must anchor.

VHF: A permanent watch on Channel 6 is compulsory whilst at anchorage and at the loading buoy.

TUGS: All vessels coming to moor at M'Bya Terminal are obliged to use Elf Gabon tugs, the tugs supply their own towrope.

Elf Gabon also supply line handling boats.

LOADING BUOY: The CALM type buoy consists of a floating shell with a square cross section (side 8.50 m. × 8.50 m.) rotating freely around a central well equipped with 4 anchoring chains. This buoy was designed for loading ships of 30,000 d.w.t. to 150,000 d.w.t.

The crude is conveyed from the sealine to the buoy by 2 × 16 in. diameter subsea flexible lines and from the buoy to the tanker by 1 × 16 in. floating flexible line made up of 24 × 35 ft. sections and 1 × 30 ft. tanker rail hose, i.e. a total length of 270 m. The maximum operating pressure of this flexible line is 10.5 bars. The connecting flange is equipped with a Camlock quick-connection system.

The tanker is moored with a "Samson" type system nylon hawser 150 ft. long with a SWL of 348 tonnes. The hawser is spliced and equipped with a galvanized thimble and with 5 m. of chafing chain at each end (438 tonnes SWL). The length of chain to be taken on board the tanker is equipped with a float which has a buoyancy of 5,000 lb.

Attached to this chain is a 150 m. long polypropylene hawser (diameter 100 mm.) and a 50 m. long inhaul (diameter 45 mm.).

One of the tanker's hawsers is used as a safety mooring line, i.e. as a back-up to the main mooring line.

The field personnel are responsible for line handling. A sufficiently long messenger line (minimum 150 m.) should be available on the tanker to enable the Elf Gabon personnel to work in complete safety.

MOORING: On board, mooring operations are carried out by the ship's crew which should comprise a sufficient number of competent hands to enable operations to be carried out quickly and safely.

The vessel shall be equipped with a boatrope at least 150 m. in length to enable Elf Gabon personnel to work in complete safety.

Notice of Readiness: Notice of Readiness shall be sent to Elf Gabon through the tanker's Agent.

Mooring Procedure: After having taken the Pilot on board in the temporary anchoring zone, the tanker shall approach the buoy at a reduced speed, following the instructions of the Elf Gabon Pilot.

The means provided for mooring are as follows:

1 supply boat (throughout the duration of the mooring period).

1 small boat and a crew of 3 line handlers.

1 Loading Master – Pilot who will remain on board the tanker throughout the mooring period.

When the tanker's bow is within 150 m. of the buoy, the tanker crew will hand to the line handling crew the end of a messenger line which is long enough (minimum length 150 m.) to be connected in complete safety by the Elf Gabon personnel to the inhaul of the main hawser. The tanker crew will then haul in the chafing chain of the main hawser by heaving on the floating inhauls. This manoeuvre requires the full attention of the crew. The Pilot shall be immediately notifed of any modification in the behaviour of the hawser. The distances between the bow of the tanker and the buoy shall be regularly communicated to the Pilot as well as the orientation of the hawser (the crew must be well trained in this manoeuvre). When the chafing chain has been heaved on to the forecastle, it will be connected as quickly as possible to another rope of the tanker as indicated by the Pilot.

During the entire operation, the supply boat will have the 16 in. flexible loading line in tow by its end and will keep it well away from the buoy so that it is not damaged during the manoeuvre.

Once the ship is moored, the supply boat will draw near the end of the flexible loading line under the cargo boom of the tanker (on the port side and rigged in advance) and the end of the flexible loading line shall be slung and heaved on board.

The ship shall be equipped with derricks and slings or straps required for stopping and securing the loading line at the tanker's rail. Once this is connected to the manifold on board, the supply boat shall be taken in tow by its stern. The supply boat will then be at the disposal of the tanker personnel who will keep a permanent watch on the buoy and, if necessary, increase the tension in the tow rope in order to avoid collision of the ship and the buoy. Once the ship is under tow, the loading operations may begin.

NOTE: For tankers on second loading, the mooring procedure may be modified according to the Pilot's instructions.

LOADING: An Elf Gabon representative, responsible for loading and safety is on permanent watch on board. The Master must supply him with all relevant information and assistance required to ensure operations run smoothly.

All exchanges of information on the site shall be on VHF Channel 6. Permanent watch on this channel is compulsory during the entire mooring period.

When the tanker is ready for loading, i.e. when the circuits have bee set up and have been checked, the Chief Officer (i.e. the officer-in charge of loading operations) will ask USF 1 to begin pumping.

Pumping rate 3,000 cu.m.p.h.

The Master will be held entirely responsible for operating the valve and for safe loading on board his ship.

If necessary, pumping speed can be reduced.

At least 10 minutes before loading is finished, the Terminal should be notified of the moment pumping should be stopped.

When loading is over, the tanks (ullages) will be inspected by a ship's officer in the presence of an Elf Gabon representative.

Average samples taken from each tank where the crude was loade will be furnished to the ship by the Terminal.

These samples will be numbered and labelled showing the origin o the crude.

Handing Over of Documents: Generally speaking, handing over o documents takes place while on site. However, Elf Gabon reserves the right to order a ship to get underway immediately after loading and awa documents at anchor.

BALLAST: *Ballast on Arrival:* Ships must arrive with clean and sufficien ballast and correct trim and be able to manoeuvre with complete safety

Ballast on arrival shall be at least 30% of the deadweight capacity o must provide the vessel with an average draft of not less than 50% o the loaded draft.

Fuel tanks, fresh water tanks and miscellaneous supplies are no considered as ballast in the weight estimate.

Deballasting – Sea Pollution: Any vessel mooring with polluted ballas may be requested to leave the loading buoy. The cost of any resulting delay will be for the account of the vessel. Furthermore, Elf Gabo reseves the right to refuse to load the tanker.

Elf Gabon decline all responsibility in respect of any violatio committed on board, in respect of the International Regulations for the prevention of sea pollution by hydrocarbons. Masters will be notified i writing each time any violation of these regulations is observed by the Elf Gabon representative.

Inspection of tanks after deballasting and before loading is carried ou in the presence of the Elf Gabon representative.

GENERAL: *Charts/Publications:* Masters will find the following particularly useful:

French Chart drawn up by the Marine Hydrographic Departme No. 6666 SH.

French nautical instructions, Volume V – Series C, African West coas 2nd volume.

Book of Lights and Fog Signals, Series C.

AUTHORITY: Elf Gabon, P.O. Box 525, Port Gentil, Gabo *Tel:* 75 60 00. *Telex:* 8210-8216, 8262.

OGUENDJO TERMINAL: 01.27 S. 08.55 E. (See Pla

LOCATION: Oguendjo Oil Terminal is located in the territorial waters the Republic of Gabon and consists of:

1. Production Platform "B" located offshore in position La 01° 26′ 44.5″ S., Long. 08° 57′ 15″ E. and Production Platform "C located offshore in position Lat. 01° 28′ 13.5″ S., Long. 08° 54′ 00″ E and Production Platform "Z" located offshore in position La 01° 26′ 1.04″ S., Long. 08° 56′ 43.27″ E.

2. An offshore loading berth composed primarily of a floating storag vessel, "Bon Bateau", permanently affixed by a "wishbone" rig mooring arm to a single point mooring buoy.

3. A submarine pipe-line which runs from Production Platform "B" the floating storage vessel, and a submarine pipe-line which runs fro Production Platform "C" to the floating storage vessel.

The floating storage vessel is located S.W. of Port Gentil approximately 90 ft. of water and is situated in open and unsheltere waters approximately 9.5 miles off the coast in position La 01° 27′ 20.5″ S., Long. 08° 55′ 00″ E. (See "Plan".)

The Company's administrative offices are located in Port Gentil. Th Company's terminal offices, storage facilities and laboratory for testin stock are located onboard the floating storage vessel located at th loading berth.

DOCUMENTS: 4 copies each of the following documents are require when calling at Oguendjo Oil Terminal:

(a) Health Declaration and Vaccination Certificate for each cre member (vaccination against yellow fever is mandatory).
(b) Crew List.
(c) Derat Certificate/Derat Exemption.
(d) Crew Customs Declaration.
(e) Store List.
(f) Animal List.
(g) Passenger List.
(h) Narcotics List.
(i) Clearance from Last Port.
(j) Arms and Ammunition List.
(k) Manifest.

The vessel's registry and the up-to-date oil record book shall also made available to the Mooring Master and appropriate governme officials.

RESTRICTIONS: The Terminal is operated 24 hours a day, 7 days week, weather and other circumstances permitting. Vessels are load and unmoored at any hour, weather and other circumstances permittin Vessels are moored during daylight hours only, weather and oth circumstances permitting.

PILOTAGE: *Mooring Master:* Lifting vessels to be moored at the Loading berth will be boarded by a Mooring Master either at the customary anchorage or at the Mooring Master pick-up zone (see "Approaches"). The Mooring Master will be provided by the Company and will act as the Loading Master during loading operations. Lifting vessels will not be allowed to approach or depart from the loading berth without the assistance of the Company-designated Mooring Master. The Mooring Master will advise the lifting vessel personnel on the approaches to the loading berth; the operations of mooring and unmooring; the raising, connecting, disconnecting and lowering of the floating cargo hose, and in all other operations within the loading berth area. The Mooring Master will be in direct charge of the portable VHF radiotelephone and all the ship-to-tug and ship-to-launch communications will be by portable VHF radiotelephone. The lifting vessel's oil residue book shall be made available for inspection by the Mooring Master on his arrival at the lifting vessel. All manoeuvring of lifting vessels within the loading berth area shall be performed by the lifting vessel personnel as directed by the lifting vessel's officer in charge and in accordance with the procedure advised by the Mooring Master. the lifting vessel's Master or licensed deck officer must be on the bridge at all times while lifting vessels are manoeuvring.

Pilot Ladder: Lifting vessels are required to have a clean and efficient pilot ladder fitted with spreaders and manropes, safely and securely rigged, ready for the Mooring Master to embark and disembark on the port side of the lifting vessel and of sufficient length to reach the Mooring Master's launch. If at night, adequate lighting must be rigged overside for the Mooring Master to approach or depart from the port side of the lifting vessel and to use the pilot ladder safely. A lifebuoy with safety line and self-igniting light together with a rope messenger for the Mooring Master's bag shall also be available at the pilot ladder head. Lifting vessels shall afford a "Good Weather Lee" and shall reduce speed as directed by the Mooring Master in order to effect the safe embarking or disembarking of the Mooring Master.

Whenever, as in the case of large lifting vessels in light condition, the freeboard exceeds 30 ft., the accommodation ladder shall also be in use in conjunction with the pilot ladder and shall be lowered to about 12 ft. above the water with the pilot ladder rigged immediately adjacent to the bottom platform of the accommodation ladder. A mechanical hoist of an improved pattern shall be considered an acceptable alternative to a conventional pilot ladder for use in conjunction with the accommodation ladder, but a mechanical hoist whose operation relies upon a single wire shall not be considered of an approved pattern. The rigging of the pilot ladder for the embarkation and disembarkation of the Mooring Master shall be supervised by a licensed officer of the lifting vessel and shall be positioned so that the ladder is well clear of any overboard discharge and so that each step of the ladder rests securely against the lifting vessel's side. If, in the opinion of the Mooring Master, the pilot ladder is not safe, the Mooring Master may refuse to board the lifting vessel and any delay caused by such refusal shall be for the lifting vessel's account.

Lifting vessels shall provide food for the Mooring Master while on board the lifting vessel and shall accommodate the Mooring Master in the Pilot's cabin. Should the lifting vessel not be equipped with a pilot cabin, the Mooring Master shall be accommodated in a cabin equivalent to that required for an officer on the lifting vessel. The Mooring Master shall have access to the bridge and/or central area of the lifting vessel and such areas shall not be locked or otherwise arranged to prevent immediate entry at any time by the Mooring Master.

APPROACHES: *Approaches, Navigational Aids and Landmarks to Oguendjo Oil Terminal:* Vessels are referred to the appropriate Hydrographic Office publications, Admiralty publications and official charts for the approaches, navigational aids and landmarks to Oguendjo Oil Terminal. Caution, however, is required when navigating near the Terminal since oil installations and marine activities may be encountered and mariners are recommended to pass to seaward of all such areas and are advised not to anchor or fish in the vicinity of such oil installations or their pipe-lines. Mariners are specifically cautioned that an oil well area exists S.S.W. of Port Gentil and all navigation is restricted in the area within a line joining the following positions: Lat. 00° 44′ 30″ S., Long. 08° 45′ 00″ E.; Lat. 00° 46′ 40″ S., Long. 08° 38′ 26″ E.; Lat. 01° 09′ 22″ S., Long. 08° 28′ 36″ E.; Lat. 01° 35′ 54″ S., Long. 08° 38′ 03″ E.; Lat. 01° 35′ 54″ S., Long. 09° 12′ 35″ E. (See "Plan").

Approach to Terminal:

Anchorage Area: The customary anchorage area for vessels awaiting the loading berth at the Terminal is a rectangular area with the following co-ordinates: Lat. 01° 36′ S., Long. 08° 57′ E.; Lat. 01° 36′ S., Long. 09° 02′ E.; Lat. 01° 40′ S., Long. 08° 57′ E.; Lat. 01° 40′ S., Long. 09° 02′ E. and with its centre located about 14 miles S.S.E. of the loading berth in position: Lat. 01° 38′ S., Long. 08° 59.5′ E. (See "Plan"). Anchorage within the restricted area referred to in Section above is prohibited unless otherwise designated by the Company or the Mooring Master.

Access Lane: The access lane from the customary anchorage to the Terminal is an area approximately 1.7 miles in width and with axis which runs from the anchorage area for approximately 12 miles in a direction of 325° true to the Mooring Master's pick-up zone. (See "Plan").

Mooring Master Pick-up Zone: The Mooring Master pick-up zone is a N.W. aligned semi-circle with a radius of 2.2 miles and with a centre position at Lat. 01° 27.5′ S., Long. 08° 54″ E. Following receipt of instructions from the Company or the Mooring Master, a lifting vessel should proceed from the anchorage area through the access lane to the Mooring Master's pick-up zone where the lifting vessel will be boarded by the Mooring Master for berthing or where the lifting vessel may be requested by the Company or the Mooring Master to temporarily anchor to await permission to enter the loading berth. (See "Plan").

Terminal Safety Zone: Lifting vessels are prohibited from navigating within the safety zone at the Oil Terminal at any time unless the Mooring Master is on board. The safety zone is bounded by lines connecting the following points:

Point	*Latitude (South)*	*Longitude (East)*
(a)	01° 28.75′	08° 54.10′
(b)	01° 26.85′	08° 57.82′
(c)	01° 26.32′	08° 57.27′
(d)	01° 26.32′	08° 55.66′
(e)	01° 27.96′	08° 53.52′

ANCHORAGES: See "Approaches".

MAX. SIZE: Max. draft 60 ft. Max. d.w.t. 170,000. Max. displacement 200,000 tons.

The Mooring Master may allow lifting vessels in excess of 170,000 d.w.t. to moor at the loading berth provided the lifting vessel first obtains the written permission of the Company to moor at the facility.

RADIO/VHF: *Initial Radio Communications:* The radio station on the "Bon Bateau" will handle the initial radio communications between lifting vessels and the Company. The "Bon Bateau", call sign ELCT, is equipped with Mariset and maintains Mariset number SINGX 1241411.

Advice of Arrival: It is important that lifting vessels establish radio contact with the Company when 3 days' distance from Oguendjo Oil Terminal and maintain such contact until just prior to arrival at the Terminal. Lifting vessels should send an ETA message to the Company (Telex: 981-8268) not less than 72 hours prior to arrival at the Terminal, providing the following information:

1. The estimated time of arrival and name of local Agent.
2. The estimated draft, fore and aft, upon arrival.
3. The quality of crude oil to be loaded and the grade of such.
4. The estimated sailing draft.
5. The last port of call.
6. Whether the lifting vessel has a clean Bill of Health.
7. The distance from the bow to the centre of the lifting vessel's manifold.
8. Mooring equipment available on the bow of the lifting vessel (e.g.) Smit's Bracket, chain stoppers).
9. Confirmation that hose handling gear and mooring equipment, navigation equipment, radars, steering gear, and engine propulsion are in good order and condition, that the lifting vessel can accept a 20 in. (reducing to 16 in.) diameter floating hose fitted with a 150 ASA camlock flange.
10. Whether the lifting vessel intends to load-on-top of existing slops and, if so, advise as to the quantity of slops in each tank on which cargo will be loaded-on-top.

This first ETA message should also include a definite statement of the details of any equipment required from the floating storage vessel for connecting the floating cargo hose to the lifting vessel's manifold. Further ETA messages should be sent to the Company when the vessel is 48 hours and 24 hours distance from Oguendjo Oil Terminal confirming or giving notice of any change in the 72 hour ETA and any other time after the 24 hour ETA message when a change by more than 2 hours occurs in the ETA. The 24 hour ETA message should include a positive statement regarding the lifting vessel's Readiness to Load on arrival and the number of hours that will be required by the lifting vessel to discharge clean ballast.

TUGS: The Company has a tug in the area equipped with fire fighting apparatus. Also see "Berthing – Mooring Operation".

BERTHING: *Loading Berth:* Lifting vessels are loaded by means of a floating cargo hose which runs from the floating storage vessel to the lifting vessel. The floating storage vessel is loaded by means of a submarine pipe-line which runs from Production Platform "B" and a submarine pipe-line which runs from Platform "C" to the single point mooring buoy to which the floating storage vessel is permanently affixed.

Mooring Facilities: The floating storage vessel is permanently affixed by a "wishbone" rigid mooring arm to the single point mooring buoy which has been secured to the seabed by 4 anchor legs. Lifting vessels are moored from their bow to the bow of the floating storage vessel by means of a terminal supplied 16 in. braided mooring hawser with a 20 ft. length of 3 in. chain attached to each end of the hawser. Upon completion of mooring, the mooring hawser will run from the bow of the floating storage vessel to the bow of the lifting vessel and will allow about 200 ft. of water to separate the bow of the two vessels. The loading berth will accept vessels up to 170,000 d.w.t. (also see "Max. Size"), with displacement not to exceed 200,000 tons. The floating storage vessel is equipped with anchorage lights and a red (360°) displayed on its top mast.

Mooring Operation: The Company will provide a mooring launch to assist tug to assist in the mooring and unmooring of the lifting vessel. The mooring launch and assisting tug will be based at the loading berth and will operate under the direct control of the Mooring Master. When the lifting vessel proceeds to within a reasonable distance from the loading berth and upon advice from the Mooring Master, the messenger line of the lifting vessel will be lowered to the mooring launch and will be carried by the launch to a floating buoy where the messenger line will be secured to an 8 in. circumference pick-up rope. The Mooring Master will advise the lifting vessel to heave in the ropes until the chafing chain located at the end of the pick-up rope comes aboard. This chafing chain will be secured to the lifting vessel's bitts or Smit bracket or chain stopper in such a manner that the Terminal-supplied 180 ft. long braided nylon hawser, which is affixed to the opposite end of the chafing chain, will remain outside the lifting vessel thereby allowing the chafing effect at the fairleads of the lifting vessel to be taken by the chafing chain. All mooring details in the sequence of movements shall be directed by the lifting vessel's officer in charge following consultation with the Mooring Master.

When the mooring operations have been completed, fire wires should be secured to the lifting vessel's bitts and one fire wire led out of the bow and one fire wire led out of the stern of the lifting vessel's port side. The fire wires should be of at least such a length that the eyes will be approximately 6 ft. above the surface of the water at all times so that they can be readily available to a tug in case of an emergency.

Vessel's Alertness: The loading berth is in open and unsheltered waters and the mooring is a flexible system; therefore, from the time the Mooring Master boards the lifting vessel until the lifting vessel has loaded her cargo and the Mooring Master has disembarked, full power must be available at all times on all deck winches and windlass and other gear of the lifting vessel. The lifting vessel's engines, steering machinery and other efficient manoeuvring equipment must likewise be maintained in constant readiness with full power for immediate use so as to allow the lifting vessel to manoeuvre in order to avoid a possible collision with the floating storage vessel or so as to allow the lifting vessel to depart from the loading berth at any time following a request by the Mooring Master or the Company to do so.

The lifting vessel's personnel should be at their stations and alert at all times during mooring, unmooring, hose handling and cargo loading operations. Where lifting vessels are equipped with an electric clutch control to the propeller shaft, such lifting vessels must disconnect the electrical clutch control and the manual clutch control so that there will be no possibility of the engine engaging the propeller shaft while the lifting vessel is moored. Where lifting vessels are turbine vessels are required to turn their propellers, such lifting vessel must turn such propellers in reverse motion. A constant watch in the engine room, control room, cargo control room and on the bridge shall be provided at all times aboard any lifting vessel while at/or in the vicinity of the loading berth.

Ship-to-Terminal Communications: The floating storage vessel is equipped with VHF radiotelephone using international frequencies and maintains a radio watch on the international VHF marine Channel 16. Not less than 12 hours prior to the lifting vessel's ETA at Oguendjo Oil Terminal, the lifting vessel is required to maintain a radio watch on R/T Frequency 2182 kHz and on VHF Channel 16. Masters are recommended to use this facility as soon as the lifting vessel is within range since such communications are the best means of avoiding delay in the mooring of the lifting vessel. While the Mooring Master is on board the lifting vessel, the Mooring Master will be in direct charge of the portable VHF ship-to-terminal radiotelephone and all ship-to-terminal, ship-to-tug and ship-to-launch communications will be by portable VHF radiotelephone. The Mooring Master will advise the Master and officers regarding the emergency whistle signals set up for use in the event the VHF radiotelephone units become inoperative. The use of the lifting vessel's radio station and/or battery charging equipment is prohibited during cargo loading operations.

Radio Watches: While at the anchorage awaiting the loading berth, lifting vessels should maintain a listening watch on R/T Frequency 2182 kHz and on VHF Channel 16 with the floating storage vessel.

LOADING: *Vessel's Gear:* Prior to the arrival of any lifting vessel at the loading berth, the derrick of the lifting vessel should be up and ready to lift the mooring and hose connection gear onboard the lifting vessel. The lifting vessel must be equipped on the forecastle head with all equipment recommended in the latest OCIMF publication on standards for equipment recommended for employment in the mooring of ships at single point moorings. The Smit Bracket or chain stopper shall be free, open and greased and a large coil of messenger line with sledgehammer and other necessary tools for mooring must be available. In the event that the lifting vessel is not equipped with Smit Brackets, snotter ropes shall be employed. The warping winches or windlass should be in good working order and condition at all times while at the loading berth and must be adequate to handle mooring lines under heavy strain and efficient stoppers must be readily available to "hang-off" the mooring lines and transfer same from the winch to the bitts.

On the starboard side opposite the lifting vessel's manifold, there must be equipment rated by an approved Classification Society and capable of lifting the floating cargo hose safely and efficiently (a 10 long ton lift) from the sea surface over the starboard rail to the lifting vessel's manifold. Lifting vessels must also have an adequate supply of nuts, bolts, gaskets and wrenches to connect the floating cargo hose. If, in the opinion of the Mooring Master, the lifting vessel is not equipped with adequate mooring or loading facilities or lines or gear, the Mooring Master must so inform the lifting vessel's Master and in such event the lifting vessel will not be bought into the loading berth until the facilities or lines or gear are deemed satisfactory by the Mooring Master.

Rate of Loading: The crude oil flow is by pump and the maximum crude oil loading rate for lifting vessels using 1×16 in. deck hose is approximately 30,000 bbls.p.h. or approximately 4,000 cu.m.p.h. In order to save vessel time and make the loading berth available for other lifting vessels, it is requested that clean ballast be pumped as fast as possible and that lifting vessels receive oil as fast as it can be delivered, with both operations having due regard for safety. It is also requested that any "Y" pieces, strainers or mud boxes restricting the flow of crude oil into the lifting vessel, be removed before the arrival of the lifting vessel at the loading berth.

Berthing: Tenders to load crude oil will normally be accepted and the loading berth will be assigned to a lifting vessel in the order of its arrival, provided the lifting vessel has a nomination for crude oil valid at the time and is in all respects equipped and ready to moor. In the event that mooring is delayed on account of weather, the lifting vessel will keep its position in line. Should the lifting vessel be required to leave the area on account of weather, the lifting vessel should keep in radio contact with the Terminal in order to make the lifting vessel available as soon as the weather moderates. The Company reserves the right to load lifting vessels "out of turn" following the return of good weather, to the extent that such loading "out of turn" does not materially delay the loading of other lifting vessels in line. For example, should weather make it necessary for a specific lifting vessel waiting at the loading berth or at the anchorage to vacate the area, the Company may load another lifting vessel which arrived at the anchorage after the specific lifting vessel but before the return of the specific lifting vessel which was waiting in line ahead of the other lifting vessel.

Connecting Hose: After the lifting vessel has been securely moored, the floating cargo hose will be hoisted to the lifting vessel's starboard side rail amidship by the lifting vessel's equipment. The floating cargo hose is a 20 in. (reducing to 16 in.) diameter floating hose, about 1,025 ft. in length, fitted with a 150 A.S.A. Camlock flange for connection to the vessel's manifold. The lifting vessel should have adapters and fittings onboard so as to enable such floating cargo hose to be connected to the lifting vessel's manifold. The raising, connecting, disconnecting and lowering of the floating cargo hose will be performed by the lifting vessel's crew as directed by the lifting vessel's officer-in-charge who must be present at all times during such operation and in accordance with the procedure advised by the Mooring Master who will remain on board as Loading Master during the entire time the lifting vessel is at the loading berth. Particular care should be taken during all such hose operations to avoid damage to the floating cargo hose and its fittings.

Loading Readiness and Arrival Time: Upon the arrival of the lifting vessel at the customary anchorage for the loading berth, the Master or his agent shall give the Company notice by letter, telegraph, wireless, or telephone that the lifting vessel is ready to load. Laytime shall commence upon the expiration of 6 hours following the acceptance of such notice by the Company provided that the lifting vessel has been nominated to load cargo and the Terminal holds such cargo nomination and further provided that the Mooring Master has deemed the lifting vessel to be in all respects ready to moor and load. The Notice of Readiness will be accepted only between 0600 hrs. and 1800 hrs. but will not be accepted at any time when Oguendjo Oil Terminal is closed. If, however, the lifting vessel is moved to the loading berth without delay after having arrived at any time and the lifting vessel is in all respects ready to moor and load in the opinion of the Mooring Master, the Notice of Readiness will be accepted at the time the Mooring Master boards the lifting vessel. Laytime shall continue until the floating cargo hose has been disconnected from the lifting vessel's manifold.

Responsibility: Prior to the commencement of any cargo loading operation, the Mooring Master and the officer-in-charge of the loading operations for the lifting vessel shall engage in a pre-loading conference to formulate a loading plan and to ensure that the lifting vessel is in all respects ready to load. No cargo loading shall take place without the permission of the Mooring Master which permission shall not be given until the pre-loading conference and the Lifting Vessel Safety Check List, have been completed. The lifting vessel's Master shall remain responsible for the safety of the lifting vessel and all operations on board the lifting vessel at all times. The Mooring Master will advise the officer-in-charge of the loading operations for the lifting vessel with respect to the loading pressures and hazards but the Mooring Master will not direct any aspect of the loading expect as may be necessary to protect the loading berth and related facilities and equipment. The manipulation of the lifting vessel's valves is the direct responsibility of lifting vessel's personnel. The Mooring Master shall have the right to suspend cargo loading operations or to require the lifting vessel to unmoor and depart from the loading berth at any time when the mooring plan, pre-loading plan or the safety requirements and regulations set forth herein are not being followed by the lifting vessel or at any time the Mooring Master believes or becomes aware of the existence of any other reason which in his opinion shall require the suspension of the mooring or the loading of the lifting vessel.

Oil Valve Control: The incoming oil stream is controlled on the floating storage vessel and the lifting vessel's valves must not be closed against the incoming oil stream. Such a procedure creates an excessive pressure which may damage the hose or other terminal facilities and could result in a pollution incident. Lifting vessels will be held legally responsible for any damage resulting from the lifting vessel's failure to observe this precaution. Frequent checks of the cargo loading must be made by lifting vessel personnel during the loading operation so that a reduction in the loading rate, before topping-off the final tank or tanks may be arranged through the Mooring Master by the officer-in-charge of the loading operations for the lifting vessel. A normal standby warning should be given about 20 minutes before the shutdown of the loading operations. Upon the request from a lifting vessel to shut down the loading operations, a minimum of 3 minutes will normally be required to stop the flow of crude oil. Lifting vessel's personnel shall be responsible for the call to stop the loading of the lifting vessel. When cargo has ceased to flow, the valves on the floating storage vessel will be closed and the lifting vessel's manifold valves may then be closed.

Emergency Signal: The emergency signal employed at Oguendjo Oil Terminal shall be the continuous blast on a vessel's whistle. Should normal ship-to-terminal communications fail, the emergency signal must be sounded by the lifting vessel. Steam or air should never be shut-off from the whistle of the lifting vessel during loading. Whenever the emergency whistle signal is used, the tug will be summoned to standby and all loading operations will be shut down until communications can be established with the vessel giving the signal. For this reason, it is requested that lifting vessels in the area refrain from using their whistles for other than essential purposes and that the use of the "continuous blast" whistle signal be reserved for emergency purposes only. All crew members who stand a deck watch during the transfer of crude oil are expected to know the emergency shutdown signal.

Code Flag: During all cargo loading operations, the International Code Flag "B" shall be displayed from a topmast signal halyard during daylight hours and a red light shall be displayed during the hours of darkness. The red light should be of a character as to be visible at a distance of at least 2 miles and show an unbroken light around the horizon.

Terminal Stops: Request for the terminal to stop the flow of crude oil at a predetermined tonnage must be made in writing to the Company and will be deemed to include the statement and understanding that the Company will not be responsible for (1) any errors, cost or claims arising from such request and (2) any crude oil loaded in excess of the requested will not be pumped back aboard the floating storage vessel. Some delays in stopping the flow of crude oil are always incurred when such a stop request is made.

BALLAST: *Precautions and Rules:* There are no facilities for the off-loading of dirty ballast but clean oil-free ballast may be discharged overboard from the lifting vessel. It is the responsibility of the Master of the lifting vessel to see that no oil (crude, bunker, diesel, bunker C, slops, residues, contaminated ballast water, or oily bilge water) is pumped or spilled overboard from the lifting vessel. All deck scuppers must be plugged tight and adequate drip pans with sand and sawdust must be provided where necessary on deck for use at all times, especially when disconnecting hoses, in order to prevent any such loss of oil overboard. The waters in and adjacent to the loading berth must not be polluted and only clean, oil-free, ballast may be discharged inside of a line running 50 miles from and parallel to the coastline of the Republic of Gabon.

The discharge of oil mixtures from lifting vessels while en route to Oguendjo Oil Terminal is prohibited except when the following conditions are all satisfied:

(1) The instantaneous rate of discharge of oil content of the oily mixture does not exceed 60 litres per mile.

(2) The total quantity of oil discharged on the ballast voyage does not exceed that quantity permitted by the International Convention for the Prevention of Pollution from ships 1973 as modified by the Protocol of 1978 related thereto, and

(3) The lifting vessel is more than 50 miles from the nearest point on the coastline of the Republic of Gabon.

Masters are warned that when disposing of dirty ballast or bilge water, (50 miles or more from the coastline of the Republic of Gabon), all pipelines, sea suctions, strainers and pumps which are later to used to discharged clean ballast, must be flushed clean, so that there will be no chance of even a small amount of pollution when the clean ballast is pumped overboard.

Lifting vessels must have sufficient ballast for safe manoeuvring and where practicable, should arrive at the loading berth with the propeller completely submerged amd properly trimmed. The Mooring Master may refuse to permit the mooring of any lifting vessel not in compliance with these requirements until the vessel takes on sufficient ballast and/or alters her trim to meet these requirements.

As soon as practicable after arrival, lifting vessel's tanks will be inspected for evidence of oil in ballast and during the discharge of ballast a similar inspection will take place. If evidence of oil appears at either of these inspections, the lifting vessel must vacate the loading berth and discharge such dirty ballast.

Any lifting vessel required to vacate the loading berth for the purpose of discharging dirty ballast, cleaning tanks or for any similar reason, automatically nullifies any Notice of Readiness already tendered and at the same time loses any priority held for loading. Lifting vessels must tender a new Notice of Readiness upon their return and lifting vessel will be entered for loading upon the Company's acceptance of the new Notice of Readiness.

Lifting vessels must keep a constant watch on the side of the lifting vessel from which clean ballast is being discharged for any indication of water discolouration or oil sheen. Discharge of ballast must be immediately suspended should there be any indication of discolouration or sheen and the Mooring Master shall be immediately informed of such. An investigation of any such discolouration or sheen shall be carried out by the lifting vessel and the findings reported to the Mooring Master. Discharging shall not resume without permission of the Mooring Master.

If, during any inspection or during the process of loading, it is revealed that a lifting vessel's tank is not oil-tight, the lifting vessel will be rejected by the Mooring Master and refused further loading until satisfactory evidence of effective repairs is submitted and the lifting vessel is duly certified by Lloyd's Register of Shipping, American Bureau of Shipping or another similarly recognised classification society.

In addition to the lights usually displayed, lifting vessels are required to illuminate the lifting vessel and the waters around the lifting vessel with all available and suitable searchlights and floodlights during the discharge of clean ballast and the loading of crude oil during the hours of darkness and restricted visibility. Such illumination must be to the satisfaction of the Mooring Master and must be undertaken so as to assist in the loading operations and in order that any oil on the surface of the sea may be readily detected and appropriate action taken. Lifting vessels unable to illuminate the sea satisfactorily may not discharge ballast or engage in the loading of crude oil during the hours of darkness and any such delay shall be for the account of the lifting vessel.

Loading and Deballasting Simultaneously: Lifting vessels equipped with a separate system of ballast tanks will be allowed to discharge clean ballast and load oil simultaneously, providing that the approval of the Mooring Master if first obtained.

MEDICAL: *Emergency Medical Assistance:* Lifting vessels requiring emergency assistance should contact Oguendjo Oil Terminal by VHF radio and supply the necessary pertinent information which will be passed on to the vessel's Agent. Neither medical nor hospital facilities are available at Oguendjo Oil Terminal, but private doctors and hospital facilities are available in the town of Port Gentil.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Consular or diplomatic representatives for many nations maintain offices in the town of Port Gentil and Libreville.

REPAIRS: The Masters of lifting vessels loading at the loading berth are advised that the loading berth is located in open and unsheltered waters and under no circumstances may engines be shut down for repairs while the lifting vessel is at the loading berth or at the anchorage. There are no facilities for making repairs to a lifting vessel at the Terminal and no repairs will be allowed at the loading berth. However, arrangements can be made through the vessel's Agent to utilise the repair facilities at other ports.

SURVEYORS: *Marine Survey and Cargo Inspection Service:* No cargo inspectors or marine surveyors are based in the area, but inspectors and surveyors who reside at other ports can be arranged through the vessel's Agent.

REPATRIATION: No facilities available.

TIME: GMT plus 1 hour. Summer time not kept.

SHORE LEAVE: Lifting vessel personnel (other than medical emergency cases) are not allowed to embark or disembark from the lifting vessel at the loading berth.

WEATHER: *General:* The Company can advise of the following general environmental characteristics for the area off the coast of the Republic of Gabon, but the navigator is referred to the published sailing instructions and directions for the area for more detailed information on the climate, weather, wind, tide, current and sea.

Climate: The coast between Cape Lopez and the Congo River is dominated by the Basin of the Ogooue and is covered with a dense equatorial forest which is frequently subjected to heavy rainfall. The area exhibits a characteristic diurnal variation in cloudiness, and the climate along the coastline is heavily influenced by the heated continental interior, the extratropical storms, and the cool Benguela current. The average annual rainfall is 123 in. and ranges from a maximum of 19.9 in. in November to a minimum of 0.04 in. in July. Temperatures seldom exceed 95°F. and seldom fall below 65°F. and are moderately high throughout the year with an average yearly temperature of 79°F. and a mean maximum temperature of 86°F.

January is the stormiest month because thunder squalls (combined thunderstorms and squalls) are frequent. Summarised wind data does not indicate strong winds during this month, but gusty winds occur during the thunderstorms, these being brief and irregular. In February and March, the weather is unsettled with occasional rain. In April weather generally improves, becoming cooler and drier. In May the weather becomes fair, but by the end of the month it again becomes more settled and a breeze flows steadily from a Southeasterly direction. In June and July, the weather is very misty and gloomy, decreasing visibility significantly. In August, light breeze persist, generally cloudy and overcast conditions exists, by the end of the month, heavy mists clear away. In September, hotter weather and more Southwesterly wind develops with frequent light showers. Sea breezes become stronger to the end of the month, and thunder squalls moving from the S.E. occur. In October, the wind is still more Westerly with occasional small showers, and generally overcast skies till noon. In November and December, strong breezes move off the land sometimes with rain, thunder and lighting.

Average annual rainfall	123 in.
Average daily maximum air temperature	84°F.
Average daily minimum air temperature	74°F.
Extreme highest average monthly air temperature	99°F.
Extreme lowest average monthly air temperature	60°F.
Average relative humidity (0700 hrs.)	92%
Average relative humidity (1300 hrs.)	76%

Winds: The prevailing winds off the Republic of Gabon are characteristically light and Southerly the year around. Land and sea breezes dominate along the coast and generally blow between the S.W. and S.E. The highest offshore wind speeds occur during local thunder squalls (combined occurrences of thunderstorms and squalls) which may have brief wind gusts up to 60-70 knots. These thunder squalls may be violent, occur quickly and without warning, and are often accompanied by heavy winds, seas, swell, and rain which may reduce visibility substantially.

Tides: The tides can be predicted with reasonable accuracy, though use of the tide tables for Takoradi in Ghana, with the appropriate correction factor for Cape Lopez applied.

Currents: The Benguela Current flows North along the West coast of Africa from the vicinity of the Cape of Good Hope to the Gulf of Guinea. The general direction of the current off the Republic of Gabon is parallel to the coast, although in the vicinity of Cape Lopez the main body takes a more Westerly course. The current is generally stronger during December and January when the current flows Southward at 10 to 20 miles off Cape Lopez, but during the remaining months of the year, the current generally sets in a Northwesterly direction and sometimes attains a velocity of about 2 knots. The current is usually more rapid close to the coast than it is farther offshore, but its velocity is variable because of the effect of the winds.

Seas: The coast is influenced by swells from the South and S.W., but most of the higher waves occur in association with thunder squalls. The highest collection of waves can be expected during March and April and during October and December, but waves of 6 ft. or more do not occur more than 2.5 per cent of the time.

GENERAL: *Flag:* Lifting vessels are required to fly the flag of the Republic of Gabon on the foremast during daylight hours while in the territorial waters of the Republic of Gabon. The territorial waters extend 12 nautical miles seaward from the coastline of the Republic of Gabon.

Government Officials: Governmental officials such as the Customs Officer, Quarantine Officer, Immigration Officer, Captain of the Port and the Police, are stationed in the town of Port Gentil. Should Customs guards be stationed on board the lifting vessel while at the loading berth, it is expected that the lifting vessel will provide food for these guards and other governmental officials. Lifting vessels calling at the loading berth must provide an accommodation ladder rigged on the port side for such governmental officals.

Quarantine Regulations: The rules governing the quarantine of lifting vessels are the same as those found in other parts of the world.

Supplies: Commissary supplies, steward stores, laundry services, fresh water, marine lubricants and bunkers are not available through the Company and may not be loaded at the loading berth. Any questions concerning the availability of such items from other sources and the loading of such items elsewhere should be handled through the vessel's Agent.

Agency: The Company does not perform any vessel agency functions. Lifting vessels calling at Oguendjo Oil Terminal must arrange for their own Agents.

Contraband: The Company prohibits unauthorised craft from coming alongside lifting vessels while at the loading berth without the permission of the Mooring Master. To avoid the possibility of undesirable elements getting aboard lifting vessels, it is recommended that Masters discourage any such craft from coming alongside while lifting vessels are at or in the vicinity of the loading berth.
Garbage: The dumping of garbage, sewage, and refuse overboard is prohibited and there are no facilities for receiving such at the Terminal.
Visitors: Vistors are not allowed to embark or disembark from the lifting vessel at the loading berth.
AUTHORITY: Amoco Gabon Exploration Company, B.P. 780, Port Gentil, Republic of Gabon. *Tel:* 750640, 750641 or 750642. *Telex:* 981-8268. *FAX:* 750647. *Contact:* Ron Cole, President/Director General.

OVENDO (Owendo): 00.17 N. 09.30 E. **(See Plan)**

SHIPMASTER'S REPORT 1978:

Vessel, length 156 m., breadth 22.0 m. Draft at the time, 30 ft.
APPROACHES: The channel buoys showed very well on radar on the 3 and 6 miles ranges, even during heavy rain, but the lights on the red buoys are poor and all buoys occasionally unlit.
ANCHORAGES: Depths in the channel and river were found to be as stated during low water with a depth of 33 ft. over all the anchorage. Maximum draft allowed at this time was 30 ft.

The holding ground is good, 4 shackles were used for a total ship weight of 19,000 tons plus a small coaster alongside.

The tides are regular with only a very short slack water period, and run at between 4 and 6 knots.
PILOTAGE: There are 2 French Pilots who may be contacted on VHF Channel 16 when in range, they are ordered by the Agent to berth vessels only, although they will pass on advice to vessels regarding anchoring.
TUGS: There is 1 tug of approximately 1,000 h.p. which assists in berthing, either towing or pushing.
BERTHING: Well fendered modern concrete quay, 450 m. in length, laid out as per "Plan" in the "Guide". The normal practice is for there to be 2 ships of around 150 m. and one smaller ship alongside at one time. The inshore side of this quay is for small craft only.

Depths alongside Berth No. 1, 23 ft.; No. 2, 18 ft. and No. 3, 22 ft.
FRESH WATER: This is obtainable while alongside the quay but only in a dire emergency at the anchorage from the tug which can supply up to 8 tons.
REPAIRS: Only very small repairs are possible and it is suggested that a receipt is obtained for any parts sent ashore.
REPATRIATION: There are 2 flights a week from Libreville to Paris and approximately 12 flights weekly to Abidjan.
SHIPCHANDLER: There is no chandler for any form of stores, the only possibility being self-purchase at the local (Libreville) supermarket. All goods are imported and therefore very expensive.
HOLIDAYS: 12th March, Gabonese Independence.
MARINE CLUB: There is a marine club about 1 km. from Ovendo in the Libreville direction (swimming pool, etc.).

SHIPMASTER'S REPORT: February 1979.

DOCUMENTS: Ship's Papers (sighted), Crew Lists (5), Passenger Lists (5), Port of Call (4), Crew's Custom Declaration (1), Marine Health (1), Arms and Ammunition (1).
PILOTAGE: Pilot boards by tug which is compulsory for docking and undocking. Vessels berthed head out for sailing.
APPROACHES: Gambia Lighthouse range 20 miles is easy to pick up, channel is well marked by buoys with good radar reflectors. No Pilot is available for the channel. After last buoy proceed directly to anchorage.

Soundings taken throughout channel showed a least depth of 20 m.
ANCHORAGES: Waiting anchorage is 0.5 to 1 mile West of the wharf.
RADIO: Agent keeps watch on VHF Channel 16.
BERTHING: A new port has been built about 4 miles South of old lighter jetties at Libreville, consisting of 1 wharf at right angles to the shore in 15 m. of water, capable of docking 2 ocean-going vessels.
STEVEDORES: Slow but efficient, about 6 tons per gang man hour.
REPATRIATION: Airport 12 miles from port, 6 flights per week direct to Paris.
TRANSPORT: Available by bus or taxi to the town.
SHORE LEAVE: Allowed.
SEAMEN'S CLUB: Within 1 mile of port with bar and swimming pool.

SHIPMASTER'S REPORT: March 1980.

PILOTAGE: Pilot compulsory. Pilot boards 1 mile S.W. of Ovendo Pier and requires 24 hours' and 12 hours' notice.
ANCHORAGE: One mile S.W. of the pier.
RESTRICTIONS: Pilot advises that vessels can only berth on slack water as a 5 – 6 knot (approx.) ebb tide runs. Vessels able to sail at any time, however, it is not advisable to manoeuvre during darkness as buoys are frequently unlit. Vessels are able to proceed from sea to anchorage at any time.
MAX. SIZE: Max. draft at Ovendo is 9.2 m. Mean tidal range 1.5 m.
TUGS: One tug available.
VHF: Pilot and Port Authority on Channel 16. Agent on Channel 9.
BERTHING: The berth at Ovendo is 20 miles from the entrance. Ther is one jetty 450 m. in length. The mean tidal range at the berth is 1.5 m and the bottom in the vicinity of the berth is mud. Container vessels us the port and discharge using ship's gear. There is ample handling an storage space for containers. "Delmas" container vessels use the po frequently and they take preference over most other vessels.
SERVICES: The following are available:

Fresh water (rate 25 tonnes p.h.), airport, doctor and hospital.

The following are not available:

Fresh provisions, repair facilities, dry dock facilities, machine shop surveyors, laundry service, fuel, lubricating oils, groceries, meats an slop facilities.
GENERAL: Arriving from a S.W. direction no difficulties wer encountered, Point Gonbe was visible 18 miles on the radar and late the Fairway Buoy was visible at 10 miles. All the channel buoys showe up at 6 to 8 miles on radar.

The Fairway Buoy is very large, similar to the type used on th American coast. Chart used 1877 (Estuaire du Gabon).

Conspicuous wreck marked in position Lat. 0° 24.4′ N., Lon 9° 17.2′ E. is no longer visible.

On entering inward I checked the buoys' positions against the lar and found:

Fairway Buoy Gp. Fl.(2) 6 secs. In position. Unlit.
(Course 090°×3.2 M) Fl. G. 4 secs. In position. Lit.
(Course 115°×2.1 M) Gp. Occ(2) G. 6 secs. In position. Unlit.
(Course 115°×2.1 M) Between { Occ. R. 4 secs. In position. Unl / Fl. G 4 secs. In position. Unlit.
(Course 137°×3.0 M) Fl. R. 4 secs. Out of position. Unlit.
(Course 137°×6.1 M) Occ. 6 secs. In position. Lit.

After passing the Fl. R. 4 sec. buoy, vessel was about to set a cour to the anchorage off the port of Libreville but was told that vesse carrying cars were to proceed to the new port of "Ovendo" som 8.5 miles further up the river.

On arrival I was told to anchor 1 mile S.W. of the new pier.

Quite a modern port as described in the "Guide".

Laying alongside the berth is not very comfortable when the ebb ti starts to flow, anything up to 6 knots within half an hour of HW, getti its force from three rivers, River Egoume, River Ikoy and the main riv Komo.

Vessels always berth on slack water with the aid of a tug to pus Vessels can leave at any time. Port employs two French Pilots.

REPORT: 1982.

SHIP SPARES: Customs require originals of invoices G11 for clear spares. Copies are not acceptable.

SHIPMASTER'S REPORT: February 1989.

PILOTAGE: 2 pilots (French) available for berthing and unberthing.

On arrival, Pilot boards at the Fairway Buoy position. This has to arranged by the Charterer or Owner. Many ships, shallow draft or regu traders, do not take the Pilot at the Fairway Buoy position.
APPROACHES: All the buoys in the Channel, including the Fairw Buoy, are missing and they are unlikely to be replaced, according to t Pilot. During the transit to the berth all positions are by radar, due lack of visual points. Arrival and departure should be in daylight.

Great care must be taken on arrival off the Fairway Buoy position some of the points of land do not show up well.

The sailing draft of 10.4 m. is governed by the depth in the chann There are several 9 m. patches and banks. The best plan is to lea the berth at LW, in order to avoid the 5 knot current during unberthi then anchor off the berth until about 1 hour before HW, then proce outward. This gives the vessel the benefit of 1.7 m. – 2.0 m. rise in ti
TUGS: One tug assists with berthing and unberthing.
BERTHING: *New Ore Berth:* This is a single "T" jetty with dolphins. were the second vessel to berth here. There is a single loading arm th covers the whole 6 hatches, without ship having to shift. Loading ra is about 3,000 t.p.h. when in full operation. During our stay, technicia were still working on varous items. Manganese Ore is either suppl ex-stock or directly from wagons.

Vessel berths port or starboard side to, with one tug assist Moorings consisted of 3/2/2 each end and no wires if possib One anchor is let go on approach.

The berth is situated just down river from the Port of Oven The port itself handles large vessels and has a depth alongside about 8.0 m.
FRESH WATER: Not available ex-berth.
FUEL: Not available ex-berth.
REPATRIATION: Possible. One crew member landed ashore medical treatment and repatriation.
SHORE LEAVE: Difficult, as launches are required and they expensive. The town of Libreville is some distance from the port.
GENERAL: *Officials:* Boarding party boarded on arrival. Us paperwork required. The bond was not sealed.
Communications: The telephone and telex service to the Agent's of was good.
Draft Survey: This is undertaken by ship's staff. The shippers requ loading plan prior to arrival. The Bill of Lading figures were the same the ship's figures.
Supplies: There is no ship chandler at the port. There is an excel supermarket in Libreville which is of European standard but items very expensive.

SHIPMASTER'S REPORT: February 1989.

I was in Owendo in February 1989, and I wish to advise you that an elevator for loading manganese ore has been completed (B.A. Chart No. 1877 – Works in progress – 1987).

The elevator has a maximum loading capacity of 3,000 tonnes per hour and is situated on dolphins. Berthing is also on dolphins with maximum draft of 12.5 m. Density is brackish. Pilot boards the vessel 1.77 nautical miles off the berth.

For information on the position of the buoys in the Passe de la Penelope, Masters should contact Owendo Pilot on VHF Channel 16, as the positions of buoys are unreliable.

SHIPOWNER'S REPORT: April 1989.

One of our vessels suffered propeller damage from underwater obstacles in Owendo in April 1989. We know of two other cases, both in 1984.

AGENT: See "Libreville".

PORT GENTIL: 00.43 S. 08.48 E. (See Plan)

LOCATION: The deep water port of Port Gentil is located between Point Clairette (Sogara Refinery) and the Alcyon Bank (CFG factory).

APPROACHES: Buoyed channel, lit at night. Minimum depth 15 m.

DOCUMENTS:

Cargo Manifest.
Stores List.
Crew's Personal Effects List.
Crew List.
List of Ports of Call (not compulsory).
Health Certificate.
Ship's Official Papers.

PILOTAGE: Pilot service operates 24 hours a day. Vessels berth day and night except at Sogara Quay where berthing is daylight only.

ANCHORAGES: An anchorage area for timber vessels faces the old port. Access to the zone is by leaving to starboard a path 200 m. from the buoys of the Alcyon and Talisman Banks.

An anchorage area for waiting vessels intending to berth at the new port, or at the Sogara Refinery is to starboard of a line joining the Prince Buoy to the buoy of the Sogara route to the port.

RESTRICTIONS: See "Pilotage".

The water area in the port is clear with no obstructions apart from the Alcyon Bank running from the marker buoy to the CFG factory. Dredging carried out permits manoeuvring of vessels to Berth No. 2 of the Commercial Quay.

RADIO: Port Control on HF 2182 kHz and VHF Channel 16, Working Channel 12.

TUGS: Not required.

BERTHING: *Commercial Quay:* 350 m. of quay with 11 m. depth of water and 75 m. of quay with a depth of 2.5 m. which constitutes the barge quay. The quay bollards are spaced 30 m. apart. This quay is able to accommodate 3×20,000 tonne vessels.

Fish Quay: The fish quay runs at right angles to the Commercial Quay (107° – 287°). 80 m. with 8 m. depth of water; 197 m. with 7 m. depth of water.

This quay is reserved as a priority for fishing vessels, but can be partially used for berthing vessels of a commercial nature. The quay bollards are spaced 20 m. apart.

Storage: 6,000 sq.m. of covered storage, divided into 6 bays of 1,000 sq.m. each. 3 bays leased to COMACO (8 reefer points available). 3 bays leased to SOAEM (1 reefer point available). 1 Customs warehouse located in the SOAEM bay.

Open storage area: Current paved surfaces of open storage areas – 14,000 sq.m. One tarmac non-covered area of 10,000 sq.m. is in service. A second storage area of 10,000 sq.m. (approx.) will be brought into service at a later date.

STEVEDORES: Work in 3 shifts throughout 24 hours.

MEDICAL: The port infirmary is located in the Comaco Building.

TANKERS: To N.E. of Mole is a petroleum pipe-line unloading point for small tankers, tying up on buoys, max. length 70 m., draft 5 m.

Prince's Bay, point for unrefined petrol by sealine is available to North of Prince's Bay (see "Cape Lopez").

FRESH WATER: Available at commercial quay and fishing quay.

CONSULS:

France	BP. 511	Tel: 20.86
Netherlands	BP. 792	Tel: 28.09
Sweden	BP. 518	Tel: 21.71
Switzerland		Tel: 20.19

REPAIRS/DRY DOCKS: Not available.

WATCHMEN: Available.

HATCHES: Opened and closed by crew.

REPATRIATION: Obtainable on medical grounds. No facilities for crew changes.

AIRPORT: 4 km. distant. Regular services.

TIME: GMT plus 1 hour. No alterations.

HOLIDAYS: No work on Independence Day, 17th August.

SHORE LEAVE: Permitted.

GENERAL: *Ships' Spares:* Customs require original of invoices for clearing spares. Copies are not acceptable.

AUTHORITY: Direction du Port de Port Gentil, B.P. 43, Port Gentil, Gabon. *Tel:* 75-35-63. *Contact:* J. B. Pea, Le Directeur du Port.

AGENT: Socopao-Gabon, B.P. 560, Port Gentil. Tel: 752491 and 753085. Telex: 8223. Cables: "Freight Portgentil". Fax: 750751.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Gambia

BANJUL: 13.27 N. 16.34 W. (See Plan)

DOCUMENTS:
7 Crew Lists.
7 Passenger Lists.
7 Ports of Call Lists.
Health Documents.
Derat (or Exemption) Certificate.
Yellow Fever Innoculation Certificates.
Customs Crew Declaration.
2 signed copies of Manifest.
Bills of Lading (may be sent in advance of vessel).

PILOTAGE: ETA and draft to be communicated to "Harbour Master Banjul" 48 hours before ETA and confirmed 12 hours before. Vessel arriving Monday ETA preferably not later than Friday morning.

Pilot station situated in Harbour Master's Office has VHF station, calling Channel 16 (156.80 MHz) working Channels 12 (156.60 MHz) and 14 (156.70 MHz). Continuous listening watch kept 0800 – 1600 hrs. Monday – Thursday. 0800 – 1300 hrs. on Friday. Listening watch at weekends if vessels are expected. Reception generally good within 100 nautical miles radius. Pilot boat has blue hull and white superstructure, exhibiting usual signals.

Pilotage from any point inwards from Fairway Buoy by request, but compulsory from No. 5 Buoy inwards.

ANCHORAGES: Good and spacious anchorages to the East and S.E. of Government Wharf in depths of 8 to 15 fathoms.

RESTRICTIONS: Vessels may enter and proceed to anchorage at all times and states of tides. Minimum depth in sea approach channel is 8.54 m. LWOST. Average rise of Spring tides 1.83 m., Neap tides 1.22 m.

HEALTH: Vessels exhibit the appropriate International Code signals. Port Health Officer usually boards the vessel at the harbour anchorage or alongside between 0800 and 1700 hrs. daily, at all times in case of emergency.

RADIO: No radio station.

RADAR/VHF: Port VHF. Radar station being constructed – See "Pilotage".

TUGS: One ocean-going tug of 1,000 h.p. with VHF keeps watch on Channel 16 throughout 24 hours.

BERTHING: Maximum permissible draft alongside Banjul Old Wharf 8.2 m. Mooring bollards on foreshore. Banjul Wharf berthing face 122 m., breadth 29 m. Mooring dolphin each end, set back from wharf face. Inner berth of length 102 m. suitable for small vessels up to 5.3 m. draft. Public Jetty berthing face 60 m., maximum draft 3.3 m.

New Banjul Wharf: Length 123 m., width 29 m., depth alongside 10 m. (outer side) and 6.0 m. (inner side). Wharf is flanked by 2 mooring dolphins at each end at distance of 24 m.

840 sq. m. of under covered cargo space. Paved area for outside storage of 8,000 sq. m. for containers and break bulk cargo.

Tankers can load ground nut oil at New Banjul Wharf.

BRIDGES: No bridges.

STEVEDORES: Normally 48 hours notice addressed to Agent. If arriving Monday preferable Agent notified requirements latest Friday. Normal working hours 0730 – 1900 hrs.

MEDICAL: Emergencies and cases requiring hospitalisation attended to at all times, giving as much advance notice and information as possible. Other cases attended to as convenient to ships after arrival. For certificates required see "Documents". Inoculation and vaccination for yellow fever given on request.

TANKERS: Tankers (discharging only) berth on Banjul Old Wharf. Maximum permissible draft 8.2 m. Discharge of residue and bilge prohibited. Ballasting by permission of Harbour Master. Ground nut oil can be loaded at New Banjul Wharf.

DENSITY: Normally salt water at Banjul, reducing to about 1020 ozs. per cu.ft. during River Gambia flood water period: August – February.

FRESH WATER: Fresh water available at Banjul wharves from hydrant. Notice of requirements should be sent with ETA. No water barge. Tug can supply up to 18 tons of fresh water to vessels at anchorage.

FUEL: Bunkering facilities available at Banjul Wharf by road tankers for reasonable quantities. Advance notification required for all bunkers.

FIRE PRECAUTIONS: For tankers and vessels carrying explosives Fire Brigade will be in attendance.

CONSULS: In Banjul: Belgium, Denmark, France, Lebanon, Norway, Spain, Sweden. U.S.A. has resident Charge d' Affairs and U.K. has High Commissioner. Senegal has resident Ambassador.

REPAIRS: Minor hull, deck and engine repairs and welding undertaken by G.P.A. dockyard.

DRY DOCK: A slipway of capacity of 500 tons displacement is included in the dockyard facilities.

GANGWAY/DECK WATCHMEN: Recommended. By arrangement with Agent.

OPENING/CLOSING HATCHES: Usually done by stevedores.

CERTIFICATES: Registry, Articles of Agreement, Load Line, Safety, Safety Equipment Radio Licence/Certificate.

CUSTOMS ALLOWANCES: Reasonable allowance of wine/spirits and tobacco/cigarettes out of bond, as per Master's request.

CARGO GEAR: In accordance with U.K. Factories Act. Ship's lifting gear for loading and discharging, also 4×6 ton and 1×30 ton mobile cranes available. Adequate plant for handling 20 ton and 40 ton containers.

REPATRIATION: Possible.

AIRPORT: Airport 14 miles from Banjul. Regular services.

TIME: GMT kept throughout the year.

HOLIDAYS: New Year's Day (1st January); Independence Day (18th February); Good Friday, Christmas Day, Boxing Day, Islamic Festivals of Eid-El-Fitr (Ramadan) and Eid-El-Kabir. No cargo work on Islamic Holidays.

TELEPHONE: Telephones installed on board at ship's/Agent's request.

SHORE LEAVE: No restriction on normal shore leave.

IDENTIFICATION CARDS: Needed.

GENERAL: The Gambia River Transport Company operates a limited fleet of lighters, mainly for transporting groundnuts from river ports to Banjul. Ships stores: fresh vegetables, beef and fish, fruit (in season) and bonded stores are available.

Other Ports: River Ports: Kaur and Kuntaur at 118 and 150 miles upriver respectively from Banjul. River Pilots available at Banjul. Max. loaded draft 5.0 m.

REPORT: August 1990.

Message from agent to ship's Master:
Quote
Banjul buoys as follows:
No. 1 is about 7 cables S.E. of charted position and unlit.
No. 2 in position but superstructure missing.
No. 3 is about 8 cables south of charted position and superstructure missing.
No. 4 in position unlit.
No. 5 in position with flashing lights.

Please proceed straight into harbour. Pilot will board for berthing after passing buoy No. 5.

Federal Republic of Germany

GENERAL:

RIVER ELBE: **(See Plan)**

GENERAL INFORMATION ON ELBE PILOTAGE, DEEPSEA PILOTAGE, HELICOPTER AND RADAR SERVICE, ANCHORAGE ON THE RIVER ELBE.

Elbe Pilots for all ports on the River Elbe, Cuxhaven, Brunsbuttel, Butzfleth, Stadersand, HEW-Wedel and Hamburg.

Pilot Vessel: For inward bound vessels near Elbe Lanby, a 2-masted pilot vessel with black hull and yellow funnel and "Lotse" painted in white letters on both sides of hull is stationed in approx. position Lat. 53° 59.5′ N., Long. 08° 09.0′ E. (1.5 miles E.S.E. of Elbe Lanby).

In bad weather pilot vessels shift to East of Light-buoy "9". Such shifting is reported by Norddeich Radio in a navigational warning.

Pilot vessel can be contacted on VHF Channel 16 or 8, by showing flag "G", by sound or morse light signals.

During the night pilot vessels show the lights mandatory for pilot craft according to Rule 29 of the International Regulations for Preventing Collisions at Sea.

The vessel used for embarking Pilots will, in addition, show white flares for 30 seconds at 2-minute intervals according to Rule 36 of the International Regulations for Preventing Collisions at Sea.

Traffic Separation Scheme in the "Approaches to River Elbe": The separation zone of this traffic separation scheme also constitutes a safety zone around Elbe Lanby. Ships are urged to give the Lanby a good berth when passing.

Masters are requested not to leave the traffic lane in question when taking a Pilot.

There is an anchorage lying 3 miles to the N.E. of the traffic separation scheme. Special care should be applied when approaching or leaving the anchorage. See "Anchorage".

Land-based radar contact can be requested through radar station "Elbe Approach Radar Radio", on VHF Channel 19 during bad weather conditions, e.g. when visibility drops below 3,000 m., when there are ice floes, when buoys have been removed from their respective positions or when pilot vessels are leaving their positions, for further particulars please see "Radar".

PILOTAGE: Vessels requiring Elbe Pilot must order same at least 12 hours prior to arrival at Elbe Lanby by radiotelegram to "Elbelotse Brunsbuttel".

Cable address:	"Elbelotse Brunsbuttel" via Norddeich Radio, call-sign DAN
Telex:	28343 Ellots D
Telephone:	(04852) 87295

Vessels coming from nearby ports should make the request on departure or as soon as possible.

If the ETA alters, a correction should be transmitted.

Message must include:

1. Name of vessel,
2. g.r.t,
3. ETA Elbe Lanby, date 2 figures and time of vessel's arrival 4 figures,
4. draft,
5. vessel's destination.

(For example: 1., Eleka, 2. 12854, 3. ETA Elbe 02 1030, 4. 24 ft. 04 in., 5. Kiel Canal).

1 hour before arrival at Elbe Lanby, Masters are advised to contact the pilot vessel by VHF Channel 16 or 8.

Compulsory District Pilotage: Pilotage is compulsory on the River Elbe to and from Elbe Lanby for all sea-going vessels over 1,000 g.r.t., furthermore for all oil, gas and chemical tankers and, in addition, for all such tank-vessels over 10,000 g.r.t. on their way to and from Deutsche Bucht Lanby.

These tank-vessels over 10,000 g.r.t. have to use the Western Approach Traffic Separation Scheme Deutsche Bucht.

Pilots for these vessels will be embarked and disembarked only at the Deutsche Bucht Lanby by helicopter or pilot boat. See "Deutsche Bucht Pilot Service".

Furthermore, pilotage is compulsory for all bulk carriers of more than 35,000 g.r.t. and other vessels of more than 60,000 g.r.t. on the River Elbe and on their way to and from Deutsche Bucht Lanby; all these vessels can embark and disembark Pilots only at the Deutsche Bucht Lanby by helicopter or pilot boat, they have to use the Western Approach Traffic Separation Scheme Deutsche Bucht. See "Deutsche Bucht Pilot Service".

Compulsory pilotage exists for outward-bound sea-going vessels of more than 20,000 g.r.t. other than oil, gas, and chemical tankers as far as to the outer range of the pilot vessel position at Elbe Lanby even when, under bad weather conditions, the pilot vessel has been moved up-river.

The disembarkation of Pilots can take place by helicopter at Elbe Lanby, if ships of the last category (20,000 g.r.t. other than oil, gas, and chemical tankers) are equipped with a properly marked winching or landing area according to International Chamber of Shipping (ICS) Guide to Helicopter/Ship Operations.

See "Deck-markings and Dimensions Plan" in Plan Section.

The transfer of Pilot by helicopter can also take place on container vessels, if these ships are equipped with a special platform for winching manoeuvres.

Exemptions:

The compulsory district pilotage regulations do not apply to tankers of less than 300 g.r.t. and other sea-going vessels of less than 5,000 g.r.t., provided that:

- such vessels navigate a route which the Master of the vessel in question has navigated at least 6 times within the preceding 12 months in that same vessel;
- the Master of the vessel has an adequate knowledge of the German language;
- such vessels are equipped with an operational radar as well as with an operational VHF radiotelephone installation featuring the Channels specified for the pilotage district in question.

Nevertheless, it is most advisable for any vessel to take a Pilot not only because of his local navigational knowledge but also for his familiarity with the special provisions for the River Elbe, the quarantine and Customs regulations.

In principle all vessels have to take 1 Elbe Pilot.

Bulk carriers and tankers having a draft of more than 37 ft. in salt water (38 ft. in fresh water) - regardless of size – and all vessels exceeding 60,000 g.r.t. – regardless of draft – must take 2 Elbe Pilots.

Pilotage District divided into 3 areas:

1st District: From Elbe Lanby to Brunsbuttel (entrance of Kiel Canal) 40 miles (from Deutsche Bucht Lanby to Brunsbuttel 68 miles) – operated by Elbe Pilots;

2nd District: From Brunsbuttel to Hamburg Seemannshoft (entrance to Port of Hamburg) 40 miles – operated by Elbe Pilots;

3rd District: Covers the whole area of the Port of Hamburg – operated by Port Pilots.

First change of Pilots takes place at Brunsbuttel for either a Kiel Canal Pilot or a second River Pilot, the Harbour Pilot for Hamburg will embark at Hamburg – Seemannshoft.

Vessels expecting Pilot may wait in vicinity of Elbe Lanby or Deutsche Bucht Lanby.

Contact either the Elbe pilot vessel or the Heligoland Pilot Station on VHF Channel 8, 13 or 16.

No restriction imposed on night entry for any vessels on the River Elbe.

Current velocity 2-3 knots; mean tidal range at Outer Bar Light-buoy "9" 9 ft. 10 in.; Brunsbuttel 9 ft. 2 in. and Hamburg 10 ft. 4 in. nature of bottom, sand and mud.

River pilotage dues (Lotsabgaben) have to be paid by all vessels exceeding 300 g.r.t., irrespective of whether they have used a river Pilot or not.

Pilotage fee (Lotsgeld) will only be charged if a Pilot is employed.

Deutsche Bucht Pilot Service: A central pilot service has been established at Deutsche Bucht Lanby.

Elbe Pilots will be transferred: By helicopter stationed at Wilhelmshaven-Mariensiel and Brunsbuttel-St. Michaelisdonn or by pilot vessel operating from Heligoland. There is a pilot station on the island of Heligoland equipped with VHF operating on Channels 13 and 16 and which responds to calls addressed to "Heligoland Pilot".

Vessels expecting their Pilot at Deutsche Bucht Lanby should stand by on VHF Channel 13 or 16 on approaching the rendezvous position.

Vessels bound for the Jade or Weser ports and requesting the Weser Pilot at Deutsche Bucht Lanby should contact: By radio telegraph linked with the code word "ETA Deutsche Bucht Lanby" to the telegram address "Weser Pilot II Bremerhaven". Telex No. 0238605. Tel: 0471/42220. VHF Channel 16.

Procedure for ordering pilot and Compulsory District Pilotage Regulations are similar to the article about Elbe Pilotage.

During bad weather conditions the pilot cutter operates at an up-river position. Compulsory pilotage to the outer range and to the Weser Lanby exists for outward – bound vessels of more than 20,000 g.r.t., other than oil, gas and chemical tankers and for car carriers and Ro-Ro vessels of more than 10,000 g.r.t.

HELICOPTERS: Helicopter Pilot service is available for vessels exceeding 10,000 g.r.t. at Deutsche Bucht Lanby.

The service to embark or disembark Pilots onto or from ships "at anchor" or "underway" can be provided day and night.

A twin-turbine powered Bell 212 S and/or Sikorsky S-76 helicopter is available for this service. Only suitably equipped vessels may have a Pilot transferred by helicopter.

There must be a properly marked landing area or a marked winching area available according to International Chamber of Shipping (ICS) Guide to Helicopter/Ship Operation.

See "Deck-markings and Dimensions Plan" in Plan Section.

If such a marking is lacking, it will not be possible for the helicopter to touch down or drop a Pilot.

These vessels have to send aforementioned information together with their ETA.

(a) Pilots for the Elbe pilotage region are to be requested 24 hours prior to arrival at the helicopter rendezvous position in the vicinity of Deutsche Bucht Lanby by radiotelegram to "Elbelotse Brunsbuttel".

Cable address:	"Elbelotse Brunsbuttel" via Norddeich Radio, call-sign DAN.
Telex:	28343 Ellots D
Telephone:	(04852) 87295

Vessels coming from nearby ports should make the request on departure or as soon as possible.

Message must include:

1. name of vessel,
2. g.r.t.,
3. ETA Deutsche Bucht Lanby with date 2 figures and time of vessel's arrival 4 figures,
4. draft,
5. vessel's destination,
6. whether a properly marked landing area or marked winching area is available,
7. if yes, whether to starboard or port and on which hatchway or which part of the ship.

(*For example:* 1. Terre, 2. 104468, 3. ETA Deutsche Bucht 11 1530, 4. 41 ft. 03 in., 5. Brunsbuttel Elbe-Terminal, 6. Landing area available, 7. on port side.)

(b) A corrected ETA should be sent to "Elblotse Brunsbuttel" 6 hours prior to the transfer operation at Deutsche Bucht Lanby.

(c) Send the exact time of arrival to "Elblotse Brunsbuttel" 2 hours before arrival at Deutsche Bucht Lanby.

In addition to this, vessels should keep watch on *VHF Channel 16, 30 minutes before arrival* so that the helicopter can contact the ship.

After radio contact is established (VHF Channel 9), the vessel shall advise the helicopter pilot of the vessel's position, heading, speed and the actual wind direction and speed over the deck.

It is essential that the vessel transmit direction finding signals on 410 kHz until the helicopter is over the ship. On request of the helicopter pilot an uninterrupted (locked key) transmission should be given.

When transferring the Pilot, vessels are restricted in their ability to manoeuvre according to Rule 3(g) (iii) and (iv) and may exhibit the lights and shapes as under rule 27(b) of the International Regulations for Preventing Collisions at Sea. In addition, they may inform shipping of their manoeuvres by VHF.

In cases of defect of helicopter, poor visibility, icing conditions, inadequacy of construction of ships, or no landing or winching area markings, the Pilot will have to be embarked or disembarked by the Pilot boat at the same position.

A sea-going Pilot boat is operating from Heligoland in up to Beaufort Sea Disturbance Nos. 4 – 5 for embarking and disembarking the Pilots, if the helicopter is not available, or if the ship's construction is inadequate for helicopter transfer, or if the helicopter landing or winching area of the ship has no proper marking according to International Chamber of Shipping (ICS) Guide to Helicopter/Ship Operation. See "Deck-markings and Dimension Plan" in Plan Section.

If due to incomplete or misleading ETA information it is found at the attempted Pilot transfer by helicopter that the vessel is not properly marked and/or fitted for such transfer and the helicopter consequently has to return to base, it will be necessary to send a Pilot by boat from Heligoland, which may involve considerable delay plus the cost of the futile flight.

General: If helicopter operation cannot take place, the ship will be informed of the fact by radio telegraph via Norddeich Radio (DAN). For that purpose a permanent radio watch should be kept on 500 kHz (512 kHz if distress traffic is in progress on 500 kHz) during the approach, starting 2 hours before reaching rendezvous position at Deutsche Bucht Lanby.

The Master will receive further instructions by radio message or via VHF on how to proceed, if Pilot transfer is not possible.

The Heligoland pilot station can be called on VHF Channel 16 or 13 and should be addressed "Heligoland Pilot".

Vessels expecting a Pilot at Deutsche Bucht Lanby will be called on 500 kHz (512 kHz during distress working) or on VHF Channel 16 or 13 for information on transfer details.

RADAR: A continuous and co-ordinated chain of radar stations has been established to cover the traffic flow along the estuary of the River Elbe from a point 4 miles before passing Elbe Lanby as far as well into the port of Hamburg.

If visibility drops below 3,000 m. and/or if particular situations arise (e.g. ice floes, withdrawn buoys, pilot vessels leaving their positions, etc.). Masters of inward-bound vessels may request land-based radar monitoring assistance from a point *4 miles* before passing Elbe Lanby until receiving a Pilot. This service will be rendered by Elbe Pilots and is available by contacting Elbe Approach Radar Radio, VHF Channel 19.

The same service is extended to outward-bound vessels as far as *4 miles* West of Elbe Lanby.

Once the Elbe Pilot has come aboard he will be assisted by his land-based colleagues monitoring the shore-operated radar system.

Radar Stations along the River Elbe: Elbe Approach Radar Radio, VHF Channel 19; Neuwerk Radar Radio 1, VHF Channel 18; Neuwerk Radar Radio 2, VHF Channel 5; Cuxhaven Radar Radio, VHF Channel 21; Belum Radar Radio, VHF Channel 3; Brunsbuttel Radar Radio, VHF Channel 4; Freiburg Radar Radio 1, VHF Channel 18; Freiburg Radar Radio 2, VHF Channel 22; Steindeich Radar Radio, VHF Channel 5; Hetlingen Radar Radio, VHF Channel 21; Hamburg Radar Radio, VHF Channel 3 and 19.

Each station broadcasts periodical reports, in German and English, of visibility, ice, tide, alterations of seamarks, etc. See "Admiralty List of Radio Signals".

ANCHORAGE: A deep-water anchorage for deep-draft vessels, very large crude carriers (VLCC's), and ultra large crude carriers (ULCC's) is located South of "Deutsche Bucht" Lanby, approx. position Lat. 54° 05′ N., Long. 07° 27′ E. Depth of water from about 34 m. to 36 m.

In the vicinity of Elbe Lanby (3 miles to the N.E.) for large and deep-draft vessels, North of estuary, approx. position Lat. 54° 03′ N., Long. 08° 09′ E., depth of water from about 14 m. to 19 m. below chart zero.

Neuwerk Roadstead, approx. position 53° 58′ N., 08° 30′ E., depth of water from about 8 m. to 17 m. below chart zero;

Medem Roadstead, approx. position 53° 51′ N., 08° 46.5′ E., depth of water from about 5 m. to 13 m. below chart zero;

Neufeld Roadstead, approx. position 53° 51.7′ N., 09° 00′ E., depth of water from about 8 m. to 10 m. below chart zero;

N.E. Roadstead, off Brunsbuttel, permission only for 1 tide, approx. position 53° 53′ N., 09° 12′ E., depth of water from about 13 m. to 14 m. below chart zero;

Freiburg Roadstead, approx. position 53° 50.6′ N., 09° 19.5′ E., depth of water about 13 m. below chart zero;

There are further anchorages for small vessels at Sudreede (South anchorage) off Brunsbuttel, Wischhafen, Krautsand, Grauerort – and Twielenfleth Roadstead.

The bottom at all these anchorages consists of sand and mud.

DEEP-SEA PILOTAGE: Ships requiring the assistance of Deep-Sea Pilots in the North Sea, the English Channel, or the Skagerrak shall make use only of the service of Deep-Sea Pilots in possession of a Deep-Sea Pilot Card issued in accordance with the Rules and Regulations for the Good Government of Deep-Sea Pilotage in the North Sea.

Ships requiring the assistance of a Deep-Sea Pilot in the North Sea or the English Channel may request the assistance of pilots licensed by the Federal Republic of Germany.

See "Baltic Deep-Sea Pilotage" – Page 174.

Request for Deep-Sea Pilots should be made for vessels berthed in

German North Sea ports	6 – 8 hours before ETD
Continental North Sea ports	24 hours before ETD
UK North Sea and Channel Ports	48 hours before ETD or before passing the local pilot station (as appropriate).

Vessels entering European waters through the English Chann usually take their pilots at Brixham 1.5 miles N.E. of Berry Head or Cherbourg 1 mile North of CH 1 Buoy. Pilots of outward-bound vesse normally disembark at the same stations.

Deep-Sea Pilots (not authorised as dual capacity River Pilots) are n allowed to pilot any vessels (whether subject to compulsory pilotage not) on the River Elbe from Deutsche Bucht Lanby as far as the Port Hamburg, regardless of whether pilot vessels are on position or n during bad weather conditions or whether or not Pilots can be embarke or disembarked during bad weather at the normal transfer position.

Also see "Brixham"

Extra Service: Inward-bound vessels – especially container vessels wishing to proceed without delay by gale or fog, etc., regardless whether pilot vessels are in position or not during bad weathe conditions, as may be caused when taking an Elbe Pilot at Elbe Lan or Deutsche Bucht Lanby, can request the Elbe Pilot to come aboar at the first Channel or North Sea port of call for approaching the rive Elbe and non-stop onward upstream pilotage.

In order to avoid all the disadvantages caused by the forementione situation – if foreseeable – it is urgently advised to request an Elbe Pil in time.

Advantages: Assistance of nautical staff in the heavily congested are of the German Bight – especially of the approach of the River Elbe - exact knowledge of local conditions, saving of time, reduced hazards

Please observe these periods of notice:

Continental North Sea ports:	24 hours prior to ETD
UK North Sea and Channel ports:	48 hours prior to ETD or before passing local pilot station.

Coastal Pilotage: Coastal pilotage is available from a position nea Lanby Borkumriff to the limits of the pilotage districts Ems, Weser Jade, and Elbe.

Telegrams: Emslotse Emden via Norddeich Radio/DAN
Telephone: 0492/24000
Telex: 27882 lotsen d

Baltic Pilot – Kiel: Ships requiring assistance of state-licensed Dee Sea Pilots for the *Baltic Sea* to send their request to

German Deep-Sea Pilots Brake
Cable: "Germanpilots Brake"

or Baltic Pilots Kiel
Cable: Balticpilots Kiel".

or Deepseapilots Busum
Cable: "Contipilot Busum".

or German Deep-Sea Pilotage Joint Service
Cable: "Praconor Travemunde".
or "Praconor Bremerhaven".

or Captain Urmersbach, Brake
Cable: "Urmersbachpilot Radio Unterweser".

The Baltic Pilotage Authorities Commission Recommendation:

The Baltic Pilotage Authorities Commission, recognising that Dee Sea Pilotage helps to enhace safety of navigation and prevention pollution of the marine environment, in particular to reduce the risk resulting from the high density of ships carrying dangerous or noxiou cargoes and that the presence of a Deep-Sea Pilot on board wou strengthen a vessel's navigational team and improve emergen measures in case of incidents and having considered the necessity establish a certain order in Deep-Sea Pilotage in the Baltic Sea, recommends

A. Masters of ships which are constrained by their draft and
B. Masters of ships other than registered in one of the Baltic state infrequently sailing in the respective area

coming from or being bound for ports in the Baltic Sea to ava themselves of Deep-Sea Pilots, certified by a competent authority o Baltic coastal state.

Notice to all Masters Entering the Baltic Sea concerning Deep-Se Pilotage:

The IMO recommends that ships which wish to avail themselves Deep-Sea Pilots in the area of the Baltic should only take Deep-Se Pilots licensed by a Pilotage Authority of a Baltic coastal state, Denmark, Finland, the Federal Republic of Germany, the Polish Peopl Republic, Sweden and the Union of Soviet Socialist Republics (IM Resolution A.480 (XII).

Such licensed Deep-Sea pilots are in possession of a red iden card.

The Pilotage Authorities of the Baltic coastal states draw spe attention to the following rule which came into force on January, 1983, but only obligatory for licences issued after that date

Deep-Sea Pilotage in the Baltic Sea Area shall be performed Deep-Sea Pilots from the respective ports of departure of the Bal coastal states only, including the Kiel-Holtenau Locks, the Sound a the Belts. A Deep-Sea Pilot shall disembark from a ship at the first p of call and shall return home as soon as possible.

If the ship wants further advice by a Deep-Sea Pilot it is responsibility of the local Pilotage Authority of that port to supply a Deep-Sea Pilot.

Also see "Baltic Deep-Sea Pilotage" – Page 174.

BRAKE: 53.20 N. 08.29 E. (See Plan)

PORT LIMITS: The government-owned piers are the commercial area of the port. A vessel is considered to be an "arrived ship" when she is moored alongside such piers, and the customs formalities are complete. Laytime will commence according to referring charter parties.

Port Authorities distribute the free berthing places in following the "Benutzungsordnung fur den Hafen Brake" which says briefly that a vessel will get a rank position in actual arriving times:

(a) for ships coming from sea: arrival "Weser Lanby" plus 5 hours.
(b) for ships coming from Bremerhaven North Roads and Blexen Roads: departure plus 2 hours.
(c) for ships coming from Bremen: departure plus 3 hours.

DOCUMENTS:
2 Lists Ship's Stores.
2 Crew Lists.
2 Passenger Lists.
Health Certificate (forms obtainable from Pilot).
Ship's Register.

DEEP SEA PILOTAGE: See "General" before first German port and "Baltic Deep-Sea Pilotage" – Page 174.

PILOTAGE: Carried out by Weser River Pilots. The river Pilots also act as docking Pilots. Also see "Bremen" and "Bremerhaven".

ANCHORAGES: No anchorage in vicinity of Harbour. Anchorage in "Blexen Roads". For further details see "Bremen".

RESTRICTIONS: Vessels proceeding to Brake with a draft in excess of 24 ft. will be restricted by the tide.

MAX. SIZE: Max. length 265 m. (869 ft.); no restriction on beam. Max. draft 37 ft. in fresh water.

PRATIQUE: Free Pratique is given by Health and Immigration Officer only. If a case of fever or disease is suspected on board radio the Agent with details before arrival.

RADIO: Cable Agent via Norddeich Radio (Call sign DAN) advising ETA and cash requirements.

RADAR/VHF: Stations from Weser Lanby to Bremerhaven. Radar service between Bremerhaven and Brake. Radar stations have day and night service. If no fog every odd hour radar stations give on VHF or Pilot walkie-talkie report of visibility, defective buoys, anchoring ships, obstructions to navigation, and special occurrences. Direct contact between port and ship is possible on VHF.

TUGS: Available day and night in sufficient number. No extra charge for using tug's lines.

BERTHING: New locks have been built at the inner harbour and are operating since August 1979. Dimensions: Length 95 m. (311 ft.), width 16 m. (52 ft.) Max. size of vessel to be handled will be a fully loaded vessel of 3,000 d.w.t. with a max. draft of 6.0 m.

Inner Harbour with tide-independent lock: Length of dock 1,070 m. (3,500 ft.), width 110 m. (360 ft.). Length of canal 228 m. (750 ft.), width of canal 46 m. (150 ft.), length of quay in canal 228 m. (750 ft.). Depth 4.3 m.

Riverside Berth: Total length 1,852 m. (6,075 ft.), depth at pier 13.6 m. at North end and 14.6 m. at South end at normal low water, tidal amplitude 11 ft. 6 in. Max. draft 37 ft. Max. length of ships not more than 265 m. (869 ft.).

This government-owned pier is divided into 2 areas. The Northern part is the crane-area with a length of 4,510 ft., the Southern part, 1,565 ft. long, is the grain-handling area.

Private Pier of the Fettraffinerie/Unimills has a length of 245 m. (804 ft.) depth 11.0 m.

SPECIALISED CARGO HANDLING FACILITIES:

Inner Harbour:
1 jib crane, capacity 32 ton. Working range 10 m. to 30 m.

South Pier:
3 grain elevators. Total discharging capacity 1,500 t.p.h.
4 lorry and railtruck unloading stations. Total capacity 1,000 t.p.h.
3 ship loading stations. Total loading capacity 1,800 t.p.h.
6 lorry and railtruck loading stations. Total loading capacity 2,600 t.p.h.

North and Middle Pier:
4 shore unloader and loading bridges of between 16 tons and 80 tons capacity, waterside reach 32 m. to 40 m.
4 luffing jib cranes – 14 tons to 25 tons capacity – max. reach 46 m.
Belt conveyor system: Length 1,280 m. Max. capacity 1,000 cu.m.p.h.
Wagon loading station: capacity 300 cu.m.p.h.
Combined ship loader: capacity 1,000 cu.m.p.h.

Fettraffinerie Quay: Loading/discharge points for vegetable and animal oils/grease, mineral oil, molasses and other liquid products.
Discharge capacity: 1,500 t.p.h.

Storage:
Silo installation and storage shed for grain: 360,000 tonnes.
Storage sheds: 55,500 sq.m.
Free storage areas: 105,000 sq.m.
Tank storage for grease, refinery and the S.S. "Elbe" 110,000 tonnes.

The government-owned pier is equipped for containers, but not for Roll-on/Roll-off traffic. The berth does not handle liquid chemicals.

STEVEDORES: ETA has to be reported to the Agent to arrange gangs. Stevedores are working 3 shifts around the clock on working days (Monday to Saturday); on Sundays and holidays 4 shifts are worked around the clock.

MEDICAL: One hospital and several doctors available at Brake. Advance notice to Agent required if medical assistance necessary.

TANKERS: Fettraffinerie Pier: Max. draft 33 ft. Discharging lines: molasses 6 in., fuel oil 8 in., diesel 10 in. and vegetable oil from 4 in. to 8 in.

DENSITY: Brake Port, Fresh water: salinity = 1002–1004.

FRESH WATER: Available both at Riverside Berth and Inner Harbour. Pumping capacity from 18 t.p.h. to 20 t.p.h.

FUEL: All grades available by bunker barges.

FIRE PRECAUTIONS: No smoking on deck. For tankers at Fettraffinerie Pier smoking only in saloon and/or messroom.

CONSULS: Consuls at Bremen.

REPAIRS: All normal ship and engine repairs can be carried out during laytime on board.

DRY DOCKS: One dry dock at Petram Werft, Brake, for ships with a length not in excess of 85 m. (279 ft.), nor wider than 16 m. (52 ft. 6 in.), and a max. draft of (3.98 m./13 ft. 11 in.)

SURVEYORS: Classification Societies not represented but several surveyors available at Brake Port.

GANGWAY/DECK WATCHMEN: Crew's watchmen necessary – strong tides, current-speed 3 knots.

HATCHES: Depends on the different charter parties.

CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle of spirits and 2 bottles of wine.

CARGO GEAR: Load/discharge normally effected by shore-gear.

REPATRIATION: Any necessary repatriation and/or crew changes can be effected by Agents at Brake.

AIRPORT: International airport served by regular airlines at Bremen. Brake to Bremen, distance 57 km. (35 statute miles).

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: New Year, Good Friday, Easter Sunday and Monday; 1st May, Ascension Day; Whitsunday and Monday, Penitentiary Day, 2 Christmas Days. Cargo work can be arranged on those days, except on New Year, Easter Sunday (1st Easter day), 1st May, Whitsunday, 1st Christmas Day, and on the days before such days till 1200 and/or 1400 hours.

POLICE/AMBULANCE/FIRE: Police 110; Ambulance 19222; Fire 112.

TELEPHONES: No arrangements to place telephones on board.

SHORE LEAVE: Shore passes are required according to customs regulations.

IDENTIFICATION CARDS: Crew members to have valid identity cards.

SEAMAN'S HOSTEL: Weserstr. 1A, tel. 4490.

DEVELOPMENTS: Weser fairway depth will be increased to 12 m. (39 ft. 6 in.).

AUTHORITY: Niedersachsisches Hafenamt Brake, Brommstrasse 2, D-2880 Brake. *Tel:* 04401/5061. *FAX:* 04401-3272. *Contact:* Port Captain.

BREMEN (Including Farge): 53.07 N. 08.45 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
Provision and Store Lists including fuel oil.
Dangerous Cargo Lists.
Health Declaration.
Ship's Register.
No Customs Papers if vessel laying in Freeports at Bremen.

DEEP SEA PILOTAGE: See "Brixham" or "Cherbourg" and "General" before first German port and "Baltic Deep-Sea Pilotage" – Page 174.

PILOTAGE: Compulsory for ships of more than 1,000 g.r.t. and tankers of more than 300 g.r.t. and for all ships with dangerous goods in bulk and nuclear ships, exemptions possible.

Distance from Weser Lanby to Bremerhaven 36 miles. Distance from Bremerhaven to Bremen 32 miles.

At least 12 hours before arrival at Weser Lanby, Masters should cable messages to "Lotsenbruderschaft Weser zwei Bremerhaven" via Norddeich Radio. Message to include name and g.r.t. of vessel, place where Pilot required to board, day and hour of vessel's arrival, vessel's destination and fresh water draft in metres. Sea Pilots board at Weser seabuoy to Bremerhaven. River Pilots board at Bremerhaven to pilot vessels to Bremen.

Pilot station near Weser Lanby (54° 05′ 16″ N., 07° 50′ 00″ E.) black painted motor vessel, black topped funnel, white lettering "Lotse" on hull. In rough weather, pilot boat may be found inside near Buoys 77 and 79. Pilots may be contacted by Norddeich Radio, 2182 or 2614 kHz. or by VHF Channel 16.

River Pilots boarding at Bremerhaven also act as harbour Pilots to all ports above Bremerhaven.

ANCHORAGES:

1. About 1 mile S.W. of Weser Lanby.
2. Hoheweg Road between Buoys 17 and 19.
3. Tanker Road W. of Buoys 27–31.
4. Blexen Roads (South Roads) only for smaller ships.

RESTRICTIONS: Vessels proceeding to Bremen, with a draft in excess of 25 ft. will be restricted by the tide.

MAX. SIZE: Bremen: Length 190 m. with draft 10.7 m., longer ships with restricted draft.

Locks: At the entrance of the Industriehafen: Length 248 m., clear width 33.40 m.

Ships passing with max. length 230 m. and max. breadth 32.40 m. According to tide, docking is possible up to 9.45 m. (31 ft.).

HEALTH: Master has to fill and sign Maritime Declaration of Health which is handed to Health Officer on arrival at Bremerhaven and Bremen. In case suspected disease or fever on board radio details to Port Health Bremerhaven via Norddeich Radio before arrival.

RADIO: Cable Agent via Norddeich Radio, call sign DAN, advising ETA and cash requirements.

Bremen Port Radio VHF station on Channels 3 or 16 to be used for messages to all Port Authorities including Police and Fire Brigade and Port Health in case of emergency. Bremen Lock Radio on Channel 12.

RADAR/VHF: Stations from Weser Lanby to the port area of Bremen. If no fog, every odd hour radar station gives by VHF or Pilot walkie-talkie, report of visibility, defective buoys, anchoring ships, obstructions to navigation and special occurrences.

Ships ordered for Bremen industriehafen should contact "Oslebshausen Lock" via Channel 12 VHF after passing Bremerhaven.

TUGS: Tugs available at all stations according to ships request. Tugs' lines used (only) without charge.

BERTHING: Berthing at Bremen: The following harbours can be reached:

Harbour name:	*Quay Length* (m.)	*Depth (above chart datum)* (m.)
Europahafen	2,730	3.20 – 8.60
Uberseehafen	2,960	3.20 – 10.20
Werfhafen	700	3.20 – 7.20
Holz–und Fabrikenhafen	2,600	4.20 – 8.50
Getreidehafen	570	4.00 – 11.50
Neustadter Hafen	3,100	4.00 – 11.50
Kap Horn Hafen	725	9.00
Industriehafen	3,060	3.20 – 6.20 (plus harbour water, about 3.80 m., only Industriehafen)

Max. draft is dependent on the prevailing winds

SPECIAL CARGO HANDLING FACILITIES:

Freeports: Neustadter Hafen, Uberseehafen and Europahafen, mainly general cargo.

Quay length: 7,960 m.
Max. draft: 11.50 m.
Shed storage: 532,000 sq.m.
Porterage company: Bremer Lagerhaus-Gesellschaft.

Facilities: Air-conditioned fruit storage, refrigerated storage, consolidated cargo centre, packing centres, Ro/Ro terminals, logistics and information processing on industrial plant transports and grain handling centre.

Container Handling Facilities: Neustadter Hafen Shed 24 is equipped with 3 container cranes, suitable for 40 ft. containers. Max. lifting capacity is 45 tons. The terminal has 116 connections for reefer containers.

Shed 21 is equipped with 2 container cranes, suitable for 40 ft. containers. Max. lifting capacity is 80 tons.

Roll-on/Roll-off terminal: At the head of the Europahafen, 1 berth. Max. carrying capacity 60 tons, width 8 m. Max. draft 28 ft.

At the end of shed 24 Neustadter Hafen, 1 berth. Max. carrying capacity 60 tons, width 30 m., draft 32 ft.

LASH Terminal: At Bremerhaven. Lash-lighter places: Lankenauer Hoft and Europahaven.

Bulk handling facilities (Industriehafen):

Bulk cargoes such as steel, and steelware, coal, coke and coke breeze, timber, ore, oil, molasses, sand, stones, phosphate and further fertiliser and chemicals are handled by companies under private management.

For entering Industriehafen see "Max. Size – Locks".

Huttenhafen: Klockner-Hutte mainly handles ore, scrap, coke and coke breeze, sand, steel and steelware as slabs and coils of Klockner Iron Mill.

Quay length: 520 m.
3 gantry cranes: 12.5, 15 and 55 tons.
Storage area: 80,000 sq.m.
Discharging capacity ore: 8,000 tons per 24 hours.
Loading capacity coils: 5,000 tons per 24 hours.
Loading capacity slabs: 6,000 tons per 24 hours.

Rhenus WTAG: Mainly handles provender, coal, coke, minerals, wood products, stones, etc.

Quay length: 450 m.
4 cranes: 25 – 56 tons.
Storage area: 21,000 sq.m.
Loading capacity coils: 6,000 tons per 24 hours.
Loading capacity plates: 5,000 tons per 24 hours.
Loading capacity coal: 6,000 tons per 24 hours.
Quarrier and riddler: 500 tons per 24 hours.

Olhafen: Oil farm for about 100,000 tons. One tank for molasses 11,000 tons.

Kohlenhafen: Gebr. Rochling mainly handles coal, coke, ore, phosphate and logs. West Africa Terminal specialises in all kinds of general cargo and container handling.

Quay length: 750 m.
7 cranes: 5 – 50 tons.
1 coal-loader: 60 tons.
Storage area: 30,000 sq.m.
Loading capacity coal: 9,000 tons per 24 hours.
Loading capacity coke: 6,000 tons per 24 hours.
Discharging logs: 1,555 tons per 24 hours (approx.).

Kraftwerk Hafen (Power Station): At this berth only coal cargoes for use by the power station are handled. Discharging rate (1 crane) 8,000 tons to 10,000 tons per 24 hours.

Kalihafen: Anker-Schiffahrt handles all kinds of cargo and is specialised in packing, decantation and sacking of chemical products.

Quay length: 500 m.
2 gantry cranes: 24 tons
4 special loaders
1 bridge for liquids
Storage area: 40,000 sq.m.

Tankfarm Defrol: Storage capacity 48,000 tons fuel.

Hafen E: Hansakai (Klembt) handles all kinds of cargoes and is specialised in coils, pipes, construction parts, heavy lifts, ore and containers.

Quay length: 285 m.
1 gantry crane: 15 tons.
4 cranes: up to 45 tons.
Storage area: 11,000 sq.m.

Wandel & Co: 60,000 sq..m. shed storage for grain and general cargo.

Hafen A: H. Menke & Co.: Quay length: 250 m. 1 tank for molasse 15,000 tons. Specialises in wine import with storage area for 20 millio litres.

Bremer Lagerhaus-Gesellschaft:
Quay length: 300 m.
Storage area: 90,000 sq.m.

Other bulk handling facilities:

Granary (Getreidehafen) *near the Uberseehafen*
No locks, max. draft 35 ft. Lighterage is possible.
Berth "A" 3 elevators with a capacity of 400 t.p.h. max. length 275
Silo capacity 150,000 tons.

Kraftwerk Farge (Power Station)
Location: 10 miles downstream from Bremen. Only coal cargoes for th power station are handled.

Max. draft	29 ft. 6 in.
Max. length	200 m. = 656 ft.
Max. beam	25 m. = 82 ft.

3 cranes, total discharging capacity 200 t.p.h.

Rolandmuhle: tidal basin Holz- und Fabrikenhafen. Grain facility with

Max. draft	22 ft. at low water.
Max. length	180 m. (591 ft.).
2 stationary elevators	3,000 tons per day

1 conveyor for loading bags only.

J.H. Bachmann/J. Muller/Karl Gross (Holz- und Fabrikenhafen)
Facility for grain and occasionally, general cargo handling.

Max. draft	up to 23 ft. at normal low water.
Quay length	710 m. (2,330 ft.).
Cranes	13 Grain/General cargo
Elevators	4×250 t.p.h. each

General cargo loading installations (Kap Horn) with 2 quays, 1×320 long inside Industriehafen and the other 800 m. long (at the riverside The storage area of 100,000 sq.m. is equipped with gantry crane fo handling pipes, construction parts and general.

STEVEDORES: Ordered by Agent; no ETA advice to stevedore necessary.

Working hours:

Regular period: 0630–1430 resp. 0600–1400	on Sundays: (overtime)
Free Port	1st shift: 0600–1200
1st shift: 0600–1400	2nd shift: 1200–1800
2nd shift: 1430–2230	3rd shift: 1800–2400
3rd shift: 2300–0600 (overtime)	4th shift: 2400–0600

1430–2030 (overtime)
2030–0230 (overtime)

CRANES: All piers are fitted with cranes 3/7 tons. Floating cranes to 200 tons available.

MEDICAL: All medical facilities available. Advance notice to Age required if medical assistance necessary.

TANKERS: Draft in fresh water.

Holzhafen	one berth, max. draft 28 ft. at LW
Osterort I	one berth, max. draft 34 ft. 6 in. at LW
Osterort IV	four berths, max. draft 37 ft. 8 in. at LW
Farge	two berths, max. draft 29 ft. 11 in. at LW

For the following tanker berths see restrictions of the entrance lo Industriehafen.

Oelhafen: one berth, max. draft 26 ft.
Huttenhafen: three berths, max. draft 20 ft. to 30 ft.
Kalihafen one berth, max. 31 ft. 3 in.

Fina Oil, Einswarden. Max. draft 36 ft. 6 in. Discharging lines crude 12 in., fuel oil 10 in., diesel 8 in.

Frisia (Gulf Oil), Einswarden. Berth for tankers up to 250 m. leng max. draft 36 ft. fresh water.

BREMERHAVEN: 53.33 N. 08.35 E. (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
3 Provision and Stores List, including fuel oil.
3 Dangerous Cargo List.
Maritime Declaration of Health.
Derat Certificate
Ship's Register.
No Customs Papers if vessel laying in Freeport at Bremerhaven.
DEEP SEA PILOTAGE: See "Brixham" or "Cherbourg" and "General" before first German Port and "Baltic Deep-Sea Pilotage" – Page 174.
PILOTAGE: See "Bremen".
Docking Pilots join vessels between Buoys 49 and 51A if bound for Uberseehafen or near entrance of Geeste River if bound for Fischereihafen. Call sign is International Code flags PT with pennant below. Sound and flash signals are 3 long and 5 short. Docking Pilots can be requested via Bremerhaven Port Radio on VHF Channel 12.
ANCHORAGE: See "Bremen".
RESTRICTIONS: Vessels proceeding to Bremerhaven with draft in excess of 35 ft. will be restricted by tide.
MAX. SIZE: Length 340 m., draft 41 ft. in fresh water. Draft 42 ft. 8 in. in fresh water, special permission required.
HEALTH: See "Bremen".
RADIO: See "Bremen".
RADAR: See "Bremen".
VHF: "Bremerhaven Port Radio" on Channel 12.
TUGS: Tugs join vessel with docking Pilots. Tug's lines used at no extra charge.
BERTHING: There are two harbour-groups, Uberseehafen North of Geeste River and Fischereihafen South of it.
Uberseehafen:

Along Weser River:	*Depth below Chart Datum*
Columbus Quay	32 ft. – 38 ft. 08 in.
Stromkaje	40 ft. 04 in.

Dock Basins:	*Maintained Depth*
Neuer Hafen	21 ft.
Kaiserhafen I	29 ft. – 36 ft.
Kaiserhafen II	36 ft.
Kaiserhafen III	36 ft.
Verbindungshafen	36 ft.
Nordhafen	42 ft. 09 in.
Osthafen	46 ft.

The dock basins can be reached through 2 locks:
Kaiserschleuse: length 732 ft., gate width 87 ft. 09 in. without fenders; including fenders 83 ft. 7 in.
Depth 23 ft. at LW.
Nordschleuse: length 1,220 ft., gate width 147 ft. without fenders; including fenders 138 ft.
Depth 35 ft. 03 in. at LW. Max. size of vessel. length 265 m., beam 38 m. (124 ft. 07 in.). Draft 42 ft. 08 in.

Fischereihafen:

Dock basins:	*Maintained Depth*
Fischereihafen I	25 ft.
Fischereihafen II	25 ft.
Handelshafen	23 ft.

Locks:
Fischereihafen-Doppelschleuse
Small lock: Length 349 ft., gate width 39 ft. without fenders; including fenders 34 ft. 06 in.
Depth 20 ft. 06 in. at LW.
Large lock: length 328 ft., gate width 98 ft. without fenders; including fenders 94 ft.
Depth 20 ft. at LW.

SPECIAL CARGO HANDLING FACILITIES: All sheds are equipped with electric cranes.

With special permission of the port authorities the following maximum FW drafts are allowed.

42 ft. 8 in. = 13.0 m. – max. beam 38 m.
42 ft. = 12.8 m. – max. beam 39 m.
40 ft. = 12.5 m. – max. beam 40 m.
38 ft. = 11.58 m. – max. beam 41 m.

The port is equipped with modern bulk, container, Ro/Ro and general cargo facilities.

4 floating cranes having lifting capacities of 100 tons – 500 tons.
Weserport (Osthafen) Ore transhipment installation, quay length 325 m. Depth 14.0 m. 2 unloaders. Max. outreach 22.5 m. Total discharge capacity 2,000 t.p.h. Average rate 900 t.p.h.
Columbus Quay Passenger and general cargo facilities.
Quay length 1,020 m. Depth 32 ft. – 38 ft. One shed of 33,000 sq.m. 9 cranes – 8 tons and one heavy lift bridge of 38 tons.
Car loading installations
A car loading installation is situated in the Nordhafen. Quay length 875 m. Storage area 40,000 sq.m. for about 3,500 cars. The loading is done by ships' ramp.
The Car Terminal Bremerhaven, situated in the Kaiserhafen II, has a quay length of 700 m. and a storage area of about 526,000 sq.m.
The Car Terminal Bremerhaven, situated in the Kaiserhafen III, has a quay length of 700 m. and a storage area of 35,000 sq.m.
Container Terminals
2 container terminals, 1 at Stromkaje and 1 in the Nordhafen, are equipped with 17 container cranes, capacity 41 tons – 68 tons.
Depth alongside in river 47 ft. at LW. Depth at Nordhafen 40 ft. 4 in.
Kaiserhafen/Verbindungshafen offers 4 basins for general cargo handling. Quay length: 3,574 m. Storage capacity in modern sheds: about 38,000 sq.ft. 37 cranes with capacities from 3–8 tons. Five banana discharging installations have a capacity of over 500,000 tons per year.
LASH Carriers: Special facilities are available.
MEDICAL: Hospital facilities at all Weser ports. No vaccination normally required.
STEVEDORES: Ordered by Agent; no ETA advice to stevedores necessary.

Working hours:	1st shift: 0600–1400	
	2nd shift: 1400–2200	
	3rd shift: 2200–0500	(overtime)

Height above water-line transiting Canal must not exceed 40 m.

For Binnenhafen, as far as km. 6.00, vessels not requiring to transit Canal may enter with draft up to 10.40 m.

HEALTH: Pratique automatic for vessels entering harbour for load or discharging, and ships passing through Canal if required and if Hea Certificate form does not show any infectious diseases.

RADIO: All messages to Agents and Pilots etc., through Nordde Radio, call sign "DAN". Closer to port Elbe-Weser Radio can contacted by VHF Channel 16.

Ships reporting station is on permanent duty at Brunsbuttel, V Channel 14, safety and calling Channel 16.

RADAR: Radar Service from Elbe 1 to Hamburg see "General" befo first German port, but no special Port Radar Service for Brunsbutt Radar Service in the area of Brunsbuttel available, can be contac through VHF Channel 4, "Brunsbuttel Radar I".

TUGS: 6 tugs available at Brunsbuttel. Vessel's lines used. Tu normally join vessels bound for the Elbe Harbour on river in vicinity Canal locks.

From the approach limit up to entry into the lock, tug assistance mandatory for vessels in Group 6 and also such vessels whi manoeuvre only with difficulty. Tugs assisting ships entering locks jo vessels on canal-roads.

BERTHING: Ships lying at terminals situated on Canal bank in Inn Harbour should take into consideration that vessels must moor safe as suction of passing ships may cause breaking of lines.

Binnenhafen: Comprises the area between lock entrance and km. 5.2

BRIDGES: Ships transiting canal must have bridge clearance of 40 Otherwise no obstructions.

STEVEDORES: Ordered by Agents, no ETA to stevedores necessa

MEDICAL: Port Medical Service by Harbour Doctors. Day and nig service. Inoculations have to be ordered 24 hours prior arrival. Hosp available at Brunsbuttel.

TANKERS: Elbehafen – Oil Section:

Location: At the Elbe-River bank, about 0.5 nautical miles upstrea from Brunsbuttel Canal Locks.

Depth of Water: Within the approaches, 13.50 m., alongside be 14.70 m.

Max. Ships Dimension Acceptable: Length about 400 m. Bea unlimited. Draft 12.95 m. (Sea Water).

Dirty Ballast/Slop Disposal: By barges or tank truck.

Max. Slop Quantity Acceptable: Contact Agent.

Elbehafen for VLCC's: The safe mooring of vessels up to 250,000 d.w has been proved and has become a matter of routine. Harbo Authorities have no objections to accept larger vessels but investigatio have to be made with regard to safe mooring facilities ashore. Tanke with more than 37 ft. draft must arrive 2 hours prior to highwater Elbe Lanby, in order to dock at Elbe Harbour with slack water or first eb tide. Vessels with draft not exceeding 37 ft. may dock during whole eb tide. Pilot vessels to be contacted via VHF radio Channels 13 and 1

Canal Berth:

Location: Inside Kiel Canal Lock at South bank of the Inner Harbour Brunsbuttel.

Depth of Water: Within the approaches 11.00 m.

Max. Ships Dimension Acceptable: Length 150 m. Beam unlimite Draft 6.50 m.

BALLAST:

Dirty Ballast Disposal: By barges or tank truck. Contact Agent.

DENSITY: Brackish at Elbe Harbour and inside locks. Average dens 1003.

FRESH WATER: Most berths supply by shore installations.

FUEL: All grades available.

Bunker stations on South side of Canal are:
Shell – 2 berths, gas oil only.
BP – 3 berths.
Elf – 4 berths.
and on the North side of Canal:
KuBi – Bunker Station – 1 berth, gas oil only.
DEA – 3 berths.

FIRE PRECAUTIONS: No specific precautions except in Kiel Canal.

CONSULS: All consulates available at Hamburg. Swedish Vice-Cons at Brunsbuttel.

REPAIRS: Only minor repairs can be effected. Big yards and dry doc available at Hamburg.

GANGWAY/DECK WATCHMEN: Services of watchmen not necess but available day and night if required.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CERTIFICATES: Ships entering canal and using terminals must ha international ship's register. All other certificates should be valid.

CUSTOMS ALLOWANCES: Tobacco, each crew member 2 cigarettes or 50 cigars or 250 grams of tobacco. Surplus will be sea up by Customs. Wine and/or spirits 1 bottle of spirits and 1 bottle wine permitted for each crew member. Beer unlimited. Ships transi canal are not affected.

REPATRIATION: Crew changes can be arranged in connection w local Immigration Office.

AIRPORT: Nearest airport Hamburg. 90 km. away.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March last weekend in September).

HOLIDAYS: Cargo work can be arranged on every day.

POLICE/AMBULANCE/FIRE: Police Tel: 110 and 3041. Water Guard Police Tel: 1012. Passport Control Tel: 87.262. Customs T 8555. Hospital Tel: 3901. Fire Tel: 112.

TELEPHONES: No facilities for placing telephone on board in K Canal.

IDENTIFICATION CARDS: Normally not needed. If necessary in spe cases Identification Cards will be issued by Immigration.

DANGEROUS CARGO: Ships with dangerous cargo or tankers not free have to be reported to the Port Authority 48 hours before arriv

AUTHORITY: Kiel Canal Authority – Wasser-und Schiffahrts Brunsbuttel, 2212 Brunsbuttel 1. *Tel:* (04852) 8011 – 8016.

Harbour Authority: Hafenbehorde Brunsbuttel, Elbehafen, 2 Brunsbuttel. *Tel:* (04852) 87044. *Contact:* Captain Dietze, Port Cap

(b) ELBE TERMINAL

LOCATION: Elbe Terminal situated outside of locks, quay length 1,100 m.

PILOTAGE: Elbe Pilots also act as docking Pilots at Elbe Terminal.

RESTRICTIONS: For vessels bound for Elbe Terminal, Brunsbuttel, there are no restrictions with regard to length, breadth and height or with regard to day or night entry. Vessels may berth and unberth day or night.

MAX. SIZE: As the fairway of the River Elbe is being dredged, it is not possible to publish any long-term draft values. The max. admissible drafts of the various sizes of vessels intending to navigate on the River Elbe must be enquired of the authorities. The Elbe Pilots will have updated information on the latest depth and draft values.

Depth of water: Oil section: 14.70 m. below chart zero; dry cargo section: 13.70 m. below chart zero. Minimum keel clearance of 3 ft. required. East Basin 4.70 m. below chart zero.

BERTHING: *Dry cargo section:* One gantry crane for handling of bulk cargoes with a capacity of 25 tons and outreach of 45 m.

3 level-luffing cranes for handling of bulk and general cargoes as well as containers. By means of syncronising 2 cranes, heavy pieces up to 45 tons can be handled.

Capacity of these cranes 12/24 tons with an outreach of 40/20 m.

2 level-luffing cranes for handling general cargo only with a capacity of 6/10 tons with an outreach of 32/20 m.

1 mobile crane with a capacity of 20 tons for handling of general cargo.

4 warehouses with a total floor space of 11,800 sq.m. available.

TANKERS: 2 Mannesmann marine loading and discharging units 12 in. diameter, each with a capacity of 1,500 t.p.h.

2 Mannesmann marine loading and discharging units 20 in. diameter with a capacity of 10,000 t.p.h.

The units are driven hydraulically. Connection to the tanker manifolds by hydraulically operated clamps.

One 30 in. pipeline to Texaco Tank Storage. Pressure admissibility of the units up to 19 Atu and a temperature up to max. +50°C (Crude oil).

Liquified Gases (Propane): 1 loading/discharging arm 250 mm. diameter, 25 bar, −50°C. 1 vapour return line 100 mm. diameter.

Also see "Regulations".

Mooring:

1. Tankers must be moored with particular care on account of the current, as handling equipment will be engaged for discharging and loading operations and therefore vessels must be moored safely. All lines must be heaved tight and secured to ensure that vessels will be firmly secured at the pier at all times.

2. Tankers exceeding 35,000 g.r.t. must be moored as shown in *Mooring Plan* (See "Plan") it being understood that these are minimum requirements for normal weather conditions.

3. The cross lines (wire ropes with a breaking strength of 120 tonnes) will be provided from the shore and should be belayed on bollards.

4. If at all possible, an additional two cross lines should be provided by the vessel.

5. All lines must be in perfect condition.

6. The winches to be used must be in perfect working order and capable of holding the tensile forces for which they are rated.

7. The crew must be large enough for efficient handling of the lines according to the standards of good seamanship.

8. The Port Authority may insist on calling in additional personnel for vessels not having a large enough crew to handle lines safely and quickly.

9. The Mooring Plan is based on all line systems. If no cross lines are provided from the shore, at least 1 wire rope each must be provided fore and aft by the vessel.

Fire Warp: Once the mooring operations are completed, a sufficiently strong tow-line (wire rope) must be lowered from bow and stern on the offshore side as far down as to the water surface.

Berthing/Unberthing: (a) Tankers may be berthed and unberthed only if the wind does not exceed Force 7 Beaufort scale.

(b) If the visibility is at least 1 nautical mile.

Tide: The mean range of the tide at the pier is about 2.66 m. (8 ft.). The max. ebb current is 1.75 m. per second, the max. flood current is 1.5 m. per second.

Important:

1. The shore-side loading/discharge swivel arms are equipped with an automatic drift alarms. Should the vessel drift beyond the safety limit, a loud signal will be sounded and all ship-side pumps must be stopped and the lines must be checked.

2. In case of fire the Ship Fire Alarm is as follows:

1 or more whistle blasts, each to be sounded for at least 10 seconds, in addition to sounding the General Alarm. All safety drills and precautions must be observed.

REGULATIONS: *Special Regulations for Gas Tankers:*

1. Gas must only be imported in bulk in tankers, which are suitable for such traffic from the aspects of type of construction, equipment and operation. Gas tankers must conform at least to the stipulations of the Code for the Construction and Equipment of Vessels for carrying liquid gas in bulk (IMO-Res.A.328 (IX)) in the currently valid manner.

2. Gas tankers must carry a certificate issued by their national Ship Safety Authorities or a recognised classification society in which it must be stated that the vessel conforms to the stipulations in point (1) above. This certificate must be presented to the Port Authorities, if requested.

3. For import and discharge of liquid gas, only sea-going tankers are permitted. In this connection, the following quantity limitations per vessel and per individual tank must be respected:

(a) Gas tanker with deep frozen liquid cargo
(atmospheric tanker)
and
(b) Gas tanker with semi-frozen cargo
(semi-pressure tanker)
Max. load per ship = 15,000 cu. m.
Max. load per individual tank = 6,000 cu. m.

(c) Gas tanker with liquid cargo under pressure
(full pressure tanker)
Max. load per ship = 6,000 cu. m.
Max. load per individual tank = 1,000 cu. m.

4. The quantity limitations quoted in point (3) include amounts to be carried onwards for discharge at further ports. If the cargo volume of the vessel or of a loaded individual tank permits an amount of cargo to be carried which is greater than that stipulated in point (3), the port authority must be presented with a written declaration issued by an independent, sworn competent person of authority to the effect that the stipulation quantity limitations have been upheld.

5. The release of cargo vapours for the purpose of reducing pressures and/or temperature adjustment – except in emergency cases – is forbidden.

6. Whilst gas tankers are on the River Elbe no materials like alkine (acetylene), polyine (polyacetylene), allene, kumulene, MAPP gases, may be carried on board as cargo. ("Rules for the Protection of Nuclear Power Stations against Pressure Waves Resulting from Chemical Reactions" dated 1st August, 1976).

7. Vessels to dock against ebb tide with port side to. In case this requirement cannot be fulfilled due to an eventual delay during the river passage or any other unforeseeable reasons, a turning manoeuvre in a position East of the berth must be prevented (i.e. acceptance of additional tugs).

8. A wireless telephone connection is to be established between the security vessel and the personnel on the jetty, and the fire-fighting centre and the vessel. The wireless telephone connection must secure a duplex communication. Furthermore a wireless telephone communication must be established in good time prior to vessel's berthing.

9. Sufficient and suitable mooring personnel must be arranged for mooring and unmooring. The number of crew must be large enough to secure a quick and safe mooring manoeuvre. The local Harbour Authorities can order the acceptance of additional suitable personnel for this purpose.

10. The vessel must be tied up at the Elbe Harbour in such a way that a parting of the moorings (breaking, melting, burning) may not occur. At least 3 head lines, 3 stern lines, 1 fore spring and 1 after spring are to be made fast. At least 1 head line, 1 stern line and 1 spring MUST be of steel wire construction.

11. For berthing and unberthing at the Elbe Harbour Quay in way of the fire-fighting monitors at least two tugs must be accepted. The engine capacity of the tugs must be sufficient to assist the vessel in all wind, current and ice-conditions. The engine capacity of each tug must be at least 1,600 h.p. Vessels of less than 3,000 g.r.t., equipped with a working bow thruster may unberth with one tug less, weather permitting.

12. While discharging, the passing traffic is to be observed. In case a vessel comes too close, gas discharging/loading is to be stopped.

13. While handling gases, bunkering is not permitted.

14. LPG/Carriers may not be berthed at the Elbe Harbour together with laden or non-gas-free, non-inerted tankers, whose last cargo had a flash-point of below 61°C.

15. No vessels may make fast alongside a gas tanker while handling cargo.

16. During extreme meteorological circumstances (thunderstorms, hurricanes) the handling of liquid gas is to be stopped.

17. The vessel has to leave the berth immediately upon completion of cargo operations.

BALLAST: Ballasting of oil tankers during or after discharging into non-gas-free tanks is allowed only up to a volume of 50% of each tank concerned. This does not apply for inerted tanks.

DENSITY: 1003, brackish water.

FRESH WATER: Available at all berths.

GANGWAYS: Shore gangways available; special gangway at hand for VLCCs.

FUEL: By barges. All grades available.

MINIMUM STAFF: During crude oil transfer a minimum staff shall be assigned for safe handling of cargo transfer. For tankers of 3,000 g.r.t. and more, the minimum staff shall be assigned as follows:

1 Deck Officer, 1 Engineering Officer (both familiar with cargo handling).

2 deckhands.

For tankers of 70,000 g.r.t. and more, 2 additional deckhands are required.

TELEPHONE: Ship telephone connections are available at all berths.

AUTHORITY: *Port Operator:* Hafengesellschaft Brunsbuttel GmbH, 2212 Brunsbuttel, Elbehafen. *Tel:* 8840. *Telex:* 28347 eport d.

Port Authority: Hafenbehorde Brunsbuttel, 2212 Brunsbuttel, Elbehafen. *Tel:* 87044.

(c) BRUNSBUTTEL – Oil Port

LOCATION: Oil Port situated on North side of Kiel Canal at km. 3.5.

PILOTAGE: See Section (a) Canal Pilots also act as Docking Pilots.

ANCHORAGE: Anchoring near the compressed-air barrier is prohibited. The location of the barrier is indicated by rings with the inscription "Preßluftsperre".

MAX. SIZE: Max. allowed dimensions of vessel between the figure values (draft and beam) can be interpolated.

Max. Draft	*Max. Beam*
10.40 m. (34 ft. 2 in.)	27.00 m. (88 ft. 7 in.)
9.50 m. (31 ft. 2 in.)	29.00 m. (95 ft. 2 in.)
8.00 m. (26 ft. 3 in.)	32.50 m. (106 ft. 7 in.)

Max. LOA 235 m. (771 ft.)

Ships passing Kiel Canal: See "Restrictions" Kiel Canal.

BERTHING:
Berths: 3 berths (Nos. 6, 7 and 8) for tankers up to 10.40 m. (fresh water) draft.

2 berths (Nos. 4 and 5) for tankers up to 6 m. (fresh water) draft.

Oil Handling Facilties: Hoses of 6 in., 8 in. and 10 in. for handling of crude oil, diesel oil, gas oil, gasoline, tuluol, xylol and lub oil.

Mooring: Tankers are required to be moored at least by 1 steel wire fore and aft. The steel wire may be covered.

Restrictions: During loading and ballasting operations, it shall be ensured that a vapour/air mixture pressed out of the tanks is no longer flammable or toxic outside the port area. In order to achieve this without continuous checking, the pumping rate is fixed at 800 cu.m./hour maximum.

Minimum Staff: During cargo transfer a minimum staff shall be assigned for safe handling of cargo transfer. For tankers of 3,000 g.r.t. and more, the minimum staff shall be assigned as follows:

1 deck officer familiar with cargo handling.
1 engineer officer familar with cargo handling.
2 deck hands.

Fire Precautions: Fire hoses must be laid out and connected to fire line, which has to be under pressure during all cargo operations.

Fire wires must be paid out to the water level fore and aft.

1 lifeboat must be swung out into an embarkation position in order to provide an additional emergency escape.

Dirty Ballast Disposal: By barges or tank truck.

DENSITY: 1003.

FRESH WATER: Available at all berths.

FUEL: By barges. All grades available.

GANGWAYS: Shore gangways available.

AUTHORITY: Operator of cargo handling facilities:
Deutsche Texaco AG, Ostermoorer Str., 2212 Brunsbuttel. *Tel:* 2011. *Telex:* 028314.

Port Operator: Hafengesellschaft Brunsbuttel GmbH, Elbehafen, 2212 Brunsbuttel. *Tel:* 8840. *Telex:* 028347 eport d.

Port Authority: Hafenbehorde Brunsbuttel, Elbehafen, 2212 Brunsbuttel. *Tel:* 87044.

(d) OSTERMOOR.

LOCATION: Kiel Canal Km. 5.66 (South Side).

PILOTAGE: See Section (a). Canal Pilots also act as Docking Pilots.

RESTRICTIONS: If passing through Kiel Canal, see "Restrictions" in Section (a).

MAX. SIZE: LOA 235 m. (771 ft.).

Max. draft	*Max. beam*
10.40 m. (32 ft. 02 in.)	27.00 m. (88 ft. 07 in.)
9.50 m. (31 ft. 02 in.)	29.00 m. (95 ft. 02 in.)
8.00 m. (26 ft. 03 in.)	32.50 m. (106 ft. 07 in.)

BERTHING: Berth Nos. 1, 2 and 4:
Port Operator: Hafengesellschaft Brunsbuttel (PO).
Operator of Cargo Handling: Norsk Hydro Agrar (NHA).
Immigration Clearance: Will be carried out on board.
Customs Clearance: No freeport. Customs clearance will be carried out on board.
Tug Assistance: According to assignment of Port Authority.
Mooring: The use of constant tension winches is prohibited (Berth Nos. 2 and 4 only). Port Authority will allocate berth where the exact position alongside berth will be advised by NHA. The Master is responsible for safe mooring. Additional mooring may be requested by Port Authority responsible (NHA). Bow of vessel at berth in direction Kiel Canal. Exception regulation by Port Authority.
Drinking Water: Available at Berth Nos. 1, 2 and 4 against payment (PO).
Steam and Nitrogen: Steam at No. 2 Berth and nitrogen at No. 4 Berth available from ashore.
Bunker Supply: By barges only. The Port safety regulation must be observed (Northern Basin).
Ship Repairs: Permission of NHA required.
Electricity Supply: No connections available.
Garbage Disposal: Available (PO).
Dirty Ballast Disposal: By barges or tank truck.
Navigating into the North Basin: (Direction by NHA) – only after stop of cargo operations at Berth No. 4.
Gangways: At Berth Nos. 2 and 4 gangways are at hand (NHA). At Berth No. 4 and at waiting place a lifeboat has to be ready at the accommodation ladder on the offside during cargo operations.
Stop of Cargo Operations in Case of Emergency: At the sound of the signal "stay away" (·–) and fire (–––) by loudspeaker; at the instructions given by telephone or loudspeaker; when the flashing light is in operation; at the release of the disconnection couplings; in case of fire on board.
Fire on board: The Port Supervisor of NHA has to be informed immediately. Cargo operations have to be stopped immediately. Ship has to give usual whistle – Fire signal ("F").
Cargo Stop in Case of Bad Weather: Berth No. 1: rainfall, windspeed greater than 22 m./sec.; Berth Nos. 2 and 4: windspeed greater than 26 m./sec. Disconnection at windspeed greater than 22 m./sec.
ETA Messages: 72 hours prior to arrival to NHA via Agent with the following information: (1) Ship's name and call sign; (2) Arrival time; (3) Cargo (product and quantity); (4) Tankers: number and diameter of cargo manifold connections; (5) Any damage to hull, tanks or overboard valves. Vessels are dispatched according to accepted ETA. In any case ETA has to be repeated 48 hours and 24 hours before arrival.
Dangerous Cargoes: Ships with dangerous cargoes or tankers which are not gas-free must be reported to the Port Authority 48 hrs. before arrival.

Ships requested to accomplish the Oil Liability Agreement (more than 2,000 tons oil onboard) must be in possession of a valid Oil Liability Certificate.

Regulation Covering the Transport of Ammonia through the Kiel Canal

In the North Sea – Baltic Canal, liquid ammonia (U.N.No. 1005) may be transported in such vehicles as fulfil the following maritime police stipulations:

1. For the vehicle, an IMO suitability certificate for the transport o ammonia must be issued in accordance with the IMO Code, Resolutio 328-IX (new vessels), Resolution 329-IX or for existing vessels.

2. The loading system must be so dimensioned that at an outside ai temperature of +25° Celsius and 20° Celsius for water the load can be maintained for an undetermined duration without ammonia vapour being blown out via the safety valves.

3. The re-liquefication plant of the vehicle must have available a reserve capacity of at least 50 per cent of the power normally required for ship's operation, in the event that ammonia is being transported, so that in the event of an accident, including damage to the insulation heavily vapourised contents of a tank can be safely re-liquefied.

4. On vessels with tank insulation which is not of the water repellant kind (e.g. glass or mineral wool), watertight longitudinal bulkheads must be available at a distance of 760 mm. from the outer skin.

5. The loading tanks of available ships must have a clearance of a least 760 mm. from the outer skin side.

6. Vessels with a loading capacity of up to 12,000 cu.m. must be equipped in addition to the requirements of section 1 with independent loading tanks of type B or C (spherical or cylindrical). The adjustment pressure of the safety valves (MARVS) must amount to at least 0.7 bars over pressure.

7. The fulfilment of the stipulations set out in Section 1, numbers 2 to 5 and in Section 2, in so far as they are necessary, must be supported by a certificate issued by a recognised Classification Society.

8. The IMO – suitability indication in accordance with Section 1 and the certificate as per Section 7 must be kept on board the vessel.

Oil tankers of more than 2,000 d.w.t. must be in possession of a valid Oil Liability Certificate.

Cargo Handling at Berth Nos. 2 and 4: Before starting cargo operations following measures are to be taken:

Confirmation of Checklist by vessel's command.
Cargo tank inspection by NHA.
Referring to "Operation plan" by NHA.
Connection of ground-wire.
Emergency towing wires (steel) must be provided at water level (Berth No. 4 only).
Installation of telephones.
Gas detectors handed on board (Berth No. 4 only).
Fire hoses must be laid out and connected to fireline, which has t be under pressure during all cargo operations (Berth No. 4 only).
Connection and disconnection of loading arms will be done by NHA personnel.

Watchmen: During cargo operations a watchman has to be on stand by at manifold. In case of an emergency, vessel's pumps and stop valves must be able to be shut down immediately.

Minimum Crew during Cargo Transfer Operation at Berth No. 4:

1 Deck Officer 1 Ass. Eng. Officer	fully qualified in cargo transfer operations

2 Deckhands
1 Watch Officer for duties other than cargo transfer.

Berth No. 5: *Berth Operator:* Bayer AG.
2212 Brunsbuttel, Post Box 2540. Tel: (04852) 81-01. Telex: 28303.

Loading and unloading by day and by night.
Max. permitted draft 7.0 m.

ETA Messages: 48 hours prior to arrival at Bayer AG, the following information is to be reported via the Agent:

1. Ship's name and call sign.
2. Time of arrival.
3. Cargo (product and quantity).
4. Number and diameter of ship's hose connections.
5. Any existing damage to hull, tanks or pipelines.
6. Distance of ship's hose connections from bow and stern.

In each case, ETA must be repeated 24 hours prior to arrival.

Report: Vessels with hazardous cargo or tankers which are not gas free must be reported 48 hours prior to arrival to the Port Authority i accordance with Sections 8 and 9 of the Port Safety Code (HSVO).

Certificates: Vessels which come under the Oil Liability Agreement (more than 2,000 tons of oil onboard) must carry on board a valid O Liability Certificate.

Discharge: Prior to discharge, the following measures are necessary

Telephones to be handed over.
Inspection of holds and cargo by Bayer AG.
Instructions as to plan of operation by Bayer AG.
Connection of ground wire.
Emergency towing wires to be rigged to the water line, fore and af
Adequate firefighting hoses to be laid out on deck and maintained under pressure throughout the discharge operation.
Confirmation of the Check Lists by ship's officers.
Connection and disconnection of hose is carried out by Bayer personnel.

IMPORTANT

During discharge, the hoses at the ship's manifolds must be continuous monitored. In the event of an emergency, the ship's pumps and cut-o equipment must be able to be shut down immediately and closed. O board the vessel, adequate crew members must at all times be present to be able to combat a major accident.

Minimum Crew Required During Discharge (Tankers over 3,000 g.r.t

1 Deck Officer 1 Eng. Officer	fully qualified in cargo transfer operations

2 Deckhands
1 Watch Officer for duties other than cargo transfer.

Port Details:

Passport control:	Carried out on board.
Customs:	No free port facilities. Customs clearance takes pla on board.
Tug assistance:	In accordance with the Port Authority Regulations

Public telephone of harbour: 8066, 8067, 8068, 8069 (PO)			
Branch line of NHA telephone system (free of charge)/telephone number of ship. Telephone No. Portmaster 2171.	—	compulsory/2180	compulsory/2181
Delivery of goods from ashore	by ship's gear	by ship's gear	with jetty-crane against payment

Remarks: *reduced discharge rate at higher cargo temperature; †only possible in exceptional cases (discharge); ‡at following conditions: P min=3 bar, T min=+55°C. Viscosity max.=35° E/+55°C; §Compulsory during loading/discharging at Berth No. 4

Berthing:	Port Authority indicates the berth to be used. Bayer AG indicates to vessels the precise discharge and loading positions. Masters are responsible for carrying out such instructions, and proper mooring. Bayer AG or the Port Authority may call for mooring lines to be strengthened. Where automatically working constant tension winches are concerned, brakes must be fitted.
Bunkers:	Only available from bunker barge with due observance of Section 24 of HSVO.
Ship's repairs:	Only with permission of Bayer AG and formal approval by the Port Authority (sections 23/2, 26 (1) of HSVO).
Electrical land connections:	Not available.
Discharge of dirty ballast water:	Not possible in the port.
Quay charges:	To be paid by the ship, unless otherwise agreed in the charter party.
Shore leave:	Available. Ship's officers are responsible for supervision.
Lifeboat:	A lifeboat must be swung out ready for use (Section 25 HSVO)

Loading and Discharging Equipment:

Products:	Aniline, formaline, sodium lye and sulphuric acid.	
Discharge capacity:	4 × 200 cu.m/hr. (10 bar).	
Hose connection:	4 hoses DN 150/PN 40/25-flange with union as per DIN 2556.	
For receipt of loading slops/ MARPOL II:	1 hose DN 100/PN 40/25.	
Working reach of hose crane:	Height in relation to normal water level upwards.	±0 up to 10.0 m.
	Crossways in relation to the fender main wall in the direction of water side.	0.0 up to 3.5 m.
Other berth equipment:	6.0 m. aluminium gangway.	

Public telephone connection by payment of charges involved. Public call number of the Port Authority is 884 – 0.

Loading of ship's stores possible in accordance with arrangements to be made with Bayer AG using a pier derrick up to a max. of 500 kg. with the ship responsible for charges involved.

Berth No. 6:

Berth Operator: ELF-Bitumen-Werke GmbH & Co., 2212 Brunsbuttel-Ostermoor. Tel: (4852) 8880, Telex: 28313 elfbrb d.

ETA Messages: 72 hours prior to arrival to ELF via Agent with the following informations:

1. Ship's name and call sign.
2. Time of arrival.
3. Cargo (product and quantity).
4. Number and diameter of cargo manifold connections.
5. Any damage to hull, tanks or overboard valves.
6. Distance of manifold connections to bow and stern.

Vessels are dispatched according to accepted ETA.

ETA has to be repeated 48 hours and 24 hours before arrival.

Report: Ships with dangerous cargoes or tankers which are not gas free have to be reported to the Port Authority according to paragraph 8 and 9 of Port Safety Code (HSVO), 48 hours before arrival.

Certificates: Ships requested to accomplish the Oil Liability Agreement (more than 2,000 tons oil onboard) must be in possession of a valid Oil Liability Certificate.

Loading and Discharging Installations:	*Product*	*Crude*
Discharging Rate	—	2,000 cu.m./h. 16 bar
Loading Rate	400 cu.m./h. 16 bar	—
Loading Arm Flange (No. and size) (Loose flange with collar acc. DIN 2656/PN40)	1 hose DN 200/PN25	1 loading arm 3 hoses DN300/250/200 DN200/PN25 DN150/PN25
Working Range of Shiploader/Unloader (Height refers to normal water level upwards)	—	+00.30 m. to +17.00 m.
(Outreach refers from dolphin vanishing line towards ship's offside)	—	00.00 m. to 09.00 m.
Further Equipment at Berth: Service limits of installed gangways (Height refers to normal water level/top edge deck)	12 m. gangway	
Public telephone connection against payment	Public telephone No. (4852) 888 186	
Public telephone No. of harbour 884-0 (PO)		
Delivery of goods from shore possible after request to ELF	By ship's gear	

Depth: Depth alongside Berth No. 6 – 12.0 m.

Cargo handling: Before starting cargo operations following measures are to be taken:
Installation of telephone.
Confirmation of Check list by vessel's command.
Tank and cargo inspection by ELF.
Referring to "Operations plan" by ELF.
Connection of ground wire.
Emergency towing wires (steel) must be provided at water level.
Fire hoses must be laid out and connected to fireline, which has to be under pressure during all cargo operations.

Connecting: Connection and disconnection of leading arm/hoses will be done by ELF personnel.

Watchman: During cargo operations a watchman has to be on stand-by at manifold. In case of emergency vessel's pumps and stop-valves must be ready for immediate shut down sufficient crew for warding off emergency must be onboard at all times.

Minimum Crew during Cargo Transfer Operation (Tankers 3,000 g.r.t.):
1 Deck Officer } fully qualified in
1 Ass. Eng. Officer } cargo transfer operations
2 Deckhands
1 Watch Officer for duties other than cargo transfer.

Gangways: Available. Supervision on behalf of Master. A lifeboat has to be ready at the accommodation ladder on the offshore side.

Stop of Cargo Operations in Case of Emergency: At the sound of the "emergency-stop" horn. At the instructions given by berth watchman. In case of fire onboard.

Fire Onboard: The berth watchman of ELF has to be informed immediately. Cargo operations have to be stopped immediately. Ship has to give usual whistle – Fire signal ("F").

Cargo stop in case of bad weather: Windspeed greater than 26 m./sec. (Connection and disconnection at windspeed greater than 22 m./sec.

AUTHORITY: Port Authority (PA): Hafenbehorde Brunsbuttel, 2212 Brunsbuttel, Elbehafen. *Tel:* 87044 – Area Code 4852.

Port Operator (PO): Hafengesellschaft Brunsbuttel mbH, 2212 Brunsbuttel, Elbehafen. *Tel:* 8840 – Area Code 4852. *Telex:* 28347 Eport D.

Operator of the Cargo Handling Facilities (NHA): Norsk Hydro Agrar, 2212 Brunsbuttel P.O.B. 1268. *Tel:* 82-1 – Area Code 4852. *Telex:* 28360 nagb. *FAX:* 82400.

BUTZFLETH: 53.39 N. 09.31 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Bonded Stores Lists.
3 Crew Manifests.
Maritime Health Declaration.
Ship's Register.
Discharge Books.
Passports of Crew.
Gas Free Certificate (OBO-Carriers)

Butzfleth is not a free-port. Customs, Immigration and River Police board on arrival at berth.

DEEP SEA PILOTAGE: See "General" before first German Port and "Baltic Deep-Sea Pilotage" Page 174.

PILOTAGE – ANCHORAGE RIVER ELBE: See "General" before first German Port.

Pilotage River Terminal: Elbe Pilots also act as docking Pilots.

ANCHORAGE: Freiburg Anchorage, approx. position Lat. 53° 50.6′ N., Long. 09° 19.5′ E., depth of water up to 13 m. below chart zero; there are further anchorages for small vessels at Krautsand – and Twielenfleth Roads. (see "General" before first German Port.)

MAX. SIZE: Berth No. 1 (Inner): LOA 155 m. Max. draft 9.0 m.
Berth No. 1 (Outer): LOA 270 m. Max. draft 14.0 m.
Berth No. 3: LOA 160 m. Max. draft 9.0 m.
Also see "Berthing".

RADAR: River Radar Service from Elbe 1 to Hamburg, see "General" before first German port, but no special Port Radar Service for Butzfleth. Radar Service in the area of Butzfleth available, can be contacted through VHF Channel 21, "Hetlingen Radar Radio" and/or VHF Channel 5, "Steindeich Radar Radio".

RADIO/VHF: All messages to Agents and Pilots, etc., through Norddeich Radio, call sign DAN. Closer to port Elbe-Weser Radio can be contacted by VHF Channel 16.

Ships' reporting station is on permanent duty at Stadersand, VHF Channel 11, safety and calling Channel 16.

Pilot boat at Elbe Lanby can be contacted on VHF Channels 13 and 16.

TUGS: 4 tugs compulsory for mooring and unmooring. To be ordered from Hamburg and Brunsbuttel through Agent.

A fire fighting tug (1,760 hp) is available 24 hours and can be reached via VHF Channel 16, also available for assistance to vessels.

BERTHING:

Aluminium Oxid Stade GmbH. (AOS): This bauxite/oxide plant, situated on the Westbank of the River Elbe, can be reached by vessels with max. drafts of 46 ft. 06 in. FW.

Quay length		*Depth at normal Low water*
Quay outside in total	325 m.	15 m. (49 ft.)
Within reach of crane	205 m.	
Quay inside	200 m.	7 m. (23 ft.)

The oxide produced at this plant, apart from being exported, is used for the mills of V.A.W. Elbewerk GmbH., Stade-Butzfleth and of Hamburger Aluminium Werk GmbH., Hamburg Finkenwerder.

Average discharging/loading rate	
West African bauxite	550–600 m.t.p.h.
Brazilian bauxite	600 m.t.p.h.
Australian bauxite:	
from Gove..............	550–600 m.t.p.h.
from Weipa..............	750 m.t.p.h.
Petcoke..............	100–400 m.t.p.h.
Oxide ("Spout" loading)..............	500 m.t.p.h.

Ship's telephone connection (4146-1453) at AOS pier.

Dow Chemicals GmbH: This industry, situated close to the AOS plant, offers 2 berths for gas and chemical tankers. The water depth at the outside quay is: 15 m. (49 ft.) and at the inside quay: 9 m. (29 ft. 6 in.), both at MLW.

Restrictions for ships	*Products*	
	Inflammable	*Non Inflammable*
Length at quay outside	270 m.	300 m.
Length at quay inside	145 m.	145 m.
Draft at quay outside (FW)	13.71 m. (45 ft.)	13.71 m. (45 ft.)
Draft at quay inside (FW)	8.0 m.	8.0 m.
Beam at quay inside	22.50 m.	22.50 m.

No bunkering permitted at the DOW-berths.

Discharging rate liquid gas	approx 200 t.p.h.
Loading rate chemical products	100–800 t.p.h.

Max. Size: Vessels loading/discharging inflammable products: Max length 270 m. Max. draft 14 m. Also see "Max. size".

Vessels loading/discharging non-flammable products: Lengt unlimited. Max. draft 14 m.

Vessels with liquid gas and flammable products: Max. length 145 m Max. draft 8 m. Max breadth 22 m.

Restriction: Mooring prohibited for vessels having IMO Class products (liquid and/or gaseous) on board.

Simultaneous handling of gases inside and flammable product outside not permissible.

Manifolds: Upriver to downriver.

Inside		Outside
Berth I	Berth III	Berth I
Methanol Telon/Vidden P.D.C. P.O. Propylene Ethylene	NAOH	P.O. Per P.G.I. Tet Chlorothene VG/NU EDC NAOH Methylene Chloride Tricholoroethane Chloroform/ Methanol

Supplies: Nitrogen and potable water.

Technical requirements on ships discharging C2/C3.

Ethylene: For loading arm horizontal clearance ships manifold to th nearest structure 2.10 m., vertical clearance from centre of manifold u 0.50 m. and down 0.60 m., flange 6 in. (300 ASA) discharge-temperatur of Ethylene minimum −103°C.

Propylene: For loading arm horizontal clearance 2.20 m., vertical u 0.50 m. and down 0.50 m., flange 6 in. (300 ASA), discharg temperature of Propylene maximum −20°C.

Further on Propylene, vessels to be guaranteed, that the vessels i Summertime are suitable for pump against a back pressure of minimu 13 kg. but preferably it should be 15 kg./16 kg.

MEDICAL: Hospital and doctor available.

FRESH WATER: Available.

FUEL: Supplied by barge from Hamburg or local supplier.

GENERAL: *Dirty Ballast:* No facilities.

REPAIRS: Minor repairs can be carried out.

SERVICES: Stevedores, hold cleaning, boatmen, mooring gangs inspectors, fitters and launches.

AUTHORITY: Niedersachsisches Hafenamt Cuxhafen, Aubenstelle Butzfleth, D – 2160 Stade 5. *Tel:* (04146) 1436. *Telex:* via 21815 clear d. *Cables:* NHC – A. Butzfleth. *FAX:* (04146) 1036. *Contact:* F. W Bork, Manager. Captain W. Schroeder, Harbour Master.

AGENT: See "Hamburg".

CUXHAVEN: 53.52 N. 08.42 E. (See Plan

DOCUMENTS:
Stores List.
Crew List.
Customs Manifest.
Derat Certificate.
Amerikahafen is a Customs free port.

DEEP SEA PILOTAGE: See "General" before first German Port an "Deep-Sea Pilotage" - Page 174.

PILOTAGE – ANCHORAGE RIVER ELBE: See "General" before fir German Port.

PILOTAGE: Pilot station situated in Old Harbour (Alten Hafen). To obta Pilot call "Cuxhaven Port", VHF Channel 12. Pilot signal is flag "G" i International Code, or sound signal – 2 long and 1 short blasts.

ANCHORAGE: Available off Cuxhaven Medem Roads, approx. positio Lat. 53° 51.5′ N., Long. 08° 46.5′ E., depth of water about 6 m. – 12 r below chart zero; further anchorages see "General" before first Germ Port.

RESTRICTIONS: Vessels can enter by day or night. No tidal restrictio *Depths:* Max. depth of water: 13.5 m. (45 ft.). Mean tide H NN+1.40 m. Mean tide LW: NN−1.50 m. Tide range is 3.20 m. (fro +1.55 m. to —1.65 m.) (NN = approx. mean sea level).

Water depth in the basins up to 8.5 m. below MTLW. Water depth the river quays 12 m. and 8 m. below MTLW.

HEALTH: Quarantine clearance effected at Cuxhaven. Only vess with suspected infectious disease on board are detained.

RADIO: For ETA, etc., use Norddeich Radio, call sign DAN. Close port Elbe–Weser Radio can be contacted by VHF Channel 16.

Ships reporting station is on permanent duty at Cuxhaven, V Channel 12, safety and calling Channel 16.

RADAR: River Radar Service from Elbe 1 to Hamburg see "Gener before first German port, but no special Port Radar Service Cuxhaven. Radar Service in the area of Cuxhaven available, can contacted through VHF Channel 21, "Cuxhaven Radar Radio".

TUGS: Tugs available and used depending on ship size and wea conditions. Cost of tugs is Hamburg Tariff plus 20%.

BERTHING:

Fahrhafen and Neue Seebaderbrucke: Modern multi-purpose Ro/Ro terminal for passengers and for handling of motor vehicles and cargo direct at the Elbe River, 300 m. quay with 8 m. depth below MTLW.

Starting point of ferries for the North Sea and the Baltic Sea, for passenger ships to Helgoland.

Ro/Ro linkspans (one of them for axle-loads up to 50 tons and for stern-door width up to 18 m.). Hard-standing and storage area of approx. 60,000 sq.m.

Alter Hafen: Multi-purpose harbour for shipyards and for boats to the seaside resorts and islands.

Alter Fischereihafen: Multi-purpose harbour with transhipment and outfitting quays for fishing cutters, offshore base and emergency port. Fish auction and fish handling sheds, fish industry, equipment firms, deep freeze house for 5,000 tons of goods.

Neuer Fischereihafen: Multi-purpose harbour with transhipment and equipment quays for trawlers and luggers, offshore suppliers, Ro/Ro ships, for ships carrying general cargo and for minor bulk cargo ships. Fish auction and handling sheds, fish industry, equipment firms, deep freeze house for 25,000 tons, ice production, open storage space.

Entrance and exit any time by the sea-lock. Length of lock 190 m., width of lock 24 m. and depth of lock is 9 m. below MTLW.

Amerikahafen: Multi-purpose harbour with transhipment and equipment quays for ships carrying general cargo and for minor ships carrying bulk cargo, emergency port, floating docks, transit shed, deep freeze house, open storage spaces.

Steubenhoft: Multi-purpose facility for big ocean vessels with 400 m. long quay and 14 m. water depth below MTLW. Usable for cargo, repair, trial trip and passenger ships of all sizes.

CRANES:

8 portal cranes	1.5 – 10 tons capacity
1 loading bridge	8 tons capacity
1 crane for heavy loads	50 tons capacity
Various mobile cranes up to	20 tons capacity

Equipment also available to handle containers and Ro/Ro traffic.

MEDICAL: Doctors and hospitals obtainable day and night.

FRESH WATER: Available from shore pipe-line up to 50 t.p.h. Small quantities up to 15 tons may be obtained in Roads from bunker barge. There are no water barges.

FUEL: Bunker and gas oil available. Small quantities, up to 150 tons, may be obtained anytime. Otherwise according to conditions of supplying oil company.

FIRE PRECAUTIONS: No special restrictions. Ships with explosive cargo and liquid cargoes of danger Class K1 and K2 not allowed in Cuxhaven Harbour.

CONSULS:

Denmark, Tel: 38021.
Iceland, Tel: 36036/37.
Others at Hamburg/Bremen.

REPAIRS: All deck and engine repairs possible.

DRY DOCKS: Floating dock for vessels up to 140 m. length.

CARGO HANDLING: A harbour for overseas ferries up to 150 m. length with Ro/Ro and container equipment.

GANGWAY/DECK WATCHMEN: Not obligatory, at Master's discretion.

OPENING/CLOSING HATCHES: Normally performed by crew. Stevedores must be paid if required to do this work.

CUSTOMS ALLOWANCES: 40 cigarettes, 1 bottle spirits and 2 bottles wine.

REPATRIATION: All facilities available.

AIRPORT: Hamburg-Fuhlsbuttel, 130 km. away; Bremen, 110 km. away.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: New Year's Day, Good Friday, Easter Sunday, Easter Monday, 1st May, Ascension Day, Whit Sunday, Whit Monday, 17th June, Atonement Day, Christmas Day, Boxing Day. Loading/unloading can be arranged on these holidays.

POLICE/FIRE/AMBULANCE: Police, Tel: 110; Harbour Police, Tel: 22072; Ambulance, tel 23125; Fire, Tel: 112.

TELEPHONES: At Steubenhoft and in the ferry harbour, telephones can be put on board.

SERVICES: Compass adjusting and radio repairs.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: If no passport, shore pass required.

AUTHORITY: Niedersachsisches Hafenamt Cuxhaven, Am Schleusenpriel 2, P.O.Box 526, 2190 Cuxhaven. *Tel:* (04721) 5014–0. *Telex:* 232167 Hacux d.

AGENT: Fisser & V. Doornum, Leuchtturmweg 5, D-2190 Cuxhaven, Federal Republic of Germany. Tel: (4721) 3 60 36. Telex: 232 139. Cables: Fissership. Fax: (4721) 3 77 65.

DUISBURG-RUHRORT: 51.25 N. 06.46 E. (See Plan)

LOCATION: Duisburg-Ruhrort port area, together with Hochfeld, covers a total surface of 870 hectares on the right bank of the river between the Rhine km. 774 and 781, the Ruhr channel – 1 km., and the Rhine-Herne canal km. 1 to 2.

CRANES: 84 cranes and travelling bridges of up to 40 tonnes lifting capacity for bulk goods and general cargo, as well as for containers. 1 heavy lift crane with 60 tonnes capacity and floating crane with 400 tons capacity.

MAX. SIZE: Dimensions of vessels able to use the German inland waterways:

Type	*Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Capacity* (tons)	*h.p.*
Motor dry cargo vessel	38.5 – 110	5 – 11.4	2 – 3.5	300 – 2,500	100 – 2,000
Tanker	50 – 110	6.6 – 11.4	2.2 – 3.5	400 – 3,200	250 – 2,000
Train (Pushing motor vessel and barge)	150 – 186.5	9.5 – 11.4	2.5 – 3	2,530 – 4,400	800 – 2,000
Pusher tug	10 – 35	7.6 – 13.2	1.4 – 2.2		1,000 – 6,000
Dumb barge for pushing	70 – 76.5	9.5 – 11.4	2.5 – 3.7	1,240 – 2,600	

The largest pusher tugs push six barges = 15,600 tons.

RADIO: Duisburg Port Radio, VHF Channel 13.

BERTHING:

Docks	*Theoretical Depth respectively zero level above normal zero*	*Loading Depths (approx. value) Actual water level at Ruhrort water gauge*
(a) Ruhrort. Water gauge zero.	16.09 m.	
Port Entrance, Vincke Canal, Bunker Dock, North Dock, South Dock, Kaiser Dock, Port Canal, Dock A, Dock B, Dock C and Railway Dock	15.40 m.	+ 40 cm.
Werft Dock	17.05 m.	–120 cm.
(b) Duisburg. Water gauge zero.	17.00 m.	
Parallel Dock, Outer Dock, Wood Dock and Inner Dock at Marientor up to km. 3.5	16.10 m.	+ 40 cm.
Inner Dock Eastwards km. 3.5	16.50 m.	± 0 cm.
(c) Hochfeld. Water gauge zero.	17.42 m.	
South and Kultus Dock.	16.45 m.	+ 40 cm.
(d) Canal Dock Meiderich Ruhr Dock Neuenkamp		Loading depths as per inland waterways traffic regulations

BULK CARGO FACILITIES: 1 coal mixing and discharging plant with 2 car dumpers and 3 ship loaders, daily capacity up to 26,000 tonnes.

Grain warehouses and silos with approx. 130,000 tonnes capacity, 4 conveyor belts, and 22 discharging plants.

Tank storage 1,244,645 cu.m. Liquid gas tank storage 20,000 cu.m.

SPECIALISED CARGO HANDLING FACILITIES: 2 Container terminals with facilities for all means of transport Roll-on/Roll-off installation. 66 points for handling liquid gas.

STEVEDORES: Working hours: 0730 – 1600 hrs., Monday to Friday.

BRIDGES:

Bridge	*Lowest Point of Upper Structure Respectively Zero Level above Normal Zero*	*Correction Value for Calculation of Passage Height**
(a) Ruhrort. Water gauge zero	16.09 m.	—
Bridge over Railway Dock	36.10 m.	19.70 m.
Bridge over Port Entrance	34.20 m.	17.80 m.
Vincke Canal Bridge	33.10 m.	16.70 m.
Kaiser Dock Bridge	32.60 m.	16.20 m.
Port Canal Bridge	33.80 m.	17.40 m.
Bridge over Dock C	38.20 m.	21.80 m.
(b) Duisburg. Water gauge zero	17.00 m.	
Cable Bridge over Outer Dock	37.80 m.	20.90 m.
Road Bridge over Outer Dock	37.00 m.	20.10 m.
Marientorbrudge (clearance between bridge counter bearings 15.80 m.):		
at rest	29.60 m.	12.70 m.
folded	Up to 33.9 m. height	Clear width 15.8 m.
	Over 33.9 m. height	Clear width 13.8 m.
Schwanentor Bridge (clearance between bridge counter bearings 17.90 m.):		
at rest	26.80 m.	9.90 m.
lifted	34.90 m.	18.00 m.

*From the following values, the actual water level at the Ruhrort water gauge is to be deducted.

With water levels over 8.40 m. at the Ruhrort water gauge, the stop gate at the Marientor Lock is drawn in and therefore through passage to the Duisburg inner port/wood harbour is no longer possible.

AIRPORT: Dusseldorf (20 km.).

AUTHORITY: Duisburg Ruhrorter Hafen A.G., Alte Ruhrorter Strasse 42-52, Postfach (Postbox) 13 02 60, D – 4100 Duisburg 13. *Tel:* (0203) 8031. *Telex:* 855306 hafag d. *FAX:* (0203) 803232. *Cables:* Hafag. *Contact:* Y. Klaus van Lith or Dr.-Ing. Jochen Muller, Directors.

ECKERNFORDE: 54.29 N. 09.51 E. (See Plan)

DOCUMENTS:

Stores List.
Customs Documents.
Cargo Documents.
Crew List.

PILOTAGE: No pilot station. No tide. In East winds, water level can increase to 1.50 m. above normal.

ANCHORAGE: Good anchorage in the Roads between N.W. to N.W. by W. bearing from the port, distance 1 to 1.5 miles. Depths 18 m. – 21 m. Anchorage not allowed in harbour area.

CLEARANCE: Customs clearance at any time subject prior notice given. If suspected diseases on board inform Health Authorities.
MAX. SIZE. In Outer Harbour, up to 5 m. draft; in Inner Harbour up to 3 m. draft.
RADIO: Radio Kiel, call sign DAO, Tel: 39491.
TUGS: No tugs.
BRIDGES: Outer and Inner Harbours separated by bascule bridge, opening to 10.7 m. width at top of bridge.
MEDICAL: Doctors and hospitals available.
FRESH WATER: Available.
FUEL: Diesel oil available. No coal.
REPAIRS: Available for fishing boats or coasters. Slipway for vessels up to 200 tons.
WATCHMEN: Not available.
OPENING/CLOSING HATCHES: By ship's crew.
TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).
HOLIDAYS: Work allowed on Sundays and official holidays subject to Harbour Master's permission.
POLICE/FIRE/AMBULANCE: Police Tel: 110. Hospital Tel: 9011. Fire Tel: 112.
TELEPHONES: Public telephones in harbour area. No installation on board.
SERVICES: Other services available from Kiel.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Required, if no passport.
AUTHORITY: Stadtwerke Eckernforde GmbH, Bornbrook 1-3, 2330 Eckernforde. *Tel:* (04351) 9050. *FAX:* (04351) 90563. *Contact:* Mr. Wegner, Harbour Master. Mr. Poetzsch, General Manager.

ELSFLETH: 53.14 N. 08.28 E.

PORT LIMITS: The seaward boundary of the port is the entrance of River Hunte, vessels are considered to be arrived when alongside the berth or waiting berth, and Customs formalities are completed.
DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
1 Health Certificate.
2 Provision and Store Lists.
1 Ship's Certificate.
DEEP SEA PILOTAGE: See "General" before first German port and "Baltic Deep-Sea Pilotage" – Page 174.
PILOTAGE: Pilotage is carried out by Weser River Pilots, no Harbour Pilot available.
ANCHORAGE: No anchorage in vicinity of the harbour, see Blexen Roads.
RESTRICTIONS: Max. draft in the entrance at LW is 3.20 m.
MAX. SIZE: Max. size in daytime, length 80 m. Max. size at night-time, length 60 m., draft depends on the tide.
PRATIQUE: Pratique is given on arrival by the Health Officer. If disease or fever is suspected on board it has to be reported to the Agent.
RADIO: Cable Norddeich (call sign DAN) advising ETA and cash requirements.
RADAR/VHF: No port radar service but river radar can be used for approaching port from Weser Lanby to Bremerhaven. VHF Channel 21 from Bremerhaven to Elsfleth. Channel 19 from Bremen to Elsfleth.

River radar can be used for approaching port from Bremerhaven to Elsfleth (entrance of River Hunte).

Bremen Port Radar Channel 12.

VHF Channel 10 from Elsfleth to Oldenburg.

The 2 railroad bridges over the River Hunte can be called on VHF Channel 19.
TUGS: Tugs have to be ordered from Bremen or Brake, they join the vessel at River Hunte Estuary. If tug lines are used there are no extra charges.
BERTHING: 1 quay with a length of 260 m., depth alongside 4.7 m. 1 waiting berth for small vessel 3 m., 1 private berth (Omni-Pac).

2 waiting berths for vessels in inland trade. 9 vessels with length from 80 m. can use these berths. One waiting berth is by the naval college (3 berths) and the other at km. 23 on the River Hunte.
SPECIALISED CARGO-HANDLING FACILITIES: 1 crane with 6.5 tons, 1 crane with 10.5 tons and 1 crane with 32 tons capacity. Bulk cargo can be handled with grabs, no other special facilities.
BRIDGES: No bridges to reach the port, but all ships bound for Oldenburg are waiting at Elsfleth for opening bridges.

A flood prevention barrier has to be passed to reach the harbour.
STEVEDORES: ETA has to be cabled to the Agents to arrange gangs. Port works 3 shifts around the clock, including Sunday and holidays.
MEDICAL: Medical service is available day and night. Hospital is available at Brake.
TANKERS: No tanker berth.
DENSITY: Fresh water.
FRESH WATER: Delivered from the quay by hose.
FUEL: Fuel is delivered by bunker barges stationed in port.
FIRE PRECAUTIONS: No fire precautions.
CONSUL: None.
REPAIRS: 1 dockyard, all ship and engine repairs can be carried out.
DRY DOCKS: 2 slipways can be used.
SURVEYORS: Classification Societies have to be ordered from Bremen, surveyors available at Elsfleth.
GANGWAY/DECK WATCHMEN: A crew watchman is necessary because of strong tidal streams, 2 – 3 knots.
HATCHES: Hatch-opening/closing to be carried out by crew.
CUSTOMS ALLOWANCES: Quantity permitted for each crew member: 100 cigarettes, 1 bottle of spirits.
CARGO GEAR: Loading/discharging is carried out by shore cranes.
REPATRIATION: Any time. Inform Agent.
AIRPORT: Airport at Bremen (50 km). Regular airlines.
TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).
HOLIDAYS: Cargo work can be arranged on those days.
POLICE/AMBULANCE/FIRE: Police: Station 2263, River 2377. Ambulance: Brake Hospital 04401 – 4060. Fire 2333.
TELEPHONES: No ship-to-shore communications.
SHORE LEAVE: Crew members are allowed ashore with valid passports.
IDENTIFICATION CARDS: No shore pass issued.
REGULATIONS: No unusual regulations for the port.
GENERAL: All ships bound for Oldenburg have to do clearance in port.
DEVELOPMENTS: A new private berth has been completed for the distillery "Pabst & Richards".
AUTHORITY: Niedersachsisches Hafenamt Brake – Hafenmeister Elsfleth, An der Straats Kaje, 2887 Elsfleth. *Tel:* 04404-2202. *Contact:* H. Plaster, Harbour Master.

EMDEN: 53.23 N. 07.13 E. (See Plan)

PORT LIMITS: The vessel is to be considered an "arrived ship" upon having berthed at the designated waiting/loading/discharging berth, depending upon Charter-Party.
DOCUMENTS: Health Declaration (form from Sea-Pilot), Dera Exemption Certificate, Bill of Lading, Cargo Manifest, Certificate of Origin (for gas-tankers only), Certificate of Quality (for gas-tankers only), Certificate of Registry, 5 Crew Lists, 2 Crew Personal Effects Lists, 4 Slop-Chest Lists, Passports/Seamen's Books, 2 German Tanker Check Lists (for tankers and gas-tankers only).
DEEP SEA PILOTAGE: See "General" before first German Port and "Baltic Deep-Sea Pilotage" – Page 174.
PILOTAGE: Compulsory. At least 12 hours prior arrival at Pilot Station, vessel to radio "Emslotse Emden" indicating vessel's name, ETA, destination and draft. Contact pilot vessel on VHF Channel 16 or MW 500 kHz or LW 2023 kHz (daytime) and 2182 kHz (night-time).

Pilot vessel located near Wester Ems Light Buoy in approx. position Lat. 53° 37′ N., Long. 06° 24′ E.

Tankers and gas-tankers above 10,000 g.r.t. with dangerous cargo have to pick up the Pilot at the TW/DB Buoy in position: 53° 59′ 18″ N., 06° 21′ 26″ E.

During bad weather periods pilot boat is withdrawn and stationed in sheltered area near the Isle of Borkum.
ANCHORAGE: Vessels may anchor in vicinity of pilot vessel in depth of 9.5 fathoms. Sandy bottom.

Further anchorage possibilities in the Ems fairway half way up to Emden at "Moevensteert", 45 ft. salt water at HW.
RESTRICTIONS: Vessels drawing in excess of 26 ft. salt water have to wait for high tide to proceed to Emden proper. Tide rise about 10 ft.

Vessels with LOA/beam over 255 m./35.5 m. respectively enter and leave in daylight only.

The "Great Sea Lock": The "Great Sea Lock" has a length of 260 m. (853 ft.) and a width of 40 m. (131 ft.) restricting vessels' size to 255 m. LOA and 35.5 m. beam, but upon special permission at about 256 m. LOA and 36.5 m. beam. Depending upon vessels' constructural shape even longer ships have been accepted in the past upon special application.
MAX. SIZE: Under normal tide conditions, vessels drawing 36 ft. ca enter Emden directly. Vessel drawing up to 45 ft. salt water can be lightened in river inside Isle of Borkum at the unloading berth "Moevensteert" by floating cranes until appropriate draft achieved. Capacity of floating crane 1,000 t.p.h., 2 cranes available.

Length and beam restrictions imposed by locks at Emden: Max 255 m. length and 35.50 m. beam. Vessels exceeding these dimensions require prior permission.
HEALTH: Pratique granted immediately on arrival at locks by Doctor o Health Official.
RADIO: Cables should be despatched via Norddeich Radio (DAN).
Gas Tankers: Entry Permission: For each gas–tanker the agent – o behalf of vessel – has to apply for an entry permission with the Lower Saxony harbour office.
Following advanced information required: 1) GRT, 2) Volume cu.m. 3) LOA, 4) Beam, 5) Year of build, 6) ETA, 7) Draft, 8) Port of Departure 9) Cargo Grade, Quantity, Temperature, 10) Possible Deficiencies Ship and/or Cargo, 11) Confirmation vessel in accordance with IM Rules A328 (9) or A 329 (9).
ETA–Notices: Master to keep agents closely advised about vessels ET at either approach buoy and any change thereof. A 7–days 96–, 48 24–, 12–hours notice would facilitate preparational matters w authorities, receivers etc.
VHF: Norddeich Radio (DAN): VHF Channel 16 and all know communication facilities including ship/shore telex.

Knock Radar Control Centre: VHF Channel 18.

Emden Pilot: VHF Channel 16.
RADAR: Radar service on the river "Ems" from approx. position: L 53° 37.5′ N., Long. 06° 23′ E. (Westerems) or Lat. 53° 35′ N., Lon 06° 23′ E. (Hubertgat) up to port entrance. The other ran (Borkumradar) works on VHF Channel 18. Further information on t Channel.
TUGS: Sufficient tugs available, stationed at Emden Locks, ranging fr 790 h.p. to 3,900 h.p. Usually ship's lines used.

BERTHING: *Outer Harbour:* Quay length 1,539 m. – tidal harbour. Also see "Developments".
New Inner Harbour: Accessible through Sea Lock (260 m. × 40 m.) and Nesserlander Sea Lock only for vessels up to 111 m. in length and 14.50 m. width.

INNER HARBOUR:

South Quay:
Commodity: Iron ore, coal, coke, bauxite, fertilizers and other dry-bulk cargoes, also wood, steel, general cargo, containers, etc.
Pier Length: 932 m.
Depth Alongside: 12 m. permanent (salinity about 1.005).
Draft Allowed: 35 ft. inbound, 34 ft. outbound.
Number of Cranes: 8, 1 cokeloader.
Lifting Capacity: 1×7 tons, 4×15 tons, 2×25 tons, 1×40 tons. 4,000 tons/day.
Daily Capacity: Discharging iron ore, about 30,000 tons. Discharging coal, about 24,000 tons. Loading coal about 10,000 tons.
Outreach of Grabs: 35.5 m. (cranes), 12.5 m. (cokeloader).
Distance Waterline/Lower Edge Grab: 14 m. (cranes), 13 m. (cokeloader).
Conveyor Belt: Double belt system.
Storage Area: About 25,000 sq.m. concrete paved. About 76,000 sq.m. for bulk cargoes. About 4,000 sq.m. of covered storage for general and bulk cargoes.
Loading/Discharging: Ex-vessel onto rail cars, trucks, barges.
Working Period: Monday 0600 hrs. – Saturday 2200 hrs., overtime possible.

North Quay:
Commodity: Iron ore, coal, coke, bauxite, fertilizers and other dry-bulk cargoes, also wood, steel, etc., and general cargo.
Pier Length: 520 m.
Depth Alongside: 12 m. permanent (salinity 1.005).
Draft Allowed: 35 ft. inbound, 34 ft. outbound.
Number of Cranes: Two.
Lifting Capacity: 15 tons each.
Daily Capacity: Discharging iron ore, about 30,000 tons. Discharging coal, about 20,000 tons. Loading coal, about 10,000 tons.
Outreach of Grabs: 35.5 m.
Distance Waterline/Lower Edge Grab: 14 m.
Conveyor Belt: Available.
Storage Area: About 13,000 sq.m. concrete paved. About 32,000 sq.m. for bulk cargoes.
Loading/Discharging: Ex-vessel onto rail cars, trucks, barges.
Working Period: Monday 0600 hrs. – Saturday 2200 hrs., overtime possible.

Industrial Harbour:
Commodity: All kinds of dry-bulk commodities in smaller lots, iron and steel, and all kinds of general cargo.
Pier Length: Total about 1,000 m.
Number of Berths: 3.
Draft: Between 23 ft. – 24 ft. permanent (salinity 1.005) depending on berth.
Number of Cranes: 4, and 1 mobile crane.
Lifting Capacity: 1×5 ton, 1×10 ton, 1×10-20 ton, 1×30 ton, 1 mobile crane 30 ton.
Outreach of Cranes: 16 m. – 40 m. depending upon weight of load to be handled.
Distance Waterline/Lower Edge Grab: 18 m. – 20 m.
Storage: About 5,500 sq.m. covered storage space. About 50,000 sq.m. open storage space.
Loading/Discharging: Ex-vessel onto rail cars, trucks, barges.
Working Period: Monday 0600 hrs. – Saturday 2200 hrs., overtime possible.

Ro-Ro Berths I and II:
Commodity: Automobiles, paper and other Ro-Ro commodities.

Berthing Length:	Terminal I 325 m.	Terminal II 300 m.
Draft Allowed:	Max. 23 ft. permanent (salinity 1.005).	Max. 23 ft. permanent (salinity 1.005).
Number of Ramps:	1 stern ramp. 1 stern or side ramp.	1 stern ramp.
Storage:	About 43,000 sq.m. storage space.	About 31,000 sq.m. storage space

Loading/Discharging: Ex vessel onto rail cars, trucks.
Working Period: Monday 0600 hrs. – Saturday 1400 hrs., overtime possible.

OUTER HARBOUR: This port basin has direct connection to the Ems Fairway, i.e. it is a tidal port area. There are no restrictions as to length or beam.

VW Berth:
Commodity: Mainly used for handling Volkswagen automobiles.
Berthing Length: About 245 m.
Depth Alongside: 8.3 m. at low water (salinity about 1.007).
Draft Allowed: 26 ft. LW.
Tidal Range: About 10 ft.
Number of Cranes: None.
Cargo Handling: Side door Roll-on/Roll-off or ship's own gear, ex vessel onto storage, rail, truck.
Loading Rate: 1,000 – 1,500 cars/day.

Granary I and II:
Commodity: All kinds of grain products, feed stuff, etc.
Berthing Length: 450 m.
Depth Alongside: 8.3 m. at LW (salinity about 1.007).
Draft Allowed: 26 ft. fresh water at LW.
Tidal Range: About 10 ft.
Number of Elevators: 3 shore elevators.
Outreach from Fenderline: 18 m.
Distance Waterline/Hatchcoaming: 11.5 m.
Daily Capacity: About 12,000 tons heavy grain. About 6,000 tons soya meals.
Storage Capacity: About 150,000 tons.
Working Period: Monday 0700 hrs. – Saturday 2200 hrs., overtime possible.

Ems Quay:
Commodity: General, wood, logs, containers, etc.
Pier Length: 271.7 m.
Draft Allowed: 35 ft. salt water at HW.
Tidal Range: About 10 ft.
Number of Cranes: None.
Number of Ramps: 1 quarter ramp, 1 stern ramp.
Storage Capacity: About 6,000 sq.m. of covered storage space and 25,000 sq.m. of concrete paved open storage space.

Lightening/Topping-Off of Dry-Bulk Cargoes at Emden-"Dukegat":
General: Vessels exceeding a draft of 35 ft. salt water have the possibility to lighten/top-off at the "Dukegat" anchorage free of expense to the vessel, provided the balance of the cargo is being handled at Emden proper. On occasions also just lightening of vessels destined for other ports than Emden is performed at costs to be specifically agreed upon.
Commodity: Iron ore, coal, bauxite, etc.
Location of Anchorage/Lightening-Place (Dukegat): About 20 sea miles up-river from pilot vessel between Buoys "A12" and "A14" near the Isle of Borkum.
Dimensions of Anchorage/Lightening-Place (Dukegat): About 2,750 m. long and about 700 m. wide.
Draft: Maximum allowable arrival/sailing draft 45 ft. salt water.
Number of Cranes: 2 self-propelled floating cranes equipped with 25 ton grabs and hoppers connected with conveyor-belt.
Outreach from Fenderline: Max. 25.5 m.
Distance Waterline/Lower Edge of Grab: Max. 21 m.
Capacity: Iron ore, about 1,000 t.p.h. Coal, about 750 t.p.h. (lightening), about 500 t.p.h. (topping-off).

BULK HANDLING FACILITIES: See "Berthing".

BRIDGES: None.

STEVEDORES: Since main commodities consist of bulk cargoes, such as iron-ore, coal, coke, bauxite, no specific requirements.

MEDICAL: Advance notice only required in urgent cases; hospital available.

TANKERS: Olhafen situated in Inner Harbour. Tankers up to 34 ft. 6 in. draft discharge to Frisia Refinery, distance about 4.5 km.

Slops may only be discharged at the Tank Cleaning installation of Thyssen Nordseewerke GmbH.

Oil Harbour:
Commodity: Crude oil, naphtha, condensates, fuel oil, gas oil.
Number of Berths: 4 (2 large and 2 smaller berths).

Docking Length:	No. 1 255 m.	No. 4 200 m.
Draft Permanent:	34 ft. 6 in. (salinity about 1.005)	34 ft. 6 in. (salinity about 1.005)
Loading Rate:	500 t.p.h. light fuel 750 t.p.h. heavy fuel	500 t.p.h. light fuel 750 t.p.h. heavy fuel
Discharging Rate:	2,500 t.p.h. crude oil	1,500 t.p.h. crude oil
Connections:	2×12 in. max.	1×8 in. max.

Working Period: Around the clock, SHinc.

LPG Terminal:
Commodity: Butane, propane and its mixtures.
Location: Emden oil harbour in the "Inner Harbour" separated from the Ems Fairway by the "Great Sea Lock"
Type of Berth: Concrete finger-pier with platform and with 5 dolphins abreast and sufficient mooring bollards ashore. Max. pull 100 tons.
Depth/Tidal Range: 10.36 m. brackish water (approx. 1007). No tidal range.
Restrictions:
LOA : 255.00 m.
Beam : 35.50 m.
Draft : 34 ft. (dock density)
Distance waterline/manifold : 19.00 m. max.
Distance ship's rail/manifold : 5.50 m. max.
Free space to forward of manifold connection : 1.40 m. min.
Berthing: Vessels berthing with port-side to. Ships being towed backwards into basin. Day and night mooring/unmooring.
Cargo Handling Facilities for Ref. + Semi-Ref. Cargo: 1 free floating discharging-arm, type Wiese 4/350, with one 8 in. 300 ASA liquid connection and one 3 in. 300 ASA flexible vapour return line.
Shore Heat-Exchangers/Shore Booster Pumps: 2 heat-exchangers – able to heat-up from -42°C to minimum of 0°C.
3 booster pumps – max. liquid delivery head 445 m.
Discharging/Loading Rate: Max. 500 cu.m/hr. max. about 200 cu.m/hr.
Distance Berth/Tank Farm: About 4.5 km.
Size of Cargo Line: Average diameter 8 in.
Storage Facilities: 2 buffer tanks at berth – 4,000 cu.m. net. 9 storage tanks at tank farm – 23,000 cu.m. net.
Working Period: Around the clock SHinc.
Special Vessel's Requirements:

a) All gas-tankers have to be equipped with 2 VHF wireless stations at the bridge.
b) All gas-tankers above 30,000 cu.m. cargo tank capacity have to be equipped additionally with:
   2 Radar units
   1 Decca navigator
   1 Electronic speed-recorder
   1 Rate of turn indicator

Required Valid Certificates:

a) IMO-Certificate of Fitness according IMO-Resolution A 328 (9) or A 329 (9)/Certificate of Compliance.
b) Cargo Ship Safety Construction Certificate.
c) Cargo Ship Safety Equipment Certificate.
d) Cargo Ship Safety Radiotelegraphy Certificate.
e) Ship Safety Radiotelephony Certificate.
f) Load Line Certificate.
g) Classification Certificate.
h) Oil Liability Certificate.
i) Oil Record Book filled–in.
j) Letter of Compliance where available.
k) Ship's Loading and Stability Manual.
l) Damage and Survival Stability–information.
m) Certificate of Safe Manning according IMO A 481 (XII).
n) Test Certificates for:
  Safety Relief Valves.
  Cargo Tanks.
  Cargo Pipe-lines.
  Instrument Calibration.

Documents for Clearing Purposes: The following documents are also required for clearing purposes:

a) Health Declaration (form from Sea Pilot).
b) Derat Exemption Certificate.
c) Bill of Lading.
d) Cargo Manifest.
e) Certificate of Origin.
f) Certificate of Quality.
g) Certificate of Registry.
h) 5 Crew Lists.
i) 2 Crew's Personal Effects Lists.
j) 4 Slopchest Lists.
k) Passport/Seaman's Book.
l) 2 German Tanker Check Lists

Supplies/Services:

a) Purging/Gas Freeing	Not allowed within the port area
b) Coolants (Propane)	Available (pressurised)
c) Nitrogen, Oxygen, Freon	Available from local Unitor in Bottles/ Cylinders
d) Bunkers	All grades available from majors and some outsiders ex-barge prior to or after cargo operations

Lightening of Tankers: There is also a tanker lightening/anchoring place at the "Dukegat" anchorage at the location of Buoys "A10"–"A12" with an allowable draft of 41 ft. SW, dimensions 1,200 m. long and 800 m. wide.

However, lightening of tankers is not customary and has not been performed recently.

DENSITY: Average density in port 1005 – 1010.
FRESH WATER: Available, supplied by barge.
FUEL: All grades available, delivered by barge by major oil companies and others.
FIRE PRECAUTIONS: All common fire precautions to be obeyed.
CONSULS: Finland (Vice-Consul), Tel: 28800, Norway, Tel: 20118, Sweden, Tel: 21904, Netherlands, Tel: 21404.
REPAIRS: All kinds of repairs possible.
DRY DOCKS: 1 dry dock 218 m. × 30 m., 1 floating dock 176 m. × 27 m., 1 floating dock 130 m. × 15.8 m., 2 floating docks 92 m. × 16.2 m.
SURVEYORS: German Lloyd, Lloyd's Register, Norske Veritas, Bureau Veritas, Panama Bureau of Shipping Inc.
GANGWAY/DECK WATCHMEN: Not compulsory.
OPENING/CLOSING HATCHES: To be performed by crew.
CUSTOMS ALLOWANCES: 40 cigarettes per day/person, 0.25 litre spirits per day/person (at "Outer Harbour" and "Old Inner Harbour").
REPATRIATION: Nearest airport to Emden is Bremen (about 150 km.). There are good train connections to and from Emden. Car transportation can also be arranged upon request to Agent. A small airport is available at Emden for domestic flights and charter flights.
AIRPORT: Nearest airports Bremen and Hamburg, about 2 – 3 hours drive from Emden. World-wide connections. Flight Emden to Bremen or Hamburg possible by air-taxi.
TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Labour Day (May 1st); Ascension Day; Whit Monday; June 17th; Prayer Day; Christmas Day; Second Christmas Day (December 26th). No work on New Year's Day, Easter Sunday, Whit Sunday, May 1st and Christmas Day.
POLICE/AMBULANCE/FIRE: Police 110; Ambulance 22222; Fire 112.
EMERGENCY CO-ORDINATION CENTRE: Local Water Police, Tel: 04921-27169/51681.
TELEPHONES: Telephones can be placed on board if vessel berthed Northquay, Southquay or Thyssen Nordseewerke shipyard. Public telephone boxes are available close to the berths.
SERVICES: Tank cleaning installation for slop disposal available. Oil pollution service available.
BANKS: German banks, such as Deutsche Bank, Commerzbank.
STORING: See "Prelims".

1. Yes.
2. Throughout loading operations, except for gas tankers.
3. Mainly yes.
4. Mainly yes.
5. Stores have to be cleared through Customs.
6. Yes.

SHORE LEAVE: Shore leave possible.
IDENTIFICATION CARDS: Normally, Seamen's Book sufficient. In certain cases shore leave passes issued.
REGULATIONS: None unusual, but tankers and especially gas tankers have to apply for a special entry permission through the Agents.
DELAYS: Normally, none.
DEVELOPMENTS:

1. The previously planned "Dollarthafen" project has been shelve The construction of an entirely new port basin in way of "Knock (about 10 km. West of Emden) is now in the planning stage. Th aim is to provide berths for vessels drawing upto 45 ft. salt wate and to handle all kinds of commodities, including dangerous good and containers.
2. In the Western part of the Northquay in the New Inner Harbour, a container terminal is being constructed, enabling transhipment o up to 100,000 TEU per year. One berth and 2×53 ton containe cranes will be available in the first stage, and an additional 2 berth and 4 cranes will be available in the second stage. Constructio work expected to be completed mid-1991.
3. Construction of new locks to commence in 1992 with completion i 1995.
   Small Lock: 226 m. × 17.50 m., for tugs and inland craft.
   Large Lock: 320 m. × 50 m., for vessels up to 45,000 d.w.t. o 125,000 d.w.t. going for repairs.

AUTHORITY: Niedersachsisches Hafenamt Emden, Friedrich Naumann Str. 7-9, 2970 Emden, West Germany. *Tel:* (04921) 897-0 *Telex:* 27966 NHA-E-D. *Cables:* Hafenamt Emden. *FAX:* (04921 897-137. *Contact:* Captain W. Kuhn, Tel: 897-119 or Captain A Brinkmann, Tel: 897-120.

AGENT: Jons. Fritzen & Sohn-GmbH, Neptunhaus, P.O. Box 1552 2970 Emden, West Germany. Tel: (04921) 20011 (day and night). Telex 27821 Frizn d. Fax: (04921) 20013. Cables: Fritzenagent Emden.

FLENSBURG: 54.48 N. 09.26 E. (See Plan

PORT LIMITS: The seaward boundary is the line between two specia boundary-stones on the West and East side of the port entrance.
DOCUMENTS: 2 Crew Lists, 2 Passenger Lists, 2 Stores Lists (bonded stores), Cargo Lists, Bills of Lading, General Declaration, Ship Certificates.
PILOTAGE: Pilot Station Flensburg, Schiffbrucke 12, D-2390 Flensburg Tel: (0461) 25150. Advance notice 5 hours before arriving Buo "Flensburger Foerde" by Kiel Radio or Agent (3 hours before leavin port). Pilot boards at Buoy "Flensburger Foerde". Pilot will board in a weather if possible, otherwise pilot-boat will lead vessel to that positio where Pilot can board. Not necessary to anchor. Pilot-boat is a fishing boat with "Lotse" written in white letters on both sides. Boat will sho lights prescribed by international regulations and is fitted out with VH Channels 6, 10, 16, 25, 26, 27.
ANCHORAGES: Just outside harbour entrance, N.E. of Mittelgrund an West of Kielseng leading lights. Depths of water between 12 m. an 19 m. muddy ground; same position for Quarantine Anchorage.

The other anchorage is at Buoy "Flensburger Foerde", depth of wate between 20 m. and 27 m. Bottom is mud and sand.

RESTRICTIONS: No specific restrictions; no tide, water-level variation depending only on the wind.
MAX. SIZE: Max. draft up to 7.0 m. at normal water-level.
HEALTH: Generally Free Pratique for ships in the North Sea and Balt Sea trade, ships coming from overseas ports pratique granted on arriva Inform Pilot if any suspected diseases on board. He will make necessar arrangements. A valid Derat Exemption Certificate has to be on boar
RADIO: Kiel Radio, call sign DAO.
VHF: None in Flensburg Port.
RADAR: There is no Port Radar Service.
TUGS: Harbour tugs are not available. If required, Flensburg Schiffbau-Gesellschaft can supply one tug 470 h.p., provided at lea 3 hours notice given, ship's lines are used.
BERTHING: Powerstation-Quay length 180 m. depth of water 7.30 m Harnis Quay length 470 m. depth of water 6.00 m. Harnis Quay leng 240 m., depth of water 7.0 m. Schiffbrucke Quay length 210 m. dep of water 6.50 m. Schiffbrucke Quay length 130 m., depth of water 5.0 m Depths of water refer to normal water-level.
CRANES: Powerstation Quay 1 crane 5 tons and 1 crane 10 tons lifti capacity; Harnis Quay 4 cranes 3 – 5 tons lifting capacity; all cranes a usable for general and bulk cargo.
BULK CARGO FACILITIES: 3 elevators for feedstuff and 1 elevator f coal.
SPECIALISED CARGO-HANDLING FACILITIES: Not available.
BRIDGES: There are no bridges at Flensburg Port.
STEVEDORES: Agents make all arrangements. Unloading rat depend on type of cargo. Bulk cargo discharge up to 160 t.p.h. per ga
MEDICAL: Doctors, hospitals, ambulances available day and night.
TANKERS: 2 berths for tankers up to 1,000 g.r.t. with depths of wa 5.70 m. and 5.00 m.; diameter of discharge lines are NW 200; avera discharge of fuel and gasoil 300 cu.m. per hour.
DENSITY: Winter-time 1015; Summer-time 1012.
FRESH WATER: Available at all berths, delivery rate about 20 cu.m./hr. fro shore hydrants.
FUEL: Diesel available in any quantity. Fuel oil subject to 5 hou advance notice from tank lorries.
FIRE PRECAUTIONS: No specific precautions.
CONSULS: Denmark, Nordergraben 19; others at Hamburg.
REPAIRS: Neue Flensburger Schiffbau-Gesellschaft Shipyard for n buildings, ships repairs, ship conversions; outfitting section equip with 1 × 42 ton crane and 1 × 60 ton (lifting capacity).
DRY DOCKS: Two floating docks with 7,500 and 1,500 tons lift capacity.
SURVEYORS: All main Classification Societies are present at Hamb
GANGWAY/DECK WATCHMEN: No watchman service available.

HATCHES: Opening/closing normally done by crew. Stevedores will perform this for additional payment.
CUSTOMS ALLOWANCES: For consumption on board merchant vessels for each crew member per day 40 cigarettes or 20 whiffs or 10 cigars or 50 grams tobacco *and* 0.25 litre spirits *and* 3 litres wine are duty-free. If the ship stays for 3 days or longer it is usual to allow three-fold of the mentioned quantity. For shore leave 20 cigarettes are permitted for each person only. If a crew member leaves the ship for at least 3 days the regulations for tourists are applicable.
CARGO GEAR: All loading and discharging done by shore cranes, except elevator-work.
REPATRIATION: Possible at any time without difficulties.
AIRPORT: Hamburg-Fuhlsbuttel, 175 km. distant; 2.5 hours by train.
TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).
HOLIDAYS: See "Hamburg". No work on official holidays.
POLICE/AMBULANCE/FIRE: Police Tel: 110, Fire/Ambulance Tel: 112.
TELEPHONES: Installation on board ships possible at Harnis Quay.
SERVICES: Tank cleaning and slop disposal services available. Compass adjusting possible, advance notice necessary.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
REGULATIONS: No particular or unusual regulations.
DELAYS: Normally no delays.
AUTHORITY: Stadt Flensburg Hafenamt, P.O.Box 2751, Batteriestrasse 48, D-2390 Flensburg. *Tel:* (0461) 487301. *Telex:* 22653 Stawfl. *FAX:* 49-461-487660. *Contact:* T. Lauritzen, Harbour Master.

GLUCKSTADT: 53.45 N. 09.25 W.

PORT LIMITS: Line drawn between seaward ends of North and South moles.
DOCUMENTS:
Ship's Papers.
Cargo Papers.
Despatching Papers.
Crew Lists.
PILOTAGE: Pilot to be ordered via Agent.
MAX. SIZE: Vessels up to 4.5 m. draft can pass through lock to Inner Harbour.
BERTHING: Outer Harbour: 400 m. quayage, depth 6 m. at HW.
Inner Harbour: 300 m. quayage, depth 4.5 m. at HW.
Dimensions of lock between Outer and Inner Harbours are: Max. depth 5.76 m. HW, width 13.85 m., usable width 12.85 m.
CRANES: 1×14 ton jib crane, 1×18 ton mobile crane, 1×14 ton caterpillar crane, 1×28 ton jib crane (privately owned).
STEVEDORES: Working Hours: Monday to Thursday 0700 – 1200 hrs., 1230 – 1600 hrs. Friday 0700 – 1200 hrs. Overtime to be agreed.
DRYDOCKS: One slipway for inland waterway vessels up to 500 d.w.t.
AIRPORT: Hamburg.
AUTHORITY: Amt fur Land-und Wasserwirtschaft Itzehoe, Breitenburger Strasse 25, 2210 Itzehoe. *Tel:* 04821-660 662138. *Telex:* 28226 Alwitzd. *FAX:* 662223. *Contact:* Harbour Master, Hafenamt Gluckstadt, 2208 Gluckstadt. Tel: 04124-2087.

HAMBURG: 53.33 N. 09.59 E. (including Altona, Harburg and Wilhelmsburg) (See Plan)

DOCUMENTS:
6 Crew Lists
6 Passenger Lists.
2 Provisions and Stores Lists including Fuel Oil.
3 Dangerous Cargo Lists.
Health Certificates (forms obtainable from Pilot).
General Cargo Declaration.
Ship's Register.
Oil Liability Certificate for more than 2,000 tons of oil.
Shipmaster's Report: October 1988.
Customs: No documents required as port is a Free Port.
Water Police: 2 copies Crew List.
1 copy Maritime Declaration of Health.
Agent: 1 copy Crew List.
DEEP SEA PILOTAGE: See "Brixham" or "Cherbourg" and "General" before first German port and "Baltic Deep-Sea Pilotage" – Page 174.
PILOTAGE:
Pilotage-Anchorage River Elbe: See "General" before first German port.
Pilotage Port of Hamburg: Harbour Pilots board the ships close to the Seemannshoft Station. Harbour Pilots can be called by VHF, Channel 9, call "Hamburg Pilot", morse or sound signal "G" (2 long and 1 short) or flag "G". Pilotage is compulsory for vessels with dangerous cargo and over 1,000 g.r.t.
Exceptions: Pilotage is not compulsory for vessels with dangerous cargo up to 300 g.r.t. and vessels up to 5,000 g.r.t., if: (1) the Master has called at the Port of Hamburg with his ship 6 times within the last 12 months, and (2) he speaks German fluently. Advisable to use Pilots in port.
ANCHORAGE: Available at several places between Elbe Lanby and Hamburg. See "General" before first German port.
RESTRICTIONS: No restrictions imposed on night entry for any vessels.
MAX. SIZE: *Inward Bound:* Vessels allowed max. draft of 46 ft. in salt water on arrival Elbe Lanby, may enter only on rising tide under normal weather and tide conditions.

Container ships exceeding 37 ft. draft in salt water on arrival Elbe Lanby may enter only on rising tide.
Outward Bound: Vessels up to 39 ft. draft in fresh water on departure from Hamburg may leave at any time.

Vessels exceeding 35 ft. draft in fresh water and up to 38 ft. on departure from Hamburg-Finkerwerder Port Pilot Station may leave 1 hour after LW until 2 hours before next following HW.

Container ships and LASH carriers up to 39 ft. draft in fresh water on departure from Hamburg may leave at any time.

Container ships exceeding 39 ft. draft in fresh water and up to 41 ft. on departure from Hamburg-Finkerwerder Port Pilot Station may leave 1 hour to 2 hours after LW but required to anchor at Brunsbuttel N.E. Anchorage depending on tide.
Inward Bound: Vessels exceeding 300 m. length or 45 m. breadth allowed max. draft to 41 ft. in salt water on arrival Elbe Lanby, may enter only on rising tide.
Outward Bound: Vessels allowed draft to max. 35 ft. in fresh water on departure from Hamburg-Finkerwerder Port Pilot Station may leave 1 hour after LW until 2 hours before next following HW. Underkeel clearance of 10% of draft required.

Vessels demanding the rising tide will proceed according to tidal conditions in order to reach Finkerwerder Pilot Station 1 – 1.5 hours before HW.

The following Harbours can be reached:

Harbour Name	**Max. draft subject to tide and berth* (ft.)	*At any time up to* (ft.)
Dradenau Hafen	41	31
Petroleum Hafen	32	22
Griesenwerder Hafen	38	29
Waltershofer Hafen	47	37
Kuhwerder Hafen	36 – 38	28
Oderhafen	32 – 37	25 – 28
Rethe Neuhof NHG	47	38
Kattwyk Hafen	40	30
Neuhofer Hafen	40	30
Rethe Hansamatex	38 – 40	29 – 30
Rethe Kruse	40	30
Rethe Mackprang	40	30
Rethe Stroh	40	30
Schluisgrove Hafen	36	27
Hansaport	47	38
Harburg Seehafen 4	34 – 39	29
Harburg Seehafen 3	31	21
Harburg Seehafen 2	30 – 39	29
Harburg Seehafen 1	28 – 30	20 – 22
Kraftwerk Wedel	32 – 42.5	32
Blumensandhafen	40	30

*Max. draft with 10% underkeel clearance.

The max. draft is dependent on the prevailing Easterly or Westerly winds.

Also see "Shipmaster's Report".
Report: October 1984.
The following salt water drafts are permitted:
46 ft. 00 in. S.W., for vessels up to 300 m. LOA and/or 45 m. beam.
44 ft. 06 in. S.W., for vessels up to 315 m. LOA and/or 47 m. beam.
43 ft. 06 in. S.W., for vessels up to 330 m. LOA and/or 49 m. beam.
42 ft. 06 in. S.W., for vessels up to 345 m. LOA and/or 54 m. beam.
41 ft. 06 in. S.W., for vessels up to 360 m. LOA and/or 63 m. beam.
RADAR: River Radar Service from Elbe 1 to Hamburg, see "General" before first German port.

Hamburg Radar Service "Hamburg Radar Radio", VHF Channels 3 and 19 at the lower end of Seemannshoeft, VHF Channels 80 and 7 at the Western and Southern part of harbour, VHF Channels 63 and 5 at upper part East of Koehlbrand.
HEALTH: Master required complete health certificate when Pilot boards. Only vessels with infectious diseases are subject to detention.
RADIO: All messages to Agents, etc., through Norddeich Radio, call sign "DAN". Closer to port Elbe-Weser Radio can be contacted by VHF Channel 16.

Ships reporting stations are on permanent duty:

Cuxhaven: Call "Cuxhaven Elbe Port Radio" on VHF Channel 12, safety and calling Channel 16.

Brunsbuttel: Call "Brunsbuttel Elbe Port Radio" on VHF Channel 14, safety and calling Channel 16.

Stadersand: Call "Stadersand Elbe Port Radio" on VHF Channel 11, safety and calling Channel 16.

Hamburg: Call "Hamburg Elbe Port Radio" on VHF Channel 12, safety and calling Channel 16.

Hamburg Port Radio (Port Authority): VHF Channel 14 and 16.
ETA: Master's telegrams via Norddeich Radio, call sign DAN, are passed on to Agent 24 hours a day, week-ends and holidays inclusive. For this reason it is advisable that Masters communicate with Agent via Norddeich Radio.

In order to avoid delay and extra charges Masters should cable their ETA at least 12 hours prior to arrival at Elbe pilot station to "Elbelotse Brunsbutelkoog" via Norddeich Radio, stating the following details:
1. Name of vessel.
2. Gross register tons.
3. Date (2 figures).
4. Time (4 figures).
5. Place where Pilot is required.
6. Place of destination.
7. Draft in metres (4 figures).

For example:

Eta Fjordaas	41079	12	1600	Elbeone	Hamburg	1214
(1)	(2)	(3)	(4)	(5)	(6)	(7)

1 hour before arrival at Elbe Lanby Masters are advised to contact the pilot cutter by VHF Channel 13 or 16.

CONTAINER HANDLING FACILITIES:

	Burchardkai	*Tollerort Terminal (SHED 90/91)*	*Africa Terminal*	*Euro-Kai KG aA Griesenw. Damm*	*Kuhwerder Terminal (SHED 73)*	*Unikai (SHED 75)*

TUGS: Normally join incoming vessels at Harbour pilot station at Finkerwerder. Tugs lines used at no extra charge.

BRIDGES: To be passed by vessels bound for basins South of Kohlbrand.

Bridge	*Situated*	*Max. breadth (ft.)*	*Height above normal H.T. (ft.)*	*Depth at normal H.T. (ft. in.)*
Kohlbrand Brucke (a high-bridge)	across the Kohlbrand near Neuhof	558	167	55 04
Kattwyk Brucke (a drawbridge)	across the Suder Elbe, before Harburg	328	167	48 05
Rethe Brucke (a drawbridge)	across the Rethe, near Reiherstieg	164	167	50 03

STEVEDORES: Ordered by Agents, no additional ETA's required.

Working hours

Monday to Friday	First shift 0650 to 1500 hrs.
	Second shift 1500 to 2310 hrs.
	Third shift 2310 to 0650 hrs.
Saturdays, Sundays and holidays	First shift 0700 to 1300 hrs.
	Second shift 1300 to 1900 hrs.
	Third shift 1900 to 0100 hrs.
	Fourth shift 0100 to 0700 hrs.

Work performed after 1500 hrs. Monday to Friday, on Saturdays after 1300 hrs., on Sundays and holidays is at overtime rates.

BULK HANDLING FACILITIES:

Grain	*Maximum Draft*	*Maximum Length*	*Number of elevators*	*Capacity total/hour*
Hamburg-Kuhwerder Hafen	36 ft.	656 ft.	4	750 tons
Hamburg-Rethe/Stroh	40 ft.	943 ft.	3	1,000 tons
Hamburg-Rethe/Kruse	40 ft.	891 ft.	3	770 tons
Hamburg-Rethe/Makprang	40 ft.	952 ft.	11	1,200 tons
Hamburg-Neuhof	47 ft.	902 ft.	4	1,660 tons

There are 6 floating elevators with a capacity of 350/450 t.p.h.

	Quay length (ft.)	*Max. safe draft (F.W.)*	*Max. height discharging gear above high water level (ft.)*
Coal and Minerals:			
Hamburg-Harburg II	1,720	38 ft.	66
Elbehafen Brunsbuttelkoog Gmbh	1,968	37 ft.	98
Coal:			
Hamburg-Strand Quay	560	37 ft	No restriction

TANKERS:

	No. of berths	*Max. Draft (FW)*
Kohlfleethafen (Esso/B.P.)	2	42 ft.
Petroleumhafen (B.P.)	10	32 ft.
Kattwyk Hafen (Shell)	2	40 ft.
Kattwyk Hafen	1	40 ft.
Blumensandshafen	1	40 ft.
Neuhof (Hansamatex)	4	38 ft. – 40 ft.
Neuhof (Schindler)	1	38 ft.
Harburg Seehafen 4 (Esso)	3	34 ft.
Tankerlager Moorburg	1	40 ft.
Stadersand (Lower Elbe)	1	35 ft.

Tanker cleaning and gas freeing facilities at Neuhof Hansamatex, Kattwyk Hafen (Shell) and some dolphin berths by boats.

Koehlfleethafen Terminal: Cautionary Advice: Ships approach the berth at HW or shortly thereafter with the ebb current just starting. At any other time, it is very difficult to enter the harbour due to the current conditio at the entrance. The ship's speed at the entrance should be as low a possible.

Berthing Procedure: Tankers for the North Berth are berthed starboa side to and at the South Berth port side to. The ship's approach on a heading parallel to the berth. Usually the spring lines are run out firs An anchor may be used when approaching the berth.

Moorings: All lines are secured on quick release hooks. Average tid range at berth is about 8 ft.

Harburg, Seehafen IV, Berths 2 and 6: Cautionary Advice – Approache All ships approaching or leaving Harburg IV have to transit the narro Kohlbrand Fairway. The ship should manoeuvre at reduced spee A good helmsman and quick response of the engine are important.

Cautionary Advice – Manifold Connections: Due to the design of th loading arms, care must be taken that the ship's lines are tight and th ship is not allowed to make any movements alongside the berth durin cargo handling operations.

Restrictions: There is a lifting bridge crossing the Kohlbrand. Th bridge will open for every ship which is tide bound. Other ships and a ships sailing from Harburg IV have to pass the bridge on schedule opening times at all even hours from 0600 hrs. – 2200 hrs. and a 0530 hrs.

There are numerous berths at the banks which have to be passed a slow speed.

Tugs: 4 tugs will normally make fast after the Pilot has boarded. Th tugs should be fast before entering into the Kohlbrand. They tow "o the hook." It is recommended to use tugs lines at no extra charge.

Berthing: Deep-drafted vessels berth at HW only. Caution should b exercised when turning from Kohlbrand into the Seehafen IV Basin.

Berth No. 6 is the first T-head jetty on the starborad side when enterin Seehafen IV, and Berth No. 2 is the innermost T-head jetty on the sam side. Vessels are always starboard side alongside and port anchor ma be used to control vessel's movement in approaching the berths. Whe close to the berth, the 2 tugs on the starboard side will let go and pus on the port side.

Both berths have wooden breasting dolphins and care should be take to land parallel to the fender face with minimum approach speed.

Kattwykhafen, Shell Terminal: Cautionary Advice – Approaches: A ships approaching or leaving Kattwykhafen transit the narrow Kohlbra Fairway and have to pass through the Rethe Harbour. Ships shou proceed with reduced speed. A good helmsman and quick engi response are of importance.

Restrictions: There are numerous berths in the Rethe Harbour whi have to be passed at slow speed.

Tugs: 4 tugs will normally be made fast after Pilot has boarded. Th tugs should be fast before entering into the Kohlbrand. The tug 2 forward and 2 aft are made fast "on the hook." It is recommend to use tugs lines at no extra cost.

Berthing: Deep-drafted vessels berth at HW only. Vessels should almost stopped in the water when swinging into Kattwykhafen. Tugs assist in controlling vessel's speed and swing.

When close to and parallel to the berth, the 2 inside tugs will let and push on the outside until vessel is alongside. Maximum approa speed at impact is 10 cm./sec. for a 100,000 d.w.t. vessel landing both breasting dolphins.

Moorings: The mooring lines are taken ashore by 2 mooring bo and lifted to the dolphins by hand. Only 2 head lines are secured quick-release-hooks.

Hansamatex, Berth Nos. 1, 2, 3 and 4: Cautionary Advice – Approach Ships approaching or leaving the Hansamatex Berths have to tra Kohlbrand Fairway and have to pass through the Rethe Harbour. Sh should proceed at reduced speed. A good helmsman and quick eng response are of importance.

There are numerous berths in the Rethe Harbour which have to passed at slow speeds.

Tugs: The number of tugs used is according to the Master's request and Pilot's advice. The tugs should be fast before entering into the Kohlbrand. The tugs will be made fast "on the hook." It is recommended to use tugs lines at no extra charge.

3 tugs are normally used for vessels of less than 20,000 d.w.t., and 4 for all other vessel's except VLCCs.

Berthing: Berth No. 1 is located on the North bank of the Rethe. Ships are towed stern first into the berth. The spring lines will be run out first. Maximum draft ships should arrive with HW. Due to the narrow manoeuvring area at Berth No. 1, the approach speed of the ship should be minimal.

Berth No. 2 is located on the North bank of the Rethe. The ships are manoeuvred close to the berth, and the spring lines will be run out first. Max. draft ships should arrive with HW.

Berth No. 3 is located on the North bank of the Rethe. Ships up to 250,000 d.w.t. are berthed for tank cleaning purposes. The draft should be confirmed by the Pilots before arrival at the Sea Buoy. The ship manoeuvres close to the berth, and the spring lines will be run out first. Max. draft vessels should arrive with HW.

Berth No. 4 is located on the East side of the Neuhofer Harbour. Ships of up to 100,000 d.w.t. may berth with part cargo or for tank cleaning. Ships arriving for this berth will turn in the Rethe heading to the South and will then be towed stern first into the berth. Spring lines will be run out first. Max. draft vessels should arrive with HW.

DENSITY: Fresh water.

FRESH WATER: Available from shore at most berths. Also supplied by barge.

FUEL: All grades available from oil berths, or supplied by barge.

REPAIRS: All deck, hull and machinery repairs can be carried out by local shipyards at Hamburg. Underwater repairs and cleaning can be effected by divers with special equipment.

DRY DOCKS: *Blohm and Voss,* tel. 3061: 4 floating docks with lifting capacities up to 50,000 tons. Graving dock, capacity up to 320,000 d.w.t. *Norderwerft,* tel. 311001: 2 docks, for vessels up to 5,700 d.w.t. and 12,000 d.w.t.

There are other shipyards providing floating docks with lifting capacities of up to 5,000 tons.

SURVEYORS: Cargo inspectors available, contact Agent.

Lloyd's Register, American Bureau, Bureau Veritas and Salvage Association are represented.

WATCHMEN: Can be hired for all purposes. Normally arranged by Agent.

OPENING/CLOSING HATCHES: Normally by crew with the assistance of stevedores; otherwise, according to charter party.

CUSTOMS ALLOWANCES: No restrictions in the freeport area on board a ship. While not on board the ship in the freeport area or outside the freeport during shore leave or temporary leaving the ship up to 3 days, each Crew member allowed 20 cigarettes, 5 cigars and 50 grams tobacco. These quantities change when paying off – up to 200 cigarettes or 50 cigars or 250 grams tobacco.

REPATRIATION: Crew changes and repatriation can be carried out without difficulty.

AIRPORT: Distance 15 km., served by Lufthansa with flights worldwide.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Labour Day (May 1st); Ascension Day; Whit Monday; National Day (June 17th); Prayer Day; Christmas Day; Boxing Day. No work on New Year's Day, Easter Sunday, May 1st, Whit Sunday and Christmas Day.

POLICE/FIRE/AMBULANCE: Police 110; Fire 112; Ambulance 110; Port Medical Service 321021 (or call Hamburg Port Radio on VHF Channel 14).

TELEPHONES: Telephones can be placed onboard at all berths. No telephone connections for vessels at dolphins.

EMERGENCY CO-ORDINATION: Call Police (Tel: 110) or Hamburg Port Radio on VHF Channel 14.

BANKS: Deutsche Bank, Adolphsplatz 7, 2000 Hamburg 11. Tel: 040-3771. Telegraphic Address: Deutbank Hamburg. Telex: 212535.

Commerz-Bank AG, Ness 7, 2000 Hamburg 7. Tel: 040-361311. Telegraphic Address: Commerzbank Hamburg. Telex: 212391.

Dresdner Bank AG, Jungfernstieg 22, 2000 Hamburg 36. Tel: 040-3581. Telegraphic Address: Dreba Hamburg. Telex: 212098.

And others.

STORING: See "Prelims".

1. Vessels can be stored by barge or truck.
2. Vessels can store from barge during loading or discharging, except on tanker berths.
3. The truck can proceed alongside at the berths.
4. Fork lift trucks can be used for handling stores.
5. No Customs regulations in the Freeport area, outside the Freeport arranged by Agent.
6. Local riggers can be employed, arranged by Agent or ship chandler.

SHORE LEAVE: No restriction.

IDENTIFICATION CARDS: No shore passes issued. Seaman's Book or Passport is sufficient.

DEVELOPMENTS: Silo capacity for bulk cargo handled by pneumatic elevators is increased up to 500,000 tons. Capacity of further 500,000 tons is available.

Dredging of the Lower Elbe to 13.5 m. at mean low tide completed.

Port Extension Area. An industrial port area of 4,600 ha. with access for large sea-going vessels up to 120,000 d.w.t. is under development.

Hansaport: The new ore/coal terminal at Sandauhafen (operational from 1977) has a capacity of 16 million tons p.a. Length of the two berths: 560 m; depth of water: 15 m. (MLW). Vessels up to 270,000 d.w.t. (partially lightened) will be able to berth.

SHIPMASTER'S REPORT: 1978.

Vessel called at Hamburg to load a full load of steel beams for Iran under Time Charter. Originally charterers had asked me to calculate the full load with maximum S.W. draft of 38 ft. 00.875 in. with 10.5 in. F.W.A. and the weight came to more than 39,000 long tons. But later when we arrived at Hamburg, while checking with Port Authorities it was learnt that though vessels are allowed to come in with 42 ft. – 43 ft. drafts fresh water, no vessels excepting, at times fast container vessels are allowed draft more than 36 ft. fresh water. This is generally not known to many operators even in Hamburg.

AUTHORITY: Freie und Hansestadt Hamburg, Behorde fur Wirtschaft, Verkehr und Landwirtschaft.

HOLTENAU, Kiel Canal: 54.22 N. 10.09 E. (See Plan)

For entrance from Baltic, refer to "Kiel".
For entrance from Elbe, refer to "Brunsbuttel".

LOCATION: Holtenau is a part of the town of Kiel, it is located on the Northern side of the entrance to the Kiel Canal.

BERTHING: The outer harbour of Kiel-Holtenau (Lat. 54° 22.2′ N. Long. 10° 09.2′ E.) in the N.E. part of the old lock fore port, with water depths of 3.5 to 4.5 m. and 280 m. long quay location serves vessels up to 3.5 m. draft, 85 m. long and 13 m. beam as a berthing point. At the quay not more than 3 ships with a total beam of 28 m. can lie next to each other. To the West of this, is a 125 m. long berthing pier, known as Kumobrucke, with 4.5 m. draft alongside for vessels up to 3 m. draft, 40 m. long and 8.5 m. beam. No more than 2 vessels may lie alongside each other.

Between this pier and the shore is a yacht harbour for pleasure craft. The inner harbour, to the East of the Holtenau Road-bridge, can only be reached through the lock of the Kiel Canal. From the berths in the inner harbour, vessels may not enter the locks without a Pilot if they are obliged to take on a Pilot for the Kiel Canal.

The Gasworks quay, just to the West of the New Locks, has a length of approx. 210 m. and a nominal depth of 10.4 m. The quay has cranes with a lifting capacity up to 8.5 tons. Vessels up to 160 m. in length and up to 9.7 m. draft can tie up at the Gasworks quay (when coming from the Baltic, because of permitted draft in Kiel Canal, draft must not exceed 9.5 m.). To the West of it, is a landing place for Wik-Holtenau passenger ferries.

To the East of the Holtenau Road-bridge is an approx. 536 m. long quay belonging to Zerssen and Co. This location is used mainly for fitting out and bunkering of vessels. On the North side of the inner harbour ships with dimensions permissible for the Kiel Canal can tie up at the dolphins but only with special permission of the Kiel Canal Authority.

SERVICES: In Holtenau are a Service Station of the German Hydrographic Institute, a pilot station, a border police station, a water police station, Customs control, Port Doctor, Sailors' Central Control, Sailors' engagement office, and a sailors' hostel.

An office for marine charts and nautical publications is located at the lock; good facilities exist for the quick supply of ships' equipment, victuals and fuels. Repairs to machinery installations, radar and wireless apparatus, supply of spare parts, and also the exchange of crews can be arranged without long voyage delay virtually whilst a vessel is passing through the canal. Shipbrokers' services are available.

AUTHORITY: Wasser-und Schiffahrtsamt Kiel-Holtenau, Schleuseninsel 2, P.O.Box 8068, 2300 Kiel 17. *Tel:* (0431) 385-1. *Telex:* 02-92836. *FAX:* (0431) 385-414. *Contact:* Port Captain, Tel: (0431) 385-450.

ITZEHOE: 53.56 N. 09.33 E. (See Plan)

DOCUMENTS:

2 Bonded Stores Lists
2 Crew Manifests
2 Crew Lists

PILOTAGE: Pilot available. Pilot boards at the entrance to the River Stor.

RESTRICTIONS: Entering River Stor at HW only. Proceeding to Itzehoe during daylight only, or up to Pilot. Departure from Itzehoe about 1 hour prior to HW.

MAX. SIZE: Length: 80 m. due to bends in river. Beam 12 m. Airdraft 18.50 m. due to height of Stor bridges. Draft 3.80 m. – 4.0 m.

RADIO/VHF: Elbe-Weser Radio on VHF Channel 16.

RADAR: *Radar Chain River Elbe:*

From Elbe Lanby to entrance River Stor:
Elbe – Ansteuerung-Radar VHF Channel 19
Neuwerk – 1-Radar VHF Channel 18
Neuwerk – 2-Radar VHF Channel 5
Cuxhaven – Radar VHF Channel 21
Belum – Radar VHF Channel 3
Brunsbuttel – Radar VHF Channel 4
Freiburg – 1-Radar VHF Channel 18
Freiburg – 2-Radar VHF Channel 22

Also see "General" before first port.

BERTHING: Total length: 450 m.

Depth alongside: At HW 4m.; at LW 1.90 m. (tidal range 2.20 m.). Bottom consists of soft mud.

CRANES: 2×3.5 tons lifting capacity and about 13 m. outreach and 1×5 tons lifting capacity and 12.5 m. outreach are available.

BULK HANDLING FACILITIES: *Grain:*

Loading: By conveyor-belt about 40 – 50 t.p.h. for heavy grain.

Discharging: By suction with 1 elevator pipe about 35 – 40 t.p.h. heavy grain. By grab/conveyor-belt 50 – 60 t.p.h. heavy grain.

Grain silos of 35,000 tons capacity.

STEVEDORES: Cargo service, 2212 Brunsbuttel. Tel: 04852-87077. Telex: 28383 HTKB D.

Ahlmann – Transport GmbH, 2370 Rendsburg. Tel: 04331 – 4995. Telex: 29447. Cables: Ahltraship.

MEDICAL: Medical, hospital and dental facilities available.

DENSITY: Fresh water.

FRESH WATER: Available.

FUEL: All grades available by road tanker.

REPAIRS: Radio, radar, nautical equipment, engine, electrical and minor hull repairs possible.

SURVEYORS: Caleb Brett and SGS available from Hamburg.

Independent Marine Surveyors available at Brunsbuttel and Hamburg.

CUSTOMS ALLOWANCES: Customs allow each crew member 200 cigarettes and 1 bottle of spirits for consumption onboard.

OPENING/CLOSING HATCHES: Usually by crew.

REPATRIATION: Possible.

AIRPORT: Nearest airport at Hamburg.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: 1st January, Good Friday, Easter Monday, 1st May, Ascension Day, Whit Monday, 17th June, Prayers Day, 25/26th December.

POLICE/AMBULANCE/FIRE: Police Tel: 110. Fire and Ambulance Tel: 112.

SERVICES: Provisions, stores, nautical publications and charts available.

AUTHORITY: Stadthafen Itzehoe, Gasstr. 18, D-2210 Itzehoe, West Germany. *Tel:* 04821-774-151. *Telex:* 28107 SWIZ D. *FAX:* 75710. *Contact:* Mr. Besel.

AGENT: Sartori & Berger, P.O.Box 1140, 2212 Brunsbuttel. Tel: (04852) 8091. Cables: Sartoriberg Brunsbuttel. Telex: 028324.

KAPPELN: 54.40 N. 09.56 E.

PILOTAGE: Pilot station at Kiel Lighthouse.

RESTRICTIONS: Depth of water between Schleimunde and Kappeln from 4.5 m. to 14 m. at normal water level. Distance from Schleimunde to Kappeln about 3.5 nautical miles.

Passage width of the swing bridge is 22.5 m.

MAX. SIZE: *North Harbour:* Max. LOA 90 m., max. beam 18 m., max. draft 4.5 m.

South Harbour: Max. LOA 90 m., max. beam 18 m., max. draft 4.5 m.

BERTHING: *North Harbour:* There is 1 grain silo available with a storage capacity of 4,500 tons. The loading/discharging rate is 40 t.p.h. – 100 t.p.h. 1 quay for discharging/loading cargo.

South Harbour: One grain silo available with a storage capacity of 4,000 tons. Loading/discharging rate 40 t.p.h. – 100 t.p.h. One quay for loading/ discharging cargo.

CRANES: *North Harbour:* One hydraulic mobile crane available wi capacity of 5 tons.

South Harbour: One hydraulic mobile crane available with capacity o 5 tons.

STEVEDORES: *Working Hours:* Monday to Friday 0700 – 1800 hrs Saturday 0700 – 1200 hrs.

BULK HANDLING FACILITIES: See "Berthing" and "Cranes".

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Possible. Contact Alfred Eberhardt, Langestr. 2341 Arnis.

AUTHORITY: Shipbroker Artur Koch, Dehnthof 21, P.O.Box 1131, 234 Kappeln. *Tel:* (04642) 2354 and 4154. *Telex:* 22681 Koch D *Cables:* Arturkoch Kappeln. *FAX:* 04642-3184. *Contact:* H. A. Koch Harbour Master.

Ship's Stores List.
Crew Possessions List.
Cargo Manifest.
Bills of Lading.
Customs Declaration.

Local Agents will advise Master on board regarding these Clearanc Documents.

PILOTAGE: For Kieler Forde, vessels over 1,000 g.r.t. and oil, gas an chemical tankers must take a Pilot.

Vessels proceeding in the approach area or through the Kiel Cana are obliged to take on a Pilot.

Vessels and push-type trains, as well as tug trains, having the greates possible max. draft of 3.1 m. and belonging to traffic group 1 ar exempted from the obligatory pilot service. Vessels with a breadth i excess of 15 m. or with a gross tonnage of over 2,500 tons (maximur tonnage) must take on recognised helmsmen (canal helmsmen) for th canal passage. Pilot station, tel. 362858. ETA required in advance. Pil boat can be found near Kiel Lighthouse and also off the entrance to Ki Canal. Pilot boats are white with red superstructure with "Lotse" painte on both sides. Signal for Pilot is flag "G" over numeral pennant 1. Pilot for Kiel Harbour also available and recommended if port is not familia Also see "Shipmaster's Report".

DEEP-SEA PILOTAGE: See "Baltic Deep-Sea Pilotage" – Page 174

ANCHORAGE: Safe anchorages at Holtenau-Reede and at Heikendor Reede for vessels up to 9.7 m. draft.

RESTRICTIONS: Non gas-free tankers must give advance notice o arrival and will require chemist's certificate before entering harbour are

Speed limit 10 knots South of line Bulk/Ehrenmal Laboe. Also se "Shipmaster's Report".

BERTHING: No particular restrictions except for vessels in distress, c carrying explosives or tankers not gas-free. In these cases speci permission of Harbour Authorities required for berthing.

Commercial Harbour:

Depth of water up to 11.0 m.; quay lengths 4,143 m.; open storage area of 176,950 sq.m.; covered shed space of 54,530 sq.m.; silos of 270,00 tons overall capacity; fuel depots; 14 cranes up to 45 tons lifting capaci siding tracks; 11 Ro/Ro piers.

Binnenhafen Ports:

Oslo-Kai: The terminal is for the exclusive use of passenger and c ferries. Depth of water 7.5 m. Quay length 500 m. Ro/Ro Piers No. 3-6.

Sartorikai: Depth of water 7.0 m.; quay length 200 m.; open stora areas of 1,000 sq.m.; covered shed space of 15,000 sq.m.; silo 16,00 tons; 2 cranes of up to 10 tons lifting capacity.

Schweden-Kai: The terminal is for exclusive use of passenger and c ferries. Depth of water 10.0 m.; quay length 180 m.; Ro/Ro Pier No.

Bollhornkai Nord: Depth of water 10.0 m.; quay length 270 m.; op storage areas of 3,700 sq.m.; 2 cranes of up to 24 tons lifting capaci Ro/Ro Piers No. 8 and 9.

Bollhornkai Sud: Depth of water 10.0 m.; quay length 300 m.; op storage areas of 7,750 sq.m.; mobile crane of up to 45 tons lift capacity; Ro/Ro Pier No. 10

Bahnhofskai: Depth of water 6.0 m.; quay length 400 m.; open stora areas of 1,000 sq.m.

Scheerhafen: Depth of water 10.0 m.; quay length 300 m.; open stora areas of 8,000 sq.m.; covered shed space of 1,000 sq.m.; private f depots of 36,000 cu.m; private tanker discharging bridge and facili for receiving dirty ballast; 2 cranes of 10 tons lifting capacity.

Nordhafen: Situated in the Kiel Canal. Depth of water 11.0 m.; m draft 9.5 m.; quay length 1,068 m.; open storage areas of 15,550 sq covered shed space of 28,530 sq.m.; 77,000 ton silo with elevato 200 t.p.h. loading/unloading performance; 6 cranes of 25 tons li capacity; 1 mobile crane of 40 tons capacity; Ro/Ro Pier No. 1.

Ostuferhafen: Depth of water up to 10.0 m.; quay length 925 m.; o storage areas of 150,000 sq.m.; covered shed space of 10,000 sq 177,000 ton silos; crane of 40 tons lifting capacity; Ro/Ro Piers No and 12.

MAX. SIZE: For Nordhafen and ships passing Canal, 235 m. length, 32.5 m. beam and 40 m. above the water level. For vessels up to 160 m. in length, the max. permitted draft is 9.5 m. In the case of vessels with length in excess of 160 m. and over 20 m. breadth, the max. permissible draft are shown in the following table (draft data in dm.).

Vessel Length (m.)	*Vessel's Breadth (m.)*													
	20	*21*	*22*	*23*	*24*	*25*	*26*	*27*	*28*	*29*	*30*	*31*	*32*	*32.5*

REPAIRS: All types of repairs possible.

DRY DOCKS: Floating Dock. No. 2, 22,500 tons.

Dry Docks: No. 5, 794 ft. long, 95 ft. wide; No. 6, 661 ft. long, 95 ft. wide; No. 7, 1,018 ft. long, 164 ft. wide; No. 8, 951 ft. long, 144 ft. wide. No. 8A, 1,395 ft. long, 292 ft. wide.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Normally by ship's crew. Can be arranged by stevedores if required.

CUSTOMS ALLOWANCES: 20 cigarettes per man per day. No alcohol.

REPATRIATION: No restrictions. Can also be arranged in the locks of Kiel Canal by local Agents. Valid passports required.

Bus and coash station: At Kiel, near Bollhornkai. Coaches to Hamburg Airport and other destinations.

Railway Station: Near bus and coach station. Trains to Hamburg, Lubeck, Berlin, Bremen, Hannover and other destinations.

AIRPORT: At Kiel, local flights to Berlin and Frankfurt. Nearest international airport at Hamburg, about 90 km. away.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: New Year's Day, Good Friday, Easter (2 days), Ascension Day, Whitsun (2 days), 17th June, Atonement Day, Christmas (2 days). Work can be arranged on above holidays except Good Friday and Christmas Eve.

POLICE/FIRE/AMBULANCE: Police, tel. 110, Harbour Police 5963396; Ambulance 112, alternative 19222; Fire, tel. 112.

TELEPHONES: Installed on wharves and Oslo quay (ferries to Scandinavia). Public phones near quays.

SERVICES: All services available.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

GENERAL: *Garbage/Sewage Removal:* Container for discharging of garbage must be taken. Barges for discharging of sewage/slops and bilge water are available.

SHIPMASTER'S REPORT: 1980.

"KIEL PILOTS" can be contacted on VHF Channel 16 and Channel 14, 2 hours before arriving at Kiel Lighthouse, for a Pilot for Kiel Harbour.

For vessels intending to transit the canal, send a message at least 3 hours in advance to "FORDE LOTSE – KIEL" by radio giving ETA, draft, g.r.t. and destination. Any request to arrange a Pilot at the other end of the canal may also be included in the message.

The maximum air draft allowed in the canal is 40 m. (from water line to highest point of the ship).

AUTHORITY: Hafen und Seemannsamt der Landeshauptstadt Kiel, Bollhornkai I, P.O. Box 2367, D 2300 Kiel 1. *Tel:* (0431) 901 1073. *Telex:* 292511 Hvbki d. *FAX:* (0431) 94477. *Contact:* Captain J. Morgenroth, Harbour Master (radio telephone 01611403705).

KIEL CANAL: (See Plan)

For entrance from Baltic, refer to "Kiel".

For entrance from Elbe, refer to "Brunsbuttel".

DEEP SEA PILOTAGE: Baltic Pilots Kiel ("Uberseelotsen Ostsee Kiel-Holtenau e.V.") is the address for ships entering the Baltic Sea via Kiel-Canal or from ports of the Federal Republic of Germany which require a Deep Sea Pilot for the Baltic Sea

The Baltic Pilots Kiel have 48 members. All members carry the "Red Licence" of BPAC which is the only licence acknowledged by all Baltic Governments.

Baltic Pilots Kiel: Tel: 0431-36 28 58 (24 hours a day). 0431-3 68 68 (office hours). Cables: Balticpilots Kiel. Telex: 299 857 bwki d. Postal Address: Uberseelotsen Ostee e.V. Schleuseninsel 6 D-2300 Kiel 17.

Also see "General – Deep-Sea Pilotage" before first port and "Baltic Deep-Sea Pilotage" – Page 174.

RADIO: Advise ETA at Elbe Lanby (or Kiel Lighthouse). Confirm ETA 12 hours before arrival at Pilot Station.

VHF: Approaching from the Baltic Sea, Kiel Radio listens on Channel 16 VHF and will notify the Kiel Pilot.

GENERAL:

Additional information required prior to Kiel Canal transit: As a result of security regulations which became effective in 1978, the following regulations issued by the competent Authorities must be complied with when transiting the Kiel Canal.

Vessels which are potentially dangerous, which include pushing and towing units, carrying material listed in the special material list in bulk (see "Wilhelmshaven"), or after discharging mineral oil or petroleum products with a flash point below 35°C and still not gas free or inert, including Reactor vessels, must report as follows:

1. Coming from the North Sea or from a port within the River Elbe District or when transiting the Kiel Canal.

24 hours before entering the River Elbe, in writing, at the latest after clearing the last port:

to the Wasser-und Schiffahrtsamt (Cuxhaven),
Deichstrasse, 2190 Cuxhaven. Telex: 233154.

With the following information:

1. Name and Call Sign of vessel. Estimated arrival time at first reporting position (day, date, local time).
2. Nationality of vessel.
3. Overall length and draft of vessel.
4. Port of departure and destination port.
5. Details and quantity of cargo with particulars of the stated dangerous cargo according to the special material list.
6. If chemicals are carried, a declaration that the vessel is in possession of a certificate as required by the IMO code for Chemical Tankers as "New Ship".
7. A declaration of any known defect in the vessel or its cargo.
8. Name of the Owners of the vessel.

2. Coming from the Baltic Sea and transiting the Kiel Canal as well as the River Elbe

24 hours before entering Kiel Bay, in writing, at the latest after clearing the last port:

To the Wasser-und Schiffahrtsamt Kiel-Holtenau,
Schleuseninsel, 2300 Kiel 17 – Telex 292836

giving the same information as required in 1. above for vessels entering the River Elbe.

3. Coming from a port within the Kiel Canal Range

Reports as per 1. and 2. have to be given.

To conform with the pilotage regulations for Kiel Bay and the River Elbe, the above mentioned vessels which are potentially dangerous are obliged to engage the services of a Pilot.

Further instructions are in force for above mentioned vessels when navigating within the River Elbe and Kiel Bay, as well as when transiting the Kiel Canal, or passing certain points. Pilots will advise the Masters of vessels of the relevant regulations and assist.

The Port Authorities at Cuxhaven and Kiel will inform each other about arrival of vessels with dangerous cargoes.

Potentially dangerous sea-going vessels of up to 300 g.r.t. should contact the relative Port Authority.

AUTHORITY: Wasser-und Schiffahrtsamt Kiel-Holtenau, P.O. Box 8068, Schleuse, 2300 Kiel 17. *Tel:* (0431) 385-1. *Telex:* 02-92836. *FAX:* (0431) 385-414. *Contact:* Port Captain, Tel. (0431) 385-450.

LUBECK (including Travemunde): 53.52 N. 10.40 E. (See Plan)

DOCUMENTS:
2 Crew Lists.
1 General Declaration for Arrival and Departure.
1 Health Declaration.
2 Cargo Manifests.
2 Stores Lists.
1 Ship's Particulars form.
Crew Manifest.
Bills of Lading.
Customs Declaration.
Derat Certificate.

PILOTAGE: Compulsory for vessels over 300 g.r.t. Pilot station situated at Travemunde, near foot of Nordermole. Pilots board vessels in anchorage area. International signals used by Pilots and by vessels requiring a Pilot. Contact by VHF Channel 13 and 20.

RESTRICTIONS: Channel from Lubeck "A" buoy to Stadthafen is well lit and navigable by vessels fitted with radar in all weathers.

Depths: from "A" buoy to Travemunde (Nordermole) 10.5 m.; from Nordermole to Siechenbucht, 10 m.; channel to NWK power station, 9.5 m.; channel to Stadthafen 9.5 m. The river Trave narrows from 130 m. at seaward end to 80 m. at Stadthafen.

MAX. SIZE: Dependent on berth depth and approaches. Vessels up to 15,000 d.w.t. can reach Stadthafen. Also see "Restrictions".

HEALTH: Radio Pratique possible. Pilot will ask Master to complete Health Declaration.

RADIO: Lubeck Radio, VHF Channel 27. Harbour Radio service used by Pilots, tugs, and other vessels.

TUGS: At Stadthafen vessels over 1,600 g.r.t. require 1 tug and vessels over 2,500 g.r.t. require 2 tugs.

BERTHING:
Travemunde: Passenger ferry harbour. North side river berths I and II, 7.5 m. depth; Kaiserbrucke, 100 m. length, 9.0 m. depth; Ostpreussenkai, 190 m. length, 7.0 m. depth; Priwall (South side), 180 m. length, 5 m. depth. 7 berths for Roll-on/Roll-off and passenger traffic each 140 m. – 220 m. length, 7 m. – 9.5 m. depth.

2 berths with railway connection, (Berths No. 6 and 7).

Industriehafen: Depth alongside 7.8 m. – 9.5 m.

N.W.K. Power Station: Depth alongside, 9.5 m.

Stadthafen: 27 km. from sea. Total length of quays 7.6 km. The harbour depth is 6 m. – 9.5 m.

Elbe Lubeck Canal: Navigable by barges up to 1,200 tons.

CRANES: 1 – 200 ton floating crane, 1 – 25 ton, 1 – 12 ton, also 3 ton cranes.

BRIDGE: Herrenbrucke is 56 m. wide and 22 m. above water level. Can be opened for vessels requiring higher clearance.

MEDICAL: All facilities available. Hospital near docks at Travemunde, and at Lubeck (Medical University).

TANKERS: Two berths, length 150 m. Max. draft 8 m. and 8.5 m.

FRESH WATER: Available by barge at any location.

FUEL: Fuel available at berth at Scandinavia Kai in Travemunde and by barge from Hamburg.

CONSULS: Denmark, Norway, Austria, Sweden, Iceland and Finland.

REPAIRS: Several shipyards available for deck and engine repairs.

DRY DOCKS: Floating docks for vessels up to 13,500 tons (45,000 tonnes d.w.t.).

SURVEYORS: Addresses of inspectors and classification society representatives can be obtained from the Chamber of Commerce and Industry at Breite Strasse 6 – 8, Lubeck.

Germanischer Lloyd, Schwartauer Allee 84a.

OPENING/CLOSING HATCHES: By crew.

REPATRIATION: All facilities available.

AIRPORT: Hamburg, 1.5 hours by bus or train.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: 1st January, Good Friday, Easter Sunday, Easter Monday, 1st May, Ascension Day, Whit Sunday, Whit Monday, 17th June, Atonement Day, Christmas Day, Boxing Day.

POLICE: Lubeck River Police, tel. 3 34 40; Travemunde River Police, tel. 74141.

BANKS: *Lubeck:* Commerzbank, Breite Strasse 52/54. Dresdner Bank, Breite Strasse 83/87. Deutsche Bank, Kohlmarkt 7 – 15.

Lubeck-Travemunde: Commerzbank, Vorderreihe 50. Deutsche Bank, Vorderreihe 35. Deutsche Bank, Vorderreihe 62.

STORING: See "Prelims".
1. Vessels can be provisioned by lighters and lorries at all berths.
2. No limitation of time for provisioning.
3. Lorries can go right alongside vessels, provided the loading and unloading operations permit.
4. At virtually all berths (with exception of the Wood Pier at Lubeck-Travemunde) fork lifts can be used.
5. Customs procedure as in all German ports.
6. There is always the possibility of obtaining riggers.

TELEPHONES: Ship telephone connections at Ro/Ro berths.

SHORE LEAVE: Allowed.

DEEP SEA PILOTAGE: See "General" before first German port an "Baltic Deep-Sea Pilotage" – Page 174.

PILOTAGE: Pilot boards off the Weser Lanby. Docking Pilot will boa off Bremerhaven.

ANCHORAGE: Sea anchorage off Weser Lanby or the Hoheweg Lig for all types of vessels. River anchorage off Blexen, 1 mile abo Bremerhaven for vessels up to 100 m. LOA.

RESTRICTIONS: No restriction except vessels with a length exceedin 260 m. and a draft of 38 ft. Vessels with a draft exceeding 30 ft. will b controlled by tidal conditions. Controlling depth in channel 11 m. MLW In the port 9 m. to 12 m. at MLW (Midgard Pier).

MAX. SIZE: (The max. drafts are estimated).
Midgard Pier: (a) Bulk cargo berth, total length 1,068 m. Max. LO 270 m. max. draft 42 ft. 08 in. (FW).

(b) Oil Berth No. 1 (combined with Southern part of 'a'), max. leng 850 ft., beam 120 ft., draft 42 ft. 08 in.

(c) Oil Berth No. 2, max. draft 42 ft. 08 in. (FW).

(d) Granary, quay length 188 m., draft 38 ft. – 40 ft. (FW) weath permitting.

Midgard Terminal (Blexen): Max. length 820 ft. (250 m.) up to a dra of 38 ft. 06 in. (FW).

Guanowerk, max. length 550 ft., max. draft 30 ft. (FW) (approx.).

Preussag, max. length 550 ft., draft 27 ft.

Also see "Tankers".

HEALTH: Pratique granted immediately on arrival in port by Heal Official.

RADIO: Norddeich Radio (DAN) or Elbe-Weser Radio (VHF Chann 16).

RADAR: No port radar available. Radar for entrance se "Bremerhaven".

TUGS: Ample available from Bremerhaven. Tug's lines used.

BERTHING: The following industrial works and companies within th port area of Nordenham possess a berth each for sea-going vesse which serve only their private supplies and requirements. These berth are situated North of Midgard Pier.

1. Norddeutsche Seekabelwerke Aktiengesellschaft, (production cables).
2. Felten & Guilleaume Schatanlagen GmbH (production of elect appliances, motors, etc.).
3. Preussag Boliden. Length of quay 230 m., depth of water 32 10 in. (approx.) 2 cranes of 10 and 5 tons. Capacity 200 t.p.h. an 90 t.p.h. respectively. Storage capacity, 50,000 tons (coal or ore 10,000 tons (metal blocks), 5,000 cu.m. (sulphuric acid).
4. Guano-Werke Aktiengesellschaft (s.a.) (phosphates an fertilisers). Length of quay 165 m. 1 gantry crane and 1 mechanic unloader for bulk cargo.
5. Erdolwerke Frisia Aktiengesellschaft (tanks for the storage mineral oils).
6. MBB (production of airplanes).
7. Weser Tanklager Gesellschaft GmbH (storage of mineral oi bunker oil station of BP).
   Connections: Gas oil 2×8 in., fuel 1×8 in.
8. Titangesellschaft GmbH (production of titandioxide).

SPECIAL CARGO HANDLING FACILITIES:
Midgard Pier:

No. 1. Bulk cargo berth for discharging and loading. Length of qua 710 m. Depth 12 m. Four bridges with a lifting capacity up t 22 tons. Max. outreach 27 m. One jib crane up to 65 ton capacity, max. outreach 48 m. Capacity: 30,000 tons ore p 24 hours. 25,000 tons of coal per 24 hours. Connections f mineral oil and molasses.

No. 2. Oil berth. Length of quay 170 m. Depth 9.5 m. Three pip lines 10 in. to 12 in. diameter for fuel oil, diesel oil and g oil. No shore steam or facilities for dirty ballast available.

No. 3. Granary. Length of quay 188 m. Depth 12 m. Two elevat with a total discharge capacity of 700 t.p.h. Loading rate vessels 300 t.p.h. Storage capacity of 46,000 tons.

No. 4. Midgard Terminal (Blexen): Length 210 m. Extra moor dolphins North and South of wharf 50 m. from each end wharf. Depth alongside 12.5 m. at MLW. 2 mechanic unloaders for discharge. Special storage facilities for bu cargoes. The berth can accept vessels up to 80,000 d.w fully laden or up to 125,000 d.w.t. with a part cargo.

STEVEDORES: 24 hours' notice required. Notice required Frid morning for week-end work.

1st shift: 0600 – 1400 hrs.
2nd shift: 1400 – 2200 hrs.
3rd shift: 2200 – 0600 hrs. (overtime).

On Saturdays:
1st shift: 0600 – 1400 hrs.
2nd shift: 1400 – 2200 hrs. (overtime).
3rd shift: 2200 – 0600 hrs. (overtime).

On Sundays:
1st shift: 0600 – 1200 hrs. (overtime).
2nd shift: 1200 – 1800 hrs. (overtime).
3rd shift: 1800 – 2400 hrs. (overtime).
4th shift: 2400 – 0600 hrs. (overtime).

MEDICAL: Hospital available; advance notice only required if urg cases.

TANKERS: Diameter of lines 8 in.

Shell Berth: Max. draft 34 ft.

Weser Tankerlager: Max. size 200 m., length 32 ft. draft at LW. T-shaped mooring lines attached to pontoons fore and aft, middle lines are attached to the shore. Length of lines 100 m.

Also see "Special Cargo Handling Facilities".

DENSITY: Average density of water 1005 – 1012.

FRESH WATER: Fresh water available at a rate of 15 t.p.h. per hose price DM 5.40 per ton.

FUEL: All grades available; delivery by barge; 2 days' notice required.

FIRE PRECAUTIONS: Special regulations for vessels loading or discharging explosives.

CONSULS: See "Bremerhaven".

REPAIRS: Minor repairs can be carried out. Ample facilities for major repairs at Bremerhaven.

DRY DOCKS/SURVEYORS: See "Bremerhaven" or "Bremen".

WATCHMEN: Not necessary but available if required by Master.

OPENING/CLOSING HATCHES: Normally by crew but if by stevedores extra charges will apply.

CUSTOMS ALLOWANCES: Each crew member 200 cigarettes or 30 cigars or 30 grammes of tobacco and 1 bottle of spirits for a running period of 3 days.

CARGO GEAR: In most cases loading and discharging is effected with shore gear. Special equipment can be ordered from Bremerhaven.

REPATRIATION: Possible by air via Bremen or Hamburg.

AIRPORT: Bremen, distance 70 km., 1 hour by car. Hamburg, 200 km., 2 hours by car.

POLICE/AMBULANCE/FIRE: Police 110; Ambulance 2052; Fire 112.

TELEPHONES: Available on request.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Not issued.

REGULATIONS: Port regulations for the Midgard Pier including special regulations for handling of explosives.

DELAYS: None except waiting for high tide (see "Restrictions").

AUTHORITY: "Midgard" DSAG, Midgardstr. 50, P.O.Box 98, D-2890 Nordenham. *Tel:* 4731/810. *Telex:* 238317. *FAX:* 88564. *Cables:* Midgard Nordenham. *Contact:* Mr. Werner, Board Member. Mr. Gocht, Pier Inspector.

PAPENBURG: 53.06 N. 07.23 E. (See Plan)

LOCATION: Papenburg is 20 nautical miles above Emden on the Ems seaway at km. 0.0 and on the inland waterway Dortmund – Ems canal at km. 225.82.

PILOTAGE: The Sea Pilot is taken on board from the pilot cutter at Westerems and the district and Port Pilot at the Emden Pilot Station. All vessels over 1,000 g.r.t. (sea-going), and all oil, gas and chemical tankers require a Pilot.

RESTRICTIONS: *Lock operating times:* From 1st March to 30th September, Monday to Saturday, from 0600 to 2000 hrs.

From 1st October to 28th February, Monday to Saturday, from 0700 to 1800 hrs.

Lockings outside operating times, and on Sundays and Holidays must be promptly reported, at the latest half an hour prior to normal lock operating times, by telephone 04961/2640 or via VHF Channel 13.

Also see "Bridges".

MAX. SIZE: Vessels with a max. draft of 5.5 m. can reach the port during MHWST. Vessels with a greater draft must discharge at Leerort.

VHF: Communications with the lock-keeper are on Channel 13. Bridges are on Channel 15.

BERTHING: The port is connected to the Ems by a lock 26 m. wide and 152 m. long. Ships with a beam greater than 26 m. can reach the port by a lock 40 m. wide. The port has a foreport (300 m. long and 80 m. wide), the sluice canal (1,900 m. long and 65 – 90 m. wide), the Southern Industrial Port (500 m. long and 100 m. wide), the Northern Industrial Port (600 m. long – 80 m. wide), the Dever Port (450 m. long and 80 m. wide), the railway dock (300 m. long and 50 m. wide), the Werft Port 200 m. long and 100 m. wide), the Turm Canal (300 m. long and 35 m. – 60 m. wide, which can be reached through a 17.6 m. wide railway bridge), and the yacht marina. Depths vary from 3.5 m. to 6 m.

Of the 3,700 m. of the Spundwand Quay, 2,500 m. are devoted to cargo handling.1,200 m. of this is provided with railway lines. The total length of the port railway facility is 6,700 m. 40,000 cu.m. of open free storage space can be used for bulk cargo accommodation. Further open and covered storage areas, together with silo facilities, for approx. 11,000 tonnes cargo are available through companies operating within the port.

CRANES: In the port area there are 2 heavy lift cranes up to 120 tons (a total 230 ton capacity), 1 heavy lift crane 140 tons, 1 heavy lift crane 50 tons, 7 jib cranes 3 – 15 tons, 1 gantry crane 6 tons with a 52 m. long traverse, 1 crane 6.5 tons, 1 crane 5 tons, 2 cranes 1 ton, 2 mobile cranes 11 tons and 40 tons, 1 floating crane 6 tons, 1 mobile conveyor belt 100 t.p.h., 2 grain handlers 30 t.p.h. and 40 t.p.h.

BRIDGES: At Ems km.15.02 the Leerort road rotary bridge has to be passed; West opening 29 m. and East opening 31 m. passage width. Opening times from sunrise to sunset and after prior report by telephone 0491/2992 and VHF Channel 15.

At Ems km.6.9, the railway folding bridge has to be passed (Weener). The passage width is 24 m. Opening times are as per the current traffic plan. The bridge is manned daily, also Sundays and holidays, from 0400 to 2200 hrs. Telephone 04951/2065 and VHF Channel 15.

Both bridges have a passage height when closed of 3.50 m. at MHWST.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Vessels up to 30,000 tons, length 250 m. and width 35 m. can be repaired at the local shipyards.

Shipbuilding dock: A covered building dock with length 258 m. and width 39 m.

DRY DOCKS: A drydock of 250 m. length and 36 m. width is available.

POLICE/AMBULANCE/FIRE: Water Police Tel: 04961/4144 or 04961/72982 (After hours).

DEVELOPMENTS: The port installations are currently being extended by the Industry Port – North which will be approximately 1,000 m. long (300 m. finished) and 100 m. wide.

AUTHORITY: Hafenamt Papenburg-Ems, P.O.Box 14 40, 2990 Papenburg 1, West Germany. *Tel:* 04961 821.

Hafenamt Papenburg, An der Seeschleuse, 2990 Papenburg 1, West Germany. *Tel:* 04961/2640. *Contact:* Captain W. Hermanns, Harbour Master. (A.O.H. *Tel:* 04961-3169).

AGENT: Fisser & V. Doornum, Ringstrasse 43, D-2970 Emden, Federal Republic of Germany. Tel: (4921) 803211/2. Telex: 27817. Fax: (4921) 20861.

RENDSBERG: 54.18 N. 09.40 E. (See Plan)

SHIPMASTER'S REPORT: June 1988.

DOCUMENTS:

2 copies Crew List.
1 copy Stores List (including tea, coffee, tobacco, spirits, cigarettes, wine).
1 copy Crew Personal Effects List (to be completed on special Customs form supplied by the Agent).

PILOTAGE: When coming from the Baltic, vessel takes a Lock Pilot and a Docking Pilot. If arriving from Brunsbuttel, Docking Pilot boards the vessel at Nubbel, a few miles from Kreishafen.

RESTRICTIONS: Maximum draft 9.5 m., air draft 40 m. The maximum draft is also controlled by Navigation Rules of the Kiel Canal and varies according to vessel's LOA and breadth.

There is no restriction on beam except when discharging into barges overside, when the maximum beam permitted is 15.0 m.

TUGS: 2×300 h.p. and 1×700 h.p.

BERTHING: The total length of Kreishafen Wharf is 750 m. The berth was rebuilt and dredged to 10.0 m. in 1986.

CARGO HANDLING FACILITIES: Daily discharge rate for fertiliser 700 tonnes – 2,500 tonnes, depending on quality of fertiliser.

Four bulldozers of 3 tons each are available to assist when discharging.

CRANES: 7×2 tons – 18 tons. Four of the cranes are suitable for grab discharge.

DENSITY: Brakish water.

STEVEDORES: ETA notice to stevedores should be sent through the vessel's Agent. Stevedores require 14 days, 10 days, 7 days, 5 days, 4 days, 2 days and 1 days notice.

Working hours are from 0600 hrs. – 1800 hrs. on Mondays to Fridays. Work carried out after 1800 hrs. weekdays and all weekend work is on overtime rates.

MEDICAL: There is a hospital available. Specialist doctors also available.

TANKERS: Esso Berth for handling chemicals, length 70 m., depth alongside 6.0 m. BP Berth for bunkering, length 80 m., depth alongside 8.0 m.

FRESH WATER: Available at the berth.

FUEL: Not easy to obtain and only available in small quantities by truck. Fuel is very expensive.

CONSULS: Nearest Consuls at Kiel and Hamburg.

REPAIRS: Facilities available.

DRY DOCKS: 2 dry docks available, Dry Dock No. 1: 155 m.×22.7 m.×5.80 m. Dry Dock No. 2: 193 m.×32 m.×6.3 m.

There is a floating dock with capacity 4,400 tons, length 120 m., breadth 22.0 m., maximum draft 5.5 m. (forward) and 5.8 m. (aft). The floating dock has one crane with capacity 10 tons.

SURVEYORS: Germanischer Lloyd based at Kiel. Lloyd's and ABS based at Hamburg.

GANGWAY/DECK WATCHMEN: Ship's crew are required to attend moorings as passing traffic sometimes not proceeding at low speed. Moorings should consist of 3 head and stern lines and 3 spring lines fore and aft.

OPENING/CLOSING HATCHES: Ship's crew open and close hatches.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottles of spirit allowed every 4 days.

REPATRIATION: Possible via Hamburg.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: All normal Federal Republic of Germany holidays.

POLICE/AMBULANCE/FIRE: 110, 110 and 112 respectively.

HEALTH: Pratique given on arrival. In case suspected disease or fever on board, radio details to Agent before arrival. Complete Declaration of Health required.
RADIO: Rugen Radio, call sign "Y5M".
TUGS: Available. Use of at least 1 tug is compulsory for vessels berthing and unberthing.

Sufficient number of tugs available, from 300 h.p. to 1,200 h.p. Tugs normally join vessel in front of the mole.
BERTHING: *Overseas Port:* Situated in Lower Warnow River about 3.8 miles from Warnemunde Sea Buoy.

Pier No. 1: 9 berths. General goods, depth 30 ft. to 34 ft.
Pier No. 2: 13 berths. General goods, depth 30 ft. to 33 ft.
Pier No. 3: 4 berths. Bulk cargoes, depth 30 ft. to 37 ft.
Pier No. 4: 3 berths. Grain, Feedstuffs, Fish Meal. Depth 34 ft., 1 berth Urea, Potash.
Oil Pier: 3 tanker berths, depth 30 ft. to 38 ft.

Chemical Port: 1 berth. Depth 29 ft. 7 in. Products Handled: Ammonia, Methanol and Butane.
City Docks: In Warnow River, about 6 miles from sea. Total quay length 1,600 m. depths alongside 21 ft. and 18 ft. Grain elevators shooting capacity 42 t.p.h., suction capacity 33 t.p.h.
Warnemunde: Port for passenger service. Quay length 180 m. Depth alongside 27 ft. 06 in.

Port Control to be contacted through VHF Channel 14.
Roll-on/Roll-off terminal with facilities for 20 ft. and 40 ft. containers. Max. draft 25 ft.
CRANES: *Overseas Port:* 73 cranes and 15 crane-bridges with capacities from 3.2 – 63 tons. A self-propelled floating crane "Goliath", for heavy lifts not exceeding 100 tons is available. Heavy Lifts weighing up to 300 tonnes may be handled by means of additional 100 ton yard cranes. Container facilties and container gantry crane available.
City Docks: Crane capacities 2 – 10 tons.
BULK HANDLING FACILITIES: 4 berths, length of quay 900 m. 6 bridges with 20 tons capacity and outreach of 40 m. 2 unloaders, 1×500 t.p.h. and 1×2,000 t.p.h. Storage area 13,200 cu.m. for 90,000 tons of bulk cargo.
MEDICAL: Doctors, hospitals available. Advance notice to Agent required if medical assistance necessary.
TANKERS: 3 berths available. Max. size 50,000 d.w.t. Max. length 230 m., Max. draft 38 ft.

Berth No. 03, 31 ft. (max. LOA 215 m.)
Berth No. 04, 38 ft. (max. LOA 230 m.)
Berth No. 05, 30 ft. (max. LOA 215 m.)

Storage capacity of 120,000 cu.m. Max. discharge rate 2,900 cu.m.p.h.
FRESH WATER: Available ex-shore hydrants.
FUEL: Available all grades fuel and gas oil by barge. Vessels calling for bunkers only, pay no harbour dues, and other fees are reduced.
REPAIRS: All repairs possible. Neptun Shipyard and other repair shops situated at City Docks. Warnow Shipyard and floating dock situated in Overseas Port.

Tank cleaning, boiler cleaning and repairs.
REPATRIATION: Can be arranged if identification papers in order.
TIME: GMT plus 1 hour. Summertime, GMT plus 2 hours (24th March – 29th September).
HOLIDAYS: New Year (1st January); Good Friday; Easter Sunday; 1st May; Whit Sunday; Whit Monday; Ascension Day, 24th May; 7th October; Christmas Day; 26th December.
AIRPORT: Berlin.
TELEPHONES: Ship-to-shore connections available.
POLICE/AMBULANCE/FIRE: Ambulance 366-3500; Police 366-3333; Fire 366-2222.
SHORE LEAVE: Crew members permitted ashore.
DEVELOPMENTS: New container and Ro-Ro installation to be built in the Southern harbour.

Port basin to be dredged to 14.0 m.

SHIPMASTER'S REPORT: September 1980 (Updated 1990).
VHF: While the vessel is in port, telephone calls to anywhere inside outside Germany can be made most conveniently through "Rostoc Radio" on VHF Channel 16. The working Channel is 26.
Customs: The Customs only seal the cigarettes and coffee. Spirits a not sealed. Each crew member is allowed 200 cigarettes.
Immigration: Immigration formalities are in accordance with internation regulations. On arrival, the Master has to present a Crew List as we as the Seaman's Books, for checking by Immigration Authorities f validity on board of the vessel.

Identity control will be affected on the spot.
Crew members will receive shore passes.
All supernumeries on board from countries with visa obligations hav to obtain a visa against a fee of DM 5.00. On departure no control w be necessary except questioning of Master about any changes in Cre List.
Density: The density of the water at the berth varies from 1000 to 10 ozs./cu.ft.

2 Currency Lists.
Stores List.
Cargo Documents.
Ship's Certificates.

PILOTAGE: Compulsory. Contact Pilot by VHF Channel 14. Pi stations are at Barhoeft and Thiessow. Pilot boards vessel at Gel (N.W. entrance) and Landtief (Eastern entrance).

Entry only possible from 1 hour before sunrise to 1 hour after suns (N.W. entrance only). Also see "Baltic Deep-Sea Pilotage" – Page 17
ANCHORAGES: In the roads clear of the fairway, depths 26 ft. to 3
RESTRICTIONS: Northern entrance between breakwaters is 12 depth, used by smaller vessels only. Eastern entrance, depth 17 ft. M passing railway bridge, which is opened about every 5 hours.

MAX. SIZE: Vessels up to 17 ft. draft.
RADIO: Rugen Radio, call sign "Y5M".
HEALTH: Pratique given on arrival. In case suspected disease or fever on board radio details to Agent before arrival.
TUGS: Available and compulsory for vessels of over 1,000 g.r.t. berthing and unberthing.
BERTHING: Depth alongside quays up to 17 ft. maximum. Length of quays 1,200 m.
CRANES:

2 cranes	10 tons capacity, reach 32 m. (heavy lifts up to 20 tons, reach 16 m.)
2 cranes	10 tons capacity; reach 20 m.
1 crane	5 tons capacity; reach 22 m.
2 Elevators	capacity 25 t.p.h. each (for grain only).

Also a conveyor system for handling of salt with a capacity of 250 t.p.h.
MEDICAL: Doctors, hospitals available. Advance notice to Agent required if medical assistance necessary.
FRESH WATER: Available from shore ex pipe-line.
FUEL: Gas oil and lub oil available by barge.
REPAIRS: All deck, hull and machinery repairs by local shipyards.
REPATRIATION: All facilities exist for changing crews.
AIRPORT: Berlin.
TIME: GMT plus 1 hour. Summertime, GMT plus 2 hours (Last Sunday in March – Last Sunday in September).
HOLIDAYS: New Year (1st January); Good Friday; Easter Sunday; 1st May; Whit Sunday; Whit Monday; 7th October; Christmas Day; 26th December.
SHORE LEAVE: Crew members permitted ashore.
AUTHORITY: VEB Seehafen Stralsund, Hafenstrasse, Stralsund. *Tel:* 692360, 692361. *Telex:* 317350 Dtsh Dd. *Contact:* Heinz Happ, Port Director. Harbour Master, *Tel:* 692382.
AGENT: VEB Schiffsmaklerei Rostock, Agentur Stralsund, 23 Stralsund, Hafen – Ballastkiste. Tel: 692362. Telex: 317224/25.

WILHELMSHAVEN: 53.31 N. 08.10 E. (See Plan)

DOCUMENTS: Tanker Check List with statement of vessel's deficiencies to be provided and delivered to the Sea Pilot before commencing pilotage.

Oil Port	2 Crew Lists. 1 Health Declaration (Form supplied by Pilot). Derat Exemption Certificate. Passports/Seamen's Books. Vaccination List. Tanker Check List
Harbour Docks	2 Crew Lists. 1 Health Declaration. 2 Cargo Manifests. 2 Stores Lists.

PILOTAGE: There is a central pilot station near "Deutsche Bucht" Lanby, where certain ships (see below) embark or disembark Jade, Weser and Elbe Pilots from/to helicopter or, weather permitting, boat. Jade (and Weser) Pilots are on board a 2-masted pilot vessel with yellow funnel with black top and white letters "LOTSE" (=Pilot) on black hull, flying the flag "H" of International Code.

Pilot vessel is usually stationed near unmanned "Weser" Lanby.

To call Jade Pilot, following signals are to be used:
- By day: flag "1" below flag "G" of International Code;
- By night: the foregoing signals, given by morse lamp and/or whistle;
- In bad visibility signals by whistle;
- In all cases advance VHF contact is recommended.

(a) When the pilot vessel is moved up the River Weser due to bad weather, embarking or disembarking of sea pilots takes place
- on the Weser in area between light buoys "17/4-Reede" and "19/H-Reede";
- on the Jade in area "Minsener Oog" by pilot vessel operating from Wilhelmshaven.

Inward bound vessels with draft exceeding 16 m. or with gross tonnage exceeding 60,000 g.r.t. may take the Harbour Pilot only seaward of Jade lightbuoys 29 and 30.

(b) Pilots are to be ordered as follows:
Inward Bound Vessels:
24 hours prior arrival pilot station at "Deutsche Bucht" Lanby or 12 hours prior arrival pilot station at "Weser" Lanby.
Outward Bound Vessels:
1. At least 2 hours prior to ETD.
2. For departures between 1900 hrs. and 1000 hrs. the Pilot has to be ordered by 1700 hrs.

(c) Pilot order must contain following items:
1. Name and gross tonnage of vessel.
2. Intended embarking position.
3. Time of arrival at embarking position.

Pilotage is compulsory as follows:
1. On navigation stretches inward of the respective outer position of pilot vessel, Wilhelmshaven Roads excluded, for:
   (a) oil, gas and chemical tankers
   (b) other vessels exceeding 1,000 g.r.t.
2. On navigation stretches between pilot station at "Deutsche Bucht" Lanby and the respective outer position of pilot vessel for:
   (a) oil, gas and chemical tankers exceeding 10,000 g.r.t.
   (b) other seagoing vessels exceeding 60,000 g.r.t.
3. On navigation stretches between the position of the pilot vessel shifted up the Weser due to bad weather and "Weser" Lanby for:
   (a) Vessels exceeding 20,000 g.r.t.; oil, gas and chemical tankers excluded.
   (b) Car carriers and Ro-Ro vessels exceeding 10,000 g.r.t.
4. Federal Government vessels and Federal navy ships are exempted.

Ships up to 5,000 g.r.t. and tankers not exceeding 300 g.r.t. are exempted from compulsory pilotage if:
- the Master and his ship have performed 6 voyages on the river within the last 12 months;
- the ship is equipped with radar and VHF (including all river working Channels);
- the Master has sufficient knowledge of the German language.

The Waterway and Shipping Authority may exempt ships, tankers excluded, exceeding 5,000 g.r.t. from compulsory pilotage on application for 12 months if:
- the Master and his ship have performed 36 voyages on the river within the last 12 months and
- the other foregoing requirements are fulfilled.

The same Authority may give exemption from compulsory pilotage only in special cases (e.g. distress situation etc.).

Vessels exempted from compulsory pilotage have to order shore based radar assistance at visibilities less than 3,000 m. from the radio station of the Wilhelmshaven Radar and Information Centre (Revierzentrale) when navigating the stretches between "Weser" Lanby and Wilhelmshaven. This station is to be called "Jade-Radar" on VHF Channels 16/63/20.

Shore based radar assistance will be given:
- when the visibility is less than 3,000 m. between "Weser" Lanby and Wilhelmshaven or;
- when the pilot vessel is moved up the River Weser due to bad weather or;
- when the lightbuoys are withdrawn during heavy ice drift periods or;
- when required by ship's command or;
- when made obligatory by instruction of Shipping Authority.

Vessels confined to the dredged channel due to their draft and/or exceeding 60,000 g.r.t. take 2 Sea Pilots at "Deutsche Bucht" Lanby.

Helicopter pilot service is available for vessels above 50,000 g.r.t. at "Deutsche Bucht" Lanby.

DEEP SEA PILOTAGE: See "General" before first German port and "Baltic Deep-Sea Pilotage" – Page 174.

ANCHORAGE:
1. Deep water Roads for large tankers South of "Deutsche Bucht" Lanby.
2. Roads for large and deep-draft vessels S.E. of "Weser" Lanby.
3. Tanker Road Schillig for tankers not exceeding 250,000 d.w.t. and/or 13.5 m. draft.
4. Schillig Roads for all vessels – tankers exempted – not exceeding 13.5 m. draft.
5. Quarantine anchorage for vessels under quarantine. Max. draft 13.5 m.
6. Explosives anchorage for vessels carrying explosives or ammunition. Max. draft 13.5 m.
7. Tanker Roads–North, for tankers which are loaded or waiting for berth. A safety distance of at least 300 m. between vessels at anchor has to be maintained. Max. draft 13.5 m.
8. Tanker Roads–South, for tankers being unloaded and not yet gas free and not exceeding 280 m. length. Max. draft 13.5 m. When anchored vessels are turning with the tide, measures like tug assistance against covering the Arngast light sector or drifting to the West side of the fairway to diminish time and circle of turning.
9. Wilhelmshaven Roads, usually for smaller vessels waiting for sea lock passage.
10. Road for small vessels up to 20 m. in length.
11. Actual sounding plans are to be observed because changes of depths are possible. (Contact "Jade-Revier Radio" or pilot).

Transhipment of goods according to IMDG Code Nos. 1 (explosives), 2 (gases) and 3 (inflammable liquids) is prohibited on the Jade including Roads.

Request for bunkering permit is to be addressed to "Wasser- und Schiffahrtsamt Wilhelmshaven" via radio station "Jade-Revier-Radio" on VHF Channels 16, 63 and 20.

RESTRICTIONS: No restrictions on night entry. Unless notified by waterway and shipping authority. Vessels draft exceeding 54 ft. 02 in. (16.5 m.), will be controlled by tidal conditions and vessels navigate according to specified schedule.

Also see "General".

Traffic Safety Measures for Large Vessels:

Vessels with draft exceeding 17 m. will be guided by police vessels showing quick flashing blue light when navigating the Precautionary Area between lightbuoys DB 18/Jade and DB 19/Jade. All other vessels are requested to give way to these vessels restricted by their draft.

During the navigation of vessels exceeding 200 m. in length in the Precautionary Area, the radio station "Deutsche Bucht-Revier-Radio" transmits navigational warnings every 15 minutes on VHF Channel 80 in German and English language. Warnings will be announced on VHF Channel 16.

Compulsory Reporting System in the Inner German Bight: (Extract from Common Proclamation of the Waterways and Shipping Directorates Nord and Nordwest).

All vessels, towing and pushing units included, exceeding 50 m. in length must report as follows:
1. *First Report* (initial)
   (a) Items to be transmitted:
      Vessel's name.
      Position.
      Dimensions.
      Destination.
   (b) Reporting positions for *inward* bound vessels:
      when passing
      Light buoy "TW 7", or
      Light buoy "DB 13", or
      If coming from the North, the parallel 54° 20′ 00″ N.

2. *Movement Report*

(a) Items to be transmitted:
  Vessel's name.
  Position.
  Speed.
  Passage time.

(b) Reporting Positions for *inward* bound vessels:
when passing
  Light buoy "TW 7", or
  Light buoy "DB 17".

(c) Reporting positions for *outward* bound vessels:
  Leaving the River Weser, when passing the light buoy "1" (Alte Weser) or "A1" (Neue Weser).
  Leaving the River Elbe in Westerly direction, when passing the connecting line "light house Heligoland/light buoy Nordergruende N" (approx. longitude 08° E).

3. These reports are to be addressed to "Deutsche Bucht Revier Radio" on VHF Channel 80.

4. After completing the reports, vessels are to stay on "stand-by" VHF channels within the extension of the German territorial waters.

Shipping Regulations and Restrictions:

1. Vessels, including those being towed or pushed, carrying dangerous goods in accordance with the Annex No. 1 (list of substances – see Annex No. 1 before "Authority") to the traffic regulations for waterways navigable by seagoing vessels in the Federal Republic of Germany or being not de-gassed or not inerted and vessels with nuclear propulsion must report 24 hours before navigating the Jade, however not later than departure from last port of call, to "Wasser- und Schiffahrtsamt" Wilhelmshaven.

Report must contain following statements:
(a) Name and call sign of vessel.
(b) ETA at lightbuoy "TW 9" or "1a" (Jade).
(c) Nationality.
(d) Length and draft.
(e) Last port of call and destination.
(f) Type, quantity and IMDG Code No. (see Annex I).
(g) When carrying chemicals or liquefied gases, indication whether a valid certificate according to IMO Code for chemical tankers or gas tankers is existing on board.
(h) Declaration about deficiencies of ship or cargo.
(i) Ship's owner or authorised Agent.

This report must be given in written form to Wasser- und Schiffahrtsamt Wilhelmshaven.

Conditions, stipulations and restrictions for the navigation of:
(a) Tankers carrying cargoes in bulk according to Annex 1 (list of substances), i.e. gases, dangerous chemicals, mineral oil and mineral oil products;
(b) empty tankers after discharging of mineral oil or mineral oil products, if the flash point of the last cargo was below 35° C, remaining slop excluded, whose tanks are not cleaned, gas freed or inerted;
(c) empty tankers of above named type, if the flash point of the last cargo was above 35° C., and before that a cargo with a lower flash point was carried, whose tanks are not cleaned, gas freed or inerted;
(d) Nuclear powered vessels:

1 Visibility must exceed 1,000 m.

2. Continuous radio contact with radio station "Jade Revier Radio" on VHF Channels 16/63/20 must be made safe, also when communicating with other stations;

3. A faultless working radar device has to be in operation and must be under permanent observation by an experienced person at reduced visibilities;

4. Use of automatic steering gear is only allowed under conditions published by Waterway and Shipping Authority;

5. Tank covers must be kept closed.

6. Further prohibitions and restrictions:

(1.) At least one VHF device must be operable from wheelhouse.

(2.) Tankers exceeding 12,000 d.w.t. which carry substances as per No. 1 of Annex 1 (list of substances) – i.e. gases, ethylene, dichloride or vinyl chloride monomer may not navigate on the Jade;

(2.1) These vessels must comply with following additional stipulations:

a) existing or valid IMO Code Certificate on board – if carrying liquid gases according IMO Resolution 328-IX or 329-IX, – if carrying chemicals according IMO Resolution A 212-VII.

b) A faultless working gyro compass to be kept in operation.

c) At wind forces which do not allow safe manoeuvring navigation on the Jade is not permitted, this does not apply for passage to next admitted roads.

d) Exemption from visibility restriction: Tankers may navigate at visibility exceeding 500 m., if they are equipped with gyro compass or an examined compass, or, if the cargo-carrying capacity is exceeding 2000 tons, by permit given by Shipping Police Authority.

2. All vessels specified exceeding 50 m. in length have to report to radio station "Jade-Revier-Radio" on VHF Channel 16/63/20 when passing the following positions:
a) Light buoy "1a",
b) before entering and when leaving the waterway Jade inward Light buoy "1a",
c) on arrival or departure from anchorage or jetty and when entering or leaving a harbour area.

Reports must contain ship's name, position, speed and passing time.

Lock Restrictions:

The sea lock opening times for No. 4 Dock are announced in daily maritime bulletins. Coastal radio station "Wilhelmshaven Lock Radio" working on Channel 13 VHF during official service hours.

Dimensions of lock: 390 m. long, 57 m. wide and depth of 11.47 m MLW. However, only smaller vessels use dock harbour as bollards fo mooring larger ships not yet available.

See "Annex No. 2" before "Authority".

HEALTH: Radio Pratique possible. Sea Pilot will hand Heal Declaration to Master. If one of the questions is answered "Yes", Pil will advise Port Health Officer. A valid Derat Exemption must b produced.

RADIO: Norddeich Radio, call sign DAN. Elbe-Weser Radio can b contacted by VHF Channel 16.

Radio advice prior to arrival: Advise Agent 7 days before arrival:
1. Ship's name and call sign, ETA in GMT.
2. Nationality.
3. Draft forward and aft.
4. Cargo on board and slop information.
*5. Number and diameter of cargo manifold connections.
6. Discharge rate per hour.
7. Loading rate per hour.
8. Quantity of ballast on board.
9. Ballasting rate per hour.
*10. Leaks in the hull or overboard valves, if any.
*11. Inert or non inert gas report.
*12. Request for crude wash.
*13. Request for repairs.
14. Valid oil liability certificate.
15. Heli-landing/winching area.
16. VHF Channel 20 in good working order.

*Details must be with Agent at least 48 hours before arrival.

ETA to be confirmed 72 hours before arrival, and whenever ET changed by more than 30 minutes.

Notify Agents of tug requirements.

MAX. SIZE: Max. size fixed for navigating the Jade:
(a) Draft, entering: 20 m. (65 ft. 07 in.)
  leaving: 19 m. (62 ft. 04 in.)
(b) Length: 350 m.
(c) Beam: 52 m.

Vessel exceeding these dimensions must apply for a permit navigation to "Wasser- und Schiffahrtsamt Wilhelmshaven".

See "Annex No. 3" before "Authority".

Keel clearance of at least 8.5% (see "Annex No. 3") of draft require Also see "Tankers".

VESSEL TRAFFIC SYSTEM: Shore based Radar Assistance an shipping police:

Wilhelmshaven Radar and Information Centre - (Revierzentral Wilhelmshaven):

This Station of the Waterways and Shipping Administration is operate continuously and performs radar surveillance and information service as follows:

1. *Jade Radar Chain:*
(a) Extension from light buoy "DB 19/Jade" to light buoy "58".
(b) Call names
  "Jade Revier Radio",
  "Jade Radar", concerning radar services.
(c) VHF Channels: 16/63/20.
(d) Shore based radar assistance is available to all vessels.
(e) Situation reports (traffic movements, dredging activitie disturbances, tidal and weather conditions, etc.) are broadcaste
  every even hour (H + 11 minutes) on VHF Channels 63/20
  German language),
  on request (also in English language).
(f) Special aims:
  observation of traffic with concern to national and internation regulations;
  information, advice and (binding) instructions addressed vessels (shipping police);
  navigational warnings (strategical assistance);
  receiving of ships reports (initial and passage reports);
  identification and recording of vessels.
(g) Handling of all other shipping affairs on the navigable waters the Jade (e.g. casualties, distress situations, oil pollutions).

2. *German Bight (Deutsche Bucht) Radar Surveillance Area (VTS*
(a) Extension: Area within a radius of 48 km. around Heligolan Lighthouse.
(b) Call name: "Deutsche Bucht Revier Radio".
(c) VHF Channels: 16/79/80.
(d) Shore based radar assistance is not yet available (Februa 1990); but radar information will be rendered to all vessels request.
(e) Situation reports (special traffic movements, disturbanc weather conditions, events important to navigators) broadcasted in German and English language
  every even hour (H + 00 minutes) on VHF Channels 80/ and on request.
(f) Special aims:
  Observation of traffic with concern to national and internatio regulations,
  information, advice, and (binding) instructions addresse vessels (shipping police),
  navigational warnings (strategical assistance),
  receiving of ships reports (initial and passage reports),
  identification and recording of vessels,
  handling of all other shipping affairs on the navigable wa within the appropriate area.

All orders issued by this Shipping Police Authority Station must observed.

TUGS: Compulsory. Tankers normally require at least 4 tugs of minim 1,500 h.p. for berthing. Tugs meet tankers at anchorage near Buoy " Only tug lines are used, charge inclusive.

VLCCs meet the tugs at Buoy "41", when they are bound for NW

BERTHING: *Wilhelmshaven Dock Harbour:*

The following dock harbours can be reached:

Harbour Name	*Max. draft*		*Quay length*
Handelshafen	16 ft. 05 in.		600 m.
Grosser Hafen	20 ft. – 26 ft.	Bontekai about	500 m.
Verbindungshafen	18 ft.	Sudwestkai	400 m.
Nordhafen			
Hannoverkai	38 ft. (11.6 m.)		312 m.
Luneburgkai	33 ft. (10.0 m.)		205 m.
Lay-up Berth (Dolphins)	41 ft. (12.5 m.)		350 m.
Ausrustungshaven (Lay-up berth)	19 ft.		140 m.

2 lay-up berths (dolphins) for vessels up to 30,000 d.w.t.

SPECIAL CARGO HANDLING FACILITIES: There is no Container traffic at Wilhelmshaven. One Ro-Ro ramp available at Luneburgkai and one Ro-Ro ramp under construction at Nordwestkai.

BULK HANDLING FACILITIES: Figdor is the operator of cargo handling in the Handelshafen with its connection to railway, road and canal-system.

Equipment: One modern gantry crane of 8 – 15 tons and efficient mobile cranes. Storage facilities for bulk cargo to an amount of 70,000 tons, 1 silo with a capacity of 720 cu.m. and 2,000 sq.m.

Niedersachsenbrucke: The facility accommodates vessels up to 150,000 d.w.t. and 47 ft. draft at the outer berth. A bulk discharge unit with an hourly capacity of 1,200 tons delivers coal to a nearby power plant by a conveyor belt.

The inner berth has a depth of 12.0 m. There are discharging installations for fuel oil and loading installations for caustic soda solution. Transhipment of bulk cargo is possible.

CRANES:

Luneburgkai:	2×15 tons – 18 tons portal cranes.
Handelshafen:	1×15 tons – 18 tons portal crane.
	1 crane for scrap iron.

A floating crane of 100 tons capacity is available on request from the Navy yard.

TANKERS: *Nord-West Oelleitung Terminal:* Position Lat. 53° 33′ N., Long. 08° 08′ E. Distance from "Weser" Lanby, 24 miles. Type of Berth, Finger Pier "T" head. Density 1025. Current velocity, 3-4 knots. Mean tidal range, 12 ft. 08 in. Nature of bottom, sand and mud. Vessels may berth and unberth day or night. Vessels exceeding 55 ft. draft enter only on rising tide. Fresh water available, Diesel and Fuel "C" available. When discharging, full capacity of ship's pumps required. Normal residues and sediments are acceptable without any water. Shore gangway available. Vessels berth port or starboard side alongside.

Minimum length of parallel ship's side – 40 m. No limit on beam.

Max. draft, Berth No. 1 and No. 2 – 52 ft. 06 in. Berth No. 4 – 65 ft. 04 in.

Berth Number	*Grades Handled*	*Pipe-lines No/Dia.* (in.)	*Length* (ft.)	*Load – Discharge Rate* (t.p.h.)	*Maximum Pressure* (lbs.)	*Hoses* (in.)
No. 1	Crude Oil	1×28	4920	8000	220	4×12
No. 2	Crude Oil	1×28	4595	8000	220	4×12
No. 4	Crude Oil	1×40	5500	16000	375	4×16
No. 1	Fuel Oil MDO	2×6 (hoses)	5920	250/300	110	2× 6
No. 2	Fuel Oil MDO	2×6 (hoses)	5575	250/300	110	1× 6
No. 4	Fuel Oil MDO	2×10 (hoses)	5500	300/600	110	2×10 (connections 8 in.)

Use of berths is only allowed for transhipment of inflammable liquids of subclasses 3.1, 3.2 and 3.3 with low (< −18° C), medium (−18° to +22.9° C) and high (+23° to +61° C) flash point.

Mobil Oil Terminal: Mobil Oil Terminal is closed, re-opening uncertain.

Latest soundings are showing suspicious differences between present and charted depth.

Berth Nos. 1 and 1A. Position Lat. 53° 37′ 28″ N., Long. 08° 08′ 30″ E. Distance from "Weser" Lanby, 20 miles. Type of berth, Sea Island. Density, 1025. Current Velocity, 3-4 knots. Mean tidal range 10 ft. 6 in. Nature of bottom, sand and mud. Least depth of water from port entrance to berth, 18.5 m. (60 ft. 09 in.) at MLW. Vessels may berth or unberth day or night. Vessels exceeding 55 ft. draft enter only on rising tide. Fresh water available by barge. Fuel "C" and Diesel available. Dirty ballast facilities available, capacity 29,000 cu.m. seawater, 17,900 cu.m. fresh/brackish water, discharge rate 2,400 cu.m./hr. Vessels berth port or starboard side alongside. All ballast, including clean ballast, to be discharged ashore.

Shore gangway available. An under keel clearance of 1 m. is required at Berth No. 1A at MLW.

Berth No. 1. Max. LOA, 1,150 ft. Min. length, 800 ft. Max. draft, 65 ft. Depth at MLW 68 ft. 11 in.

Berth No. 1A. Max. LOA, 650 ft. Min. length, 500 ft. Max. draft at HW, 48 ft. 2 in. Depth at MLW 41 ft.

Berth Number	*Grades Handled*	*Pipe-lines No/Dia.* (in.)	*Length* (m.)	*Load – Discharge Rate* (cu.m./h.)	*Hoses* (in.)
No. 1	Crude Oil	1×44	5000	17500	4×16
No. 1A	Heavy Fuel Oil	1×30	3000	3200	2×16
	Heavy Fuel Oil	1×30	3000	3200	3×12
	Light Fuel Oil	1×20	3000	3200	2×12
	Gasoline	1×12	3000	950	1×10

Use of Island Jetty (berth 1/1A) is only allowed for transhipment of inflammable liquids of subclasses 3.1 and 3.3 with low (less than −18°C) and high (+23° to +61°C) flash point.

Berth Nos. 2 and 3. (Also see "Shipmaster's Report").Position Lat. 53° 37′ 12″ N., Long. 08° 07′ 36″ E. Distance from " Weser" Lanby, 20 miles. Type of berth, "L"-head jetty. Density, 1025. Current velocity, 3 – 4 knots. Mean tidal range, 10 ft. 6 in. Nature of bottom, sand and mud. Least depth of water from port entrance to berth 7.5 m. (24 ft. 7 in.) at MLW. Vessels may berth or unberth day or night. Vessels up to 21 ft. 4 in. may berth and unberth any time. Fresh water by barge. Diesel and Fuel "C" available. Dirty ballast facilities same as Berth Nos. 1 and 1A. Max. deballasting rates, Berth No. 2, 2×10 in. 1,800 cu.m./hr. Berth No. 3, 2×8 in. 500 cu.m./hr.

All ballast, including clean ballast, to be discharged ashore. Min. distance ship's side to manifold, 1.5 m. If reducer required to match shore flanges, at least 1.8 m. Shore gangway available. A keel clearance of 1 m. is required at MLW until silting developments after dredging can be firmly assessed. Vessels berth port or starboard side alongside.

Max. LOA, 400 ft., min. LOA, 263 ft. will be reduced to 180 ft. Beam, no limit. Max. draft, 31 ft. 8 in. (at HW). Depth of water at MLW 24 ft. 7 in.

Berth Number	*Grades Handled*	*Pipe-lines No./Dia* (in.)	*Length* (m.)	*Load – Discharge Rate* (cu.m./h.)	*Hoses* (in.)
No. 2	Heavy Fuel Oil	1×20	2000	2600	2×10
	Light Heating Oil	1×20	2000	2400	2×10
No. 3	Heavy Fuel Oil	1×16	2000	475	1× 8
	Light Heating Oil	1×20	2000	550	1× 8
	Gasoil	1×10	2000	550	1× 8
	Gasoline	1×12/1×10	2000	950/550	2×10/8
	LPG	1×8	2000	400	1× 6

Use of Berth No. 2 is only allowed for transhipment of inflammable liquids of class 3 with flash point < −18° to +61°C.

Use of Berth No. 3 is only allowed for transhipment gases (class 2) and inflammable liquids of subclasses 3.1, 3.2 and 3.3 —flash point see above under Nord-West Oelleitung Terminal).

Voslapper Groden Jetty (ICI-Jetty):

Position: Lat. 53° 37′ 59″ N., Long. 08° 05′ 46″ E.

Traffic Bridge of 1,346 m. length ends in L-shaped cargo handling pier of 675 m. length. Traffic bridge is fitted with two tracks of 5.5 m. and 3.5 m. width, all cables and pipes are led lengthwise upon the bridge to the pier connections.

Berth No. 1 at the seaward end is provided for 1 tanker of 20,000 d.w.t. – 60,000 d.w.t., but not yet in operation. Berths No. 2 and 3 (inner side) are provided for tankers of 400 d.w.t. – 12,000 d.w.t., limited by a maximum depth of 8.5 m. at MLW.

Use of Berth No. 2 is only allowed for transhipment of ethylene (class 2, UN No. 1038).

Use of Berth No. 3 is only allowed for transhipment of vinyl chloride monomer (class 2, UN No. 1068) and its residue LE and HE or ethylene dichloride (subclass 3.2, UN No. 1184).

Under following conditions Berths No. 2 and 3 can be used by ships from 7,000 - 12,000 d.w.t.:

Ship's length not more than 137 m.

Single tank size of ship:

a.) with Ethylene dichloride cargo not more than 3,100 cu. m.

b.) with vinyl chloride monomer cargo and ethylene not more than 2,900 cu. m.

Ships of more than 120 m. length must be berthed with 1 additional Atlas-spring line fore and aft. The lines are available from shore, if the ship does not have her own.

Berths may only be used by gas and chemical tankers which conform with IMO recommendations and which have a valid certificate to that effect as follows:

1. Resolution A 328 (IX) Code for the Construction and Equipment of Ships carrying liquefied Gases in Bulk,
2. Resolution A 329 (IX) Recommendations concerning Ships not covered by the Resolution 328 (IX),
3. Resolution A 212 (VII) Code for the Construction and Equipment of Ships carrying dangerous chemicals in Bulk.

All stores, fresh water exempted, must be taken onboard from seaward side. These activities are prohibited during cargo handling or taking ballast.

Also see under "General".

Harbour areas (NWO and ICI) may be exceptionally navigated by auxiliary and supply vessels if this is absolutely necessary for the transhipment or ship operations according to Port Regulations, providing these vessels comply with the safety requirements. All other vessels are excluded.

Bunker and diesel oil is available in adequate quantities from Nord-West Ollleitung. At the "Niedersachsen Bridge" it is necessary to order a bunker vessel in advance.

Also see "Developments".

Report: *Berth Approaches:* The main affect on ships approaching the berth results from the flood or ebb current setting South or North nearly parallel to the berth.

Handling of Ships: Berths No. 1 and No. 2 can accept vessel up to 43 ft. draft at any time and over 43 ft. at slack water. Berth No. 4 can accept vessels under 40 ft. at any time, vessels between 40 ft. and 55 ft. at slack water and vessels over 55 ft. at peak high water.

It is of extreme importance that a ship which has to turn before berthing reduces speed in ample time and does not commence turning until its speed over the ground is reduced to zero. Ships scheduled to berth port side to NWO Berth No. 4 should start the turning manoeuvre in the fairway about 800 m. North of the berth.

NWO-Terminal (Nordwest-Olleitung): Cautionary Advice: Due to the strong current at the berths of up to 4 knots, extreme care should always be taken to keep the ship moored safely alongside the berth with all mooring lines tight. Especially during off-setting strong winds and with the tide changing, the moorings must be watched carefully. Shore wires are available.

Berthing Procedures: Berth No. 1: The ship may be berthed with port or starboard side alongside depending on the direction of the current. The ship is always moored with the head into the current. Max. draft ships will be moored only during nearly slack water at high tide. If necessary, the ships will be turned off the jetty.

Berth No. 2: Same procedure is followed as at Berth No. 1.

Berth No. 4: All max. sized ships planned for this berth will run on a time schedule without anchoring from German Bight Lanby to the berth. Ships are normally scheduled to arrive at the turning position about 800 m. North of the berth 2 hours/30 minutes before Slack High Water, then turned if flood tide manoeuvre, then turned and backed up to the berth mooring port side to. It is emphasised that the ship should be stopped over the ground before commencing the turn and ships must not be turned off the berth itself. If the ship is behind schedule and the ebb current has started to run, the ship will then berth without turning and moor starboard side to.

Berthing Speeds/Angles: On Berths No. 1 and 2, the max. berthing speed for 100,000/140,000 d.w.t. tankers is 12.0 cm./sec.

On Berth No. 4, the max. berthing speed for a 250,000 d.w.t. tanker is 12.0 cm./sec. The bending way of the dolphins is recorded on a chart. Signal lamps on the pier of Berths No. 2 and 4 indicate, during berthing approach, speed of the vessel as follows:

red for more than 8 cm./sec.,
yellow for up to 8 cm./sec.,
green for less than 6 cm./sec.

The angle of approach should be as small as possible.

DENSITY: Brackish water.

BRIDGES: 3 swing bridges affect entering dock harbour; these are opened to coincide with lock opening times.

STEVEDORES: 24 hours' notice required. Bulk cargo discharge rate about 150 t.p.h.

MEDICAL: All medical facilities available.

FRESH WATER: Available by pipe-line.

FUEL: All grades available. 2 days' notice required.

CONSULS: Denmark Tel: 41061. Sweden Tel: 26266. Finland Tel: 8021.

REPAIRS: Facilities available for all deck and engine repairs. Repairs affecting main engine or steering gear intended to be carried out at the berths or at Wilhelmshaven Anchorage, must be authorised by NWO, Mobil Oil A.G. and Port Authorities, when sufficient security tugs will be ordered to stand by. No additional charge for tugs if ordered before arrival. Permission for repairs depends on prevailing weather conditions and should be requested before arrival.

DRY DOCKS: Floating docks for vessels of 8,000 and 1,000 tons respectively. 1 small dry dock 50 m. by 10 m. by 2.8 m.

GANGWAY/DECK WATCHMEN: Shore watchman recommended to attend telephone.

OPENING/CLOSING HATCHES: Usually by ship's crew.

CUSTOMS ALLOWANCES: Oil port is Customs free port. In dock harbour each man allowed 5 cigars or 40 cigarettes, or 50 grams tobacco and 50 pieces of cigarette paper; 1 unopened bottle wine/spirits.

REPATRIATION: All facilities available.

AIRPORT: Local airport at Wilhelmshaven-Mariensiel, available for helicopters and small aircrafts. Nearest international airport at Bremen, distance 102 km.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: 1st January; Good Friday; Easter Sunday; Easter Monday; 1st May; Ascension Day; Whit Sunday; Whit Monday; 17th June; Atonement Day; Christmas Day; Boxing Day. Work may be arranged on Easter Monday, Ascension Day, Whit Monday and Boxing Day.

Not observed in oil ports.

POLICE/AMBULANCE/FIRE:

Police: Tel: 110.
NWO Oil Port: Fire/Ambulance Tel: 621.
ICI: Jetty Operator Tel: 882 460.
Fire/Ambulance Tel: 882 310.
Niedersachsen Bridge: Fire/Ambulance Tel: 50308 or 26121.
Dock Harbour: Tel: 112 or 26121.

TELEPHONES: May be placed on board all tankers in oil port. At some locations in dock harbour, installation by Post Office, who require 2 days' notice.

SERVICES: All services available including tank-cleaning, diving, compass adjusting, etc.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required in oil port.

GENERAL: *Federal Republic of Germany – Jade.* On the River Jade from the sea to Wilhelmshaven all vessels are to observe the following regulations.

1. Absolute prohibition of head-on passage and overtaking for vessels confined to the dredged channel with each other.
2. Local prohibition of head-on passage for vessels amongst themselves with
   a) draft exceeding 13.5 m.,
   b) length exceeding 250 m.,
   c) extraordinary pushing and towing units
   within following fairway areas:
   - between buoy pairs 15/16 and 19/20 (circumnavigation Minsener Oog)
   - course change areas at buoy pairs 3/4 (channel entrance), 33/34 and 45/46.
3. Vessels confined to the dredged channel may navigate with the same tide phase only when keeping a longitudinal distance of 5 nautical miles amongst each other within the channel.
4. Prohibition of head-on passing and over-taking for tankers carrying cargoes as per No. 1 of Annex 1 (list of subtances) i.e. gases, ethylene dichloride or vinyl chloride monomer with each other and with all other vessels exceeding 3,000 d.w.t. within following navigation stretches:– between buoy pairs 15/16 and 19/20.

4.1. Vessels confined to the dredged channel, i.e. constrained by their draft, have right of way on the above mentioned stretches.

5. The observance of these directions will be controlled and, if necessary, regulated by the above-mentioned VHF radio station, whose instructions are to be followed.

Urgent shipping police measures may also be executed by Water Police (blue hulled vessels with inscription "WASSERSCHUTZPOLIZE within the Territorial waters of the Federal Republic of Germany).

6. Continuous radio contact with radio station "Jade Revier Rad must be made
   - between buoy 1a or river entrance inward and buoy pa 33/34 on VHF Channel 63;
   - between buoy pairs 33/34 and all waterway areas inward of th position on VHF Channel 20.
   Remark: Shore based radar assistance will be given on th respective VHF channels.
7. When vessels are meeting on reciprocal or nearly reciproc courses each shall alter her course to starboard.
   During the passage of vessels carrying cargoes as per No. 1 Annex 1 (list of substances) with each other or with other vesse the greatest possible lateral distance has to be kept.
8. Vessels proceeding within the fairway have right of way again vessels which
   a) enter the fairway,
   b) cross the fairway,
   c) turn within the fairway,
   d) leave their anchorages.
9. Particular attention is drawn to the observance of the obligatio to the shipping authorities prescribed as per Section A, Part No. 3 of the additional regulations to the traffic regulations waterways navigable by seagoing vessels in the Federal Repub of Germany of the Wasser- und Schiffahrtsdirektion Nordwest.

Regulations Within the Entrance to the Sea Lock – New Outer Harbou – (Neuer Vorhafen) and the Sea Lock in Wilhelmshaven (extract rules):

1. Areas within the Outer Harbour and the Sea Lock belong to th safety zone of Naval Base.
2. Port Authority within these areas is the Naval Port Captain.
3. Traffic direction inward and outward Sea Locks is performed Wasser- und Schiffahrtsamt Officials.
4. Use of port facilities may be restricted or refused in consequen of certain reasons if deemed necessary by Port Authorities.
5. Vessels with dangerous cargoes have to obtain spec authorisation issued by Port Authorities and civil permissio before entering.
6. Vessels exceeding 150 g.r.t. may be obliged to take a Harbo Pilot.
7. Vessels are obliged to give notice to the radio statio "Wilhelmshaven-Lock" on VHF Channels 16/13 before enterin Naval radio station is operating on VHF Channels 16/11.
8. Lock signals and preliminary lock signals are to be observe This applies also to signals given by Naval Authorities.
9. Military safety zones must be passed at reduced speed b without delays. Bow anchors must be kept ready to drop.
10. Sailing vessels may not hamper other vessels.
11. Only in cases of distress is it allowed to go alongside within th Outer Harbour.
12. Photographing, fishing, bathing, diving, use of pyrotechnics a operation of position-finding devices and ship's wireless station exempt for navigational use – is not allowed.
13. Pollution of water within harbour areas is prohibited.

DEVELOPMENTS: *Liquid Gas Berth:* To the North of Mobil Oil A.G.

The existing ICI Terminal (see "Tankers") is planned to be extende for transhipment of L.N.G.

"Lower Saxony Bridge" (Niedersachsen Bridge): Th "Niedersachsen Bridge" is to be extended. It is planned to provi facilities for the loading and discharge of large vessels up to 250,0 d.w.t. with dry and liquid bulk cargoes.

Dredging: Maintenance dredging in progress.

ANNEX NO. 1:

(List of dangerous substances which have to be reported) Annex III the traffic regulations for waterways navigable by seagoing vessels the Federal Republic of Germany:

1. Liquified Gases	*IMDG Code No.*
Acetaldehyde	1089
Ammonia, anhydrous, liquified or ammonia	1005
Butadiene, inhibited	1010
Butane or butane mixtures	1011
Butylene	1012
Chlorine	1017
Dimethylamine, anhydrous	1032
Ethyl chloride	1037
Ethane, refrigerated liquid	1961
Ethylamine (monoethylamine)	1036
Ethylene, refrigerated liquid	1038
Ethylene oxide	1040
Methane, refrigerated liquid or Natural Gas, refrigerated liquid	1972
Methyl acetylene and propadiene mixtures, stabilized	1060
Methyl bromide	1062
Methyl chloride	1063
Propane	1978
Propylene	1077
Sulphur dioxide, liquified	1079
Vinyl chloride, inhibited	1086

2.Chemicals	*IMDG Code No.*
Absorbent A 1	1992''
Absorbent A 2	1993''
Absorbent A 3	1993''

2.Chemicals	*IMDG Code No.*
Acetic acid, glacial or Acetic acid solution, more than 80% acid, by weight	2789
Acetic anhydride	1715
Acetone	1090*
Acetone cyanohydrin	1541
Acetonitrile	1648
Acrylic acid, inhibited	2218
Acrylonitrile, inhibited	1093
Adiponitrile	2205
Alcohol, denatured	1986/1987**
Alcohol, industrial	1986/1987**
Allyl alcohol	1098
Allyl chloride	1100
Aminoethylethanolamine	–
Aniline	1547
Benzene	1114
Benzyl chloride	1738
Isobutyl acrylate, inhibited	2527
Butyl acrylate, inhibited	2348
Butyl alcohol	1120*
Butyl ether	1149
Normal butyl methacrylate	2227
Isobutyraldehyde	2045
n–Buthyraldehyde	1129
Camphor oil	1130
Carbolic oil	–
Carbon disulphide	1131
Carbon tetrachloride	1846
Chlorobenzene	1134
Chloroform	1888
Chlorohydrines, crude	–
Chloroprene, inhibited	1991
Chlorosulfonic acid with or without sulphur trioxide	1754
Coal tar naphtha	2553
Cresols (ortho–, meta–, para)	2076
Crotonaldehyde, inhibited	1143
Cyclohexanone	1915
Cyclohexylamine	2357
Di–(normal – butyl)amine	2248
1.1–Dichloroethane	2362
1.2–Dichloroethane	1184
Dichloroethyl ether	1916
Dichloromethane (Methylene chloride)	1593*
1.1–Dichloropropane	**
1.2–Dichloropropane	1279
1.3–Dichloropropane	–
1.3–Dichloropropene	2047
2.3–Dichloropropene	2047**
Diethylamine	1154
Diethyl ether (Ethyl ether)	1155
Dimethylamine, solution	1160
Dimethyl ethanolamine	2051
Dimethylformamide	2265
1.4–Dioxane	1165
Diisopropylamine	1158
Epichlorohydrin	2023
Ethyl acrylate, inhibited	1917
Ethyl alcohol	1170*
Ethyl benzene	1175*
Ethylene chlorohydrin	1135
Ethylmethacrylate, inhibited	2277
Ethylene cyanohydrin	–
Ethylene diamine	1604
Ethylene dibromide	1605
Ethylene glycol monoethyl ether acetate	1172**
Formaldehyde solutions (45 % or less)	1198
Formic acid	1779
Furfural	1199
Gascondensate	1993**
Heptane, and its isomers	1206*
Hexane, and its isomers	1208*
Isoprene, inhibited	1218
Lignite tars	1999**
Mesityl oxide	1229
Methylacrylate, inhibited	1919
Methylalcohol (methanol)	1230*
Methyl isocyanate or methylisocyanate solutions	2480**
Methyl methacrylate, monomer, inhibited	1247
Methylstyrene	2303
Monoethylamine solutions (72 % or less)	2270
Nerozene	1993**
Nitrobenzol	1662
Morpholine	2054
Motor fuel anti-knock mixtures	1649
Nitric acid (70% and over)	2031/2032
1– or 2–Nitropropane	2608
Nitrotoluenes (ortho–, meta–, para)	1664
Oleum	1831
Paraldehyde	1264
Pentachloroethane	1669
Phenol, molten	2312
Phenylisocyanate	2487**
Phosphorusoxychloride	1810**
Phosphorustrichloride	1809**
Phosphorus, white, molten	2447
Phosphoric acid, liquid	1805
Propionic acid, solution containing no less than 80 % acid	1848
iso–Propylalcohol	1219*
iso–Propylamine	1221
n–Propylamine	1277
iso–Propylbenzene (Cumene)	1918*
Propylene oxide	1280
Pyridine	1282
Pyrocondensate	1992**
Sodium hydroxide, solution	1824*
Sulphuric acid	1830
Styrene monomer, inhibited	2055
Turpentine	1299*
1.1.2.2–Tetrachloroethane	1702
Tetrachloroethylene (Perchloroethylene)	1897*
Tetrahydrofuran	2056
Toluene (Methylbenzol)	1294*
Toluene diisocyanate	2078
Trichloroethylene	1710
1.1.1–Trichloroethane	2831
Triethylamine	1296
n– and iso–Valeraldehyde	2058
Vinyl acetate, inhibited	1301
Vinyl ethyl ether, inhibited	1302
Vinylidene chloride, inhibited	1303
Vinyl toluenes, inhibited	2618
Xylenes (Dimethylbenzene)	1307*

3. *Mineral (crude) oil and mineral oil products.*

4. *Remarks:*

* Substances listed in IMO Code for Gas and Chemical Tanker for which the Code does not apply.

** Substances not listed in IMO Code for Gas and Chemical Tankers.

ANNEX NO. 2: *Data of Wilhelmshaven Sea Lock:*

Operation hours of Wilhelmshaven Sea Lock:

Monday-Friday	0600 – 1830 hrs.
Saturdays	0630 – 1600 hrs.
Sundays and holidays	0800 – 1600 hrs.

Beyond these hours the lock will be operated only for commercial shipping when service is ordered to the Lock Master on VHF Channel 16/13 (call "Wilhelmshaven Lock") or telephone (04421) – 304084/26311 as follows:

1. Lockage between 0000 hrs. and commencement of normal operating hours to be ordered on the day before up to 1200 hrs.
2. Lockage between termination of normal operating hours and 2400 hrs. to be ordered on the same day until 2 hours before end of operations.

Dimensions of Wilhelmshaven Sea Lock:

Length between gates	390 m.
Length usable	360 m.
Breadth between lock-basin walls	60 m.
Breadth between fenders	57 m.
Depth (above mean high tide)	14.75 m.

(Vessels in ballast up to 250,000 d.w.t. have passed without difficulties.)

In case of doubt, German text of lock regulations is authoritative.

ANNEX NO. 3

Wasser- und Schiffahrtsamt
Wilhelmshaven Wilhelmshaven, the ....of ....19...
3-332.3/4 /...

Official Permit of Navigation
No. /19...

The Master of the tanker " . . . . " has been granted official permission to navigate the Jade shipping channel on account of the application made by the Shipping Agency . . . . , dated the ....of ....19 ......and in accordance with the stipulations contained in §57 subparagraph 1, No. of the National Maritime Shipping Routes Regulations (Seeschiffahrtsstrassen-Ordnung) of the 15th April 1987 (Federal Gazette Bulletin 1, pages 1266-1286).

The transfer of this permit is forbidden unless authorised by the Waterway Authority (Wasser- und Schiffahrtsamt) Wilhelmshaven.

The validity of this permit expires on the ....of ....19...... and applies only to a single passage of the Jade shipping channel in inward and outward bound directions.The permit does not authorise the holder to encroach on or to prejudice the rights of third parties or to encroach on or to take into use objects being in possession of others neither does it supercede any necessary administrative measures in connection with any other lawful regulation or any agreements of a private and legal nature which may be, if occasion arises, concluded with the Government of the Federal Republic of Germany.

The following documents/statements are binding for the grant of this permit:

(a) The application submitted by the Agency . . . . dated the ....of ....19 ......

(b) The technical data of the vessel delivered with the above named application.

Berth No. 4: All max. sized ships planned for this berth will run on a time schedule without anchoring from German Bight Lanby to the berth. Ships are normally scheduled to arrive at the turning position about 800 m. North of the berth 2 hours/30 minutes before Slack High Water, then turned if flood tide manoeuvre, then turned and backed up to the berth mooring port side to. It is emphasised that the ship should be stopped over the ground before commencing the turn and ships must not be turned off the berth itself. If the ship is behind schedule and the ebb current has started to run, the ship will then berth without turning and moor starboard side to.

Berthing Speeds/Angles: On Berths No. 1 and 2, the max. berthing speed for 100,000/140,000 d.w.t. tankers is 12.0 cm./sec.

On Berth No. 4, the max. berthing speed for a 250,000 d.w.t. tanker is 12.0 cm./sec. The bending way of the dolphins is recorded on a chart. Signal lamps on the pier of Berths No. 2 and 4 indicate, during berthing approach, speed of the vessel as follows:

red for more than 8 cm./sec.,
yellow for up to 8 cm./sec.,
green for less than 6 cm./sec.

The angle of approach should be as small as possible.

DENSITY: Brackish water.

BRIDGES: 3 swing bridges affect entering dock harbour; these are opened to coincide with lock opening times.

STEVEDORES: 24 hours' notice required. Bulk cargo discharge rate about 150 t.p.h.

MEDICAL: All medical facilities available.

FRESH WATER: Available by pipe-line.

FUEL: All grades available. 2 days' notice required.

CONSULS: Denmark Tel: 41061. Sweden Tel: 26266. Finland Tel: 8021.

REPAIRS: Facilities available for all deck and engine repairs. Repairs affecting main engine or steering gear intended to be carried out at the berths or at Wilhelmshaven Anchorage, must be authorised by NWO, Mobil Oil A.G. and Port Authorities, when sufficient security tugs will be ordered to stand by. No additional charge for tugs if ordered before arrival. Permission for repairs depends on prevailing weather conditions and should be requested before arrival.

DRY DOCKS: Floating docks for vessels of 8,000 and 1,000 tons respectively. 1 small dry dock 50 m. by 10 m. by 2.8 m.

GANGWAY/DECK WATCHMEN: Shore watchman recommended to attend telephone.

OPENING/CLOSING HATCHES: Usually by ship's crew.

CUSTOMS ALLOWANCES: Oil port is Customs free port. In dock harbour each man allowed 5 cigars or 40 cigarettes, or 50 grams tobacco and 50 pieces of cigarette paper; 1 unopened bottle wine/spirits.

REPATRIATION: All facilities available.

AIRPORT: Local airport at Wilhelmshaven-Mariensiel, available for helicopters and small aircrafts. Nearest international airport at Bremen, distance 102 km.

TIME: GMT plus 1 hour. GMT plus 2 hours (last weekend in March to last weekend in September).

HOLIDAYS: 1st January; Good Friday; Easter Sunday; Easter Monday; 1st May; Ascension Day; Whit Sunday; Whit Monday; 17th June; Atonement Day; Christmas Day; Boxing Day. Work may be arranged on Easter Monday, Ascension Day, Whit Monday and Boxing Day.

Not observed in oil ports.

POLICE/AMBULANCE/FIRE:

Police: Tel: 110.
NWO Oil Port: Fire/Ambulance Tel: 621.
ICI: Jetty Operator Tel: 882 460.
Fire/Ambulance Tel: 882 310.
Niedersachsen Bridge: Fire/Ambulance Tel: 50308 or 26121.
Dock Harbour: Tel: 112 or 26121.

TELEPHONES: May be placed on board all tankers in oil port. At some locations in dock harbour, installation by Post Office, who require 2 days' notice.

SERVICES: All services available including tank-cleaning, diving, compass adjusting, etc.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required in oil port.

GENERAL: *Federal Republic of Germany – Jade.* On the River Jade from the sea to Wilhelmshaven all vessels are to observe the following regulations.

1. Absolute prohibition of head-on passage and overtaking for vessels confined to the dredged channel with each other.
2. Local prohibition of head-on passage for vessels amongst themselves with
   a) draft exceeding 13.5 m.,
   b) length exceeding 250 m.,
   c) extraordinary pushing and towing units
   within following fairway areas:
   - between buoy pairs 15/16 and 19/20 (circumnavigation Minsener Oog)
   - course change areas at buoy pairs 3/4 (channel entrance), 33/34 and 45/46.
3. Vessels confined to the dredged channel may navigate with the same tide phase only when keeping a longitudinal distance of 5 nautical miles amongst each other within the channel.
4. Prohibition of head-on passing and over-taking for tankers carrying cargoes as per No. 1 of Annex 1 (list of subtances) i.e. gases, ethylene dichloride or vinyl chloride monomer with each other and with all other vessels exceeding 3,000 d.w.t. within following navigation stretches:– between buoy pairs 15/16 and 19/20.

4.1. Vessels confined to the dredged channel, i.e. constrained by their draft, have right of way on the above mentioned stretches.

5. The observance of these directions will be controlled and, if necessary, regulated by the above-mentioned VHF radio station, whose instructions are to be followed.

Urgent shipping police measures may also be executed by Water Police (blue hulled vessels with inscription "WASSERSCHUTZPOLIZE within the Territorial waters of the Federal Republic of Germany).

6. Continuous radio contact with radio station "Jade Revier Radi must be made
   - between buoy 1a or river entrance inward and buoy pai 33/34 on VHF Channel 63;
   - between buoy pairs 33/34 and all waterway areas inward of th position on VHF Channel 20.
   Remark: Shore based radar assistance will be given on th respective VHF channels.
7. When vessels are meeting on reciprocal or nearly reciproc courses each shall alter her course to starboard.
   During the passage of vessels carrying cargoes as per No. 1 Annex 1 (list of substances) with each other or with other vesse the greatest possible lateral distance has to be kept.
8. Vessels proceeding within the fairway have right of way again vessels which
   a) enter the fairway,
   b) cross the fairway,
   c) turn within the fairway,
   d) leave their anchorages.
9. Particular attention is drawn to the observance of the obligatio to the shipping authorities prescribed as per Section A, Part I No. 3 of the additional regulations to the traffic regulations f waterways navigable by seagoing vessels in the Federal Republ of Germany of the Wasser- und Schiffahrtsdirektion Nordwest.

Regulations Within the Entrance to the Sea Lock – New Outer Harbo – (Neuer Vorhafen) and the Sea Lock in Wilhelmshaven (extract rules):

1. Areas within the Outer Harbour and the Sea Lock belong to th safety zone of Naval Base.
2. Port Authority within these areas is the Naval Port Captain.
3. Traffic direction inward and outward Sea Locks is performed b Wasser- und Schiffahrtsamt Officials.
4. Use of port facilities may be restricted or refused in consequenc of certain reasons if deemed necessary by Port Authorities.
5. Vessels with dangerous cargoes have to obtain speci authorisation issued by Port Authorities and civil permissio before entering.
6. Vessels exceeding 150 g.r.t. may be obliged to take a Harbo Pilot.
7. Vessels are obliged to give notice to the radio statio "Wilhelmshaven-Lock" on VHF Channels 16/13 before enterin Naval radio station is operating on VHF Channels 16/11.
8. Lock signals and preliminary lock signals are to be observe This applies also to signals given by Naval Authorities.
9. Military safety zones must be passed at reduced speed b without delays. Bow anchors must be kept ready to drop.
10. Sailing vessels may not hamper other vessels.
11. Only in cases of distress is it allowed to go alongside within th Outer Harbour.
12. Photographing, fishing, bathing, diving, use of pyrotechnics a operation of position-finding devices and ship's wireless statio exempt for navigational use – is not allowed.
13. Pollution of water within harbour areas is prohibited.

DEVELOPMENTS: *Liquid Gas Berth:* To the North of Mobil Oil A.G. The existing ICI Terminal (see "Tankers") is planned to be extende for transhipment of L.N.G.

"Lower Saxony Bridge" (Niedersachsen Bridge): T "Niedersachsen Bridge" is to be extended. It is planned to provi facilities for the loading and discharge of large vessels up to 250,0 d.w.t. with dry and liquid bulk cargoes.

Dredging: Maintenance dredging in progress.

ANNEX NO. 1:

(List of dangerous substances which have to be reported) Annex III the traffic regulations for waterways navigable by seagoing vessels the Federal Republic of Germany:

1. Liquified Gases	*IMDG Code No.*
Acetaldehyde	1089
Ammonia, anhydrous, liquified or ammonia	1005
Butadiene, inhibited	1010
Butane or butane mixtures	1011
Butylene	1012
Chlorine	1017
Dimethylamine, anhydrous	1032
Ethyl chloride	1037
Ethane, refrigerated liquid	1961
Ethylamine (monoethylamine)	1036
Ethylene, refrigerated liquid	1038
Ethylene oxide	1040
Methane, refrigerated liquid or Natural Gas, refrigerated liquid	1972
Methyl acetylene and propadiene mixtures, stabilized	1060
Methyl bromide	1062
Methyl chloride	1063
Propane	1978
Propylene	1077
Sulphur dioxide, liquified	1079
Vinyl chloride, inhibited	1086

2. Chemicals	*IMDG Code No.*
Absorbent A 1	1992"
Absorbent A 2	1993"
Absorbent A 3	1993"

2. Chemicals	*IMDG Code No.*
Acetic acid, glacial or Acetic acid solution, more than 80% acid, by weight	2789
Acetic anhydride	1715
Acetone	1090*
Acetone cyanohydrin	1541
Acetonitrile	1648
Acrylic acid, inhibited	2218
Acrylonitrile, inhibited	1093
Adiponitrile	2205
Alcohol, denatured	1986/1987**
Alcohol, industrial	1986/1987**
Allyl alcohol	1098
Allyl chloride	1100
Aminoethylethanolamine	–
Aniline	1547
Benzene	1114
Benzyl chloride	1738
Isobutyl acrylate, inhibited	2527
Butyl acrylate, inhibited	2348
Butyl alcohol	1120*
Butyl ether	1149
Normal butyl methacrylate	2227
Isobutyraldehyde	2045
n–Buthyraldehyde	1129
Camphor oil	1130
Carbolic oil	–
Carbon disulphide	1131
Carbon tetrachloride	1846
Chlorobenzene	1134
Chloroform	1888
Chlorohydrines, crude	–
Chloroprene, inhibited	1991
Chlorosulfonic acid with or without sulphur trioxide	1754
Coal tar naphtha	2553
Cresols (ortho–, meta–, para)	2076
Crotonaldehyde, inhibited	1143
Cyclohexanone	1915
Cyclohexylamine	2357
Di–(normal – butyl)amine	2248
1.1–Dichloroethane	2362
1.2–Dichloroethane	1184

Vinyl ethyl ether, inhibited	1302
Vinylidene chloride, inhibited	1303
Vinyl toluenes, inhibited	2618
Xylenes (Dimethylbenzene)	1307*

3. *Mineral (crude) oil and mineral oil products.*

4. *Remarks:*
   - * Substances listed in IMO Code for Gas and Chemical Tanker for which the Code does not apply.
   - ** Substances not listed in IMO Code for Gas and Chemical Tankers.

ANNEX NO. 2: *Data of Wilhelmshaven Sea Lock:*

Operation hours of Wilhelmshaven Sea Lock:

Monday-Friday	0600 – 1830 hrs.
Saturdays	0630 – 1600 hrs.
Sundays and holidays	0800 – 1600 hrs.

Beyond these hours the lock will be operated only for commercial shipping when service is ordered to the Lock Master on VHF Channel 16/13 (call "Wilhelmshaven Lock") or telephone (04421) – 304084/26311 as follows:

1. Lockage between 0000 hrs. and commencement of normal operating hours to be ordered on the day before up to 1200 hrs.
2. Lockage between termination of normal operating hours and 2400 hrs. to be ordered on the same day until 2 hours before end of operations.

Dimensions of Wilhelmshaven Sea Lock:

Length between gates	390 m.
Length usable	360 m.
Breadth between lock-basin walls	60 m.
Breadth between fenders	57 m.
Depth (above mean high tide)	14.75 m.

(Vessels in ballast up to 250,000 d.w.t. have passed without difficulties.)

In case of doubt, German text of lock regulations is authoritative.

ANNEX NO. 3

Wasser- und Schiffahrtsamt
Wilhelmshaven Wilhelmshaven, the . . . . . .of . . . . . . .19...
3-332.3/4 /...

Official Permit of Navigation
No. /19...

The Master of the tanker " . . . . " has been granted official permission to navigate the Jade shipping channel on account of the application made by the Shipping Agency . . . . , dated the ....of ....19 .....and in accordance with the stipulations contained in §57 subparagraph 1, No. 1 of the National Maritime Shipping Routes Regulations (Seeschiffahrtsstrassen-Ordnung) of the 15th April 1987 (Federal Gazette Bulletin 1, pages 1266-1286).

The transfer of this permit is forbidden unless authorised by the Waterway Authority (Wasser- und Schiffahrtsamt) Wilhelmshaven.

The validity of this permit expires on the ....of ....19...... and applies only to a single passage of the Jade shipping channel in inward and outward bound directions.The permit does not authorise the holder to encroach on or to prejudice the rights of third parties or to encroach on or to take into use objects being in possession of others neither does it supercede any necessary administrative measures in connection with any other lawful regulation or any agreements of a private and legal nature which may be, if occasion arises, concluded with the Government of the Federal Republic of Germany.

The following documents/statements are binding for the grant of this permit:

(a) The application submitted by the Agency . . . . dated the ....of ....19 .....

(b) The technical data of the vessel delivered with the above named application.

This permit is issued subject to the following conditions and stipulations:

1. Shore based radar assistance has to be ordered well in time before commencement of river passage at the Wilhelmshaven Radar and Information Centre (Revierzentrale) via "Deutsche Bucht Revier Radio" (VHF Channel 16/80/79) respectively "Jade-Revier-Radio" (VHF Channel 16/20/63).
2. In case of a visibility of less than..............m. the entrance into the Jade shipping channel or the departure from a berth or anchorage is not permitted.
3. In case of wind in gale force (Beaufort 8-9) or more, the commencement of river passage is not permitted.
4. Inward bound the relative speed of 10 knots over the ground laid down in the tidal navigation schedule for the Jade up to the light-buoy "..........." must be complied with, taking into account the maritime traffic within the channel.
5. Prior to commencement of the channel passage, tidal information must be obtained sufficiently well in advance to ensure that the tide will permit an underkeel clearance (UKC) during the entire passage until vessel is taken over by tugs or has left the channel seawards as follows:
   (a) From Buoy No. "1a" to Buoy No. "23": 1.97 m.
   (b) From Buoy No. "23" to Buoy No. "45": 1.93 m.
   (c) From Buoy No. "45" to NWO-Jetties: 1.75 m.
6. Before commencement of the passage, it is essential to ensure that the complete propulsion and steering equipment as well as all other manoeuvre and anchor devices are capable of operating without any restrictions, even when subjected to the increased stresses resulting from extreme manoeuvring conditions. Should, for any reason whatsoever, the passage in the channel need to be interrupted, the immediate assistance of sufficient tugs must be requested in order to maintain the ship on its course in the shipping channel, or if necessary, to allow the ship to be turned within the channel, taking the draft into account.
7. The turning or mooring manoeuvre must be carried out with adequate assistance of tugs in the manner mandatory in the harbour of Wilhelmshaven. Up to fresh breeze (5 Beaufort) total pulling force of at least.................tons is necessary.
   With strong breeze (6–7 Beaufort) a pulling force of at least ....tons is necessary.
   When mooring at low tide (to be considered only at a draft of 13.0 m. to 16 m.) the total pulling force has to be increased respectively at least for another.................tons additionally.
   The total pulling force must be distributed among at least 6 tugs.
8. The stipulations contained in the above paragraphs 1–7 apply also to the casting-off manoeuvre and to the subsequent return seaward passage. For the casting-off manoeuvre, depending on wind conditions and with agreement of the pilots, the number of tugs and total pulling force may be reduced, provided that the safe performance of the manoeuvres is ensured.

This permit is issued subject to the following stipulations and instructions.

The right to issue any future necessary additions, amendments or supplements to the above instructions, or the right to cancel the permit are reserved, should this be deemed necessary to ensure the safety and the easy flow of shipping traffic or the prevention of dangers caused by shipping operations.

This permit can be cancelled immediately when one of the above specified conditions and for stipulations is not observed.

Charges:

In connection with the issue of this permit and in accordance with No. 2 of the Tariff for official functions of the Federal Waterways Shipping Administration dated the 13th September 1989 (Federal Gazette Bulletin 1, page 1666 - 1671).

a fee of ....DM
has been laid down.
In addition and in accordance with §1 (2)
of the above schedule, expenses of ....DM
The total sum due is ....DM

These charges shall be made payable, free of charge to the recipient, to the Bundeskasse Bremen – Account No. 290 010 11 at the Landeszentralbank Bremen, quoting the cash remark "1203 – 111 01 WSA Wilhelmshaven", not later than the ..... of .... 19.... . Only payments to the above named account will release vessel from liability to pay.

Advice in respect of judicial right:

An appeal against this decree can be lodged with the local maritime authorities, Wasser- und Schiffahrtsamt Wilhemshaven, Mozartstrasse 32, within one calendar month, either in writing, or by appearing in person to register an appeal.

In cases of doubt, the German issue of this permit is authoritative.

Wasser- und Schiffahrtsamtes
Wilhelmshaven
Captain Stockhorst

SHIPMASTER'S REPORT: Mobil Sea Island (Platform): (updated 1990).

Position: Between Jade River Buoy Nos. 18 and 19.

Pilotage: Sea Pilots (2) board/leave at Deutsche Bucht Lanby by helicopter.

Berthing Pilots (2) board/leave about 2 to 3 miles North of Sea Island by launch.

Pilotage straightforward to "Weser" Lanby where river passage begins.

Two bad bends here make strict attention to steering and helmsman necessary.

Passage Time:

Inward (VLCC – half cargo)	
Sea Pilotage	3 hours 50 minutes
Berth Pilotage	54 minutes
Mooring	57 minutes
Pilotage distance	41 miles
Outward (VLCC – Ballast)	
Berthing Pilotage	39 minutes
Sea Pilotage (to 8 miles South of Lanby)	2 hours 24 minutes
Pilotage distance	31 miles

Helicopters: Base for the 3 German rivers at Wilhelmshaven.

First contact 1 to 2 hours before arrival at Deutsche Bucht Lanby v Norddeich Radio Channel 16-27 when ETA confirmed and that vess is familiar with helicopter procedures.

Thereafter continuous watch on Channel 16 VHF until helicopte contact will require continuous calling on 410 kHz and listening out o Channel 9 VHF until operation completed.

Berthing/Unberthing: Carried out at slack water only. Deep laden VLC on HW only. Ballast or half-loaded VLCCs on either slack water. Dee laden VLCCs can only proceed inward on flood tide.

River passage at Buoy No. 3 begins about 4 hours before local H at Wilhelmshaven and is proceeding according to fixed tide schedule.

Minimum underkeel clearances to be observed:

1. Inward bound:
   (a) From Buoy No. "1a" to Buoy No. "23": 1.97 m
   (b) From Buoy No. "23" to Buoy No. "45": 1.93 m
   (c) From Buoy No. "45" to NWO Jetties: 1.75 m
2. Outward bound:
   jetties to sea: 15%.

Tugs: Six tugs used for any VLCC movement, 1 forward, 1 aft an 4 "pushers". Additional tugs have to be ordered well in advance.

Moorings: Standard VLCC mooring arrangement. Springs run out firs

Cargo: 4×16 in. Chicksan booms available. Discharge rates compatib with modern VLCC facility. Official outturn figures average 1.5% les than ship figures.

Crude Oil Washing: Subject prior permission this is allowed.

Air Pollution: Monitoring of gas emission from tank venting syste carried out during ballasting. If readings high, ballasting rate must b adjusted to keep readings within set parameters (parameters no known).

Documentation: As per "Guide". *Important that Certificate of Financ Responsibility is on board otherwise vessel fined (up to a maximum o D.M. 10,000).*

Shore Leave: Permitted. Ferry is on call when required from Island t mainland berth. Refinery jeep is then on call from Gate House. It i forbidden to walk in Refinery area. Taxis can be called from Gatehous

General: The Sea Island is in the "free port" area, therefore, no persona effects lists or other customs problems. Authorities inflexible i certification problems arise (Certificate of Financial Responsibility).

SHIPMASTER'S REPORT: April 1988 (updated 1990).

Chart: B.A. Chart No. 3669.

Pilotage: Pilot boards by motor boat from the seagoing Jade/Weser Pil Cutter which is stationed about one mile S.E. of "Weser" Lanby. O boarding, the Pilot requires the Tanker Check List.

Pilots change just North of the berth on entering and leaving. Tim from pilot vessel to ICI Berth is about 2 hours.

Tugs: Tugs are not used by small vessels but standby astern whi vessel alongside.

Berth: The ICI Berth is 5 miles North of Wilhelmshaven and extends t approximately 0.75 miles. There are 3 berths (Nos. 1, 2 and 3), but on Berths No. 2 and No. 3 are used and these are inside of the 'L' shape section. Maximum depth at Chart Datum on Berths No. 2 and No. 3 i 8.5 m.

Berth No. 2 (North) is for Ethylene and Berth No. 3 is for VCM an EDC. Vessels normally berth port side to heading South.

Mooring at each end consists of 7 lines (3 head/stern lines, 2 brea lines and 2 springs). Mooring and unmooring is carried out quickly wi the use of a mooring boat.

Fire wires must be tended at all times and must be between 1.0 m and 2.0 m. above the water.

Cargo: Berth No. 2 (Ethylene): Liquid and vapour return are 6 i Chicksans. Vapour line not normally connected during discharg Normally warmest temperature accepted is −101° C. Shore can acce vessels maximum pumping rate in the daytime but is reduced at nig We averaged 149 t.p.h. with the maximum being 175 t.p.h.

On completion the arms are cleared with ship's hot gas for abo 20 minutes.

Berth No. 3 (VCM and EDC): Separate lines are provided for ea product. The liquid loading line is 8 in. and the vapour return line is 4 i

Due to shore power difficulties the pumping rate is reduced after da when the shore lighting is on. This is due to Grid distribution which enta the shore booster pump being shut down. This in turn reduces t pumping rate by half. On occasions ships are not berthed at night as is not worth accepting the low pumping rate.

In Winter discharge can be prolonged to 36 hours whereas in Summ it is normally 12 hours.

The surveyor handles most of the paper work, except Notice Readiness, which is accepted by the Loading Master.

Documentation: The berth is within a free trade area, therefore no Cr Declaration or Stores Lists required. The Immigration Officer boards arrival and on departure in order to check all non-EEC passport holde Shore passes are issued to non-EEC passport holders and must handed in prior to departure.

Facilities: Fresh water is available from the pier and is metered.

There is a telephone at the control pier which is metered.

Lorries delivering stores are permitted to within 100 m. of the sh side. Berth crane available.

A shore gangway is available and is landed on the forecastle on small ships.

No barges allowed alongside during cargo operations.

The Water Police board the vessel on arrival and check all certificates and the Oil Record Book. The Oil Record Book must be completely up-to-date and carefully compiled and signed by both the Master and the Chief Engineer. For gas vessels Cargo Oil Record Book not required.

The Water Police required a copy of the Tanker Check List.

2. *Port Authority:* Niedersachsisches Hafenamt Wilhelmshaven, Neckar Strasse 10, 2940 Wilhelmshaven. *Tel:* (04421) 4800–0. *FAX:* 04421-480099. *Contact:* Captain Boege or Captain Pape.
3. *Municipal Port Authority:* (Competent for harbour affairs within municipal harbour limits) Stadt Wilhelmshaven, Rathausplatz, 2940 Wilhelmshaven. *Tel:* (04421) 297786. *Contact:* Captain Muehlinghaus.

AGENT: Fisser & V. Doornum, Luisenstrasse 4-6, P.O.Box 466, D-2940 Wilhelmshaven, Federal Republic of Germany. Tel: (4921) 803211/2. Telex: 27817. Fax: (4921) 20861.

WISMAR: 53.54 N. 11.27 E. (See Plan)

DOCUMENTS:
Health Declaration.
3 Crew Lists.
3 Passenger Lists.
2 Currency Lists.
Stores List.
Bonded Stores List.
Crew Personal Effects List.
Cargo Documents.
Ship's Certificates.

On arrival Master to complete Master's Declaration and Master's Report.

PILOTAGE: Compulsory for commercial vessels over 150 g.r.t., 4 hours' notice required by Wismar pilots, pilots on VHF throughout 24 hours. Pilots meet vessels day and night near Wismar Light Buoy.

Also see "Baltic Deep-Sea Pilotage" – Page 174.

ANCHORAGES: Anchorage in Outer Roads, North of Hannibal Shoal in the following positions:

(a) 53° 59.90′ N., 11° 20.70′ E.
(b) 53° 59.60′ N., 11° 21.85′ E.
(c) 53° 59.10′ N., 11° 21.90′ E.
(d) 53° 58.45′ N., 11° 21.10′ E.
(e) 53° 58.60′ N., 11° 20.80′ E.

The depths are 11 m. – 17 m., condition of the ground is sand and stones.

RESTRICTIONS: The harbour is approached through a buoyed and lighted channel, 15 miles long, dredged to a depth of 9.5 m. (31 ft. 3 in.) MWL over a width of 60 m.

Vessels over 125 m. length or exceeding 7.3 m. (24 ft.) draft may enter in daylight only.

The water level does not vary much during settled weather, but during gales fluctuations of ± 1 m. (3 ft.) or even more often occur.

Vessels should give at least 4 hours' Notice of Arrival at the Fairway Buoy.

MAX. SIZE: Length up to 200 m. Max. draft 29 ft. (8.8 m.).

HEALTH: Pratique given on arrival. In case suspected disease or fever on board radio details to Agent or Harbour Master before arrival.

RADIO: Wismar Port Radio Station keeps a constant watch on VHF. Rugen Radio, call sign "Y5M".

VHF: "Wismar Port" on VHF Channel 17.
"Timmendorf Pilot" on VHF Channel 12.

TUGS: 3 tugs of 750 h.p. available. Tugs compulsory for vessels over 1,000 g.r.t. entering, advance notice required. For berthing and unberthing tugs join vessel according to the Pilot's instructions.

BERTHING: The harbour is on the East side at the inner end of the entrance channel.

CARGO HANDLING FACILITIES: Shore cranes of 6 – 12 tons, a new "Atlant" crane max. 20/40 tons, 3 mobile cranes of 40 tons, floating crane of 100 tons, 3 mechanical loaders for potash with a capacity of 9,500 tons per day, grain suction plant.

STEVEDORES: *Working Hours:* Monday – Friday: 0600-1400, 1400-2200, 2200-0600. Meals: 1000-1030, 1800-1830, 0200-0230.

Saturday/Sunday: General cargo handling places: 0600-1800, 2200-0600. Meals: 1000-1030, 1400-1430, 0200-0230. No work from 1800-2200.

Potash and liquids: 0600-1800, 1800-0600. Meals: 1000-1030, 1300-1330, 2200-2230, 0200-0230.

The port works at night and on weekends if labour ordered.

MEDICAL: Medical station with doctor in Old West Port. Hospital also available. Advance notice to Agent required if medical assistance necessary.

FRESH WATER: Available from shore hydrants at all berths.

FUEL: All grades fuel and gas oil obtainable. Vessels calling for bunkers only pay no harbour dues, and are allowed a reduction in pilotage and clearance fees.

REPAIRS: Repairs can be effected at Mathias-Thesen Shipyard. Floating crane available, capacity up to 100 tons.

TIME: GMT plus 1 hour. Summertime GMT plus 2 hours. (25th March – 30th September).

HOLIDAYS: New Year (1st January); Good Friday; Easter Sunday; Easter Monday; 1st May; Whit Sunday; Whit Monday; Ascension Day; Christmas Day; Boxing Day and other special national holidays.

AIRPORT: Berlin, 270 km. from Wismar.

TELEPHONES: No ship to shore communications.

SHORE LEAVE: Crew members permitted ashore.

NOTES

Please also advise Shipping Guides Ltd.

Ghana

GENERAL:

DOCUMENTS: On 15th November 1988 the Ghana Ports and Harbours Authority announced that all Cargo Manifests must be received by the GPHA 7 days prior to the arrival of vessel, failing which there will be no berthing for the vessel.

HEALTH: *Pratique Procedure:*

1. The Port Health Officer or authorised officer shall grant Pratique to a ship as soon as the following conditions shall have been properly complied with:

(a) The Master shall complete accurately to the best of his knowledge and belief a Maritime Declaration of Health Form.

The Declaration shall be countersigned by a ship's surgeon if one is carried and shall be delivered to the Port Health Officer or authorised officer.

(b) The answers to the questions in the Declaration shall clearly indicate the absence of any infectious disease on board during the voyage or on arrival of the ship, and that the ship has not called at any infected area or had direct contact during the voyage with any ship from any infected area or having on board any case of infectious disease, and shall satisfy that Port Health Officer or authorised officer that the granting of Pratique shall not be attended by any danger.

(c) The Master or any other person on board including a ship's surgeon, if one is carried, shall accurately and, completely answer any other questions put to him by the Port Health Officer or authorised officer in regard to the sanitary condition of the ship, the health of the passengers and crew or of any ship with which there has been direct contact during the voyage, and shall furnish any such officer with all such information and assistance as he may reasonably require.

2. In the event of any suspected disease or fever on board a ship before arrival at the port and any other circumstances requiring the attention of the Port Health Officer, the Master shall:

(a) If the ship is equipped with a suitable radio transmitting apparatus and is due to arrive at a radio receiving port, send before arrival, either directly to the Port Health Officer or through an Agent approved by him, a radio message to that effect.

(b) If the ship is not so equipped or is due to arrive elsewhere than at a radio receiving port, notify the Port Health Officer immediately on arrival of the presence on board of such infectious disease, or suspected conditions.

Any radio message sent shall:

(a) embody such of the items of information as are applicable;

(b) be sent so as to reach the Port Health Officer not more than 12 hours, and not less than 4 hours, before the expected arrival of the ship;

(c) if it is in code, conform with the section relating to standard quarantine messages of the International Code of Signals.

3. Any ship arriving at its first port of call in Ghana from a foreign port shall be deemed to have come from an infected local area, and shall be required to comply with the provisions as to flags and signal lights as prescribed until granted Free Pratique by the Port Health Officer or authorised officer.

The following signals are to be shown on arrival within 3 miles of land, by vessels requiring or required to show their state of health:

(a) in the daytime i.e. during the whole of the time between sunrise and sunset.

(i) "Q" flag signifying "my ship is 'healthy' and I request free Pratique" or;

(ii) "Q" flag over first substitute ("QQ") signifying "my ship is 'suspect', i.e. I have had a case or cases of infectious disease more than 5 days ago, or there has been unusual mortality among the rodents on board my ship" or;

(iii) "Q" flag over "L" flag ("QL") signifying "my ship is infected" i.e. I have had a case or cases of infectious disease less than 5 days ago.

(b) by night i.e. during the whole of the time between sunset and sunrise, a red light over a white light, the lights being not more than 6 ft. apart shown at the peak or where the signal can best be seen from the shore, and exhibited only when the ship is within the presence of a port signifying "I have not received Free Pratique".

(c) Any ship displaying the appropriate signal in accordance with the provisions of paragraph (3) above shall, as soon as practicable, be visited by the Port Health Officer or authorised officer, who shall grant Pratique or take such other steps as may be necessary before granting Pratique.

4. A ship which has been granted Free Pratique at its first port of call in Ghana which has not been declared an infected area shall not be required to obtain further Pratique at another port in Ghana.

Vaccination requirements in respect of persons arriving in Ghana

All officers, crew and passengers of every ship arriving at any port in Ghana shall be in possession of valid Certificates of vaccinations against yellow fever and cholera.

Where a person arrives at any port in Ghana and is unable to produce a valid Certificate as required, the Port Health Officer or the authorised officer shall require such person to be vaccinated on the spot or to present himself at a place or places for the purposes of being vaccinated.

Under no circumstances should any officer, crew or passenger disembark if he is not in possession of any valid Certificate against yellow fever and cholera.

CUSTOMS REGULATIONS: *Pre-Entry System:*

Customs Authorities have introduced a 'Pre-Entry System' whereby importers are expected to process their Customs Bills of Entry in advance, at least 7 clear days prior to vessel's arrival, failing which a penalty is imposed by Customs on importer/consignee. To avoid a situation where importers will hold Agent/Owners responsible for refu of penalties for late submission of Manifest with Customs, it is essent that shipowners are requested to let Agent receive all cargo manifes at least 10 days prior to vessel's arrival in order for Agent to lodge w Customs Authorities advance manifest for the benefit of importe Recently, most cargo documents have been received late and in som cases manifests have been received when vessel is in port. It suggested that manifests are airfreighted to ensure early receipt.

SALTPOND (Bonsu): 05.05 N. 01.00 W.

LOCATION: 9 km. South of Saltpond village in position Lat. 05° 04′ 47″ N Long. 01° 00′ 25″ W.

TUGS: One tug available to assist with berthing and connecting hose

BERTHING: Ship to ship transfer through 1,200 ft. floating hose. Dep of water 85 ft.

The platform "Agpi" is permanently moored. The storage vessel named "Farmer". Loading time for 20,000 tons is 24 hours. Product named "Saltpond Crude" or "Bonsu Crude".

OPERATOR: Agripetco Ghana Inc.

TAKORADI: 04.53 N. 01.45 W. (See Pla

PORT LIMITS: Are shown on Admiralty Chart 3102 and covers an are of about 1.5 miles to 2 miles outside harbour entrance.

DOCUMENTS:

Customs:

2 Stores Lists.
2 Lists Crew Personal Effects.
1 Bill of Health.
6 Crew Lists with dates of yellow fever inoculations (use Ghana Form No. 62 which is supplied by Agent).
6 Passengers Lists or 'Negative'.
6 Vessel's Itinerary Lists.
1 Freighted Cargo List.
1 Unfreighted Cargo List.
1 Set Bills of Lading.
1 Clearance from last Port.
1 List of Narcotics.
1 List of Stowaways (state 'nil' if so).
1 List of Arms and Ammunition (state 'nil' if so).
1 List of Mail (state 'nil' if so).
1 List of Animals on board (state 'nil' if so).

Immigration Officer:

1 Crew List (Ghanian Form No. 62).
1 List Ports of Call.
1 List of Passengers, if any.
All crew and Passengers' Passports.
Advice to Immigration of any stowaway.

PILOTAGE: Pilotage compulsory. Pilot boards within port limit International code signals used. Vessels to call "Takoradi Port Contro on VHF Channel 14 when about 30 miles off, to confirm ETA.

ANCHORAGES: Vessels may anchor outside the harbour without Pil Depth at moorings 22 ft. to 35 ft.

RESTRICTIONS: Depth at harbour entrance 35 ft. MLW.

MAX. SIZE: Up to 28 ft. draft for berthing alongside. Up to 33 ft. at buoy Also see "Tankers".

HEALTH: See "General" before first Ghana port.

RADIO: Radio Takoradi. The station is a Coast Station and or operates on HF and MF equipment. The call sign for this station is 9G

VHF: Signal station Channel 14. 24 hour service for all information w regard to Pilots, berthing, etc.

RADAR: No radar services available.

TUGS: 3 tugs available. Tugs usually join the vessel outside p entrance. Tugs' assistance is compulsory. Usually one tug is assign to vessels with a bow thruster.

BERTHING:

Berth	*Max. Length Vessel*	*Max. Draft*
Manganese	520 ft.	28 ft. 0 in.
2 Wharf	550 ft.	26 ft. 0 in.
3 Wharf	500 ft.	26 ft. 0 in.
4 Wharf	600 ft.	28 ft. 6 in.
5 Wharf	270 ft.	28 ft. 0 in.
6 Wharf	500 ft	29 ft. 0 in.
Bauxite	505 ft.	30 ft. 0 in.
Coal Wharf	250 ft.	14 ft. 0 in.
Oil Wharf	600 ft.	29 ft. 3 in.
1 Buoys	550 ft.	F.34 ft. 0 in. A.36 ft. 0 in.
3 Buoys	570 ft.	27 ft. 0 in.
4 Buoys	520 ft.	F.27 ft. 0 in. A.30 ft. 0 in.
5 Buoys	510 ft.	F.24 ft. 0 in. A.27 ft. 0 in.
6 Buoys	480 ft.	F.24 ft. 0 in. A.26 ft. 0 in.
7 Buoys	450 ft.	F.23 ft. 0 in. A.25 ft. 0 in.
8 Buoys	400 ft.	F.21 ft. 0 in. A.22 ft. 0 in.
9 Buoys	340 ft.	18 ft. 0 in.

BULK CARGO FACILITIES: There are 2 berths for the loading of bulk cargo – manganese ore and bauxite. In the case of grain, or fertilisers, sulphurs, copra, etc., discharge can be done at any of wharf berths. The loading rate of manganese ore is approxima 333 long tons per hour; and the loading rate of bauxite is 330 long per hour.

CRANES: There are 9 Portal Cranes at the Port after the restoration. Of these, 2 cranes of 15 tons each lifting capacity are at the main wharf for loading and discharging of vessels. 4 cranes of 3 tons each lifting capacity are placed at the West Wharf to cater for loading and discharging cocoa, cocoa products and other commodities. 3 cranes of 15 tons are available at the Log Wharf for discharging lorries and wagons of logs and sawn timber from the countryside and loading same on to pontoons and into lighters for vessels loading at the buoys. There are no cranes at the Cargo Platform. Instead, a mobile crane of 14 tons is used. Forklifts are used to load and discharge cargoes. In addition there are 20 gantries for loading and discharging sawn timber. There are no cranes at the buoy berths and ships are expected to use their own gear. Also there are no floating cranes at this Port.

SPECIALISED CARGO HANDLING FACILITIES: Vessels usually use their own derricks for loading and discharging containers. The Port's Mafi trailers handle the containers on the quay.

Ro/Ro vessels with their own specialised cargo gear are handled.

BRIDGES: There are no bridges at the port.

STEVEDORES: Berthing meetings are held daily between the Port Authority and all Port Operators with the view to determining ETA and ETD of vessels to enable the stevedoring companies to arrange for gangs and determine the relevant rates and charges.

Normal working hours: weekdays 0700 hrs. to 1200 hrs. and 1400 hrs. to 1700 hrs. Saturdays 0700 hrs. to 1200 hrs.

Gangs required for Sunday work should be ordered before 1130 hrs. previous day. For weekday work, gangs should be ordered before 1500 hrs. previous day.

MEDICAL: It is absolutely necessary for the Agents to be notified in advance of the required medical attention so that necessary arrangements for medical exercise be carried out immediately on the vessel's arrival. Also see "General – Health".

TANKERS: Oil tankers moor on the North side of Lee breakwater. 1 berth suitable for ships of 600 ft. length, draft 29 ft.

Pipe-line: 805 m. long, pipe size 8 in. for all grades of petroleum and Bitumen.

Discharge Rate:

Petroleum	– Premium Mogas	150 t.p.h.
	Regular Mogas	150 t.p.h.
	A.G.O.	200 t.p.h.
	Kerosene	200 t.p.h.
Bitumen	– 80/110–142 cu.m./hr.	
	60/70 –154 cu.m./hr.	
	12/18 –337 cu.m./hr.	

DENSITY: Salt water.

FRESH WATER: Delivery at berths and buoys is by means of water barge of 448,000 gallons capacity. The rate of delivery is 11,000 g.p.h.

FUEL: 2 grades available, fuel and gas oil. Advance notice is necessary.

Fuel – supplied through pipe-lines.

Gas Oil – supplied by mobile tanker.

FIRE PRECAUTIONS: 6 firemen ordered to standby with fire engine. "No Smoking" notices are posted at considerable distances from the tankers.

CONSULS: Italian Consul only. High Commissioners and Ambassadors are in Accra.

REPAIRS: Minor repairs can be effected, slipway for vessels up to 500 tons. Small dry dock for vessels up to 100 ft. length.

DRY DOCK: There is no large dry dock in this port but there is 1 small dry dock capable of accommodating vessel of 100 ft. long, 25 ft. wide and 8.5 ft. draft.

SURVEYOR: Lloyd's, ABS, GL, BV, Panama Bureau of Shipping and Bureau of Maritime Affairs (Liberia) represented by Wiltex Ltd. (consulting engineers and marine surveyors).

GANGWAY/DECK WATCHMEN: Provision of Gangway, Deck and Hatch Watchmen is absolutely necessary to prevent stealing, pilferage and smuggling on board ships.

HATCHES: Hatches are normally opened and closed by the stevedoring gangs or, at times, by the ship's crew.

CUSTOMS ALLOWANCES: Quantity permitted for each member of the crew to be held Out of Bond is as follows: Tobacco 100 grammes; Spirits 0.75 litres; Wine 0.75 litres.

CARGO GEAR: Load/discharge is affected by the Port Authority's shore gear. There is 1 heavy lift crane of 15 tons capacity which is used for heavy lifts. Where the cargo exceeds the lifting capacity of the shore crane, the ship's jumbo derrick is sometimes used.

REPATRIATION: The Immigration Department is responsible for signing on and off on the advice of the shipping company.

AIRPORT: The airport, approximately 5 km. from the Port, is now exclusively used by Ghana Air Force. The commercial airport is located at the Capital city of Accra – some 232 km. from Takoradi.

TIME: The Greenwich Meridian Time is applied to this Port as the Greenwich Meridian passes through this country.

HOLIDAYS: The holidays at the Port are as follows; New Year's Day (1st January); Redemption Day (13th January); Independence Day (6th March); Good Friday (non-working day); Holy Saturday; Easter Monday; Republic Day (1st July); Christmas Day (25th December) (non-working day); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Telephone 999 for all 3 services.

TELEPHONES: Presently no arrangements exist for installing telephone on board ships.

SERVICES: There is no special service for tank cleaning, tank-washing or compass adjustment.

SHORE LEAVE: Every member of the crew is free to go ashore at any time of the day or night after the Immigration Officer has issued shore passes.

IDENTIFICATION CARDS: Seamen's Book or Passport is sufficient to identify any seaman. Also see "Shore Leave".

REGULATIONS: Ship's are not allowed to discharge on board explosives or petroleum without prior approval of the Port Manager. Ships are not allowed to berth after 1800 hrs.

DELAYS: None.

DEVELOPMENTS: Rehabilitation work which is underway includes paving, fender replacement, refurbishment of jetties and quayside buildings. Electrical systems are being brought up to date to allow for the installation of new port equipment, which includes a 35 tonne multi-purpose crane, a 15 tonne general cargo crane and a 15 tonne crane for log handling,.

AUTHORITY: Ghana Ports and Harbours Authority, P.O.Box 1, Takoradi, Ghana. *Tel:* 3220. *Telex:* 2189. *Cables:* Harbours Takoradi. *Contact:* Captain J. E. Quansah, Harbour Master.

AGENT: Scanship (Ghana) Limited, P.O. Box 329, Takoradi. Tel: 35.31, 36.50, 35.33. Fax: 233 21 712 932. Telex: 2182 Scanship Takoradi. Cables: "Scanship Takoradi".

Radio: Contact possible after leaving Tema on R/T 6,500 kHz and VHF Channel 9.

TEMA: 05.38 N. 00.01 E. (See Plan)

PORT LIMITS: A vessel is considered "arrived" when it is within 1.5 miles distance of the port.

DOCUMENTS:

Port Health:

Maritime Declaration of Health.
Valid Certificates for cholera and yellow fever.
Derat Certificate.
1 copy Crew List.
1 copy Ports of Call List.
1 copy Passenger List.

Immigration:

1 copy Passenger List.
1 copy Crew List.
1 copy Ports of Call List.

Customs:

2 copies Manifest.
Dangerous Cargo List.
1 copy Crew List.
1 copy Ports of Call List.
1 copy Passenger List.
Port Clearance, visaed by Customs at last port of call.

PILOTAGE: For Main Harbour, pilotage is compulsory for all vessels of more than 60 net tonnage, when arriving or leaving harbour, or shifting berth, but for both Fishing Harbours obtainable on request.

Time of pilotage as follows for Main Harbour:

(a) Dry cargo vessels: Arrivals 0600 – 1800 hrs. (up to 2000 hrs. on special request); departure 0600 – 2300 hrs.

(b) Tankers: Arrivals daylight only; sailings 0600 – 2300 hrs.

(c) Valco-carriers: All handling, during daylight only.

Vessels arriving or wishing to enter harbour must await Pilot between E. and S.W. off Fairway Buoy, up to 1.5 miles distance. Ships embarked by Pilots from 0600 hrs., according to time of arrival Quarantine Anchorage.

ANCHORAGES: Safe anchorage, three-quarters to two miles from E.N.E. to S.W. off main entrance with depth 30 ft. to 60 ft., with good holding ground. Eastern area of anchorage is more comfortable, without additional swell reflected from main breakwater.

RESTRICTIONS: Entrance to main harbour is 800 ft. wide. Approaches have a minimal depth of 35 ft. Ships entering harbour may roll heavily, up to 8°, during some seasons when 2-3 cables before entrance.

Ships deeper than 30 ft. enter only during high tide with maximum possible draft limit of 32 ft. during neap tides.

Bottom of harbour consists of sand and mud with frequent hard rocky ground. Depth increases in direction of main breakwater.

Inside harbour alongside breakwater is an old wharf for tankers with depth of 34 ft.

MAX. SIZE: Restricted to 650 ft. length, 32 ft. draft and 60,000 tonnes.

HEALTH: All crew require valid certificates of vaccination against yellow fever which are inspected by Port Health Authorities. In case of any suspected disease or fever on board. Agent of the vessel should be notified in advance by radio. Also see "General" before first Ghana Port.

VHF: The port is equipped with VHF radio Channels 14 and 16. Channel 16 is the international listening channel and Channel 14 is the port working channel. Signal station request LOA and draft in feet and last port of call.

Under certain conditions, vessels are able to contact the Signal Station at 200 miles.

BERTHING:

Berth No.	*Length* (m.)	*Depth at LW* (m.)
1	183	9.6
2	183	8.6
3	183	7.6
4	183	7.8
5	183	7.7
6	183	7.4
7	183	7.9
8	183	7.6
9	183	7.6
10	183	7.6
11	183	7.6
12	183	7.6
Valco	175 (Max. LOA)	9.6
Oil	244	9.8

Usually ships moor starboard side to Berths No. 1, 2, 6–9 and portside to Berths No. 3, 4, 5, 10–12.

TUGS: 5 tugs available with capacity 1,300 h.p. – 2,200 h.p. Minimum of 2 tugs for berthing and unberthing. Tugs join vessels at entrance of harbour when berthing and join vessel alongside when leaving. Usual for ships' lines to be used. Charge for use of tugs' lines is 120 dollars per tug per day.

CRANES: 1×10 tonne portal crane at Quay No. 1 and 1×10 tonne portal crane at Quay No. 2.

SPECIALISED CARGO HANDLING FACILITIES: Valco Berth for handling bulk cargoes such as alumina, pitch/coke and aluminium fluoride. It is also equipped with 2 elevators for sucking/discharging.

Conveyor System: 4 Outloaders, each 30-35 t.p.h.
or : 2 Outloaders on high speed = 70 t.p.h.

STEVEDORES: Available. Dry cargo is handled from 0730 hrs. to 1230 hrs. and from 1400 hrs. to 1700 hrs. on normal working hours, and overtime after 1700 hrs. to 2000 hrs. (for finishing ships 2030 hrs.) and on Saturdays p.m., Sundays and holidays. Oil Wharf and Valco Berth are working around the clock.

Gangs required for Sunday work should be arranged before 1130 hrs. previous day. For weekday work, gangs should be arranged before 1500 hrs. previous day.

MEDICAL: No advance notice except in cases of serious illness. Advice should be sent with arrival cable. Ample hospital facilities available.

TANKERS: Tankers always moored starboard side to dolphins, and ropes to breakwater and bow-buoys. Crude oil pumped to refinery, by ship's pumps, a distance of 18,000 ft.

	Pipeline Size (in.)	*Capacity* (cu.m.)	*Pumping Rate* (t.p.h.)
Crude oil	24 – 16	1,567,130	1,000
Fuel oil	14	51,400	600

DENSITY: 1025.

FRESH WATER: Available. Rate 50 t.p.h.

At times a limited supply is available.

FUEL: Fuel and diesel-oil available by tanker-trucks only. No coal-bunkers available.

FIRE PRECAUTIONS: Oil tankers when moored alongside must have "Fire Wires" hanging over the bow and stern on the outboard side of the vessel. These must be lowered to the water's edge and securely made fast on board so that they can be used to tow the ship away if necessary in an emergency. Two large fire fighting pumps and "snorkels" are mounted at the oil wharf. A floating boom to prevent the spread of oil spillage must be put in position around tankers loading and discharging. The Master of the ship should be warned to lower the guy ropes securing the boom to the ship, so that the boom is afloat at all times and not lifted up as the vessel's draft changes.

REPAIRS: Marine workshop for deck and engine repairs.

DRY DOCKS: There are 2 drydocks.

Drydock No. 1: Serviced by 60 tonnes and 20 tonnes travelling cranes. Capacity: 100,000 d.w.t. Length: 910 ft. (277.4 m.). Width (entrance): 149 ft. (45.4 m.) Width (inside wall): 155 ft. (47.2 m.). 8.2 m. on the sill. Flooding time empty dock: 2 hours (approx.). Dewatering time: 4 hours (approx.). Vessels with 6.5 m. draft can enter at HW.

Drydock No. 2: Serviced by 45 tonnes and 25 tonnes mobile cranes. Length: 350 ft. (106.7 m.). Width: 44 ft. (13.4 m.). Draft (entrance): 18 ft. (5.5 m.). Flooding time of empty dock: 4 hrs. (approx.). Dewatering time: 4 hrs. (approx.).

Fitting out quay: 600 ft. (182.9 m.). Draft: 14 ft. (4.3 m.) to be deepened. Crane: 15 ton travelling crane.

SURVEYORS: Lloyd's, NKK and Bureau Veritas are represented at the port.

GANGWAY/DECK WATCHMEN: Services of watchmen necessary and compulsory.

HATCHES: Opening/closing of hatches is normally carried out by stevedores or crew.

CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle of spirits and wine and beer in reasonable quantities.

REPATRIATION: Facilities exist for effecting crew changes through the Shipping Master's Office and the Ministry of Transport and Communications.

AIRPORT: Situated 18 miles from the port.

TIME: GMT. No alterations during the year.

HOLIDAYS: New Year's Day (January 1st); Independence Day (March 6th); Good Friday; Holy Saturday; Easter Monday; Labour Day (May 1st); PNDC Government (June 4th); Republic Day (July 1st); Christmas Day (December 25th); Boxing Day (December 26th). Cargo work can be arranged, except for Christmas Day.

POLICE/AMBULANCE/FIRE: Telephone Nos: Police: 2936; Fire: 2822-12.

SHORE LEAVE: Every member of the crew is free to go ashore at any time of the day or night after the Immigration Officer has issued shore passes.

IDENTIFICATION CARDS: Shore passes issued are sufficient.

REGULATIONS: No refuse or waste material of any description allowed to be pumped or thrown overboard from vessel into the sea.

No person shall load or discharge explosives without the consent of the Port Operations Manager.

It is strictly forbidden to undertake main engine work without prior permission of the Port Operations Manager.

GENERAL: Recommended to send ETA message as early as possible advance. Essential that ETA message reaches Agent's office before 1430 hrs. Monday-Thursday or before 1000 hrs. Friday for weekends because of booking of gangs. Ships from Abidjan should also send 48 hours ETA message.

Tides: Maximum tides rise 6 ft. 2 in., minimum tides rise 3 ft.

Prevailing Winds: Light to fresh breeze from W. and S.W. during all year, except December to February when N.E. Harmathan is dominating with poor visibility. Dangerous winds are tornadoes from East, May to July, but occasionally isolated tornadoes are to be expected from January to December. There is a swell in harbour, especially after tornadoes, when lying alongside the berths.

DELAYS: Delays not expected for berthing, loading or discharging, except for natural occurrences such as heavy storm or heavy downpour of rain.

AUTHORITY: The Director General, Ghana Ports and Harbo Authority, P.O.Box 150, Tema, Ghana. *Tel:* 2631–9. *Cables:* "Harbours *Contact:* Gp. Captain E. A. Awuvri, Port Director. Captain E. D. Zie Harbour Master.

AGENT: Scanship (Ghana) Ltd., P.O.Box 64 Tema. Tel: 26.51 a 25.71. Cables: "Scanship Tema". Fax: 233 21 712 932. Telex: 23 Scanship Tema.

NOTES

Please also advise Shipping Guides Ltd.

Gibraltar

GIBRALTAR: 36.08 N. 05.21 W. (See Plan)

DOCUMENTS:

5 Crew Lists.
5 Passenger Lists.
Arrival Report, to be completed when receiving Pratique.
International Maritime Declaration of Health.
Ship's Register.
Load Line Certificate.
Derat Certificate.
Ship's Articles.
Certificate of Insurance in respect of Civil Liability for Oil Pollution Damage.
Stowaway Report.

PILOTAGE: Pilotage compulsory for all navigation (except direct departure from anchorage). Give notice of arrival through Agents 24 hours in advance furnishing maximum draft. Ships approach off Rosia Bay where Pilot (available day and night) boards vessel. Pilot boat painted black and flies international Pilot flag. To call Pilot: sound, and fly flag "G" or call Gibraltar Port on VHF Channel 16 and pass message on Channel 12.

ANCHORAGES: In open bay, good safe anchorage, depths vary from 5 to 40 fathoms. Vessels normally anchor in area West of Harbour Moles.

RESTRICTIONS: *Note:* British waters in the Bay of Gibraltar extend to the Median Line drawn in accordance with the 1958 Geneva Convention on the Territorial Sea and Contiguous Zone (see Admiralty Chart D 1448). However, part of those waters, lying North of 2 Qk. Fl. buoys, are considered by the Spanish Authorities to be within the limits of the Port of Algeciras/La Linea (Spanish Notice to Mariners 49/1563/67 of 9 December 1967), and the Spanish Authorities have claimed Spanish port dues in respect of vessels anchoring between the Median Line and the line of buoys.

The waters in dispute form only a small part of the anchorages available to shipping calling at Gibraltar.

MAX. SIZE: If anchoring in bay, any size. Max. draft alongside, 31 ft. 6 in.

HEALTH: Vessels are usually boarded by Port Authorities off the Southern end of the Detached Mole: if everything found satisfactory Pratique is granted immediately. Masters should advise Agents by radio before arrival of any illness on board so that Port Doctor may board vessel with Port Authorities.

RADIO: Gibraltar Radio (British Telecom), call sign ZDK.

VHF: Communicate with Port Authorities by VHF international calling Channel 16, pass message on Channel 12, many other channels available (24 hour service).

TUGS: 8 tugs, 500 h.p. – 2,600 h.p. When required for berthing alongside, tugs meet vessels off Mole. Ship's ropes sometimes used.

BERTHING: Cruise Liners and vessels calling for bunkers or water can be berthed on both sides of Western Arm. Outer side is 490 m. long with draft up to 9.60 m. The inner side is 450 m. long and max. draft is 8.53 m. Ships of deeper draft can be accommodated on half tide basis according to tide. Vessels calling for repairs or lay up can be berthed at the Detached Mole. There are also 5 berths of 100 m. in length available to vessels discharging general and bulk cargoes.

Masters required to advise ship's draft when giving ETA. Cruise ships are only charged 13.3% of normal berthing charge.

Ships calling for bunkers and/or fresh water and not conducting operations involving passengers or cargo are only required to pay 6.6% of the normal berthing charges. Such vessels may, at the discretion of the Captain of the Port, be allowed to be berthed for a period not exceeding 8 hours whilst such vessel is not bunkering or taking on supplies or fresh water.

Vessels coming in solely for bunkers are exempted from tonnage dues.

CARGO HANDLING: Container berth at No. 2 Jetty available for vessels up to 350 ft. in length, max. draft 26 ft. Containers are also discharged at No. 1 Jetty.

STEVEDORES: Agents automatically advise stevedoring company on receipt of ETA from ship.

MEDICAL: Masters should advise Agents when giving ETA if medical attention is required on board. Adequate hospital facilities available.

TANKERS: Max. draft at discharging berths 31 ft. 06 in. Diameter of discharging lines 14 in. fuel oil, 10 in. diesel oil and gas oil.

DENSITY: 1025.

FRESH WATER: Available at Mole from pipe-lines, delivery rate 60/80 t.p.h. Water can also be delivered at anchorage from barge, delivery rate 40/50 t.p.h.

FUEL: A quick and efficient bunkering service is provided on a 24-hour basis at alongside and anchorage berths. Ships arriving at night are required to give prior notice before 1600 hrs. on the day of arrival. The requirement is the same on Sunday and weekdays.

Fuel of various grades is supplied to shipping throughout the year from piped installations at all alongside berths (with the exception of the Detached Mole) using the latest metered bunkering techniques. The grades include marine fuel, thin, fuel, marine diesel fuel and gas-oil. Ships at the Detached Mole and in the Commercial Anchorage are serviced by lighters. This supply to ships is handled as a joint venture by the Shell International, Mobil, Chevron, Texaco and B.P. oil companies and is managed by the Shell Company of Gibraltar Limited, who own the main share of the installations.

The bunkering installation at Gibraltar, which was the first in the world to provide metered deliveries at shipside, includes 2 Fisher-in-Line blending units to ensure rapid delivery of fuel oils of any viscosity. Oil bunkers are normally delivered at 200 – 250 t.p.h. per connection subject to the ship's acceptance capacity. Similar rapid bunkering is provided in the anchorage by a lighter of 880 tons fuel capacity and a total capacity of 1,000 tons including bulk lubricants.

International Direct Dialling (I.D.D.) in operation.

REPAIRS: Deck and engine repairs possible. Underwater operations including repairs and cleaning of vessel's hull.

DRY DOCKS: 3 dry docks available. Largest 871 ft. × 125 ft. Max. vessel size 245 m. × 36 m. Dry docks operated by Gibraltar Shiprepair Ltd.

GANGWAY/DECK WATCHMAN: Not necessary but available if required.

OPENING/CLOSING HATCHES: Normally effected by stevedores.

CUSTOMS ALLOWANCES: No restriction whilst on board. Crew members may bring ashore small quantity for their immediate personal use.

REPATRIATION: Facilities exist for repatriating Crew members.

AIRPORT: Regular flights to London (Gatwick). Distance to airport about half mile.

TIME: GMT plus 1 hour in Winter, plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Good Friday; Easter Monday; May Day; Commonwealth Day (24th May); Spring Bank Holiday; Summer Bank Holiday; Queen's Birthday; Christmas Day; Boxing Day. Cargo work can be effected at overtime rates on these holidays except on Good Friday and Christmas Day when no cargo work is carried out. Bunkering is effected on any of these holidays except on Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: Police and Ambulance 199; Fire 190.

TELEPHONES: Telephone can be placed onboard at cruise ship berth. Telephones can also be placed on vessels under repair at the Detached Mole, through Admiralty Telephone Exchange, cost about £10.

IDENTIFICATION CARDS: Not required.

GENERAL: Advisable that vessels calling for bunkers and only stopping in port for few hours should radio their requirements prior to arrival to ensure avoiding delay.

SHIPMASTER'S REPORT: Offport Call. (Updated 1988).

VHF: Lloyd's on Channels 16 and 14. Port and Pilots on Channels 16 and 12.

Pratique: Cable for Free Pratique 18 hours ahead. Standard message. Do not expect reply.

Pilot: Boards from small black hulled motor boat off Rosia Bay. Good lee required. Contact when South of Europa Point.

Anchoring: Not necessary for offport call with under 1 hour's wait. One anchor required ready with forecastle party on stand-by.

Agent/Quarantine Officer: Board off South end of Detached Mole.

Procedure: Require 5 Crew Lists and 1 Health Declaration. They also look at Ship's Papers, Register and Derat Certificate.

For British crew joining and leaving ALC3 and ALC5 are required to be filled in, so joining members must sign on immediately.

Time: Depends on numbers and ranks joining and leaving, but in October 1980, 9 officers left and 6 joined, procedure took 30 minutes with total off hire of 1 hour and 32 minutes.

General: Money: Sterling easily available in all denominations but make sure you cable in for Agent to arrange during bank hours.

Films: Walport from 'Restano' films and Vidpak – 48 hours' notice.

Agent: Very efficient, on prior request supplied British newspapers and up-to-date Lloyd's Index.

Anchorage: Northern limit of tanker anchorage – East to West line 1 cable South of North End Detached Mole (Qk. Fl. G.), ("C" Head) – good anchorage 3–5 cables off mole – single anchor good holding.

For ships awaiting repairs or orders, North limit – East to West line North End South Mole (Fl. 2 sec.) – "A" Head.

Current: (From Pilot). Strong Southerly setting current up to 4 knots, with East wind, off moles.

Lloyd's signal station: Approaching Gibraltar, will pass all messages to Pilots and Agent.

Port expenses: Agent quoted total off port (including Pilot) £650.

AUTHORITY: Captain of the Port, Port Office, North Mole, Gibraltar. *Tel:* 77254/78134. *Telex:* 2130 Gibpor Gk. *FAX:* 77011. *Cables:* Gibport. *Contact:* Captain J.W. Prior, Captain of the Port.

AGENT: Lambert Brothers (Gibraltar) Ltd., 47 Irish Town. Cables: "Lambert-Gibraltar". Tel. 72685. Telex 2222. Fax: 75959. Ship's Agents, Insurance Agents, Travel Agents.

ACHLADI: 38.53 N. 22.50 E. (See Plan)

DOCUMENTS: See "Stylis".
PILOTAGE: Compulsory for all vessels arriving at and leaving the berth. Pilots available through Volos Pilot Station.
ANCHORAGES: The waters which surround the port are free from dangers. Good holding ground with depths from 25 to 30 fathoms.
MAX. SIZE: Max. draft alongside is 15.0 m.
VHF: Port Authority on Channels 7 and 12.
TUGS: Tugs must be ordered from Volos.
BERTHING: Achladi port is a new construction belonging to the factory of Agroinvest S.A. It is a private berth about 200 m. in length standing about 3 m. above sea level and is well protected by rubber fenders. It was constructed in order to serve factory for loading and/or discharging their products, such as animal food, flour, wheat, maize, etc. Maximum permissible draft along the pier is 15.0 m.

The factory is visible just after passing Akra Tapia. It is a conspicuous building due to the height of silos and warehouses. Two fixed green lights show the ends of the berth.

Agroinvest S.A., 49 Vas. Sofias Avenue, 106 76 Athens, Greece. Tel: (1) 7249907. Telex: 210422 Agro GR. Contact: Captain George Siainis.

Factory: Achladi Fthiotis. Tel: (0238) 31002. Telex: 0296186 Agro GR.
CRANES: Loading/discharging by ship's gear for cargoes other than grain. Mobile cranes may be hired by arrangement with local Agent.
STEVEDORES: Loading and unloading carried out throughout 24 hours.
BULK CARGO FACILITIES: There is a grain silo of 100,000 tonnes capacity with a travelling shiploader/unloader of 500 t.p.h. for loading, and 600 t.p.h. for unloading.
FRESH WATER: Available but quite expensive. Vessel will be supplied by truck/barge only.
FUEL: Not available.
REPAIRS: Minor repairs can be carried out in Stylis or Lamia.
GENERAL: Stores or provisions available from Volos and/or Stylis.
DEVELOPMENTS: A silo for grain is under construction on the pier.
AUTHORITY: Stylis Harbour Authority, Stylis, Greece. *Tel:* (0238) 22329.

AGHIOS NIKOLAOS (St. Nikolo-St. Nicholas), Crete: 35.12 N. 25.43 E.

DOCUMENTS:
4 Crew Lists.
2 Passenger Lists.
1 Cargo Manifest.
1 Spares List.
1 Stores List.
1 List Crew Personal Effects.
Maritime Health Declaration.
1 Provisions List.
PILOTAGE: Not compulsory. No Pilot station. Private Pilot who can be used if needed. However, not always available. Area of Pilot's boarding is N.E. or S.E. of Aghioi Pandes Islet, depending weather conditions. Anchorage waiting place in same area. Call Pilot with signal "G". Small fishing vessels (length 13.0 m.) fitted with VHF can indicate position of anchorage if advised by Agent.
ANCHORAGES: (a) Harbour of Aghios Nikolaos, depth 3 – 5 fathoms. (b) Usual anchorage for vessels over 500 tons gross, South or S.E. of Nikolo Islet (Admiralty Chart No. 2536 B) and at a distance of 0.5 – 1.0 miles from the mainland, depth 10 – 40 fathoms respectively. (c) Poros Bay for small and large vessels, only when North and N.W. fresh gales, depth 16 – 27 fathoms.
RESTRICTIONS: Care to be taken off North entrance to port owing to rocky shoals, depth 5 m. Entrance from the S.W. is free of obstructions.
MAX. SIZE: Vessels of up to 100 m. length and 9.0 m. draft can enter the port. At oil bunkering installation outside the port, vessels of any size can be accommodated.
HEALTH: If from another Greek port free pratique is automatic and access to and from vessel granted on permission of Port Authorities. Port doctor visits all other vessels.
RADIO: No local radio station. Cables to Agent or Port Authority through "Athinai Radio", "Heraklion Radio" or "Rhodes Radio".
TUGS: One tug available.
BERTHING: Berthing position designated by Port Authority.
STEVEDORES: 10 permanent port stevedores available, but further 5 men can be engaged. Cargo worked by vessel's own gear.
MEDICAL: No advance notice of medical attendance required. Medical attention by town doctors available. Government hospital with all facilities.
TANKERS: No tanker berths. Vessels moor to buoys. Oil line 6 in. diameter.
DENSITY: 1025.
FRESH WATER: At new pier 3 hydrants, hose diameter 2.5 in. for supplying water. At the bunkering installation at Katsini Bay there is water storage tank capacity 500 cu. m. for supply to deep-sea vessels. Loading rate about 49 t.p.h. Delivery by flexible hose connection from the mooring buoys. Fresh water not available at the present time at the bunkering installation as they have ceased operating.
FUEL: Small quantities transported by tank truck are available from the pier.
HATCHES: Opened/closed by stevedores.
CUSTOMS ALLOWANCES: 2 packets cigarettes per crew member day.
CARGO GEAR: No shore facilities. All cargo worked with ship's o gear.
CONSULS: None.
REPAIRS: Only minor repairs.
SURVEYORS: None.
REPATRIATION: Crew replacement and repatriation available.
AIRPORT: At Iraklion distance 66 km. 2 or 3 flights per day to Athen
TIME: GMT plus 2 hours. GMT plus 3 hours late March to la September.
HOLIDAYS: In addition to standard Greek holidays, local holidays Ascension Day (date not fixed), and St. Nicholas Day (6th Decembe
POLICE/AMBULANCE/FIRE: St. Nicholas Police tel. 100. Sta Hospital, tel. 22369. Fire tel. 22674 or 28905. Port Police tel. 2231 Area code for St. Nicholas 0841.
TELEPHONES: Available for yachts only.
SERVICES: Tank cleaning and hold cleaning.
SHORE LEAVE: Permitted with Port Authority pass.
STORING: Possible by truck or barge. Trucks may proceed alongsid No fork lift trucks available. Riggers available.
REGULATIONS: *(a)* Vessels are not allowed to approach Aghioi Pand (goat reserve). *(b)* No refuse or other waste matter of any descriptio allowed to be thrown overboard from vessel. *(c)* No visitors permitte without Port Authority permission.
DEVELOPMENTS: During next 5 years *(a)* deepening of Port Bas *(b)* Provision of 1 shore crane, *(c)* construction of breakwater — leng 200 m.
AUTHORITY: Port Authority of Agios Nikolaos, Akti Coundourou, Agi Nikolaos, Crete, P.N. 72.100 Greece. *Tel:* 0841-22312. *Telex:* 02610 *Contact:* Ioannis Papadomichelakis, (Lieut-Commander), Harbo Master.

AGIA MARINA: 38.54 N. 22.36 E.

DOCUMENTS: See "Stylis".
PILOTAGE: Compulsory. Pilot can be boarded at Stylis Anchorage Agia Marina. Pilot and pilot boat is the same as for the port of Stylis
VHF: Stylis Port Authority on Channels 7 and 12.
TUGS: See "Stylis".
BERTHING: Agia Marina Port is an open port on the North side Maliakos Kolpos. It is a private port belonging to Metalia Voxit Elefsinos A.E. (Skalistiris Enterpr. S.A.).

The Port of Agia Marina is visible just after passing Akra Drepan and is 2 miles West of the main port of Stylis. A red fixed light sho the head of the elevator.

The berth, consisting of poles only, can accommodate cargo vesse up to 30 ft. draft for loading bauxite and/or chrome ore in bulk, cargo come from the mines of Mount Parnassos and Mount Iti. Vessels calli at Agia Marina have to make fast to poles and are secured alongs the poles. Communication with the shore is effected only by motor bo which can be hired through local Agents. The loading takes place us an electric elevator and the rate is about 1,000 tons daily.

The port is lee to the wind and it has been reported that even wit Force 8-9 wind, vessels can stay in position without any difficulty. T vessel has to drop anchor in order to facilitate shifting(s) as elevato immovable, also for better securing. The waters around are clear, w good holding bottom, the depth of which varies from 7 to 13 fathom
STEVEDORES: Working hours – 24 hours daily.
FRESH WATER: Not available. Can be obtained at Stylis, whe max. draft allowed is 18 ft. 6 in.
FUEL: Not available. See "Stylis".
REPAIRS: Minor repairs can be carried out at Stylis or Lamia.
GENERAL: Stores and provisions available in limited quantities.
AUTHORITY: Stylis Harbour Authority, Stylis, Greece. *Tel:* (023 22329.

AGIOI THEODOROI: 37.55 N. 23.05 E. (See Pla

DOCUMENTS:
7 copies Crew Lists (European and Asian).
2 copies Dates of Vaccinations/Inoculations.
1 copy Cargo Manifest.
2 copies List of Provisions and Stores (these are supplied on for issued by Agent printed in Greek/English).
2 copies Officers'/Crews' personal declaration, on forms supplied Agent in Greek/English, covering all high duty items, rad cameras, etc.
1 copy Declaration of ships' cash on board, form supplied by Ag in Greek but made out in front of Master.
2 copies of Masters' Declaration that all high duty goods have been put under seal, and that he is responsible for any loss landing of same without proper authority.
All passports and/or Seamen's Books to be produced *if* requeste Immigration.
On completion of loading, documentation takes about 2 hours.
PILOTAGE: Compulsory. Pilot boards S.S.E. of port, about 1 mile the outer jetty. No pilot boat as such; uses either a tug or mooring b Pilot is arranged by Agents who are based in Piraeus (1 hour by c No means of radio contact between vessel and Pilot station.

ANCHORAGES: A reasonably safe anchorage can be obtained in position 0.5 mile off the outer jetty in a depth of 20 to 25 fathoms with a sandy bottom.
MAX. SIZE: Max. draft 70 ft.
TUGS: 2 tugs used for berthing, and 1 on sailing.
BERTHS: There are 3 main berths with 2 smaller berths for coastal vessels. The largest and outermost berth can accommodate vessels of 250,000 tons fully loaded, maximum discharge/loading rate at this berth being 5,000 t.p.h. The other berths can accommodate vessels of up to 50,000 tons fully loaded with maximum discharge/loading rate of 3,000 t.p.h. All berths are equipped with 4 × 10 in. Chicksans. They are situated in an open position for winds from the South and West but provided ample moorings are put out, there should be no cause for concern.

Vessels can berth at any time day or night.
MOORINGS: Standard moorings on to dolphins which are well fendered and hold the vessel about 4 ft. clear of the manifold complex. Vessels require their gangway but no derricks are required. 1 or 2 anchors are used depending on the berth used.
FRESH WATER: Fresh water for other than drinking purposes is available from the jetty, but drinking water has to come by barge from Piraeus for which 2 days' notice is required.
FUEL: Available alongside. Rate 3,500 cu.m./hr. for fuel oil and 600 cu.m./hr. for diesel.
REPAIRS: No facilities. Nearest port for repairs is Piraeus.
CUSTOMS: Bonded locker is sealed. Allowance 200 cigarettes or equivalent in tobacco or cigars per man (7 days) and a part bottle of wine and spirits is permitted per man (7 days). All Tobacco/cigars/cigarettes placed under seal. Crew excess must be declared on provision list in separate column for same.
SHORE LEAVE: Shore leave is allowed, passes being issued on arrival which must be handed in prior to sailing.

SHIPMASTER'S REPORT: December 1984.
Documents: Crew Lists must be IMO standard forms.
Pilotage: Oil Company has its own private Pilots. There are 4 Pilots stationed here, of which 2 are on call. Pilotage is compulsory. Pilot comes out by tug.
VHF: About 4 miles from the jetty, start calling "Pier Master Theodoroi", on Channel 14 VHF. He will give information about berthing and/or anchoring.
Anchorage: Reasonable safe anchorage Westward of jetty, about 3.5 cables from shore, in 20 – 25 fathoms of water.
Tugs: 4 tugs available.
Berthing: See "Plan". Ships always moor heading West, so only Berth "B" Inner is moored portside to. Each berth has 4 Chicksans. Connections ranging from 8 in. to 12 in. Connecting and disconnecting is done by shore crew.
Fresh Water: Drinking water is also laid on to the jetty.
Provisions: Are available. Are brought alongside by tug for which a separate bill has to be signed.

AUTHORITY: Motor Oil (Hellas) Refineries.

ALEXANDROUPOLIS: 40.51 N. 25.54 E.

DOCUMENTS:
Port Authority:
2 Crew Lists.
1 Passenger List (if any).
If from abroad Maritime Declaration of Health.
If Greek flag, articles and log book, and declaration of foreign exchange.
Customs:
3 Lists of Stores and Provisions.
1 Crew List.
Master's personal declaration that all stores not held in bond will remain on board.
PILOTAGE: No pilot service. If Master requires pilotage assistance an experienced local boatman is available, but Agent must be advised of ETA in advance order to arrange for this Pilot to await vessel about 1 mile outside port.
ANCHORAGES: Depth inside port 18 ft. 06 in., mud bottom. Depth increases outside port to about 10 m. at distance of 1 nautical mile.

Area around port subject to strong S.E./S. winds especially during Winter. During strong winds vessels can seek shelter off Samothraki Island. In strong winds port is considered safe but because of occasional large waves loading is stopped. Winds from other directions do not affect port work.
MAX. SIZE: Vessels with draft not exceeding 18 ft. can enter safely.
HEALTH: Vessels from foreign countries can enter harbour and obtain Free Pratique during the period from sunrise until 2200 hrs. Vessels having suspected contagious disease on board should remain outside harbour until visit of medical officer, and await further instructions.
TUGS: None.
BERTHING: At least 24 hours notice of ETA to be passed to Agent in order to obtain allocation of berth from Port Authority.
STEVEDORES: Prior notice to be passed to Agent order arrange gangs. Rate of cargo working: General cargo about 100 tons per gang every 8 hours. Bagged cargo about 100 tons per gang every 8 hours. Coal about 80 tons per gang every 8 hours. Timber about 120 cu.m. per gang every 8 hours. Vessels must use own gear for loading/discharging.
MEDICAL: No advance notice required. 1 Government General Hospital, 3 clinics. Doctors' services readily available.
TANKERS: There is a floating pipe-line. Tankers with a draft of 18 ft. can discharge diesel oil and gasoline.
FRESH WATER: 10 hydrants available. Delivery rate about 5 t.p.h. (each), but delivery rate reduced when 2 or more hydrants in use.
FUEL: No Bunker C fuel available. Supplies of diesel oil possible from road tankers.
FIRE PRECAUTIONS: No port fire brigade. In emergency fire brigades must be called from Alexandroupolis.
CONSULS: Consul-Agent of France Tel. 26–720. Consul-Agent of Italy Tel: 28–384.
REPAIRS: Only minor repairs available.
WATCHMEN: Not available, and if required must be supplied by vessel.
HATCHES: Opened and closed by crew.
CUSTOMS ALLOWANCES: 1 packet cigarettes allowed out of bond for each crew member, for each day in port. Wine/beer no restrictions. Spirits, Master allowed 1 bottle.
CARGO GEAR: Load/discharge by ship's own gear.
REPATRIATION: Facilities for crew changes and repatriation.
AIRPORT: 5 km. distant. 2 daily flights to and from Athens.
TIME: GMT plus 2 hours. Summertime GMT plus 3 hours.
HOLIDAYS: 1st January; 6th January; Whit Monday; 25th March; Good Friday; Easter Monday; 1st May; 14th May (local); 15th August; 28th October; 6th December; 25th December; 26th December, and all Sundays. Cargo work can be arranged on these days, subject to payment of additional charges.
POLICE/AMBULANCE/FIRE: Police station, 26352; Security Police, 26220; Ambulance, 25272; Fire, 26222. Port Police, 26468 (VHF 12).
TELEPHONES: No facilities for telephones on board.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Shore pass issued against Crew List and Seaman's Book. Passes obtainable from Port Authorities.
DEVELOPMENTS: (a) Supplementary works are being performed outside along the West breakwater.

(b) Dredging works has begun inside the port.
AUTHORITY: Port Authority of Alexandroupolis. *Tel:* 26468 (VHF Channel 12). *Contact:* G. Tsironis (Lieut-Commander), Harbour Master.

1 Vaccination List
4 Crew Effects Declaration
Passenger List
Cargo Documents
2 Special Customs Forms in triplicate
2 Store Lists

PILOTAGE: Cable Agent 72, 48, 24 hours in advance advising ETA. Agent informs Pilot Office of vessel's arrival time. Piraeus Pilots can be contacted on VHF, Channel 16 for calling. Pilot boards vessel 0.5 miles S.E. of Piraeus Breakwater.
ANCHORAGES: See "Eleusis" and "Piraeus".
RESTRICTIONS: Max. 60,000 d.w.t., max. permissible draft to enter Eleusis Bay is 35 ft. 6 in.
HEALTH: Pratique is in accordance with International Regulations. Pratique automatic if arriving from another Greek port.
RADIO: Athens (SVA).
VHF: Operative throughout 24 hours on Channels 16, 12, 7 for Pilots and 16, 12, 7 and 19 for Eleusis Coastguard. Aspropyrgos Refinery on Channel 8.
RADAR: None.
TUGS: Usually join vessel at the entrance of the channel, ship's lines always used.
BERTHING: Position of berth: Lat. 38° 01′ 34″ N., Long. 23° 35′ 36″ E.

Pilot will advise Master of berthing place in accordance with Port Authority instructions. Usually berthing with port side to at crude oil berth; with starboard side to at oil products berth and with the stern to at LPG berth.

According to the Pilot, it is preferable to use ropes for mooring.

Also see "Tankers".
MEDICAL: Advance notice not required; clinic available in town of Eleusis if required.
TANKERS: One berth, depth 38 ft. 9 in., with 3 unloading arms (8 in. diameter each) for discharging crude oil. The max. acceptable pressure at the unloading arms is 9 kg./sq.m.

One berth, depth 38 ft. 9 in., with 3 loading arms (8 in. diameter each) for oil products.

One berth, depth 23 ft. 8 in., for loading LPG and oil products with flexible hoses, 6 in. diameter each.

There is one pier for small tankers (coasters) with max. depth 26 ft.
DENSITY: 1025.
FRESH WATER: Can be supplied from the piers (up to a maximum quantity of 300 cu.m. per vessel).
FUEL: All grades available.
FIRE PRECAUTIONS: Fire wires rigged fore and aft on outboard side of vessel. Deck scuppers plugged. Spark arresters to be fitted on tank openings. Earth connections made. Patrols made by Port Officers.

In the case of a storm, the Dock Master can stop discharge of vessels. The refinery fire fighting procedure is followed.
CONSULS: None.
REPAIRS: While alongside, maintenance of any kind on board is strictly prohibited. In case of an emergency, the issuing of a special written "cold or hot work" permit is necessary.
DRY DOCKS: See "Eleusis".
GANGWAY/DECK WATCHMEN: Not required.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 open bottle of wine/spirit allowed per crew member.
REPATRIATION: All facilities available for crew changes and repatriation.
AIRPORT: Direct overseas flights available via Athens airport at Hellinicon.
TIME: GMT plus 2 hours; Summertime (March to September) GMT plus 3 hours.
POLICE/AMBULANCE/FIRE: All emergency services are available through the terminal office. Fire alarms are installed throughout the jetty. Fire tel: 300. Ambulance tel: 311, Police tel: 353.
SERVICES: Compass adjusting. Electronic equipment services.
SHORE LEAVE: Permitted.

CHALKIS: 38.27 N. 23.35 E.

DOCUMENTS:
- 2 Crew Lists.
- 2 Passenger Lists.
- 2 Cargo Manifests.
- 2 Stores and Spares Lists.
- 2 Crew Personal Effects Lists.
- Health Certificate.

PILOTAGE: Pilotage is compulsory for all foreign vessels and Greek vessels over 1,000 g.r.t.

Application for Pilot to be made by radio through Agent to Chalkis Port Authority. ETA required at least 24 hours before arrival. 2 hours notice of departure required.

Apply for Pilot through VHF Channel 12, or through radio/telephone on 2364 kHz calling Harbour Master, Chalkis.

Pilot boards from black motor-boat with white horizontal stripes, about 10 m. length, in a position about 1 mile – 1.5 miles North of the light buoys of the Northern Port.

The pilotage area extends from 1 mile North of red and green light buoys, North of Evripos Bridge. and to the South of Euboea, 2.5 miles from Bourtzi Point.

The anchorage for vessels coming from the North of Euboea and awaiting Pilot is at the centre of the Euboean coast off Lighthouse Kakokefali, North of the 2 light buoys and outside the bearing 020°/200° which is the axis of vessels passing in and out of Evripos Strait.

Safe anchorage for vessels coming from South of Euboea and awaiting Pilot is 1 nautical mile South of Bourtzi Point.

ANCHORAGES: Good anchorages in both harbours, well clear of th fairway, 2 miles S.S.W. of the green Fairway Buoy of the South entranc and 1.5 miles North of the green and red buoy of the North entrance
ENTRANCE: The South entrance has 2 narrow passages. Th Southernmost is the 3 cable wide Dhiavlos Avlidos with 6.4 m. (21 f depth, which leads to the outer harbour. Three miles further N.W., th one cable wide Dhiavlos Peramatos connects the outer and the inn harbours, depth 6.4 m. (21 ft.) over a width of 90 m.
RESTRICTIONS: Vessels with a draft of 18 ft. – 21 ft. and LOA 110 n – 178 m. pass through Dhiavlos Steno in daytime only, and are to b accompanied by a tug.

Full details in Evripos Straits Operations Regulations.

There is also a restriction in Steno Straits, where there is an overhea cable 37 m. (121 ft.) above sea-level.

Swing Bridge: Passage through swing bridge only possible fro 2300 hrs. – 0500 hrs. Call Chalkis Port Control on VHF Channel 12 Max. LOA 105 m. and max. draft 5.5 m. (18 ft.). Width of channel 39 n *Tides/Currents:* In Avlidos Steno the tidal stream is normally up t 4 knots – 5 knots, North of the swing bridge. The spring range is abo 0.8 m. (2.6 ft.) and neap range about 0.2 m. (0.6 ft.). South of the brid the currents and tides are small. Moreover H.W. is 1 hour 12 minut later in the North harbour than in the South harbour, which cause streams of 7 knots – 9 knots at Springs.
MAX. SIZE: Max. draft 21 ft. in daytime and 19 ft. at night for vesse entering port. For vessels navigating Evripos Strait, max. length 110 m max. draft 19 ft., breadth 20 m. and subject to local regulations.
HEALTH: Pratique not required if coming from another Greek por Otherwise International Pratique regulations are applied.
RADIO: No local radio, all messages should be passed through Athin Radio.
TUGS: 3 tugs available, join vessel off the berth. Ship's tow lines use Tug is compulsory for vessels over 1,000 g.r.t. Tug used only for berthin and unberthing.
BERTHING: *South Outer Harbour:*
(1) A pier of Interchem Chemicals factory with a channel with 18 t max. draft.
(2) Avlis Shipyard with 2 floating docks.
(3) A cement factory with docks, with max. draft 21 ft., with piers fo loading cement and discharging coal (South Inner Harbour).

On the Eastern shore the old quay has a length of 150 m. and a dep of 6.0 m. (20 ft.) alongside. The new quay has a length of 430 m. an a depth of 5.0 m. – 7.0 m. (17 ft. – 24 ft.) alongside.

Berthing at slack water or when stream is South to North.
BRIDGES: Passage above Evripos Bridge can only be effected at slac water or with following tide.
CRANES: Mobile cranes available.
STEVEDORES: Loading, discharging, carried out with ship's gea Notice must be given by Agent to stevedores not less than 6 hou before vessel's arrival.

Cargo working rates: General cargo 80 tons – 100 tons every 8 hour Bagged cargo 100 tons – 150 tons every 8 hours. Timber 70 cu.m. 90 cu.m. every 8 hours.
MEDICAL: Agent should be advised beforehand if medical assistanc required on arrival. Clinic facilities available. Vaccination certificat required.
DENSITY: Average 1025.
FRESH WATER: Drinking water can be supplied in small quantities b tanker lorry or water barge. Available alongside at the South Pier.
FUEL: Can be supplied in small quantities by tanker lorry.
CONSUL: France, Tel: 2574.
DRY DOCKS/REPAIRS: Avlis Shipyards S.A., P.O.Box 18, Chalk Greece. Tel: (0221) 31502, 31512. Telex: 272143, 272180.

Shipyard has 2 floating docks (max. size 48,000 d.w.t.) and a lay- berth for major repairs.
WATCHMEN: Not compulsory.
HATCHES: Opening and closing hatches can be effected by ship's cre or by workers if requested.
CUSTOMS ALLOWANCES: Crew members each allowed 1 packet cigarettes per day. Only the Master is allowed 1 or 2 bottles of alcoh while vessel in port.
REPATRIATION: No difficulties as there are excellent communicatio with Piraeus. Also see "Shipmaster's Report".
AIRPORT: Nearest is Athens International Airport (90 km.).
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: 1st January; 6th January; 25th March; 21st April; Go Friday; Easter Monday; Easter Sunday; 21st May; 15th August; 28 October; 6th December; 25th and 26th December. Local holiday St. Paraskevi (July), St. Nicholas (6th December).
POLICE/FIRE/AMBULANCE: Port police 22580; Fire 2333 Ambulance 22282.
TELEPHONES: Cannot be connected on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes are issued by Port Authoriti
DELAYS: Only waiting for suitable tides.
GENERAL: *Garbage:* Removal of garbage is compulsory.

SHIPMASTER'S REPORT: June 1981.

The name appears to be pronounced Halkis but according to lo people the spelling can be Chalkis, Khalkis, Halkis or Kalkis.

To repatriate Indian crew, Agent requires names of those pers leaving at least 48 hours in advance. Crew usually cleared throu Immigration 48 hours beforehand and through Customs when they le the vessel. Immigration office closes at 1300 hrs. and all day Sund For British personnel, Immigration can be arranged 24 ho beforehand. All personnel must ensure that anything declared on t manifest such as cameras, radios, etc., are crossed off on being ta ashore otherwise vessel will be fined if these items not sighted Customs when vessel sails.

The bridge lowers and retracts under the road on the South side

According to the Pilot the maximum tidal rate is 4 knots, although it does appear faster at times.

AUTHORITY: Chalkis Port Authority, 1 Athens Street, 34100 Chalkis, Greece. *Tel:* 28888, 28055. *Telex:* 272197. *Contact:* Commander George Papanicolaou, Harbour Master.

CORFU (including Kalifoka and Kefalomandouko): 39.37 N. 19.56 E.

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists.
Maritime Declaration of Health.
3 Stores Lists.
3 Spares Lists.

PILOTAGE: At least 24 hours before arrival ETA should be passed to Port Authority on 2182 kHz, answering on 2830 kHz also VHF Channels 7 or 12 and Telex No. 33111. Vessels requiring Pilot during daytime should hoist letter "G" of international code, and sound letter "G" in the morse code on ship's whistle at intervals. Vessels should await Pilot in position Lat. 39° 38′ N., Long. 19° 57′ E. nearest to the coast of Ptychia Island (Vido) and Corfu, depending on weather conditions.
ANCHORAGES: Safe anchorages in the area between Vido Island and coasts of Corfu, depth about 30 m. During strong N.W. winds there is safe anchorage in the roadstead at Garitsa Bay at a distance of 0.5 miles from the shore where depth in excess of 20 m.
RESTRICTIONS: Only during unfavourable weather conditions or lack of berthing space.
MAX. SIZE: Draft 7.0 m.
HEALTH: Port Health Officer boards vessel on arrival and examines health declaration. In cases of suspected disease or fever on board the Health Officer will examine entire crew and passengers.
RADIO: Radio Kerkyra. 2182 and 2830 kHz.
VHF: Radio Kerkyra on Channel 26. Port Authority on Channels 7 and 12.
TUGS: One tug – "Hermes".
BERTHING: Vessels should prepare fenders prior going alongside berth.
STEVEDORES: At least 24 hours advance notice of ETA required order arrange gangs. There are 2 silos for the discharge of bulk grain at Mandouki.
MEDICAL: Agent should be advised in advance of any medical requirements. Medical clinics available.
DENSITY: 1025.
FRESH WATER: Available through 2 in. hoses.
FUEL: For yachts in the new harbour there is a diesel-oil tank, capacity 10 tons. Also available from road tanker for all vessels alongside.
FIRE PRECAUTIONS: Loading/discharging of inflammable liquids and explosives generally forbidden without permission of Port Police. The anchorage for vessels carrying inflammable liquids or explosives is between Lazareto Islet and N.W. of breakwater point.
CONSULS:

Belgium: S. Savanis, 44 Alexandras Av. Tel: 33788.

REPAIRS: Facilities for minor repairs only.
DRY DOCK: Largest dry dock 20 m. length, 2 m. depth.
WATCHMEN: Required.
HATCHES: Opened and closed by stevedores. Hold cleaning service available.
CUSTOMS ALLOWANCES: Crew of Greek vessels are not allowed more than immediate requirements out of bond. Seamen signing off and passengers leaving the vessel are allowed 200 cigarettes.
REPATRIATION: Facilities for crew changes and repatriation available.
AIRPORT: 2 km. from port. During Winter 2 flights daily to Athens. During Summer frequent daily flights to Athens, Thessalonika and abroad.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: Local holidays are 21st May, 11th August and 12th December. In addition Corfu observes standard Greek holidays.
POLICE/AMBULANCE/FIRE: Port Police, tel: 32655, 30481; Police, tel: 38661; Ambulance, tel: 39403, 30033, 30562; Fire, tel: 39533.
TELEPHONES: Telephones only available for placing onboard for special cases.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
REGULATIONS: Forbidden to approach Lazareto Islet.
GENERAL: Prevailing wind is from the N.W. Anchorage in the new harbour unsatisfactory due to mud bottom.
AUTHORITY: Port Authority of Corfu, Xenofontos Stratigoy 2, GR 491 00 Corfu, Greece. *Tel:* 32655, 39513, 30481. *Telex:* 33111. *Contact:* Harbour Master.

ELEUSIS (including Skaramanga): 38.02 N. 23.33 E.

(See Plan)

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.
Bill of Lading.
2 Lists of Stores and Provisions.

PILOTAGE: Piraeus Pilot Station regulations are operative.
ANCHORAGES: Port offers safe anchorage. Bottom mud and sand.
RESTRICTIONS: After sunset and for vessels intending to enter Eleusis port through Salamis Channel, it is imperative to give 6 hours notice of expected time of arrival to Port Authorities of Eleusis, in order to obtain special permission from the naval yard of Salamis.
MAX. SIZE: No limitations to length and breadth at the installations or at the main port. Max. permissible draft of vessel entering Eleusis Bay is 35 ft. Max. draft at berths is 33 ft. Also see "Tankers".
HEALTH: For vessels arriving from other Greek ports, Pratique is automatic. Vessels arriving from foreign ports boarded by Health Officer who grants Free Pratique.
RADIO: Athinai, 2182 kHz.
TUGS: Join vessel outside Piraeus Harbour and formalities much same as Piraeus.
BERTHING: Overall length of jetties and quay at Eleusis 715 m. Max. depth over 80 m. of jetty length is 33 ft. with depths of 26 ft. elsewhere.
SPECIALISED CARGO-HANDLING: Loading/discharging of iron ore is carried out by *(a)* Holivourgiki Co., (See "Shipmaster's Report" - August 1985) which owns a pier of 180 m. long and from 26 ft. to 36 ft. depth, equipped with 4 cranes with average discharge rate of 6,000 t.p.h., and *(b)* by Metallia Voxitou Elefsinos Co., which offer a special anchorage with buoys. Loading is effected by means of silo.

Loading/discharging of fluid chemicals or liquid gas are carried out by Petrogas Co. to their private pier of 35 m. long and 15 ft. depth.
MEDICAL: Advance notice not required. Clinic available in town of Eleusis if required.
TANKERS: Operating companies supply reducing pieces. No facilities for residue discharge. *(a)* Esso Pappas: length 160 m.; breadth 30 m.; depth at pier 30 ft. *(b)* Greek Refineries: length 93 m.; breadth 12.70 m.; depth 7 m. *(c)* Texaco: length 80 m.; breadth 6 m.; draft 4.50 m. *(d)* Mamidakis: length 40 m.; breadth 5 m.; draft 27 ft.
Shipmaster's Report: June, 1981.

Petrola petroleum harbour just West of Elefsis town.

Petrola is owned by John Latsis Co. The terminal has their own VHF Channel 66 Alpha, also use Channel 12 but this usually congested.

Moorings: Normally 3, 2, 1. Normally 2 tugs. Pilots employed by Petrola and come on board after Sea Pilot has taken vessel through the Bay. Fresh water available from jetty.
FRESH WATER: Barge delivery available.
FUEL: Available ex-wharf at tanker installations subject advance notice. Can be supplied by barge at other locations.
FIRE PRECAUTIONS: The usual precautions applicable to oil installations. During operations of white liquid (petrol, spirits, etc.) regulations require a tug to be standing by.
HATCHES: Usually opened and closed by crew and subject additional payment by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits allowed per Crew member out of bond.
CONSULS: None.
REPAIRS: All grades of repairs can be carried out at Eleusis Shipyard, and also at Skaramanga (see "Dry Docks").
DRY DOCKS:
Hellenic Shipyards Co.

Skaramanga Shipyard: Situated on the coast between the Port of Piraeus and Eleusis Bay. Shipyard is 8 miles by road from Athens and 7 miles from Piraeus; driving time 25 and 20 minutes respectively.

Mailing address: Hellenic Shipyards Co. Athens: 4 Academias St. Tel: 36.11.142. Cables: Shipyard, Athens. Telex: 215123.

Skaramanga: Tel: 55.73.351, 55.73.471. Cables: Shipyard, Athens. Telex: 215293, 215396.

Office hours at Skaramanga: 0815 hrs. to 1715 hrs. (weekdays), 0815 hrs. to 1345 hrs. (Saturdays).

Floating Docks

Main Particulars	*Dock No. 1*	*Dock No. 2*	*Dock No. 3*
Lifting capacity	30,000 tons	22,000 tons	25,500 tons
Docking capacity (d.w.t.)	72,000 tons	37,000 tons	60,000 tons
Length overall	826 ft.	673 ft.	760 ft.
Length on keel blocks	760 ft.	605 ft.	693 ft.
Breadth inside banks	121 ft.	105 ft.	111 ft.
Breadth outside banks	147 ft.	129 ft.	136 ft.
Ht. of WL above keel blocks	28 ft.	28 ft.	28 ft.

Skaramanga Yard's 3 floating docks have been designed in such a way as to eliminate delays of any kind in the raising of large vessels and to ensure that the work is carried out in minimum time and with the least possible inconvenience to the crew living on board.

The basic equipment of the docks is the following; 2×5 ton cranes, 2 fire extinguishing pumps 120 cu.m. per hour at 90 m. WC, DC current supply to ships 1200 A 220 V, AC current supply to ships 600 A 440 V 60 cycles, multipoint welding rectifier 2500 A, 2 oil pumps for supply of fuel oil from the dock to the vessel 60 cu.m. per hour at 50 m., 2 compressors 17 cu.m. per minute at 7 atu, emergency diesel generator set 200 KVA, foam fire extinguishing system, steam boiler and water distilling plants.

Shipmaster's Report: 1978.

Tankers may discharge residue at the deballasting station of Hellenic Shipyards, max. output 500 cu.m./hour.

Graving Docks

1. Capacity 500,000 tons. Length 420 m., breadth 75 m., depth 9.5 m.
2. Capacity 250,000 tons. Length 327 m., breadth 53.6 m., depth 9.25 m.

Ships are manoeuvred at the dock entrance with the assistance of 2×5-ton capstans situated on each side of the entrance gate. They are then shifted inside the docks by 2×15 ton auto-tensioning winches and hauling-in trolleys (mules) running on tracks on each side along the dock subway.

The dock floor is fitted with specially designed keel blocks for easy fitting and removal and with electrically operated side blocks.

The Graving Dock is served by 2×100 ton cranes, 1×50 ton crane and a small 5 ton crane.

A fleet of 5 powerful tugs is on hand at Skaramanga Yard to assist docking and undocking operations of all vessels calling at the yard.

Eleusis Shipyards S.A. is located 27 km. outside Athens. The site was chosen on account of the several advantages it presents. The bay is well protected from strong winds, sources of raw materials are available in the vicinity of the yard, and adequate transportation, power, and telecommunication facilities can service the needs of yard.

Athens Office: 67 Athinas Street, Athens 112. Tel. 349 053. Cables "Helnafel Athinia". Telex 215215 Esc Gr.

Yard: Eleusinia, Eleusis. Tel. (01) 5535111. Cables "Helnafel Eleusis". Telex 215684 Yard Gr and 215690 Yard Gr.

Floating Docks: Three floating docks are available with the following specifications:

	No. 1	*No. 2*	*No. 3*
Length	162 m.	227.5 m.	252 m.
Breadth at entrance	23 m.	33 m.	41 m.
Draft over keel blocks	6.30 m.	8 m.	9.40 m.
Lifting capacity	11,500 m. tons (20,000 d.w.t)	20,000 m. tons (60,000 d.w.t.)	30,000 m. tons (115,000 d.w.t)
Cranage	5 t at 15 m.	12 t at 20.6 m.	12 t at 20 m.

Quay Wall: The 640 m. long quay wall is equipped with 40 and 15 ton cranes, range 30 m.; power 220 volts DC 100 amp. – 42 volts DC 25 amp. – 280 volts AC 630 amp. Floating crane, 50 tons capacity.

Tugs: Available for manoeuvring purposes at all times.

AIRPORT: Athens Airport. Regular international flights.

HOLIDAYS: Cargo operations can be effected during usual Greek holidays, following submission of application to Harbour Workers' Union and subject cost increase of 75% above normal.

POLICE/AMBULANCE/FIRE: Eleusis Police Station 46674; Ambulance 46503; Fire Brigade 0199.

SPECIAL PRECAUTIONS: See "Piraeus".

SHIPMASTER'S REPORT: August 1985.

Berth of Chalivourgiki S.A.

Vessel: 20,500 d.w.t.

Max. Size: LOA 165 m. max. draft 39 ft.

Products Handled: Steel.

Anchorage: Eleusis Roads.

Pilotage: Pilot boards and disembarks at Piraeus.

Tugs: From Piraeus only.

Cranes: 2×20 tons.

Fresh Water: Available alongside.

SHIPMASTER'S REPORT: October 1987.

Documents:

9 copies Crew List.
2 copies Crew Declaration (to include radios, cameras,cassettes etc.).
2 copies Manifest (including ship's stores, bond, ship's fixtures, etc.).
1 copy Health Declaration.
2 copies Drugs List.
6 copies Cargo Manifest.

Pilotage: The Pilot for Eleusis boards from a black and white launch off Piraeus Breakwater (Molos Themistokleous). There is deep water close in to the breakwater.

The Pilot can be contacted by telex No. 00601-212187, answerback OLPGR.

Pilots should be contacted on VHF Channel 12, 2 hours before arrival off the breakwater and again when 3 miles from the breakwater.

When berthing at Eleusis oil piers or quays, the Refinery Pilot boards and departs off the pier.

Normally only daylight transit and berthing and unberthing for tankers proceeding through Ormos Keratsiniou and Stenon Navstathmou Straits which lead to Kolopos Eleusinas Bay.

Under special circumstances and by prior arrangement with the Agent and authorities, transit is possible at night.

At the Western end of Eleusinas Bay, Prosmegaron Channel can be transitted without Pilot by prior arrangement through the Agent. If required, a pilot will board/depart from vessel South of Makronisos Island. At least 6 hours notice of arrival is required by the Agent and Piraeus pilot station by telex.

Passage: The channel into Eleusinas Bay from Piraeus is very crowded with repair yards, naval base, laid-up vessels and small craft.

The Pilot advised that the maximum draft allowed through Yeoryios Channel is 39 ft. 6 in. (BA. Chart No. 894 indicates 36 ft.). On the North and South bound transits using echo soundings, we found a depth of 38 ft. 6 in. This should therefore be closely checked beforehand if transitting in a deep draft vessel.

The Pilot advised that the maximum draft allowed through West passage of Prosmegaraon was 26 ft.

Anchorage: The vessel used Piraeus Anchorage Area No.1 (BA. Chart No. 894 and 1520) to the West of the line 232° from AK. Aminiou lighthouse. This is a slightly different anchorage area than that shown on BA. Charts.

The anchorage is often very crowded. No Pilot required.

Anchorage is also possible in Eleusinas Bay under Pilot's direction. This bay can also be very crowded with laid-up vessels.

Tugs: There are very many tugs available in the area. The refinery has special tugs of up to 5,000 h.p. available.

It is compulsory for small vessels to use at least 1 tug when berthing. Tugs secure alongside when berthing and unberthing.

Max. Size: Maximum size of the vessel is restricted by the size that can pass through Keratsiniou Passage.

Tanker Berths: 3 piers and 1 quay are used by the refinery.

The long pier in position 38° 09.95′ N.,23° 30.55′ E. (See B.A. Cha No. 1513) is used by crude carriers on the East side and by chemic carriers on the West side (Chicksan arms).

LPG is loaded at quay (38° 02.2′ N., 23° 30.56′ E.) to the East of th long pier. A depth of 38 ft. was found alongside the quay. Other produc are also handled. The vessel moored with 2 head/stern lines, 2 brea lines and 1 spring forward and aft. Vessels can berth either side to the LPG quay, depending on ship's requirements. Maximum leng allowed at the LPG quay is 150 m.

Cargo: LPG storage at ambient temperature (very hot in Summer) 4 spheres, 2 with capacity of 3,000 cu.m. and 2 with capacity 4,000 cu.m. These spheres are situated close to the quay. A Butan and LPG mix is handled. The liquid Chicksan is 6 in. 300 ASA and th vapour return line which is attached to the liquid arm is 2 in. 300 AS

The maximum Butane loading rate is 250 cu.m.p.h. In October 19 the average rate was 180 cu.m.p.h. at +30°C. The surveyor strong advised us not to use the vapour return line due to the large differen between ship and shore figures in the past (vapour does not go bac to the same tank).

There is no facility to flare cargo return vapours, or vent inert gas.

Butane density 0.582 at 15°C. Apparently maximum oxygen lev allowed in ship's tanks is 1%, this was not checked.

The shore tank figures were used for Bill of Lading.

Fresh water supplied through shore hydrant and meter at a cost US $3.00 per cu.m. The ship's hoses were used and the rate of deliver was high. There is waterman available.

General: It is very difficult to take any stores or supplies over the qua through the terminal due to numerous Customs and Port Regulation If possible it is best to take stores at Piraeus anchorage or before th Pilot boards. The charge for launch service at Eleusis is £100 per tr and at Piraeus £20 per trip.

For personnel leaving vessel, luggage is in bond until it reaches th airport.

Pilot advised that there is a large tanker sea-buoy discharge termi at N. Revithousa Island in position 37° 57.8′ N., 23° 23′ E. (B.A. Cha No. 1513).

Public correspondence is through Hellas Radio but due to the amou of traffic the quality of the service/reception was poor.

AUTHORITY: Eleusis Port Authority.

IRAKLION (Heraklion), Crete: 35.20 N. 25.10 E.

(See Plan

DOCUMENTS:

4 Cargo Manifests.
4 Crew Lists.
4 Passenger Lists.
Declaration of Crew's Personal Effects.
List of Stores and Provisions.
Maritime Declaration of Health.
Vaccination Certificates.

PILOTAGE: Pilotage area extends 0.5 to 1 mile N.E. of breakwat Advance notice of ETA should be passed to Agents order arrange Pil Contact may be made with Pilot station on VHF Channel 12 duri daylight, also when within distance of 3 – 12 miles, and subject pri agreement of calling time, communication can be effected by radi telephone via Radio Iraklion – Pilot station telephone 22532 International pilotage signals apply. Pilot boat is wooden boat 12 length, hull colour black, with white deckhouse, carrying black boa with word "Pilot" in white letters. In bad weather vessels should proce close to entrance of port for Pilots boarding.

A cement pillar has been installed on the end of the extension of th North breakwater. Fl. G. every 3 seconds, visible 9 miles. The pilot bo is equipped with VHF, range 50 miles.

ANCHORAGES: Anchorage East of port entrance is forbidden owi to numerous underwater cables. In good weather conditions anchora to be found 0.75 mile Northwards of North breakwater with Enetic Cas bearing 180°. In bad weather conditions, best anchorage is at a distan of about 5 nautical miles to the W. of the North breakwater and a distance of 3 miles from the coast (Linoperamata Bay); depth of wa requires a big scope of anchor chain.

MAX. SIZE: Max. length 250 m., draft 29 ft. – 29 ft. 6 in. Usual rise a fall of tide 1 ft. but increasing with South winds and decreasing w North winds.

HEALTH: International regulations apply for obtaining Free Pratique the event of suspected disease vessel will remain under quarantine u cleared. Pratique is automatic if arriving from another Greek port.

RADIO/VHF: Iraklion Radio, call sign SVH, keeps watch on 2182 k and replies on 2799 kHz.

Iraklion Central Port Authority (Port Police) maintain 24 hour V watch on Channel 12.

TUGS: Two tugs available.

"Captain Gianis", 1,780 h.p., owned by Tsainis Kir (Tel. 081-2223

"Minotavros", 960 h.p., owned by Minos Shipping Co. (Tel. 0 283180).

BERTHING: Pilot will advise Master of berthing position.

CRANES: 1 × 40 tonnes for containers, 2 × 12.5 tonnes and 4 × tonnes.

STEVEDORES: Cargo operations usually conducted by use of sh own gear. Discharge rates per gang in 8 hours: Bulk cargo 200 to bagged cargo 500 tons, timber 200 cu.m. and containers 2,000 tons

MEDICAL: Advance notice should be passed to Agents if requ medical attention. Clinics and medical treatment available.

TANKERS: Only very small tankers discharge in Iraklion Port and Linopermata Bay. At Iraklion, tankers discharging liquid fuel are required to berth at East breakwater (fuel pier), Pier No. 6 or North Breakwater. Attendance of fire brigade and 1 tug standing by is compulsory.

DENSITY: 1020.

FRESH WATER: Available ex-berth or ex-barge. Rate of delivery ex-berth about 500 tons per 24 hours.

CONSULS:

REPAIRS: Minor repairs available by machine shops in town of Iraklion. No facilities for deck repairs.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: 2 packets of cigarettes per day per crew member allowed out of bond, and one 500 ml. bottle wine/spirits for whole time of vessel's stay in port. Goods to the value of 7,500 dr. for E.E.C. citizens and 3,000 dr. for other countries.

AIRPORT: Distance 5 km. Now an international airport with numerous flights.

TIME: GMT plus 2 hours, GMT plus 3 hours end March – end September.

HOLIDAYS: Usual Greek holidays plus local holidays of 25th August and 11th November. Cargo work can be arranged on holidays subject additional costs.

POLICE/AMBULANCE/FIRE: Police, tel. 100, 282243, 282430, 282316; Ambulance, tel. 222222; Fire, tel. 225048, 282333.

IDENTIFICATION CARDS: Shore passes issued by Port Authorities.

DEVELOPMENTS: Dredging of some berths to 12.5 m. expected, from present depth of 10.0 m.

A jetty with length 800 m. and depth of 13.5 m. is to be constructed.

AUTHORITY: Iraklion Central Port Authority, 71110 Iraklion, Greece. Tel: 081-244912. *Contact:* Captain Bilias Savas, Harbour Master.

ISTHMIA, Corinth Canal (including Sousakion and Corinth): 37.55 N. 23.00 E. (See Plan)

DOCUMENTS: (For Sousakion only).

Port Authorities

- Crew List.
- Passenger List.
- Ship's Certificates.
- Health Certificates.
- Certificate of Anchorage Dues.

Customs

- Customs papers and declarations.
- Cargo Papers.
- List of Stores and Provisions.
- List of Crew's Personal Effects.

PILOTAGE: There are 16 Pilots for the Corinth Canal. Cables: "Corinth Canal", tel: 0741-24452, telex: 232164 Dico Gr. Master of vessel must give at least 4 hours' notice of ETA in order to avoid delay. For Pilot signals, etc., see Article 7 of the New Company of the Corinth Canal "Regulation of Navigation and Tonnage".

ANCHORAGES: Open anchorage in Isthmia Bay.

RESTRICTIONS: Corinth Canal closed every Tuesday from 0600 hrs. to 2000 hrs. in order for maintenance work to be effected.

MAX. SIZE: The max. draft of ships negotiating the Canal, in relation to their width, is defined as below, assuming normal water level and normal weather conditions.

Width	*Maximum draft*
16.0 to 16.5 m.	6.2 m.
15.5 to 16.0 m.	6.2 m.
15.0 to 15.5 m.	6.6 m.
14.5 to 15.0 m.	6.8 m.
14.0 to 14.5 m.	7.0 m.

The max. draft for vessels of less than 14.0 m. width is 7.2 m. The max. width must not exceed 18.3 m. (60 ft.).

Special instances will be examined by the Master and the Canal Service in collaboration.

HEALTH: (For Sousakion only). Pratique effected by health department of the Port Authority assisted by temporarily engaged doctor. In cases of suspected contagious disease vessel will be held under quarantine and if necessary fumigation will be conducted at Piraeus.

VHF: Corinth Canal Pilots on VHF Channel 11. Harbour Master at Isthmia on Channel 19. Harbour Master at Corinth on Channels 19 and 12.

TUGS: Join vessel near Canal entrance at Isthmia and Possidonia. Ship's lines always used.

BERTHING: In Sousakion at private factory pier. No berths at Isthmia.

MEDICAL: Agent should be advised in advance of number of crew needing medical assistance, also information of any vaccination required.

FRESH WATER: Not available either at Sousakion or in the Canal.

FUEL: No fuel available at Corinth.

CUSTOMS ALLOWANCES: Each crew member allowed 200 cigarettes out of bond and 1 bottle wine/spirits.

CARGO GEAR: Loading/discharging by ship's gear.

AIRPORT: 100 km. distance.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

POLICE/FIRE/AMBULANCE: Telephone Harbour Master of Isthmia No. 22129.

DELAYS: Possible delay up to 1.5 hours in transiting Canal if another vessel already transiting canal from opposite direction.

GENERAL: Passage via the Corinth Canal is a *Transit*.

SHIPMASTER'S REPORT: (Corinth) 1977.

Vessel: 5,700 g.r.t., 9,200 d.w.t., Summer draft 24 ft. 07 in., LOA 409 ft. 05 in.

Documents: No special entry papers required and if anchoring to await the berth Customs and Immigration will usually board at anchorage.

Port of Corinth: The port has no VHF communications but messages can be passed through the Corinth Canal Pilot Station on Channel 11. Pilot will then telephone Agents.

Anchoring off the port in the case of delay is possible but cannot be described as safe due to the close proximity of land or shoal water. Holding ground, however, is good. This vessel anchored with Corinth Breakwater light bearing 248° in about 16 fathoms of water using 6 shackles of cable. Vessel rode out a Force 7/8 gale from the North without dragging but with the cable fully stretched the bridge was only 2.3 cables from the breakwater and too close for comfort. A second anchorage was used with the breakwater light bearing 232° and the ship's bridge 5.6 cables from the breakwater in about 18 fathoms of water. Again with the cable fully stretched this gave a clearance off the nearest shoal water of 3 cables, 6 shackles of cable being used. This is a slightly more comfortable position and again gale force winds were experienced without dragging. The vessel did drag in this position but not until winds were gusting to Force 9 as a prelude to very severe storm conditions in which no anchorage of this nature would have been satisfactory. The bottom is stiff grey mud and care must be taken when anchoring not to impede the traffic approaching the canal entrance. Anchoring further to the Westward in order to increase the clearance from shoal water, etc., is not recommended as in addition to the much greater depth of water the holding ground deteriorates, becoming crumbly mud.

A boat can be provided by the Agents for use as a liberty boat when at anchor and there is no objection on the part of the Authorities to using the ship's boats for runs ashore.

A first examination of the chart (B.A. Chart No. 1600) will not indicate anywhere to berth a vessel of this size. However, dredging work has been carried out and the berth is on the S.E. side of the breakwater where there is room for a vessel of this size and for one small coaster in addition. The breakwater itself is slightly different in shape from that shown on the chart and building and dredging work are still in progress at its seaward end. The green flashing buoy shown on the chart is no longer in position but a light of similar characteristics is now shown from a structure on the breakwater end.

Maximum draft for berthing is 6.7 m. (22 ft.) and on this vessel's first call soundings between ship and quay when alongside indicated depths of between 24 ft. and 26 ft., depths outside the ship being some 5 ft. greater.

A Pilot is available, and is of great assistance. He is an experienced shipmaster and has very good local knowledge. A small tug is presently employed shifting barges and cranes employed in harbour works and it is sometimes possible to use his services. This is dependent upon the tugmaster. He is particularly useful when undocking to hold the stern off the quay.

Initial approach to the berth is bow on until the starboard anchor has been let go which should be done at such a distance from the berth so as to allow 4 shackles of cable in the water when the vessel is alongside. Vessel is gradually swung on the anchor, long head and stern ropes are run by boat, and vessel is so brought alongside port side to.

The undocking operation is straightforward, the bow being pulled off the quay by means of the anchor. The only danger is that of the propeller coming into contact with the quay and here the services of the tug are valuable.

Docking and undocking in strong winds from any direction would be hazardous and in many cases impossible. Docking is always done in daylight and I do not recommend undocking at night either although this would be possible under calm conditions. An added disadvantage of undocking in evening time would be that the vessel would arrive at the Narrows ferry crossing in the dark.

The Pilot agrees with this appraisal of the situation.

The quay itself is smooth concrete usually well fendered with rubber tyres and with good mooring posts. Vessel should be well secured as strong winds from a Northerly direction are experienced particularly in Winter.

There is a concrete apron some 3.0 m. wide alongside the ship and clear of this a considerable unsurfaced area on to which cargo is discharged. This area is very wet and dirty during rain.

Fresh water is available but 7 lengths of ship's hose are necessary to reach the outlet. A permanent water main is in the process of being laid alongside the ship.

Cargo operation: This is controlled by the 'Carton Pack' Plant Manager, there being no stevedore as such. Ship's gear is used and normally 3 gangs of stevedores.

The working day is from 0800 hrs. to 1700 hrs., evening overtime being unusual. Seven day working is possible but all overtime is subject to the plant working to receive the cargo.

Stevedores can discharge rapidly from the ship lifting 2 rolls of linerboard at a time but there are frequent stoppages due to congestion on the quay which reduces the overall discharge rate to about 25–27 rolls per gang hour. Although head and end clamps are provided by Charterers (carried on board) stevedores refuse to use these and all discharge is by rope sling. Rolls are landed on wooden platforms (timber supplied by Charterers) and then rolled by hand clear of the concrete apron. Two or possibly 3 fork lifts are used to load rolls from here onto lorries for transportation to the plant a short distance away.

Damage rate is high due to rolls becoming wet and dirty on the unsurfaced quay with bands being broken and outer layers torn. Further damage is caused by the fork lifts when loading the lorries.

No improvement in discharging conditions can be seen unless the quay is surfaced with proper drainage and unless Charterers are prepared to provide clamp machines for handling the rolls on the quay. Care should be taken when signing final outturn report as of course damages are written up to make it appear that they took place before discharge.

Weyerhaeuser are fully conversant with the situation.

Agents: Situated in Piraeus which is some 90 km. away. They use sub-Agents in Corinth.

The sub-Agents are not geared for handling a foreign-going ship. To obtain action on major items it is best to telephone Agent in Piraeus direct.

Bunkers: Basically not available but diesel oil has been taken, having been brought from Piraeus by road tanker and with ten days ordering notice.

Repairs: These cannot be carried out except by bringing repairers from Piraeus at very high cost.

Lloyds' surveyor is obtainable from Piraeus, this being best arranged directly by the ship.

Provisions: These can be obtained locally and are of acceptable quality. There is no ship chandler as such and the system is for the Catering Officer to visit various suppliers with the Agents, pick his purchases and then leave Agents to collect and deliver to the ship.

Shore Leave: Passes are required and are renewed each visit. They should be available for return to Immigration on departure.

Corinth Canal: This vessel passed through the canal on the 4th November, 1977 on a draft of 3.6 m. forward and 4.74 m. aft.

Application should be made in advance to the Canal Authority quoting the minimum draft obtainable.

The transit presented no difficulties.

SHIPMASTER'S REPORT: (Corinth) December 1984.

Pilotage: One private Pilot.

Restrictions: Berthing daytime only. Unberthing anytime day or night.

Loading/Discharging: Vessel loaded iron pipes, rate 600 tons to 700 tons per gang, per 8 hour shift by ship's gear. Working only during daytime (never night-time).

Vessel discharged iron plate in coils, rate 600 tons per gang, per 8 hour shift by shore crane.

Cargo Handled: Vessel loaded iron pipes, porcelain in powder and fruit in boxes. Vessel discharged iron plate in coils and paper for boxes in rolls.

AUTHORITY: Port Authority of Isthmia, *Tel:* (0741) 22129 (Harbour Master).

Harbour Master at Corinth *Tel:* (0741) 24574.

ITEA: 38.26 N. 22.25 E.

DOCUMENTS:

- 6 Crew Lists.
- 4 Passenger Lists.
- Cargo Manifest.
- Bills of Lading.
- 2 Lists of Ship's Stores and Spares.
- Health Declaration.
- Ship's Certificates.

PILOTAGE: Vessel should advise ETA at least 24 hours before arrival through the telegraphic office of Itea. Pilots are called with the assistance of the Port Authority on VHF Channel 12.

Pilot boards 1 mile S.E. jetty lighthouse. Pilot boat painted black with white deckhouse, the word "Pilot" is painted in white letters on both sides. On the bow is painted "PY21".

In bad weather vessel should enter harbour without Pilot and anchor using both anchors.

ANCHORAGES: Available inside the harbour and in Aggolis Gulf. Safe anchorage in the vicinity of the jetty head in depths of 8 m. – 10 m.

RESTRICTIONS: Vessel may enter harbour day or night. Harbour anchorage suitable for vessels up to 60 ft. draft.

MAX. SIZE: Max. LOA 130 m., Max. draft 6.0 m. Also see "Berthing."

HEALTH: Pratique is given on arrival by the port medical officer.

RADIO: Contact possible through Hellas Coastal Radio.

VHF: Contact with Port Authority and Pilot made on Channel 12.

TUGS: None available.

BERTHING: One pier. East side can accommodate one vessel with max. LOA 83 m. and draft 6.0 m. West side can accommodate one vessel max. LOA 130 m. and draft 6.0 m.

Parnassos: Bauxite loading facility. Max. size 30,000 d.w.t. Loading by conveyor.

Elefsinos: Bauxite loading facility. Max. size 10,000 d.w.t. with tide of 25 cm. – 60 cm. Loading by conveyor.

STEVEDORES: Gangs should be ordered in advance by Agents on basis of Master's ETA. Loading and discharging is effected by ship's gear.

MEDICAL: 24 hours' notice preferred if any medical requirements. Vaccination can be arranged within 24 hours. Hospital in Amfissa, 13 km. from the port.

TANKERS: There are no special installations for loading/discharg tankers.

FIRE PRECAUTIONS: There are no specific precautions.

GANGWAY/DECK WATCHMEN: Required, Master to appoint cre member.

CARGO GEAR: Loading/unloading by ship's gear.

AIRPORT: Nearest airport at Athens, distance approximately 210 k

DENSITY: 1025.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: No local representation.

REPAIRS: No facilities for repairs.

HATCHES: Hatches are opened and closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 opened bottle alcohol is allowed each man.

REPATRIATION: Can be arranged.

TIME: GMT plus 2 hours. End March to end September GMT p 3 hours.

HOLIDAYS: Cargo work can be effected on all holidays on paymen overtime.

Official Holidays: January 1st; January 6th; Holy Monday; First Mond of Lent; Good Friday; Easter Sunday; Monday after Easter; 25th Marc 1st May; Ascension Day; 6th August; (Local Holy Day); 15th Augu 28th October; 6th December; 25th December; 26th December.

POLICE/AMBULANCE/FIRE: Police: Tel. 32222; Ambulance: T 28400; Fire: Tel. 28199.

TELEPHONES: Not available.

REGULATIONS: There are general and specific regulations for the P of Itea.

IDENTIFICATION CARDS: Needed for crew men going ashore.

DELAYS: Delays in loading can seldom be expected.

DEVELOPMENTS: Extension and widening of the existing breakwa and the construction of a second breakwater.

AUTHORITY: Port Authority of Itea.

KALAMAKI: 37.52 N. 23.01 E. (See Pla

SHIPMASTER'S REPORT:

DOCUMENTS: See "Piraeus".

PILOTAGE: Arranged by Agent.

MAX. SIZE: Max. draft 38 ft. (Additional 1 ft. of draft by arrangemen

TUGS: Berthed without tug. Agent can arrange small tug from Corin Canal.

BERTHING: Berth for discharging soya beans at Kalamaki Soya M (Refinery).

Bulk Handling facility: Fixed steel tower with 2 suction pipes capab of a total of 250 tonnes/p.h. but generally slower. Vessel to shift fro hatch to hatch. Outreach of arms about 16 m.

The berth is not marked on the chart – B.A. 1600 and U.S. D.M 54289. It is situated on the North shore of the Sarnikos Kolpos near t Eastern entrance to the Corinth Canal (Dhiorix Korinthou). Wh alongside, the Canal Breakwater Lt. Ho. was bearing 253°×0.64 mi and Akra Sofia 195°×1.14 miles. Starboard side to.

Mooring bollards are adequate, there being 4 suitable for backspri on the short face (about 64 m.) of the 'T' jetty and 1 on shore for t headlines. At the Eastern side of the berth there is a new berth se from the line of the jetty consisting of 4 concrete dolphins each wi bollard and 3 of our sternlines were made fast to these. Between t new berth, which is for discharging logs, and the leg of the 'T' jetty the is a facility for loading the products of the Soya Oil refinery into coaste Tyre fenders on the 'T' jetty are few.

On approaching the berth from Eastwards it is recognisable by t dark grey ribbed metal silos and the lattice steel tower of the discharg unit.

FRESH WATER: Obtainable by truck 15 tonne capacity or by ba from Piraeus. Pipe for loading water from trucks will have to be extend by ship's hoses particularly if working cargo in forward hatches. C per truck about 3,000.00 Drachmas. Agent says price for barge sup is comparable to truck if a large quantity is required.

STEVEDORES: *Working Hours:* Continuous – Workers supplied plant.

AGENT: *Sub-Agents:* G. Karagiorgis of Corinth. Cables: "Kasko Corinth".

SHIPMASTER'S REPORT: April 1988.

The Kalamaki Private Pier is 2 miles E.N.E. of Corinth Canal. This d belongs to the Murikis Wood Factory which is 500 m. from the Do The Berth is used for small vessels of 2,000 d.w.t. loading plywood the Murikis factory. Loading is by ship's gear or mobile cranes. E sling of wood is from 800 kg. – 1,100 kg. Cargo is loaded by fac personnel. Small vessels lie alongside the pier where the depth is 1 – 18 ft. Overall length 120 m.

Large vessels lie alongside blocks with depth of 30 ft. – 32 ft. Ov length 160 m. Discharging of logs is by ship's gear into the sea on offside.

Repatriation is possible via Athens which is 80 km. away.

Berthing only possible during daylight hours. On arrival, contac Isthmia Harbour Master or Corinth Canal on VHF Channel 16.

KALAMATA: 37.02 N. 22.07 E. (See Plan)

PORT LIMITS: The seaward boundaries of the port within which a vessel is considered to be an "arrived vessel" and (subject to Charter-Party Terms) laytime commences to count is 0.5 mile from the breakwater red light, where Pilot boards.

DOCUMENTS:

3 Crew Lists, plus 3 additional for passenger vessels.
3 Crew personal effects lists, plus 3 additional for passenger vessels.
3 Deck, Engine and Steward department Store Lists.
1 Cargo Manifest.
All ship's official documents.
2 Crew Vaccination Lists, plus 2 additional for passenger vessels.
1 Health declaration.
The above are not necessary for incoming vessels from Greek ports.

PILOTAGE: Notice of ETA required 48 hours before arrival. There is VHF listening and transmitting on Channel 12 on continuous basis. Range 30 miles.

Pilot boards 0.5 miles East of the breakwater red light, weather permitting.

ANCHORAGES: Vessels awaiting Pilot may anchor 0.75 miles East of the breakwater red light.

MAX. SIZE: Vessels up to 30 ft. draft may enter harbour, for berthing alongside.

HEALTH: Port Health doctor boards vessel on arrival or alongside the berth. Master required to produce Fumigation Certificate, vaccination list and Declaration of Health. Health visit not necessary for vessels coming from a Greek port or West European ports.

RADIO: Athens Radio, call sign SVA, on R/T which covers the Kalamata region also R/T stations of Patra Kerkyra and Hiraklion.

TUGS: No tugs available.

BERTHING: Agents require details of vessel's draft in advance to get berthing permission from Harbour Authorities. Total length of piers – 1,200 m. Covered storage: 3,500 sq.m. Open storage: 22,000 sq.m.

SPECIALISED CARGO-HANDLING FACILITIES: There is a silo for grain. 2 electric pumps for liquids; 2 mobile cranes, lifting capacity 40 tons and 200 tons; 2 forklifts.

STEVEDORES: Number of gangs required to be advised Agent in good time.

MEDICAL: Doctors and medical assistance available. Also private and public hospitals.

FRESH WATER: Available in any quantity at berths. No barges.

FUEL: Can only be supplied by road tankers – subject to advance notice.

CONSULS: France, Finland and Sweden.

REPAIRS: Minor repairs can be effected in shore machine shops. No dry docks.

DENSITY: 1018.

WATCHMEN: If required can be arranged from shore.

HATCHES: Can be opened and closed either by crew or by stevedores subject to regulation payments for this work.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of spirits per man.

REPATRIATION: Can be arranged by car, train or air.

AIRPORT: Situated 6 miles away. Flights to Athens 1/2 times a day.

TIME: GMT plus 2 hours in Winter. GMT plus 3 hours in Summer (end March – end September).

HOLIDAYS: Additional local holidays are Ascension Day and St. Dionysio's Day.

POLICE/FIRE/AMBULANCE: Police tel. 22218 and 24720; Fire tel. 28273/4; Ambulance tel. 25555/27420; Tourist Police tel. 23187. District Code Number 0721.

SHORE LEAVE: Allowed. Shore passes issued by Harbour Authorities.

DEVELOPMENTS: In the near future a Free Zone will exist.

Additional open storage to be available.

AUTHORITY: Port Authority of Kalamata, Port Office, Custom House Square, 24101 Kalamata. *Tel:* 0721/22-218. *Telex:* 252211 Lcal Gr. *Cables:* "Kalamata Port Authority". *Contact:* Commander K. Mountrihas, Harbour Master.

KALI LIMENES, Crete: 34.56 N. 24.49 E.

DOCUMENTS: Vessels may arrive for bunkering without obtaining free pratique. However, if pratique is effected, vessels should have ship's papers ready for inspection, also 4 Crew Lists, 4 Passenger Lists, Cargo Manifest and a List of Stores and Provisions.

PILOTAGE: 1 private Pilot employed by the bunkering company SEKA who undertakes pilotage for vessels calling for bunkers. Pilot boat is a small boat equipped with signal lamp. Pilot boards about 1 to 2 miles S.S.E. of Aghios Pavlos (St. Paul) Islet. Vessels awaiting Pilot may anchor 1.5 miles East of Aghios Pavlos Islet.

ANCHORAGES: (See "Pilotage") Vessels may anchor in area between Aghios Pavlos Islet and Mavronissi, which is a safe anchorage.

MAX. SIZE: Vessels in ballast of up to 280,000 d.w.t. and max. draft 12.80 m. can enter port.

HEALTH: Vessels arriving from foreign ports wishing to obtain free pratique should cable Agents to arrange for boarding of Health Inspector. Free pratique automatic if arriving from another Greek port.

TUGS: There is 1 tug, but it is seldom used.

MEDICAL: Agent should be advised well in advance if medical assistance required. There are no hospitals or other local facilities and doctor has to be called from nearest town. Hospitals at Iraklion, 75 km. distant.

TANKERS: 3 berths North of Aghios Pavlos Islet (position Lat. 34° 55′ 45″ N., Long. 24° 48′ 30″ E.), max. draft 12.80 m.

FRESH WATER: Unlimited supplies available at 48 hours' notice.

FUEL: Unlimited supplies, all grades of fuel (1,000 cu.m.p.h.), diesel (200 cu.m.p.h.) and luboils available subject adequate advance notice. Supplied by Seka S.A. Telegraphic address: Seka Kalilimenes. Telex: 0262180 Vila GR.

Piraeus Address: Seka S.A., 53–55 Akti Miaouli, 18536 Piraeus, Greece. Tel: 4522911. Telex: 212172, 241717. Contact: Costas Zacharopoulos.

FIRE PRECAUTIONS: Portable foam fire extinguishers.

CONSULS: None.

REPAIRS: None.

CUSTOMS ALLOWANCES: 200 cigarettes permitted to each crew member to be held out of bond, and 1 bottle of wine/spirits.

AIRPORT: At Iraklion, 75 km. distant.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

SHORE LEAVE: Permitted if Free Pratique requested and granted.

SHIPMASTER'S REPORT: 1976. (Updated 1984).
Pilotage: Pilot boards about 1 mile South of Aghios Pavlos.
Anchorage: Half a mile E.S.E. of Mavronissi, depth of water 30 ft.
Max. Size: According to Pilot; 300,000 d.w.t. in ballast and max. draft 42 ft.
Pumping Rate: Fuel – 1,000 t.p.h., diesel – 200 t.p.h.
ETA: Send ETA 48 hours in advance through Radio Athens. The bunker station can be reached direct on VHF Channels 16 – 14.

KATAKOLON: 37.39 N. 21.20 E. (See Plan)

DOCUMENTS:

Maritime Health Declaration.
Usual Ship's Certificates.
3 Crew Lists.
3 Passenger Lists.
2 Lists of Stores and Provisions.
2 Lists of Crew's Personal Effects.

PILOTAGE: Not compulsory. Port has 1 private Pilot whom vessel may use provided sufficient advance notice passed through Agent.

ANCHORAGES: Vessels can anchor at a distance of 2 cables from the head of the breakwater (bearing 300°). Safe anchorage for vessels of up to 30 ft. draft between positions Lat. 37° 40′ N., Long. 21° 19′ E. and Lat. 37° 40′ N., Long. 21° 20′ E.

MAX. SIZE: Max. safe draft 24 ft.

BERTHING: One pier. Length 204 m. Depth alongside 26 ft. Berthing possible on both sides of the pier.

STEVEDORES: No advance notice required. No shore facilities. Vessels load/discharge with own gear.

MEDICAL: No medical assistance in Katakolon, but facilities exist at the town of Pyrgos 13 km. distant.

FRESH WATER: Available. Capacity 20 cu.m./hr.

FUEL: Not available ex-berth, but can be delivered by tank truck from Patras or Kalamata.

CONSULS: None.

REPAIRS: Not available in Katakolon. Small quantities of engine spares available in Pyrgos.

HATCHES: Usually opened and closed by crew but this work can be carried out by stevedores subject consent of Port Authority. Cost as agreed between Master and stevedores.

AIRPORT: Andravis Airport 26 km. distant. Flights to Athens twice weekly.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

HOLIDAYS: Usual Greek holidays plus local holidays of 6th December and 17th December.

POLICE/AMBULANCE/FIRE: Police and Immigration, Tel: 41202; Fire Brigade (Pyrgos), Tel: 22633; Ambulance (Pyrgos), Tel: 22344.

TELEPHONES: No facilities for placing on board.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Passes issued by Port Authority.

AUTHORITY: Port Authority of Katakolon.

KAVALLA: 40.55 N. 24.25 E.

DOCUMENTS:

5 Crew Lists.
2 Lists of Foreign Exchange.
4 Passenger Lists.
2 Cargo Manifests.
2 Lists of Crew Personal Effects.
Copies of Bills of Lading and usual Ship's Certificates.

PILOTAGE: Compulsory. 24 hours' notice of ETA to be passed to Agents or direct to Port Authorities. Vessels requiring Pilot should contact Harbour Master/Pilot on VHF Channel 12 (24 hour service). Pilot usually boards about 0.5 mile from breakwater light from new 14 m. length pilot boat. If strong South or S.W. winds prevailing, vessels recommended take refuge Eleftheron Bay. Vessels awaiting a Pilot may anchor 0.5 mile South of Kavalla Lighthouse and stand-by on VHF Channel 12.

ANCHORAGES: 0.5 to 2 miles South of Kavalla Lighthouse, depth 30 m. to 40 m. Bottom sand and mud.

RESTRICTIONS: Berthing during daytime. Unberthing possible anytime.

MAX. SIZE: Max. length 200 m. with proportionate breadth. Max. draft 27 ft. 06 in. Tidal range 2 ft.

HEALTH: Doctor boards vessel with Port Officer. Maritime Declaration of Health and Derat Certificate required. In case suspected disease or fever on board, Master should radio Port Authorities in advance. Pratique is automatic if arriving from another Greek port.
RADIO: No local radio station. Cables may be routed through Athinai Radio.
VHF: Harbour Master's office equipped with VHF Channel 12 and 16 (24 hour service).
MEDICAL: Advance notice of medical requirements necessary. General hospital in Kavalla and numerous private clinics.
TANKERS: See "Prinos".
DENSITY: 1025.
FRESH WATER: Available at berth.
FUEL: Small quantities available by truck.
CONSULS:

France	Tel: 3163	Netherlands	Tel: 3265
Finland	Tel: 3467	Sweden	Tel: 3669

REPAIRS: Minor repairs available.
HATCHES: Opened and closed by crew.
CARGO GEAR: Vessel should have cargo gear ready on arrival in order to avoid delay.
AIRPORT: Distance 30 km. One or two flights daily to Athens.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: Standard Greek holidays. Local holiday 29th June.
POLICE/FIRE: Police, Tel: 3291; Fire, Tel: 1999.
AUTHORITY: Kavalla Port Authority, Kavalla, Greece. *Tel:* 051-223716. *Telex:* 045 2140 LIKA. *Contact:* P. Zachariou, Harbour Master.

KYMASSI: 38.49 N. 23.32 E. (See Plan)

LOCATION: Lat. 38° 48.6′ N., Long. 23° 31.5′ E.
The port is on the Northern part of Nissos Evvoia. Vessels load magnesite in bulk, and firebricks on pallets.
DOCUMENTS: Crew list and usual documents for Greece.
PILOTAGE: Pilot boards about 5 cables off the berth.
APPROACHES: See "Shipmaster's Report".
RESTRICTIONS: No berthing during night-time.
RADIO: ETA and other relevant information sent by radio to the Sub-Charterer's Agents, Financial Mining Industrial and Shipping Corp., in Athens. Cable Address: "Epichiris, Athens".
VHF: Approaching Kymassi VHF contact only with Harbour Master's Office on Channel 12 during working hours (and Channels 14 – 16).
TUGS: There are no tugs in the area, except pilot boat.
BERTHING: Safe draft alongside is 26 ft. 6 in., salt water. Ship berths alongside 2 dolphins which are very well fendered with numerous rubber tyres. On approach the port anchor is let go and as the ship snubs round to port an off-shore mooring line is run by the pilot boat aft to the off-shore mooring buoy, to which the ship's line is made fast. The next line is run to inshore mooring buoy the same way. Then vessel is made fast to strong bollards.
LOADING: Carried out via a sophisticated conveyor system, the main tower of which is on curved track, thus allowing flexibility in loading either forward or aft for all the length of the vessel without any shifting, this is necessary only when loading palletised cargo. Also see "Shipmaster's Report".
EMERGENCY CO-ORDINATION CENTRE: Nearest at Chalkis 60 km.
BANKS: National Bank of Greece in Mandoudi. Foreign banks in Chalkis.
STORING: See "Prelims".

1. Yes.
2. Yes, vessel can store from barges during loading.
3. Trucks can proceed alongside.
4. Yes.
5. Declaration to Customs.
6. No.

SURVEYORS: Cargo inspectors and surveyors come from Piraeus.

SHIPMASTER'S REPORT: March 1979.
The port is on the Island of Nissos Evvoia. Vessel loaded a cargo of bulk magnesite ore (deadburned).
Documents: Crew List. Usual documents for Greece. However, as the ship had already cleared into Greece at Corinth, the Bond had to remain sealed from that port to Kymassi. Leaving Corinth a photo-stat copy of all papers handed in at that port was placed on board duly stamped by Customs for production at Kymassi. Register and usual certificates were taken by Agent to authorities and returned with Pilot plus clearance before sailing.
Pilotage: Pilot boards about 5 cables off the berth. He gave advance advice about the time the other ship was to sail and when he expected to board.
Approaches: Although no large scale British Admiralty Chart of the area or port on board, the approach was made without any difficulty. The 100 fathom line runs approximately 1 to 1.5 miles off the land. The ore loading berth is on the South side of the Bay with fairly steep to land on the Northern side. As ship has to swing to lie head out to sea, it is better according to the Pilot to approach keeping towards the North side of the Bay. Anchoring is not advised unless very good weather due to depth of water and poor holding ground. The Pilot, via VHF, advised us to lie off as the berth was occupied when we arrived. The ship berthed was due to sail around 1200 hrs., we arrived at 0900 hrs.
Radio: ETA and other relevant information was sent by radio to the Sub-Charterer's Agents, Financial Mining & Industrial Corp., in Athens. Cable address 'Epichiris – Athens'. There were no problems clearing messages.
Approaching Kymassi there was no response on VHF until the ship was within 4 miles of the port, when the Pilot answered on Channel 16 and we worked on Channel 12.
Berthing: Ship heads towards the loading jetty, a high concrete structu of "Y" shape with the ship berthing against the two arms. Both thes are well fendered with numerous rubber tyres. On approach the pr anchor is let go and as the ship snubs round to port an off-shore moorin line is run by the boat aft to the off-shore mooring buoy. This buoy ha a slip toggle arrangement to which the ship's line is made fast. The ne line run is the inshore after line which is taken to a mooring buoy insid the line of the berth. A head rope was then run to the pier and to strong bollard.
The anchor cable was slacked and ship hove alongside by the hea and stern ropes, the offshore stern rope being slacked as required. Bac spring was led to a bollard on the jetty as was the spring from a A further headrope was run to the bollard on the pier and aft a secon rope to the inshore buoy plus a bight to a bollard on the pier.
Loading: Carried out via a sophisticated conveyor system, the ma tower of which is on a curved track, thus allowing flexibility in loadin either forward of aft in a hatch. It is necessary to shift ship to load eac hatch.
Two grades of magnesite were loaded. One grade in No. 2 hatc (first loaded), then the other grade between No. 1 and No. 3 hatches When No. 2 was completed it was necessary to warp the ship astern t load No. 1 and later warp ahead to load No. 3 hatch.
Loading commenced at 1540 hrs. on the 17th and was completed a 0650 hrs. on the 18th. Allowing for shift ship plus change of gangs ashor it averaged out at a loading rate of 556 tonnes per hour.
The loader has an adjustable spout which ensures that the cargo ca be readily trimmed to ensure a good flat stow on completion of spac without any need for trimmers. The loader is operated with regard t the spout and slewing from a control box situated on the draw-bridg section of the loader. A very dusty cargo.
General: Whilst the vessel was alongside a small ship berthed using Mediterranean moor, two anchors down and stern moored to a buoy This berth is further inside the Bay. The vessel loaded her cargo fro lighters.
Agents: The Agent from the Financial, Mining and Industrial Corp. wa most helpful and attentive to his duties. He appears to work long hour as he also supervises the loading and works continuously. He als attends to advising when it is necessary to shift ship.

AUTHORITY: Harbour Master of Kymassi, Mandoudi, Evia Island Greece. *Tel:* 0227-22020. Also VHF Channels 12, 14 and 1 *Contact:* George Sakalis, Harbour Master.

LAVRION: 37.42 N. 24.04 E. (See Plan

DOCUMENTS:
Maritime Declaration of Health with Crew's Vaccination Cards.
Cargo Manifests.
4 Crew Lists.
PILOTAGE: Address of pilot station, Port Authority of Lavrion. Pilot boa is a motor launch 8 m. long, black hull with white stripe flying code fla "H". Vessels requiring Pilot should flash or sound letter "G". Pilot board about 0.5 miles from Green Light (Ak. Ergastiria). In event of ba weather, boarding position is inside the buoy. Vessels awaiting Pil should anchor close to the Green Light depending on vessel's size.
ANCHORAGES: See "Pilotage".
MAX. SIZE: Max. length 130 m. (approx.), max. draft 21 ft.
HEALTH: Health Officer and Port Officer board vessel on arriva Maritime Declaration of Health should be submitted to Health Offic who examines any sick crew. Free Pratique is not automatic.
VHF: Pilot boat equipped with VHF.
BERTHING: Harbour open to S.E. winds, but otherwise sheltered an safe. There are two quays: one 330 ft. length, depth alongside 20 f and one of 260 ft. length, depth alongside 13 ft.
Mining company owns bridge elevator with capacity of 700 tons pe day.
STEVEDORES: Advance notice required in order to arrange gangs. N shore cargo equipment, and cargo operations effected by ship's gea
MEDICAL: Medical assistance available.
FRESH WATER: Can be supplied to vessels alongside berth from tank trucks.
FUEL: Only small quantities available as existing fuel tank only 10 ton capacity. Can be supplied by tank trucks from Piraeus.
HATCHES: Opened and closed by crew.
CUSTOMS ALLOWANCES: 200 cigarettes per crew member allow out of bond.
REPAIRS: Minor repairs only.
AIRPORT: Athens Airport, distance 45 km.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
POLICE/AMBULANCE/FIRE: Police, Tel: 25218; Ambulance, Te 25340; Fire, Tel: 25249.
HOLIDAYS: Local holiday 26th July.
AUTHORITY: Port Authority of Lavrion.

MEGARA (Agia Trias): 37.58 N. 23.24 E. (See Plan)

BERTHING: Pier owned by Hellenic Aspropyrgos Refinery S.A. in position Lat. 37° 58′ 11″ N., Long. 23° 24′ 17″ E. (working 24 hours.)

Pier projecting 205 m. from shore with berthing head 63 m. long. Single berth with depth of 42 ft. 6 in. at S.W. end. 44 ft. at N.E. end. 46 – 50 ft. available at 1 m. from the berth.

With suitable fendering berth can accommodate vessels up to 65,000 d.w.t.

Tankers discharge cargoes by 3 flexible hoses of 8 in. diameter each. The maximum acceptable pressure at the unloading hoses is 8 – 9 kg./sq.cm.

FRESH WATER: Not available.

FUEL: Not available.

For additional information see "Pachi Oil Terminal".

AUTHORITY: *Operator:* Hellenic Aspropyrgos Refinery S.A., 18 Hermou Street, P.O.Box 3649, 10563 Athens, Greece. *Tel:* 5573252-6, 5573483. *Cables:* Refaspr. *Telex:* 215442, 215443, Ref Gr. *Contact:* Emm. Lebidakis.

MILAKI (Aliveri Bay): 38.22 N. 24.04 E. (See Plan)

SHIP'S OFFICER'S REPORT: December 1985.

LOCATION: Aliveri Bay is about 2 km. N.N.E. of Karavos in position Lat. 38° 22′ 30″ N., Long. 24° 04′ 10″ E. Milaki is the name of the berthing facility.

PILOTAGE: Pilot boards 1 nautical mile S.W. of the berth. Pilot boat painted white. Call "Katerina" on VHF Channel 14 to make contact, also works on Channel 12.

ANCHORAGE: Vessels may anchor in Aliveri Bay.

MAX. SIZE: Vessels up to 120,000 d.w.t. and 240 m. LOA handled.

VHF: See "Pilotage".

TUGS: One tug "Achileus", 1,200 h.p. Additional tugs available from Khalkis (Chalkis).

BERTHING: Berthing instructions obtainable from "Katerina" on VHF Channels 14 or 12.

One pier, length 300 m. and width approximately 50 m.

Depths alongside: North side: 18 m. at seaward end and 14.9 m. at inner end.

South side: 23 m. at seaward end and 13 m. at inner end.

The North side is for unloading coal and slag and the South side for loading coal and cement.

Cargo discharged by grab (gantry) and loaded by pipe.

MEDICAL: There is a small hospital in Aliveri.

FRESH WATER: Available by truck.

REPAIRS: Facilities available at Khalkis.

AIRPORT: Athens International Airport.

GENERAL: *Publications and Charts:* B.A. Mediterranean Pilot Volume 4 and B.A. Chart No. 1597.

Note: The pier and light on N.W. corner (OQ(R)) of pier not marked on Chart No. 1597, edition 1983, with corrections done for 1983 and 1985.

SHIPMASTER'S REPORT: April 1987.

LOCATION: In Aliveri Bay, on the Western shore of the Island of Evia (Euboia).

DOCUMENTS:

2 copies Crew Effects Declaration.
2 copies Ship's Stores, including Narcotics.
2 copies Stores not Sealed in Bond (Master's Responsibility).
4 copies Crew List.
1 copy Maritime Declaration of Health.
2 copies Vaccination List.

PILOTAGE: Sea Pilot can be arranged by prior notice to Agents. Boarding position is off Dipsa Rock.

Harbour Pilot boards at the anchorage or close to the jetty.

ANCHORAGE: In position Lat. 38° 22′ N., Long. 24° 02′ E., about 1 mile West of the Jetty head in over 28 fathoms of water.

HEALTH: Radio Pratique not available.

Maritime Declaration of Health required. Pratique is granted after berthing.

VHF: Terminal Heracles II and agent maintain watch on Channel 14.

TUGS: 3 tugs available from Chalkis.

BERTHING: *Coal Discharging Berth Heracles II:* Berth is located on the Northern side of a Jetty extending about 300 m. out in a 280° direction from the coast. The Jetty head is in position Lat. 38° 22.5′ N., Long. 24° 03.1′ E., about 5 cables South of Southern Breakwater light of Karavos Port.

The terminal is controlled by the cement factory, which is situated just across the road from the Jetty. The reported depths of water in this berth (see "Plan") were prepared by Gold Divers Underwater Services Co. of Piraeus in April 1986.

One travelling bridge crane serves the ships. The discharging rate is between 500 t.p.h. and 600 t.p.h. Permissible airdraft is 19.00 m. maximum. Recommended arrival draft is 15.20 m. forward and 17.70 m. aft.

With the above recommended draft the vessel can tie up starboard side alongside using about 200 m. length of the jetty with the remaining length of the vessel overhanging. All the after mooring ropes lead forward to the knuckle. Vessel can however, be warped ahead after lightening from forward holds.

MEDICAL: Facilities available at Aliveri.

DENSITY: 1028 – 1029.

REPATRIATION: Possible, but with difficulty.

AIRPORT: Nearest airport at Athens, 3 hours by road.

GENERAL: *Customs:* For issue of bonded stores contact Karavos. For clearance of stores and spares contact Chalkis.

Immigration: At Chalkis.

Supplies: Provisions and stores are ordered from Piraeus/Athens.

AUTHORITY: Port Authority of Karavos. *Tel:* 0223-22318.

MILOS ISLAND (Adamas, Voudia Bay): (See Plan)

LOCATION: Adamas Harbour: Lat. 36° 42.5′ N., Long. 24° 26.5′ E. Voudia Bay: Lat. 36° 44.6′ N., Long. 24° 32.8′ E. (on the N.E. side of Milos Island).

A vessel is considered to be an "arrived ship", when at and/or anchored close to the above positions.

DOCUMENTS:

4 Crew Lists.
3 Passenger Lists.
3 Provisions Lists.
4 Personal Effects Declarations.
2 Cargo Manifests.
Ship's Gear Book.
Vaccination Certificates.
Derat Certificate.
Certificate of Registry.
Load-line Certificate.
Safety Equipment Certificate.
Radio-telegraphy Certificate.
Certificate of Measurement.

PILOTAGE: No pilot station. Vessels requiring a Pilot should make contact with Adamas Harbour Control by VHF Channel 12. Vessels calling at Voudia Bay can make contact on Channel 8 VHF during office hours (0700 – 1500 hrs.local time) for general information and Pilot arrangements. Pilot arrangements are generally done through Agent's who may contact Pilot in advance by telephone. Pilot boards from a small motor-boat.

ANCHORAGES: Safe anchorage in all parts of Milos Bay, where Adamas port is situated. Main anchorage in Milos Bay is on E.S.E. side of Bombarda Cape, which has a lighthouse showing a Fl. R. 4.5 secs. light.

The Voudia Bay Anchorage is located 6 cables S.E. of Voudia Light within a circle of 3 cables radius. Ship's calling to Voudia Bay should use this anchorage.

MAX. SIZE: Any size vessel may enter Adamas Port, but berthing alongside the Ore Loading Berth at Kanaba or the private Ore Loading Berth of Mycobar Ore Mining Co. is restricted for vessels of more than 26 ft. draft.

Ore loading berth at Voudia Bay (Privately owned by Messrs. Silver and Baryte Ore Mining Co.) is able to facilitate berthing of vessels of up to 185 m. long (610 ft.) and max. draft 33 ft. Restriction exists for this berth, also for the height of vessel's freeboard. (The highest point of the vessel's side along the deck including rails or any other fixed constructions, must not exceed the 10.9 m. (36 ft.) from the sea level).

Loading-discharging dock at Voudia Bay with installations for mechanical loading of cargo in bags. This dock has a length of approximately 75 m. and the max. draft of the vessel alongside cannot exceed more than 6 m. (20 ft.).

No facilities for tankers.

HEALTH: Authorities require 24 hours' notice of arrival in order to grant Free Pratique to vessels arriving from a non-infectious country. Free Pratique cannot be granted at Milos to vessels having disease on board nor to those arriving from an infected area. Such vessels are required to proceed to a main Greek port (Piraeus, Syros, etc.) to obtain health clearance.

RADIO: Athens Radio and Heraklion Radio.

TUGS: Not available.

STEVEDORES: Loading/discharging at Adamas Port (Kanaba) is by means of ship's gear, reaching a loading rate of 1,000 – 1,300 tonnes per working day. At the private berths of Mycobar Ore Co. in Adamas and Silver and Baryte Ore Co. at Voudia Bay the bulk ore is loaded by means of a conveyor belt at a rate of 500 tonnes p.h. maximum.

MEDICAL: One small public hospital. There are 3 doctors and 2 dentists resident on the Island. There is an airport on the Island with daily services to Athens. Also in case of illness, the possibility of an emergency service.

FRESH WATER: Available to vessels alongside using ship's hoses. Delivery alongside up to 30 cu.m. in 12 hours.

FUEL: Small quantities of lubricants available.

OPENING/CLOSING HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: Customs Office at Adamas Harbour. Tel: 0287-22.282.

(a) Vessel arriving from European Common Market Ports: 300 cigarettes, or 150 small cigars, or 75 big cigars, or 400 gm. tobacco. 1.5 litres of spirits of 22° vol. or more, or 4 litres of wines of less than 22° vol. Perfumes 75 gm.

(b) Vessel arriving from any other port: 200 cigarettes, or 100 small cigars, or 50 big cigars, or 250 gm. of tobacco. 1 litre of spirit of 22° vol. or more, or 2 litres of wines of less than 22° vol.

REPAIRS: Minor oxy-acetylene repairs possible.

TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.

HOLIDAYS: Sundays and customary holidays. Cargo work can be arranged on these days at 75% increase on tariff rates.

TELEPHONES: Police: 0287-21.204. Port Authority: 0287-22.100. Agent of Silver and Baryte Ores Co.: 0287-41.277. Pilot: 0287-22.265 or 22.086.

SHORE LEAVE: Permitted.
DELAYS: Strong Southerly winds may delay berthing, or force vessel to leave loading berth at Voudia Bay.
DEVELOPMENTS: Intentions to construct a conveyor belt for ore cargo loading on the Kanaba Dock (Adamas).

SHIPMASTER'S REPORT No. 1: *Voudia Bay:* Fresh water is available using vessel's own hoses. Limited quantity of provisions are available. Hire of polypropylene ropes of 150 m. length is possible.

It is advisable to close ventilators before loading due to excessive dust.

Pilot remains on board during loading.
Cargo: Perlite.
Loading rate for bulk: 250 t.p.h.
Loading rate for bags: 18–20 t.p.h.

SHIPMASTER'S REPORT No. 2: *Voudia Bay and Milos Island:* Situated on the N.E. corner of the island of Milos. When approaching from the S.E. the most prominent features are the scarred terrain, the factory building and the silo which is situated just above the berth. The loading gantry has both fixed red and white lights on it and is conspicuous.
Anchorage: The vessel anchored in a position with the loader bearing 302° T. distance 7.5 cables in 48.5 m. of water using 5 shackles of cable, the holding appeared to be good. The recommended anchorage is in a position with the loader bearing 328° distance 5 cables where holding is reported to be good. There was another vessel in that position at the time.

Caution: This anchorage is not recommended in strong South to S.E. winds due to the seas that build up in the Bay. Vessels are recommended to go to the North of Pilonisi Island and anchor in a position N.W. of the North West point, a distance of not less than 3 cables. This island is now joined to the main island by rubble from the factory, this is not shown on the Chart (1832).
Method of Berthing: (See "Plans"). Approach to the berth is made heading in a N.W.'ly direction, keeping the Northernmost buoy (A) close to the starboard side and when the bow is passed about a third of the ship's length, the starboard anchor is let go and let run until about 4 shackles on deck, then it is checked, in the meantime a boat will take a breast rope from for'd, run from the port shoulder lead (1). Once this is ashore and the vessel begins to cant to starboard, the bow is worked into position by heaving on the breast rope and slacking the cable until there is about 6 shackles on the latter. Meanwhile, a line is run from the starboard quarter (2) to buoy (B). A word of caution here, the berth is designed to take vessels up to 23,000 tons, so for a small vessel it will be necessary to have 2 ropes joined together for moorings (2), (4) and (5). The next line sent away is one from the Port Quarter to ashore as a breast rope (3), the stern is then brought into position in a similar manner to the bow. As the prevailing wind is from ahead usually, the next rope sent away is the head line (4) and finally the stern line (5). The latter two are used for shifting the vessel under the loader. Directly under the loading gantry, there is a dolphin arrangement to keep the vessel off the cliff, but on completion of mooring, the vessel should end up about 6 ft. to 10 ft. off this.

Caution: In strong South to S.E. winds, the berth becomes dangerous and vessels have to leave and go to anchor and it is often necessary to leave the ropes on the buoys etc. as it is not possible to let them go. It is also advisable to retain some ballast on board for berthing.

There are 2 Pilots, both speaking English, the younger, an ex-Chief Officer has the better command of English and was the source of a lot of this information.

On leaving the berth, the last rope to be let go is (2) and with a smaller vessel, this can safely let go while weighing anchor. Vessel will then proceed to another anchorage close to, to secure, obtain clearance and clean up.
Loading Procedure: Loading is done by a chute and at an approximate rate of 300 tonnes per hour. The cargo is very dusty and everything should be securely battened down and it is strongly advisable to wear goggles and protective masks on deck as the dust is choking and if it gets in the eyes, they should not be rubbed as it is abrasive and can cause permanent damage. Eyes should be washed out. The ship will advise what weight she can take, and as the weighing procedure ashore is liable to break down after the first 500 tonnes, vessel is loaded according to draft, which has to be carefully checked, as when stipulating amounts required per hatch, they will not necessarily keep to this unless told. A boat is available for checking the draft, 1 blast on the whistle will summon it. Only method of getting ashore is by boat, so it is necessary to have the starboard gangway down. Both foreman and boatman have a fair knowledge of English, but foreman does not come aboard but stays on the loader, so it is necessary to shout instructions etc. The foreman will advise on shifting for position required, this is done with the aid of frequent blasts on a pocket whistle. Only one man comes aboard and that is to tend the chute.

There appears to be a continual short swell which makes draft reading a little difficult.
Entry and Clearance: Agent, Doctor, Customs and Harbour Master boarded the vessel at anchor and entered her there. Forms on board were not acceptable, but they transferred them to their own. I understand that the only acceptable forms are the standard IMO forms, and if there are any of these on board they should be used.

Forms required:
2 Crew Declarations.
3 Crew Lists.
2 Bonded Stores List.
2 Stores Lists.
1 Vaccination list (Including Cholera).

There are various other forms to sign, but these are prepared by the Agent. The Health Declaration is made out by the doctor in his book. The Agent, who is from the Mining Company, spoke very good English.
Weather: Northerly winds predominate during the Summer and can become quite strong during September, mainly from midnight to noon.

AUTHORITY: Port Authority of Milos, Adamas Harbour, Milos Islan Greece. *Tel:* 0287-22.100.

Silver & Baryte Ores Mining Co., 21a Amerikis Street, Athens 13 Greece. *Tel:* 3628.432 or 3626.064. *Telex:* 215189 elio gr.
Local: Silver & Baryte Ores Mining Co., Voudia Bay, Cyclades, Mi 84800, Greece.

MITILENE (incl. Geras Bay and Pamfyllon): 39.06 N. 26.35 E. (See Plan

PORT LIMITS: A vessel is considered to be an "arrived ship" and laytim will commence at the working hours that follow the delivery of th Master's Notice of Readiness.
DOCUMENTS:
Quarantine:
Maritime Declaration of Health.
Valid Derat Certificate.
International Vaccination Certificates.
Customs:
2 Crew's Effects Declarations.
2 Ship's Stores Declarations.
2 Bonded Goods Declarations.
2 Crew Lists.
Immigration:
1 Crew List.
Port Authority:
1 Crew List.
1 Passenger List.
Ship's Certificates or Memorandum.
Ship's Papers.
PILOTAGE: It is not compulsory, but, if required, the services experienced Mercantile Marine officers, having knowledge of the por can be obtained.
ANCHORAGES: Off the Outer Port, in depths of about 18 m.; extrem end East of Kastro Peninsula (or Fokiotrypa) light, bearing due North.
RESTRICTIONS: Entry is not allowed after sunset.
MAX. SIZE: Length 120 m. – draft 17 ft. at Inner Port; length 160 m. draft 28 ft at Outer Port.
HEALTH: The Authorities must receive a 24 hour advance notice the ETA of the vessel with information about the port of origin, the carg the number of crew and passengers and the port of destination; detai of any suspected disease or fever on board must be included in th notice. Pratique is automatic only for vessels entering after calling another Greek port.
RADIO: "Athinai (Athens) Radio", "Limnos Radio", "Chios Radio". ca signs SVA, SVL, SVX respectively.
VHF: Port Authority's VHF radiocommunication; Channel 12 for callin
BERTHING: See "Plan". For drafts see "Max. Size".
STEVEDORES: At least 8 hours' advance notice for the number stevedores required.
MEDICAL: In case of illness on board the Master should cable detai prior to arrival. Hospital and dental facilities are available. Vaccinatio cards required.
TANKERS: At Geras Bay (Mamidakis) and Pamfila (Purfina).
FRESH WATER: Available from the quay through pipes. Cost per to about 200 Drs.
FUEL: Supplied by tanker trucks only; advance notice required.
FIRE PRECAUTIONS: No more than the usual ones.
CONSULS:

Belgium	Tel. 28494	Netherlands	Tel. 287
France	Tel. 28151	Sweden	Tel. 284

REPAIRS: Local machine shops undertake very minor repairs.
SURVEYORS: Lloyd's Register.
HATCHES: Opening and closing is normally carried out by crew.
CUSTOMS ALLOWANCES: For each member of the crew: tobacc 50 grams; cigarettes, 40 pieces; small cigars, 20 pieces. Wines, 2 litre Spirits, 0.75 litre.
CARGO GEAR: Load/discharge effected by ship's own gear.
REPATRIATION: There are facilities for effecting crew changes a arranging any necessary repatriation.
AIRPORT: Distance 8 km. It is regularly served by "Olympic". Flig to Athens and Thessaloniki.
TIME: GMT plus 2 hours. GMT plus 3 hours during Summertime fro April to September.
HOLIDAYS: January 1st, New Year's Day; January 6th, Epiphany; A Monday; March 25th, National Holiday; Good Friday; Easter Monda May 1st, Labour Day; Whit Monday; August 15th, Assumption; Octob 28th, National Holiday; December 25th, Christmas Day; December 26 Boxing Day.

Cargo work can be arranged on these days after consultation with t union of stevedores.
POLICE/AMBULANCE/FIRE: Police, Tel. 100 and 22021; Hospital, T 28412 and 22005; Fire Brigade, Tel. 199 and 22055.

STORING: Vessel can be stored by truck only. Trucks can proceed alongside at the berth.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Shore passes are issued.
DELAYS: Normally there are no delays.
SHIP SUPPLY SERVICE: Ant. Picoulos Shipping Agency, Prokymaia, Mitilene. Office Tel: 23720, 27000, 24933. Home Tel: 22341. Telex: 297120.

A launch of 11 m. length available for ship to shore transport of personnel and/or essential stores and/or sick crew members if allowed.
AUTHORITY: Hellenic Coast Guard, Island of Lesbos Port Authority, Mitilene Port Authority, Prokymaia, Mitilene 81100, Greece. *Tel:* 28827, 28647, 24115. *Telex:* 290142 LXM GR. *Cables:* Limenarchio, Mytilene. *Contact:* Commander B. Ch. Antypas.

MYKONOS: 37.26 N. 25.25 E.

Vessels in excess of 22,000 d.w.t. have been accommodated. Loading of Barytes ore at rates up to 5,000 tons per day. In Winter when North winds prevail conditions are satisfactory for loading: however, loading position considered unsafe when S.W. or West winds prevailing. When sufficient cargo is available vessels can load in 2 days.

PACHI: 37.58 N. 23.23 E. (See Plan)

DOCUMENTS: All usual certificates including Registry, Safety, Cargo Gear, Radio, Derat, Last Port of Clearance and:
9 copies Crew Lists.
2 copies Vaccination Certificates.
1 copy Cargo Manifest.
1 copy List of Spares.
1 copy Maritime Declaration of Health.
1 copy Vaccination List.
4 copies Crew Effects Declaration.
1 copy Passenger List.
1 copy Cargo Documents.
2 Special Customs Forms in triplicate.
2 copies Stores Lists.
PILOTAGE: Cable Agent 72, 48, 24 hours in advance advising ETA. Agent informs Pilot Office of vessel's arrival time. Piraeus Pilots can be contacted on VHF Channels 7 and 12. Pilot boards vessel North of Kanaria Islands.
ANCHORAGES: See "Piraeus".
RESTRICTIONS: None.
MAX. SIZE: Pachi Oil Terminal is able to accept vessels for discharging crude oil from 20,000 d.w.t. to 600,000 d.w.t., max. draft 29 m. The depth at the head of the pier is 31 m.
HEALTH: Pratique is in accordance with International Regulations. Pratique automatic if arriving from another Greek port.
RADIO: Athens (SVA).
VHF: Piraeus Pilots and Eleusis Coastguard operate a 24 hour service on Channels 16, 12 and 7. Hellenic Refinery operates on Channel 16.
RADAR: None.
TUGS: Usually join vessel near to the berth. Ship's lines always used.
BERTHING:
Location of berth: Lat. 37° 58′ 25″ N., Long. 23° 22′ 50″ E.

Pilot will advise Master of berthing place in accordance with Port Authority instructions. Usually berthing with starboard side alongside with 3 head lines, 4 breasts, 2 springs, 3 stern lines, 4 breasts and 2 springs, depending on the size of the vessel. According to the Pilot, it is preferable to use ropes for head and stern lines.
MEDICAL: Advance notice not required; clinic available in town of Eleusis if required.
TANKERS: There is one berth with 4 unloading arms 16 in. diameter each. The maximum and minimum height of the manifolds to the ship is 35.5 m and 2 m. respectively above sea level.

The maximum accepted pressure at the unloading arms and of the crude oil system is 11 bars (150 p.s.i.) and the maximum accepted flow rate through each unloading arm is 4,000 cu.m./.hr. (Total for all four unloading arms 16,000 cu.m./.hr.).
DENSITY: 1025.
FRESH WATER: Not available at present.
FUEL: Not available at present.
FIRE PRECAUTIONS: Fire wires rigged fore and aft on outboard side of vessel. Deck scuppers plugged. Spark arresters to be fitted on tank openings. Earth connections made. Patrols made by Port Officers.

In the case of a storm, the Dock Master can stop discharge of vessels. The refinery fire fighting procedure is followed.
CONSULS: None locally. Consuls at Athens and Piraeus.
REPAIRS: While alongside, maintenance of any kind on board is strictly prohibited. In case of an emergency, the issuing of a special written "cold or hot work" permit is necessary.
DRY DOCKS: See "Eleusis".
GANGWAY/DECK WATCHMEN: Not required.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 open bottle of wine/spirit allowed per crew member.
REPATRIATION: All facilities available for crew changes and repatriation.
AIRPORT: Direct overseas flights available via Athens Airport at Hellinicon.
TIME: GMT plus 2 hours. Summertime (March to September) GMT plus 3 hours.
HOLIDAYS: None affecting cargo operations.
POLICE/AMBULANCE/FIRE: All emergency services are available through the Terminal Office. Tel: 26480 – 26580. Fire alarms are installed throughout the jetty. Eleusis Coastguard (01) 5543504.
TELEPHONES: This service is available aboard ship by prior arrangement through the Agents. Standard rates apply.
SERVICES: Compass adjusting. Electronic equipment services.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes issued by Port Authority.
AUTHORITY: *Operators:* Hellenic Aspropyrgos Refinery, S.A., 18 Hermou St., P.O.Box 3649, 10563 Athens, Greece. *Tel:* 5573252-6, 5573483 . *Telex:* 215442, 215443. *Cables:* Refaspr. *Contact:* George Dimogerontas.

Eleusis Port Police.

PATRAS (including Rio): 38.14 N. 21.45 E. (See Plan)

DOCUMENTS: Port Authorities: 2 Crew Lists, Customs: Declaration of Cargo and Passengers.
PILOTAGE: Compulsory. Advance notice of ETA to be passed to Agents who arrange Pilot. Vessels without Agents should advise authority of ETA through Athens Radio, or on arrival outside harbour make International Code sounds and signals for vessels requiring a Pilot. Pilot boat is small boat carrying pilot flag. Pilot usually boards less than 1 mile outside harbour entrance. VHF contact possible with Port Authority and Pilot on Channel 12.
ANCHORAGES: Patras Roads are usually safe; when very strong W./N.W. winds blow, vessels may anchor at Nafpaktos Roads.
RESTRICTIONS: Port entrance has depth of 34 ft. At main harbour vessels having draft in excess of 28 ft. cannot berth. The limit at the new berth is 34 ft. draft. There are 2 red buoys at the entrance to the port.
MAX. SIZE: Vessels of less than 34 ft. draft. No restrictions on length or breadth. Height of tide, max. 0.55 m., does not affect size of vessel.
HEALTH: Pratique in accordance with International Regulations.
RADIO: Athens Radio.
TUGS: Two tugs, 900 h.p. and 1,200 h.p. Use of tug compulsory for all vessels over 1,000 tons gross. Joins vessel at entrance to harbour. Ship's lines used.

Tugs also available on request to Nicolas E. Vernicos. Tel: Piraeus 4527812-4522337 (24 hours).
BERTHING: In accordance with allocation given by Port Authority. See "Plan" for lengths and depths.
STEVEDORES: Advance notice of ETA required in order to arrange berth and order number of gangs to commence work immediately. General cargo rate about 80 – 100 t.p.h./gang, bulk cargoes 75 – 90 tons. 7 mobile cranes, capacity up to 25 tons available. One mobile crane capacity 118 tonnes with container handling facilities.
TANKERS: No facilities at Patras, but Texaco-Restis Berth at Rio for vessels up to 18 ft. and 2,500 tons alongside. No residue discharge facilities.
FRESH WATER: Supply line connected to all berths. Rate 30 t.p.h.
FUEL: Deliveries by tank trucks at Patras. Available at Texaco-Restis Berth at Rio.
FIRE PRECAUTIONS: Vessels refuelling or discharging explosives or flammable materials must apply to Port Fire Brigade to stand by.
CONSULS:
Belgium
Denmark
Finland
France
Germany F.R.
Italy
Netherlands
Sweden
Switzerland
REPAIRS: Very minor repairs only.
WATCHMEN: Advisable to employ night-watchmen on large vessels.
HATCHES: Usually opened and closed by crew.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits allowed out of bond for each Crew member.
REPATRIATION: All facilities for crew changes and repatriation.
AIRPORT: None.
TIME: Summertime GMT plus 3 hours end March to end September, otherwise GMT plus 2 hours.
HOLIDAYS: In addition to general Greek holidays and Sundays, local holidays are 8th September, 30th November. Work can be arranged on these days subject to payment of additional charges.
POLICE/AMBULANCE/FIRE: Port Police, tel. 341–002; Patras Police Station, tel. 100; Ambulance, tel. 166; Fire Brigade, tel. 199. The port has a fireboat.
TELEPHONES: Facilities for connecting on board.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Crew are supplied with passes by Port Authority.
DEVELOPMENTS: *(a)* Outer breakwater has been extended by 90 m. at South end.

(b) New quay with length of 220 m. to the North of the main installation to be constructed.
AUTHORITY: Port Authority of Patras, Building of Port Authorities, Patras, Greece. *Tel:* 061-322024. *Telex:* 312120 LTPA GR. *FAX:* 061-331997. *Contact:* P. Bousbouras, Technical Manager.

PIRAEUS: 37.57 N. 23.38 E. (See Plan)

(Including AGHIOS GEORGIOS 37.57 N. 23.36 E.; DRAPETZONA 37.56 N. 23.37 E.; and PERAMA 37.58 N. 23.35 E.)

DOCUMENTS: All usual certificates including Registry, Measurement, Inspection, Load-line, Fumigation, Passenger Safety, Cargo Gear, and Radio.
9 Crew Lists.
2 Vaccination Certificates.
Cargo Manifest.
List of Provisions and Stores.
List of Spares.
Maritime Declaration of Health.
1 List of Vaccination Dates.
1 Crew Effects Declaration.
Customs:
2 Special Forms in Triplicate.
1 Stores List.
Master's Declaration of typewriters and adding machines, etc.
Crew Passports, or Seamen's Books.
Passenger Passports.

PILOTAGE: Cable Agent well in advance advising ETA. Agent informs pilot office of vessel's arrival time.

Pilots can be contacted on VHF Channel 16 for calling, Channels 7 and 12 for communication. Pilot boat is a wooden vessel about 10 m. length with black-painted hull, word "Pilot" painted in white.

Vessels requiring Pilot should signal letter "G" by morse light or by ship's whistle. Pilot boards vessel about 1.5 miles off entrance to harbour, except when very strong South winds prevailing, in which case vessel advised by VHF or by signal light that conditions impossible for Pilot boarding, and whether vessel permitted enter harbour at Master's risk.

If awaiting Pilot, anchorage is possible inside pilotage area of Piraeus – Aghios Kosmas – Piraeus Anchorage – Perama Anchorage – Megara Anchorage (Pachi).

ANCHORAGES: As above. Depths between 9 and 35 fathoms.

RESTRICTIONS: No restrictions for Aghios Georgios Harbour or Drapetzona excepting draft. Harbours open throughout 24 hours for entry and departure subject prevailing weather conditions. No tidal restrictions.

MAX. SIZE: (also see "Tankers") Aghios Georgios max. draft 32 ft. Drapetzona max. draft 38 ft. Piraeus max. draft 36 ft.

RADIO: Athinai Radio – SVA.

TUGS: Use of tugs compulsory for vessels over 1,000 g.r.t. Usually join vessel outside harbour, always using ship's lines. Over 30 tugs available. 10 of less than 1,000 h.p. and remainder over 1,000 h.p.

Nicolas E. Vernicos Shipping Co. Ltd., operate 10 tugs, 500 – 4,000 h.p. Available for towage and salvage. Tel: 4527812, 4522337 (24 hours). Telex: 212450 Vern Gr. VHF Channel 6.

BERTHING: Agent must advise Piraeus Harbour Authorities in order to secure berth allocation. 20,000 m. of quay space. 9 Ro/Ro ramps available.

CRANES: 3 container cranes, lifting capacity 41 tons.

56 electric wharf cranes with capacities of 2 to 27 tons installed along the wharf of the main port and at the dry and floating docks.

51 mobile cranes with capacities of 3 to 20 tons.

19 Straddle-carriers for containers, capacity 30 tons each.

4 floating cranes with capacities of 15, 30 and 2×100 tons.

BULK HANDLING FACILITIES: Silo suction-duct installations capable of moving grain at up to 130 t.p.h. and storage facility for 40,800 tons, as well as 2 mobile suction-duct units for bulk grain-cargoes.

One gantry crane lifting capacity 10 tons, used for coal and bulk cargoes installed at Hercules Port. Pier length 200 m., max. LOA 160 m., max. beam 17 m., max. draft 10 m. Average daily rate for coal 1,000 – 1,200 tonnes.

STEVEDORES: Agent must submit letter of application to Piraeus Port Authorities for number of gangs required also time required to commence cargo work. Discharge usually effected with ship's own gear.

Normal work on loading/discharge of goods in the port is carried out by 2 regular shifts, the morning shift (0800 – 1400 hrs.) and the afternoon shift (1500 – 2100 hrs.). Likewise, upon application of the interested parties (ship-owners, Agents, consignees, shippers, etc.), and provided approval of the competent P.P.A. Service is obtained, a third, night shift can be assigned to the job if the necessary workers and operators are available. This shift is again of 7 hour duration, from 2100 – 0330 hrs. or can be extended to the morning hours if necessary. Exceptionally in the case of work on refrigerator vessels, on which work during the Summer period is limited to the afternoon hours, the Service can assign workers and operators of loading/discharge machinery, starting from 1630 hrs., for a 7 hour period which can be extended, if conditions warrant, to the morning of the next day. Loading/discharge work may also be undertaken on Sundays and other non-working days (holidays) such work being considered as totally extra, being burdened with extra charges accordingly.

MEDICAL: All medical and hospital facilities available. No advance notice required except in special cases.

TANKERS: Discharging effected at private installations.

Shell	max. draft 32 ft.	Petrolles	max. draft 29 ft.
B.P.	max. draft 36 ft.	Fina	max. draft 28 ft.
Elvyn	max. draft 26 ft.	Mobil	max. draft 48 ft.

D.E.H. max. draft 36 ft. (outside steam generator factory, no facilities for going alongside).

DENSITY: 1025.

FRESH WATER: Available alongside berths. For vessels at anchor, water can be delivered by barges (capacity 150 – 240 tons) belonging to Piraeus Harbour Authority at 50% additional cost.

FUEL: Gas oil, fuel oil and mixtures of both to a certain viscosity available. Advance notice of requirements should be sent to Agent order complete customer's requirements.

CONSULS:
Belgium
Costa Rica
Cyprus
Denmark
Ecuador
Finland
Iceland
Italy
Liberia
Netherlands
Norway
Panama

SERVICES: Compass adjusting, tank cleaning. No facilities discharge of tank residues.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Passes required for seamen going asho

SPECIAL PRECAUTIONS:

Ship's Speed in Port: Incoming or outgoing vessels must keep spe steady, provided weather conditions and vessel's manoeuvrability al to do so, but never to exceed 5 knots.

Pollution in the Harbour: Throwing overboard of ballast, objects of any kind, oil, food rejects, and dirt in general is strictly prohibited. All such rejects can be jettisoned after ship's exit from the harbour and at a distance not less than 16 miles from the nearest coast. Alternatively, all such rubbish can be thrown in a special rubbish-collecting vessel in the port.

Sea Pollution by Bunker Oil or Sediments: The jettisoning of oil products generally in any port or roadsteads less than 50 miles from the coast is strictly prohibited. Similarly prohibited is the pollution of the sea by jettisoning of oil-sediments during dry-docking or repairs of vessels.

Pollution of the Air: Strictly forbidden is the de-sooting of boilers of all vessels at Greek ports. Similarly prohibited is the exit of gases in the form of smoke, which poisons the atmosphere and endangers public health.

Overloading: If upon arrival or sailing the Port Authorities ascertain overloading of the vessel, heavy fines are imposed.

DEVELOPMENTS: Hercules Port Container Terminal under construction. Length 1,100 m. in 1st phase and on completion 2,300 m., depth 13 m. First phase became operational in April 1989. 2×46 tonne gantry cranes available. 6 gantry cranes will be available in late 1991, when the terminal is completed.

AUTHORITY: Port of Piraeus Authority, 2, II Merarchias Street, 185-35 Piraeus. *Tel:* 4520-910/919. *Telex:* 212187 Olp Gr. *FAX:* 4520-852. *Cables:* Olp – Piraeus. *Contacts:* George Prassianakis, Chairman; George Klavdianos, General Manager, Tel: 4520-944; Kyriakos Perimenis, Labour and Coordination Division; Emmanuel Peloponissios, Harbour Master.

PRINOS: 40.56 N. 24.31 E.

SHIPMASTER'S REPORT: May 1984.

ANCHORAGE/PILOTAGE: Tankers using this terminal are required to anchor approximately 0.5 miles South of the breakwater at Kavalla town if a waiting period is involved but other than that vessels pick up the Pilot and Loading Master in the vicinity of the berth. Vessels which have had to anchor off Kavalla pick up the Pilot and Loading Master from Kavalla and proceed to the berth with them.

TUGS: Two tugs are available to assist with mooring operations.

BERTHING: B.A. chart No. 1086 shows a tanker mooring of superbuoy size which is incorrect. Actual berthing arrangement is an open sea moor using both anchors forward run out to about 9 shackles on each anchor and aft making fast to 3 buoys using 3 lines to each buoy. The buoys are orange in colour exhibiting an orange light flashing every 5 seconds.

LOADING: Product is stabilised crude. API 31.12. Average temperature 72°F. Loading rate approx. 1,700 t.p.h. Manifold connection 1×10 in. hose. There are no dirty ballast facilities. At the end of loading there may be a delay of up to 3 hours whilst waiting for cargo papers.

PROTI ISLAND: 37.05 N. 21.32 E.

SHIPMASTER'S REPORT: July 1981.

LPG Transfer Anchorage:

CHART: B.A. 719.

LOCATION: About 12 miles North of Pilos. Ship has to go to Pilos inwards and generally outwards to clear Customs and Immigration.

ANCHORAGES: For ship-to-ship transfers, only two anchorages are allowed – to West and North of Proti Island, both in deep water of 60 fathoms.

The Western anchorage is safe in Northerly or Easterly winds, very unsafe in Westerly or Southerly winds. Northern anchorage used in West or Southerly winds. Prevailing winds in Summer are from the North. Generally reasonably good position can be found 0.5 miles off the coast in both cases.

In bad weather vessels are allowed to shelter to the East of the Island, which is an excellent anchorage in all winds with little to no swell and good holding ground. Unfortunately the local population do not like ships in the area and exert pressure on the local authorities to move the vessel if it can be seen, as it can, when anchored to the East of Proti Island.

VHF: Pylos Port Authority on Channel 12.

CURRENT: Generally sets at 0.5 knots, but can be variable.

FENDERS/HOSES: Stored at Marathos, the local fishing village, during the Summer season.

PERIOD: The area is used for LPG transfers from May to December. Between December to May, Karamata Bay is used.

SERVICES: Agents: J. Vrettakos and J. Giannopoulos have office in Marathos manned when a ship is working at Proti Island.

Stores: Small quantities can be brought out by the local fishing boats. Large quantities have to come up from Pilos by tug. Stores can be warehoused at Pilos, until required.

Doctor: For Cholera injections, comes from Kalamata, charge $34.00 plus $4.50 per person. Doctor will come out to ship in calm weather otherwise injections done in Agent's office. Yellow Fever can only be done in Athens. For general medical attention, there is a doctor in the village, or hospital at Karamata one hour away.

Water: Fresh water can be brought from Pilos at $10.00 per tonne, minimum 200 tonnes. The sea water is so clean that ship's plant can make fresh water.

Money: Customs rule, no Greek Drachmas to overseas seamen, they must use their own currency and exchange.

Reliefs/Crew Exchange: For large scale crew changes this has to be planned well in advance with permission from Athens. This is because the local population do not like a lot of foreign seamen moving about, Marathos is not an immigration landing point (Comes under Karamata) but the ship clears inwards and outwards at Pilos, a different district. A few officer changes present no problems.

The total number of joining/leaving with their documents numbers, nationality, flight numbers (arrival and departure), must be telexed by Owner to Agent at least four days in advance of movement.

Customs Allowance: Very strict (every 10 days), advisable to take full crew issue to cut costs of visits.

Lloyd's Surveyor: From Piraeus, minimum 2 days, charge U.S. $1,500.00 per 2 days.

Cargo Surveyor: Redwood from Kalamata. Surveyor checks inward and outward for quantity transhipped (not individual shipments). Cost U.S. $340.

Boat Service: Standard charge U.S. $82.00, basis 4 round trips per day to Marathos. Local boatmen use fishing boats who are generally very good. Last boat back 2300 hrs.

Local Facilities: Marathos is a quiet fishing village with a few tourists in Summer. The local population do not like any trouble from ships' crews and will get the authorities to stop shore leave at the slightest sign of trouble.

Storing Costs:	Tug from Pilos on small amount basis	$800.00
	Tug from Pilos on 40 tonne basis	$2,500.00
	Riggers at Pilos per tonne	$25.00
	Customs at Pilos	$83.00
	Barge Pilos Bay per tonne	$33.00
	Crane Hire Pilos – straight charge	$333.00
	Pilot at Pilos in and out	$250.00

Generally most facilities and items are obtainable in this area as long as sufficient notice given.

Cargo Transhipment: 'Naftomar' the Greek company have sole rights to transhipment in the area. Their representative (a former LPG Master and Mate) stays in Marathos when a ship is working off Proti Island. He does all the co-ordinating. Contact can be made on VHF Channel II call sign "Nestor".

The representative is very helpful. Usually about a day's notice is given for a ship and as they all have to call at Pilos before coming to Proti Island a further 4 hours' notice is given.

NO coming alongside at night. Vessels leave at night with complete safety.

All the vessels are around 3,000 cu.m. (semi-pressure vessel type). Propane can be taken at about 150 m.t.p.h. and Butane at 250 m.t.p.h.

Various ships are used – generally Greek under 'Naftomar' flag but Panamanian, Norwegian and Japanese. Generally co-operation good.

We obtained a receipt for each shipment signed by 'Naftomar' representative. A local fishing boat transfers lines on coming alongside.

Hose connection/disconnection done by ship's crew. The hoses we had were new 'British Compoflex' like our own and no trouble. They also gave us some old hoses as vapour return which we did not use.

Fenders: 3×2 m. Yokohama type as primary and old truck tyres as secondary. We kept the fenders at all times except when weather bad with ship alongside when she took them with her to get away and fishing boats brought them back to us.

AUTHORITY: Port Authority of Pylos, Pylos Messinias, Greece. *Tel:* 0721-22225. *Telex:* 252101. *Cables:* Limenarchon-Pylos. *Contact:* Harbour Master.

PYLOS (including Sfaktiria and Navarino Bay): 36.55 N. 21.42 E.

DOCUMENTS:

For Port Authorities

1. For ships under the Greek flag and foreign flag vessels of Greek ownership.
   Inspection of all Ship's Papers.
   7 Crew Lists with full details of crew members' home addresses.
   For passenger vessels – 6 Passenger Lists including passport details, that is, number, date of issue and nationality.
2. Foreign Flag Vessels.
   Inspection of all Ship's Papers.
   3 Crew Lists.

For Customs

Crew Personal Effects List.
1 Crew List.
Passenger List.
Lists of goods or effects to be sent ashore.
3 Lists of Stores and Spares.
Bills of Lading.
Cargo Manifest.

PILOTAGE: No pilot station. There is a private Pilot employed by the bunkering company named G. Mamidakis Limited. Agent and/or bunkering company should be advised in advance of vessel's ETA order arrange Pilot to meet vessel at entrance of Navarino Bay and take vessel to oil installations at Sfaktiria Bay.

ETA should be passed by radio telephone at least 48 hours before arrival and thereafter confirming ETA within 24 hours of arrival. If ETA has not been passed by radio, vessel should wait at entrance to Navarino Bay, and request Pilot by signalling letter "G" by flashing light or ship's whistle.

ANCHORAGES: Safe anchorage may be made in all areas of Navarino Bay except within red sector of Helonaki Islet light.

MAX. SIZE: Any size vessel can enter and anchor in Navarino Bay. The small harbour of Pylos is only suitable for small vessels.
HEALTH: Doctor visits vessels that require Free Pratique, and those coming from infected ports. Master and Health Officer together sign Maritime Declaration of Health. Free Pratique continues when vessel arrives from another Greek port. A vessel in transit must have Free Pratique if remaining in port more than 24 hours. Infected vessels or suspected vessels remain under quarantine in accordance with existing health regulations.
RADIO: Athinai Radio.
TUGS: No tugs available.
STEVEDORES: Labour requirements passed by radio at least 24 hours prior arrival. No shore loading/discharging facilities and this work effected by ship's gear. Average rate load/discharge 100 tons per gang every 8 hours.
MEDICAL: Agent should be advised by cable prior arrival of medical and medicant requirements. There are two chemists and a Red Cross hospital. Yellow-fever and cholera vaccination certificates required.
TANKERS: Sfaktiria Island Installation (ESAPP. G. Mamidakis Limited). 2 flexible hoses diameter 6 in. and 1 gas oil hose diameter 2.5 in. No facilities for residue discharge. At Pylos small harbour there is a jetty 100 m. length, the head of which is reserved for small tankers carrying wine and spirits, which moor stern to quay. At head of pier, depth of water about 4 m., but within short distance from pier, depth increases to 10 m. Only 1 vessel of 12 ft. to 15 ft., draft can moor stern to quay at any time. Loading/discharging is effected through flexible and portable pipe-lines belonging to Gialovi Wine Factory at Pylos, and cargo is transported by special tank trucks.
DENSITY: 1023 in harbour basin and whole of Navarino Bay.
FRESH WATER: Master or Agent must apply in writing to Customs Authority, and application is to include notice from water supplier giving quantity to be supplied and cost of supply. Water barge capacity 200 tons. Rate of supply 160 t.p.h. by canvas hoses. Barge belongs to Maritime Agency I. Vrettakos, Pylos. Water also available alongside Pylos harbour quay.
FUEL: Mamidakis Fuel Installations at Sfaktiria Island. Vessels should give 48 hours' notice to Mamidakis (Athens Office, address: Eleftheriou Venizelou 56; Tel. 622543) Pylos Tel. 22282.
FIRE PRECAUTIONS: No unusual fire precautions at Sfaktiria Installations, but at main port of Pylos authorities do not allow loading/discharging of 2 vessels at same time, as the only 2 berths available are very close to each other.
REPAIRS: 3 workshops for minor repairs.
WATCHMEN: Usually not necessary to employ watchmen, but if required, available.
HATCHES: Usually opened and closed by crew.
CUSTOMS ALLOWANCES: 2 packets of cigarettes per crew member/day allowed out of bond according to duration in port and this quantity to be declared on Stores List. Store orders for supply of additional quantities are allowed on the basis of the number of crew and the length of voyage, basis 2 packets per day per crew member. 1 opened bottle wine/spirits allowed out of bond.
REPATRIATION: Crew changes and repatriation facilities available.
AIRPORT: Kalamata Airport, 40 km. from Pylos. Kalamata/Athens flights every day at 17.50 hrs. Athens/Kalamata every day flights at 19.10 hrs.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: *(a)* Standard Government Holidays; *(b)* Local holidays: 9th May (St. Nicholas) holiday for port workers; 24th September; 20th October (Anniversary of Battle of Navarino). During these holidays, cargo work can be arranged subject overtime payment.
POLICE/AMBULANCE/FIRE: Police (Pylos) 223-16; Greek Red Cross Hospital Pylos 223-15; Kalamata Fire Brigade 28373.
TELEPHONES: No facilities for placing on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Shore passes issued against submission of seamen's books.
GENERAL: Very severe fines imposed on oil pollution.
DEVELOPMENTS: Work in progress to extend existing Pylos harbour pier to 215 m. length, 20 m. width, and 15 m. depth at head of pier. Depth inside pier to be 10 m.

SHIPMASTER'S REPORT: July 1981.
Time: GMT plus 2 hours Winter, plus 3 hours Summer as per A.L.R.S. Vol. No. 5.
Chart: Pilos/Navarine Bay – BA 211.
General: Pilos: A fairly busy port for ships taking stores and water and changing personnel.
Navarine Bay is well sheltered and generally deep.
Bay can be entered and left with safety as long as vessels keep well up to Pilos Island (Baba Island) off Cape Kypri, shoals exist on the Southern shore.
Pilot: Advise Agent 24 hours in advance. Pilot boards about 1 mile outside heads in calm weather, otherwise inside, from slow motorboat.
Pilot speaks little English, uses mostly sign language but seems competent.
VHF: Pilos Port Authority and Pilot on Channel 12 when expecting vessels. Agents work Channel 11, Call Sign "Nestor" when expecting vessels (unofficial).
Anchorage: In area 8.5 cables N.W. of Pilos Jetty (5 shackles).
Bay: Navarine Bay is good and sheltered. An 8 fathom patch in centre as per BA Chart 211.
Agent says 300,000 d.w.t. tankers drawing up to 15 m. draft have anchored in Bay.
New jetty for small craft at Pilos.
Current: Outside Heads generally South going at rate of 0.5 knots.
Tug: 1 tug (1,000 h.p.) owned by principal Agency, called "Nestor", sometimes not at Pilos but at Karamata.
Agents: Principal Agents: J. Vrettako and J. Giannopoulos with offic in Athens, Karamata, Pilos and Marathos.
Pilos office: Telex: 252152 Vret GR. Tel: 0723-22-255/22-219. Cable "Tainaron".
Very good and helpful.
Services/Supplies: Pilos: A 20 tonne crane on jetty owned by Agents
Water: Fresh Water is plentiful at $4.00 per tonne minimum 20 tonne in Navarine Bay.
Supplies: Generally good, although advance notice required. If froze provisions required this must be stipulated.
Unitor Gas: Limited range held by Agents. Oxygen/acetylene, R22/1 has to come from Athens area (2 days' notice).
International Paint: From Piraeus full range (2 days' notice).
Lub Oil: Most brands including Chevron from Piraeus in drums (2 days notice).
Repairs: Very limited at Karamata about one hour away, otherwise fu range at Piraeus. Parts for repair can be sent by truck to Piraeus an return the next day if an emergency, but generally allow three days.
Fuel: Very limited supply H.O. and D.O. in Pilos but negotiations unde way to expand local facility.
Walport Films: By arrangement with Agency in Skaramanga (2 days notice).
Airport: At Karamata – local airport one hour away. Olympic Airway daily flight from and to Athens. Arrives at 1800 hrs. and leaves a 1900 hrs. (40 minute flight).
International flights from Athens. To catch internal flight to Karama you must land in Athens not later than 1600 hours.
Communications: Roads poor, takes 6 hours to get to Athens. Telephon services – internal reasonable, overseas poor.
Boat Service: From anchorage to town in Navarine Bay easily arrange at $5.00 per ship per trip.
Customs/Immigration: Customs very strict. Basic issue only allowed b best take out for all crew members. Immigration check all crew book inward and outward. Greek shore passes required with crew member photo attached. Forms: All on Greek Papers.
1 copy Ship's Particulars.
2 copies General Stores Declaration.
2 copies Bond Store Declaration.
1 copy Crew Declaration.
6 copies Crew List (U.S.A. style).

AUTHORITY: Port Authority of Pylos.

RHODES (including Akantias): 36.25 N. 28.17 E.

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
1 Cargo Manifest.
1 Stores and Provisions List.
Usual Ship's Documents.
PILOTAGE: 24 hours' notice required by Rhodes Port Authorit Pilot boards 1 mile from port.
ANCHORAGES: Suitable anchorage up to a distance of 300 m. fro the port East of the pier extension.
RESTRICTIONS: Port entry can be difficult and sometimes impossib with strong North or N.E. winds.
MAX. SIZE: Up to 24 ft. draft.
RADIO: Rodos Radio, 2182 kHz.
BERTHING: Pilot will advise Master of berthing place in accordan with Port Authority instructions.
2 diesel motor-driven cranes capacity 2 tons and 3 tons available discharging. No facilities for containers.
STEVEDORES: 24 hours advance notice required in order to arran gangs.
MEDICAL: General hospital and private clinics available.
FRESH WATER: Available – supplied by canvas hoses.
FUEL: Deliveries only by tank trucks.
CONSULS:

France	Tel. 2318	Sweden	Tel. 3379
Germany	,, 7479	Turkey	,, 3362
Italy	,, 7432		

REPAIRS: Minor repairs only.
HATCHES: Opened and closed by crew.
CUSTOMS ALLOWANCES: 60 cigarettes per day per crew memb and 1 bottle wine/spirits per crew member allowed out of bond.
AIRPORT: Distance 15 km. During Winter, flights twice daily to Athe and during Summer, flights 5 times daily.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
HOLIDAYS: 1st January, 6th January, 7th March, 25th Mar Good Friday, Easter Monday, 21st May, 15th August, 28th Octob 8th November, Christmas Day, Boxing Day.
POLICE/AMBULANCE/FIRE: Police, tel. 7690 or 2220; Ambulance, 2555; Fire Brigade, tel. 3333.
DELAYS: Sometimes necessary to remain outside harbour up to 3 ho to allow coastal passenger vessels to berth if other berths are full.
DEVELOPMENTS: Extension of the Merchant Port Pier by 110 m North and 140 m. to S.E. Also an extension of the new harb (Akantias) pier, to the East of the Marine Harbour. Length to be 480 with a depth of 6.5 m. alongside.
AUTHORITY: Central Port Authority of Rhodes.

STYLIS: 38.55 N. 22.37 E.

DOCUMENTS: The usual Documents for all Greek Ports are required i.e. Cargo Manifest, Crew List, Store Lists, Personal Effects, Ship's Certificates, Oil Book, Cargo Gear Book, Exchange Declaration.
PILOTAGE: Compulsory. Pilot can be boarded at Stylis anchorage which is half a mile South of the Island of Kaloyiros. Pilot is a practical seaman who has experience and knowledge of local waters.

Vessels entering Stylis port must pass through the channel of 2 flashing green and 2 flashing red sea buoys and be in the line with the main light situated on the pier, flashing orange.

There is a pilot boat painted white flying the international Pilot's letter "H". VHF is installed and the working frequency is Channel 12.

There are 4 white launches available for hire (capacity 10 – 20 passengers). VHF is installed and the working frequency is Channel 10. These are for Pilots and Crew Members of anchored vessels.
ANCHORAGES: See "Pilotage".

The Gulf of Maliakos is a safe anchorage for laid up vessels. Position should be given upon request to the Ministry of Merchant Marine, Piraeus.
MAX. SIZE: Max. draft 18 ft. 6 in.
VHF: Port Authority on Channels 7 and 12.
TUGS: No tugs are available. For large vessels being laid up at Maliakos Kolpos tugs and Pilot must be ordered from Volos.
BERTHING: Stylis port is an open port on the North side of Maliakos Kolpos and consists of berths on the North side and of shallow waters on the South side which break at low tide. The berths total about 450 m. in length, forming the Greek letter π. The draft varies along the 3 berths with a max. of 18 ft. 6 in. at HW and 17 ft. at LW.
CRANES: No crane railway system is installed. Loading and/or discharging operations take place only by ship's gear or by mobile cranes which can be hired through the local Agents from Stylis/Lamia and/or Volos.
STEVEDORES: Working hours: 0800 hrs. – 1700 hrs. daily.
FRESH WATER: Fresh water available 24 hours. Rate 30 cu.m.p.h. Vessels must use their own hoses.
FUEL: No bunkers available. Vessels can be supplied only by barge and/or trucks ordered from Volos/Athens/Salonica.
REPAIRS: Minor repairs can be carried out.
HOLIDAYS: Aghios Athanassios on January 18th, Aghios Nikolaos on December 6th.
STORING: A limited quantity of stores and provisions are available in Stylis. Transit stores are not available.
GENERAL: No warehouses are available on the docks.

The main exported goods are olives and olive oil in tins/drums, reels of cables, cotton, etc. The imported goods are timber, machinery, paper, etc.
DEVELOPMENTS: A dredger is widening the channel and deepening the Harbour in order to accommodate vessels up to 20 ft. draft.
AUTHORITY: Stylis Harbour Authority, Stylis, Greece. *Tel:* (0238) 22329. *Contact:* Lieutenant Commander John Kioupis, Harbour Master.

SUDA BAY, Crete: 35.29 N. 24.09 E.

PORT LIMITS: Suda Bay.
DOCUMENTS:
3 copies Crew List.
Cargo Manifest.
Agency Manifest.
Transit Manifest.
Ship's Store or Instruments Manifest.
Clearance from the last Port of Call.
All the necessary certificates according to International Laws and Conventions.
PILOTAGE: Not compulsory – pilotage service is non existent.
ANCHORAGES: Safe anchorage area in the Port of Suda according to the Port Authority instructions.
RESTRICTIONS: Permission for departure or arrival after sunset is given by the Suda Navy Base.
MAX. SIZE: Permissible length 200 m., breadth 10 m.
HEALTH: Pratique is compulsory for all ships coming from ports outside Greece.
VHF: Helles Radio VHF Channel 16.
TUGS: None.
BERTHING: Cargo pier, depth up to 32 ft. Grain silo with similar depth alongside.
CRANES: None.
BULK CARGO FACILITIES: Bulk cargo discharging gear available.
SPECIALISED CARGO-HANDLING FACILITIES: Fork lift trucks available.
BRIDGES: None.
STEVEDORES: Available.
MEDICAL: Hospital facilities available.
TANKERS: There are no oil discharging installations or facilities for tankers.
FRESH WATER: Installations for the supply of fresh water available.
FUEL: Available in limited quantities.
FIRE PRECAUTIONS: Fire brigade service at Chania.
CONSULS: Germany F.R. and France.
REPAIRS: Limited facilities.
DRY DOCKS: None.

Length Overall	230 m.	195 m.
Width between sidewalls	35 m.	33.5 m.
Pumping Time	160 minutes	100 minutes
Cranes	2×10 tons	1×15 tons 1×10 tons
Quay Space	1,800 m.	
Floating Cranes	1×70 tons capacity and 1×200 tons capacity	
Travelling Cranes	Up to 40 tons capacity	

Tank cleaning station with storage capacity of 7,000 tons and separator capacity of 3,000 tons of dirty ballast and slops per hour.

4 tugs of which one is an ocean going salvage tug.

Machine shop, plate shop, foundry containing the most modern equipment.

Gritblasting.

Service Agency for Sulzer Bros. Ltd., Lister Ltd., B+W, Caterpillar SA, SKL Ltd., MWM, MAN.

Resident Classification Surveyors: Lloyd's Register of Shipping, American Bureau of Shipping.

Neorion Shipyards Syros Ltd., Syros, Greece. Telex: 0293123 Neorion Syros. Tel: 010-281 22001.

WATCHMEN: Not required.
HATCHES: Opened and closed by ship's crew.
CUSTOMS ALLOWANCES: Each man allowed 40 cigarettes per day for period not exceeding 5 days. Each man allowed 1 opened bottle of spirits. No restrictions for wine.
REPATRIATION: Can be arranged.
TIME: GMT plus 2 hours. GMT plus 3 hours in Summer.
REGULATIONS: Port Captain should be contacted for any queries not covered by lists of regulations provided on arrival.
HOLIDAYS: Work may be arranged on all holidays on payment of 75% additional to tariff.
POLICE/FIRE/AMBULANCE: Police 6-10; Fire 3-33; Ambulance 5-55.
TELEPHONES: Cannot be connected on board.
SHORE LEAVE: Crew may go ashore after pratique is given, carrying shore leave passes issued by Port Authority.
IDENTIFICATION CARDS: Shore passes are issued on production of Seamen's Books or passports.
DEVELOPMENTS: Port being dredged to permit entry of larger vessels. Shipyard installing facilities for building vessels up to 15,000 tons.

SHIPMASTER'S REPORT: February 1983.

Vessel called for bunkers only.

Documents: Not required for bunker call.
Pilotage: Recommended, not known whether compulsory or not. Vessel could undock without Pilot, however, Pilot necessary for docking.

Pilot boards 1 mile East of harbour entrance.

Chart: B.A.1833 – Plans in the Kirkladhes.
Restrictions: No restrictions on night berthing at bunker dolphin. No tidal restrictions.
Radio: Limnos and Athens. Cable address "Sekavin Syros" for bunkers.
VHF: Pilot and Bunker Agent operate on Channel 12.
Tugs: One medium size tug used aft for mooring and unmooring. Vessel cannot moor/unmoor without aid of tugs.
Berthing: 'Seka' bunker dolphin 214°T×3 cables from Fl.G. 3s. breakwater light. Berth is 2.5 cables from harbour entrance.

Vessel berthed head 040°T, with 7 shackles out on each anchor. Bunker dolphin just forward of bridge, starboard side. 4 mooring lines run from main deck and 1 spring from poop. All short nips from main deck.

Berth appears unsafe but we found that vessel remained alongside in strong winds.

Soundings taken at stern when moored gave 13 m. of water.

Vessel is restricted by draft, and distance from manifolds to dolphin.

Density: 1025.
Fuel: Bunker fuel oil and diesel available. Rate 200 t.p.h.

Shore installation used 6 lengths of hose (6 in. diameter) which were lifted aboard by shore derrick from bunker dolphin. The hoses were manhandled forward to the vessel's midship manifold. Same hoses used for both products.

No lighters available for bunkering.

Repairs: Facilities available.
Dry Docks: Available.
Airport: No local airport.
Authority: No authorities boarded.
Agent: No Agent in attendance for bunker call.

AUTHORITY: The Harbour Office of Syros.

THESSALONIKI (Salonica): 40.38 N. 22.56 E.

(See Plan)

PORT LIMITS: A vessel is considered as an "arrived vessel", when she has passed the line connecting the Small Kara Point and Paliomanna light buoy.
DOCUMENTS: For Greek flag and Greek-owned vessels:

List of Foreign Exchange.

Crew list (additional copy for Port Authority).

All vessels:

4 Crew Lists (Port Authority, Customs, Immigration and Health).
1 List of Stores.
1 List of Personal Effects.
Copies of Bills of Lading and Cargo Manifest.

PILOTAGE: Apply for Pilot through VHF Channel 12 or by international code signals. Pilot meets vessel about 1,000 m. S.E. of breakwater light (white). Pilot boat is small motor-boat carrying pilot flag.
ANCHORAGES: Area from 500 m. to 1,000 m. S.E. of port offers safe anchorage.
MAX. SIZE: See "Berthing".
HEALTH: Health Officer boards vessels from foreign ports to grant Free Pratique.
RADIO: Radio Thessalonika. 24 hours' notice of ETA required to obtain berth and stevedores.
VHF: Operative throughout 24 hours on Channel 12, Central Po Authority. Tugs on Channel 8. Pilots on Channels 12 and 7.
TUGS: 12 tugs from 375 h.p. – 3,120 h.p., owned by N. Vernico Gigilinis and Zouros, also available for salvage and towage contracts
BERTHING:

Pier No.	*Length* (m.)	*Depth* (m.)	*Remarks*

TELEPHONES: Facilities available for placing on board.
BANKS: National Bank of Greece, Bank Macedonia – Thraces, Citiba etc.
SHORE LEAVE: Permitted without restriction. For tankers, the Mas should arrange transport with Agent for seamen to the landing pie Thessaloniki Harbour. Seamen will not be permitted to pass throu refinery area.
IDENTIFICATION CARDS: Passes issued to crew members of fore vessels.
DEVELOPMENTS: 6th Pier under construction. An area 350,000 sq.m. will be available with quay length of 1,860 m. and de 12.0 m. A second gantry crane of 40 tons will also be available.

SHIPMASTER'S REPORT: August 1987.
Berth: Sea Island
Documents:
8 Copies Crew List.
2 Copies Crew Declaration.
3 Copies Manifest (including ship's stores, bond, ship's fixtures, etc.).
1 Copies Health Declaration.
2 Copies Currency List.
1 Copy Arms & Ammunition List.
1 Copy Drugs List.
1 Copy Passenger List.
3 Copies Cargo Manifest.

Shore passes issued. They have to be returned before departure.

Ship's papers and Oil Record Book taken ashore for inspection.

List of Ship's fixtures - Radios, Computer, Photocopier, etc. is required.

Anchorages: The anchorage is 0.75 miles South of the East end of the breakwater in a depth of 8.5 fathoms.

Pilotage: The Pilot boards at the anchorage or 1 mile from the Sea Island. VHF Channel 12 is used for communications.

On departure we left without tugs and pilot, with the Terminal's approval, as the pilots were engaged elsewhere.

Restrictions: Berthing and unberthing is carried out in daylight hours only between 0700 hrs. and 2030 hrs. in Summer and between 0700 hrs. and 1800 hrs. in Winter.

Tugs: The use of 2 tugs is compulsory for berthing and unberthing. Ship's lines are used.

Berthing: Vinyl Chloride Monomer (VCM) is discharged at the Sea Island (Lat. 40° 38.1′ N., Long. 22° 53.3′ E.). Vessel berthed on the shore side of the Sea Island platform, port side to.

The platform handles vessels up to 20,000 d.w.t. Depth alongside 10.0 m.

Products are handled on the North side and crude oil is handled on the South side.

The platform used to be owned by Esso but Esso is now nationalised and the platform is falling into disrepair. However the fendering on the berth is good.

Pilots advise that great care should be taken when berthing and unberthing in order to avoid damage claims.

Moorings at the berth were 2 head/stern lines, 1 breast line and 2 springs fore and aft. It is advisable to have a good spread of moorings as the vessel overhangs the flat fendering aft at about half length.

Cargo is not worked if the wind speed is over 30 knots.

The pipelines from the shore are not buried, they lay on the seabed.

Ship's gangway used.

Cargo: The rate of discharge is about 140 t.p.h. with 10 Bar back pressure. The maximum line pressure allowed is 12 Bar.

The discharge temperature is usually 0°C. A heater may be required.

Time for sampling is about 3 hours.

The vessel used an 8 in. Chicksan (the most northerly one on the Sea Island).

Hot gas is blown through the cargo lines upon completion.

Shore personnel connect and disconnect lines.

General: No fresh water available on pier. By barge the cost is 260 Drachmas per ton for 50 tons. The quality of the water is good.

Stores are only available by launch.

There is a launch service to the city between 0800 hrs. and 2300 hrs. The cost of this service is 2,500 Drachmas on weekdays and 3,500 Drachmas on weekends. The Agent or the terminal can arrange this service.

The Customs Officers in the freight section at the airport work between 0800 hrs. and 1600 hrs. on Monday to Thursday and between 0800 hrs. and 1400 hrs. on Friday. There is no Saturday or Sunday work. Outside these hours no spares can be cleared.

The airport at Thessaloniki is about 30 minutes South of the city.

During late Summer and Autumn violent wind shifts and squalls suddenly occur and sometimes reach 60 knots. The squalls are generally from the North, funnelling down the mountains. If there is thunderstorm activity take great care.

Mount Oros Khortiatis is 8 miles East of the city and is very conspicuous with radar domes on top.

AUTHORITY: Port Authority of Thessaloniki, Thessaloniki 10467-54110, Greece. *Tel:* 031-530721. *Telex:* 412-536 Thpa Gr. *FAX:* 510-500. *Contact:* Kiossis Sotirios, General Manager. D. Papadopoulos, Director of Technical Service. P. Andriotis, Director of Development.

VOLOS: 39.21 N. 22.56 E. (See Plan)

DOCUMENTS:
Nationality Certificate.
Measurement Certificate.
Crew Lists (5 copies).
Derat Certificate.
Health Documents of Crew.
Cargo Gear Book.
Safety: (a) Passenger Ship Safety Certificate.
  (b) Cargo Ship Safety Construction Certificate.
  (c) Cargo Ship Safety Equipment Certificate.
  (d) Cargo Ship Radiotelegraphy or Radiotelephony Certificate.
  (e) Exemption Certificate.
  (f) Nuclear Passenger Ship Safety Certificate.
  (g) Nuclear Cargo Ship Safety Certificate.
International Load Line Certificate (1966).
Certificate for Inspection of Life Raft.
Oil Book and International Sewage Pollution Prevention Certificate (1973).

PILOTAGE: Compulsory. Pilot boards about 1 mile outside port. Pilot boat is small launch coloured grey and black.

ANCHORAGES: Suitable anchorage situated 1–2 miles outside harbour in depths of 14 m. to 20 m.

RESTRICTIONS: Vessels in excess of 10,000 tons unable enter at night.

MAX. SIZE: Max. draft 30 ft., no limitation on length or breadth.

HEALTH: Port Officer acts as Health Officer and Pratique effected on doctor's advice. If arriving from another Greek port, Pratique automatic.

VHF: Port Authority on Channel 12.

TUGS: Join vessel at entrance to harbour. 7 tugs, 280 h.p., 380 h.p., 465 h.p., 480 h.p., 640 h.p., 860 h.p. and 1,080 h.p.

BERTHING: Ro/Ro facilities available.

Dock	*Length*	*Depth*
K	600 m.	8.0 m.
1	1,000 m.	9.7 m.
11	980 m.	9.7 m. (under construction)
R	270 m.	7.0 m. (under construction)

CRANES:	1	Mobile crane (For containers)	— Capacity 35 tons
	1	Mobile crane	— Capacity 35 tons
	3	Mobile cranes	— Capacity 10 tons
	3	Crawler cranes	— Capacity 4 tons
	1	Rail mounted crane at Dock 1	— Capacity 27 tons at 17 m. and 16 tons at 30 m.

Cranes under construction:

Dock 1	4 cranes	— Capacity 8 tons at 20 m. and 6 tons at 25 m.
Dock 11	2 cranes	— Same capacity as Dock 1

BULK HANDLING FACILITIES: 2 silos, capacity 15,000 tons, loading ability 370 t.p.h. Discharging ability 250 t.p.h.

STEVEDORES: Advance notice required order arrange gangs. Cargo operations handled with ship's gear and with 14 shore cranes.

MEDICAL: Advance notice of required medical attention is necessary. Hospital and medical facilities available.

TANKERS: One berth, depth alongside 27 ft.

DENSITY: 1025.

FRESH WATER: Available at all the piers of the harbour. Also available from special barge (capacity 300 tons).

FUEL: Order through Agent. Oil delivered by small tanker "KEA" at all berths capacity 182 tons fuel.

CONSULS: Germany F.R., Tel: 25379, France, Tel: 25870, Sweden, Tel: 22611, Italy Tel: 26048, Belgium Tel: 23318, Netherlands Tel: 23494.

REPAIRS: Minor repairs can be effected.

GANGWAY/DECK WATCHMEN: Ship's gangway used. Usually ship's crew.

HATCHES: Usually opened and closed by crew, but if by stevedores, additional costs apply.

CUSTOMS ALLOWANCES: 1 to 2 packets cigarettes allowed per crew member per day. 1 bottle wine/spirits allowed out of bond.

SURVEYORS: Cargo inspector: Hellenic Register of Shipping.

REPATRIATION: Crew changes and repatriation can be carried out.

AIRPORT: No airport locally.

TIME: GMT plus 2 hours, Winter. GMT plus 3 hours in Summer.

HOLIDAYS: Usual Greek holidays. Local holiday 6th December; cargo work can be arranged subject to additional cost with the exception of 6th December.

POLICE/AMBULANCE/FIRE: Police, Tel: 23652; Ambulance, Tel: 27531; Fire, Tel: 33191.

EMERGENCY CO-ORDINATION CENTRE: Ministry of Mercantile Marine (Piraeus) Tel: 1/4112500-4173238.

SERVICES: Divers available for surveys and underwater repairs.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Shore passes are required.

DEVELOPMENTS: Construction of a new dock at the grain silo.

SHIPMASTER'S REPORT: 1977. (Updated 1984).
Restrictions: Draft restrictions on new quays subject to maximum depth of water of 32 ft. and on the original town quays a maximum depth of water of 28 ft. East side, 26 ft. West side, 26 ft. Head. (Thus draft will have to be about 2 ft. less than depth.)

Stevedores: Working hours 0730 hrs. – 1400 hrs. and 1400 hrs. – 2100 hrs. on overtime.

Berths: Town quay (K) with approx. 800 ft. frontage on each side and cross berth approx. 385 ft. on end. No. 1 quay – "L" shaped berths with base to the shore with frontages approx. 600 ft. on North side, 1,570 ft. on East side, 505 ft. on head and 1,210 ft. on West side.

No. 2 quay – "L" shaped berths with base to the shore with frontages approx. 500 ft. on North side, 1,385 ft. on East side, 330 ft. of head and 1,520 ft. on West side (Not yet finished, see plan).

Pollution: Port regulations prohibit the scraping and scaling of ships side and the pollution of sea or port area by painting.

AUTHORITY: Volos Central Port Authority, 380 00 Volos, Greece. *Contact:* Lieutenant E. Kalabalikis, Harbour Master. *Tel:* 421-24179. Vice Harbour Master, *Tel:* 421-20115. Port Police Office, *Tel:* 421-24179. Safety Navigation Office, *Tel:* 421-24758. *Telex:* 282170.

YALI ISLAND: 36.40 N. 27.08 E. (See Plan)

DOCUMENTS:
5 Crew Lists.
2 Passenger Lists.
Cargo Manifest.
Bills of Lading.
List of Ship's Stores and Spares.
Health Declaration.
Ship's Certificates.

PILOTAGE: A Mooring Master is available from Piraeus. Mooring Master boards at the anchorage.

ANCHORAGES: Safe anchorage in the roads (36° 39′ N., 27° 09′ 30″ E.) except in strong Southerly winds.

Area to be Avoided for Anchoring: Power Cable – "See Plan".

West Portion of the Zone:
(1) 36° 40′ 04″ N. 27° 07′ 30″ E.
(2) 36° 39′ 30″ N. 27° 08′ 24″ E.
(3) 36° 37′ 30″ N. 27° 08′ 24″ E.
(4) 36° 36′ 52″ N. 27° 08′ 37″ E.

East Portion of the Zone: E.
(5) 36° 40′ 07″ N. 27° 07′ 54″ E.
(6) 36° 39′ 36″ N. 27° 09′ 00″ E.
(7) 36° 36′ 50″ N. 27° 08′ 53″ E.

MAX. SIZE: Max. LOA 200 m., max. beam 24 m., max. draft 11 m.

HEALTH: Port Authorities will board by launch from Nissyros to arrange Free Pratique. Any sick crew members will be disembarked to Nissyros by the same launch.

VHF: Contact Yali Quarry on Channel 8 and Harbour Master's office on Channel 12.

TUGS: Available.

BERTHING: The vessel is moored at loading berth on 8 buoys in addition to port anchor. During loading operations vessels have to be shifted from hatch to hatch.

BULK CARGO FACILITIES: Loading Berth is located at the end of the conveyer belt shiploader. The shiploader is on a cement construction, about 500 m. offshore. The cargo is carried by conveyor belt to the spout. The raising and slewing of the spout is controlled by the operator from the control desk to allow trimming of the cargo.

STEVEDORES: Workers are employed by Lava Mining and Quarrying Co.

MEDICAL: Nearest medical and hospital facilities are at the island of Kos, 7 miles North of Yali.

DENSITY: 1028 – 1030.

FRESH WATER: None available.

FUEL: Not available.

CONSULS: No local representation.

REPAIRS: No facilities exist.

HATCHES: Opened and closed by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 opened bottle of spirits are allowed for each man.

AIRPORT: Nearest at Kos with 2-3 flights daily to Athens during the Summer and a daily flight in Winter.

HOLIDAYS: Sundays and Public Holidays.

SHORE LEAVE: Allowed.

GENERAL: *Pilots Recommendations for Mooring:*

1. Pilot's motorboat at position P1 (see "Plan").
2. Vessels are always berthed with starboard side towards the loading station.
3. Have ready following moorings:
   (a) Fore – Portside 1 × 200 fathoms manila or nylon ropes – Starboard side 2 × 200 fathoms manila or nylon rope and
   (b) Aft – Portside 2 manila or nylon ropes (should be 200 fathoms long) – Starboard side 2 × 200 fathoms manila or nylon rope.

Note: The 200 fathoms aft starboard side ropes are required only in the initial stage of mooring to bring the ship in her final position.

4. Secure lines as follows:
   (a) Manila or nylon ropes to each of Buoy Nos. 3, 4, 5, 6, 7, 8.
   (b) Manila or nylon rope(s) to either Buoy No. 1 or No. 2 according to ship's size.
5. Vessel to have portside anchor chain lowered (1.5 shackles) when vessel is about 400 yards away from anchoring point.
6. On arrival have portside gangway ready for immediate use.

Expedite Loading:

1. As a rule loading commences from midship holds. Vessel to be ready to shift back and forth at all hours of day and night for loading of other holds on 30 minutes' notice.
2. Have all hatches open.
3. Broom swept and washed clean holds, hold ladders and supporting beams.
4. Arrive at Yali fully ballasted.
5. If arriving at Yali 4-5 hours before sunset loading may commence before dark.
6. Shipper intends to work around the clock.
7. In case of tween decker, before arrival, remove all tweendeck hatch beams also 2 or 3 adjacent beams from the centre of Nos. 2, 3 and 4 main deck hatches.

AGENCY: *Main Agent:* Petros M. Nomikos Ltd., 17-19 Akti Miaouli, Tanpy Building, Piraeus 185 35, Greece. Tel: 4170895/9. Telex: 212397. FAX: 4171777. Contact: Mr. Michael Vazeos, Director.

AUTHORITY: Harbour Master at Mandraki, Port of Nissyros, Nissyros Island, Dodekanissa (Dodecanese), Greece. *Tel:* (0242) 31222. *Telex:* 29-2195. *Cables:* Limenarchion, Nissyros, Greece. *Contact:* Mr. Stergios Remopoulos, Harbour Master.

OPERATOR: Lava Mining & Quarrying Co., 49-51 Sof., Venizelou St., Lycovrissis, Attica, Greece. Tel: (01) 2898530, 2898465, 2898462. Telex: (21) 5168-9. Fax: (01) 2817778. Contact: Mr. El. Fedros, General Manager or Mr. C. Cavafakis, Commercial Department.

Quarry: Yali Island, Nisyros Dodecanese. Tel: (0242) 31280 a
31426. Telex: (29) 2195. Fax: (0242) 31426. Contact: Mr. Anastas
Venetis, General Manager of Quarry.

NOTES

Please also advise Shipping Guides Ltd.

Greenland

GENERAL:

CUSTOMS: The Master and the crew are not to distribute anything tax-free in a Greenland port.

DOCUMENTS: Following documents must be on board:

Speed Certificate.
Crew List.
Radio Station Certificate.
Safety Equipment Certificate.
Clearance Certificate.
Health Declaration.
Tonnage Certificate.
Certificate of Registry.
Derat Certificate.
Sailing Orders.

PILOTAGE: Attention is drawn to the fact that any person who is assigned to act in Greenland waters as "kendtmand" (i.e. a ship's guide with local knowledge) is not considered to be a Pilot in the sense of the word normally used in International shipping.

While serving on board he is to act exclusively in an advisory capacity, and the navigation of the vessel is at no time to be entrusted to him.

RESTRICTIONS: Foreign-flag vessels have access to Greenland ports. The crew may go ashore subject approval of Port Authorities.

All vessels arriving at ports must give a 24 hour ETA to Port Authority and Master should immediately after arrival make a presentation of Health Certificate and allow a medical check on board.

All ships have to pay harbour dues.

ICE INFORMATION: Ice Centre Narssarssuaq (Tel: 35244. Telex: 90332 iscent gd. Fax: 35344.) transmits daily at 1200 hrs. 1400 hrs. and 2200 hrs. GMT the latest information of the ice in Southern Greenland Waters. Information is transmitted in Facsimile (Mufax) on frequency 125.00 kHz, drum speed 120. Ships can, free of charge, request telegraphic ice information from following coastal radio stations:

OZL—Ammassalik
OXF—Qaqortoq

Ice information also transmitted in Facsimile (Mufax) on frequency/time (GMT) as follows:

9,360 kHz	0003-0025 GMT.
5,850 kHz	0028-0050 GMT.
5,850 kHz	0943-1005 GMT.
9,360 kHz	1008-1030 GMT.
13,855 kHz	1218-1240 GMT.
9,360 kHz	1243-1305 GMT.
13,855 kHz	1308-1330 GMT.
17,510 kHz	1333-1335 GMT.
13,855 kHz	1803-1825 GMT.
9,360 kHz	1828-1850 GMT.

RADIO: In ports where there is a local radio station, vessels are prohibited from using ship's station for sending messages.

HEALTH: Before commencing voyage to Greenland, at the port of departure, Master is required to obtain a Health Certificate from an authorised medical practitioner, stating that there are no dangerous or contagious diseases on board, such as pest, cholera, yellow-fever or typhus. The crew list is to be included in this certificate stating that there are no venereal or other contagious diseases amongst the crew members. The Health Certificate is only valid if it has the stamp and signature of the Royal Danish Consul or Vice-Consul of the district in which the port of departure is situated. On arrival at the first Greenland port, the Master is to present the Health Certificate to the Port Authorities. Health Certificate may also be issued by a doctor in the first Greenland port of call.

STEVEDORES: Contact Authority.

MEDICAL: Dental facilities available in all ports, but only in emergencies. Hospitals available in all ports, but only in emergencies. The only large hospital is in Nuuk/Godthaab.

FRESH WATER: Available in larger ports.

CONSULS: Iceland, Sweden, Norway, Canada and Great Britain have representations in Nuuk/Godthaab and Iceland has representation in Qaqortoq/Julianehaab.

WATCHMEN: Ship is required to appoint a crew member as ship's guard on board.

TIME: GMT minus 3 hours. Permanent. Except at Thule Air Base and N.E. Greenland.

HOLIDAYS: As applicable to Denmark.

WORKING HOURS: Normally from 0800 hrs. to 1700 hrs. with 2 meal breaks. Possible to increase the working hours if necessary.

REPORT: Immediately upon arrival of a vessel in Greenland, the Master must report to the Port Authorities.

WASTE DISPOSAL: It is forbidden to throw waste material of any description overboard into port waters.

AUTHORITY: Greenland Trade (KNI), P.O. Box 608, Dk-3900 Nuuk/Godthaab, Greenland. *Tel:* 25211. *FAX:* 25311. *Telex:* 90401 trasys gd. *Cables:* Trafikkontoret, Nuuk.

AASIAAT (Egedesminde): 68.43 N. 52.53 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Roadstead, Inner Port (inside Bay), Anchorage, Boat Port, and Atlantic Quay.

DAYLIGHT: Polar darkness from 2nd December to 11th January, and midnight sun from 22nd May to 23rd July.

CONDITIONS: (a) Current: flows Eastwards between the islands at Aasiaat from 3 hours before, to 3 hours after high water, following which, current flows Westwards for 6 hours. *(b)* Ice: Winter ice normally occurs from mid-December to early May, but can occur earlier, in November. New ice in the port can be up to 60 cm. thick; 1st January covering ice up to 30 cm and by 1st February about 45 cm. Icebergs sometimes enter port area and stop all shipping movement. *(c)* Tide: high tide height 2.6 m. (max. 3.1 m.). Low tide height 1.5 m. Direct West wind causes 0.3 m. rise above tidal height, and South or S.E. wind about 0.5 m. below.

PILOTAGE: No official port Pilot, but assistance arriving and sailing may be obtained from a local seafarer having good knowledge of the area. This local assistance should be ordered if required in ETA cable to Port Authority at least 24 hours prior arrival. The Port Manager usually acts as local expert as part of his normal duties.

There is VHF radio installation in office of Port Authority and it is usually possible to obtain VHF contact within 30 miles of Aasiaat.

Local area expert will board vessel from port boat at meeting place usually arranged just outside entrance to port.

No special pilotage regulations and no Outer Anchorage where Pilot may be taken on board. However, in waters North and N.E. of port entrance vessels may stop or proceed at very slow speed in order to embark local expert.

ANCHORAGES: No special anchorages, and vessel is only allowed to anchor for a short period at the entrance to port subject permission of Port Authority.

MAX. SIZE: Largest vessel to berth alongside Atlantic Quay was length 136 m., breadth 20 m., draft 7.5 m.

ENTRY: Day or night.

TUGS: None. 1 port boat to take lines and assist mooring.

RADIO: Local radio station "OYR". RDF station beacon East of the town. Radio link between Aasiaat and Transitoen, and between Transitoen and Roeveo.

BERTHING: Atlantic Quay: Length 70 m., depth alongside 8.1 m., at medium low tide and 10.7 m., at medium high tide. Height of quay at medium tide about 1.5 m., above w/l. 2 × 10 ton mobile cranes and fork-lift trucks used in discharging.

MEDICAL: Hospital, doctor and dentist available.

FRESH WATER: Available at Atlantic Quay.

FUEL: Only gas-oil available for local fishing vessels from the tank-station.

REPAIRS: Shipyard for repairs to wooden fishing vessels. Machine shop also available. Slip for small vessels (250 tons).

AIRPORT: Heliport.

SALVAGE: Salvage-station in the area.

AUTHORITY: Kalaallit Niuerfiat, Niels Egedes Plads, 3950 Aasiaat, Greenland. *Tel:* 42244. *Telex:* 91000. *Cables:* Handelchefen Aasiaat. *FAX:* 42223. *Contact:* Handelchefen.

FAERINGEHAVN (Polaroil): 63.41 N. 51.34 W.

(Also see "General Information" at beginning of Greenland Section).

DOCUMENTS: Bill of Health: Doctor's Certificate mentioning each member of crew by name to be free of contagious diseases. This document to be signed by Consulate in the port of delivery to be prepared by competent authority, passengers excluded. One Manifest with Bill of Lading. Ordinary Ship's Papers.

PILOTAGE: As a rule Pilot can be ordered in the months May-October, 12 hours' notice before arrival is required.

ANCHORAGE: Inside fjord area.

RESTRICTIONS: None.

MAX. SIZE: Oil-carriers about 26,000 d.w.t., draft 40 ft. General cargo-ships 20 ft.

HEALTH: Master to apply with documents at harbour office for Free Pratique.

RADIO: Nuuk Radio: OXI, connected Faeringehavn by Telex and Telephone.

VHF: Oil company and fishing company are listening on VHF during working hours.

TUGS: None. 1 harbour boat for assisting with mooring and taking lines.

BERTHING: Natural port, anchorage for the largest vessels. Wharf, 225 m. with 5 m. at L.W.

STEVEDORES: None, but fishing and service company "Nordafar" may act as stevedores.

MEDICAL: For medical service, apply to Nuuk.

TANKERS: Load/discharge lines 6 in. and 8 in. Smaller diameters for bunkering when necessary.

FRESH WATER: Only available May to November.

FUEL: Available. Light fuel, gas oil, aviation turbine fuel A1, gas oil, oct. 97. But only with permission of Kalaallit Niuerfiat at Nuuk.

CONSULS: None.

REPAIRS: Small repairs only.

GANGWAY/DECK WATCHMEN: Not required (ship's crew).

OPENING/CLOSING HATCHES: Must be carried out by ship's crew.

REPATRIATION: Available, via Nuuk by air to Copenhagen.

AIRPORT: Nearest airport is Nuuk distance 35 miles regular airlines.

TIME: GMT minus 3 hours.

HOLIDAYS: Danish holidays and Greenland holidays.

POLICE/AMBULANCE/FIRE: Police tel. Nuuk 21448.
TELEPHONES: Not available on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
DELAYS: Bunker station closes for arrivals between 2200 hrs. and 0600 hrs. local time.
GENERAL: Bunker station open all year; during Winter-time sometimes difficulties caused by ice.
AUTHORITY: Kalaallit Niuerfiat, Polaroil, 3900 Nuuk, Greenland. *Tel:* 22527. *Cables:* Polaroil. *Contact:* Kalaallit Niuerfiat, Nuuk.

ILULISSAT (Jakobshavn): 69.13 N. 51.06 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is a narrow open bay, entrance to the N.W., having outer port and inner port. In outer port is Atlantic Quay and bunkering station, and inner port has another quay and a fishing harbour.
CONDITIONS: *(a)* Tide: height of average high tide 2.8 m. (max. 3.3 m.) low tide 1.6 m.
(b) Wind: usually East to N.E. In Autumn winds are strong especially in the morning.
(c) Ice: impression can be gained when approaching port that port is closed due to icebergs. On closer approach channels between icebergs will be found but if these openings appear too narrow a wider passage should always be found to the North.
(d) "Kanele": a natural phenomenon that occurs at this port causing regular and heavy swell, height up to 2 m. Wave characteristic, long and flat, frequency about 6 minutes. Pilot should be consulted for full information.
ENTRY: Port usually open day and night, from mid May to end November.
DAYLIGHT: Polar darkness between 1st December and 12th January and midnight sun between 21st May and 24th July.
PILOTAGE: A local Pilot (Kendtmand) should always be used by larger vessels and request made to Port Authority in ETA cable. Pilot boarding place to be agreed with Authority.
MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 100 m., draft 6.8 m.
RADIO: Aasiaat Radio, call sign "OYR".
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Outer port depth 6.5/7 m., inner port 5.5/6 m. Atlantic Quay length 100 m. Depth alongside Atlantic Quay 8 m. at average low tide. Height of quay about 1.1 m. above w/l. Permission to enter port should be obtained prior arrival from Port Authority. Mobile crane capacity 10 tons, also fork-lift trucks.
MEDICAL: Hospital, doctors and dentists available.
FRESH WATER: Obtainable alongside Atlantic Quay.
AIRPORT: STOL airstrip available for internal flights.
REPAIRS: Machine workshop. Crane for lifting small vessels, capacity 50 tons.
GENERAL: Police, Fire Brigade, Port and cable office.
AUTHORITY: Kalaallit Niuerfiat, Noah Molgaardsvey, 3952 Ilulissat, Greenland. *Tel:* 43244. *Telex:* 91204. *Cables:* Handelchefen Ilulissat. *Contact:* Handelchefen.

IVIGTUT: 61.12 N. 48.10 W.

Mining in the area has stopped. The Port has closed down and the settlement has been abandoned.

(Also see "General Information" at beginning of Greenland Section)
CONDITIONS: *(a)* Current: strongest about 3 hours before and 3 hours after high water, and vessels arriving and sailing should take this into consideration. *(b)* Tide: height of average high tide 3 m. (max. 3.4 m.), low tide 1.6 m. *(c)* Wind: calm for about half the year otherwise winds are usually from South or S.E. The dangerous winds for moored ships are the infrequent storms from North or N.E.; these storms seldom occur but if they do occur they do so in the Autumn. *(d)* Ice: Winter ice usually occurs from December onwards in the fjord outside Ivigtut and disappears in the beginning of April. Outside Ivigtut Winter ice always occurs, sometimes reaching a thickness of about 1 m. Information concerning ice conditions always obtainable on telegraphic request to GLK.
ENTRY: Day and night and usually all year round.
PILOTAGE: No official Pilot but an acting Pilot can be arranged through connection with Port Authority at least 24 hours prior arrival.
MAX. SIZE: Largest vessel to have berthed at Pier was length 102 m., breadth 14 m., draft 6.2 m.
RADIO: Qaqortoq Radio "OXF" or Gronnedal Radio "OVC".
VHF: Gronnedal Radio listens on VHF 24 hours.
TUGS: None. Motor-boat will assist mooring.
BERTHING: Depth alongside about 7 m. height of pier about 2 m. above w/l. Berthing during daylight only. Kryolit not exported from mid-December to end March. Crane capacity 3 tons.
Note: Kryolitselskabet Oresund A/S ceased operating at the port in December 1987.
FRESH WATER: Available.
FUEL: Deliveries of small quantities of gas-oil for local vessels only.
REPAIRS: No facilities.
MEDICAL: Hospital in Ivigtut, but doctors and dentists are in Gronnedal.
AUTHORITY: Hjemmestyret for Gronland, P.O.Box 1015, 3900 Nuuk, Greenland.

KANGERLUSSUAQ (Sondre Stromfjord): 66.58 N. 50.57 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is used for the supply of an American base a for air communication to Copenhagen. Port has a quay and a s terminal for tankers.
DAYLIGHT: Camp Lloyd is situated South of the border for po darkness but has a midnight sun from 15th June to 1st July.
CONDITIONS: *(a)* Current: the current at entrance and at the West Sondre Stromfjord is N.E. at flood tide, and S.W. at ebb tide, and c reach a speed of 7 knots. *(b)* Tide: high water at Camp Lloyd is abo 3 hours later than at the entrance of Sondre Stromfjord. Height average high tide 3 m. (max. 3.6 m.). Low tide 1.6 m. *(c)* Ice: Sond Stromfjord is frozen during winter throughout whole of inner harbou but about 55 miles from Camp Lloyd, ice thickness varies from 5 cm. 90 cm. *(d)* Winds: strong winds can occur from East and S.E.
ENTRY: On account of ice, the fjord is closed from beginning December to end-June, but can be used day or night from beginning July to end-October.
PILOTAGE: No authorised Pilot, but Harbour Master will assist berthin
ANCHORAGES: Good anchorages about 2 miles S.E. of Emmons Py in depth of about 40 m. Great care should be taken in anchoring, sin sea bottom is shelving.
RADIO: ETA should be given well in advance of arrival to the Ro Greenlandic Commercial Representative and also to the Port Authori The arrival should be reported at least 24 hours in advance throu GLK. The Harbour Master can be contacted on 2716 kHz and t contact should be established at least 1 hour before vessels arrival.
BERTHING: *(a)* A quay which is located North of Emmons Pynt, dep alongside only 3 m. *(b)* Tanker sea terminal about 700 m. S.S.E. Emmons Pynt where there is mooring with discharge lines. Depth water 24 m. – 26 m. on the South side of the mooring position; 15 at the mooring, and 10 m. on Northern side of mooring with rap shelving to the North.

The Port Authorities should be contacted before mooring at the s terminal. There are mobile cranes with lifting capacity up to 5 tons, a fork-lift trucks.
MEDICAL: Hospital, doctor and dentist available.
AIRPORT: Heliport and airstrip.
REGULATIONS: Camp Lloyd is an American Defence Area and en is restricted. American supply ships have preference in mooring at installations.
AUTHORITY: U.S. Air Force, 3910 Kangerlussuaq, Greenla *Tel:* 11153.

MANIITSOQ (Sukkertoppen): 65.25 N. 52.54 W.

(Also see "General Information" at beginning of Greenland Section)
LOCATION: Harbour situated on S.E. side of Maniitsoq Island, and h Atlantic Quay.
CONDITIONS: *(a)* Tide: height of average high water 4.2 m. (ma 4.8 m.), low water 2 m. *(b)* Ice: Winter ice occurs from December April. *(c)* Wind: advisable not to enter harbour area if winds are stro Most obstructive winds are storms from South or S.W.
ENTRY: Port open day and night, normally all year round.
PILOTAGE: Pilot is arranged by cable to Nuuk Radio when giving ET which should be sent well in advance. Pilot will meet vessel as arrang outside the harbour, or at Faltings Skoer.
MAX. SIZE: Largest vessel that can berth at Atlantic Quay is leng 100 m., draft 6 m. Vessels up to 4,000 tons have used the port.
RADIO: Extended from Nuuk "OXI".
TUGS: None. Port motor-boats assist mooring.
BERTHING: Depth in harbour is about 27 m. and alongside Atlan Quay. Length 60 m. with depth of about 8.2 m. Height of quay is abo 2 m. above w/l. Cranes up to 5 tons capacity and fork-lift trucks.
MEDICAL: Hospitals, doctors and dentist available.
FRESH WATER: Available at quay.
REPAIRS: Repair workshop for repairs to wooden fishing vesse Machine shop available. Slip for small vessels (225 tons).
AIRPORT: Heliport.
GENERAL: Telex, telephones, Police, Fire Brigade.
AUTHORITY: Kalaallit Niuerfiat, A. W. Nielsensvej, 3912 Maniitso Greenland. *Tel:* 13244. *Telex:* 90701. *Cables:* Handelchefen Maniitso *Contact:* Handelchefen.

MARMORILIK: 71.07 N. 51.17 W. **(See Pla**

The mining operations will close down in December 1990.

DOCUMENTS:
International Load Line Certificate.
Safety Raid Certificate.
PILOTAGE: Optional for coastal vessels entering Davis Strait. Age are to make arrangements if Pilot required.
GENERAL DESCRIPTION: The berth is located at the North end of t West side of Agfardlikavsa Fjord.

Agfardlikavsa Fjord, West Greenland, (entrance approxima Lat. 71° 08′ N., Long. 51° 18′ W.) is located at the end of the larg Qaumarujuk Fjord.

Qaumarujuk Fjord, the Northeastern arm of Ingnerit, has its entrance between Qegertanguit and the Western extremity of Akuliarusikavsak, a mainland projection about 2.5 nautical miles S.E. Ingnerit is one of the largest of the branch fjords and flows into Umanak Fjord. It is entered between Tuperssuatsiait, the S.E. extremity of the Alfred Wegener Peninsula, and Akuliaruseq, a point about 4 miles S.S.E. The waters of the Umanak Fjord flow into the Nordost Bay.

The Agfardlikavsa Fjord is separated from the Qaumarujuk Fjord by a shallow, narrow bar. Depth at the centre of the sill is approximately 30 m.

There is a considerable surface water run-off along the Fjord walls including occasional rock slides. The bottom of the Fjord is filled with 6 ft. to 8 ft. of fine silty material.

Marmorilik (Lat. 71° 08′ N., Long. 51° 18′ W.) lies on the S.E. side of the Qaumarujuk Fjord at the Western entrance point of the Agfardlikavsa Fjord.

The larger fjords and Nordost Bay are encumbered with islets and rocks requiring extreme care in navigation. In particular, a shoal is known to exist some 350 m. N.W. of Marmorilik Point and extra care is required in this vicinity.

In 1984 an upstanding rock, 4.0 m. below sea level, was discovered in position 71° 07′ 44″ N., 51° 16′ 40″ W.

ANCHORAGE: There is an anchorage at Agfordlikowsa in depths of 20 m. to 35 m. Tankers can anchor near the berth in depths of 24 m. to 50 m., but must be aware of an unmarked 6 m. shoal about 300° True, and 375 m. (approx.) from the discharge point.

MAX. SIZE: Max. d.w.t. 65,000 (Panamax). Min. depth alongside ore terminal is 12.5 m. at LW.

RADIO: Egedesminde Radio.

VHF: Ship-to-shore communications will be maintained using VHF Channel 16.

Information on ice conditions in the fjord can be obtained from shore personnel. During loading operations, Greenex will supply the vessel with 2 portable radio transceivers for communications between the carrier and the loading control station.

TUGS: 1 tug available, 3,700 h.p. The tug will assist with berthing and unberthing if required, and will break up any thin ice in the vicinity of the berth and entrance to the fjord.

BERTHING: The Marine Terminal is used for loading ore carriers up to 65,000 d.w.t. The berth consists of 4 breasting dolphins with bollards for springs and breast-lines. On the shore are 7 bollards for head and stern lines spread over a distance of 366 m. The min. depth of water alongside is 12.5 m. at LW.

Vessels normally berth port-side alongside and use the starboard anchor to assist in berthing. No. 1 hatch is lined up under the loader as it is the first hatch to be loaded.

Initially the headlines go to the Northernmost dolphin and stern lines to the Southernmost bollard on the shore.

Loading: Zinc and lead are loaded with a luffing and slewing ship-loader. The ship-loader is fitted with a 20 ft. conveyor to distribute the cargo in the hold. Communication is maintained between the vessel and control room by portable radios. The average loading rate is 500 metric t.p.h.

Notice of Readiness will not be accepted at time of arrival at the dock unless the vessel is in all respects ready to load.

General Cargo: Unloaded into barges with vessel's gear and towed ashore to a separate lightering dock located about 500 m. N.E. of the ore terminal.

MEDICAL: Emergency medical and dental treatment can be arranged and should, when possible, be requested by the vessel's Master in his ETA message to the mine site office.

TANKERS: Diesel fuel oil and turbo-fuel are stored in a tank farm located on-shore about 500 m. West of the point at Marmorilik on Qaumarujuk Fjord, at an elevation of 50 m.

Vessels usually berth using both anchors, 5 shackles on the port anchor, and about 4.5 shackles on the starboard anchor, using a heavy chain from the stern to the S.E. point of the oil installation. The chain is available from the shore. Tankers can also moor to the N.N.W. of the oil installation, but must remain outside the 6 m. line.

The tanker hoses are connected to an 8 in. flange connection for diesel oil or a 4 in. hose adaptor with dust-cap for turbo-fuel. The static head on the lines is about 70 m. when the tanks are full. An anti-static cable is provided.

On the shore, there are 2×50 ton bollards and 1×20 ton stock. No breasting or mooring dolphins are provided.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

TIME: Standard time is GMT minus 3 hours.

GENERAL: Repairs: While alongside the dock, no repairs are to be undertaken that will prevent the main propulsion machinery from being activated at very short notice.

Vessel's Whistle: The vessel's whistle shall be operational during operations. One long blast on the whistle means "Emergency – stop operations".

AUTHORITY: Greenex A/S, 3963 Marmorilik, Greenland. *Tel:* 009-299-48311/48360. *Telex:* 91500 Gxmar GD. *FAX:* 009-299-48385. *Contact:* Benny Gregersen, Service Manager.

NARSSARSSUAQ (Isrecognosceringsstation): 61.08 N. 45.26 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Ice outlook station, with quay.

CONDITIONS: *(a)* Current: occasional strong N.W. current. *(b)* Tide: average height of HW 3 m. (max. 3.6 m.) LW 1.6 m. *(c)* Wind: S.E. wind sometimes reaches typhoon strength. *(d)* Ice: in Winter ice thickness sometimes reaches 1 m. Ice breaker not available.

PILOTAGE: Not available. Base representative should be advised of ETA well in advance of arrival.

MAX. SIZE: Largest vessel to berth at quay was length 130 m., draft 8 m.

ENTRY: Open season from mid-May to mid-October. During season, port open day and night.

RADIO: Qaqortoq Radio "OXF".

VHF: Extended from Qaqortoq.

TUGS: None.

BERTHING: Quay length 140 m., depth alongside (West) 6 m. – 11 m. (East) 5 m. – 8 m. Height of pier 2 m. above w/l. 2 vessels may berth, 1 on either side of quay. Heavy mooring equipment on the quay, and should be used by larger vessels. Mobile cranes capacity up to 4 tons, and fork-lift trucks.

FRESH WATER: Obtainable at quay, about 80 tons per single off-take.

AIRPORT: Landing-strip for aircraft. Ice station usually uses Twin Otter aircraft and S61 Helicopter.

AUTHORITY: Greenland Homerule, Box 1015, 3900 Nuuk. *Tel:* 2-3000. Station Manager, 3926 Narssarssuaq, Greenland. *Tel:* 35266.

NORTH STAR BUGT (Thule Air Force Base): 76.36 N. 68.52 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Supply port for the Thule Air Force Base. Port is operated by and belongs to the U.S. Air Force.

DAYLIGHT: Polar darkness from 1st November to 10th February and midnight sun from 23rd April to 20th August.

CONDITIONS: *(a)* Ice: port is frozen over from end October to beginning July. From beginning of November, large areas of compact ice appear, and these can sometimes be up to 20 miles wide. During May, compact ice areas commence breaking up; however, large quantities of drift ice remain along the coast until end July. Winter ice is normally about 180 cm. thick. *(b)* Temperature: in January and February average temperature is 29° below zero. In June, July and August, average temperature is usually above freezing-point, but for the rest of the year it is below freezing. *(c)* Tide: mean Spring tide is 3 m. (max. 3.4 m.). Mean neaptide 1.7 m.

ENTRY: Normally, port is open early July depending upon ice situation.

PILOTAGE: No authorised Pilot, but American Port Authority assists in mooring and should be advised of ETA well in advance.

ANCHORAGE: Good holding ground in depth between 20 m. and 40 m., but anchoring should only be carried out following advice of Port Authority.

MAX. SIZE: Largest vessel to berth alongside quay was length 130 m., and draft 7 m.

MEDICAL: Hospital, doctor and dentist available.

TUGS: None. Port boats assist mooring.

BERTHING: 2 vessels may berth at the quay. Depth alongside about 7 m. Height of pier about 2 m. above MHW. Mobile cranes and forklift trucks; however, equipment varies from year to year and Port Authorities should be contacted well in advance. 3 amphibious craft for vessels discharging in the roadstead.

FRESH WATER: Available alongside quay.

AIRPORT: Two rescue helicopters stationed at this base.

REGULATIONS: The area is a Military Defence area and special permission is necessary to enter the port. Shore leave is prohibited.

AUTHORITY: U.S. Air Force, North Star Bugt, Greenland. *Tel:* 50091.

NUUK (Godthab): 64.10 N. 51.44 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Narrow entry to port, but well protected, with good modern berths and anchorages.

CONDITIONS: *(a)* Current: sometimes strong between anchorage and the berths. *(b)* Ice: only very occasional large quantities of ice reach the port and into the fjord. If ice in area South of Nuuk, S.W. storms force drift ice into the fjord. In recent years the port has begun to freeze over in Winter, and small vessels have at times become icebound. *(c)* Wind: S. and S.W. storms spring up suddenly but only last for brief periods. *(d)* Tide: height of high water 4.4 m. (max. 5.1 m.); low water 2.1 m.

ENTRY: Port open day and night all year round.

DAYLIGHT: Nuuk situated South of the border for midnight sun and Polar darkness.

PILOTAGE: Port Manager normally acts as Pilot for ships, but is not an authorised Pilot. Pilotage may be arranged by VHF contact with Authority during normal working hours with 24 hours notice.

ANCHORAGES: Good anchorages available inside fjord. Larger vessels should anchor close to Rypeo and in Malene Bugt.

POLICE/AMBULANCE/FIRE: Police tel. Nuuk 21448.
TELEPHONES: Not available on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
DELAYS: Bunker station closes for arrivals between 2200 hrs. and 0600 hrs. local time.
GENERAL: Bunker station open all year; during Winter-time sometimes difficulties caused by ice.
AUTHORITY: Kalaallit Niuerfiat, Polaroil, 3900 Nuuk, Greenland. *Tel:* 22527. *Cables:* Polaroil. *Contact:* Kalaallit Niuerfiat, Nuuk.

ILULISSAT (Jakobshavn): 69.13 N. 51.06 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is a narrow open bay, entrance to the N.W., having outer port and inner port. In outer port is Atlantic Quay and bunkering station, and inner port has another quay and a fishing harbour.
CONDITIONS: *(a)* Tide: height of average high tide 2.8 m. (max. 3.3 m.) low tide 1.6 m.
(b) Wind: usually East to N.E. In Autumn winds are strong especially in the morning.
(c) Ice: impression can be gained when approaching port that port is closed due to icebergs. On closer approach channels between icebergs will be found but if these openings appear too narrow a wider passage should always be found to the North.
(d) "Kanele": a natural phenomenon that occurs at this port causing regular and heavy swell, height up to 2 m. Wave characteristic, long and flat, frequency about 6 minutes. Pilot should be consulted for full information.
ENTRY: Port usually open day and night, from mid May to end November.
DAYLIGHT: Polar darkness between 1st December and 12th January and midnight sun between 21st May and 24th July.
PILOTAGE: A local Pilot (Kendtmand) should always be used by larger vessels and request made to Port Authority in ETA cable. Pilot boarding place to be agreed with Authority.
MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 100 m., draft 6.8 m.
RADIO: Aasiaat Radio, call sign "OYR".
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Outer port depth 6.5/7 m., inner port 5.5/6 m. Atlantic Quay length 100 m. Depth alongside Atlantic Quay 8 m. at average low tide. Height of quay about 1.1 m. above w/l. Permission to enter port should be obtained prior arrival from Port Authority. Mobile crane capacity 10 tons, also fork-lift trucks.
MEDICAL: Hospital, doctors and dentists available.
FRESH WATER: Obtainable alongside Atlantic Quay.
AIRPORT: STOL airstrip available for internal flights.
REPAIRS: Machine workshop. Crane for lifting small vessels, capacity 50 tons.
GENERAL: Police, Fire Brigade, Port and cable office.
AUTHORITY: Kalaallit Niuerfiat, Noah Molgaardsvey, 3952 Ilulissat, Greenland. *Tel:* 43244. *Telex:* 91204. *Cables:* Handelchefen Ilulissat. *Contact:* Handelchefen.

IVIGTUT: 61.12 N. 48.10 W.

Mining in the area has stopped. The Port has closed down and the settlement has been abandoned.

(Also see "General Information" at beginning of Greenland Section)
CONDITIONS: *(a)* Current: strongest about 3 hours before and 3 hours after high water, and vessels arriving and sailing should take this into consideration. *(b)* Tide: height of average high tide 3 m. (max. 3.4 m.), low tide 1.6 m. *(c)* Wind: calm for about half the year otherwise winds are usually from South or S.E. The dangerous winds for moored ships are the infrequent storms from North or N.E.; these storms seldom occur but if they do occur they do so in the Autumn. *(d)* Ice: Winter ice usually occurs from December onwards in the fjord outside Ivigtut and disappears in the beginning of April. Outside Ivigtut Winter ice always occurs, sometimes reaching a thickness of about 1 m. Information concerning ice conditions always obtainable on telegraphic request to GLK.
ENTRY: Day and night and usually all year round.
PILOTAGE: No official Pilot but an acting Pilot can be arranged through connection with Port Authority at least 24 hours prior arrival.
MAX. SIZE: Largest vessel to have berthed at Pier was length 102 m., breadth 14 m., draft 6.2 m.
RADIO: Qaqortoq Radio "OXF" or Gronnedal Radio "OVC".
VHF: Gronnedal Radio listens on VHF 24 hours.
TUGS: None. Motor-boat will assist mooring.
BERTHING: Depth alongside about 7 m. height of pier about 2 m. above w/l. Berthing during daylight only. Kryolit not exported from mid-December to end March. Crane capacity 3 tons.
Note: Kryolitselskabet Oresund A/S ceased operating at the port in December 1987.
FRESH WATER: Available.
FUEL: Deliveries of small quantities of gas-oil for local vessels only.
REPAIRS: No facilities.
MEDICAL: Hospital in Ivigtut, but doctors and dentists are in Gronnedal.
AUTHORITY: Hjemmestyret for Gronland, P.O.Box 1015, 3900 Nuuk, Greenland.

KANGERLUSSUAQ (Sondre Stromfjord): 66.58 N. 50.57 W.

(Also see "General Information" at beginning of Greenland Section
DESCRIPTION: Port is used for the supply of an American base a for air communication to Copenhagen. Port has a quay and a terminal for tankers.
DAYLIGHT: Camp Lloyd is situated South of the border for po darkness but has a midnight sun from 15th June to 1st July.
CONDITIONS: *(a)* Current: the current at entrance and at the Wes Sondre Stromfjord is N.E. at flood tide, and S.W. at ebb tide, and reach a speed of 7 knots. *(b)* Tide: high water at Camp Lloyd is ab 3 hours later than at the entrance of Sondre Stromfjord. Heigh average high tide 3 m. (max. 3.6 m.). Low tide 1.6 m. *(c)* Ice: Son Stromfjord is frozen during winter throughout whole of inner harbo but about 55 miles from Camp Lloyd, ice thickness varies from 5 cm 90 cm. *(d)* Winds: strong winds can occur from East and S.E.
ENTRY: On account of ice, the fjord is closed from beginning December to end-June, but can be used day or night from beginning July to end-October.
PILOTAGE: No authorised Pilot, but Harbour Master will assist berth
ANCHORAGES: Good anchorages about 2 miles S.E. of Emmons P in depth of about 40 m. Great care should be taken in anchoring, si sea bottom is shelving.
RADIO: ETA should be given well in advance of arrival to the Ro Greenlandic Commercial Representative and also to the Port Autho The arrival should be reported at least 24 hours in advance thro GLK. The Harbour Master can be contacted on 2716 kHz and contact should be established at least 1 hour before vessels arriva
BERTHING: *(a)* A quay which is located North of Emmons Pynt, de alongside only 3 m. *(b)* Tanker sea terminal about 700 m. S.S.E Emmons Pynt where there is mooring with discharge lines. Dept water 24 m. – 26 m. on the South side of the mooring position; 1 at the mooring, and 10 m. on Northern side of mooring with r shelving to the North.

The Port Authorities should be contacted before mooring at the terminal. There are mobile cranes with lifting capacity up to 5 tons, fork-lift trucks.
MEDICAL: Hospital, doctor and dentist available.
AIRPORT: Heliport and airstrip.
REGULATIONS: Camp Lloyd is an American Defence Area and e is restricted. American supply ships have preference in mooring a installations.
AUTHORITY: U.S. Air Force, 3910 Kangerlussuaq, Greenla *Tel:* 11153.

MANIITSOQ (Sukkertoppen): 65.25 N. 52.54 W.

(Also see "General Information" at beginning of Greenland Section
LOCATION: Harbour situated on S.E. side of Maniitsoq Island, and Atlantic Quay.
CONDITIONS: *(a)* Tide: height of average high water 4.2 m. (m 4.8 m.), low water 2 m. *(b)* Ice: Winter ice occurs from Decembe April. *(c)* Wind: advisable not to enter harbour area if winds are stro Most obstructive winds are storms from South or S.W.
ENTRY: Port open day and night, normally all year round.
PILOTAGE: Pilot is arranged by cable to Nuuk Radio when giving E which should be sent well in advance. Pilot will meet vessel as arran outside the harbour, or at Faltings Skoer.
MAX. SIZE: Largest vessel that can berth at Atlantic Quay is le 100 m., draft 6 m. Vessels up to 4,000 tons have used the port.
RADIO: Extended from Nuuk "OXI".
TUGS: None. Port motor-boats assist mooring.
BERTHING: Depth in harbour is about 27 m. and alongside Atla Quay. Length 60 m. with depth of about 8.2 m. Height of quay is ab 2 m. above w/l. Cranes up to 5 tons capacity and fork-lift trucks.
MEDICAL: Hospitals, doctors and dentist available.
FRESH WATER: Available at quay.
REPAIRS: Repair workshop for repairs to wooden fishing vess Machine shop available. Slip for small vessels (225 tons).
AIRPORT: Heliport.
GENERAL: Telex, telephones, Police, Fire Brigade.
AUTHORITY: Kalaallit Niuerfiat, A. W. Nielsensvej, 3912 Maniits Greenland. *Tel:* 13244. *Telex:* 90701. *Cables:* Handelchefen Maniits *Contact:* Handelchefen.

MARMORILIK: 71.07 N. 51.17 W. **(See Pla**

The mining operations will close down in December 1990.

DOCUMENTS:
International Load Line Certificate.
Safety Raid Certificate.
PILOTAGE: Optional for coastal vessels entering Davis Strait. Age are to make arrangements if Pilot required.
GENERAL DESCRIPTION: The berth is located at the North end of West side of Agfardlikavsa Fjord.

Agfardlikavsa Fjord, West Greenland, (entrance approxima Lat. 71° 08′ N., Long. 51° 18′ W.) is located at the end of the lar Qaumarujuk Fjord.

Qaumarujuk Fjord, the Northeastern arm of Ingnerit, has its entrance between Qegertanguit and the Western extremity of Akuliarusikavsak, a mainland projection about 2.5 nautical miles S.E. Ingnerit is one of the largest of the branch fjords and flows into Umanak Fjord. It is entered between Tuperssuatsiait, the S.E. extremity of the Alfred Wegener Peninsula, and Akuliaruseq, a point about 4 miles S.S.E. The waters of the Umanak Fjord flow into the Nordost Bay.

The Agfardlikavsa Fjord is separated from the Qaumarujuk Fjord by a shallow, narrow bar. Depth at the centre of the sill is approximately 30 m.

There is a considerable surface water run-off along the Fjord walls including occasional rock slides. The bottom of the Fjord is filled with 6 ft. to 8 ft. of fine silty material.

Marmorilik (Lat. 71° 08′ N., Long. 51° 18′ W.) lies on the S.E. side of the Qaumarujuk Fjord at the Western entrance point of the Agfardlikavsa Fjord.

The larger fjords and Nordost Bay are encumbered with islets and rocks requiring extreme care in navigation. In particular, a shoal is known to exist some 350 m. N.W. of Marmorilik Point and extra care is required in this vicinity.

In 1984 an upstanding rock, 4.0 m. below sea level, was discovered in position 71° 07′ 44″ N., 51° 16′ 40″ W.

ANCHORAGE: There is an anchorage at Agfordlikowsa in depths of 20 m. to 35 m. Tankers can anchor near the berth in depths of 24 m. to 50 m., but must be aware of an unmarked 6 m. shoal about 300° True, and 375 m. (approx.) from the discharge point.

MAX. SIZE: Max. d.w.t. 65,000 (Panamax). Min. depth alongside ore terminal is 12.5 m. at LW.

RADIO: Egedesminde Radio.

VHF: Ship-to-shore communications will be maintained using VHF Channel 16.

Information on ice conditions in the fjord can be obtained from shore personnel. During loading operations, Greenex will supply the vessel with 2 portable radio transceivers for communications between the carrier and the loading control station.

TUGS: 1 tug available, 3,700 h.p. The tug will assist with berthing and unberthing if required, and will break up any thin ice in the vicinity of the berth and entrance to the fjord.

BERTHING: The Marine Terminal is used for loading ore carriers up to 65,000 d.w.t. The berth consists of 4 breasting dolphins with bollards for springs and breast-lines. On the shore are 7 bollards for head and stern lines spread over a distance of 366 m. The min. depth of water alongside is 12.5 m. at LW.

Vessels normally berth port-side alongside and use the starboard anchor to assist in berthing. No. 1 hatch is lined up under the loader as it is the first hatch to be loaded.

Initially the headlines go to the Northernmost dolphin and stern lines to the Southernmost bollard on the shore.

Loading: Zinc and lead are loaded with a luffing and slewing ship-loader. The ship-loader is fitted with a 20 ft. conveyor to distribute the cargo in the hold. Communication is maintained between the vessel and control room by portable radios. The average loading rate is 500 metric t.p.h.

Notice of Readiness will not be accepted at time of arrival at the dock unless the vessel is in all respects ready to load.

General Cargo: Unloaded into barges with vessel's gear and towed ashore to a separate lightering dock located about 500 m. N.E. of the ore terminal.

MEDICAL: Emergency medical and dental treatment can be arranged and should, when possible, be requested by the vessel's Master in his ETA message to the mine site office.

TANKERS: Diesel fuel oil and turbo-fuel are stored in a tank farm located on-shore about 500 m. West of the point at Marmorilik on Qaumarujuk Fjord, at an elevation of 50 m.

Vessels usually berth using both anchors, 5 shackles on the port anchor, and about 4.5 shackles on the starboard anchor, using a heavy chain from the stern to the S.E. point of the oil installation. The chain is available from the shore. Tankers can also moor to the N.N.W. of the oil installation, but must remain outside the 6 m. line.

The tanker hoses are connected to an 8 in. flange connection for diesel oil or a 4 in. hose adaptor with dust-cap for turbo-fuel. The static head on the lines is about 70 m. when the tanks are full. An anti-static cable is provided.

On the shore, there are 2×50 ton bollards and 1×20 ton stock. No breasting or mooring dolphins are provided.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

TIME: Standard time is GMT minus 3 hours.

GENERAL: Repairs: While alongside the dock, no repairs are to be undertaken that will prevent the main propulsion machinery from being activated at very short notice.

Vessel's Whistle: The vessel's whistle shall be operational during operations. One long blast on the whistle means "Emergency – stop operations".

In June, July and August, average temperature is usually above freezing-point, but for the rest of the year it is below freezing. *(c)* Tide: mean Spring tide is 3 m. (max. 3.4 m.). Mean neaptide 1.7 m.

ENTRY: Normally, port is open early July depending upon ice situation.

PILOTAGE: No authorised Pilot, but American Port Authority assists in mooring and should be advised of ETA well in advance.

ANCHORAGE: Good holding ground in depth between 20 m. and 40 m., but anchoring should only be carried out following advice of Port Authority.

MAX. SIZE: Largest vessel to berth alongside quay was length 130 m., and draft 7 m.

MEDICAL: Hospital, doctor and dentist available.

TUGS: None. Port boats assist mooring.

BERTHING: 2 vessels may berth at the quay. Depth alongside about 7 m. Height of pier about 2 m. above MHW. Mobile cranes and forklift trucks; however, equipment varies from year to year and Port Authorities should be contacted well in advance. 3 amphibious craft for vessels discharging in the roadstead.

FRESH WATER: Available alongside quay.

AIRPORT: Two rescue helicopters stationed at this base.

REGULATIONS: The area is a Military Defence area and special permission is necessary to enter the port. Shore leave is prohibited.

AUTHORITY: U.S. Air Force, North Star Bugt, Greenland. *Tel:* 50091.

NUUK (Godthab): 64.10 N. 51.44 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Narrow entry to port, but well protected, with good modern berths and anchorages.

CONDITIONS: *(a)* Current: sometimes strong between anchorage and the berths. *(b)* Ice: only very occasional large quantities of ice reach the port and into the fjord. If ice in area South of Nuuk, S.W. storms force drift ice into the fjord. In recent years the port has begun to freeze over in Winter, and small vessels have at times become icebound. *(c)* Wind: S. and S.W. storms spring up suddenly but only last for brief periods. *(d)* Tide: height of high water 4.4 m. (max. 5.1 m.); low water 2.1 m.

ENTRY: Port open day and night all year round.

DAYLIGHT: Nuuk situated South of the border for midnight sun and Polar darkness.

PILOTAGE: Port Manager normally acts as Pilot for ships, but is not an authorised Pilot. Pilotage may be arranged by VHF contact with Authority during normal working hours with 24 hours notice.

ANCHORAGES: Good anchorages available inside fjord. Larger vessels should anchor close to Rypeo and in Malene Bugt.

MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 135 m., breadth 17 m., and draft 7 m.
RADIO: Local radio station "OXI". 24 hours notice of ETA should be passed to Authority, cable address "Handelschefen Nuuk". Radio beacon at Kookoerne.
TUGS: 2 tugs available. 1 port boat to take lines and assist mooring.
BERTHING: Larger vessels should contact Port Authority before approaching port at night-time. Atlantic Quay, length 170 m., has a depth alongside 7 m., approx. for the most Northerly 120 m., and between 4.5 m. – 5 m. at MLWS for the most Southerly 50 m.

Vessels normally berth port side alongside. Mobile cranes capacity 30 tons.

Schooner Quay is 50 m. long, with a depth of 4.0 m., approx. Vessels normally berth bow Westward.

On the Coastal Passenger Quay length 40 m., depth 5.4 m., vessels usually berth with bow to the North.

There are several other small quays for the use of trawlers, and cutters, and a sand discharging berth length 30 m., depth 5 m.
MEDICAL: Hospital, doctors and dentists available.
TANKERS: Tankers can anchor and stern moor out from the gas installations, using an oil pipe-line connection. A mooring arrangement has been established for tankers of 25,000 – 30,000 d.w.t. below the tank and gas farm on the hillside.
FRESH WATER: Available at all berths.
FUEL: Small quantities gas-oil available at Atlantic Quay after receiving permission from Port Authority.
REPAIRS: Slip for small vessels (40 tons) and minor repairs. Slip for vessels up to 1,860 tons, repairs possible for steel and wooden ships.
AIRPORT: Runway 950 m. × 30 m.
GENERAL: Police, Fire Brigade, radar and radio technicians, radio station post, and cable office.
AUTHORITY: Kalaallit Niuerfiat, Skibshavnen, Post Box 160, 3900 Nuuk, Greenland. *Tel:* 23615, 25211. *Telex:* 90627. *FAX:* 24382. *Cables:* Handelchefen Nuuk. *Contact:* Knud E. Moller, Harbour Master.

PAAMIUT (Frederikshab): 61.59.7 N. 49.40.8 W.

(Also see "General Information" at beginning of Greenland Section)
LOCATION: The port is in the inner part of a small bay.
DESCRIPTION: Atlantic Quay; fishing quay; anchorage.
CONDITIONS: (a) Current: none. *(b)* Ice: big ice reaches to the North of the port; smaller ice reaches the port especially to the North, but South of the port it is usually ice-free. The best period of finding the port ice-free is between March/April and the end of August. *(c)* Tide: height of average high water is 3.8 m., low water 2.0 m. (max. 2.4 m).
PILOTAGE: Pilot should be requested in ETA cable via Nuuk Radio. Pilot will meet vessel at Satuarssugssuaq (Fyroen).
ANCHORAGE: S.E. of Skarvo. Holding ground is not good and anchoring should be carried out at very slow speed and only in good weather conditions.
MAX. SIZE: Length 100 m., draft about 6 m.
ENTRY: Day or night.
RADIO: Radio station Nuuk "OXI". RDF station beacon East of the town.
TUGS: None. Port boats assist in mooring.
BERTHING: Atlantic Quay. Length 90 m., depth alongside at average low tide, 7 m., depth in harbour about 10 m. Cranes up to 5 tons capacity and fork-lifts trucks used in discharging.
MEDICAL: Hospital, doctor and dentist available.
FRESH WATER: Available alongside Atlantic Quay.
FUEL: Refuelling quay, depth about 5 m., Gas-oil and diesel oil available for small vessels.
REPAIRS: Workshop for repairs to wooden fishing vessels. Machine shop available. Slip for small vessels (250 tons).
AIRPORT: Heliport.
GENERAL: Police Station, Fire Brigade.
AUTHORITY: Kalaallit Niuerfiat, Poul Ibsensvej 1, P.O.Box 222, DK3940 Paamiut, Greenland. *Tel:* 17244. *Telex:* 90503. *Cables:* Handelchefen Paamiut. *Contact:* Handelchefen.

QAQORTOQ (Julianehab): 60.43 N. 46.02 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is an open bay, facing South with Atlantic Quay.
CONDITIONS: *(a)* Current: flows N.W., but in Southern part of port from little current effect. *(b)* Tide: average height of high tide 2.8 m. (max. 3.2 m.); low tide 1.4 m. *(c)* Ice: drift ice between January and July occasionally fills whole port. *(d)* Wind: the most frequent wind is from East or N.E., normally occurring as storms during Winter months and as strong winds in Summer. Winds can be violent and cause rapid rise in temperature. Very secure moorings are advisable.
PILOTAGE: Port office is equipped with VHF which should always be used to contact Port Authorities before arrival, and to arrange Pilot's boarding position.
MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 110 m. and draft 7 m.
ENTRY: Port open day and night normally throughout year.
RADIO: Local radio station (call sign OXF). Radio beacon station at Simiutaq about 10 miles West of entrance to Julianehab Fjord.
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Atlantic Quay – length 60 m., depth alongside betw 7/9 m. on average high tide and 1 quay, length 60 m., depth alongs 4.8 – 7.2 m. for small vessels. Height of quay is 1.3 m. above w/l. Mo cranes, lifting capacity up to 5 tons.
MEDICAL: Hospital, doctor and dentist available.
FRESH WATER: Available from Atlantic Quay.
FUEL: Gas-oil available at Atlantic Quay.
REPAIRS: At repair quay there is a stationary crane lifting capa 35 tons. Slip for small vessels (250 tons) and minor repairs. Mach shop available.
AIRPORT: Heliport.
DEVELOPMENTS: The Atlantic Quay is to be extended by 40 m. Northerly direction in 1990/1991.
AUTHORITY: Kalaallit Niuerfiat, Torvevej, 3920 Qaqortoq, Greenla *Tel:* 38244. *Telex:* 90202. *Cables:* Handelchefen Qaqor *Contact:* Handelchefen.

QEQERTARSUAQ (Godhavn): 69.14 N. 53.32 W.

(See Pl

(Also see "General Information" at beginning of Greenland Sectio
DESCRIPTION: Port consists of a mooring inside a bay and a 1 quay with depth 4 m.
DAYLIGHT: Polar darkness from 25th November to 15th January, midnight sun between 19th May and 26th July.
CONDITIONS: Ice: Winter ice is fast from November–December end May or beginning of June. Thickest observed Winter ice is a 100 cm.
ENTRY: Day or night. Port is open from May to November. Betw mid-April until May the port can only be used by specialised tonna
PILOTAGE: Boarding point arranged with Port Authority in ETA adv
ANCHORAGE: Good anchorage in the bay – outer port.
MAX. SIZE: Largest vessel to date length 100 m., draft 6.5 m. at with length 60 m. and depth 4 m.
RADIO: Extended from Aasiaat "OYR". RDF Station beacon.
TUGS: None. Port boats assist with mooring.
BERTHING: Quay length 12 m. depth alongside 4.0 m. at ML Vessel moors to 2 anchors and stern-lines to the shore. Mobile cra on shore capacity up to 5 tons. Depths in bay about 6.82 m.
MEDICAL: Hospital. Doctors and dentist available.
GENERAL: Arctic Scientific Station, Fire Brigade, Cable Office.
AUTHORITY: Kalaallit Niuerfiat, Holten Mollersvej 3/C, Qeqertarsuaq, Greenland. *Tel:* 47244. *Telex:* 91401. *FAX:* 47 *Cables:* Handelchefen Qeqertarsuaq. *Contact:* Handelchefen.

SISIMIUT (Holsteinsborg): 66.56 N. 53.40 W.

(Also see "General Information" at beginning of Greenland Sectio
LOCATION: Harbour is situated on Northern side of Tommermands
CONDITIONS: *(a)* Tide: average height of high tide 3.5 m. (max. 4. low tide 2 m. *(b)* Ice: Winter ice up to 1 m. thick. Ice normally o from December to March or April.
ENTRY: Port open day and night, and normally all year round.
PILOTAGE: Arrange with Authority through Aasiaat Radio, address "Director of Commerce Sisimiut". Pilot meets vessel at Ja Skaer, 2 miles S.W. of Mollersoe.
ANCHORAGE: Large vessels can anchor outside port and disch into barges.
MAX. SIZE: Largest vessel that can berth alongside Atlantic length 136 m., breadth 20 m., draft 7.2 m.
RADIO/VHF: Radio station extended from Aasiaat "OYR". connection in Port Director's office. Radio technicians available, address "Polar Radio".
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Atlantic Quay, length 60 m., depth alongside 7.8 m average low water. Height of quay 2 m., above w/l. If berth occu loading/discharging of larger vessels at anchorage with ba At Atlantic Quay there is a mobile crane with capacity of 10 tons forklift trucks. Belt conveyor for coal.
Offshore Quay: Length 20 m. with depth of 6 m. at LW.
MEDICAL: Hospital, doctors and dentists available.
FRESH WATER: Obtainable at Atlantic Quay.
REPAIRS: Slip for small vessels (250 tons). Repairs possible to wo ships. Machine shop available.
AIRPORT: Heliport.
GENERAL: Post and cable offices. Telephones not normally avai for connection on board, but vessels at anchor can call Port Dire office on VHF during daytime.
AUTHORITY: Kalaallit Niuerfiat, Frederiks den 9 Plads I, 3911 Sisi Greenland. *Tel:* 14044. *Telex:* 90805. *Cables:* Handelchefen Sisi *FAX:* 14981. *Contact:* Handelchefen.

Grenada

ST. GEORGE'S: 12.02 N. 61.46 W. (See Plan)

DOCUMENTS:
Port Authority: Arrival Report (Ship's Particulars).
Health Authority: Health Declaration, 1 Crew List.
Customs: Passenger List, Clearance from last port.
Immigration: 2 Crew Lists, 2 Passenger Lists.

PILOTAGE: Compulsory for anchoring and berthing for vessels over 200 g.r.t. Notice must be given before 1500 hrs. for vessels requiring berthing between 1600 hrs. and 0800 hrs. the following day.

Pilot boards at Pilot Station 0.5 miles N.W. of the red flashing buoy.

ANCHORAGE: Vessels anchor in position 12° 03.3′ N., 61° 46′ W. or as designated by the Pilot/Port Authority.

RESTRICTIONS: Vessels are normally berthed between 0500 hrs. and 2300 hrs. Berthing and unberthing may be done in certain circumstances outside of the above hours.

MAX. SIZE: Single screw vessels up to 600 ft. LOA, approximately, depending on type and machinery equipment of the vessel, this size may be increased. Max. draft 28 ft.

VHF: 25 Watt base station – Grenada Ports Control (J3YA) Channels 6, 11, 12, 13, 16, 22A, 26, 68. Hours: 0800 – 1600 hrs., Monday to Friday.

Mobile station(J3YA) 5 Watt, Channels 6, 11, 12, 16, 22A. Hours flexible but mainly limited from 0600 to 2200 hrs. Monitors Channel 16.

St. Georges Pilot (J3YB) Channels 6, 11, 12, 13, 16 and 22.

TUGS: Not available.

BERTHING: Length of berth 800 ft. Depth alongside 30 ft. (minimum). Berth owned by the Grenada Port Authority.

Berthing in hours of darkness is carried out if advice received before 1500 hrs. Palletised and container cargoes are loaded and unloaded by ship's gear.

CRANES: 1×8 ton crane stationed at the port. A 35 ton crane is available on request from Central Garage.

STEVEDORES: Available.

MEDICAL: Doctor and general hospital available.

TANKERS: A tanker berth exists at the bulk storage terminal at Grand Mal, approximately 1.5 miles North of St. George's. Another terminal, Queens Park Terminal, exists 100 yards South of Green Bridge at the Northern limit of the town of St. George's. A minimum depth of 26 ft. exists between the mooring buoys at this Terminal.

Due to shallows, manoeuvring in the area of the Grand Mal Terminal is difficult and is not carried out during the hours of darkness. It is also not recommended to attempt berthing at the Queens Park Terminal during the hours of darkness due to lack of navigation ranges.

FRESH WATER: Available at an approximate cost of U.S.$5.0 per ton. Rate 10 t.p.h. (approx.).

FUEL: This can be arranged with sufficient notice (not less than 24 hours). Grade – Gas Oil 45 Cetane. Minimum supply 300 gallons.

SURVEYORS: Michael Forshaw and Alan C. Hoaber, Windward Island Surveys, Tel: 440-2881 and 440-2444 respectively. Both act for Panama Bureau of Shipping.

AIRPORT: Air services provided by Leeward Island Air Transport (LIAT), British West Indian Airways (BWIA) and British Airways(BA). Daily flights by LIAT and BWIA and once per week by BA.

HOLIDAYS: New Year's Day, Corpus Christi, Independence Day (February 7th), Good Friday, Easter Monday, Labour Day (May 1st), Whit Monday, August Bank Holiday (Monday and Tuesday), Christmas Day, Boxing Day.

TELEPHONES: Dock side telephone available on request from Grenada Telephone Company.

GENERAL: *Charts:* B.A. Chart No. 2830.

SHIPMASTER'S REPORT: December 1989.
Charts: BA. Charts No. 2830 and 2821.
Berths: Texaco and Shell Oil Terminals.
Documents:
2 copies Crew Manifest.
2 copies Bonded Stores List.
6 copies Crew List.
3 copies Cargo Manifest.
1 copy Maritime Declaration of Health.

The port officials and the Pilot boarded off Fort St. George and leave the vessel at the berth. Ship's own forms are accepted. We tried to obtain Grenada forms for next visit but these were not available. The bond was not sealed.

Pilotage: Pilotage is compulsory for berthing at all berths and all oil moorings. Vessels are allowed to unberth from the oil moorings without a Pilot.

Pilotage normally available between 0600 hrs. and 2000 hrs., however the Pilot will berth vessels at night at Grand Mal and Kings Bay by special arrangement, in which case an early booking should be made through the Agent in order to avoid delays. The Pilot boards off Fort St. George or at Fort St. George Anchorage, from a launch with a black hull and white superstructure.

Anchorage: Vessels anchor off Fort St. George in a depth of 5 – 7 fathoms with Fort St. George bearing 118° at a distance of 0.5 miles. There is often a large swell in this area.

Approaches: There is a shoal patch of 8.0 m. at low water on the approach to the Grand Mal moorings in position Lat. 12° 04.4′ N., Long. 61° 45.2′ W. (See "Plan").

Max. Size:

Grand Mal Mooring: Max. LOA 300 ft. Max. draft 22 ft. The depth at the mooring is 24.0 m.

Berthing:

Grand Mal: At Grand Mal, vessels with cargo for Shell and Texaco moor using the port anchor and stern lines to 2 mooring buoys. When the vessel is in the correct position she will be equidistant between white marker buoys on the port beam and the starboard beam. When moored, the vessel had 4 shackles out on the port anchor and the ship's head was 250°. In this position the port quarter buoy is abeam of the stern and the starboard quarter buoy is astern of the vessel, both buoys being 15 m. from the stern.

It is recommended that the vessel is heaved into position as close to the buoys as possible in order to reduce the length of hose required to reach the ship. The shore connection is approximately 210 m. from the stern.

A blue hulled boat with a powerful outboard assists with mooring and when not in use is normally secured at the Texaco landing stage.

Kings Bay: Shell operate a terminal at Kings Bay. The mooring consists of 2 stern mooring buoys. The mooring is just South of St. John's River and has a minimum depth of 6 fathoms. Ship's hoses are used at this terminal.

Loading:

Grand Mal: Texaco have facilities for LPG and white oils. The Texaco LPG capacity at Grand Mal is 100 tonnes in 4 tanks (2 × 694 bbls. and 2 × 534 bbls.). There are also tanks for propane (100 tonnes) and butane (116 tonnes). Gas oil, kerosene, aviation jet fuel and motor spirit are also handled.

Shell handle white oils but have no facilities for LPG.

Kings Bay: Used by Shell for the handling of white oils only.

Hoses: There is one undersea hose for LPG. The undersea hose for white oils at Grand Mal Bay is not used.

The ship's hose, with a length of 280 m. is run ashore to the connection between the Texaco and Shell facilities.

For communications whilst loading, Texaco use Channel 12 and Shell use Channel 9.

The rate of discharge for products is governed by the maximum rate possible for the ship's hoses.

General: The boatman was very helpful with running of stores and personnel from ship to shore.

Most U.S. and European food products and goods are obtainable.

The Airport (St. George's Pearls) at Saline Point, on the South West tip of the island, handles both international and inter-island traffic.

SHIPMASTER'S REPORT: March 1990.
Berth: Shell Oil Offshore mooring at Queen's Park, St. George's.
Chart: British Admiralty Chart No. 2830.

Pilotage: Compulsory. Pilot boards off St. George's and is available during daylight hours only. If the conditions are good and the vessel is a regular trader, night time berthing may be considered.

If vessel shifts from Grand Mal to Queen's Park or vice-versa a pilot is required by legal by-laws.

Mooring: The mooring is located in position Lat. 12° 03.48′ N., Long. 61° 45.43′ W., off the entrance to St. John's River.

The vessel moors to 2 buoys aft and uses the vessel's starboard anchor with 4 shackles in the water. The vessel should be as close as possible to the port quarter buoy (South buoy) as there is less water near the starboard quarter buoy on account of silt from the river. The depth of the water at the stern is approximately 6.5 m.

The vessel sends a line to each buoy but if a heavy swell is running an additional line may be required to each buoy.

Cargo Operations: The mooring is used exclusively by Shell to supply gas oil to the Power Station, which is located in position Lat. 12° 03.9′ N., Long. 61° 45.2′ W. The connection is on the road side just North of the river mouth near the road bridge. The ship's floating hose is used to make connection and the pumping rate is approximately 650 bbl./hr. The capacity of the tanks at the Power Station is 6,000 bbls.

If VHF Channel 9 is not available on the ship, vessel is to land 2 sets of walkie-talkies for communications whilst discharging. One set is used at the road side connection and the other at the Power Station.

A representative of Shell boards at commencement and completion of operations.

Launch: Shell have their own safety launch which also serves Shell at Grand Mal. The launch acts as a mooring boat and will run crew to the nearest point ashore but will not run crew into town.

AUTHORITY: Grenada Ports Authority, Carenage, St. Georges, Grenada, West Indies. *Tel:* 440-3439 440-3013, 440-3015. *Telex:* 2132 Min. *Cables:* Grenada Port Authority. *FAX:* 440-4100. *Contact:* Michael T. Forshaw, General Manager. A. Phillip, Port Manager.

POLICE/AMBULANCE/FIRE: Police tel. Nuuk 21448.
TELEPHONES: Not available on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
DELAYS: Bunker station closes for arrivals between 2200 hrs. and 0600 hrs. local time.
GENERAL: Bunker station open all year; during Winter-time sometimes difficulties caused by ice.
AUTHORITY: Kalaallit Niuerfiat, Polaroil, 3900 Nuuk, Greenland. *Tel:* 22527. *Cables:* Polaroil. *Contact:* Kalaallit Niuerfiat, Nuuk.

ILULISSAT (Jakobshavn): 69.13 N. 51.06 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is a narrow open bay, entrance to the N.W., having outer port and inner port. In outer port is Atlantic Quay and bunkering station, and inner port has another quay and a fishing harbour.
CONDITIONS: *(a)* Tide: height of average high tide 2.8 m. (max. 3.3 m.) low tide 1.6 m.
(b) Wind: usually East to N.E. In Autumn winds are strong especially in the morning.
(c) Ice: impression can be gained when approaching port that port is closed due to icebergs. On closer approach channels between icebergs will be found but if these openings appear too narrow a wider passage should always be found to the North.
(d) "Kanele": a natural phenomenon that occurs at this port causing regular and heavy swell, height up to 2 m. Wave characteristic, long and flat, frequency about 6 minutes. Pilot should be consulted for full information.
ENTRY: Port usually open day and night, from mid May to end November.
DAYLIGHT: Polar darkness between 1st December and 12th January and midnight sun between 21st May and 24th July.
PILOTAGE: A local Pilot (Kendtmand) should always be used by larger vessels and request made to Port Authority in ETA cable. Pilot boarding place to be agreed with Authority.
MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 100 m., draft 6.8 m.
RADIO: Aasiaat Radio, call sign "OYR".
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Outer port depth 6.5/7 m., inner port 5.5/6 m. Atlantic Quay length 100 m. Depth alongside Atlantic Quay 8 m. at average low tide. Height of quay about 1.1 m. above w/l. Permission to enter port should be obtained prior arrival from Port Authority. Mobile crane capacity 10 tons, also fork-lift trucks.
MEDICAL: Hospital, doctors and dentists available.
FRESH WATER: Obtainable alongside Atlantic Quay.
AIRPORT: STOL airstrip available for internal flights.
REPAIRS: Machine workshop. Crane for lifting small vessels, capacity 50 tons.
GENERAL: Police, Fire Brigade, Port and cable office.
AUTHORITY: Kalaallit Niuerfiat, Noah Molgaardsvey, 3952 Ilulissat, Greenland. *Tel:* 43244. *Telex:* 91204. *Cables:* Handelchefen Ilulissat. *Contact:* Handelchefen.

IVIGTUT: 61.12 N. 48.10 W.

Mining in the area has stopped. The Port has closed down and the settlement has been abandoned.

(Also see "General Information" at beginning of Greenland Section)
CONDITIONS: *(a)* Current: strongest about 3 hours before and 3 hours after high water, and vessels arriving and sailing should take this into consideration. *(b)* Tide: height of average high tide 3 m. (max. 3.4 m.), low tide 1.6 m. *(c)* Wind: calm for about half the year otherwise winds are usually from South or S.E. The dangerous winds for moored ships are the infrequent storms from North or N.E.; these storms seldom occur but if they do occur they do so in the Autumn. *(d)* Ice: Winter ice usually occurs from December onwards in the fjord outside Ivigtut and disappears in the beginning of April. Outside Ivigtut Winter ice always occurs, sometimes reaching a thickness of about 1 m. Information concerning ice conditions always obtainable on telegraphic request to GLK.
ENTRY: Day and night and usually all year round.
PILOTAGE: No official Pilot but an acting Pilot can be arranged through connection with Port Authority at least 24 hours prior arrival.
MAX. SIZE: Largest vessel to have berthed at Pier was length 102 m., breadth 14 m., draft 6.2 m.
RADIO: Qaqortoq Radio "OXF" or Gronnedal Radio "OVC".
VHF: Gronnedal Radio listens on VHF 24 hours.
TUGS: None. Motor-boat will assist mooring.
BERTHING: Depth alongside about 7 m. height of pier about 2 m. above w/l. Berthing during daylight only. Kryolit not exported from mid-December to end March. Crane capacity 3 tons.
Note: Kryolitselskabet Oresund A/S ceased operating at the port in December 1987.
FRESH WATER: Available.
FUEL: Deliveries of small quantities of gas-oil for local vessels only.
REPAIRS: No facilities.
MEDICAL: Hospital in Ivigtut, but doctors and dentists are in Gronnedal.
AUTHORITY: Hjemmestyret for Gronland, P.O.Box 1015, 3900 Nuuk, Greenland.

KANGERLUSSUAQ (Sondre Stromfjord): 66.58 N. 50.57 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is used for the supply of an American base and for air communication to Copenhagen. Port has a quay and a sea terminal for tankers.
DAYLIGHT: Camp Lloyd is situated South of the border for polar darkness but has a midnight sun from 15th June to 1st July.
CONDITIONS: *(a)* Current: the current at entrance and at the West of Sondre Stromfjord is N.E. at flood tide, and S.W. at ebb tide, and can reach a speed of 7 knots. *(b)* Tide: high water at Camp Lloyd is about 3 hours later than at the entrance of Sondre Stromfjord. Height of average high tide 3 m. (max. 3.6 m.). Low tide 1.6 m. *(c)* Ice: Sondre Stromfjord is frozen during winter throughout whole of inner harbour but about 55 miles from Camp Lloyd, ice thickness varies from 5 cm. to 90 cm. *(d)* Winds: strong winds can occur from East and S.E.
ENTRY: On account of ice, the fjord is closed from beginning of December to end-June, but can be used day or night from beginning of July to end-October.
PILOTAGE: No authorised Pilot, but Harbour Master will assist berthing.
ANCHORAGES: Good anchorages about 2 miles S.E. of Emmons Pynt in depth of about 40 m. Great care should be taken in anchoring, since sea bottom is shelving.
RADIO: ETA should be given well in advance of arrival to the Royal Greenlandic Commercial Representative and also to the Port Authority. The arrival should be reported at least 24 hours in advance through GLK. The Harbour Master can be contacted on 2716 kHz and this contact should be established at least 1 hour before vessels arrival.
BERTHING: *(a)* A quay which is located North of Emmons Pynt, depth alongside only 3 m. *(b)* Tanker sea terminal about 700 m. S.S.E. of Emmons Pynt where there is mooring with discharge lines. Depth of water 24 m. – 26 m. on the South side of the mooring position; 15 m. at the mooring, and 10 m. on Northern side of mooring with rapid shelving to the North.

The Port Authorities should be contacted before mooring at the sea terminal. There are mobile cranes with lifting capacity up to 5 tons, and fork-lift trucks.
MEDICAL: Hospital, doctor and dentist available.
AIRPORT: Heliport and airstrip.
REGULATIONS: Camp Lloyd is an American Defence Area and entry is restricted. American supply ships have preference in mooring at all installations.
AUTHORITY: U.S. Air Force, 3910 Kangerlussuaq, Greenland. *Tel:* 11153.

MANIITSOQ (Sukkertoppen): 65.25 N. 52.54 W.

(Also see "General Information" at beginning of Greenland Section)
LOCATION: Harbour situated on S.E. side of Maniitsoq Island, and has Atlantic Quay.
CONDITIONS: *(a)* Tide: height of average high water 4.2 m. (max. 4.8 m.), low water 2 m. *(b)* Ice: Winter ice occurs from December to April. *(c)* Wind: advisable not to enter harbour area if winds are strong. Most obstructive winds are storms from South or S.W.
ENTRY: Port open day and night, normally all year round.
PILOTAGE: Pilot is arranged by cable to Nuuk Radio when giving ETA which should be sent well in advance. Pilot will meet vessel as arranged outside the harbour, or at Faltings Skoer.
MAX. SIZE: Largest vessel that can berth at Atlantic Quay is length 100 m., draft 6 m. Vessels up to 4,000 tons have used the port.
RADIO: Extended from Nuuk "OXI".
TUGS: None. Port motor-boats assist mooring.
BERTHING: Depth in harbour is about 27 m. and alongside Atlantic Quay. Length 60 m. with depth of about 8.2 m. Height of quay is about 2 m. above w/l. Cranes up to 5 tons capacity and fork-lift trucks.
MEDICAL: Hospitals, doctors and dentist available.
FRESH WATER: Available at quay.
REPAIRS: Repair workshop for repairs to wooden fishing vessels. Machine shop available. Slip for small vessels (225 tons).
AIRPORT: Heliport.
GENERAL: Telex, telephones, Police, Fire Brigade.
AUTHORITY: Kalaallit Niuerfiat, A. W. Nielsensvej, 3912 Maniitsoq, Greenland. *Tel:* 13244. *Telex:* 90701. *Cables:* Handelchefen Maniitsoq. *Contact:* Handelchefen.

MARMORILIK: 71.07 N. 51.17 W. (See Plan)

The mining operations will close down in December 1990.

DOCUMENTS:
International Load Line Certificate.
Safety Raid Certificate.
PILOTAGE: Optional for coastal vessels entering Davis Strait. Agents are to make arrangements if Pilot required.
GENERAL DESCRIPTION: The berth is located at the North end of the West side of Agfardlikavsa Fjord.

Agfardlikavsa Fjord, West Greenland, (entrance approximately Lat. 71° 08′ N., Long. 51° 18′ W.) is located at the end of the larger Qaumarujuk Fjord.

Qaumarujuk Fjord, the Northeastern arm of Ingnerit, has its entrance between Qegertanguit and the Western extremity of Akuliarusikavsak, a mainland projection about 2.5 nautical miles S.E. Ingnerit is one of the largest of the branch fjords and flows into Umanak Fjord. It is entered between Tuperssuatsiait, the S.E. extremity of the Alfred Wegener Peninsula, and Akuliaruseq, a point about 4 miles S.S.E. The waters of the Umanak Fjord flow into the Nordost Bay.

The Agfardlikavsa Fjord is separated from the Qaumarujuk Fjord by a shallow, narrow bar. Depth at the centre of the sill is approximately 30 m.

There is a considerable surface water run-off along the Fjord walls including occasional rock slides. The bottom of the Fjord is filled with 6 ft. to 8 ft. of fine silty material.

Marmorilik (Lat. 71° 08′ N., Long. 51° 18′ W.) lies on the S.E. side of the Qaumarujuk Fjord at the Western entrance point of the Agfardlikavsa Fjord.

The larger fjords and Nordost Bay are encumbered with islets and rocks requiring extreme care in navigation. In particular, a shoal is known to exist some 350 m. N.W. of Marmorilik Point and extra care is required in this vicinity.

In 1984 an upstanding rock, 4.0 m. below sea level, was discovered in position 71° 07′ 44″ N., 51° 16′ 40″ W.

ANCHORAGE: There is an anchorage at Agfordlikowsa in depths of 20 m. to 35 m. Tankers can anchor near the berth in depths of 24 m. to 50 m., but must be aware of an unmarked 6 m. shoal about 300° True, and 375 m. (approx.) from the discharge point.

MAX. SIZE: Max. d.w.t. 65,000 (Panamax). Min. depth alongside ore terminal is 12.5 m. at LW.

RADIO: Egedesminde Radio.

VHF: Ship-to-shore communications will be maintained using VHF Channel 16.

Information on ice conditions in the fjord can be obtained from shore personnel. During loading operations, Greenex will supply the vessel with 2 portable radio transceivers for communications between the carrier and the loading control station.

TUGS: 1 tug available, 3,700 h.p. The tug will assist with berthing and unberthing if required, and will break up any thin ice in the vicinity of the berth and entrance to the fjord.

BERTHING: The Marine Terminal is used for loading ore carriers up to 65,000 d.w.t. The berth consists of 4 breasting dolphins with bollards for springs and breast-lines. On the shore are 7 bollards for head and stern lines spread over a distance of 366 m. The min. depth of water alongside is 12.5 m. at LW.

Vessels normally berth port-side alongside and use the starboard anchor to assist in berthing. No. 1 hatch is lined up under the loader as it is the first hatch to be loaded.

Initially the headlines go to the Northernmost dolphin and stern lines to the Southernmost bollard on the shore.

Loading: Zinc and lead are loaded with a luffing and slewing ship-loader. The ship-loader is fitted with a 20 ft. conveyor to distribute the cargo in the hold. Communication is maintained between the vessel and control room by portable radios. The average loading rate is 500 metric t.p.h.

Notice of Readiness will not be accepted at time of arrival at the dock unless the vessel is in all respects ready to load.

General Cargo: Unloaded into barges with vessel's gear and towed ashore to a separate lightering dock located about 500 m. N.E. of the ore terminal.

MEDICAL: Emergency medical and dental treatment can be arranged and should, when possible, be requested by the vessel's Master in his ETA message to the mine site office.

TANKERS: Diesel fuel oil and turbo-fuel are stored in a tank farm located on-shore about 500 m. West of the point at Marmorilik on Qaumarujuk Fjord, at an elevation of 50 m.

Vessels usually berth using both anchors, 5 shackles on the port anchor, and about 4.5 shackles on the starboard anchor, using a heavy chain from the stern to the S.E. point of the oil installation. The chain is available from the shore. Tankers can also moor to the N.N.W. of the oil installation, but must remain outside the 6 m. line.

The tanker hoses are connected to an 8 in. flange connection for diesel oil or a 4 in. hose adaptor with dust-cap for turbo-fuel. The static head on the lines is about 70 m. when the tanks are full. An anti-static cable is provided.

On the shore, there are 2×50 ton bollards and 1×20 ton stock. No breasting or mooring dolphins are provided.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

TIME: Standard time is GMT minus 3 hours.

GENERAL: Repairs: While alongside the dock, no repairs are to be undertaken that will prevent the main propulsion machinery from being activated at very short notice.

Vessel's Whistle: The vessel's whistle shall be operational during operations. One long blast on the whistle means "Emergency – stop operations".

AUTHORITY: Greenex A/S, 3963 Marmorilik, Greenland. *Tel:* 009-299-48311/48360. *Telex:* 91500 Gxmar GD. *FAX:* 009-299-48385. *Contact:* Benny Gregersen, Service Manager.

NARSSARSSUAQ (Isrecognosceringsstation): 61.08 N. 45.26 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Ice outlook station, with quay.

CONDITIONS: *(a)* Current: occasional strong N.W. current.
(b) Tide: average height of HW 3 m. (max. 3.6 m.) LW 1.6 m.
(c) Wind: S.E. wind sometimes reaches typhoon strength.
(d) Ice: in Winter ice thickness sometimes reaches 1 m. Ice breaker not available.

PILOTAGE: Not available. Base representative should be advised of ETA well in advance of arrival.

MAX. SIZE: Largest vessel to berth at quay was length 130 m., draft 8 m.

ENTRY: Open season from mid-May to mid-October. During season, port open day and night.

RADIO: Qaqortoq Radio "OXF".

VHF: Extended from Qaqortoq.

TUGS: None.

BERTHING: Quay length 140 m., depth alongside (West) 6 m. – 11 m. (East) 5 m. – 8 m. Height of pier 2 m. above w/l. 2 vessels may berth, 1 on either side of quay. Heavy mooring equipment on the quay, and should be used by larger vessels. Mobile cranes capacity up to 4 tons, and fork-lift trucks.

FRESH WATER: Obtainable at quay, about 80 tons per single off-take.

AIRPORT: Landing-strip for aircraft. Ice station usually uses Twin Otter aircraft and S61 Helicopter.

AUTHORITY: Greenland Homerule, Box 1015, 3900 Nuuk. *Tel:* 2-3000.
Station Manager, 3926 Narssarssuaq, Greenland. *Tel:* 35266.

NORTH STAR BUGT (Thule Air Force Base): 76.36 N. 68.52 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Supply port for the Thule Air Force Base. Port is operated by and belongs to the U.S. Air Force.

DAYLIGHT: Polar darkness from 1st November to 10th February and midnight sun from 23rd April to 20th August.

CONDITIONS: *(a)* Ice: port is frozen over from end October to beginning July. From beginning of November, large areas of compact ice appear, and these can sometimes be up to 20 miles wide. During May, compact ice areas commence breaking up; however, large quantities of drift ice remain along the coast until end July. Winter ice is normally about 180 cm. thick. *(b)* Temperature: in January and February average temperature is 29° below zero. In June, July and August, average temperature is usually above freezing-point, but for the rest of the year it is below freezing. *(c)* Tide: mean Spring tide is 3 m. (max. 3.4 m.). Mean neaptide 1.7 m.

ENTRY: Normally, port is open early July depending upon ice situation.

PILOTAGE: No authorised Pilot, but American Port Authority assists in mooring and should be advised of ETA well in advance.

ANCHORAGE: Good holding ground in depth between 20 m. and 40 m., but anchoring should only be carried out following advice of Port Authority.

MAX. SIZE: Largest vessel to berth alongside quay was length 130 m., and draft 7 m.

MEDICAL: Hospital, doctor and dentist available.

TUGS: None. Port boats assist mooring.

BERTHING: 2 vessels may berth at the quay. Depth alongside about 7 m. Height of pier about 2 m. above MHW. Mobile cranes and forklift trucks; however, equipment varies from year to year and Port Authorities should be contacted well in advance. 3 amphibious craft for vessels discharging in the roadstead.

FRESH WATER: Available alongside quay.

AIRPORT: Two rescue helicopters stationed at this base.

REGULATIONS: The area is a Military Defence area and special permission is necessary to enter the port. Shore leave is prohibited.

AUTHORITY: U.S. Air Force, North Star Bugt, Greenland. *Tel:* 50091.

NUUK (Godthab): 64.10 N. 51.44 W.

(Also see "General Information" at beginning of Greenland Section)

DESCRIPTION: Narrow entry to port, but well protected, with good modern berths and anchorages.

CONDITIONS: *(a)* Current: sometimes strong between anchorage and the berths. *(b)* Ice: only very occasional large quantities of ice reach the port and into the fjord. If ice in area South of Nuuk, S.W. storms force drift ice into the fjord. In recent years the port has begun to freeze over in Winter, and small vessels have at times become icebound. *(c)* Wind: S. and S.W. storms spring up suddenly but only last for brief periods. *(d)* Tide: height of high water 4.4 m. (max. 5.1 m.); low water 2.1 m.

ENTRY: Port open day and night all year round.

DAYLIGHT: Nuuk situated South of the border for midnight sun and Polar darkness.

PILOTAGE: Port Manager normally acts as Pilot for ships, but is not an authorised Pilot. Pilotage may be arranged by VHF contact with Authority during normal working hours with 24 hours notice.

ANCHORAGES: Good anchorages available inside fjord. Larger vessels should anchor close to Rypeo and in Malene Bugt.

MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 135 m., breadth 17 m., and draft 7 m.
RADIO: Local radio station "OXI". 24 hours notice of ETA should be passed to Authority, cable address "Handelschefen Nuuk". Radio beacon at Kookoerne.
TUGS: 2 tugs available. 1 port boat to take lines and assist mooring.
BERTHING: Larger vessels should contact Port Authority before approaching port at night-time. Atlantic Quay, length 170 m., has a depth alongside 7 m., approx. for the most Northerly 120 m., and between 4.5 m. – 5 m. at MLWS for the most Southerly 50 m.

Vessels normally berth port side alongside. Mobile cranes capacity 30 tons.

Schooner Quay is 50 m. long, with a depth of 4.0 m., approx. Vessels normally berth bow Westward.

On the Coastal Passenger Quay length 40 m., depth 5.4 m., vessels usually berth with bow to the North.

There are several other small quays for the use of trawlers, and cutters, and a sand discharging berth length 30 m., depth 5 m.
MEDICAL: Hospital, doctors and dentists available.
TANKERS: Tankers can anchor and stern moor out from the gas installations, using an oil pipe-line connection. A mooring arrangement has been established for tankers of 25,000 – 30,000 d.w.t. below the tank and gas farm on the hillside.
FRESH WATER: Available at all berths.
FUEL: Small quantities gas-oil available at Atlantic Quay after receiving permission from Port Authority.
REPAIRS: Slip for small vessels (40 tons) and minor repairs. Slip for vessels up to 1,860 tons, repairs possible for steel and wooden ships.
AIRPORT: Runway 950 m. × 30 m.
GENERAL: Police, Fire Brigade, radar and radio technicians, radio station post, and cable office.
AUTHORITY: Kalaallit Niuerfiat, Skibshavnen, Post Box 160, 3900 Nuuk, Greenland. *Tel:* 23615, 25211. *Telex:* 90627. *FAX:* 24382. *Cables:* Handelchefen Nuuk. *Contact:* Knud E. Moller, Harbour Master.

PAAMIUT (Frederikshab): 61.59.7 N. 49.40.8 W.

(Also see "General Information" at beginning of Greenland Section)
LOCATION: The port is in the inner part of a small bay.
DESCRIPTION: Atlantic Quay; fishing quay; anchorage.
CONDITIONS: (a) Current: none. *(b)* Ice: big ice reaches to the North of the port; smaller ice reaches the port especially to the North, but South of the port it is usually ice-free. The best period of finding the port ice-free is between March/April and the end of August. *(c)* Tide: height of average high water is 3.8 m., low water 2.0 m. (max. 2.4 m).
PILOTAGE: Pilot should be requested in ETA cable via Nuuk Radio. Pilot will meet vessel at Satuarssugssuaq (Fyrøn).
ANCHORAGE: S.E. of Skarvo. Holding ground is not good and anchoring should be carried out at very slow speed and only in good weather conditions.
MAX. SIZE: Length 100 m., draft about 6 m.
ENTRY: Day or night.
RADIO: Radio station Nuuk "OXI". RDF station beacon East of the town.
TUGS: None. Port boats assist in mooring.
BERTHING: Atlantic Quay. Length 90 m., depth alongside at average low tide, 7 m., depth in harbour about 10 m. Cranes up to 5 tons capacity and fork-lifts trucks used in discharging.
MEDICAL: Hospital, doctor and dentist available.
FRESH WATER: Available alongside Atlantic Quay.
FUEL: Refuelling quay, depth about 5 m., Gas-oil and diesel oil available for small vessels.
REPAIRS: Workshop for repairs to wooden fishing vessels. Machine shop available. Slip for small vessels (250 tons).
AIRPORT: Heliport.
GENERAL: Police Station, Fire Brigade.
AUTHORITY: Kalaallit Niuerfiat, Poul Ibsensvej 1, P.O.Box 222, DK3940 Paamiut, Greenland. *Tel:* 17244. *Telex:* 90503. *Cables:* Handelchefen Paamiut. *Contact:* Handelchefen.

QAQORTOQ (Julianehab): 60.43 N. 46.02 W.

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port is an open bay, facing South with Atlantic Quay.
CONDITIONS: *(a)* Current: flows N.W., but in Southern part of port from little current effect. *(b)* Tide: average height of high tide 2.8 m. (max. 3.2 m.); low tide 1.4 m. *(c)* Ice: drift ice between January and July occasionally fills whole port. *(d)* Wind: the most frequent wind is from East or N.E., normally occurring as storms during Winter months and as strong winds in Summer. Winds can be violent and cause rapid rise in temperature. Very secure moorings are advisable.
PILOTAGE: Port office is equipped with VHF which should always be used to contact Port Authorities before arrival, and to arrange Pilot's boarding position.
MAX. SIZE: Largest vessel to berth at Atlantic Quay was length 110 m. and draft 7 m.
ENTRY: Port open day and night normally throughout year.
RADIO: Local radio station (call sign OXF). Radio beacon station at Simiutaq about 10 miles West of entrance to Julianehab Fjord.
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Atlantic Quay – length 60 m., depth alongside betw 7/9 m. on average high tide and 1 quay, length 60 m., depth along 4.8 – 7.2 m. for small vessels. Height of quay is 1.3 m. above w/l. Mo cranes, lifting capacity up to 5 tons.
MEDICAL: Hospital, doctor and dentist available.
FRESH WATER: Available from Atlantic Quay.
FUEL: Gas-oil available at Atlantic Quay.
REPAIRS: At repair quay there is a stationary crane lifting capa 35 tons. Slip for small vessels (250 tons) and minor repairs. Mach shop available.
AIRPORT: Heliport.
DEVELOPMENTS: The Atlantic Quay is to be extended by 40 m. i Northerly direction in 1990/1991.
AUTHORITY: Kalaallit Niuerfiat, Torvevej, 3920 Qaqortoq, Greenla *Tel:* 38244. *Telex:* 90202. *Cables:* Handelchefen Qaqor *Contact:* Handelchefen.

QEQERTARSUAQ (Godhavn): 69.14 N. 53.32 W.

(See Pla

(Also see "General Information" at beginning of Greenland Section)
DESCRIPTION: Port consists of a mooring inside a bay and a 12 quay with depth 4 m.
DAYLIGHT: Polar darkness from 25th November to 15th January, a midnight sun between 19th May and 26th July.
CONDITIONS: Ice: Winter ice is fast from November–December un end May or beginning of June. Thickest observed Winter ice is abo 100 cm.
ENTRY: Day or night. Port is open from May to November. Betwee mid-April until May the port can only be used by specialised tonnage
PILOTAGE: Boarding point arranged with Port Authority in ETA advice
ANCHORAGE: Good anchorage in the bay – outer port.
MAX. SIZE: Largest vessel to date length 100 m., draft 6.5 m. at qua with length 60 m. and depth 4 m.
RADIO: Extended from Aasiaat "OYR". RDF Station beacon.
TUGS: None. Port boats assist with mooring.
BERTHING: Quay length 12 m. depth alongside 4.0 m. at MLWS Vessel moors to 2 anchors and stern-lines to the shore. Mobile crane on shore capacity up to 5 tons. Depths in bay about 6.82 m.
MEDICAL: Hospital. Doctors and dentist available.
GENERAL: Arctic Scientific Station, Fire Brigade, Cable Office.
AUTHORITY: Kalaallit Niuerfiat, Holten Mollersvej 3/C, 395 Qeqertarsuaq, Greenland. *Tel:* 47244. *Telex:* 91401. *FAX:* 4740 *Cables:* Handelchefen Qeqertarsuaq. *Contact:* Handelchefen.

SISIMIUT (Holsteinsborg): 66.56 N. 53.40 W.

(Also see "General Information" at beginning of Greenland Section)
LOCATION: Harbour is situated on Northern side of Tommermandsoe
CONDITIONS: *(a)* Tide: average height of high tide 3.5 m. (max. 4.4 m low tide 2 m. *(b)* Ice: Winter ice up to 1 m. thick. Ice normally occu from December to March or April.
ENTRY: Port open day and night, and normally all year round.
PILOTAGE: Arrange with Authority through Aasiaat Radio, cab address "Director of Commerce Sisimiut". Pilot meets vessel at Jakob Skaer, 2 miles S.W. of Mollersoe.
ANCHORAGE: Large vessels can anchor outside port and discharg into barges.
MAX. SIZE: Largest vessel that can berth alongside Atlantic Qua length 136 m., breadth 20 m., draft 7.2 m.
RADIO/VHF: Radio station extended from Aasiaat "OYR". VHF connection in Port Director's office. Radio technicians available, cab address "Polar Radio".
TUGS: None. Port boats take lines and assist mooring.
BERTHING: Atlantic Quay, length 60 m., depth alongside 7.8 m., a average low water. Height of quay 2 m., above w/l. If berth occupie loading/discharging of larger vessels at anchorage with barge At Atlantic Quay there is a mobile crane with capacity of 10 tons an forklift trucks. Belt conveyor for coal.
Offshore Quay: Length 20 m. with depth of 6 m. at LW.
MEDICAL: Hospital, doctors and dentists available.
FRESH WATER: Obtainable at Atlantic Quay.
REPAIRS: Slip for small vessels (250 tons). Repairs possible to wood ships. Machine shop available.
AIRPORT: Heliport.
GENERAL: Post and cable offices. Telephones not normally availab for connection on board, but vessels at anchor can call Port Director office on VHF during daytime.
AUTHORITY: Kalaallit Niuerfiat, Frederiks den 9 Plads I, 3911 Sisimi Greenland. *Tel:* 14044. *Telex:* 90805. *Cables:* Handelchefen Sisimi *FAX:* 14981. *Contact:* Handelchefen.

Grenada

ST. GEORGE'S: 12.02 N. 61.46 W. (See Plan)

DOCUMENTS:
Port Authority: Arrival Report (Ship's Particulars).
Health Authority: Health Declaration, 1 Crew List.
Customs: Passenger List, Clearance from last port.
Immigration: 2 Crew Lists, 2 Passenger Lists.

PILOTAGE: Compulsory for anchoring and berthing for vessels over 200 g.r.t. Notice must be given before 1500 hrs. for vessels requiring berthing between 1600 hrs. and 0800 hrs. the following day.

Pilot boards at Pilot Station 0.5 miles N.W. of the red flashing buoy.

ANCHORAGE: Vessels anchor in position 12° 03.3′ N., 61° 46′ W. or as designated by the Pilot/Port Authority.

RESTRICTIONS: Vessels are normally berthed between 0500 hrs. and 2300 hrs. Berthing and unberthing may be done in certain circumstances outside of the above hours.

MAX. SIZE: Single screw vessels up to 600 ft. LOA, approximately, depending on type and machinery equipment of the vessel, this size may be increased. Max. draft 28 ft.

VHF: 25 Watt base station – Grenada Ports Control (J3YA) Channels 6, 11, 12, 13, 16, 22A, 26, 68. Hours: 0800 – 1600 hrs., Monday to Friday.

Mobile station(J3YA) 5 Watt, Channels 6, 11, 12, 16, 22A. Hours flexible but mainly limited from 0600 to 2200 hrs. Monitors Channel 16.

St. Georges Pilot (J3YB) Channels 6, 11, 12, 13, 16 and 22.

TUGS: Not available.

BERTHING: Length of berth 800 ft. Depth alongside 30 ft. (minimum). Berth owned by the Grenada Port Authority.

Berthing in hours of darkness is carried out if advice received before 1500 hrs. Palletised and container cargoes are loaded and unloaded by ship's gear.

CRANES: 1×8 ton crane stationed at the port. A 35 ton crane is available on request from Central Garage.

STEVEDORES: Available.

MEDICAL: Doctor and general hospital available.

TANKERS: A tanker berth exists at the bulk storage terminal at Grand Mal, approximately 1.5 miles North of St. George's. Another terminal, Queens Park Terminal, exists 100 yards South of Green Bridge at the Northern limit of the town of St. George's. A minimum depth of 26 ft. exists between the mooring buoys at this Terminal.

Due to shallows, manoeuvring in the area of the Grand Mal Terminal is difficult and is not carried out during the hours of darkness. It is also not recommended to attempt berthing at the Queens Park Terminal during the hours of darkness due to lack of navigation ranges.

FRESH WATER: Available at an approximate cost of U.S.$5.0 per ton. Rate 10 t.p.h. (approx.).

FUEL: This can be arranged with sufficient notice (not less than 24 hours). Grade – Gas Oil 45 Cetane. Minimum supply 300 gallons.

SURVEYORS: Michael Forshaw and Alan C. Hoaber, Windward Island Surveys, Tel: 440-2881 and 440-2444 respectively. Both act for Panama Bureau of Shipping.

AIRPORT: Air services provided by Leeward Island Air Transport (LIAT), British West Indian Airways (BWIA) and British Airways(BA). Daily flights by LIAT and BWIA and once per week by BA.

HOLIDAYS: New Year's Day, Corpus Christi, Independence Day (February 7th), Good Friday, Easter Monday, Labour Day (May 1st), Whit Monday, August Bank Holiday (Monday and Tuesday), Christmas Day, Boxing Day.

TELEPHONES: Dock side telephone available on request from Grenada Telephone Company.

GENERAL: *Charts:* B.A. Chart No. 2830.

SHIPMASTER'S REPORT: December 1989.
Charts: BA. Charts No. 2830 and 2821.
Berths: Texaco and Shell Oil Terminals.
Documents:
2 copies Crew Manifest.
2 copies Bonded Stores List.
6 copies Crew List.
3 copies Cargo Manifest.
1 copy Maritime Declaration of Health.

The port officials and the Pilot boarded off Fort St. George and leave the vessel at the berth. Ship's own forms are accepted. We tried to obtain Grenada forms for next visit but these were not available. The bond was not sealed.

Pilotage: Pilotage is compulsory for berthing at all berths and all oil moorings. Vessels are allowed to unberth from the oil moorings without a Pilot.

Pilotage normally available between 0600 hrs. and 2000 hrs., however the Pilot will berth vessels at night at Grand Mal and Kings Bay by special arrangement, in which case an early booking should be made through the Agent in order to avoid delays. The Pilot boards off Fort St. George or at Fort St. George Anchorage, from a launch with a black hull and white superstructure.

Anchorage: Vessels anchor off Fort St. George in a depth of 5 – 7 fathoms with Fort St. George bearing 118° at a distance of 0.5 miles. There is often a large swell in this area.

Approaches: There is a shoal patch of 8.0 m. at low water on the approach to the Grand Mal moorings in position Lat. 12° 04.4′ N., Long. 61° 45.2′ W. (See "Plan").

Max. Size:

Grand Mal Mooring: Max. LOA 300 ft. Max. draft 22 ft. The depth at the mooring is 24.0 m.

Berthing:

Grand Mal: At Grand Mal, vessels with cargo for Shell and Texaco moor using the port anchor and stern lines to 2 mooring buoys. When the vessel is in the correct position she will be equidistant between white marker buoys on the port beam and the starboard beam. When moored, the vessel had 4 shackles out on the port anchor and the ship's head was 250°. In this position the port quarter buoy is abeam of the stern and the starboard quarter buoy is astern of the vessel, both buoys being 15 m. from the stern.

It is recommended that the vessel is heaved into position as close to the buoys as possible in order to reduce the length of hose required to reach the ship. The shore connection is approximately 210 m. from the stern.

A blue hulled boat with a powerful outboard assists with mooring and when not in use is normally secured at the Texaco landing stage.

Kings Bay: Shell operate a terminal at Kings Bay. The mooring consists of 2 stern mooring buoys. The mooring is just South of St. John's River and has a minimum depth of 6 fathoms. Ship's hoses are used at this terminal.

Loading:

Grand Mal: Texaco have facilities for LPG and white oils. The Texaco LPG capacity at Grand Mal is 100 tonnes in 4 tanks (2 × 694 bbls. and 2 × 534 bbls.). There are also tanks for propane (100 tonnes) and butane (116 tonnes). Gas oil, kerosene, aviation jet fuel and motor spirit are also handled.

Shell handle white oils but have no facilities for LPG.

Kings Bay: Used by Shell for the handling of white oils only.

Hoses: There is one undersea hose for LPG. The undersea hose for white oils at Grand Mal Bay is not used.

The ship's hose, with a length of 280 m. is run ashore to the connection between the Texaco and Shell facilities.

For communications whilst loading, Texaco use Channel 12 and Shell use Channel 9.

The rate of discharge for products is governed by the maximum rate possible for the ship's hoses.

General: The boatman was very helpful with running of stores and personnel from ship to shore.

Most U.S. and European food products and goods are obtainable.

The Airport (St. George's Pearls) at Saline Point, on the South West tip of the island, handles both international and inter-island traffic.

SHIPMASTER'S REPORT: March 1990.
Berth: Shell Oil Offshore mooring at Queen's Park, St. George's.
Chart: British Admiralty Chart No. 2830.
Pilotage: Compulsory. Pilot boards off St. George's and is available during daylight hours only. If the conditions are good and the vessel is a regular trader, night time berthing may be considered.

If vessel shifts from Grand Mal to Queen's Park or vice-versa a pilot is required by legal by-laws.

Mooring: The mooring is located in position Lat. 12° 03.48′ N., Long. 61° 45.43′ W., off the entrance to St. John's River.

The vessel moors to 2 buoys aft and uses the vessel's starboard anchor with 4 shackles in the water. The vessel should be as close as possible to the port quarter buoy (South buoy) as there is less water near the starboard quarter buoy on account of silt from the river. The depth of the water at the stern is approximately 6.5 m.

The vessel sends a line to each buoy but if a heavy swell is running an additional line may be required to each buoy.

Cargo Operations: The mooring is used exclusively by Shell to supply gas oil to the Power Station, which is located in position Lat. 12° 03.9′ N., Long. 61° 45.2′ W. The connection is on the road side just North of the river mouth near the road bridge. The ship's floating hose is used to make connection and the pumping rate is approximately 650 bbl./hr. The capacity of the tanks at the Power Station is 6,000 bbls.

If VHF Channel 9 is not available on the ship, vessel is to land 2 sets of walkie-talkies for communications whilst discharging. One set is used at the road side connection and the other at the Power Station.

A representative of Shell boards at commencement and completion of operations.

Launch: Shell have their own safety launch which also serves Shell at Grand Mal. The launch acts as a mooring boat and will run crew to the nearest point ashore but will not run crew into town.

AUTHORITY: Grenada Ports Authority, Carenage, St. Georges, Grenada, West Indies. *Tel:* 440-3439 440-3013, 440-3015. *Telex:* 2132 Min. *Cables:* Grenada Port Authority. *FAX:* 440-4100. *Contact:* Michael T. Forshaw, General Manager. A. Phillip, Port Manager.

Guadeloupe

BASSE TERRE: 15.59 N. 61.44 W. (See Plan)

DOCUMENTS:
6 Crew Lists.
6 Manifests.
Health Declaration Form.
6 Lists of Stores on board.
Passenger List.
Clearance from Last Port.

PILOTAGE: Not available.

ANCHORAGE: On an 18 fathom bank North of the pier, 2 cables from the shore.

RESTRICTIONS: Vessel can berth and unberth at any stage of the tide, but if vessel's first call, recommend berthing during daylight only.

MAX. SIZE: Max. LOA 300 m. Max. beam 30 m. There is 32 ft. – 36 ft. alongside but an allowance should be made for a 3 ft. swell, therefore would suggest max. draft approx. 29 ft.

HEALTH: Authorities require 24 hours notice of the vessel's arrival.

RADIO: Fort-de-France, call sign "FFP" (high frequency) and Destrellan, call sign "FFQ" for medium wave.

VHF: Port Authority on Channel 16.

TUGS: Not available, however a small boat will assist in running lines if the Port Authority is advised in sufficient time on VHF Channel 16.

BERTHING: The extension is in operation. The old S.E. arm of the quay and 3 remaining banana elevators were so badly damaged in a hurricane of 1979 that they are to be removed. The new quay is solid-filled and extends to a reclaimed shore thus providing considerable container stacking area. The berth is approximately 300 m. long and is well fendered with rubber fenders.

CRANES: 30 ton mobile crane available.

STEVEDORES: Working hours: 0700 – 1100 hrs. and 1300 – 1700 hrs. Extension possible.

MEDICAL: Doctors and hospital available.

DENSITY: 1025.

FRESH WATER: Available.

CONSUL: None, nearest consuls at Pointe-a-Pitre.

SERVICES: Fresh provisions, groceries and meats available. The following are not available: repair facilities, dry dock, machine shop, airport, surveyors, laundry services, bunker fuel oil, diesel oil, lubricating oil and slop tanks.

WEATHER: The swell is between 3 ft. and 4 ft. from a S.E. direction. The wind is mainly from an Easterly direction.

AUTHORITY: Guadeloupe Port Authority, Place Cours Nolivos, 97100 Basse-Terre, Guadeloupe. *Tel:* 81-09-15 and 81.11.21. *Telex:* 919710 GL. *Contact:* Mr. Claude Julienne, Port Director.

POINTE-A-PITRE: 16.13 N. 61.32 W. (See Plan)

DOCUMENTS:
6 Manifests. See (a).
6 Crew Lists.
3 Stores Lists.
3 Crew Declaration. See (b).
6 Passenger Lists.
4 Declaration of Health.
2 Bills of Lading.
1 Clearance from Last Port.
6 Entrance Declaration.

(a) In addition, 2 sets of Manifests must be airmailed to arrive 72 hours before arrival in Pointe-a-Pitre.

(b) This Declaration must indicate all new and used personal effects.

PILOTAGE: Pilot meets vessels at "Mouchoir Carre" buoys. Advance notice of ETA to be passed 24 hours, and VHF Channel 16, 1 hour before arrival.

ANCHORAGE: Consult charts.

RESTRICTIONS: Max. length 230 m. Max. draft 10.0 m.

MAX. SIZE: See "Restrictions".

HEALTH: Port Health board on arrival.

RADIO: Destrellan Radio, also on VHF.

TUGS: None available.

BERTHING: 9 berths available, 8 additional for petroleum, sugar, cement, flour mill, bananas, Ro/Ro and containers.

Tourist Port:

Quay No. 1:	Length 150 m., depth 7.80 m.
Quay No. 2:	Length 177 m., depth 8.80 m.
Quay No. 3: Quay No. 4:	Length 283 m. Depth 8.80 m.

Commercial Port:

Quay No. 5: Quay No. 6:	Length 320 m., depth 7.10 m. Ro-Ro, General Cargo
Quay No. 7: Quay No. 8:	Length 306 m.; No. 7, depth 7.10 m.; No. 8, depth 8.20 m. General cargo.

Industrial Port:

Quay No. 9:	Length 180 m., depth 7.60 m. Mineral Berth.
Quay No. 10:	Length 140 m., depth 7.20 m. Storage capacity 30,000 cu.m.
Quay No. 11-1:	Length 150 m., depth 8.0 m. Sugar Berth. Storage capacity 70,000 cu.m. Loading rate 750 t.p.h.
Quay No. 11-2:	Length 150 m., depth 9.0 m. Grain vessels, flour and feed, general cargo.
Quay No. 11: (Ro-Ro):	Length 35 m., depth 4.20 m.
Quay No. 13:	Length 160 m., depth 10.0 m. General cargo, Containers.
Quay No. 14:	Length 240 m., depth 10.00 m. Container Terminal.

Industrial Area: The industrial area of Jarry offers 40 hectares of open storage at the water's edge.

Container Terminal: Quay No. 14: The container terminal is equipped with 3 × 40 ton Paceco-ACB cranes.

STEVEDORES: 24 hours advance notice of ETA required (72 hours i vessel arrives on Monday). Working hours 0700–1030 and 1315–1645. At container terminal hours are 0630–1300 and 1400–2030.

MEDICAL: Clinics and Hospital facilities available. Hospital Te 82.88.88, 82.98.80.

TANKERS: Only tankers having less than 7.2 m. draft can enter the harbour.

FRESH WATER: Available day and night if requested in advance.

FUEL: Available F.O. 350 seconds Redwood, D.O. for gas oil. Delivered by road tankers.

CONSULS:
Belgium
Denmark
Ecuador
Haiti
Italy
Lebanon
Netherland
Norway
Spain
Sweden
United Kingdom
Venezuela

REPAIRS: Workshops available.

GANGWAY/DECK WATCHMEN: Available on request.

HATCHES: Usually opened and closed by crew. Stevedores will a Master's request but at ship's expense.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle per man.

CARGO GEAR: Ship's gear used.

REPATRIATION: All facilities available.

AIRPORT: 3 miles from the harbour with daily flights to Paris, Miami and New York.

TIME: GMT minus 4 hours. No alterations during the year.

HOLIDAYS: New Year's Day; Shrove Tuesday; Ash Wednesday; Carnival; Good Friday; Easter Monday; Labour Day (1st May); Ascension Day; Whit Monday; National Day (14th July); Souls' Day; Armistice; Christmas Day.

POLICE/AMBULANCE/FIRE: Police: 82.00.05 or 82.13.17 or 17; Ambulance and/or Fire Department: 83.00.28 or 18.

SHORE LEAVE: Permitted.

!IDENTIFICATION CARDS: I/D or passport required.

REGULATIONS: No particular regulations.

DEVELOPMENTS: Berths No. 11 and 12 are to be connected. Berth No. 13 to be strengthened to take Paceco ACB cranes. Infilling to provide 10 hectares of Foreign Trade Zone underway.

AUTHORITY: Guadeloupe Port Authority, Quai Lardenoy, (P.O.Box 485), Pointe-a-Pitre 97165, Guadeloupe, F.W.I. *Tel:* (590) 916313. *Telex:* 919710 GL PA GUAD. *FAX:* (590) 91 5679. *Contact:* Captain C. Lievain, Harbour Master. J. C. Cren, General Manager. C. Georgelin, Operations Manager.

NOTES

Please also advise Shipping Guides Ltd.

Guam

GUAM (Apra Harbour): 13.26 N. 144.39 E. (See Plan)

DOCUMENTS: Guam is a United States Territory in the Western Pacific and official documentation is as for mainland U.S. ports, including visaed Crew List completed at port of departure prior to Guam. Vessels should have a stock of American Crew Lists Form I-148 and Form I-95A. The American Alien Crewman Landing Permit is acceptable and preferred. This is the plastic identification card previously issued on the U.S. coast. Required on arrival:

Vaccination Cards.
Visaed Immigration Crew List.
4 Crew Lists.
4 Passenger Lists.
1 Stores List.
Clearance from last port.
Cargo Papers.

Have ready Immigration Form I-94 for each passenger and Form I-95 for each alien unless they have I-184 plastic Identification Card. Shore Passes not required. Crew Customs Declaration not required.

PILOTAGE: It is advisable to have on board U.S. charts for Guam: C & GS 4197 Apra Harbour. 4196 Guam Approaches.

Pilot available 24 hours a day. Weather permitting, Pilot will board outside breakwater upon Master's request.

APPROACHES: Make for the unmarked approach point designated "AH" (Alpha Hotel) 2 miles from entrance at 13° 26′ 8″ N., 144° 34′ 09″ E. where Pilot boards, weather permitting. From position AH, the entrance range line is 084° with the leading marks in line. Because of depths, anchoring outside the harbour is impossible. If vessel must wait for the Pilot cruise back and forth in this area.

Port entry: On occasions, weather and sea conditions are considered unsuitable for Pilots to board outside. Under such circumstances vessel may be requested to proceed inwards and pick up the Pilot in the harbour area. The Harbour Master's permission for vessel to enter is mainly based on the traffic situation and does not necessarily take into account whether it is actually safe for vessel to enter under such conditions. It is not advisable to enter without a Pilot due to strong cross currents.

Pilots are very willing to assist arriving tankers and whenever the weather situation at point AH is prohibitive for boarding, they may request the Master to proceed Southwards in Agat Bay to look for a more sheltered boarding ground.

Before entering, the Harbour Master and the Pilot should be consulted to ensure that no outgoing traffic will be encountered in the harbour entrance. It is also advisable to obtain from the Harbour Master the positions of vessels which may be anchored in the harbour area.

Under the influence of N.E. Trades the prevalent set of the current (reaching 3 knots) off the entrance is to the South or S.W. regardless of the tidal currents. During the summer months, when Westerly winds prevail occasionally, a Northerly set may be experienced (reaching 1.5 knots). The current velocity fluctuates during a daily period under the influence of tidal currents. Entry should be made during periods when cross currents are expected to be at a minimum. The Pilot should be consulted on this matter.

Strong cross currents may require an approach speed of up to 8 knots. In view of the relatively short distance from the entrance to the berth, the speed must be substantially reduced as soon as the influence of the cross current has subsided. In relation to this, the manoeuvring characteristics of vessel should be carefully taken into consideration.

Notice:

Issued by: Commander, U.S.C.G., Marianas Section.
Dated: 17th October, 1986.
Subject: SECURITY ZONE.

The Coast Guard has directed Naval Prepositioning Ships mooring in Apra Harbour to use Buoy 702* in Outer Apra Harbour and is establishing a security zone around this buoy and Naval Prepositioning Vessels moored thereto effective 17th October, 1986.

A 100 yard security zone has been established in all directions around Buoy 702 and Naval vessels moored there. When no vessels are moored to Buoy 702, a 50 yard security zone will remain in effect around the buoy itself.

The zone is established to safeguard Naval Maritime Preposition Ships against any possible destruction from sabotage or other similar causes.

Entry into the security zone is prohibited unless authorised by the Captain of the Port. Any person or vessel that enters the security zone without the permission of the Captain of the Port is subject to boarding search and removal from the area. Criminal penalties can be pursued against those on board.

*Buoy 702 is approximately 3.3 cables N.E. of the General Anchorage.

ANCHORAGE: Harbour – range 084° True, 2 green lights. Strong set across harbour entrance, Navy recommends 10 knots entering. Quarantine Anchorage at Middle Ground, Outer Harbour, depth 45 ft.

Inner Anchorage: Tidal range in the harbour is about 2 ft. Currents are weak. Deep drafted vessels should exercise caution as to the patch indicated as "Middle Ground" and the 42 ft. patch situated Westward of "Middle Ground". On rare occasions vessels may be requested to anchor. In these instances, deep drafted vessels may use the Naval Anchorage between and to the North of buoys 951 and 704. Officially, this anchorage is reserved for Navy vessels, however, the Navy has not objected to commercial vessels using this anchorage occasionally. Smaller vessels should have no difficulties in finding anchorage. In each case, anchorage location is determined by the Harbour Master in consultation with the Pilots. The bottom is mainly coral and is not a good holding ground.

MAX. SIZE: Max. LOA 230 m. (Berths "F4", "F5" and "F6"). Depth alongside Berth "F5" – 10.97 m. at HW.

Berth "F3". Max. LOA 182.80 m. Depth 9.75 m. at HW.

Max. beam for container vessels is 33.55 m.

RESTRICTIONS: The Harbour Master of the Port Authority of Guam, is in complete control of the approaches to Guam and it is essential to obtain clearance and permission to enter Guam from "Harbour Master" Port Authority, call sign KUF-810 at least 24 hours prior to arrival. Permission is readily granted with the condition to request permission again 2 hours prior to arrival at Guam. This time from Guam Control, call sign KUF-810 and NRV (USCG).

HEALTH: If from suspect port, Inspector boards at anchorage or at pier for thorough check. Inspector grants Pratique.

RADIO: Harbour Master Radio Station, call sign KUF-810 ship/shore watching 24 hours. Use of USCG Station "NRV" for best service if unable to reach KUF-810 due to limitation of range.

Notice to Ship's Agents: (20th August, 1980)

The Harbour Master's Control Tower is operating on a 24 hour basis. The following VHF frequencies are guarded and monitored:

156.8 MHz – Channel 16
156.6 MHz – Channel 12
156.65 MHz – Channel 13

In addition, Control Tower personnel will be monitoring S.S.B. with the following procedure:

2182.0 kHz continually.

4143.6 kHz – (4B). Every hour on the half hour for a period of 5 minutes.

8291.1 kHz – (8A). Every hour at 35 minutes after the hour for a period of 5 minutes.

12432.3 kHz – (12B). Every hour at 40 minutes past the hour for a period of 5 minutes.

The Port Authority solicits your co-operation in the matter of keeping the Harbour Master advised of all arrivals, departures, and other pertinent information whereby we may best serve the maritime industry.

VHF: Masters of vessels approaching should keep watch on Channels 12, 13 and 16.

TUGS: 3 tugs (1,200 h.p.) available throughout 24 hours. Tugs can be contacted direct on VHF Channels 16, 13 and 19.

BERTHING: Vessels may berth Port or Starboard side upon request of the Master or Agent at "F3", "F4", "F5" except "F6" port side to, 1 large tug and 1 small tug normally used. Ship's gangway is required. Local information from Pilots states that after completion of Berth F-1 (Gorco Oil Berth), a submerged wreck was discovered, said to be a 500 ft. long cargo vessel, and lies across and below the vessel in this berth, on the Eastern side of the jetty. It is advisable not to drop anchors – should they have to be used – until vessel has passed over the wreck. There have been instances of forward springs or breastlines becoming fouled in this wreck during operations.

CRANES: 1 (Manitowoc) × 140 ton, 1 (P&H) × 40 ton and 1 × 35 ton.

2 Paceco rail mounted container gantry cranes for handling 20 ft., 27 ft. or 40 ft. containers. 30 fork lifts, capacity 3 – 20 tons, including a Hystainer with special spreader for handling containers.

TANKERS: *Mobil Pier:* Berth "G". Depth alongside 39 ft.

The terminal consists of a T-head pier, with 2 breasting dolphins. Head and stern lines are secured to shore-based bitts. No breast lines can be used. Therefore, caution should be exercised when off-berth winds occur.

The pier is within the blast zone of the Navy ammunition pier. When a vessel is working ammunition, or when ammunition is on that dock, U.S. Coast Guard will not ordinarily permit a vessel to lie at the Mobil Pier. If U.S. Coast Guard does give permission, U.S. Navy authorities require a "Hold Harmless" agreement before permitting vessel to berth at the Mobil Pier. To this effect the Agent assists and offers guidance.

Berthing: Vessels usually berth on port side. There are no particular difficulties with berthing a vessel but approach speed and impact on the dolphins should be kept to a minimum. 2 mooring launches are utilised. There are no capstans for hauling mooring lines.

Beam winds may affect vessels when alongside. Because of the lack of breasting lines, Northerly winds tend to push the vessel off the berth. Southerly winds cause excessive pressure on breasting dolphins when the vessel is in a light condition. Ballasting while discharging should be considered and Terminal operators will advise the Master on this. In case ballasting is necessary prior to completion of discharge, U.S. Coast Guard permission must be obtained.

Cargo Handling: Only refined petroleum products are handled at this pier.

Flexible rubber cargo hoses are used. No shore crane is available. Ship's manifold is to be ready with blanks removed and reducers rigged if necessary. Cargo booms should be operational prior to arrival, in order to lower the ship's gangway as soon as the vessel is secured to the pier. Different grades can be discharged simultaneously.

Gorco Berth: Berth "F1". Depth alongside 55 ft.

The terminal consists of a T-head pier with 2 breasting dolphins at each end and 2 mooring dolphins on the West side.

On the East side there are quick-release hooks along the shore line. All mooring points are provided with quick-release hooks and capstans for hauling the mooring lines.

Berthing: Ships always berth port side to. Vessel is to proceed at slow speed towards the berth passing North of Buoy No. 2 (on some charts designated as Buoy RB "A") and East of the patch of 57 ft. reported in 1970. Tugs are in attendance. 2 mooring boats strong enough to handle (100,000 d.w.t.) wire ropes are available. Some difficulties have been reported when running lines ashore at the Eastern side since the mooring launch, because of shallow water, cannot get close to shore and rope pick-up winches at times are malfunctioning. Additional messenger lines are normally required from the vessel. The use of wires as headlines should be avoided.

Cargo Handling: Both crude oil and petroleum products are handled at this pier. For crude discharge 4×10 in. ASA hoses are used. Distance to tanks 7 miles. Ship's port side manifold to be ready with blanks removed and adaptors fitted if necessary.

Ballast/slop facilities are available and consists of 1×12 in. line of about 1,000 ft. long with a tank capacity of 80,000 bbls. The maximum acceptable quantity, however, is restricted to 50,000 bbls.

Guadeloupe

BASSE TERRE: 15.59 N. 61.44 W. (See Plan)

DOCUMENTS:
6 Crew Lists.
6 Manifests.
Health Declaration Form.

Guam

GUAM (Apra Harbour): 13.26 N. 144.39 E. **(See Plan)**

DOCUMENTS: Guam is a United States Territory in the Western Pacific and official documentation is as for mainland U.S. ports, including visaed Crew List completed at port of departure prior to Guam. Vessels should have a stock of American Crew Lists Form I-148 and Form I-95A. The American Alien Crewman Landing Permit is acceptable and preferred. This is the plastic identification card previously issued on the U.S. coast.

Required on arrival:
Vaccination Cards.
Visaed Immigration Crew List.
4 Crew Lists.
4 Passenger Lists.
1 Stores List.
Clearance from last port.
Cargo Papers.

Have ready Immigration Form I-94 for each passenger and Form I-95 for each alien unless they have I-184 plastic Identification Card. Shore Passes not required. Crew Customs Declaration not required.

PILOTAGE: It is advisable to have on board U.S. charts for Guam: C & GS 4197 Apra Harbour. 4196 Guam Approaches.

Pilot available 24 hours a day. Weather permitting, Pilot will board outside breakwater upon Master's request.

APPROACHES: Make for the unmarked approach point designated "AH" (Alpha Hotel) 2 miles from entrance at 13° 26′ 8″ N., 144° 34′ 09″ E. where Pilot boards, weather permitting. From position AH, the entrance range line is 084° with the leading marks in line. Because of depths, anchoring outside the harbour is impossible. If vessel must wait for the Pilot cruise back and forth in this area.

Port entry: On occasions, weather and sea conditions are considered unsuitable for Pilots to board outside. Under such circumstances vessel may be requested to proceed inwards and pick up the Pilot in the harbour area. The Harbour Master's permission for vessel to enter is mainly based on the traffic situation and does not necessarily take into account whether it is actually safe for vessel to enter under such conditions. It is not advisable to enter without a Pilot due to strong cross currents.

Pilots are very willing to assist arriving tankers and whenever the weather situation at point AH is prohibitive for boarding, they may request the Master to proceed Southwards in Agat Bay to look for a more sheltered boarding ground.

Before entering, the Harbour Master and the Pilot should be consulted to ensure that no outgoing traffic will be encountered in the harbour entrance. It is also advisable to obtain from the Harbour Master the positions of vessels which may be anchored in the harbour area.

Under the influence of N.E. Trades the prevalent set of the current (reaching 3 knots) off the entrance is to the South or S.W. regardless of the tidal currents. During the summer months, when Westerly winds prevail occasionally, a Northerly set may be experienced (reaching 1.5 knots). The current velocity fluctuates during a daily period under the influence of tidal currents. Entry should be made during periods when cross currents are expected to be at a minimum. The Pilot should be consulted on this matter.

Strong cross currents may require an approach speed of up to 8 knots. In view of the relatively short distance from the entrance to the berth, the speed must be substantially reduced as soon as the influence of the cross current has subsided. In relation to this, the manoeuvring characteristics of vessel should be carefully taken into consideration.

Notice:

Issued by: Commander, U.S.C.G., Marianas Section.
Dated: 17th October, 1986.
Subject: SECURITY ZONE.

The Coast Guard has directed Naval Prepositioning Ships mooring in Apra Harbour to use Buoy 702* in Outer Apra Harbour and is establishing a security zone around this buoy and Naval Prepositioning Vessels moored thereto effective 17th October, 1986.

A 100 yard security zone has been established in all directions around Buoy 702 and Naval vessels moored there. When no vessels are moored to Buoy 702, a 50 yard security zone will remain in effect around the buoy itself.

The zone is established to safeguard Naval Maritime Preposition Ships against any possible destruction from sabotage or other similar causes.

Entry into the security zone is prohibited unless authorised by the Captain of the Port. Any person or vessel that enters the security zone without the permission of the Captain of the Port is subject to boarding search and removal from the area. Criminal penalties can be pursued against those on board.

*Buoy 702 is approximately 3.3 cables N.E. of the General Anchorage.

ANCHORAGE: Harbour – range 084° True, 2 green lights. Strong set across harbour entrance, Navy recommends 10 knots entering. Quarantine Anchorage at Middle Ground, Outer Harbour, depth 45 ft.

Inner Anchorage: Tidal range in the harbour is about 2 ft. Currents are weak. Deep drafted vessels should exercise caution as to the patch indicated as "Middle Ground" and the 42 ft. patch situated Westward of "Middle Ground". On rare occasions vessels may be requested to anchor. In these instances, deep drafted vessels may use the Naval Anchorage between and to the North of buoys 951 and 704. Officially, this anchorage is reserved for Navy vessels, however, the Navy has not objected to commercial vessels using this anchorage occasionally. Smaller vessels should have no difficulties in finding anchorage. In each case, anchorage location is determined by the Harbour Master in consultation with the Pilots. The bottom is mainly coral and is not a good holding ground.

MAX. SIZE: Max. LOA 230 m. (Berths "F4", "F5" and "F6"). Depth alongside Berth "F5" – 10.97 m. at HW.

Berth "F3". Max. LOA 182.80 m. Depth 9.75 m. at HW.

Max. beam for container vessels is 33.55 m.

RESTRICTIONS: The Harbour Master of the Port Authority of Guam, is in complete control of the approaches to Guam and it is essential to obtain clearance and permission to enter Guam from "Harbour Master" Port Authority, call sign KUF-810 at least 24 hours prior to arrival. Permission is readily granted with the condition to request permission again 2 hours prior to arrival at Guam. This time from Guam Control, call sign KUF-810 and NRV (USCG).

HEALTH: If from suspect port, Inspector boards at anchorage or at pier for thorough check. Inspector grants Pratique.

RADIO: Harbour Master Radio Station, call sign KUF-810 ship/shore watching 24 hours. Use of USCG Station "NRV" for best service if unable to reach KUF-810 due to limitation of range.

Notice to Ship's Agents: (20th August, 1980)

The Harbour Master's Control Tower is operating on a 24 hour basis. The following VHF frequencies are guarded and monitored:

156.8 MHz – Channel 16
156.6 MHz – Channel 12
156.65 MHz – Channel 13

In addition, Control Tower personnel will be monitoring S.S.B. with the following procedure:

2182.0 kHz continually.

4143.6 kHz – (4B). Every hour on the half hour for a period of 5 minutes.

8291.1 kHz – (8A). Every hour at 35 minutes after the hour for a period of 5 minutes.

12432.3 kHz – (12B). Every hour at 40 minutes past the hour for a period of 5 minutes.

The Port Authority solicits your co-operation in the matter of keeping the Harbour Master advised of all arrivals, departures, and other pertinent information whereby we may best serve the maritime industry.

VHF: Masters of vessels approaching should keep watch on Channels 12, 13 and 16.

TUGS: 3 tugs (1,200 h.p.) available throughout 24 hours. Tugs can be contacted direct on VHF Channels 16, 13 and 19.

BERTHING: Vessels may berth Port or Starboard side upon request of the Master or Agent at "F3", "F4", "F5" except "F6" port side to, 1 large tug and 1 small tug normally used. Ship's gangway is required. Local information from Pilots states that after completion of Berth F-1 (Gorco Oil Berth), a submerged wreck was discovered, said to be a 500 ft. long cargo vessel, and lies across and below the vessel in this berth, on the Eastern side of the jetty. It is advisable not to drop anchors – should they have to be used – until vessel has passed over the wreck. There have been instances of forward springs or breastlines becoming fouled in this wreck during operations.

CRANES: 1 (Manitowoc) × 140 ton, 1 (P&H) × 40 ton and 1 × 35 ton.

2 Paceco rail mounted container gantry cranes for handling 20 ft., 27 ft. or 40 ft. containers. 30 fork lifts, capacity 3 – 20 tons, including a Hystainer with special spreader for handling containers.

TANKERS: *Mobil Pier:* Berth "G". Depth alongside 39 ft.

The terminal consists of a T-head pier, with 2 breasting dolphins. Head and stern lines are secured to shore-based bitts. No breast lines can be used. Therefore, caution should be exercised when off-berth winds occur.

The pier is within the blast zone of the Navy ammunition pier. When a vessel is working ammunition, or when ammunition is on that dock, U.S. Coast Guard will not ordinarily permit a vessel to lie at the Mobil Pier. If U.S. Coast Guard does give permission, U.S. Navy authorities require a "Hold Harmless" agreement before permitting vessel to berth at the Mobil Pier. To this effect the Agent assists and offers guidance.

Berthing: Vessels usually berth on port side. There are no particular difficulties with berthing a vessel but approach speed and impact on the dolphins should be kept to a minimum. 2 mooring launches are utilised. There are no capstans for hauling mooring lines.

Beam winds may affect vessels when alongside. Because of the lack of breasting lines, Northerly winds tend to push the vessel off the berth. Southerly winds cause excessive pressure on breasting dolphins when the vessel is in a light condition. Ballasting while discharging should be considered and Terminal operators will advise the Master on this. In case ballasting is necessary prior to completion of discharge, U.S. Coast Guard permission must be obtained.

Cargo Handling: Only refined petroleum products are handled at this pier.

Flexible rubber cargo hoses are used. No shore crane is available. Ship's manifold is to be ready with blanks removed and reducers rigged if necessary. Cargo booms should be operational prior to arrival, in order to lower the ship's gangway as soon as the vessel is secured to the pier. Different grades can be discharged simultaneously.

Gorco Berth: Berth "F1". Depth alongside 55 ft.

The terminal consists of a T-head pier with 2 breasting dolphins at each end and 2 mooring dolphins on the West side.

On the East side there are quick-release hooks along the shore line. All mooring points are provided with quick-release hooks and capstans for hauling the mooring lines.

Berthing: Ships always berth port side to. Vessel is to proceed at slow speed towards the berth passing North of Buoy No. 2 (on some charts designated as Buoy RB "A") and East of the patch of 57 ft. reported in 1970. Tugs are in attendance. 2 mooring boats strong enough to handle (100,000 d.w.t.) wire ropes are available. Some difficulties have been reported when running lines ashore at the Eastern side since the mooring launch, because of shallow water, cannot get close to shore and rope pick-up winches at times are malfunctioning. Additional messenger lines are normally required from the vessel. The use of wires as headlines should be avoided.

Cargo Handling: Both crude oil and petroleum products are handled at this pier. For crude discharge 4×10 in. ASA hoses are used. Distance to tanks 7 miles. Ship's port side manifold to be ready with blanks removed and adaptors fitted if necessary.

Ballast/slop facilities are available and consists of 1×12 in. line of about 1,000 ft. long with a tank capacity of 80,000 bbls. The maximum acceptable quantity, however, is restricted to 50,000 bbls.

IMMIGRATION:

1. *Prior to Departure for Guam:*
   - A. Visaed Crew List: Prepare 1 Crew List on U.S. Form I-418 and have it visaed by a U.S. Consulate at a port prior to Guam. Without this, crew shore leave may be denied.
   - B. Passengers must have a valid passport and also must have an appropriate U.S. Visa whether landing or not on Guam.
   - C. Intransit passengers do not need U.S. visa if the Owners of the vessel have signed a contract called "Immediate and Continuous Transit Agreement" with the Commissioner of Immigration at Washington, D.C.
2. *Prior to Arrival at Guam:*
   - A. Passenger List, Form I-418 prepare 3 copies of Passenger List on U.S. Form I-418 (for Immigration, Customs and Agent).
   - B. Passenger Landing Card: Form I-94. Prepare or have on hand, 1 U.S. Form I-95A for each alien crew member. Not required if crew member is a permanent resident with U.S. I-184 laminated "Crewman's Landing Card". Not required of U.S.A. Citizens. Please present form I-95A in appropriate Seaman's passport or identification book. Form I-95A can be used repeatedly for future arrivals of same crewman on same ship at any United States Port.
3. *Upon Arrival at Guam:*
   - A. U.S. Federal Immigration Inspector boards upon arrival at pier, must see all passengers with their passport and Form I-94 and all crew members with their passport or identification books and Form I-94A or Form I-184.
   - B. Passengers and crew are required to be ready for inspection immediately upon docking at Guam.
   - C. No shore leave and no visitors or stevedores may board until this Immigration inspection is complete. The Inspector will advise Master when he has completed his inspection of passengers and of crew.
4. *Prior to Departure from Guam:*
   - A. Intransit Passengers: Pick up from intransit passengers the Form I-94 and hand to Agent before departing from Guam. These must be returned by Agent to U.S. Immigration as passenger departure records.
   - B. Alien crew member joining at Guam: Pick up from them the Form I-94 which they used to enter the U.S.A. These must be returned to U.S. Immigration by Agent as permanent records.

SECURITY: Guam Government Official usually boards at pier, examines vaccination cards and inspects Steward's stores and slop chest. Also represents U.S. Customs. Requires 1 Crew List, 1 Passenger List, 1 Stores List, Clearance from last port, later issues new clearance from Guam which Agents bring to ship. Normally does not seal stores or slop chest.

MARINE GUARD: Required when docked at Ammunition Pier, requires 1 Crew List.

MEDICAL: Foreign ships use Guam Memorial Hospital or other clinics in town. American ships use U.S. Naval Dispensary in Harbour area, or in emergency U.S. Naval Hospital near Agana, 10 miles distant. Certificates required signed by Master. Patient returns to vessel by taxi at vessel's expense. Dispensary hours for merchant seamen Monday to Friday 0800 – 1200 and 1300 – 1600 hrs. At other times, if emergency, use the U.S. Navy Hospital. Doctors will not normally visit ships.

Dentists: Private dentists only. Usual hours 0900 – 1700 hrs., Saturday to 1200 hrs.

REPAIRS: Commercial Yard and Casamar Yard available. Navy Yard, repairs by U.S. Naval Ship Repair Facility (SRF), subject to prior Navy commitments, and requires cash deposit in advance. Payment to be made for work done successfully or not. "No Cure No Pay" does not apply.

FRESH WATER: Very good, available any quantity, meter service.

FUEL: Marine Diesel Oil available by truck at any pier and by pipe-line at Berth "F3". Black oil available by pipe-line at Berth "F6". Both products also available by pipe-line at Berth "F1" (Gorco Pier) and the Mobil Pier. The distribution companies are Exxon, Gorco and Mobil. Infrequent fuel delivery restriction occurs when ammunition vessel working.

STORES: Available but considered expensive. Produce from U.S.A.; meats from U.S.A. and N.Z.; milk is recombined in quart cartons, white, chocolate or buttermilk. Order milk day prior to delivery; tropical fruits seldom available; ice in blocks or cubes. Prices wholesale, except under 1 case lots when at retail. Delivered to ship's gangway or hook.

LAUNDRY: Also dry-cleaning available 3 days service at U.S.A. prices. 1-day service extra. Delivered to ship's gangway or hook.

TIME: GMT plus 10 hours.

POLICE/FIRE/AMBULANCE: Ambulance U.S. Naval Dispensary, Harbour Area, Tel: 339-4224/4227. Fire Tel: 22222. Police – Naval Station Security, Harbour Area Tel: 333-2988. Police – Guam Civilian Police, Tel: Agana 777-9811

BANKS: Bank of America, Bank of Guam, Bank of Hawaii, Chase Manhattan Bank, Citibank, First Hawaiian Bank, Hong Kong and Shanghai Banking Corp.

WEATHER: *Tropical Typhoons:* The Navy Fleet Weather Centre of Guam broadcasts typhoon warnings. Weather forecasts are good and reliable; however, due to the particular geographical position of Guam it is impossible to definitely determine the track of approaching turbulence. These turbulences usually generate a few hundred miles South or S.E. and may easily divert when passing near Guam. There are four typhoon warning conditions.

Condition 4:
Typhoon winds possible within 72 hours;
Condition 3:
Typhoon winds possible within 48 hours;
Condition 2:
Typhoon winds possible within 24 hours;
Condition 1:
Typhoon winds possible within 12 hours.

During the typhoon season months of August through December condition 4 exists at all times.

In case of a typhoon warning, (condition 2) the U.S. Navy invites all Masters for a meeting to discuss the action plan for evacuating the port. It is considered very dangerous to remain alongside or anchored within the port when a typhoon is approaching Guam.

SHIPMASTER'S REPORT: April 1987.

I was advised that Agents can obtain permission to enter Guam on behalf of the Master. If a ship is fitted with telex this saves time and money over the U.S.C.G. Station NRV.

On this occasion, the vessel was unable to raise KUF-810 until within VHF range. It was also noted that the Agency offices are in the same building as the Harbour Master. This Port Services Building also houses the U.S.C.G. and the Customs.

I was also advised that Daylight Saving Time is not being used by the present Administration, however the situation may change when a new Governor is appointed.

The 3 tugs in use are diesel electric, built in 1944 and estimated to be about 800 h.p. maximum. A tug of 1,700 h.p. is being sought at present.

This vessel used all 3 tugs when laden on a draft of 11.02 m. at the Mobil Pier - Berth "G". This pier is being renewed. At present the berth consists of 2 breasting dolphins only. The vessel used 3 × 6 in. floating hoses to discharge. No crew boats were available and a ship's lifeboat was used as a liberty boat. The new jetty should be in use in June 1987 according to the U.S.C.G.

Agent's name & address: Ambyth Shipping & Trading Inc., 1026 Cabras Highway, Suite 205, Piti, Guam 96925, USA. Telex: (721)6405 AMBYTH GM. Fax: (671) 472 1264.

AUTHORITY: Port Authority of Guam, Government of Guam, 1026 Cabras Highway, Suite 201, Piti, Guam 96925. *Tel:* 477-5931/35. *Telex:* (721) 6689 Paggum. *FAX:* (671) 477-2689. *Contact:* David B. Tydingco, General Manager. Frank G. Santos, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Guatemala

GENERAL

DOCUMENTS:

Consular Documents:

Masters are required to:

1. Obtain a health and clearance permit, issued by the competent authority at the last port of call, and certified by the Guatemalan Consul, and;
2. Submit 5 copies of a general manifest of articles carried to each port of the country, approved by the Guatemalan Consul at the port of loading, and also, separate copies of the manifest for in-transit articles unloaded.

If no articles bound for the country are carried, a ballast manifest should be submitted.

Prior to Arrival:

Arrival Notice:

There is no minimum period for advance notice of the vessel's arrival, because Authorities exercise a degree of flexibility. However, it is recommended that notice be submitted in writing to the following sometime in advance: The Captain of the Port, Customs Administration and Customs Supervision of Unloading, Migration Delegate, Maritime Health, Plant Health Delegate and Port Watch. Notification must also be sent to the following agencies of the Port Authority: Port Administrator, Office of the Chief of Operations, Office of the Chief of Docks, Import Division, Export Division, Invoicing Division, Container Section (if any) and Pilots Division.

Information on Cargo for the Port:

If the vessel carries cargo to be discharged at the port, the following information will be submitted to the Port Authority:

Stowage Plan.

Cargo Distribution List.

Heavy Cargo List.

Amount of Exports.

If containers are carried to the port, 8 copies of the list of container contents and 8 copies of the list of complete shipments and of mixed shipments (for more than one consignee) are to be submitted to the Container Section.

This information may be submitted upon the vessel's arrival, so that no delays in the work will be experienced for that reason.

On Arrival:

Type of Documents	*Number and Distribution of Documents*						
Basic Forms	*Captain of Port*	*Customs*	*Security*	*Maritime Health*	*Immigration*	*Plant Health*	*Port Authority*

(a) Delivered to Post Office.

(b) According to the number of stevedores requested, more than 2 copies.

Other Requirements:

Requests for permission to load and unload are submitted to Customs, each on stamped paper and also, when appropriate, a request for overtime work.

Prior to Departure: The clearance permit is requested from the Captain of the Port 4 hours in advance, after obtaining clearance from Customs, on a clearance permit application, which is submitted on stamped paper.

UNIFORMS: Vessels have been fined when officers have not been wearing uniforms when boarded by officials for clearance inward.

CHAMPERICO: 14.17 N. 91.55 W.

DOCUMENTS:

Clearance from Last Port.

Travel Memorandum (original and 4 copies).

Declaration of Maritime Health.

Derat Exemption Certificate.

5 Crew Lists.

5 Passenger Lists or "no passengers" Declaration.

5 Provision Lists.

5 Dangerous Cargo, inflammable or explosives declaration.

5 Mail Lists or "No Mail" Declaration.

Manifests of Cargo from each port (original and 11 copies).

Bills of Lading from each port.

Vaccination Certificates for whole crew.

12 Ballast Manifests, if no cargo on board.

PILOTAGE: None.

ANCHORAGES: Without limit but recommended *not to anchor* less than 1 km. from beach.

MAX. SIZE: Vessels work cargo at anchorage in depth consistent with vessel's draft.

HEALTH: Give notice of any suspicious illness or fever on board when the doctor comes for official visit.

RADIO: ETA cables through Cristobal (Panama).

VHF: Channel 16.

TUGS: No tugs required.

STEVEDORES: No advance notice necessary. Possible to arrange gangs within an hour.

MEDICAL: Adequate advance notice required depending on gravity of case. Hospital 30 minutes away and possible to arrange transport for patient, also to arrange for doctor on board. Crew must have current International Vaccination Certificates.

TANKERS: No facilities for tankers.

DENSITY: Changes from 1022 in October to 1027 in April.

FRESH WATER: Free within port limits.

FUEL: No facilities.

CONSULS: None.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Available upon request.

OPENING/CLOSING HATCHES: Either by crew or by stevedores.

CUSTOMS ALLOWANCES: Without limit on board. Prohibited to take tobacco, wine or spirits ashore.

CARGO GEAR: Ship's gear used for loading/discharging.

REPATRIATION: All facilities available.

AIRPORT: International airport 3 hours distant with regular flights all over world.

TIME: GMT minus 6 hours. No alterations to clock during year.

HOLIDAYS: No work on 1st January, Maundy Thursday and Good Friday, 1st May and 25th December. The rest of the year work day and night.

POLICE/AMBULANCE/FIRE: All available.

TELEPHONES: Cannot be placed on the vessels.

IDENTIFICATION CARDS: Not needed.

SHORE LEAVE: No restrictions.

DELAYS: Some days in April and October the surge is very strong and work has to be suspended.

GENERAL: Possible to supply provisions, especially vegetables and shell-fish at good prices.

DEVELOPMENTS: Project to build a modern port with an entrance channel, artificial bay and capacity for 8 merchant vessels and facilities for fishing ships and tourist ships.

AUTHORITY: Empresa Portuaria Nacional de Champerico, 10A Calle 3-31, Zona 1, Guatemala City, Guatemala. *Tel:* 25-4-47, 85-2-16, 53-54-57. *Cables:* Epnac. *Contact:* Cnel. Antonio Batres Barreda, President. Gregorio Cifuentes, Administrator.

PUERTO BARRIOS: 15.44 N. 88.36 W.

DOCUMENTS:

Clearance from Last Port.

Crew List, 1 legalised and 9 copies.

Passenger List, 1 legalised and 7 copies or negatives.

Cargo Manifest, 1 legalised and 21 copies.

Stores/Provisions List, 3 copies.

Voyage Memorandum, 4 copies.

Bills of Lading, 2 sets.

Declaration of Health.

PILOTAGE: Pilot boards 2 miles off Puerto Barrios, from small unmarked launch. If awaiting Pilot, vessel may anchor about 3 miles North of Puerto Barrios, keeping port entrance clear. No VHF.

ANCHORAGE: In Santo Tomas Bay, depths up to 6 fathoms.

MAX. SIZE: Length 600 ft., draft 30 ft.

HEALTH: Advise Agent in advance if any fever or contagious disease suspected on board. Otherwise Pratique granted on arrival. Officials board only between 0600 hrs. and 1800 hrs.

RADIO: Coastal radio in Costa Rica, call sign TIM operating on 8485 kHz.

TUGS: No tugs available.

BERTHING: One pier owned by International Railway used to discharge fuel oil. 1,000 ft. berthing length on each side. A flag is shown on the pier to indicate where vessel will berth. Berthing recommended during daylight hours only. Tankers discharge on South side of the pier.

See "Shipmaster's Report" at Santo Tomas de Castilla.

MEDICAL: Doctor available. All crew require International Vaccination Certificates.

FRESH WATER: Available at the pier.

FUEL: Not available.

CUSTOMS ALLOWANCES: Normal daily consumption on board. No tobacco, wine or spirits to be taken ashore.

TIME: GMT minus 6 hours; no alterations during the year.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

AUTHORITY: Commandante del Puerto.

Guadeloupe

BASSE TERRE: 15.59 N. 61.44 W. (See Plan)

DOCUMENTS:
6 Crew Lists.
6 Manifests.
Health Declaration Form.
6 Lists of Stores on board.
Passenger List.
Clearance from Last Port.

PILOTAGE: Not available.
ANCHORAGE: On an 18 fathom bank North of the pier, 2 cables from the shore.
RESTRICTIONS: Vessel can berth and unberth at any stage of the tide, but if vessel's first call, recommend berthing during daylight only.
MAX. SIZE: Max. LOA 300 m. Max. beam 30 m. There is 32 ft. – 36 ft. alongside but an allowance should be made for a 3 ft. swell, therefore would suggest max. draft approx. 29 ft.
HEALTH: Authorities require 24 hours notice of the vessel's arrival.
RADIO: Fort-de-France, call sign "FFP" (high frequency) and Destrellan, call sign "FFQ" for medium wave.
VHF: Port Authority on Channel 16.
TUGS: Not available, however a small boat will assist in running lines if the Port Authority is advised in sufficient time on VHF Channel 16.
BERTHING: The extension is in operation. The old S.E. arm of the quay and 3 remaining banana elevators were so badly damaged in a hurricane of 1979 that they are to be removed. The new quay is solid-filled and extends to a reclaimed shore thus providing considerable container stacking area. The berth is approximately 300 m. long and is well fendered with rubber fenders.
CRANES: 30 ton mobile crane available.
STEVEDORES: Working hours: 0700 – 1100 hrs. and 1300 – 1700 hrs. Extension possible.
MEDICAL: Doctors and hospital available.
DENSITY: 1025.
FRESH WATER: Available.
CONSUL: None, nearest consuls at Pointe-a-Pitre.
SERVICES: Fresh provisions, groceries and meats available. The following are not available: repair facilities, dry dock, machine shop, airport, surveyors, laundry services, bunker fuel oil, diesel oil, lubricating oil and slop tanks.
WEATHER: The swell is between 3 ft. and 4 ft. from a S.E. direction. The wind is mainly from an Easterly direction.
AUTHORITY: Guadeloupe Port Authority, Place Cours Nolivos, 97100 Basse-Terre, Guadeloupe. *Tel:* 81-09-15 and 81.11.21. *Telex:* 919710 GL. *Contact:* Mr. Claude Julienne, Port Director.

POINTE-A-PITRE: 16.13 N. 61.32 W. (See Plan)

DOCUMENTS:
6 Manifests. See (a).
6 Crew Lists.
3 Stores Lists.
3 Crew Declaration. See (b).
6 Passenger Lists.
4 Declaration of Health.
2 Bills of Lading.
1 Clearance from Last Port.
6 Entrance Declaration.

(a) In addition, 2 sets of Manifests must be airmailed to arrive 72 hours before arrival in Pointe-a-Pitre.

(b) This Declaration must indicate all new and used personal effects.

PILOTAGE: Pilot meets vessels at "Mouchoir Carre" buoys. Advance notice of ETA to be passed 24 hours, and VHF Channel 16, 1 hour before arrival.
ANCHORAGE: Consult charts.
RESTRICTIONS: Max. length 230 m. Max. draft 10.0 m.
MAX. SIZE: See "Restrictions".
HEALTH: Port Health board on arrival.
RADIO: Destrellan Radio, also on VHF.
TUGS: None available.
BERTHING: 9 berths available, 8 additional for petroleum, sugar, cement, flour mill, bananas, Ro/Ro and containers.

Tourist Port:

Quay No. 1:	Length 150 m., depth 7.80 m.
Quay No. 2:	Length 177 m., depth 8.80 m.
Quay No. 3: Quay No. 4:	Length 283 m. Depth 8.80 m.

Commercial Port:

Quay No. 5: Quay No. 6:	Length 320 m., depth 7.10 m. Ro-Ro, General Cargo
Quay No. 7: Quay No. 8:	Length 306 m.; No. 7, depth 7.10 m.; No. 8, depth 8.20 m. General cargo.

Industrial Port:

Quay No. 9:	Length 180 m., depth 7.60 m. Mineral Berth.
Quay No. 10:	Length 140 m., depth 7.20 m. Storage capacity 30,000 cu.m.
Quay No. 11-1:	Length 150 m., depth 8.0 m. Sugar Berth. Storage capacity 70,000 cu.m. Loading rate 750 t.p.h.
Quay No. 11-2:	Length 150 m., depth 9.0 m. Grain vessels, flour and feed, general cargo.
Quay No. 11: (Ro-Ro):	Length 35 m., depth 4.20 m.
Quay No. 13:	Length 160 m., depth 10.0 m. General cargo, Containers.
Quay No. 14:	Length 240 m., depth 10.00 m. Container Terminal.

Industrial Area: The industrial area of Jarry offers 40 hectares of open storage at the water's edge.
Container Terminal: Quay No. 14: The container terminal is equipped with 3 × 40 ton Paceco-ACB ton cranes.
STEVEDORES: 24 hours advance notice of ETA required (72 hours i vessel arrives on Monday). Working hours 0700–1030 and 1315–1645. At container terminal hours are 0630–1300 and 1400–2030.
MEDICAL: Clinics and Hospital facilities available. Hospital Tel: 82.88.88, 82.98.80.
TANKERS: Only tankers having less than 7.2 m. draft can enter the harbour.
FRESH WATER: Available day and night if requested in advance.
FUEL: Available F.O. 350 seconds Redwood, D.O. for gas oil. Delivered by road tankers.
CONSULS:

Belgium	Italy	Spain
Denmark	Lebanon	Sweden
Ecuador	Netherland	United Kingdom
Haiti	Norway	Venezuela

REPAIRS: Workshops available.
GANGWAY/DECK WATCHMEN: Available on request.
HATCHES: Usually opened and closed by crew. Stevedores will a Master's request but at ship's expense.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle per man.
CARGO GEAR: Ship's gear used.
REPATRIATION: All facilities available.
AIRPORT: 3 miles from the harbour with daily flights to Paris, Miami and New York.
TIME: GMT minus 4 hours. No alterations during the year.
HOLIDAYS: New Year's Day; Shrove Tuesday; Ash Wednesday; Carnival; Good Friday; Easter Monday; Labour Day (1st May); Ascension Day; Whit Monday; National Day (14th July); Souls' Day; Armistice; Christmas Day.
POLICE/AMBULANCE/FIRE: Police: 82.00.05 or 82.13.17 or 17; Ambulance and/or Fire Department: 83.00.28 or 18.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: I/D or passport required.
REGULATIONS: No particular regulations.
DEVELOPMENTS: Berths No. 11 and 12 are to be connected. Berth No. 13 to be strengthened to take Paceco ACB cranes. Infilling to provide 10 hectares of Foreign Trade Zone underway.
AUTHORITY: Guadeloupe Port Authority, Quai Lardenoy, (P.O.Box 485), Pointe-a-Pitre 97165, Guadeloupe, F.W.I. *Tel:* (590) 916313. *Telex:* 919710 GL PA GUAD. *FAX:* (590) 91 5679. *Contact:* Captain C. Lievain, Harbour Master. J. C. Cren, General Manager. C. Georgelin, Operations Manager.

NOTES

Please also advise Shipping Guides Ltd.

Guam

GUAM (Apra Harbour): 13.26 N. 144.39 E. (See Plan)

DOCUMENTS: Guam is a United States Territory in the Western Pacific and official documentation is as for mainland U.S. ports, including visaed Crew List completed at port of departure prior to Guam. Vessels should have a stock of American Crew Lists Form I-148 and Form I-95A. The American Alien Crewman Landing Permit is acceptable and preferred. This is the plastic identification card previously issued on the U.S. coast. Required on arrival:

Vaccination Cards.
Visaed Immigration Crew List.
4 Crew Lists.
4 Passenger Lists.
1 Stores List.
Clearance from last port.
Cargo Papers.

Have ready Immigration Form I-94 for each passenger and Form I-95 for each alien unless they have I-184 plastic Identification Card. Shore Passes not required. Crew Customs Declaration not required.

PILOTAGE: It is advisable to have on board U.S. charts for Guam: C & GS 4197 Apra Harbour. 4196 Guam Approaches.

Pilot available 24 hours a day. Weather permitting, Pilot will board outside breakwater upon Master's request.

APPROACHES: Make for the unmarked approach point designated "AH" (Alpha Hotel) 2 miles from entrance at 13° 26′ 8″ N., 144° 34′ 09″ E. where Pilot boards, weather permitting. From position AH, the entrance range line is 084° with the leading marks in line. Because of depths, anchoring outside the harbour is impossible. If vessel must wait for the Pilot cruise back and forth in this area.

Port entry: On occasions, weather and sea conditions are considered unsuitable for Pilots to board outside. Under such circumstances vessel may be requested to proceed inwards and pick up the Pilot in the harbour area. The Harbour Master's permission for vessel to enter is mainly based on the traffic situation and does not necessarily take into account whether it is actually safe for vessel to enter under such conditions. It is not advisable to enter without a Pilot due to strong cross currents.

Pilots are very willing to assist arriving tankers and whenever the weather situation at point AH is prohibitive for boarding, they may request the Master to proceed Southwards in Agat Bay to look for a more sheltered boarding ground.

Before entering, the Harbour Master and the Pilot should be consulted to ensure that no outgoing traffic will be encountered in the harbour entrance. It is also advisable to obtain from the Harbour Master the positions of vessels which may be anchored in the harbour area.

Under the influence of N.E. Trades the prevalent set of the current (reaching 3 knots) off the entrance is to the South or S.W. regardless of the tidal currents. During the summer months, when Westerly winds prevail occasionally, a Northerly set may be experienced (reaching 1.5 knots). The current velocity fluctuates during a daily period under the influence of tidal currents. Entry should be made during periods when cross currents are expected to be at a minimum. The Pilot should be consulted on this matter.

Strong cross currents may require an approach speed of up to 8 knots. In view of the relatively short distance from the entrance to the berth, the speed must be substantially reduced as soon as the influence of the cross current has subsided. In relation to this, the manoeuvring characteristics of vessel should be carefully taken into consideration.

Notice:

Issued by: Commander, U.S.C.G., Marianas Section.
Dated: 17th October, 1986.
Subject: SECURITY ZONE.

The Coast Guard has directed Naval Prepositioning Ships mooring in Apra Harbour to use Buoy 702* in Outer Apra Harbour and is establishing a security zone around this buoy and Naval Prepositioning Vessels moored thereto effective 17th October, 1986.

A 100 yard security zone has been established in all directions around Buoy 702 and Naval vessels moored there. When no vessels are moored to Buoy 702, a 50 yard security zone will remain in effect around the buoy itself.

The zone is established to safeguard Naval Maritime Preposition Ships against any possible destruction from sabotage or other similar causes.

Entry into the security zone is prohibited unless authorised by the Captain of the Port. Any person or vessel that enters the security zone without the permission of the Captain of the Port is subject to boarding search and removal from the area. Criminal penalties can be pursued against those on board.

*Buoy 702 is approximately 3.3 cables N.E. of the General Anchorage.

ANCHORAGE: Harbour – range 084° True, 2 green lights. Strong set across harbour entrance, Navy recommends 10 knots entering. Quarantine Anchorage at Middle Ground, Outer Harbour, depth 45 ft.

Inner Anchorage: Tidal range in the harbour is about 2 ft. Currents are weak. Deep drafted vessels should exercise caution as to the patch indicated as "Middle Ground" and the 42 ft. patch situated Westward of "Middle Ground". On rare occasions vessels may be requested to anchor. In these instances, deep drafted vessels may use the Naval Anchorage between and to the North of buoys 951 and 704. Officially, this anchorage is reserved for Navy vessels, however, the Navy has not objected to commercial vessels using this anchorage occasionally. Smaller vessels should have no difficulties in finding anchorage. In each case, anchorage location is determined by the Harbour Master in consultation with the Pilots. The bottom is mainly coral and is not a good holding ground.

MAX. SIZE: Max. LOA 230 m. (Berths "F4", "F5" and "F6"). Depth alongside Berth "F5" – 10.97 m. at HW.

Berth "F3". Max. LOA 182.80 m. Depth 9.75 m. at HW.

Max. beam for container vessels is 33.55 m.

RESTRICTIONS: The Harbour Master of the Port Authority of Guam, is in complete control of the approaches to Guam and it is essential to obtain clearance and permission to enter Guam from "Harbour Master" Port Authority, call sign KUF-810 at least 24 hours prior to arrival. Permission is readily granted with the condition to request permission again 2 hours prior to arrival at Guam. This time from Guam Control, call sign KUF-810 and NRV (USCG).

HEALTH: If from suspect port, Inspector boards at anchorage or at pier for thorough check. Inspector grants Pratique.

RADIO: Harbour Master Radio Station, call sign KUF-810 ship/shore watching 24 hours. Use of USCG Station "NRV" for best service if unable to reach KUF-810 due to limitation of range.

Notice to Ship's Agents: (20th August, 1980)

The Harbour Master's Control Tower is operating on a 24 hour basis. The following VHF frequencies are guarded and monitored:

156.8 MHz – Channel 16
156.6 MHz – Channel 12
156.65 MHz – Channel 13

In addition, Control Tower personnel will be monitoring S.S.B. with the following procedure:

2182.0 kHz continually.

4143.6 kHz – (4B). Every hour on the half hour for a period of 5 minutes.

8291.1 kHz – (8A). Every hour at 35 minutes after the hour for a period of 5 minutes.

12432.3 kHz – (12B). Every hour at 40 minutes past the hour for a period of 5 minutes.

The Port Authority solicits your co-operation in the matter of keeping the Harbour Master advised of all arrivals, departures, and other pertinent information whereby we may best serve the maritime industry.

VHF: Masters of vessels approaching should keep watch on Channels 12, 13 and 16.

TUGS: 3 tugs (1,200 h.p.) available throughout 24 hours. Tugs can be contacted direct on VHF Channels 16, 13 and 19.

BERTHING: Vessels may berth Port or Starboard side upon request of the Master or Agent at "F3", "F4", "F5" except "F6" port side to, 1 large tug and 1 small tug normally used. Ship's gangway is required. Local information from Pilots states that after completion of Berth F-1 (Gorco Oil Berth), a submerged wreck was discovered, said to be a 500 ft. long cargo vessel, and lies across and below the vessel in this berth, on the Eastern side of the jetty. It is advisable not to drop anchors – should they have to be used – until vessel has passed over the wreck. There have been instances of forward springs or breastlines becoming fouled in this wreck during operations.

CRANES: 1 (Manitowoc) × 140 ton, 1 (P&H) × 40 ton and 1 × 35 ton.

2 Paceco rail mounted container gantry cranes for handling 20 ft., 27 ft. or 40 ft. containers. 30 fork lifts, capacity 3 – 20 tons, including a Hystainer with special spreader for handling containers.

TANKERS: *Mobil Pier:* Berth "G". Depth alongside 39 ft.

The terminal consists of a T-head pier, with 2 breasting dolphins. Head and stern lines are secured to shore-based bitts. No breast lines can be used. Therefore, caution should be exercised when off-berth winds occur.

The pier is within the blast zone of the Navy ammunition pier. When a vessel is working ammunition, or when ammunition is on that dock, U.S. Coast Guard will not ordinarily permit a vessel to lie at the Mobil Pier. If U.S. Coast Guard does give permission, U.S. Navy authorities require a "Hold Harmless" agreement before permitting vessel to berth at the Mobil Pier. To this effect the Agent assists and offers guidance.

Berthing: Vessels usually berth on port side. There are no particular difficulties with berthing a vessel but approach speed and impact on the dolphins should be kept to a minimum. 2 mooring launches are utilised. There are no capstans for hauling mooring lines.

Beam winds may affect vessels when alongside. Because of the lack of breasting lines, Northerly winds tend to push the vessel off the berth. Southerly winds cause excessive pressure on breasting dolphins when the vessel is in a light condition. Ballasting while discharging should be considered and Terminal operators will advise the Master on this. In case ballasting is necessary prior to completion of discharge, U.S. Coast Guard permission must be obtained.

Cargo Handling: Only refined petroleum products are handled at this pier.

Flexible rubber cargo hoses are used. No shore crane is available. Ship's manifold is to be ready with blanks removed and reducers rigged if necessary. Cargo booms should be operational prior to arrival, in order to lower the ship's gangway as soon as the vessel is secured to the pier. Different grades can be discharged simultaneously.

Gorco Berth: Berth "F1". Depth alongside 55 ft.

The terminal consists of a T-head pier with 2 breasting dolphins at each end and 2 mooring dolphins on the West side.

On the East side there are quick-release hooks along the shore line. All mooring points are provided with quick-release hooks and capstans for hauling the mooring lines.

Berthing: Ships always berth port side to. Vessel is to proceed at slow speed towards the berth passing North of Buoy No. 2 (on some charts designated as Buoy RB "A") and East of the patch of 57 ft. reported in 1970. Tugs are in attendance. 2 mooring boats strong enough to handle (100,000 d.w.t.) wire ropes are available. Some difficulties have been reported when running lines ashore at the Eastern side since the mooring launch, because of shallow water, cannot get close to shore and rope pick-up winches at times are malfunctioning. Additional messenger lines are normally required from the vessel. The use of wires as headlines should be avoided.

Cargo Handling: Both crude oil and petroleum products are handled at this pier. For crude discharge 4×10 in. ASA hoses are used. Distance to tanks 7 miles. Ship's port side manifold to be ready with blanks removed and adaptors fitted if necessary.

Ballast/slop facilities are available and consists of 1×12 in. line of about 1,000 ft. long with a tank capacity of 80,000 bbls. The maximum acceptable quantity, however, is restricted to 50,000 bbls.

IMMIGRATION:

1. *Prior to Departure for Guam:*
   - A. Visaed Crew List: Prepare 1 Crew List on U.S. Form I-418 and have it visaed by a U.S. Consulate at a port prior to Guam. Without this, crew shore leave may be denied.
   - B. Passengers must have a valid passport and also must have an appropriate U.S. Visa whether landing or not on Guam.
   - C. Intransit passengers do not need U.S. visa if the Owners of the vessel have signed a contract called "Immediate and Continuous Transit Agreement" with the Commissioner of Immigration at Washington, D.C.
2. *Prior to Arrival at Guam:*
   - A. Passenger List, Form I-418 prepare 3 copies of Passenger List on U.S. Form I-418 (for Immigration, Customs and Agent).
   - B. Passenger Landing Card: Form I-94. Prepare or have on hand, 1 U.S. Form I-95A for each alien crew member. Not required if crew member is a permanent resident with U.S. I-184 laminated "Crewman's Landing Card". Not required of U.S.A. Citizens. Please present form I-95A in appropriate Seaman's passport or identification book. Form I-95A can be used repeatedly for future arrivals of same crewman on same ship at any United States Port.
3. *Upon Arrival at Guam:*
   - A. U.S. Federal Immigration Inspector boards upon arrival at pier, must see all passengers with their passport and Form I-94 and all crew members with their passport or identification books and Form I-94A or Form I-184.
   - B. Passengers and crew are required to be ready for inspection immediately upon docking at Guam.
   - C. No shore leave and no visitors or stevedores may board until this Immigration inspection is complete. The Inspector will advise Master when he has completed his inspection of passengers and of crew.
4. *Prior to Departure from Guam:*
   - A. Intransit Passengers: Pick up from intransit passengers the Form I-94 and hand to Agent before departing from Guam. These must be returned by Agent to U.S. Immigration as passenger departure records.
   - B. Alien crew member joining at Guam: Pick up from them the Form I-94 which they used to enter the U.S.A. These must be returned to U.S. Immigration by Agent as permanent records.

SECURITY: Guam Government Official usually boards at pier, examines vaccination cards and inspects Steward's stores and slop chest. Also represents U.S. Customs. Requires 1 Crew List, 1 Passenger List, 1 Stores List, Clearance from last port, later issues new clearance from Guam which Agents bring to ship. Normally does not seal stores or slop chest.

MARINE GUARD: Required when docked at Ammunition Pier, requires 1 Crew List.

MEDICAL: Foreign ships use Guam Memorial Hospital or other clinics in town. American ships use U.S. Naval Dispensary in Harbour area, or in emergency U.S. Naval Hospital near Agana, 10 miles distant. Certificates required signed by Master. Patient returns to vessel by taxi at vessel's expense. Dispensary hours for merchant seamen Monday to Friday 0800 – 1200 and 1300 – 1600 hrs. At other times, if emergency, use the U.S. Navy Hospital. Doctors will not normally visit ships.

Dentists: Private dentists only. Usual hours 0900 – 1700 hrs., Saturday to 1200 hrs.

REPAIRS: Commercial Yard and Casamar Yard available. Navy Yard, repairs by U.S. Naval Ship Repair Facility (SRF), subject to prior Navy commitments, and requires cash deposit in advance. Payment to be made for work done successfully or not. "No Cure No Pay" does not apply.

FRESH WATER: Very good, available any quantity, meter service.

FUEL: Marine Diesel Oil available by truck at any pier and by pipe-line at Berth "F3". Black oil available by pipe-line at Berth "F6". Both products also available by pipe-line at Berth "F1" (Gorco Pier) and the Mobil Pier. The distribution companies are Exxon, Gorco and Mobil. Infrequent fuel delivery restriction occurs when ammunition vessel working.

STORES: Available but considered expensive. Produce from U.S.A.; meats from U.S.A. and N.Z.; milk is recombined in quart cartons, white, chocolate or buttermilk. Order milk day prior to delivery; tropical fruits seldom available; ice in blocks or cubes. Prices wholesale, except under 1 case lots when at retail. Delivered to ship's gangway or hook.

LAUNDRY: Also dry-cleaning available 3 days service at U.S.A. prices. 1-day service extra. Delivered to ship's gangway or hook.

TIME: GMT plus 10 hours.

POLICE/FIRE/AMBULANCE: Ambulance U.S. Naval Dispensary, Harbour Area, Tel: 339-4224/4227. Fire Tel: 22222. Police – Naval Station Security, Harbour Area Tel: 333-2988. Police – Guam Civilian Police, Tel: Agana 777-9811

BANKS: Bank of America, Bank of Guam, Bank of Hawaii, Chase Manhattan Bank, Citibank, First Hawaiian Bank, Hong Kong and Shanghai Banking Corp.

WEATHER: *Tropical Typhoons:* The Navy Fleet Weather Centre of Guam broadcasts typhoon warnings. Weather forecasts are good and reliable; however, due to the particular geographical position of Guam it is impossible to definitely determine the track of approaching turbulence. These turbulences usually generate a few hundred miles South or S.E. and may easily divert when passing near Guam. There are four typhoon warning conditions.

Condition 4:
Typhoon winds possible within 72 hours;
Condition 3:
Typhoon winds possible within 48 hours;
Condition 2:
Typhoon winds possible within 24 hours;
Condition 1:
Typhoon winds possible within 12 hours.

During the typhoon season months of August through Decembe condition 4 exists at all times.

In case of a typhoon warning, (condition 2) the U.S. Navy invites a Masters for a meeting to discuss the action plan for evacuating the por

It is considered very dangerous to remain alongside or anchored withi the port when a typhoon is approaching Guam.

SHIPMASTER'S REPORT: April 1987.

I was advised that Agents can obtain permission to enter Guam o behalf of the Master. If a ship is fitted with telex this saves time an money over the U.S.C.G. Station NRV.

On this occasion, the vessel was unable to raise KUF-810 until withi VHF range. It was also noted that the Agency offices are in the same building as the Harbour Master. This Port Services Building also houses the U.S.C.G. and the Customs.

I was also advised that Daylight Saving Time is not being used by the present Administration, however the situation may change when a new Governor is appointed.

The 3 tugs in use are diesel electric, built in 1944 and estimated to be about 800 h.p. maximum. A tug of 1,700 h.p. is being sought a present.

This vessel used all 3 tugs when laden on a draft of 11.02 m. at the Mobil Pier - Berth "G". This pier is being renewed. At present the bert consists of 2 breasting dolphins only. The vessel used 3 × 6 in. floating hoses to discharge. No crew boats were available an a ship's lifeboat was used as a liberty boat. The new jetty should be i use in June 1987 according to the U.S.C.G.

Agent's name & address: Ambyth Shipping & Trading Inc., 1026 Cabras Highway, Suite 205, Piti, Guam 96925, USA. Telex: (721)640 AMBYTH GM. Fax: (671) 472 1264.

AUTHORITY: Port Authority of Guam, Government of Guam, 1026 Cabras Highway, Suite 201, Piti, Guam 96925. *Tel:* 477-5931/35. *Telex* (721) 6689 Paggum. *FAX:* (671) 477-2689. *Contact:* David B. Tydingco General Manager. Frank G. Santos, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Guatemala

GENERAL

DOCUMENTS:

Consular Documents:

Masters are required to:

1. Obtain a health and clearance permit, issued by the competent authority at the last port of call, and certified by the Guatemalan Consul, and;
2. Submit 5 copies of a general manifest of articles carried to each port of the country, approved by the Guatemalan Consul at the port of loading, and also, separate copies of the manifest for in-transit articles unloaded.

If no articles bound for the country are carried, a ballast manifest should be submitted.

Prior to Arrival:

Arrival Notice:

There is no minimum period for advance notice of the vessel's arrival, because Authorities exercise a degree of flexibility. However, it is recommended that notice be submitted in writing to the following sometime in advance: The Captain of the Port, Customs Administration and Customs Supervision of Unloading, Migration Delegate, Maritime Health, Plant Health Delegate and Port Watch. Notification must also be sent to the following agencies of the Port Authority: Port Administrator, Office of the Chief of Operations, Office of the Chief of Docks, Import Division, Export Division, Invoicing Division, Container Section (if any) and Pilots Division.

Information on Cargo for the Port:

If the vessel carries cargo to be discharged at the port, the following information will be submitted to the Port Authority:

Stowage Plan.

Cargo Distribution List.

Heavy Cargo List.

Amount of Exports.

If containers are carried to the port, 8 copies of the list of container contents and 8 copies of the list of complete shipments and of mixed shipments (for more than one consignee) are to be submitted to the Container Section.

This information may be submitted upon the vessel's arrival, so that no delays in the work will be experienced for that reason.

On Arrival:

Type of Documents	*Number and Distribution of Documents*

(a) Delivered to Post Office.

(b) According to the number of stevedores requested, more than 2 copies.

Other Requirements:

Requests for permission to load and unload are submitted to Customs, each on stamped paper and also, when appropriate, a request for overtime work.

Prior to Departure: The clearance permit is requested from the Captain of the Port 4 hours in advance, after obtaining clearance from Customs, on a clearance permit application, which is submitted on stamped paper.

UNIFORMS: Vessels have been fined when officers have not been wearing uniforms when boarded by officials for clearance inward.

CHAMPERICO: 14.17 N. 91.55 W.

DOCUMENTS:

Clearance from Last Port.

Travel Memorandum (original and 4 copies).

Declaration of Maritime Health.

Derat Exemption Certificate.

5 Crew Lists.

5 Passenger Lists or "no passengers" Declaration.

5 Provision Lists.

5 Dangerous Cargo, inflammable or explosives declaration.

5 Mail Lists or "No Mail" Declaration.

Manifests of Cargo from each port (original and 11 copies).

Bills of Lading from each port.

Vaccination Certificates for whole crew.

12 Ballast Manifests, if no cargo on board.

PILOTAGE: None.

ANCHORAGES: Without limit but recommended *not to anchor* less than 1 km. from beach.

MAX. SIZE: Vessels work cargo at anchorage in depth consistent with vessel's draft.

HEALTH: Give notice of any suspicious illness or fever on board when the doctor comes for official visit.

RADIO: ETA cables through Cristobal (Panama).

VHF: Channel 16.

TUGS: No tugs required.

STEVEDORES: No advance notice necessary. Possible to arrange gangs within an hour.

MEDICAL: Adequate advance notice required depending on gravity of case. Hospital 30 minutes away and possible to arrange transport for patient, also to arrange for doctor on board. Crew must have current International Vaccination Certificates.

TANKERS: No facilities for tankers.

DENSITY: Changes from 1022 in October to 1027 in April.

FRESH WATER: Free within port limits.

FUEL: No facilities.

CONSULS: None.

REPAIRS: Minor repairs only.

GANGWAY/DECK WATCHMEN: Available upon request.

OPENING/CLOSING HATCHES: Either by crew or by stevedores.

CUSTOMS ALLOWANCES: Without limit on board. Prohibited to take tobacco, wine or spirits ashore.

CARGO GEAR: Ship's gear used for loading/discharging.

REPATRIATION: All facilities available.

AIRPORT: International airport 3 hours distant with regular flights all over world.

TIME: GMT minus 6 hours. No alterations to clock during year.

HOLIDAYS: No work on 1st January, Maundy Thursday and Good Friday, 1st May and 25th December. The rest of the year work day and night.

POLICE/AMBULANCE/FIRE: All available.

TELEPHONES: Cannot be placed on the vessels.

IDENTIFICATION CARDS: Not needed.

SHORE LEAVE: No restrictions.

DELAYS: Some days in April and October the surge is very strong and work has to be suspended.

GENERAL: Possible to supply provisions, especially vegetables and shell-fish at good prices.

DEVELOPMENTS: Project to build a modern port with an entrance channel, artificial bay and capacity for 8 merchant vessels and facilities for fishing ships and tourist ships.

AUTHORITY: Empresa Portuaria Nacional de Champerico, 10A Calle 3-31, Zona 1, Guatemala City, Guatemala. *Tel:* 25-4-47, 85-2-16, 53-54-57. *Cables:* Epnac. *Contact:* Cnel. Antonio Batres Barreda, President. Gregorio Cifuentes, Administrator.

PUERTO BARRIOS: 15.44 N. 88.36 W.

DOCUMENTS:

Clearance from Last Port.

Crew List, 1 legalised and 9 copies.

Passenger List, 1 legalised and 7 copies or negatives.

Cargo Manifest, 1 legalised and 21 copies.

Stores/Provisions List, 3 copies.

Voyage Memorandum, 4 copies.

Bills of Lading, 2 sets.

Declaration of Health.

PILOTAGE: Pilot boards 2 miles off Puerto Barrios, from small unmarked launch. If awaiting Pilot, vessel may anchor about 3 miles North of Puerto Barrios, keeping port entrance clear. No VHF.

ANCHORAGE: In Santo Tomas Bay, depths up to 6 fathoms.

MAX. SIZE: Length 600 ft., draft 30 ft.

HEALTH: Advise Agent in advance if any fever or contagious disease suspected on board. Otherwise Pratique granted on arrival. Officials board only between 0600 hrs. and 1800 hrs.

RADIO: Coastal radio in Costa Rica, call sign TIM operating on 8485 kHz.

TUGS: No tugs available.

BERTHING: One pier owned by International Railway used to discharge fuel oil. 1,000 ft. berthing length on each side. A flag is shown on the pier to indicate where vessel will berth. Berthing recommended during daylight hours only. Tankers discharge on South side of the pier.

See "Shipmaster's Report" at Santo Tomas de Castilla.

MEDICAL: Doctor available. All crew require International Vaccination Certificates.

FRESH WATER: Available at the pier.

FUEL: Not available.

CUSTOMS ALLOWANCES: Normal daily consumption on board. No tobacco, wine or spirits to be taken ashore.

TIME: GMT minus 6 hours; no alterations during the year.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required.

AUTHORITY: Commandante del Puerto.

PUERTO QUETZAL: 13.55 N. 90.47 W. (See Plan)

DOCUMENTS: See "Regulations."

PILOTAGE: Pilotage is compulsory for all vessels berthing and sailing, but not for shifting.

ANCHORAGE: A vessel approaching from sea is permitted to anchor in front of the harbour not closer than 1 nautical mile without using a Pilot.

RESTRICTIONS: *Safe draft over the bar and channel:*

Maximum safe draft is 11 m. (36 ft.), the width of the channel is 210 m. (689 ft.).

Depth in channel and turning basin is 39 ft.

Docking of vessel at any time of the day: Docking is permitted by the Port Authority when the required documents have been presented and provided the vessel is to commence work. Vessels may dock at any time, but such movements are normally scheduled to fit in with time of granting of Free Pratique and of commencement of work.

Clearance of a vessel outward: This is normally signed by the Port Captain during hours prior to completion of work.

Restriction on sailing time: No restriction.

MAX. SIZE: LOA 210 m. Beam 32 m. Max. draft 10.5 m.

HEALTH: Free Pratique is normally granted all day, including Sundays and holidays.

Free Pratique at anchorage or at the wharf: Free Pratique is given either at the anchorage or after berthing. Where wharf space is available and vessels' documents have been presented, she would normally dock on arrival or at scheduled time for clearance, and receive Free Pratique at the wharf.

Free Pratique in Puerto Quetzal is granted when the party of officials visit the vessel to clear her inwards. These officials represent:

Port Captain
Customs Administrator
Port Health Authority
Quarantine Officer
Port Authority
Customs Guard (Guarda Hacienda).

A representative of the vessel's Agent is present and the offer of refreshments or soft drinks assists things along.

Where a vessel is cleared at anchorage, every effort should be made to lower a gangway, rather than expect the officials to use a pilot ladder.

In case the vessel does not have a Guatemala national flag aboard, a vessel would be well advised to cable his Agent to bring one to the vessel on arrival.

TUGS: Tugs are compulsory for berthing and sailing, but not when shifting without engine.

BERTHING: Berthing facilities in Puerto Quetzal consist of one wharf of 800 m. (2,624 ft.) of length, 56 m. (184 ft.) width including a ramp of 30 m. (98 ft.) length and 25.5 m. (84 ft.) width for Ro-Ro vessels. Depth alongside 11 m.

Fenders: The 800 m. wharf has rubber fenders with approximately 2×1.2 m. (4 ft.) diameter, spaced at 20 m. (66 ft.)

CARGO OPERATIONS: Average outturn per hour based on modern type vessels with large hatches, good winches/cranes:

Containers 20 ft. or 40 ft.	8 units/hr.
Iron & Steel products	50 tonnes
Iron & Steel products pre-slug	60 tonnes
Bagged cargo	30 tonnes
Drums	20 tonnes
General cargo	16 tonnes

These figures are subject to many variables, e.g. size of parcel, stowage, separation of marks, etc. Also when working iron and steel products pre-slinging would do much to assist.

Gear supply for handling cargo: The stevedore firms supply all necessary gear such as rope and wire slings, nets, forklifts of different sizes. Presently following forklifts in good condition exist: 1×36 ton unit, 1×15 ton, 3×7 ton, 3×4 ton, 3×3 ton and 2×2 ton units all owned by the stevedoring firms.

STEVEDORES: Normal working hours 0600 – 1700.

Labour: Presently there are about 1,200 stevedores in the City of San Jose which is always sufficient.

The average gang has the following personnel:

General Cargo:	Containers:
14 stevedores	8 stevedores
1 hatchman	1 hatchman
1 winchman	1 winchman
1 foreman	1 foreman

Change of gangs: The first shift of labour works from 0700 hrs. to 1430 hrs., the second shift from 1430 hrs. to 2130 hrs. and the third shift from 2130 hrs. to 0700 hrs. At midnight there is a break of 30 minutes for meals.

Advance notice to call a gang for commencement of work:

1. For the morning shift – Recommended to advise the night before, latest 2000 hrs.
2. During the day – 3 hours advance notice.
3. At night – Advise before 1700 hrs.

MEDICAL: Hospital facilities in Esquintla (54 km.) and Guatemala City (100 km.).

FRESH WATER: Available.

FUEL: Fuel oil, kerosine, diesel oil and gas oil available by road tanker.

REPAIRS: Minor repairs possible.

DRY DOCKS: None.

SURVEYORS: Lloyd's Register: Franklin Ltda. 12 Calle "A" 2-34, Zona 1, Guatemala City. Tel: 8-32-33, 53-68-26.

General Superintendence Co.: Centrans S.A. 6a. Ave 20-25, Zona 9. Attention: Mr. H. Preuss. Tel: 370134/35.

P & I Club's Representation: Ing. Jack Sigal, Torre Professional No. 1, Guatemala City. Tel: 531452.

GANGWAY/DECK WATCHMEN: Private watchmen are available b are not compulsory for either on board or ashore.

Uniformed guards of the Customs Police (Policia de Hacienda) a stationed at the gangway free of charge.

However, it is recommended to keep vigilance to prevent cabins a storerooms, etc., being entered.

Vessels at anchor (however, presently there is no port congestion n is any expected in the near future) should also keep a strict watch f boarders.

No meals are required to be supplied by vessels in Puerto Quetzal t Customs, guards or any other persons.

AIRPORT: Distance to airport 8 km.

HOLIDAYS: *Legal and Local Holidays:*

December 31st 1800 hours until January 2nd 0600 hours	New Year's Day
March 19th 0000 hours until March 20th 0600 hours	Local Holiday
Wednesday 1200 hours until Saturday 0600 hours	Easter
May 1st 0000 hours until May 2nd 0600 hours	Labour Day
June 30th 0000 hours until July 1st 0600 hours	Revolution 1871
September 15th 0000 hours until September 16th 0600 hours	Independence Day
October 20th 0000 hours until October 21st 0600 hours	Revolution 1944
November 1st 0000 hours until November 2nd 0600 hours	All Saints Day
December 24th 1800 hours until December 26th 0600 hours	Christmas Day

Due to the present situation (being a new harbour) the port work 365 days per year, however this could change later.

GENERAL: *Authorisation of lowering boat:* Lowering of boats require permission which is normally granted by the Port Captain.

Regulations regarding explosives and ammunition at Puerto Quetza

Explosives and ammunition are only allowed to be discharged on scheme whereby they leave the port area immediately and a notice 24 hours should be given prior to arrival.

Cargoes remaining on board are not covered by any particula regulations.

Local guidance on stores and availability of items:

Deck Stores: The few available items are expensive.

Engine Room spare parts: Even well-known makes are almost non available.

Lubricating Oils: The commonly used ones are available in sma quantities, but special ones are not obtainable.

Stewards Department: Most dry stores are expensive with fe exceptions and quantities are limited.

Fresh fruits, vegetables, seasonally available in moderate quantities at reasonable prices, likewise fish, poultry, fresh beef and pork. (Bee bought in Guatemala is accepted as safe in the USA, but not so th pork – confirm with respective Authorities.)

Laundry service: Available at a reasonable cost.

Radio/Navigational Aids: Spares are not generally available an service of a very limited nature only. Better service can be obtained Guatemala City. (Each case should be investigated by Agent.)

Important: Ship's spare parts can be sent to a vessel calling at Puert Quetzal by air – or by sea freight but care must be exercised in the addressing and marking, as otherwise local import duties may b imposed. All such items should be clearly addressed to the vessel, care of the vessel's Agent, and must say the Spanish for "in transit the phrase "EN TRANSITO". This ensures that the goods can be treate and may be exported on the receiving ship without problems.

Any such movement should always be co-ordinated with the loca Agents, who should be kept fully advised of same.

REGULATIONS: The following is a translation from Spanish.

Operation Regulations for the Provision of Services in the Port Quetzal:

Article 4: Programming Arrivals:

Eight (8) days prior to the end of the month, Ships' Agents mus present in writing or by telex to the Commercial Department programme with the approximate date of arrival of vessels for the comin month, and keep this programme up to date.

Article 5: Request for Guarantee Deposit:

Ships' Agents must request the Commercial Department for th amount of the guarantee deposit as established by Article 5 of th Government Agreement 825 – 83.

Article 6: Guarantee Deposit:

In exceptional cases, the guarantee deposit can be lodged at th Fiscal Treasury Office of the Port Services Division in Puerto Quetza

Article 7: Request for Services:

Ships' Agents must present to the Port Services Division the reque for services 24 hours in advance of the arrival of the vessel, when sh is coming from Acajutla or Champerico. When the vessel is coming fro other ports, the Agent must comply with Article 6 of the Governme Agreement 825-83, by means of the General Request for Services form In both cases, Authority must be requested to contract a spec stevedoring concern.

Article 8: Authorisation of Request for Services:

The Request for Services will be authorised after it has been verifie that the corresponding regulations have been complied with.

Article 9: Confirmation of Arrival:

Ships' Agents must submit in writing to the Port Services Divisi confirmation of arrival of their vessels 12 hours in advance, with th exception of vessels coming from Acajutla or Champerico, in respect which confirmation may be given 6 hours in advance.

Article 10: Documents required prior to the provision of services:
Ships' Agents must provide in advance to the Port Services Division the following documents in an accurate and legible form:

(a) For imports of general cargo:
- 2 stevedoring stowage plans
- 2 sets of bills of lading
- 2 tally books for each hold of the vessel to be worked and 2 for the office
- 5 sets of cargo manifests, 4 lists of direct cargo.

(b) For imports of solid bulk cargo:
- 2 sets of bills of lading
- 5 sets of cargo manifests, 1 stevedoring plan, 2 sets of tally books per hold.

(c) For imports of containers and lorries:
- 2 stowage plans
- 2 sets of bills of lading
- 4 container listings (sequency lists)
- 1 packing list per container
- 5 sets of cargo manifests

(d) Imports of Vehicles:
- 2 stowage plans
- 2 sets of bills of lading
- 4 tally books
- 5 sets of cargo manifests

(e) For exports:
- Complete shipping lists authorised by the Customs, 1 set per hold and 3 additional sets
- 4 sets of export manifests
- Container lists – 1 set per hold and 3 additional sets.
- 1 packing list per container.

Article 11: Period for delivery of documents:
Import documentation must be presented at least 3 days prior to the arrival of the vessel, the order for shipment and the list of containers to be loaded 12 hours prior to commencement of the operation, and the export manifest within 12 hours after sailing.

Article 12: Goods not covered by the manifest:
Discharge of goods which are not on the manifest is not permitted without due written authorisation from Customs. Once discharge operations have been completed and not later than 12 hours afterwards, the Ship's Agent must present the corresponding additional manifest to the Port Services Division.

Article 13: Letter of Correction:
Where there are discrepancies between the bill of lading and the cargo manifests, the Ship's Agent must present to the Port Services Division a letter of correction within a period not longer than 24 hours after delivery of the documentation indicated in Article 10 of these regulations.

SHIPMASTER'S REPORT: December 1984.
Limited operations commenced on 18th March, 1983.
Currently, services are provided with the following minimum organisation:
- Port operations.
- Maritime and Communication operations.
- Financial and Administrative Services, and the additional personnel to provide other support services.

These offices operate in module buildings constructed for this purpose in the port area.

Services to Vessels:
- Right to berth.
- Aids to navigation.
- Service of pilot launch.
- Pilotage.
- Mooring, berthing, and vice versa.
- Stay in port.
- Anchorage.

Protection Works: The sheltered area is formed by a major (West) breakwater 1,140 m. long, the minor (East) breakwater 307 m. long, and a secondary North Dock with a length of 367 m. These works ensure a minimum of rough water inside the port and maximum safety for vessels.
Access Channel: The access channel to the dock provides safety and facilitates entry and leaving of vessels to and from the sheltered area. It has a minimum width of 210 m. and a depth of 12 m. at the lowest tide.
Manoeuvring Basin: This offers safety and facilitates manoeuvring of vessels. It is circular with a diameter of 400 m., and a depth of 12 m. at the lowest tide.
Berthing: The main quay, situated in the Eastern part, was planned as a multi-purpose terminal. It has a length of 800 m., and a free platform of 56 m. width. It includes a ramp 30 m. long and 25.5 m. wide, provided with two mooring devices at the sides with capacity of 100 tonnes, and with a predominant slope of one in ten for serving Ro/Ro vessels. It is located at the Northern extremity.

The whole quay is provided with rubber defences and bitts for mooring vessels. Its crown dimension is +4.5 m., and a depth of −11 m., giving a total of 15.5 m.

The South Quay has a length of 170 m., for berthing smaller ships. Its crown dimension is +4.5 m. and its depth is −5 m., giving a total of 9.5 m.

The Service Quay is 50 m. long and is for servicing small craft. Its crown dimension is +4.5 m. and its depth is −5 m.

Types of vessels handled:
- General cargo.
- Solid bulk cargo.
- Containers.
- Ro/Ro.
- Barges.
- Tourist passenger vessels.

Stevedores: Cargo handling services are provided by private concerns duly authorised by the Port Authority.

Ship's Agents and brokers arrange cargo handling with the stevedoring companies who in turn are authorised to provide such services.

The following services and direct cargo handling are available:
- Receipt and clearance.
- Loading and unloading.
- Handling on quay.
- Storage in the open.

Storage: It has been planned to place at the disposal of users a multiple use warehouse 90 m. long and 80 m. wide. This warehouse will have an area covered by metal structures and concrete walls, and fitted with fire-fighting equipment.

Attached to the warehouse will be a module housing the warehouse guard, Customs inspection, port checkers and wharfingers.
Airport: There is an airport with capacity to receive any type of commercial aircraft 8 km. away.

There is also the runway of the Aeroclub de Guatemala and the installations of the Tourist Complex of Likin.
General: Puerto Quetzal is a terminal of the system of inter-ocean communication with the ports of the Atlantic, which are 406 km. distant by road and 443 km. by rail.

The new port is reached by land via the asphalted highway CA9 at a distance of 110 km. from the capital. There is also rail connection, and both means of communication connect with the country's network of roads and railways. The motorway from Escuinta to Puerto San Jose has yet to be built.

SHIPMASTER'S REPORT: January 1985.
Fresh Water: Said to be possible, ex road tankers. Very expensive.
Painting: No painting and/or scraping either on board or on hull can be done. Granting of permission takes at least 2 days.

AUTHORITY: Empresa Portuaria Quetzal, 7A Avenida 3-74, Zona 9 (6o. Nivel), Ap. Postal 206-A Guatemala City, Guatemala, C.A. *Tel:* 319101, 319133 and 319152. *Telex:* UNECPU-GU 6134 Cuidad Guatemala. UNECPU-GU 6315 San Jose, Escuintla.
Contact: Francisco Motta Lemus, General Manager.

SAN JOSE: 13.55 N. 90.50 W. (See Plan)

NOTE: Very little cargo handled. Vessels now proceeding to Puerto Quetzal.
DOCUMENTS:
- Clearance from Last Port.
- Crew List, 1 legalised and 4 copies.
- Passenger List, 1 legalised and 7 copies.
- Passengers in Transit List, 4 copies.
- Cargo Manifest, 1 legalised and 19 copies.
- Stores/Provisions List, 3 copies.
- Voyage Memorandum, 4 copies.
- Cargo Check Lists, 18 copies.
- Mail List, 7 copies.
- Bills of Lading, 2 sets.
- Baggage Declaration, per passenger, 4 copies.
- Declaration of Health.

PILOTAGE: Not required and no resident Pilots available, except for Tankers where services of a Pilot could be made available upon request.
ANCHORAGE: San Jose is a lighter port (open roadstead). Vessels anchor about 0.25 mile from pierhead in 8–9 fathoms of water.
RESTRICTIONS: Normally no pratique granted after 1900 hrs., although in some instances and if prior arrangements made, vessels could be received by Port Authorities up to 2300 hrs. Tankers moor in daylight only.
MAX. SIZE: Size immaterial since no docking facilities. Cargo transported from vessel to pier and vice-versa by means of steel lighters or barges of 35 tons capacity each. This applies to dry cargo only. Bulk, liquid cargo at respective terminals (oil and oil by-products, imports, and molasses export), where vessels proceed after pratique.
HEALTH: Pratique automatic (0700 hrs. to 1900 hrs.), irrespective of previous port of call. Master's obligation to notify Authorities on arrival of any suspected disease and/or fever on board, in order that adequate precautions taken.
RADIO: Messages should be routed via Guatel.
TUGS: None available or required for manoeuvring vessels.
BERTHING: New port 2 miles East of San Jose Pier (See "Puerto Quetzal.")
STEVEDORES: No gangs available after 2100 hrs., unless another vessel is working in port. Rate of discharge/loading: dry cargo: 15–20 tons per gang hour. Max. gangs available: 3. Bulk cargo handled ten times faster.
MEDICAL: Hospital available. No vaccination/fever certificates required.
TANKERS: 2 buoy berths for tankers. Discharging lines 8 in. diameter. Esso Terminal: Mooring Master assists berthing. IRCA Terminal: Stern discharge.
FRESH WATER: None available.
FUEL: None available.
CONSULS: All Consulates located in Guatemala City, where vessels' Agents, when and if required, have special documents legalised. Normally, however, Agents can take care of regular certifications required, through port officials, who are authorised to certify documents in absence of a consul of a particular nation.
REPAIRS: No facilities available.
GANGWAY/DECK WATCHMEN: None required or necessary.

OPENING/CLOSING HATCHES: By stevedores.
CUSTOMS ALLOWANCES: On board, no restrictions; no crew member allowed to bring ashore more than amount required for personal use.
CARGO GEAR: Ship's gear used for loading and discharging dry cargo. Vessels must bring own lines to tie lighters alongside.
REPATRIATION: Possible. Usually arranged by Agents in cooperation with vessel's Agent in Guatemala City.
AIRPORT: Nearest airport Guatemala City, 108 km. due North of San Jose. Daily flights to and from all parts of world.
TIME: Central Standard Time, GMT minus 6 hours. No changes during year.
HOLIDAYS: January 1st; Holy Thursday; Good Friday; Easter Saturday; March 19th; May 1st; June 30th; July 25th; September 15th; October 20th; November 1st; December 24th; December 25th; December 31st.
POLICE/AMBULANCE/FIRE: These can be contacted through Agent at San Jose and/or Guatemala City.
TELEPHONES: No facilities for placing telephones on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Necessary for those on shore leave.
DELAYS: Only 2 dry-cargo vessels can work simultaneously. A third vessel must await departure of 1 of the first 2. Only 1 tanker can work at each bulk liquid cargo terminal.

SHIPMASTER'S REPORT: September, 1978.
Approach was direct from the Pacific. A good landfall was made. San Jose main Light was observed to be Isophase, rather than Occulting, every 20 seconds.
Anchorage: Vessel anchored in a position with the head of the Iron Wharf bearing 011°(T) – 8 cables. We lay to 4 shackles of cable on the starboard anchor, in 13 fathoms of water. Despite a considerable swell at times, the vessel did not drag her anchor. If anchoring, vessels do not take a Pilot.
Berthing: Ocean-going vessels and at times, due to the swell, almost any vessel, cannot berth alongside the wharf. While we were at San Jose a tanker of about 20,000 d.w.t. berthed stern-on with both anchors down, to load molasses.

I understand that, if no tanker is expected, general cargo ships are sometimes berthed in this manner. The tanker employed a Pilot.
Communications; If at anchor, it is best to keep radio watches and maintain long-range communications in this way. When working cargo, the Supervisor is in VHF communication with the Agents, but this facility is not available outside of working days.
Documents: As per "Guide to Port Entry". It was not possible to get any documents legalised prior to arrival, but this was arranged by Agents, as also was legalisation of documents for subsequent Central American ports.
Cargo Work: Continuous, weather and the supply of lighters permitting. There are only 3 general cargo gangs in the port and only 2 ships can be worked at a time. The first ship gets 2 gangs, the second ship 1 gang.

Many delays were experienced waiting for lighters, and 2 full days discharging time were lost due to the size of the swell.

This is not a very serious problem alongside the ship, but makes discharge of the lighters at the wharf impossible.

Rate of discharge of coiled steel rods was 55 tons per gang-hour, net of delays awaiting barges.
Pratique: Granted on arrival.
Provisions: Not purchased.
Fresh Water: Unobtainable at the anchorage.
Shore Leave: Permitted, but one has to take one's chances of getting a ride to and fro on the lighters. Not many people went ashore and fortunately none were stranded when work was suspended.

SANTO TOMAS DE CASTILLA: 15.42 N. 88.37 W. (See Plan)

DOCUMENTS:
The following are the documents required from each port at which cargo is loaded for discharge in Guatemala, all to be in the Spanish language.

	In Advance	*On Board*	*Consularised*
Consular Clearance	—	—	—
Cargo Manifests, copy	—	35	1
Cargo Manifests, freighted	—	1	—
Copy Bills of Lading (not freighted)	—	3	—
Cargo Plans	—	3	—
Hatch List	—	3	—
Crew List	—	8	1
Stores Lists	—	8	1
Passenger Declaration*	—	8	1
Arms Declaration*	—	8	1
Mail Declaration*	—	8	1
Clearance from Last Port	—	1	—
Maritime Declaration of Health	—	1	—
Crews Personal Effects Lists	—	4	—

* Where these are negative, may be combined in one form.

Consularised documents may be put aboard the vessel, or sent with advanced documents. Above requirements do not include the Agents need such as distribution of Bills of Lading to customers and his own needs for accounting and files purposes. *Consularised documents are not necessary as the fine imposed locally consists of maximum quezales 40.00 per port,* as Guatemalen Consulates may not be at a specific port of loading or their offices are closed.

PILOTAGE: Compulsory for all vessels arriving, leaving a manoeuvring within the port limits and available 24 hours a day. Pilot taken on board 3 miles off the quay.

The pilot station and the Control Office of Maritime Traffic of the Na maintains listening on R.T. frequencies 2738 kHz, and Channel 16 VH

The pilot craft are painted white, flying a red and white flag by da and red and white lights by night, they have VHF radio, but no radar.

The pilot craft base is the Santo Tomas de Castilla Quay, as well a the pilot station, and they will proceed to provide service once requeste by the Ship's Agents.

The ladder for the Pilot to board must be positioned on the lee sid of the vessel 1 m. above the water, but any alternative may be agree between the Pilot and the Master of the vessel.
ANCHORAGE: Vessels with a draft up to 24 ft. can anchor about 1 mil to the North of Villedo Lighthouse, leaving the main channel free, bu vessels drawing more water should anchor a little further away from th lighthouse.

The Pilots will anchor vessels with less than 24 ft. draft in the inne bay, i.e. nearer to the port, depending on the position of vesse anchored.
APPROACHES: As aids to navigation, there is a lighthouse at Cab Tres Puntas, Ox-Tongue Lighthouse, Heredia Lighthouse, Villed Lighthouse, the access channel together with the manoeuvring basi being marked by light buoys, driven by batteries recharged by sola energy.
Note: The channel buoys have been changed to the International Rule (Inbound starboard - green) with radar-reflectors placed on then (7 buoys).
Lighthouse: A radio-tower is located in Pto. Barrios with a visibility o approximately 20 miles (Fl. 10 sec.), well marked on the chart.
Chart: Approach to Santo Tomas de Castilla – U.S. chart GUA 03 28165 1st Ed. Jan. 84.
RESTRICTIONS: The channel has a depth of 30 ft., at the margina quay there is a depth of 33 ft.
Docking/Undocking: Docking is permitted by the Port Authority whe the required documents have been presented and provided the vesse is to commence work. Vessel may dock at any time, but such movements are normally scheduled to fit in with time of granting of Free Pratique and of commencement of work.

Once docked a vessel can stay at the wharf waiting for cargo during a longer period of time, for example overnight. However if space is needed to work another vessel with cargo available then the vesse losses its dock space.

There is no restriction on time of sailing.

Clearance is normally signed by the Port Captain during hours prio to completion of work.
MAX. SIZE: Max. draft 27 ft. – 30 ft. Max. LOA 750 ft.
HEALTH: Free Pratique is normally granted all day, including Sundays and Holidays.

Free Pratique is given either at the anchorage or after berthing. Where wharf space is available and vessels' documents have been presented she would normally dock on arrival or at scheduled time for clearance and receive Free Pratique at the wharf.

Free Pratique in Santo Tomas is granted when the party of officials visit the vessel to clear her inwards. These officials represent:

Port Captain
Customs Administrator
Port Health Authority
Quarantine Officer
Port Authority
Customs Guard (Guardia Hacienda)

A representative of the vessel's agent is present and the offer o refreshments or soft drinks assist things along.

Where a vessel is cleared at anchorage, every effort should be made to lower a gangway, rather than expect the officials to use a pilot ladder.

In case the vessel does not have a Guatemala national flag aboard a vessel would be well advised to ask his Agent to bring one to the vessel on arrival.
RADIO: ETA cables to Agent and Receiver made through Lantana Radio, Florida (WDE) in the U.S.A.
VHF: The distance at which VHF communication can be established with the Santo Tomas de Castilla pilot station is 16 nautical miles, i.e. the distance at which Cabo Tres Puntas (Three Points Cape) is from the port.

When the Pilot is manoeuvring, communication with the tugs is via Channel 12 VHF.
TUGS: It is compulsory to use at least 1 tug for any type of manoeuvre depending on the size, structure, location where the manoeuvre is being executed, and the state of the weather, the Pilot will decide upon the use of a second tug. The port currently has available 3 tugs - 1×1,200 h.p., 1×1,100 h.p. and 1×700 h.p.
BERTHING: The quay is marginal with a length of 914.51 m., being divided into 6 berths of 152.40 m. (approx.) each. The depth of water alongside the quay is 33 ft., the water is saline, and for discharge and loading of goods, facilities are available for day and night work. The vessel's own gear and equipment is used, and in special cases shore equipment. It is necessary that prior to the arrival of the vessel's relevant and general information be provided regarding the cargo carried by the vessel, so as to allocate the corresponding berth, as well as equipment and storage warehouses.
CRANES: The port currently has 3 mechanical scoops (type P&H 2 with a lifting capacity of 35 tons and 1 with a capacity of 7.5 tons. A mobile jib crane on rails capable of covering a distance of 400 m approx., and with a lifting capacity of 30 tons. There is also a fixed crane with a lifting capacity of 50 tons. The Authority has no floating cranes.

The port can work conventional vessels, container and Ro/Ro ships solid and liquid bulk carriers, and for operating solid bulk carriers, the Authority has a Buhler unit with a capacity of 100 t.p.h. discharge and mechanical scoops with grabs. Liquid bulk carriers visiting the port discharge and load products via tubes and hoses, conveniently installed along the quay.

SPECIALISED CARGO HANDLING FACILITIES: There are 4 berths for Ro/Ro vessels operation.

For handling container ships there is 2 Straddler carriers with a lifting capacity of 40 tons and stowage at 3 high, 2 Raygo-Wagner fork-lifts with 40 tons lifting capacity and stacking height to 3 high, 2 spreaders, 1 for 40 ft. and 1 for 20 ft. containers, 9 winches and 8×40 ft. platforms. 79 forklift trucks up to 8,000 lb. capacity. 15 reefer points available.

STEVEDORES: The Port Authority provides the stevedoring service in accordance with the applications for service submitted by port agents.

Labour:

(a) Amount of gangs available to work:
Presently there are about 2,000 stevedores in the City of Puerto Barrios (5 km. from Santo Tomas) which is always sufficient.

(b) Amount of stevedores employed in a ship's gang:

General Cargo:	14 stevedores
	1 hatchman
	2 winchman (even if only one is required)
	1 foreman

Container and Trailer vessels:
Same amount of men per gang, which can be used for different cranes/hatches at the same time.

(c) Change of gangs:
The first shift of labour works from 0700 to 1700 hours, the second shift from 1800 until 0600 hours.
Breaks for meals are as follow:

Breakfast	0600 - 0700 hrs.
Lunch	1200 - 1400 hrs.
Supper	1700 - 1800 hrs.
Break	0000 - 0100 hrs.

(d) Advance notice to call a gang for commencement of work:
1. For the morning shift - the day before lastest 1700 hrs.
2. During the day - 3 hours advance notice
3. At night - advise before 1530 hrs.

(e) Average outturn per hour based on modern type vessels with large hatches, good winches/cranes:

Containers 20 ft. or 40 ft.	8 units/hr.
Iron & Steel products	25-30 tonnes/p.h.
Iron & Steel Products pre-slung	60 tonnes/p.h.
Bagged cargo	20-25 tonnes/p.h.
Drums	20-25 tonnes/p.h.
General cargo	15 tonnes/p.h.

These figures are subject to many variables, e.g. size of parcel, stowage, separation of marks, etc. Also when working iron and steel products pre-slinging would assist.

MEDICAL: No advance notice necessary. Hospital facilities and ambulance service available. International vaccination certificate required.

TANKERS: Diameter of pipe-lines 16 in. and load/discharge lines 14 in. No slop discharge facilities. Only 1 mooring berth for tankers and max. draft permitted 30 ft. Also see "Shipmaster's Report".

DENSITY: 1015.

FRESH WATER: Pipe-lines alongside quay. Delivered by hoses belonging to port. Rate 15 t.p.h.

FUEL: Available by lorry no advance notice required. Products available: Fuel oil, kerosene, diesel and gas oil.

FIRE PRECAUTIONS: No specific precautions for tankers. Hydrants and fire brigade available to combat fires, besides tug's services and Coast Guard ships of Navy. Dangerous areas to be clearly signposted.

CONSULS: El Salvador, Germany F.R., Honduras, Italy, Mexico, Netherlands and Sweden.

REPAIRS: Only minor deck and engine repairs.

SURVEYORS: Lloyd's Register in Guatemala City. Tel: 8-32-33, 53-68-26.
General Superintendence Co. Tel: 370134/35.
Jack Sigal (P&I Representative) Tel: 531452 in Guatemala City.

GANGWAY/DECK WATCHMEN: Private watchmen are available but are not compulsory. The cost is approximately Quetz. 1.50/hr. during the day and Quetz. 2.25/hr. at night.

Uniformed guards of the Customs Police (Policia de Hacienda) are stationed at the gangway free of charge.

However it is recommended to keep vigilance to prevent cabins and storerooms etc. being entered.

Vessels at anchor should also keep a strict watch for boarders.

No meals are required to be supplied by vessels in Santo Tomas for Customs, guards or any other persons.

OPENING/CLOSING HATCHES: Normally by crew.

CUSTOMS ALLOWANCES: Tobacco, Wine and/or Spirits: No definite quantity and usually regulated by the Master.

REPATRIATION: Possible.

AIRPORT: In Puerto Santo Tomas de Castilla there is no airport. There is an airport at Puerto Barrios 8 km. away, and flying time from there to the capital, Guatemala City, is 45 minutes. There is no regular airline, but it is possible to hire air taxis.

TIME: GMT minus 6 hours.

HOLIDAYS: *Legal and local holidays:*
December 31st 1800 hrs. until January 2nd 0700 hrs. (New Year's Day); March 23rd 0000 hrs. until March 24th 0700 hrs. (Dignidad Nacional); Wednesday 1200 hrs. until Saturday 0600 hrs. (Easter); May 1st 0000 hrs. until May 2nd 0700 hrs. (Labour Day); June 30th 0000 hrs. until July 1st 0700 hrs. (Revolution 1871); September 15th 0000 hrs. until September 16th 0700 hrs. (Independence Day); October 20th 0000 hrs. until October 21st 0700 hrs. (Revolution 1944); November 1st 0000 hrs. until November 2nd 0700 hrs. (Saints Day); December 24th 1200 hrs. until December 26th 0700 hrs. (Christmas).

No work on Good Friday from 0600 hrs. until Saturday 0700 hrs. and December 24th from 1200 hrs. until December 26th 0700 hrs. with exception of perishible goods when the port can work on December 24th until 1800 hrs.

On all other holidays work can usually be arranged, with advance notice, and at overtime rates.

TELEPHONES: No facilities for placing telephones on board.

BANKS: Central Bank of Guatemala.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Passes issued to each crew member.

DELAYS: Maximum delays 3-4 days could occur at most 5 times during a year. Container vessels and reefer vessels have preference if they carry perishible cargo, same as vessels which carry coffee or load coffee with limitations in their sales-terms (L/C) such as 15th and end of a month.

GENERAL: *Dunnage Wood:* Dunnage wood is not available in the port however with enough advance notice it can be brought from Zacapa, approximately 150 km. (94 miles).

Local guidance on stores and availability of items:

Deck stores: The few available items are expensive.

Engine room spare parts: Even well-known makes are almost non-available.

Lubricating oils: The commonly used ones are available in small quantities, but special ones are not obtainable.

Stewards department: Most dry stores are expensive with few exceptions and quantities are limited.

Fresh fruits, vegetables: Seasonally available in moderate quantities, at reasonable prices, likewise fish, poultry, fresh beef and pork. (Beef bought in Guatemala is accepted as safe in the USA, but not so the pork – confirm with respective authorities).

Laundry service: Available at a reasonable cost.

Radio/Navigational aids: Spares are not generally available and service of a very limited nature only. Better service can be obtained in Guatemala-City. (Each case should be investigated first by Agent).

IMPORTANT: Ships spare parts can be sent to a vessel calling at Santo Tomas de Castilla by air or sea freight but care must be exercised in their addressing and marking, as otherwise local import duties may be imposed. All such items should be clearly addressed to the vessel, in care of the vessel's Agent, and important to state the Spanish for "in transit" the phrase "EN TRANSITO". This ensures that the goods can be treated and may be exported on the receiving ship without problems.

Any such movement should always be co-ordinated with the local Agents, who should be kept fully advised on same.

Regulations ruling explosives and ammunition at port:

Explosives and ammunition are only allowed to be discharged on a scheme whereby they leave the port area immediately and a notice of 48 hours should be given prior to arrival.

Cargoes remaining on board are not covered by any particular regulations.

Before working a vessel the Port Authority requests a deposit from the Agent, based on a Proforma. This is calculated by the manifest of inbound cargo and the expected exports. Without this deposit the vessel is not allowed to work.

SHIPMASTER'S REPORT: 1976

Approaches: No difficulty once position is ascertained approaching the Gulf of Honduras. The Pilot boarded 3 miles North of the Villedo Shoal Beacon. Pilots have VHF Channel 16 call Porto Barrios Pilots. Only 1 pilot speaks English so if he is on duty there is no difficulty in communications.

The lights on the approach beacons are said to be unreliable but all were found to be good radar targets.

At the present time a dredger is working on a new approach channel to give a 32 ft. buoyed channel past Puerto Barrios up to Santo Tomas de Castilla.

General: The area is still recovering from the severe earthquake some 8 months ago in which the finger pier at Puerto Barrios was destroyed. This now constitutes a submerged hazard while in the channel on the approaches to Santo Tomas de Castilla. The channel is poorly marked and at present there are numerous survey buoys which can be confusing.

The berth is stern to at the Eastern end of the cargo jetty at Santo Tomas using 2 anchors and backing up to 10 ft. off the jetty from where the hose is passed up to the stern line by a mobile crane. The connection is made by the ship's crew. There is a 1 × 8 in. hose for all grades into a 10 in. shore line which is approximately 5 km. long. The requested back pressure of 8.5 kg. was easily maintained using 2 pumps.

AUTHORITY: Empresa Portuaria Nacional – Santo Tomas de Castilla, *Tel:* 0480060, 0480611, 0480588, 539098. *Telex:* Stomas GU 719. *Contact:* Dollfus O. Sagastume, Director – Port Administration.

Republic of Guinea

CONAKRY: 09.31 N. 13.43 W. (See Plan)

DOCUMENTS:
6 Crew Lists.
6 Passenger Lists.
2 Stores Lists.
2 copies List of Medicines and Drugs.
2 Lists Crew Declaration (personal effects).
7 Manifests of Cargo (if any).
Port Clearance from last port of call.
2 Lists of Dangerous Cargoes (if any)
3 copies of Bills of Lading for LCL-Containers (if any).
2 copies of Loading Plan.
1 Derat Certificate.
3 Lists of Weapons and Ammunition (if any).
Documents to be presented on request:
Log Book
International Health Certificate of Crew Members.
Seamens Books.

CERTIFICATES: Derat Certificate, Log Book, International Health Certificates of Crew.

PILOTAGE: Pilot meets vessels N.E. of Sea Buoy Tonnelier in position Lat. 9° 27.3′ N., Long. 13° 44.05′ W.

Advise Captain of the Port of ETA by Telex No. 22276 PAC GE.

ANCHORAGE: Safe deep anchorage.

RESTRICTIONS: No entry at night. Channel depth 8.5 m. LLW.

The shore and harbour lights are not in operation but are scheduled to be set in operation in near future.

MAX. SIZE:

Bulk carriers for alumina:	518 ft. length; 32 ft. draft at HW.
Bulk carriers for bauxite:	655 ft. length; 33 ft. draft at HW.
Tanker for crude oil:	655 ft. length; 33 ft. draft at HW.
Tankers for light fuel:	518 ft. length; 32 ft. draft at HW.
Other vessels (Ro/Ro, Container, Conventional, etc.):	655 ft. length; 32 ft. draft at HW.

HEALTH: Valid yellow fever inoculation certificates.

RADIO: Conakry Radio 2182 kHz and 2586 kHz.

TUGS: 2 new tugs, 27 tons bollard pull. Tugs normally connect to starboard side. Ship's lines used.

BERTHING: All tankers berth according to HW. No berthing at night, except by special authorisation of Harbour Master on request. Normal berthing time 0700 hrs. to 1900 hrs. 10 berths available. Max. depth 11.0 m.

Berth No.	*Length* (m.)	*Depth* (m.)
0–1	346	10.0
2–5	483	8.0 – 8.5
6	155	7.0
6A–6B	180	2.0 – 4.0
6C	130	4.0
7	160	8.0
8–9	296	11.0

Notes: Depth of water is Port Zero (lowest low water).

Berths No. 6B and 6C for fishing boats and service vessels only.

STEVEDORES: Vessels to send ETA to ship's Agent.

Working Hours:

	Monday to Thursday and Saturday	Friday	Sundays and Holidays
Normal Working Hours	0730 –1500	0730 – 1300	—
Overtime Charges			
15%	1500 – 1800	1300 – 1800	—
25%	1800 – 2200	1800 – 2200	—
35%	2200 – 2400	2200 – 2400	—
50%	2400 – 0730	2400 – 0730	0730 – 1300
100%	—	—	1300 – 0730

MEDICAL: Advance notice required for medical service, hospital facilities available.

TANKERS: Pipe-line 5,280 ft. long, 10 in. diameter. 2 tanker berths, 33 ft./32 ft. high-water max. draft at these berths.

DENSITY: 1016 in the port with particular relation to state of tide.

FRESH WATER: Available by connection from pier.

FUEL: Available. Advise Agent.

FIRE PRECAUTIONS: Special fire service for tankers and ships carrying IMDG – goods..

CONSULS: All major maritime nations.

REPAIRS: Minor repairs possible, no shipyard.

GANGWAY/DECK WATCHMEN: Compulsory. Arranged by Agent.

Piracy: Large gangs of thieves have boarded vessels in daylight in the port and have stolen cargo from containers and holds.

OPENING/CLOSING HATCHES: Normally by crew. Stevedores if requested by Master.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes out of bond. Wine and/or Spirit, 1 litre of spirit and 1 litre of wine per day out of bond.

REPATRIATION: All facilities exist for effecting crew changes and arranging repatriation to Europe and other places.

AIRPORT: International airport Gbessia 14 km. served by regular airlines.

TIME: GMT plus 1 hour.

HOLIDAYS: New Year's Day (1st January); Labour Day (1st May); Anniversary of 2nd Republic (3rd April); Assumption (15th August); 1958 Referendum Day (28th September); Independence Day (2nd October); All Saint's Day and Guinea Army's Day (1st November); Christmas (25th December).

Varying holidays which depend on the position of moon: Ramadan – End of fasting; Tabaski – Pilgrimage Day at Mecca; Mahouloud – Day after Prophet Mahomed's Birthday.

Work available during holidays, except Labour Day, Independence Day, Ramadan, Tabaski and Mahouloud.

POLICE/AMBULANCE/FIRE: Contact Harbour Master.

TELEPHONES: Not possible to place telephones on board except a Berth No. 9.

SERVICES: None.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Seaman's Book necessary.

DEVELOPMENTS: The Access Channel is to be dredged to 9.5 between 1988 and 1991.

AUTHORITY: Port Autonome de Conakry, B.P. 805, Conakry, Republ of Guinea. *Tel:* 44.27.37. *Telex:* 22276 PAC GE. *Contact:* Banga Camara, Director General.

AGENT: Socopao Guinee, 10 E Avenue X 5E Boulevard, B.P. 333 Conakry 1, Guinea. Tel: (224) 444233, 443731. Telex: 22131 Freig Ge.

PORT KAMSAR: 10.39 N. 14.37 W. (See Plan

DOCUMENTS:
1 Vaccination List.
1 Maritime Declaration of Health.
6 Crew Lists.
6 Passenger Lists (If any passengers onboard).
1 Crew Declaration (Personal effects) List.
1 Stores List.
6 Last Ports of Call Lists.
12 Manifests of Cargo (General cargoes only).
2 Copies Bills of Lading (General cargoes only).

To ensure the best possible turn-round for general cargo vesse complete sets of the required cargo documents should be mad available to the authorities by hand of the Master. Delays have bee occasioned by the late arrival of documents sent by post. It would be help for the Master to send hatch distribution and the amount refrigerated cargo, if any, at the same time as ETA.

Quarantine, Immigration and Customs: Representatives of th departments board after the vessel has been made fast alongside. Th Quarantine Flag "Q" should be flown by arriving vessels.

ARRIVAL ADVICE: Masters are required to send ships ETA, addresse to OFAB Shipping Agency and/or to Harbour Master and/or Shippin Superintendent C.B.G., through Port Kamsar Radio Station, 7 day 5 days, 3 days and 1 day before arrival at Port Kamsar.

APPROACHES:

Approaches to Rio Nunez: Port Kamsar formerly known as Kakande located on the East bank of the Rio Nunez river and is approximately 17 km. from the sea.

Vessels bound for Port Kamsar will find there are few natural feature to aid a landfall. The most prominent feature is Cape Verga situated the Eastward of the Rio Nunez entrance. This cape can be observe by radar at a distance of approximately thirty miles. At present the lig on Cape Verga is extinguished.

To the Westward of the Rio Nunez entrance are the Compony Shoa and Conflict Reef. These are screened by a series of light buoys an vessels approaching from the West should keep them well on the po hand. (See "Buoyage System" below).

Another prominent feature is Gonzales Rock on the starboard sid close to the entrance to Rio Nunez. During daylight the hull an superstructure of a wreck stranded 765 ft. bearing 049.75° from the Gonzales light structure is visible and may be picked up by radar at distance of between ten and fifteen miles. A light buoy is positione screening the rocks and is identified as Buoy No. VII. The true positio of the wreck is: 10° 24′ 24″ N., 14° 41′ 18″ W.

Vessels proceeding to Port Kamsar should anchor and await th arrival of the Pilot in the area bounded by Latitudes 10° 26′ N. an 10° 28′ N. and Longitudes 14° 44′ W. and 14° 46′ W.

Kamsar Buoyage System: Approaches to Rio Nunez – Sea Buoys

No.	*Shape–Colour*	*Position* *N.*	*W.*	*Characteristic*	*Visi-bility (miles*
II	Red cylindrical	10° 12.3′	15° 25.5′	FL. 10 secs	5

VIII	Red cylindrical	10° 29.5′	14° 43.9′	FL. 10 secs	5

Charts of the area are as follows:
British Admiralty:
600 Cacheo River to Iles de los.
1562 Rio Nunez and Riviere Compony.
United States Naval Oceanic Office:
51580 Ponta Caio to Cap Verga.
Service Hydrographique de la Marine (These charts are recommend by the Port Captain):
6148 Embouchure du Rio Nunez.
6228 Acces au Rio Nunez.
6288 Abords du Port Kakande.

Rio Nunez Transit: The channel from the mouth of Rio Nunez to bauxite loading wharf at Port Kamsar is 17 km. in length and 120 wide and is well marked by 21 light buoys. The channel is subdivid into an inner and outer channel, the bottom of which consists of and sand.

The inner channel extends from the bauxite wharf to point "F" and dredged to between 8.25 m. and 8.50 m. below Reference Datum Le (R.D.L.) which is defined at +0.15 m. above the lowest water registe (British Admiralty Tide Tables LLWS = 0.00).

The outer channel extending from point "F" seaward is dredged depth of 9.00 m. below R.D.L. increasing to a depth of – 12.00 m. km. 15.3 to the sea.

The turning, waiting basin for inbound vessels is dredged to −7.75 m. below R.D.L. the bottom of which is mainly mud and it is good holding ground.

PILOTAGE: Pilotage service is compulsory for all vessels over 150 ft. LOA. Vessels under 150 ft. LOA will also be required to have a Pilot aboard on their first calls, but may be exempt thereafter by consent of the Harbour Master and approval of the Port Director.

Pilots are supplied from the Director's Office. Pilots board vessels in the designated waiting area at Sea Buoy No. 8. When conditions are too unfavourable for a Pilot to board the vessel at the designated area the Pilot will pass instructions by VHF radio, Aldis lamp or loud hailer from the pilot boat, and the vessel will follow the pilot boat in until conditions are suitable for boarding.

Pilot boats are fitted with VHF radio can be contacted on Channel 16 or 12.

ANCHORAGE: See "Approaches".

RESTRICTIONS: Pilots are now berthing ore carriers of any size (up to 229 m. LOA, which is the largest size of ship calling at Port Kamsar) at any stage of tide, including with the half ebbing current of Spring tides during the dry season. However, this performance can be limited during Spring tides in the rainy season.

MAX. SIZE: Max. LOA 229 m. Shipmaster reported max. draft at LW 42 ft. 8 in.

HEALTH: Authorities board when vessel is alongside the berth. Yellow fever and Cholera vaccination certificates required.

RADIO: The Port Radio Station is operated by the Post, Telegraph and Telecommunications Department. The equipment includes a 5 kW. transmitter (both voice and telegraph) with the following frequencies.

(A)

Frequency	*Power*	*Mode*	*Call Letters*
6383 kHz	5,000 Watts	A 1	3X0 27
8702 kHz	5,000 Watts	A 3	3X0 28
12885 kHz	5,000 Watts	A 3	3X0 29
484 kHz	1,000 Watts	A 1	3X0 30
500 kHz	1,000 Watts	A 1	3X0

NOTE: *Watchhours are at the GMT times shown below:*

0800 – 0850	500 kHz
0850 – 0950	6383 kHz
0950 – 1100	500 kHz
1100 – 1200	6383 kHz
1600 – 1700	500 kHz
1700 – 1800	6383 kHz
2000 – 2100	500 kHz
2100 – 2200	6383 kHz

(B) *Port Operations:*

(1) A new SSB radio telephone set has been installed and is operating on the following frequencies and watchkeeping hours:

Frequency	*Power*	*Mode*	*Call Letters*	*Watch Hours*
2182 kHz	150 Watts	A3H	3X04	8000–1200,
8702 kHz	150 Watts	A3J	3X028	1330–1730
12885 kHz	150 Watts	A3J	3X029	and as required

(2) VHF Channels 16 and 12. Watchkeeping hours: 0800 – 1200; 1330 – 1730 and as required.

(C) A Radio Direction Finder has been installed and is operating with the following characteristics:

Position:	10° 39′ 41″ North 14° 36′ 25″ West
Frequency:	308 kHz
Signal:	KAM – · – · – – –
Power:	100 Watts
Range:	150 miles (approx.)
Operating Time:	Continuous

(D) A further means of communication is through Port Kamsar Post Office through which international connections may be made.

Telegraphic address: BCTR KAMSAR.
Telex : Kamsar.

TUGS: Two tugs in service (1×825 h.p., 1×2,800 h.p.).

BERTHING: Located 17 km. from the channel entrance is the bauxite wharf.

The area alongside the wharf has been dredged to a depth of 13.5 m. below R.D.L. Fendering is separate from the wharf proper, and consists of 12 flexible steel dolphins spaced 21.6 m. apart and protruding 4 m. from the face of the wharf.

A vessel proceeding to the bauxite wharf will normally swing off the berth and make fast port side to, heading seaward, during the flood tide. If the berth is occupied the vessel will be anchored in the turning basin to await the berth.

There is a single loading berth at the wharf. The longest vessel berthed had a LOA of 229 m., which is considered to be the maximum length permissible.

The mobile shiploader has a travel of 165 m., and an outreach of 21 m. from the outside face of the fendering. It is rated at about 4,000 tonnes/hour.

A vessel's air draft, i.e. distance from the waterline to the top of the hatch coaming, must not exceed 13.72 m. (45 ft.) at Highest High Water.

Weight of bauxite loaded is determined by a formula using deadweight survey and weightometer. The weightometer is used for loading runs.

Stowage factor of the dried bauxite is 28 cu.ft./long ton.

Bauxite vessels sail from Port Kamsar during the flood tide. Maximum departure draft is regulated according to tidal conditions.

Facilities for the discharge of petroleum products are also available on the bauxite wharf. Attached to the shiploader is a Chicksan arm with an 8 in. connection. This feeds 2 main lines, 1×16 in. line for Bunker "C", and 1×8 in. line for Diesel. Discharge rates average about 450 tonnes/hour at 100 lbs. per sq. in. back pressure at the ships pumps.

Storage facilities are three 10,000 tons Bunker "C" tanks, and two 3,000 tons diesel tanks.

At the same wharf there is a 6 in. line for the discharge of petrol (gasoline) by the same tankers bringing diesel oil. Discharge rates average 60 cu.m.p.h. The storage facilities are two 1,400 cu.m. tanks.

There are 2 small general cargo wharves located at the entrance to the Dougoufissa Creek, where vessels of up to 100 m. LOA with a maximum draft of 6 m., may berth. As there is only 3.5 m. at Lowest Low Water, these vessels will be aground at low water periods.

One of these wharves is equipped with a heavy lift crane – derrick with a maximum S.W.L. of 110 tons. Safe Working Loads are as follows:–

Radius of derrick (metres)	*Lifting capacity* (tons)	*Height under hook* (metres)
16.5	110	29
26	75	23
32 (max.)	45	11

The derrick is also equipped with a secondary hook with a capacity of 20 tons.

Two 400 tons and two 200 tons barges are available for loading and discharging midstream.

WIND/WEATHER/TIDE: In the Rio Nunez approach area waves up to 4 m. can be encountered. At the entrance to the fairway or channel they are generally less than 1 m. high during the rainy season, and less than 0.5 m. high in the dry season. Waves and swell in the inner channel and harbour area are generally very moderate.

The tide, in the the proximity of the buoyed channel, runs N.N.E. and S.S.W. at 2.5 knots under normal conditions, but can reach 4.5 knots during Spring tides in the rainy season.

The flood tide runs parallel with the line of the bauxite loading wharf at a speed of up to 4 knots. The ebb tide, augmented by water coming out of the Dougoufissa Creek, runs through the bauxite wharf at an angle of approximately 20° at a speed of up to 4.5 knots on spring tides in the rainy season, tending to set the vessel off the wharf. It is therefore absolutely essential to tend moorings continuously, particularly on the stern of a loading vessel.

The density of the Rio Nunez at the bauxite loading wharf varies between 1013 (rainy season) and 1028 (dry season) at high water.

Port Kamsar has a typical tropical climate, which is characterised by two separate seasons.

Rainy season from June to October

Maximum rainfall	is during July and August mainly at night.
Relative humidity	is 70% to 80% during the day and 90% to 95% at night.
Temperatures	range from 17°C to 38°C, with an average of between 22°C to 28°C.
Wind conditions	Variable from between South and West, Force 3 to 6 Beaufort Scale. Possible tornadoes from between North and N.E. with wind reaching force 10 Beaufort Scale for short periods.

Dry season from November to May

Little rainfall.

Relative humidity	is 30% to 50% during the day, and 80% to 90% at night. There is often coastal fog in the mornings.
Temperatures	range from 15°C to 42°C, with an average of between 20°C to 35°C.
Wind conditions	Light breezes from the Southwest to West, force 1 to 3 Beaufort Scale.

MEDICAL: Hospital facilities at Port Kamsar are available only on an emergency basis.

TANKERS: See "Berthing".

FRESH WATER: Available in limited quantity on an emergency basis.

TIME: GMT.

HOLIDAYS: New Year's Day (1st January); Second Republic Day (3rd April); Labour Day (1st May); Independence Day (2nd October); Christmas Day (25th December); Tabaski (variable date); Ramadan (Id il Fitri) (variable date); Maouloud (variable date).

All Sundays are also declared Public Holidays. The President may also, at his discretion, declare any other day to be a Public Holiday.

The loading of bauxite is generally continued without stoppage for Public Holidays.

General cargo will not, except in special circumstances, be worked on above named Public Holidays. All other Public Holidays are normally worked.

SHORE LEAVE: Crew members are granted shore leave. Shore leave passes are issued by Immigration Officer at ship's gangway.

PIRACY: Acts of piracy have taken place at Conakry.

GENERAL: Stores: Provisions are scarce and therefore not available to calling vessels.

Gangways: Vessels must provide and attend their own gangways.

A vessel berthing at the bauxite wharf should have its gangway swung out and ready to lower.

Normal practice of the port is for the foot of the gangway to be heaved out and landed on the wharf after the vessel is fast alongside.

Port Director's Office: The office of the Port Director is solely responsible for the operation of Port Kamsar, which includes the provision of Pilotage, tugs and launches.

The Office acts as sole Agent for all vessels calling at Port Kamsar, including the normal ships business functions performed by ships Agents.

SHIPMASTER'S REPORT: 1974 – Updated 1986.

Density: Varies from 1013–1028 according to season.

Fresh Water: Available, rate 20 t.p.h.

Repairs: Small repairs can be carried out in an emergency.

Airport: Nearest airport is Conakry which is 8 hours away by car.

SHIPMASTER'S REPORT: August 1983 (Updated 1986).
Documents:
1 Vaccination List.
1 Maritime Declaration of Health.
6 Crew Lists.
1 Crew Declaration.
6 Passenger Lists (If any onboard).
6 Ports of Call Lists.
12 Manifests of Cargo (Cargo ships only).
2 copies Bills of Lading (Cargo ships only).
1 Stores List.

Agent, Doctor, Customs, Immigration, Navy Officer and Shipper's Representative board on arrival alongside to clear vessel. Later during office hours a gentleman from the Maritime Inspection Department will board to inspect vessel's certificates etc. On ship's first visit he will issue a numbered chit which should be *retained* for future visits. A shippers' representative will board on arrival to carry out a deadweight survey. He usually accepts Chief Officer's figures for ballast, bunkers, fresh water, etc., which he should have ready. 2 Immigration and 1 Customs Officer live on board for the duration of vessel's stay alongside.

Approaches: Are fairly straightforward following the pecked line route on Charts B.A. 600 and 1560, however this with the benefit of a 'Satnav'. Currents in that area were found over several voyages to be unpredictable and at times quite strong. No. III Buoy is equipped with a Racon which can be detected at distances of between 13 and 18 miles and should be passed keeping it to the South, thence inwards keeping to the South likewise of Nos. IV and V Buoys (also pecked line route) proceeding to the anchorage after passing Buoy V, or if entering port directly from sea to the pilot station usually about 1 mile South of No. 8 Buoy. Here the pecked line (Charts B.A. 1560 & 1562) should be adhered to in order to avoid the shoal patch S.S.W. of No. 8 Buoy.

Buoy III appears to be about 3 miles South of charted position and Buoy IV even further out of position. At the time of writing the light on Buoy III is extinguished, however the Racon is working well. Ile Binari and Ile Gonzales show up well on the radar. Rocher Gonzales upon which lies a conspicuous wreck, shows on the radar as a double blip and has been found most useful for obtaining fixes. Unfortunately neither the light or Racon on the reef work. Most of the buoys show up well on the radar and are visible for about 6 miles (conditions allowing). Off the river mouth flood tide sets Northeasterly and the ebb Southwesterly.

Pilotage: 3 pilots available. Pilots should be called on VHF Channel 16 about one and a half hours before arrival, they are supposed to keep a 24 hour watch, however if many vessels are waiting at anchor this is not always the case.

If berth is unoccupied, Pilot will meet vessel 1 mile South of No. 8 Buoy and conduct vessel through an 8.25 mile channel, well buoyed, 120 m. in width with a least depth of 8.25 m. to the inner anchorage and turning basin dredged to 10.0 m. Both anchors should be run out ready and a man standing by them for the channel passage. If entering on the flood tide (on which vessels must berth) immediately on entering the basin, vessel is swung to port and port anchor let go to one shackle (in water) until vessel has swung to flood, she is then dredged astern to a position N.W. of and handy to the berth, when anchor is weighed and vessel proceeds to berth. An adequately powerful tug assists in the operation. On weighing port anchor the starboard anchor must be ready in case of need on berthing.

If berth is occupied but no other ships waiting, vessel will enter as above, but when in position pay out cable and come to anchor. Holding ground is reputed good. As vessels of or near this size must sail one hour before high water Pilot rejoins about 1.5 hours before high water, cable is shortened and vessel dredged astern as above to await the sailing of berthed ship.

Anchorages: As will be seen on the charts the anchorage and pilot station area indicated is close to shoal water. I therefore found it preferable to anchor about 5 miles West of Rocher Gonzales. The holding ground is reputed to be good though I have never had opportunity to put this to the test.

Radio: Early ETAs have to be sent via Portishead Radio, however as these have to pass through Conakry and overland communications are poor, it is not unusual for these to be lost or badly delayed. It is therefore important to establish communication via Kamsar Radio as early as possible. Our earliest has been about 3 days from the port, when I have considered it worthwhile to repeat the 3 day ETA direct. The evening watch hours seem to be the best. Agents do not reply to requests for 'prospects'. First advice therefore is from the Pilots.

VHF: See "Pilotage".

Tugs: See "Berthing".

Berthing: If more than one vessel, waiting turn, order is: Vessel berthed, next on turn at inner anchorage, the rest anchored outside awaiting turn. Turns are not necessarily in order of arrival. If a ship is without laydays she must wait until laydays are allotted or until ships within laydays have loaded even though may have arrived later.

Bauxite Berth: An L shaped jetty extending about 6.25 cables from shore, it is well fendered with modern sprung fenders, depth alongside 13 m. Vessel berths port side to the quay head to flood. Tie up, forward 6 head ropes and 2 springs, aft 6 stern/breast ropes and 2 springs. On Spring tides and particularly during the rainy season, a very strong ebb sets at an angle across vessel's stern setting it off the quay. If need be the tug 'Dougoufissa' can be called on VHF Channel 16, either direct or via Pilots (depending on one's French) to stand by and/or assist by pushing vessel to quay.

There is no shore gangway. Ship's gantry must be landed on quay. As usual the space for it to run is restricted and it must be carefully kept out of the way of the loader.

Berth is equipped with a travelling loader with an outreach of 21 m. Max. airdraft to coamings (hatchcovers for siderollers) is 45 ft. Loading rate is up to 60,000 tons per day working around the clock. However during the rainy season and particularly if there is a run of ships, loading rate is limited by the capacity of the driers, about 1,500 t.p.h. for ships loading dry ore.

Max. sailing draft varies with height of tide and river, and will b calculated by the Pilot before he leaves the ship on berthing.

On sailing, Pilot will board 1.5 hours before high water (day or nigh at which time vessel should be ready to single up as she must leav the berth promptly 1 hour before high water.

Fresh Water: Available in limited quantities and on an emergency bas only.

Repairs: No facilities for repairs.

Shore Leave: Permitted.

Crew Mail: Mail left with Agents is forwarded to Brussels direct by a every Monday.

AUTHORITY: Direction du Port, OFAB, Port Kamsar, Guinea. *Contac* Captain M.L. Cisse, Port Director.

NOTES

Republic of Guinea Bissau

BISSAU: 11.51 N. 15.34 W.

DOCUMENTS:
Entrance Declaration.
Clearance from the last Port of Call.
List of all Passengers on Board, either in transit or disembarking in Bissau.
Provisions List.
List of the Crew Members' Effects.
2 Lists of Passengers' Baggage.
List of Cargo to disembark in Bissau, Baldeade (Bolama) or otherwise in transit to be disembarked in another port.
List of Cargo (inside sealed envelope).

PILOTAGE: Pilot's base and radio beacon located at Caio Point, (small island at the entrance of Geba's Channel). To call the Pilots and/or the radio beacon, send telegram to Servicosmarguine, informing of the ETA at Caio; pilotage is compulsory.

ANCHORAGE: Between Bissau and the Ilheu do Rei.

MAX. SIZE: Draft 26 ft.

HEALTH: Visit of Port Doctor compulsory if ship has no doctor, or if permission for exemption has not been requested; permission can be requested by radio. When needed, the health services in Bissau can be used by passengers or crew members. Yellow fever vaccinations required.

RADIO: Station call sign CQF weekdays on at 0900, 1300, 1600, 1800 hrs. GMT. Sundays 0900 and 1100 hrs. GMT. Frequency 500 kHz, CW.

TUGS: 1 tug of 320 h.p. and 1 of 800 h.p. available.

BERTHING: Ponte, Cais de Bissau, length 131 m., width 25 m., depth 8 m.
Equipment: 4×6 ton cranes; 2×12 ton stacker trucks; 2×4 ton stacker trucks; 4×2 ton stacker trucks; 2×6 ton towing tractors 16×6 ton trucks; 1×35 ton towing tractor; 1×25 ton platform; 1×50 ton towing tractor; 1×50 ton platform; 2 suction machines for 80 t.p.h.; 2×35 m. conveyor belts; 1×40 m. conveyor belt.

STEVEDORES: 1,500 stevedores available for loading and unloading cargo.

FRESH WATER: Available; pumping rate, 10 t.p.h.

FUEL: Diesel available; pumping rate, 6 t.p.h.

CONSULS: Algeria, Brazil, China, Cuba, Egypt, France, Germany F.R., Democratic Republic of Korea, Lebanon, Libya, Netherlands, Nigeria, Portugal, Sweden, U.S.A., U.S.S.R.

REPAIRS: Small repairing work can be done on machinery or ship's hull.

AIRPORT: 7 km. from Bissau; 2 flights to Lisbon per week, 1 flight per week to Moscow, 1 flight per week to Algiers and 4 flights per week to Conakry.

TIME: GMT minus 1 hour all year round.

HOLIDAYS: *National Holidays:* 1st January; 20th January; 8th March; 1st May; 3rd August; 24th September; 14th November; 25th December, Days of Ramadan and Tabasky.

POLICE/AMBULANCE/FIRE: Police, tel. 213957; Fire, tel. 118.

TELEPHONES: Line connection land-ship, if requested to the Post Office Authorities.

DEVELOPMENTS: "T" shaped general cargo pier length 290 m. with head length 260 m. under construction.

SHIPMASTER'S REPORT: November 1979.
Vessel from Dakar; bound for Bissau. Speed 14 knots, draft 6.10 m.
Report on the River Entrance to Bissau:
The vessel was proceeding on course 172° (T) and positions taken at various intervals as follows:
0920 hrs.: Cabo Roxo Lt. Ho. Brg. 054° (T) × 20.5 miles
0930 hrs.: Cabo Roxo Lt. Ho. Brg. 047° (T) × 22.0 miles
At 0920 hrs. minimum sounding was taken at 4.0 m. under the keel and Westerly set was applied.
At 0930 hrs. the vessel altered course to 137° (T).
1025 hrs.: Pta. Cabaceira Pt. Brg. 081° (T) × 31 miles
1145 hrs.: Pta. Cabaceira Pt. Brg. 057° (T) × 26.1 miles
1210 hrs.: Pta. Cabaceira Pt. Brg. 048° (T) × 21.5 miles
From 0930 hrs. onwards, poor fixes due to poor radar targets of land points.

From 1020 hrs. the vessel steered various courses to the Fairway Buoy at Lat. 11° 47.3′ N., Long. 16° 41.8′ W., due to strong currents.

At 1145 hrs. Fairway Buoy was found not in position and the vessel altered course and steered heading for pilot station at Caio Island. Caio Island Western Point was picked up on radar at about 16 nautical miles.

Visibility throughout was hazy and poor, about 3-4 nautical miles due to sand dust. Radio beacon at Caio Island was not working. Aero Radio Beacon at Bissau appeared to be unreliable.
1345 hrs.: Vessel anchored South of Caio Island awaiting Pilot.
1415 hrs.: Pilot onboard.

Pilot station at Caio Island had no VHF or other possible means for communication with the vessel. Vessel had to anchor and await Pilot. The Pilot boat is small with a weak engine and at times not working. The Pilot may have to be picked up by own lifeboat. The River Pilot did not speak any English, only Portuguese and was unable to give proper orders to the helmsman. Navigation in River Geba to Bissau was mostly done by the vessel's officers. Entrance and departure from Bissau cannot be done during the night, as most lights and buoys are unlit. On arrival at Bissau the vessel has to anchor 4 cables N.E. of the jetty and await Harbour Pilot.
1808 hrs.: Vessel anchored at Bissau, 4 cables N.E. of jetty.
1900 hrs.: Vessel berthed at Bissau, starboard side alongside the jetty.

The Harbour Pilot was able to communicate in English. Berthing and unberthing is preferred on flood tide. Current alongside berth up to 3.5 knots. Maximum depth alongside at low water was 20 ft. 3 soundings were taken at low water alongside the wharf: West end: 7.40 m., middle: 6.10 m., East end: 9.30 m., length of wharf 131 m.

Discharging was slow. The vessel stayed 4 days in port to discharge 1,364 tonnes flour in bags of 50 kg. Cargo worked from 0800 hrs. to 2300 hrs. daily. No cargo work at night due to heavy pilferage from the cargoes, ship's watchmen were kept in all hatches during discharging.
Day of Departure:
0715 hrs.: Vessel left berth.
1210 hrs.: Vessel anchored at Caio Island.
1220 hrs.: Pilot disembarked by ship's lifeboat.
1305 hrs.: Vessel continued voyage.

On departure the pilot boat at Caio Island was not working and the vessel had to use her own lifeboat to disembark the Pilot.
Max. Size: LOA 131 m.
Anchorage: Good anchorage 4 cables N.E. of the wharf. Depth 6 – 7 fathoms, holding ground was good.
Pilotage: Pilot station on Caio Island which is 50 nautical miles West of Bissau. Request for pilotage is compulsory, via Agent.
Restrictions: Entry by night is difficult as most lights are unlit and the current rises at up to 3.5 knots on the flood and ebb tides, also the navigation aids are poor.
Tugs: Not available.
Berthing: Length of wharf 131 m., depth alongside at LW 20 ft. (FW).
Cargo Handling Facilities: General cargo only handled, there are no lighters, container or Ro/Ro facilities.
Cranes: 2 mobile cranes, maximum capacity 15 tonnes.
Repairs: Not possible.
Fuel: Not available.
Fresh Water: Supply to the wharf is unreliable.
General: Provisions not available.
Medical: No services available.
Airport: There is a twice weekly air service from Bissau to Europe. Distance to airport 7 km.

SHIPMASTER'S REPORT: December 1988.
Vessel proceeded from Las Palmas to Bissau. Speed 13 knots. Draft 5.8 m.
Report on the River Entrance to Bissau: Steer true course 177° until vessel crosses the 100 fathom line at position Lat. 12° 26′ N., Long. 17° 30′ W. From this point steer true course 148° until the vessel again crosses the 100 fathom line at position Lat. 12° 11′ N., Long. 17° 20′ W. From this position steer true course 124° to Buoy Geba-A (Fairway Buoy).

From position Lat. 12° 11′ N., Long. 17° 20′ W. vessel's position was ascertained by radar, using Cabo Roxo which was visible on the radar up to 40 miles; the Baixos do Rio Grande light, which was visible on radar up to 30 miles; Ilha da Jeta which was visible up to 30 miles and the Buoy Geba-A (Fairway Buoy) which was visible on radar at 12 miles.

On reaching the Fairway Buoy, vessel alters course towards the pilot station at Caio Island. The minimum depth by echo sounder under the keel was 4.5 m. Strong currents of up to 5.5 knots were experienced.

The pilot station at Caio Island has no means of communication with either the vessel or the Port of Bissau. River Pilots are therefore never advised of vessel's arrival in advance.

When the vessel arrives at the pilot station, the vessel's lifeboat/rescue boat, is to be used to pick-up the pilot as the pilot boat has frequent engine breakdowns. The approach to Caio Island is very dangerous due to many breakers, wrecks and strong currents.

The River Pilot only speaks "Crioulo" (Creole), which is a local dialect, and a very few words of Portuguese. He is therefore unable to give proper orders to the helmsmen.

All navigation in the Canal do Geba has to be done by the ship's Master. The pilot does not assist in any way.

Entry and departure from Bissau is dangerous, especially at night, as the East Cardinal buoy off Banco do Meio is missing and most other buoys are unlit.

On arrival, vessels anchor at Bissau Inner Roads, which are 4 cables Northeast of the jetty, and await the harbour pilot.

The harbour pilot was able to communicate in English but was unable to show on the chart where the vessel was to berth.

Berthing/unberthing is preferred on the flood tide.

Vessel anchored in the Roads at 1930 hrs. and berthed alongside at 2300 hrs.

All jetties are unlit, so vessel had to use Suez Canal searchlight when approaching the berth.

Minimum depth under the keel when approaching the berth was 2.0 m. Currents alongside the berth are up to 3.5 knots and range of tide up to 5.0 m.

The vessel has to provide a cabin for the River Pilot as he stays on board the vessel during the whole time alongside.

When vessel was due to leave, the Harbour Pilot was standing-by on another vessel so we left port without a Harbour Pilot. On approaching Caio Island we again had to use our lifeboat/rescue boat to land the River Pilot.
Pilotage: Compulsory. Request for pilot to be made to the vessel's local agent. The pilot station is located at Ilheu do Caio which is about 50 nautical miles West of Bissau.
Anchorage: The Canal do Geba has good holding ground and plenty of room.
Restrictions: Night navigation is not recommended as most of the lights are either missing or unlit.
Tugs: None available.
Berthing: The old cargo jetty is 131 m. in length and has a minimum depth alongside of 6.3 m.

The new cargo jetty, which is soon to be operational, has a length of approximately 280 m.

Cargo Handling Facilities: Ship's cranes or derricks are to be used. 1 forklift of low capacity available. General cargo can be loaded on to the quay but all containers must be loaded direct on to trucks.
Stevedores: The working hours are from 0800 hrs. to 2300 hrs. Night work is possible, but pilferage increases considerably during night time.
Repairs: Not possible.
Agent: Messrs. Guinemar S.A., Rua Guerra Mendes 4/4a, Bissau. Tel: 213022/3. Telex: 0969-276.
Note: Only the agent has VHF in Bissau (range up to 30 nautical miles).

AUTHORITY: Junta Autonoma dos Portos da Guine-Bissau, P.O.Box 382, Bissau, Guinea-Bissau. *Tel:* 2797 (Administrator's Office), 2783 (Secretariat). *Cables:* Porto, Bissau. *Contact:* Port Director.

Secretario de Estade dos Transportes, C.P. 306, Bissau, Guinea Bissau. *Tel:* 212583. *Telex:* 263 MTT BI.

NOTES

Please also advise Shipping Guides Ltd.

Guyana

ESSEQUIBO RIVER (Bartica): 06.24 N. 58.37 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

Essequibo Light (steel framework tower with red and white horizontal bands) marks seaward end of Essequibo Main Ship Channel. Vessels in vicinity of Demerara Pilot Station should listen for pilot boat on VHF Channel 16.
RESTRICTIONS: The Essequibo Bar is composed of hard mud and sand. The least depth of water is 3 ft. less than for Demerara Bar. Vessels should not attempt to cross the Essequibo Bar drawing more than 3 ft. less than that predicted for the Demerara Bar.
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Georgetown when Pilot boards. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
MEDICAL: Hospital at Georgetown and Bartica.
DENSITY: 1000, fresh water.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: At Georgetown.
REPAIRS: Government dry dock situated at Mazaruni, approximately 40 miles up river at junction of Essequibo and Mazaruni Rivers. Extreme dimensions: 160 ft. by 35 ft.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown, Guyana. *Tel:* 02-67842. *Cables:* Transport Guyana. *Contact:* Captain A. Haynes, Harbour Master.

GEORGETOWN: 06.49 N. 58.10 W. (See Plan)

PORT LIMITS: Seaward by an arc of a circle with radius 1 nautical mile, with the Georgetown Lighthouse as centre.
DOCUMENTS:
Certificate of Registry.
8 Crew Lists.
8 Provisions and Stores Lists.
4 Passenger Lists.
Customs Documents:
2 Reports of Ship's Stores (Form C1).
2 Lists of Crew Personal Effects (Form C2).
1 List of Unmanifested Cargo (Form C3).
12 Health Declaration Forms (W.H.O.2)
Health Documents for Crew (1 copy for each crew member).
5 Cargo Manifests.
5 Bills of Lading.
PILOTAGE: Vessels apply for Pilots through local Agents or direct to Chief Pilot, Georgetown, through "Demerara Radio, 8 Romeo Bravo", 12 hours in advance of ETA at pilot station when vessel is proceeding in to Georgetown Harbour. Pilot boarding ground is in Northwestern quadrant of circle with radius 5 cables and centre the Outer Georgetown Light. Normal international day or night signals for "I require a Pilot" are used. All pilot cutters are painted black (hull) and white (superstructure) with the word "Pilot" painted in white on black ground. Cutters are approximately 60 ft. in length.
ANCHORAGES: There are 5 with a least depth of approximately 20 ft. MLWS named A to E from North to South. Vessels are safely anchored at any of the above anchorages 1.5 cables to 2 cables from Georgetown park line. Bottom is soft mud and provides good holding ground.
RESTRICTIONS: No entry restrictions except those on draft imposed by the bar at estuaries.
MAX. SIZE: Draft 20 ft. 6 in. See "Developments".
HEALTH: Radio Pratique is not given, and Pratique is only given at Georgetown. This normally involves a visit from the Health Authorities if the vessel is clear. If a vessel is "suspect" or "infected", Master should advise Harbour Authority by special message through Demerara Radio or Georgetown Lighthouse and await advice of Port Health Officers; meanwhile, if in the vicinity of Georgetown, vessel may anchor at the specified quarantine anchorage near the Outer Georgetown Buoy as entry into the limits of the port without the authority of the Ministry of Health is prohibited if the vessel is suspect or infected.
RADIO: Name of radio station "Demerara Radio", call sign "8RB", always standing by on 2182 kHz., will give latest weather report or RDF bearings on request. Georgetown Lighthouse operates VHF Channel 16, HF 2738 and SSB 8281.2 kHz.
RADAR: No service available.
TUGS: At present, vessels dock stem on to the tide without aid of tugs. However, tugs could be provided if urgently required.
BERTHING: There are 6 main wharves privately and government owned, situated along the river frontage at Georgetown and varying in length from 210 ft. to 730 ft. Depths alongside range from 16 ft. to 20 ft. at LWS, but as the bottom is soft mud vessels may safely lie aground alongside. Ships work cargo with their own appliances.
BULK HANDLING FACILITIES: The sugar berth is 416 ft. in length with least depth alongside of 18 ft. MLWS and can accommodate vessels up to 530 ft. in length. Loading rate is 500 t.p.h. using 2 chutes. Vessels should not be more than 63 ft. beam.
CRANES: No heavy lift cranes available. Ship's gear has to be used. No floating cranes.
BRIDGES: Demerara Harbour Bridge: Floating bridge with retractor span situated 4.2 miles from mouth of river. Arrangements for passing are made by Agents. Bridge operators keep radio watch on VHF Channel 16.
STEVEDORES: Ship's Agent normally arranges for gangs in accordance with cargo plans or Master's cable advice. Gangs are unionised. Stevedores work around the clock every day of the week though they are paid overtime between hours of 1600 and 1900 and they earn time-and-a-half or double time on public holidays according to which one of the 12 public holidays they work.
MEDICAL: No special advance notice of required medical attention is necessary, and hospital facilities are always available.
TANKERS: There are no residue discharge facilities at this port. There are 4 tanker berths in the Georgetown area.
Rome Terminal (Shell) – depth alongside is 11 ft.
Ramsburg Terminal (Esso) – depth alongside 16 ft.
Ramsburg Terminal (Texaco) – depth alongside 11 ft.
Providence (Guyoil) – depth alongside 8.5 ft.
Size of pipe-lines: 6 in.
DENSITY: Average density in port is 1015, though during the rainy season (March-May; October-December) density of water may be as low as 1000 at LW in the harbour.
FRESH WATER: Fresh water is available, and is delivered alongside. The ship is required to pay for labour, overtime, etc., involved in the delivery.
FUEL: In case of emergency, providing advance notice is given by Master, vessels may be partially bunkered at any of Shell, Texaco or Esso installations. Vessels may be required to go alongside 2 hours before HW and leave not later than 1 hour after HW at the above-mentioned installations. Grades of fuel available are "Bunker C" and diesel fuel.
CONSULS: (and Embassies)
Belgium
Brazil
Canada
China
Colombia
Costa Rica
Cuba
Denmark
Egypt
France
Germany
India
Italy
Jamaica
Japan
Korea
Libya
Mexico
Netherlands
Norway
Panama
Sweden
Trinidad & Tobago
United Kingdom
U.S.A.
Venezuela
Yugoslavia
FIRE PRECAUTIONS: There are no stated precautions other than regulations against pumping out residual heavy oil (e.g. "Bunker C"). Ships having cargoes of ammunition, high explosives, dynamite, etc., are required by Harbour Regulations to anchor North of Georgetown Lighthouse prior to proceeding alongside wharf to unload and/or proceeding up river.
REPAIRS: Every type of deck or engine repair is undertaken at Guyana National Engineering Corporation (GNEC) Dry Dock. Above waterline and engine-room repairs of any type are undertaken on vessels exceeding the dimensions mentioned below while vessel is anchored in the stream. Also see "Dry Docks".
DRY DOCKS: GNEC Dry Dock: A graving dock 210 ft. × 37 ft. 9 in. at entrance situated South of GNEC No. 2 Wharf, which is State owned and operated on normal commercial lines. 198 ft. length of dry dock is on blocks. Breadth: top 46 ft. 4 in., bottom 40 ft. 9 in., depth on sill at HWOST 92 ft.

Government Dry Dock: Situated at Mazaruni approx. 40 miles upriver at junction of Essequibo and Mazaruni rivers is a graving dock and has extreme dimensions of approx. 160 ft. × 35 ft.
SURVEYORS: Lloyd's and Bureau Veritas. No cargo inspectors available.
GANGWAY/DECK WATCHMEN: Services of watchmen are compulsory and are obtained through a watchman's pool by ships' Agent.
Piracy: Armed gangs of robbers have boarded vessels from shore and from canoes and stolen quantities of ship's stores.
OPENING/CLOSING HATCHES: Normally carried out by ship's crew.
CUSTOMS ALLOWANCES: Each crew member is permitted up to 200 cigarettes aboard held out of bond, but is only allowed to take ashore 40 at any time. Only on a *final discharge* would a member of crew be permitted a tobacco allowance of half-a-pound. Each crew member is allowed to keep out of Bond, 1 (one) bottle of wine or spirits, but is prohibited from taking any of it ashore. Each member of crew is allowed tax-free only one-sixth gallon wine and one-sixth gallon spirits *when he is finally discharged.*
CARGO GEAR: Ship's gear.
REPATRIATION: Arrangements normally made through ship's Agents.
AIRPORT: Timehri International Airport is situated approx. 30 miles South of Georgetown with highway connection and is served by many intercontinental airlines.
TIME: 3 hours behind GMT. No alterations made to clocks during the year.
HOLIDAYS: New Year (January 1st); *Eid-ul-Ahza; *Phagwah; Republic Day (February 23rd); Good Friday; Easter Monday; Labour Day (May 1st); *Youman Naubi; Caribbean Day (July 5th); Commonwealth Day (First Monday in August); *Deepavali; Christmas Day (December 25th); Boxing Day (December 26th). *Religious holidays are variable.
POLICE/AMBULANCE/FIRE: Tel. 999. There are Police/Ambulance/Fire Stations on the waterfront.
TELEPHONES: Could be arranged through Coast Station 8RB.
STORING: See "Prelims".
(1) Yes. (2) Yes. (3) Yes. (4) Yes. (5) Yes. (6) Yes.

BANKS: Chase Manhattan Bank N.A., Bank of Guyana Building, Church Street, Georgetown, P.O.Box 101080, Telex: Chase Bk, GY 2222.

Barclays Bank Int. Ltd., 48 Water Street, Georgetown, Telex: Barclay GY 2248.

SHORE LEAVE: Granted by Immigration Boarding Officer.

IDENTIFICATION CARDS: Not required.

DELAYS: Only when berths are occupied.

DEVELOPMENTS: Dredging to 20 ft. 08 in. chart datum in progress.

SHIP'S OFFICER'S REPORT: September 1988.

During vessel's stay in Georgetown I was able to gather the following information:

In a major step towards promoting the export of Bauxite, the Guyanese government has charted the Panamanian flag vessel M.V. "Arrowcane II", for an initial period of 5 years. This vessel will be a silo ship for transhipment of Bauxite.

She will be permanently moored in position Lat. 06° 49′ N., Long. 58° 10.5′ W. (approximate), heading North (see "Plan").

The "Arrowcane II" has been converted into a self-loading/discharging silo ship. She has an arrangement for discharging barges on her port side using on-board grabs, and then loading larger ships on her starboard side using a conveyor belt. She also has "Yokohama type" fenders on her starboard side.

Initially there was a draft restriction for vessels loading Bauxite at Linden (06° 01′ N., 58° 18′ W.) (up the Demerara River), so it was not possible for large vessels to take a full load. With the establishment of this silo ship at the mouth of the river it will be possible to load vessels to a deeper draft.

It was not possible to get other details about the loading draft restrictions, loading rates, etc., as the silo ship was still not operational when we left Georgetown. The 4 buoys have been laid and M.V. "Arrowcane II" was to carry out the "mooring operation" within a few days and become fully operational after 2 weeks.

SHIPMASTER'S REPORT: November 1989 and December 1989.

Charts: B.A. Charts No. 519, 527, 533 and 572.

Documents:

3 copies Crew Personal Effects List.
3 copies Bonded Stores List.
3 copies Provisions List.
2 copies Unmanifested Cargo.
1 copy Maritime Declaration of Health.
8 copies Crew List.

Port Officials: The Port Officials boarded at the berth and the party was large for a small vessel. The bond was sealed after gratuities given out.

Pilotage: The pilot boards at the Pilot Buoy (which was unlit at the time of our visits) from a large cutter with a black hull and white upper works with "Pilot" on the side. The name of the vessel was "Lady Young" and it was similar in appearance to a small tug.

There is a shortage of pilots as they are also required for Berbice and Essequibo, so it is usual for a pilot to transfer from an outward bound vessel to an inward bound vessel, and as this is the case, there are quite often long delays. Change of pilot takes place off the town.

A 24 hour pilot service is operated from Georgetown to the sea as long as the leading lights are operating.

Approaches: The headland on Pomeroon River is conspicuous on the radar at 20 miles. The tower and factory at Devonshire Castle Flats/Anna Regina are conspicuous on the radar at 25 miles. The town of Georgetown is also conspicous at 25 miles on the radar.

The wreck just North of the Pilot Buoy in position Lat. 07° 00.8′ N., Long. 58° 02.9′ W. is no longer visible at low water.

The Demerera D/F Beacon is very unreliable and the Georgetown light was not operating at the time of our visit.

Anchorage: November 1989: Vessels anchor just North of the Pilot Buoy in a depth of approximately 4 fathoms. The bottom is mud and there is a large groundswell.

December 1989: Whilst waiting for the Sea Pilot for the outward passage we used the River Anchorage and anchored in Position "C". The River Pilot advised us to use 4 shackles in the water. Whilst at this anchorage a good watch should be maintained as thieves may try to board the vessel.

Channel: There are very few buoys left in the Channel and the pilot uses the leading marks day and night.

The old front leading mark has been moved to behind the rear mark (225° × 0.85 miles behind the original rear mark).

The Channel from the Pilot Buoy to the ship silo is 200 ft. wide and is aligned 045°/225°. The Channel has recently been dredged to 20 ft. 6 in. at chart datum (19 ft. 6 in. MLWS), although it was found to be silting to 17 ft. chart datum. There is a lot of mud/silt in suspension.

Radio/VHF: In November 1989, Georgetown Lighthouse Radio was first contacted on VHF Channel 16 at a distance of 30 miles, working Channel 12.

We were not able to contact Demerera Radio (8RB) prior to contacting Georgetown Lighthouse Radio, although another vessel reported making contact with the station at a distance of 120 miles on 2,558 kHz./2,049 kHz.

Whilst at anchor we worked Demerera Radio on 2,558 kHz./2,049 kHz. The station was very helpful.

The pilot launch "Lady Young" works on VHF Channel 16 but will switch to Channel 14 if required.

In December 1989, we made contact with Demerera Radio at over 100 miles (calling 2,182 kHz., working 2,258 kHz./2,049 kHz.). It is in order to make a local call to the Agent.

Berthing: Shell (November 1989): We berthed on the sea side of the Shell pontoon bridge at high water. Our draft was 4.4 m. and we experienced no difficulties going alongside. We unberthed one hour before low water with a draft of 4.1 m. and again experienced no difficulties even though the echo sounder indicated no water under the keep until we were 10 m. off the berth, where the depth was 7.0 m. at datum until we were abeam of Georgetown Lighthouse.

We berthed head out starboard side alongside.

The moorings consisted of 2 head/stern lines and 1 spring at ea end. The mooring lines are run by the boat which was very efficient.

The tidal range at the berth is about 2.0 m. The depth alongside chart datum was found to be about 4.0 m.

Berthing and unberthing is affected day and night.

A searchlight is very useful when berthing and unberthing.

Shell/Texaco (December 1989): Pilots are not keen to berth or unber at Shell (called 'Rome' on documents) and Texaco (called 'Ramsbu on documents) at slack low water. At low water the forward mooring p at Texaco is dry so the mooring boat would be unable to get alongsid the pile.

Pilots prefer to dock 2 hours either side of low water at Texaco a about one hour either side of low water at the Shell berth.

The depth at the Texaco berth is greater than at Shell, 4.5 m. at cha datum. At both Shell and Texaco, vessels berth head out starboard sid to.

The Texaco berth is made up of wooden pilings and a platform an is about 80 m. in length. Parts have recently been renewed. A searchlig is necessary for night mooring. The after moorings at the Texaco ber are sent to a staghorn.

The official opening times of the pontoon bridge appear to b 0300 hrs., 1100 hrs., 1600 hrs. and 2300 hrs., although these times a liable to change if power is not available. They will also open at othe times for river traffic if power is available.

Cargo: Shell (November 1989): The ship's portable flexible hose wa used for discharge. The capacity of the shore tank is 180 tonnes.

The maximum back pressure allowed is 12 Bar and with 2 pumps w averaged 40 t.p.h. (LPG mix 80/20). The ship's radio was used t communicate with the shore during cargo operations.

Check for leaks were made prior to commencement of discharging and hot gas was used for 10 minutes on completion. No difficulties wer encountered.

The shore Surveyor checks the shore tanks and then boards th vessel on completion.

Texaco (December 1989): Texaco have 9 horizontal cylindrical tank for ambient storage of LPG (5 × 660 bbls. and 4 × 160 bbls.). Th maximum back pressure allowed at the berth is 150 p.s.i. (10 Bar). The are LPG shipments to the Texaco berth every 3 weeks. White oils a also handled at this berth.

The Esso berth which is 0.25 miles upstream of the Texaco berth of similar construction.

General: It is advisable to keep all cabins and lockers locked and a movable objects under lock as many "visitors" are likely to board th vessel.

We employed 2 guards, larger vessels should employ more guards

There are 2 tanker berths upstream of the pontoon bridge, these a operated by Texaco and Esso. The Pontoon bridge is only ve occasionally opened for sea-going vessels as there is a lack of elect power to operate the winches.

All lights, including Georgetown Lighthouse, but excluding the leadin lights are extinguished.

Bauxite vessels with maximum draft of 18 ft. can transit the 55 mile up river to Mackenzie, but during day time only and on a flood tide.

There is a silo ship at fixed moorings to the West of the main Channe abeam of Georgetown Lighthouse. It is moored bow out. Vessels wi a draft of 30 ft. can be handled at the silo vessel at MHWS and 28 ft. 6 i at normal high water.

Fresh water is only available at one general cargo berth in the tow

It was possible to make an international call from the Tower Hot near the Cathedral. The cost to Europe is about U.S.$1.60 per minut

It is very important to make a thorough stowaway search prior t departure.

SHIPMASTER'S REPORT: February 1990

Berth: Esso Ramsburg.

Position: Lat. 06° 45.2′ N., Long. 58° 11.25′ W. (BA Chart No.519).

Berthing: The berth is on the East bank of the River at Georgetown. is 100 m. long and is at the present time being refurbished with tarre hardwood and logs.

The depth alongside at MLW is 14 ft. This depth extends to 100 ft. o the jetty.

Cargo: Mogas is handled by a 6 in. line to a tank of 15,000 bbls. Ga Oil is handled by a 6 in. line to a tank of 18,000 bbls. and Av. Jet handled by a 4 in. line to a tank of 6,200 bbls. Lube Oils are also handle There are no facilities for handling of LPG.

Shore hoses are used and a pumping rate of 1,700 bbls./hr. can b achieved. On completion of operations, ullages, temperatures and wa dips are taken, ship's forms used.

General: Vessels berth port or starboard side alongside, depending o the tide.

Ship's gangway was difficult to land at low water.

Berth: Guyoil Providence.

Position: Lat. 06° 45.65′ N., Long. 58° 11′ W. (BA Chart No.519).

Berthing: The berth is operated by Guyoil Providence who are a sta oil distribution company. The berth is 50 m. long and is constructed hardwood, logs and planks. The depth alongside at MLW is 12.5 ft.

Cargo: There is 1 dual purpose 6 in. line for Av. Jet and Gas Oil an 1×6 in. line for Mogas. There are 4 tanks, 1×5,000 bbl. for Moga 1×5,000 bbl. for Av. Jet and 1×5,000 bbl. and 1×10,000 bbl. tank f Gas Oil. There are no tanks for LPG.

Shore hoses were used for discharge operations.

A water flush is required between Av. Jet and Gas Oil and vice-vers

General: Vessels berth port or starboard side alongside, dependent tide.

AUTHORITY: Transport and Harbours Department, Water Str Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport – Guya *Contact:* Captain A. Haynes, Harbour Master.

LINDEN: 06.00 N. 58.17 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilotage compulsory. Pilots are stationed at Georgetown. ETA to be given 12 hours in advance to pilot station. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

From Georgetown to Linden and Linden to Georgetown, pilotage not compulsory, but advisable to use G.N.E.C. Pilots.
RESTRICTIONS: Governed by depth of water at Demerara River Bar. Entrance normally at HW. Max. speed limit on the river is 10 knots.
ANCHORAGES: Vessels proceeding to Linden in ballast and drawing less than 15 ft. may anchor beyond Southern limit of Georgetown. Depths 16 ft. – 18 ft. MLWS.
MAX. SIZE: Draft 21 ft. 6 in.
HEALTH: Pratique given at Georgetown by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: There are 2 bauxite berths accommodating vessels of up to 570 ft. One loader for metal grades has an airdraft of 29 ft. 8 in. and a loading rate of 800 t.p.h. The second loader for calcined bauxite has an airdraft of 34 ft. and a loading rate of 350 t.p.h.

The Alumina berth has a travelling tower with an airdraft of 64 ft. and a loading rate of 400 t.p.h. Max. beam of vessel 85 ft.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02 – 67842. *Cables:* Transport Guyana.
Contact: Captain A. Haynes, Harbour Master.

NEW AMSTERDAM (Everton, Berbice): 06.14 N. 57.31 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.
RESTRICTIONS: The Berbice Bar is composed of fairly hard mud. Vessels may cross the Berbice Bar on even keel (reported to be dredged to 14.8 ft.)
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Berbice by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: The Bauxite Berth is about 1,500 ft. long, and has a fixed loading arm with an average loading rate of 500 t.p.h. The airdraft is 36 ft.

There is a strong ebb current of about 4–5 knots, although the flood runs at about 3 knots.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport Guyana.
Contact: Captain A. Haynes, Harbour Master.

Guyane (French Guyana)

DEGRAD-DES-CANNES (Main Port): 04.51 N. 52.16 W.
LE LARIVOT (Secondary Port): 04.54 N. 52.22 W.
CAYENNE (Secondary Port): 04.56 N. 52.20 W.
KOUROU (Secondary Port): 05.09 N. 52.40 W.
SAINT LAURENT-DU-MARONI (Secondary Port): 05.30 N. 54.02 W.

(See Plan)

LOCATION: Degrad-des-Cannes – 15 km. from Cayenne.
Le Larivot – 10 km. from Cayenne.
Kourou – 60 km. from Cayenne.
Saint-Laurent-du-Maroni – 250 km. from Cayenne.

PILOTAGE: Notice of ETA and request for a Pilot no less than 24 hours before ETA at Degrad-des-Cannes Channel Buoy and 48 hours for Saint-Laurent and Kourou.

Station de Pilotage de Guyane, Port du Degrad-des-Cannes, 97300 – Remire. Tel: 31.37.23.

ANCHORAGES:
1. At Sea Buoy at Cayenne.
2. At Sea Buoy at Degrad-des-Cannes.
3. At Salut Island (Iles du Salut).

RESTRICTIONS: Permanent dredging underway. Recommended that vessels approach at high tide.

Depth of water in channels:
Cayenne-Larivot (10 km.): 0.90 m. + height of tide.
Degrad-des-Cannes (15 km.): 3.0 m. + height of tide.

HEALTH: French Regulations apply.

RADIO: Cayenne Radio.

VHF: Harbour Master and Pilot Station on Channel 16.

BERTHING: Berth at Degrad-des-Cannes on the Mahury River, length of concrete wharf is 300 m., max. LOA 160 m. Roll-on/Roll-off facilities available. Discharge of general cargo and containers by ship's gear.

TANKERS: *Degrad-des-Cannes:* Steel wharf with dolphins. Min. LOA 80 m. Max. LOA 130 m.
Le Larivot: Concrete wharf. Max. LOA 100 m. Depth 4.9 m.

FRESH WATER: Available.

FUEL: By road tanker.

REPAIRS: Limited facilities available.

REPATRIATION: Rochambeau Airport. Connecting flights to France, Suriname and Brazil.

TIME: GMT minus 3 hours.

POLICE/AMBULANCE/FIRE: Contact Harbour Office at Degrad-des-Cannes.

GENERAL: Customs and Frontier Police at Degrad-des-Cannes.

DEVELOPMENTS: New berth under construction at Degrad-des-Cannes (length 130 m.).

SHIPMASTER'S REPORT: October 1990.
Arrival: Vessel arrived at Degrad Des Cannes Fairway Buoy at 2130 hrs., and anchored to Pilot's advice.

Pilot starts one hour before H.W., in order to be between Buoys No. 10 – 18 at H.W. The shallowest part of the channel is between Buoys No. 1 – 27.

Our deepest draft was 5.03 m.

A tug stands by in case there are any difficulties when transitting the channel. The channel is 80 m. wide, and the buoys are spaced 160 m. apart. The current was to the West at 2.5 knots. Vessel has to keep close to the green buoy.

Departure: Vessel departed at 0330 hrs., and waited at the channel entrance to allow a vessel with draft 5.90 m. to enter.

Dredger: On our arrival, the dredger was under repair, but began work again after 10 days.

Current: According to the Pilot, the current is normally to the West, but changes twice a year and runs to the East for 8 days. In the dry season, the current still runs up 15 minutes after H.W. In the rainy season, the current runs down half an hour before H.W.

Berthing: On approaching the berth, the vessel turns on the starboard anchor, with 2 shackles in the water.

Vessels without bow thrusters must leave berth before H.W., as the current from H.W. onwards pushes the vessel on to the berth.

AUTHORITY: *Port Director:* M. le Directeur, Departemental de l'Equipement, 40 Avenue Leopold Heder, B.P. 338, 97305 – Cayenne, Cedex.

Haiti

GENERAL

DOCUMENTARY REQUIREMENTS PRIOR TO ARRIVAL:

Advice of Arrival: The arrival of the vessel must be announced 48 hours in advance, and in writing, to the Port Captaincy and to the Port Authority, with indication of the vessel's characteristics, the cargo which will be discharged and loaded, and requirements concerning supply of water, etc.

Information Concerning Cargo Intended for the Port: The Agency must receive in good time by air mail 6 copies of the Cargo Manifest and 2 copies of the Bills of Lading. In the event that it is not possible to supply these documents by mail, the information must be provided by telex to the Agency so that the latter may draw them up.

The Cargo Manifests are distributed to the Port Authority, the Haiti Terminal (private concern handling cargo consolidation), to the Ministry of Commerce, the Ministry of Finances and to the Agency.

REQUIREMENTS RELATING TO THE RECEIPT OF THE VESSEL:

Reception Commission: The vessel is received by representatives of the Port Health, Immigration, Customs, International Police, National Port Authority and the Agency.

Documentation Required: On the arrival of the vessel, the following documents are required, OEA/ALALC, IMO and certain other documents being acceptable.

No of Copies and Distribution

Type of Document	*Health*	*Immigration*	*Customs*	*Police*	*NPA*	*Agency (a)*
General Declaration	–	–	1	–	1	1
Cargo Manifest (b)	–	–	–	–	1	–
Crew List	1	1	3	1	–	1
List of Passengers	–	1	2	–	–	–
List of Stores	–	–	2	–	–	–
Declaration of Crew Effects	–	–	2	–	–	–
Maritime Health Declaration	1	–	–	–	–	–
Mail List	–	–	–	–	–	1
Arms and Ammunition Manifest	–	–	1	1	–	1

(a) The Agency requires additional copies of the Crew List, the Passenger List, the Stores List, the Arms and Ammunition Manifest, etc., dependent upon the destination of the vessel, in accordance with the requirements of Consular Clearance.

(b) Required in the event that the manifest has been received, or information regarding the cargo, in advance of the arrival of the vessel; if not, the agency requires 4 or 6 copies for distribution amongst the different authorities.

REQUIREMENTS CONCERNING DOCUMENTATION ON SAILING:

Documentation on Sailing: At the request of the Agency, the Customs issue a clearance with which permission to sail is applied for from the Port Captaincy. The latter's permit is used for requesting the services of the Pilot from the National Port Administration.

An Outgoing Manifest is presented to Customs which also contains a sworn statement (sworn statement of the Master of a vessel with cargo, or sworn statement of the Master of a vessel in ballast), and the List of Passengers. If the vessel is sailing with cargo, it is presented in 6 copies; if in ballast, in 4 copies.

CONSULAR INTERVENTION:

Consular Documentation: In accordance with the 1963 Customs Code, Article 119, the Master of a vessel loading cargo for Haiti, or his representative, must sign before the Consul a Declaration sworn as to the truthfulness of the manifest. This article is transcribed as follows:

Quote:

Article 119, *Oath.* Masters of vessels or their representative, at the time of having their manifests visaed, shall give the following oath which shall be transcribed by the Consul at the bottom of the manifest: I swear that this manifest contains exactly the packages shipped on board my vessel, that the quantities are in agreement with those shown on the Bills of Lading. I declare that I will accept all penalties which I may incur for offence against the Customs Law. I give my hand hereto.

Unquote.

In general, Consular Clearance has to be obtained at each port from the first at which cargo is loaded for Haiti. For this purpose, the Consul requires 6 copies of each of the following documents:

General Declaration.
Cargo Manifests or In Ballast.
Crew List.
List of Passengers or Negative.
Stores List.

The Consul returns 3 copies of the documents, which must go with the vessel, and 6 envelopes, i.e. 1 for each of the following Authorities:

General Customs Administration.
Director of Customs.
Department of Commerce.
Fiscal Department.
Finance Department.
Customs Collector.

The 6 envelopes are not always received, and at times only 2 copies of the visaed documents are given back. The Authorities apply a certain tolerance when it is established that the Consular Fees have been paid at the Consulate or at destination.

CAP HAITIEN: 19.46 N. 72.12 W. (See Plan)

GENERAL: For all general information refer to "Port-au-Prince".
APPROACHES: The current is about 3 knots in the entrance to the port when the river is in flood.
ANCHORAGE: Vessels which are unable to moor alongside because of deeper draft are anchored off the wharf.
BERTHING: The wharf at Cap Haitien was constructed by the Compania Industrial Maritima. The construction is in reinforced concrete. It extends for a length of 900 ft. in an Easterly direction and comprises 3 sections. The most important section is 600 ft. long and has berths for deep sea vessels on the South side in depths of 30 ft. The Western section, nearest the shore, is 300 ft. long with variable depths of 7 ft. to 9 ft. alongside, with berths for motor vessels of small tonnage and sailing ships. The central section accommodates the Customs offices. 2 metal warehouses border the East and West ends of the wharf. Between the warehouses is 1 fixed crane of 30 tons capacity.
FRESH WATER: Fresh water is available at Cap Haitien.
FUEL: Available, only in drums.
DEVELOPMENTS: Ro/Ro Berth length 100 m., under construction. Main pier length 250 m., under construction. Cruise ship pier length 170 m., to be constructed.

REPORT: December 1984.
Documents: See "Port-au-Prince".
Approaches: New lighthouse on Pte. Pinolet seen at 30 miles.
Pilotage: Pilots boarded in Lat. 19° 48.8′ N., Long. 72° 10.9′ W. Pilots board from small launch, approx. 5 m. long, with grey hull and yellow decking. The words "Pilote No. 1" painted in black on either side of white housing.

2 Pilots boarded – Senior Pilot/Port Captain: Eugene Magloire.

Restrictions: Channel very well marked – new beacons in positions as shown on "Plan". Least depth encountered in channel 10 m.
Radio: ETA telex sent via satellite to Agents. No radio station available.
VHF: Called pilot station on VHF Channel 16, 2 hours and 1 hour prior to arrival, but received no reply. Shortly before arrival at pilot boarding point, pilot station advised, on Channel 16, that pilot boat was coming out to our vessel.
Tugs: None. Small mooring boat takes heaving lines only ashore.
Berthing: Our vessel, 200 m. long, berthed at the Passenger Berth after swinging to starboard in the basin off the berth (depth 11 m.).

The berth is well fendered (Kleber fenders). Apart from main access to berth, there is also a footbridge for passengers.

Port has recently been reconstructed with modern berthing facilities, adequate mooring points, lighting, warehousing, open storage, etc.

Cargo Handling Equipment: Observed 1 conveyor, no cranes in evidence.
Regulations: Not permitted to take fruit ashore.
Authority: Autorite Portuaire National.

MIRAGOANE: 18.25 N. 73.04 W. (See Plan)

GENERAL: For all general information refer to "Port-au-Prince".
BERTHING: The facilities at Miragoane are 1 small jetty for loading and discharging general cargo with a max. depth alongside of 18 ft.

There is a wharf for loading bauxite, belonging to the Reynolds Company, with a depth alongside of 34 ft. Total annual export about 350,000 tons.

PORT-AU-PRINCE: 18.33 N. 72.21 W. (See Plan)

Also see "General" before first port.

DOCUMENTS:
Shipmasters Report: October 1982.

Clearance from Last Port.
6 Crew Lists.
3 Nil Passenger Lists.
3 Provisions/Stores Lists.
3 Crew Personnel Effects Lists.
2 Ports of Call Lists.
1 Vaccination/Inoculation List.

PILOTAGE: Pilotage is compulsory for all movements of ships in the port. The Pilot boards to the West of the Fairway Buoy and is accompanied by port officials, i.e. Port Doctor and Representatives of Immigration, Police and Customs. These officials insist on using the accommodation ladder to board the vessel. Masters must arrange with their respective Agents the time which they will require a Pilot to leave the port. If they are ready to depart before the hour arranged they may call the Pilot by 3 blasts of the ship's whistle.

Berthing from 0530 hrs. – 2100 hrs. except Sundays and holidays.

APPROACHES: The Port of Port-au-Prince is situated at the extreme S.E. of the bay. It can be approached from the North and from the South by 2 channels.

One may approach from the N.E. by the Saint-Marc channel or from the West by the Gonave channel, between Trou-Forban Point and the village of Ca-Ira. The bay extends between Trou-Forban Point in the North and the village of Ca-Ira about 20 miles to the South. The position of Ca-Ira is 18° 32′ N., 72° 39′ W. From Ca-Ira the South coast of the bay extends about 2 miles N.E. and about 12 miles East to Pointe Lamentin.

Cargo Handling Facilities: Ship's cranes or derricks are to be used. 1 forklift of low capacity available. General cargo can be loaded on to the quay but all containers must be loaded direct on to trucks.
Stevedores: The working hours are from 0800 hrs. to 2300 hrs. Night work is possible, but pilferage increases considerably during night time.
Repairs: Not possible.
Agent: Messrs. Guinemar S.A., Rua Guerra Mendes 4/4a, Bissau. Tel: 213022/3. Telex: 0969-276.
Note: Only the agent has VHF in Bissau (range up to 30 nautical miles).

AUTHORITY: Junta Autonoma dos Portos da Guine-Bissau, P.O.Box 382, Bissau, Guinea-Bissau. *Tel:* 2797 (Administrator's Office), 2783 (Secretariat). *Cables:* Porto, Bissau. *Contact:* Port Director.
Secretario de Estade dos Transportes, C.P. 306, Bissau, Guinea Bissau. *Tel:* 212583. *Telex:* 263 MTT BI.

NOTES

Please also advise Shipping Guides Ltd.

Guyana

ESSEQUIBO RIVER (Bartica): 06.24 N. 58.37 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

Essequibo Light (steel framework tower with red and white horizontal bands) marks seaward end of Essequibo Main Ship Channel. Vessels in vicinity of Demerara Pilot Station should listen for pilot boat on VHF Channel 16.
RESTRICTIONS: The Essequibo Bar is composed of hard mud and sand. The least depth of water is 3 ft. less than for Demerara Bar. Vessels should not attempt to cross the Essequibo Bar drawing more than 3 ft. less than that predicted for the Demerara Bar.
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Georgetown when Pilot boards. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
MEDICAL: Hospital at Georgetown and Bartica.
DENSITY: 1000, fresh water.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: At Georgetown.
REPAIRS: Government dry dock situated at Mazaruni, approximately 40 miles up river at junction of Essequibo and Mazaruni Rivers. Extreme dimensions: 160 ft. by 35 ft.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown, Guyana. *Tel:* 02-67842. *Cables:* Transport Guyana. *Contact:* Captain A. Haynes, Harbour Master.

GEORGETOWN: 06.49 N. 58.10 W. (See Plan)

PORT LIMITS: Seaward by an arc of a circle with radius 1 nautical mile, with the Georgetown Lighthouse as centre.
DOCUMENTS:

Certificate of Registry.
8 Crew Lists.
8 Provisions and Stores Lists.
4 Passenger Lists.
Customs Documents:
2 Reports of Ship's Stores (Form C1).
2 Lists of Crew Personal Effects (Form C2).
1 List of Unmanifested Cargo (Form C3).
12 Health Declaration Forms (W.H.O.2)
Health Documents for Crew (1 copy for each crew member).
5 Cargo Manifests.
5 Bills of Lading.

PILOTAGE: Vessels apply for Pilots through local Agents or direct to Chief Pilot, Georgetown, through "Demerara Radio, 8 Romeo Bravo", 12 hours in advance of ETA at pilot station when vessel is proceeding in to Georgetown Harbour. Pilot boarding ground is in Northwestern quadrant of circle with radius 5 cables and centre the Outer Georgetown Light. Normal international day or night signals for "I require a Pilot" are used. All pilot cutters are painted black (hull) and white (superstructure) with the word "Pilot" painted in white on black ground. Cutters are approximately 60 ft. in length.
ANCHORAGES: There are 5 with a least depth of approximately 20 ft. MLWS named A to E from North to South. Vessels are safely anchored at any of the above anchorages 1.5 cables to 2 cables from Georgetown park line. Bottom is soft mud and provides good holding ground.
RESTRICTIONS: No entry restrictions except those on draft imposed by the bar at estuaries.
MAX. SIZE: Draft 20 ft. 6 in. See "Developments".
HEALTH: Radio Pratique is not given, and Pratique is only given at Georgetown. This normally involves a visit from the Health Authorities if the vessel is clear. If a vessel is "suspect" or "infected", Master should advise Harbour Authority by special message through Demerara Radio or Georgetown Lighthouse and await advice of Port Health Officers; meanwhile, if in the vicinity of Georgetown, vessel may anchor at the specified quarantine anchorage near the Outer Georgetown Buoy as entry into the limits of the port without the authority of the Ministry of Health is prohibited if the vessel is suspect or infected.
RADIO: Name of radio station "Demerara Radio", call sign "8RB", always standing by on 2182 kHz., will give latest weather report or RDF bearings on request. Georgetown Lighthouse operates VHF Channel 16, HF 2738 and SSB 8281.2 kHz.
RADAR: No service available.
TUGS: At present, vessels dock stem on to the tide without aid of tugs. However, tugs could be provided if urgently required.
BERTHING: There are 6 main wharves privately and government owned, situated along the river frontage at Georgetown and varying in length from 210 ft. to 730 ft. Depths alongside range from 16 ft. to 20 ft. at LWS, but as the bottom is soft mud vessels may safely lie aground alongside. Ships work cargo with their own appliances.
BULK HANDLING FACILITIES: The sugar berth is 416 ft. in length with least depth alongside of 18 ft. MLWS and can accommodate vessels up to 530 ft. in length. Loading rate is 500 t.p.h. using 2 chutes. Vessels should not be more than 63 ft. beam.
CRANES: No heavy lift cranes available. Ship's gear has to be used. No floating cranes.
BRIDGES: Demerara Harbour Bridge: Floating bridge with retractor span situated 4.2 miles from mouth of river. Arrangements for passing are made by Agents. Bridge operators keep radio watch on VHF Channel 16.
STEVEDORES: Ship's Agent normally arranges for gangs in accordance with cargo plans or Master's cable advice. Gangs are unionised. Stevedores work around the clock every day of the week though they are paid overtime between hours of 1600 and 1900 and they earn time-and-a-half or double time on public holidays according to which one of the 12 public holidays they work.
MEDICAL: No special advance notice of required medical attention is necessary, and hospital facilities are always available.
TANKERS: There are no residue discharge facilities at this port. There are 4 tanker berths in the Georgetown area.

Rome Terminal (Shell) – depth alongside is 11 ft.
Ramsburg Terminal (Esso) – depth alongside 16 ft.
Ramsburg Terminal (Texaco) – depth alongside 11 ft.
Providence (Guyoil) – depth alongside 8.5 ft.
Size of pipe-lines: 6 in.

DENSITY: Average density in port is 1015, though during the rainy season (March-May; October-December) density of water may be as low as 1000 at LW in the harbour.
FRESH WATER: Fresh water is available, and is delivered alongside. The ship is required to pay for labour, overtime, etc., involved in the delivery.
FUEL: In case of emergency, providing advance notice is given by Master, vessels may be partially bunkered at any of Shell, Texaco or Esso installations. Vessels may be required to go alongside 2 hours before HW and leave not later than 1 hour after HW at the above-mentioned installations. Grades of fuel available are "Bunker C" and diesel fuel.
CONSULS: (and Embassies)

FIRE PRECAUTIONS: There are no stated precautions other than regulations against pumping out residual heavy oil (e.g. "Bunker C"). Ships having cargoes of ammunition, high explosives, dynamite, etc., are required by Harbour Regulations to anchor North of Georgetown Lighthouse prior to proceeding alongside wharf to unload and/or proceeding up river.
REPAIRS: Every type of deck or engine repair is undertaken at Guyana National Engineering Corporation (GNEC) Dry Dock. Above waterline and engine-room repairs of any type are undertaken on vessels exceeding the dimensions mentioned below while vessel is anchored in the stream. Also see "Dry Docks".
DRY DOCKS: GNEC Dry Dock: A graving dock 210 ft. × 37 ft. 9 in. at entrance situated South of GNEC No. 2 Wharf, which is State owned and operated on normal commercial lines. 198 ft. length of dry dock is on blocks. Breadth: top 46 ft. 4 in., bottom 40 ft. 9 in., depth on sill at HWOST 92 ft.

Government Dry Dock: Situated at Mazaruni approx. 40 miles upriver at junction of Essequibo and Mazaruni rivers is a graving dock and has extreme dimensions of approx. 160 ft. × 35 ft.
SURVEYORS: Lloyd's and Bureau Veritas. No cargo inspectors available.
GANGWAY/DECK WATCHMEN: Services of watchmen are compulsory and are obtained through a watchman's pool by ships' Agent.
Piracy: Armed gangs of robbers have boarded vessels from shore and from canoes and stolen quantities of ship's stores.
OPENING/CLOSING HATCHES: Normally carried out by ship's crew.
CUSTOMS ALLOWANCES: Each crew member is permitted up to 200 cigarettes aboard held out of bond, but is only allowed to take ashore 40 at any time. Only on a *final discharge* would a member of crew be permitted a tobacco allowance of half-a-pound. Each crew member is allowed to keep out of Bond, 1 (one) bottle of wine or spirits, but is prohibited from taking any of it ashore. Each member of crew is allowed tax-free only one-sixth gallon wine and one-sixth gallon spirits *when he is finally discharged.*
CARGO GEAR: Ship's gear.
REPATRIATION: Arrangements normally made through ship's Agents.
AIRPORT: Timehri International Airport is situated approx. 30 miles South of Georgetown with highway connection and is served by many intercontinental airlines.
TIME: 3 hours behind GMT. No alterations made to clocks during the year.
HOLIDAYS: New Year (January 1st); *Eid-ul-Ahza; *Phagwah; Republic Day (February 23rd); Good Friday; Easter Monday; Labour Day (May 1st); *Youman Naubi; Caribbean Day (July 5th); Commonwealth Day (First Monday in August); *Deepavali; Christmas Day (December 25th); Boxing Day (December 26th). *Religious holidays are variable.
POLICE/AMBULANCE/FIRE: Tel. 999. There are Police/Ambulance/Fire Stations on the waterfront.
TELEPHONES: Could be arranged through Coast Station 8RB.
STORING: See "Prelims".

SHORE LEAVE: Granted by Immigration Boarding Officer.

IDENTIFICATION CARDS: Not required.

DELAYS: Only when berths are occupied.

DEVELOPMENTS: Dredging to 20 ft. 08 in. chart datum in progress.

SHIP'S OFFICER'S REPORT: September 1988.

During vessel's stay in Georgetown I was able to gather the following information:

In a major step towards promoting the export of Bauxite, the Guyanese government has charted the Panamanian flag vessel M.V. "Arrowcane II", for an initial period of 5 years. This vessel will be a silo ship for transhipment of Bauxite.

She will be permanently moored in position Lat. 06° 49′ N., Long. 58° 10.5′ W. (approximate), heading North (see "Plan").

The "Arrowcane II" has been converted into a self-loading/discharging silo ship. She has an arrangement for discharging barges on her port side using on-board grabs, and then loading larger ships on her starboard side using a conveyor belt. She also has "Yokohama type" fenders on her starboard side.

Initially there was a draft restriction for vessels loading Bauxite at Linden (06° 01′ N., 58° 18′ W.) (up the Demerara River), so it was not possible for large vessels to take a full load. With the establishment of this silo ship at the mouth of the river it will be possible to load vessels to a deeper draft.

It was not possible to get other details about the loading draft restrictions, loading rates, etc., as the silo ship was still not operational when we left Georgetown. The 4 buoys have been laid and M.V. "Arrowcane II" was to carry out the "mooring operation" within a few days and become fully operational after 2 weeks.

SHIPMASTER'S REPORT: November 1989 and December 1989.

Charts: B.A. Charts No. 519, 527, 533 and 572.

Documents:

3 copies Crew Personal Effects List.
3 copies Bonded Stores List.
3 copies Provisions List.
2 copies Unmanifested Cargo.
1 copy Maritime Declaration of Health.
8 copies Crew List.

Port Officials: The Port Officials boarded at the berth and the party was large for a small vessel. The bond was sealed after gratuities given out.

Pilotage: The pilot boards at the Pilot Buoy (which was unlit at the time of our visits) from a large cutter with a black hull and white upper works with "Pilot" on the side. The name of the vessel was "Lady Young" and it was similar in appearance to a small tug.

There is a shortage of pilots as they are also required for Berbice and Essequibo, so it is usual for a pilot to transfer from an outward bound vessel to an inward bound vessel, and as this is the case, there are quite often long delays. Change of pilot takes place off the town.

A 24 hour pilot service is operated from Georgetown to the sea as long as the leading lights are operating.

Approaches: The headland on Pomeroon River is conspicuous on the radar at 20 miles. The tower and factory at Devonshire Castle Flats/ Anna Regina are conspicuous on the radar at 25 miles. The town of Georgetown is also conspicous at 25 miles on the radar.

The wreck just North of the Pilot Buoy in position Lat. 07° 00.8′ N., Long. 58° 02.9′ W. is no longer visible at low water.

The Demerera D/F Beacon is very unreliable and the Georgetown light was not operating at the time of our visit.

Anchorage: November 1989: Vessels anchor just North of the Pilot Buoy in a depth of approximately 4 fathoms. The bottom is mud and there is a large groundswell.

December 1989: Whilst waiting for the Sea Pilot for the outward passage we used the River Anchorage and anchored in Position "C". The River Pilot advised us to use 4 shackles in the water. Whilst at this anchorage a good watch should be maintained as thieves may try to board the vessel.

Channel: There are very few buoys left in the Channel and the pilot uses the leading marks day and night.

The old front leading mark has been moved to behind the rear mark (225° × 0.85 miles behind the original rear mark).

The Channel from the Pilot Buoy to the ship silo is 200 ft. wide and is aligned 045°/225°. The Channel has recently been dredged to 20 ft. 6 in. at chart datum (19 ft. 6 in. MLWS), although it was found to be silting to 17 ft. chart datum. There is a lot of mud/silt in suspension.

Radio/VHF: In November 1989, Georgetown Lighthouse Radio was first contacted on VHF Channel 16 at a distance of 30 miles, working Channel 12.

We were not able to contact Demerera Radio (8RB) prior to contacting Georgetown Lighthouse Radio, although another vessel reported making contact with the station at a distance of 120 miles on 2,558 kHz./ 2,049 kHz.

Whilst at anchor we worked Demerera Radio on 2,558 kHz./ 2,049 kHz. The station was very helpful.

The pilot launch "Lady Young" works on VHF Channel 16 but will switch to Channel 14 if required.

In December 1989, we made contact with Demerera Radio at over 100 miles (calling 2,182 kHz., working 2,258 kHz./2,049 kHz.). It is in order to make a local call to the Agent.

Berthing: Shell (November 1989): We berthed on the sea side of the Shell pontoon bridge at high water. Our draft was 4.4 m. and we experienced no difficulties going alongside. We unberthed one hour before low water with a draft of 4.1 m. and again experienced no difficulties even though the echo sounder indicated no water under the keep until we were 10 m. off the berth, where the depth was 7.0 m. at datum until we were abeam of Georgetown Lighthouse.

We berthed head out starboard side alongside.

The moorings consisted of 2 head/stern lines and 1 spring at ea end. The mooring lines are run by the boat which was very efficient.

The tidal range at the berth is about 2.0 m. The depth alongside chart datum was found to be about 4.0 m.

Berthing and unberthing is affected day and night.

A searchlight is very useful when berthing and unberthing.

Shell/Texaco (December 1989): Pilots are not keen to berth or unbe at Shell (called 'Rome' on documents) and Texaco (called 'Ramsbu on documents) at slack low water. At low water the forward mooring p at Texaco is dry so the mooring boat would be unable to get alongsi the pile.

Pilots prefer to dock 2 hours either side of low water at Texaco a about one hour either side of low water at the Shell berth.

The depth at the Texaco berth is greater than at Shell, 4.5 m. at ch datum. At both Shell and Texaco, vessels berth head out starboard si to.

The Texaco berth is made up of wooden pilings and a platform a is about 80 m. in length. Parts have recently been renewed. A searchlig is necessary for night mooring. The after moorings at the Texaco be are sent to a staghorn.

The official opening times of the pontoon bridge appear to 0300 hrs., 1100 hrs., 1600 hrs. and 2300 hrs., although these times a liable to change if power is not available. They will also open at oth times for river traffic if power is available.

Cargo: Shell (November 1989): The ship's portable flexible hose w used for discharge. The capacity of the shore tank is 180 tonnes.

The maximum back pressure allowed is 12 Bar and with 2 pumps averaged 40 t.p.h. (LPG mix 80/20). The ship's radio was used communicate with the shore during cargo operations.

Check for leaks were made prior to commencement of discharg and hot gas was used for 10 minutes on completion. No difficulties we encountered.

The shore Surveyor checks the shore tanks and then boards t vessel on completion.

Texaco (December 1989): Texaco have 9 horizontal cylindrical tan for ambient storage of LPG (5 × 660 bbls. and 4 × 160 bbls.). T maximum back pressure allowed at the berth is 150 p.s.i. (10 Bar). The are LPG shipments to the Texaco berth every 3 weeks. White oils a also handled at this berth.

The Esso berth which is 0.25 miles upstream of the Texaco berth of similar construction.

General: It is advisable to keep all cabins and lockers locked and movable objects under lock as many "visitors" are likely to board t vessel.

We employed 2 guards, larger vessels should employ more guard

There are 2 tanker berths upstream of the pontoon bridge, these a operated by Texaco and Esso. The Pontoon bridge is only ve occasionally opened for sea-going vessels as there is a lack of elec power to operate the winches.

All lights, including Georgetown Lighthouse, but excluding the lead lights are extinguished.

Bauxite vessels with maximum draft of 18 ft. can transit the 55 mi up river to Mackenzie, but during day time only and on a flood tide.

There is a silo ship at fixed moorings to the West of the main Chann abeam of Georgetown Lighthouse. It is moored bow out. Vessels w a draft of 30 ft. can be handled at the silo vessel at MHWS and 28 ft. 6 at normal high water.

Fresh water is only available at one general cargo berth in the to

It was possible to make an international call from the Tower Ho near the Cathedral. The cost to Europe is about U.S.$1.60 per minu

It is very important to make a thorough stowaway search prior departure.

SHIPMASTER'S REPORT: February 1990

Berth: Esso Ramsburg.

Position: Lat. 06° 45.2′ N., Long. 58° 11.25′ W. (BA Chart No.519).

Berthing: The berth is on the East bank of the River at Georgetown. is 100 m. long and is at the present time being refurbished with tam hardwood and logs.

The depth alongside at MLW is 14 ft. This depth extends to 100 ft. the jetty.

Cargo: Mogas is handled by a 6 in. line to a tank of 15,000 bbls. G Oil is handled by a 6 in. line to a tank of 18,000 bbls. and Av. Jet handled by a 4 in. line to a tank of 6,200 bbls. Lube Oils are also handle There are no facilities for handling of LPG.

Shore hoses are used and a pumping rate of 1,700 bbls./hr. can b achieved. On completion of operations, ullages, temperatures and wa dips are taken, ship's forms used.

General: Vessels berth port or starboard side alongside, depending t the tide.

Ship's gangway was difficult to land at low water.

Berth: Guyoil Providence.

Position: Lat. 06° 45.65′ N., Long. 58° 11′ W. (BA Chart No.519).

Berthing: The berth is operated by Guyoil Providence who are a st oil distribution company. The berth is 50 m. long and is constructed hardwood, logs and planks. The depth alongside at MLW is 12.5 ft.

Cargo: There is 1 dual purpose 6 in. line for Av. Jet and Gas Oil a 1×6 in. line for Mogas. There are 4 tanks, 1×5,000 bbl. for Moga 1×5,000 bbl. for Av. Jet and 1×5,000 bbl. and 1×10,000 bbl. tank Gas Oil. There are no tanks for LPG.

Shore hoses were used for discharge operations.

A water flush is required between Av. Jet and Gas Oil and vice-ver

General: Vessels berth port or starboard side alongside, dependent tide.

AUTHORITY: Transport and Harbours Department, Water Str Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport – Guya *Contact:* Captain A. Haynes, Harbour Master.

LINDEN: 06.00 N. 58.17 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilotage compulsory. Pilots are stationed at Georgetown. ETA to be given 12 hours in advance to pilot station. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

From Georgetown to Linden and Linden to Georgetown, pilotage not compulsory, but advisable to use G.N.E.C. Pilots.
RESTRICTIONS: Governed by depth of water at Demerara River Bar. Entrance normally at HW. Max. speed limit on the river is 10 knots.
ANCHORAGES: Vessels proceeding to Linden in ballast and drawing less than 15 ft. may anchor beyond Southern limit of Georgetown. Depths 16 ft. – 18 ft. MLWS.
MAX. SIZE: Draft 21 ft. 6 in.
HEALTH: Pratique given at Georgetown by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: There are 2 bauxite berths accommodating vessels of up to 570 ft. One loader for metal grades has an airdraft of 29 ft. 8 in. and a loading rate of 800 t.p.h. The second loader for calcined bauxite has an airdraft of 34 ft. and a loading rate of 350 t.p.h.

The Alumina berth has a travelling tower with an airdraft of 64 ft. and a loading rate of 400 t.p.h. Max. beam of vessel 85 ft.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02 – 67842. *Cables:* Transport Guyana.
Contact: Captain A. Haynes, Harbour Master.

NEW AMSTERDAM (Everton, Berbice): 06.14 N. 57.31 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.
RESTRICTIONS: The Berbice Bar is composed of fairly hard mud. Vessels may cross the Berbice Bar on even keel (reported to be dredged to 14.8 ft.)
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Berbice by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: The Bauxite Berth is about 1,500 ft. long, and has a fixed loading arm with an average loading rate of 500 t.p.h. The airdraft is 36 ft.

There is a strong ebb current of about 4–5 knots, although the flood runs at about 3 knots.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport Guyana.
Contact: Captain A. Haynes, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Cargo Handling Facilities: Ship's cranes or derricks are to be used. 1 forklift of low capacity available. General cargo can be loaded on to the quay but all containers must be loaded direct on to trucks.
Stevedores: The working hours are from 0800 hrs. to 2300 hrs. Night work is possible, but pilferage increases considerably during night time.
Repairs: Not possible.

Guyana

ESSEQUIBO RIVER (Bartica): 06.24 N. 58.37 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

Essequibo Light (steel framework tower with red and white horizontal bands) marks seaward end of Essequibo Main Ship Channel. Vessels in vicinity of Demerara Pilot Station should listen for pilot boat on VHF Channel 16.
RESTRICTIONS: The Essequibo Bar is composed of hard mud and sand. The least depth of water is 3 ft. less than for Demerara Bar. Vessels should not attempt to cross the Essequibo Bar drawing more than 3 ft. less than that predicted for the Demerara Bar.
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Georgetown when Pilot boards. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
MEDICAL: Hospital at Georgetown and Bartica.
DENSITY: 1000, fresh water.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: At Georgetown.
REPAIRS: Government dry dock situated at Mazaruni, approximately 40 miles up river at junction of Essequibo and Mazaruni Rivers. Extreme dimensions: 160 ft. by 35 ft.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown, Guyana. *Tel:* 02-67842. *Cables:* Transport Guyana. *Contact:* Captain A. Haynes, Harbour Master.

GEORGETOWN: 06.49 N. 58.10 W. (See Plan)

PORT LIMITS: Seaward by an arc of a circle with radius 1 nautical mile, with the Georgetown Lighthouse as centre.
DOCUMENTS:
Certificate of Registry.
8 Crew Lists.
8 Provisions and Stores Lists.
4 Passenger Lists.
Customs Documents:
2 Reports of Ship's Stores (Form C1).
2 Lists of Crew Personal Effects (Form C2).
1 List of Unmanifested Cargo (Form C3).
12 Health Declaration Forms (W.H.O.2)
Health Documents for Crew (1 copy for each crew member).
5 Cargo Manifests.
5 Bills of Lading.
PILOTAGE: Vessels apply for Pilots through local Agents or direct to Chief Pilot, Georgetown, through "Demerara Radio, 8 Romeo Bravo", 12 hours in advance of ETA at pilot station when vessel is proceeding in to Georgetown Harbour. Pilot boarding ground is in Northwestern quadrant of circle with radius 5 cables and centre the Outer Georgetown Light. Normal international day or night signals for "I require a Pilot" are used. All pilot cutters are painted black (hull) and white (superstructure) with the word "Pilot" painted in white on black ground. Cutters are approximately 60 ft. in length.
ANCHORAGES: There are 5 with a least depth of approximately 20 ft. MLWS named A to E from North to South. Vessels are safely anchored at any of the above anchorages 1.5 cables to 2 cables from Georgetown park line. Bottom is soft mud and provides good holding ground.
RESTRICTIONS: No entry restrictions except those on draft imposed by the bar at estuaries.
MAX. SIZE: Draft 20 ft. 6 in. See "Developments".
HEALTH: Radio Pratique is not given, and Pratique is only given at Georgetown. This normally involves a visit from the Health Authorities if the vessel is clear. If a vessel is "suspect" or "infected", Master should advise Harbour Authority by special message through Demerara Radio or Georgetown Lighthouse and await advice of Port Health Officers; meanwhile, if in the vicinity of Georgetown, vessel may anchor at the specified quarantine anchorage near the Outer Georgetown Buoy as entry into the limits of the port without the authority of the Ministry of Health is prohibited if the vessel is suspect or infected.
RADIO: Name of radio station "Demerara Radio", call sign "8RB", always standing by on 2182 kHz., will give latest weather report or RDF bearings on request. Georgetown Lighthouse operates VHF Channel 16, HF 2738 and SSB 8281.2 kHz.
RADAR: No service available.
TUGS: At present, vessels dock stem on to the tide without aid of tugs. However, tugs could be provided if urgently required.
BERTHING: There are 6 main wharves privately and government owned, situated along the river frontage at Georgetown and varying in length from 210 ft. to 730 ft. Depths alongside range from 16 ft. to 20 ft. at LWS, but as the bottom is soft mud vessels may safely lie aground alongside. Ships work cargo with their own appliances.
BULK HANDLING FACILITIES: The sugar berth is 416 ft. in length with least depth alongside of 18 ft. MLWS and can accommodate vessels up to 530 ft. in length. Loading rate is 500 t.p.h. using 2 chutes. Vessels should not be more than 63 ft. beam.
CRANES: No heavy lift cranes available. Ship's gear has to be used. No floating cranes.
BRIDGES: Demerara Harbour Bridge: Floating bridge with retractor span situated 4.2 miles from mouth of river. Arrangements for passing are made by Agents. Bridge operators keep radio watch on VHF Channel 16.
STEVEDORES: Ship's Agent normally arranges for gangs in accordance with cargo plans or Master's cable advice. Gangs are unionised. Stevedores work around the clock every day of the week though they are paid overtime between hours of 1600 and 1900 and they earn time-and-a-half or double time on public holidays according to which one of the 12 public holidays they work.
MEDICAL: No special advance notice of required medical attention is necessary, and hospital facilities are always available.
TANKERS: There are no residue discharge facilities at this port. There are 4 tanker berths in the Georgetown area.
Rome Terminal (Shell) – depth alongside is 11 ft.
Ramsburg Terminal (Esso) – depth alongside 16 ft.
Ramsburg Terminal (Texaco) – depth alongside 11 ft.
Providence (Guyoil) – depth alongside 8.5 ft.
Size of pipe-lines: 6 in.
DENSITY: Average density in port is 1015, though during the rainy season (March-May; October-December) density of water may be as low as 1000 at LW in the harbour.
FRESH WATER: Fresh water is available, and is delivered alongside. The ship is required to pay for labour, overtime, etc., involved in the delivery.
FUEL: In case of emergency, providing advance notice is given by Master, vessels may be partially bunkered at any of Shell, Texaco or Esso installations. Vessels may be required to go alongside 2 hours before HW and leave not later than 1 hour after HW at the above-mentioned installations. Grades of fuel available are "Bunker C" and diesel fuel.

FIRE PRECAUTIONS: There are no stated precautions other than regulations against pumping out residual heavy oil (e.g. "Bunker C"). Ships having cargoes of ammunition, high explosives, dynamite, etc., are required by Harbour Regulations to anchor North of Georgetown Lighthouse prior to proceeding alongside wharf to unload and/or proceeding up river.
REPAIRS: Every type of deck or engine repair is undertaken at Guyana National Engineering Corporation (GNEC) Dry Dock. Above waterline and engine-room repairs of any type are undertaken on vessels exceeding the dimensions mentioned below while vessel is anchored in the stream. Also see "Dry Docks".
DRY DOCKS: GNEC Dry Dock: A graving dock 210 ft. × 37 ft. 9 in. at entrance situated South of GNEC No. 2 Wharf, which is State owned and operated on normal commercial lines. 198 ft. length of dry dock is on blocks. Breadth: top 46 ft. 4 in., bottom 40 ft. 9 in., depth on sill at HWOST 92 ft.

Government Dry Dock: Situated at Mazaruni approx. 40 miles upriver at junction of Essequibo and Mazaruni Rivers is a graving dock and has extreme dimensions of approx. 160 ft. × 35 ft.
SURVEYORS: Lloyd's and Bureau Veritas. No cargo inspectors available.
GANGWAY/DECK WATCHMEN: Services of watchmen are compulsory and are obtained through a watchman's pool by ships' Agent.
Piracy: Armed gangs of robbers have boarded vessels from shore and from canoes and stolen quantities of ship's stores.
OPENING/CLOSING HATCHES: Normally carried out by ship's crew.
CUSTOMS ALLOWANCES: Each crew member is permitted up to 200 cigarettes aboard held out of bond, but is only allowed to take ashore 40 at any time. Only on a *final discharge* would a member of crew be permitted a tobacco allowance of half-a-pound. Each crew member is allowed to keep out of Bond, 1 (one) bottle of wine or spirits, but is prohibited from taking any of it ashore. Each member of crew is allowed tax-free only one-sixth gallon wine and one-sixth gallon spirits *when he is finally discharged*.
CARGO GEAR: Ship's gear.
REPATRIATION: Arrangements normally made through ship's Agents.
AIRPORT: Timehri International Airport is situated approx. 30 miles South of Georgetown with highway connection and is served by many intercontinental airlines.
TIME: 3 hours behind GMT. No alterations made to clocks during the year.
HOLIDAYS: New Year (January 1st); *Eid-ul-Ahza; *Phagwah; Republic Day (February 23rd); Good Friday; Easter Monday; Labour Day (May 1st); *Youman Naubi; Caribbean Day (July 5th); Commonwealth Day (First Monday in August); *Deepavali; Christmas Day (December 25th); Boxing Day (December 26th). *Religious holidays are variable.
POLICE/AMBULANCE/FIRE: Tel. 999. There are Police/Ambulance/Fire Stations on the waterfront.
TELEPHONES: Could be arranged through Coast Station 8RB.
STORING: See "Prelims".
(1) Yes. (2) Yes. (3) Yes. (4) Yes. (5) Yes. (6) Yes.

BANKS: Chase Manhattan Bank N.A., Bank of Guyana Building, Church Street, Georgetown, P.O.Box 101080, Telex: Chase Bk, GY 2222.

Barclays Bank Int. Ltd., 48 Water Street, Georgetown, Telex: Barclay GY 2248.

SHORE LEAVE: Granted by Immigration Boarding Officer.

IDENTIFICATION CARDS: Not required.

DELAYS: Only when berths are occupied.

DEVELOPMENTS: Dredging to 20 ft. 08 in. chart datum in progress.

SHIP'S OFFICER'S REPORT: September 1988.

During vessel's stay in Georgetown I was able to gather the following information:

In a major step towards promoting the export of Bauxite, the Guyanese government has charted the Panamanian flag vessel M.V. "Arrowcane II", for an initial period of 5 years. This vessel will be a silo ship for transhipment of Bauxite.

She will be permanently moored in position Lat. 06° 49′ N., Long. 58° 10.5′ W. (approximate), heading North (see "Plan").

The "Arrowcane II" has been converted into a self-loading/discharging silo ship. She has an arrangement for discharging barges on her port side using on-board grabs, and then loading larger ships on her starboard side using a conveyor belt. She also has "Yokohama type" fenders on her starboard side.

Initially there was a draft restriction for vessels loading Bauxite at Linden (06° 01′ N., 58° 18′ W.) (up the Demerara River), so it was not possible for large vessels to take a full load. With the establishment of this silo ship at the mouth of the river it will be possible to load vessels to a deeper draft.

It was not possible to get other details about the loading draft restrictions, loading rates, etc., as the silo ship was still not operational when we left Georgetown. The 4 buoys have been laid and M.V. "Arrowcane II" was to carry out the "mooring operation" within a few days and become fully operational after 2 weeks.

SHIPMASTER'S REPORT: November 1989 and December 1989.

Charts: B.A. Charts No. 519, 527, 533 and 572.

Documents:

3 copies Crew Personal Effects List.
3 copies Bonded Stores List.
3 copies Provisions List.
2 copies Unmanifested Cargo.
1 copy Maritime Declaration of Health.
8 copies Crew List.

Port Officials: The Port Officials boarded at the berth and the party was large for a small vessel. The bond was sealed after gratuities given out.

Pilotage: The pilot boards at the Pilot Buoy (which was unlit at the time of our visits) from a large cutter with a black hull and white upper works with "Pilot" on the side. The name of the vessel was "Lady Young" and it was similar in appearance to a small tug.

There is a shortage of pilots as they are also required for Berbice and Essequibo, so it is usual for a pilot to transfer from an outward bound vessel to an inward bound vessel, and as this is the case, there are quite often long delays. Change of pilot takes place off the town.

A 24 hour pilot service is operated from Georgetown to the sea as long as the leading lights are operating.

Approaches: The headland on Pomeroon River is conspicuous on the radar at 20 miles. The tower and factory at Devonshire Castle Flats/Anna Regina are conspicuous on the radar at 25 miles. The town of Georgetown is also conspicuous at 25 miles on the radar.

The wreck just North of the Pilot Buoy in position Lat. 07° 00.8′ N., Long. 58° 02.9′ W. is no longer visible at low water.

The Demerera D/F Beacon is very unreliable and the Georgetown light was not operating at the time of our visit.

Anchorage: November 1989: Vessels anchor just North of the Pilot Buoy in a depth of approximately 4 fathoms. The bottom is mud and there is a large groundswell.

December 1989: Whilst waiting for the Sea Pilot for the outward passage we used the River Anchorage and anchored in Position "C". The River Pilot advised us to use 4 shackles in the water. Whilst at this anchorage a good watch should be maintained as thieves may try to board the vessel.

Channel: There are very few buoys left in the Channel and the pilot uses the leading marks day and night.

The old front leading mark has been moved to behind the rear mark (225° × 0.85 miles behind the original rear mark).

The Channel from the Pilot Buoy to the ship silo is 200 ft. wide and is aligned 045°/225°. The Channel has recently been dredged to 20 ft. 6 in. at chart datum (19 ft. 6 in. MLWS), although it was found to be silting to 17 ft. chart datum. There is a lot of mud/silt in suspension.

Radio/VHF: In November 1989, Georgetown Lighthouse Radio was first contacted on VHF Channel 16 at a distance of 30 miles, working Channel 12.

We were not able to contact Demerera Radio (8RB) prior to contacting Georgetown Lighthouse Radio, although another vessel reported making contact with the station at a distance of 120 miles on 2,558 kHz./2,049 kHz.

Whilst at anchor we worked Demerera Radio on 2,558 kHz./2,049 kHz. The station was very helpful.

The pilot launch "Lady Young" works on VHF Channel 16 but will switch to Channel 14 if required.

In December 1989, we made contact with Demerera Radio at over 100 miles (calling 2,182 kHz., working 2,258 kHz./2,049 kHz.). It is in order to make a local call to the Agent.

Berthing: Shell (November 1989): We berthed on the sea side of the Shell pontoon bridge at high water. Our draft was 4.4 m. and we experienced no difficulties going alongside. We unberthed one hour before low water with a draft of 4.1 m. and again experienced no difficulties even though the echo sounder indicated no water under the keep until we were 10 m. off the berth, where the depth was 7.0 m. at datum until we were abeam of Georgetown Lighthouse.

We berthed head out starboard side alongside.

The moorings consisted of 2 head/stern lines and 1 spring at e end. The mooring lines are run by the boat which was very efficien

The tidal range at the berth is about 2.0 m. The depth alongside chart datum was found to be about 4.0 m.

Berthing and unberthing is affected day and night.

A searchlight is very useful when berthing and unberthing.

Shell/Texaco (December 1989): Pilots are not keen to berth or unbe at Shell (called 'Rome' on documents) and Texaco (called 'Ramsb on documents) at slack low water. At low water the forward mooring at Texaco is dry so the mooring boat would be unable to get alongs the pile.

Pilots prefer to dock 2 hours either side of low water at Texaco about one hour either side of low water at the Shell berth.

The depth at the Texaco berth is greater than at Shell, 4.5 m. at c datum. At both Shell and Texaco, vessels berth head out starboard to.

The Texaco berth is made up of wooden pilings and a platform is about 80 m. in length. Parts have recently been renewed. A searchl is necessary for night mooring. The after moorings at the Texaco b are sent to a staghorn.

The official opening times of the pontoon bridge appear to 0300 hrs., 1100 hrs., 1600 hrs. and 2300 hrs., although these times liable to change if power is not available. They will also open at o times for river traffic if power is available.

Cargo: Shell (November 1989): The ship's portable flexible hose used for discharge. The capacity of the shore tank is 180 tonnes.

The maximum back pressure allowed is 12 Bar and with 2 pumps averaged 40 t.p.h. (LPG mix 80/20). The ship's radio was use communicate with the shore during cargo operations.

Check for leaks were made prior to commencement of dischar and hot gas was used for 10 minutes on completion. No difficulties w encountered.

The shore Surveyor checks the shore tanks and then boards vessel on completion.

Texaco (December 1989): Texaco have 9 horizontal cylindrical ta for ambient storage of LPG (5 × 660 bbls. and 4 × 160 bbls.). maximum back pressure allowed at the berth is 150 p.s.i. (10 Bar). Th are LPG shipments to the Texaco berth every 3 weeks. White oils also handled at this berth.

The Esso berth which is 0.25 miles upstream of the Texaco ber of similar construction.

General: It is advisable to keep all cabins and lockers locked and movable objects under lock as many "visitors" are likely to board vessel.

We employed 2 guards, larger vessels should employ more gua

There are 2 tanker berths upstream of the pontoon bridge, these operated by Texaco and Esso. The Pontoon bridge is only occasionally opened for sea-going vessels as there is a lack of ele power to operate the winches.

All lights, including Georgetown Lighthouse, but excluding the lea lights are extinguished.

Bauxite vessels with maximum draft of 18 ft. can transit the 55 m up river to Mackenzie, but during day time only and on a flood tide

There is a silo ship at fixed moorings to the West of the main Chan abeam of Georgetown Lighthouse. It is moored bow out. Vessels a draft of 30 ft. can be handled at the silo vessel at MHWS and 28 ft. at normal high water.

Fresh water is only available at one general cargo berth in the t

It was possible to make an international call from the Tower H near the Cathedral. The cost to Europe is about U.S.$1.60 per mi

It is very important to make a thorough stowaway search pric departure.

SHIPMASTER'S REPORT: February 1990

Berth: Esso Ramsburg.

Position: Lat. 06° 45.2′ N., Long. 58° 11.25′ W. (BA Chart No.519)

Berthing: The berth is on the East bank of the River at Georgetow is 100 m. long and is at the present time being refurbished with ta hardwood and logs.

The depth alongside at MLW is 14 ft. This depth extends to 100 ft the jetty.

Cargo: Mogas is handled by a 6 in. line to a tank of 15,000 bbls. Oil is handled by a 6 in. line to a tank of 18,000 bbls. and Av. Je handled by a 4 in. line to a tank of 6,200 bbls. Lube Oils are also hand There are no facilities for handling of LPG.

Shore hoses are used and a pumping rate of 1,700 bbls./hr. car achieved. On completion of operations, ullages, temperatures and w dips are taken, ship's forms used.

General: Vessels berth port or starboard side alongside, depending the tide.

Ship's gangway was difficult to land at low water.

Berth: Guyoil Providence.

Position: Lat. 06° 45.65′ N., Long. 58° 11′ W. (BA Chart No.519).

Berthing: The berth is operated by Guyoil Providence who are a s oil distribution company. The berth is 50 m. long and is constructe hardwood, logs and planks. The depth alongside at MLW is 12.5 ft.

Cargo: There is 1 dual purpose 6 in. line for Av. Jet and Gas Oil a 1×6 in. line for Mogas. There are 4 tanks, 1×5,000 bbl. for Mog 1×5,000 bbl. for Av. Jet and 1×5,000 bbl. and 1×10,000 bbl. tank Gas Oil. There are no tanks for LPG.

Shore hoses were used for discharge operations.

A water flush is required between Av. Jet and Gas Oil and vice-ve

General: Vessels berth port or starboard side alongside, dependen tide.

AUTHORITY: Transport and Harbours Department, Water Str Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport – Guy *Contact:* Captain A. Haynes, Harbour Master.

LINDEN: 06.00 N. 58.17 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilotage compulsory. Pilots are stationed at Georgetown. ETA to be given 12 hours in advance to pilot station. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.

From Georgetown to Linden and Linden to Georgetown, pilotage not compulsory, but advisable to use G.N.E.C. Pilots.
RESTRICTIONS: Governed by depth of water at Demerara River Bar. Entrance normally at HW. Max. speed limit on the river is 10 knots.
ANCHORAGES: Vessels proceeding to Linden in ballast and drawing less than 15 ft. may anchor beyond Southern limit of Georgetown. Depths 16 ft. – 18 ft. MLWS.
MAX. SIZE: Draft 21 ft. 6 in.
HEALTH: Pratique given at Georgetown by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: There are 2 bauxite berths accommodating vessels of up to 570 ft. One loader for metal grades has an airdraft of 29 ft. 8 in. and a loading rate of 800 t.p.h. The second loader for calcined bauxite has an airdraft of 34 ft. and a loading rate of 350 t.p.h.

The Alumina berth has a travelling tower with an airdraft of 64 ft. and a loading rate of 400 t.p.h. Max. beam of vessel 85 ft.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02 – 67842. *Cables:* Transport Guyana. *Contact:* Captain A. Haynes, Harbour Master.

NEW AMSTERDAM (Everton, Berbice): 06.14 N. 57.31 W.

DOCUMENTS: See "Georgetown".
PILOTAGE: Pilots are stationed at Georgetown. ETA to be given 24 hours in advance to pilot station. Pilotage compulsory. Pilot boards from black cutter 5 cables N.W. of the Outer Georgetown Light.
RESTRICTIONS: The Berbice Bar is composed of fairly hard mud. Vessels may cross the Berbice Bar on even keel (reported to be dredged to 14.8 ft.)
MAX. SIZE: Controlled by Bar draft predictions.
HEALTH: Pratique given at Berbice by Health Authorities. If vessel is suspect or infected, Master to advise Harbour Authority by radio before arrival.
RADIO: Demerara Radio call sign 8RB operating on 2182 kHz. Georgetown Lighthouse operates VHF Channel 16 and HF 2738 kHz, 24 hours a day. Also SSB 8281.2 kHz.
TUGS: Not available.
BERTHING: The Bauxite Berth is about 1,500 ft. long, and has a fixed loading arm with an average loading rate of 500 t.p.h. The airdraft is 36 ft.

There is a strong ebb current of about 4–5 knots, although the flood runs at about 3 knots.
MEDICAL: Hospital at Georgetown.
DENSITY: 1000, fresh water.
FRESH WATER: Can be supplied.
FUEL: Can be supplied.
CONSULS/REPAIRS: At Georgetown.
OPENING/CLOSING HATCHES: By ship's crew.
CUSTOMS ALLOWANCES: Up to 200 cigarettes and 1 bottle wine or spirits per man. Only 40 cigarettes may be taken ashore at any time.
AUTHORITY: Transport and Harbours Department, Water Street, Stabroek, Georgetown. *Tel:* 02-67842. *Cables:* Transport Guyana. *Contact:* Captain A. Haynes, Harbour Master.

Guyane (French Guyana)

DEGRAD-DES-CANNES (Main Port): 04.51 N. 52.16 W.
LE LARIVOT (Secondary Port): 04.54 N. 52.22 W.
CAYENNE (Secondary Port): 04.56 N. 52.20 W.
KOUROU (Secondary Port): 05.09 N. 52.40 W.
SAINT LAURENT-DU-MARONI (Secondary Port): 05.30 N. 54.02 W.

(See Plan)

LOCATION: Degrad-des-Cannes – 15 km. from Cayenne.
Le Larivot – 10 km. from Cayenne.
Kourou – 60 km. from Cayenne.
Saint-Laurent-du-Maroni – 250 km. from Cayenne.

PILOTAGE: Notice of ETA and request for a Pilot no less than 24 hours before ETA at Degrad-des-Cannes Channel Buoy and 48 hours for Saint-Laurent and Kourou.

Station de Pilotage de Guyane, Port du Degrad-des-Cannes, 97300 – Remire. Tel: 31.37.23.

ANCHORAGES:
1. At Sea Buoy at Cayenne.
2. At Sea Buoy at Degrad-des-Cannes.
3. At Salut Island (Iles du Salut).

RESTRICTIONS: Permanent dredging underway. Recommended that vessels approach at high tide.

Depth of water in channels:
Cayenne-Larivot (10 km.): 0.90 m. + height of tide.
Degrad-des-Cannes (15 km.): 3.0 m. + height of tide.

HEALTH: French Regulations apply.

RADIO: Cayenne Radio.

VHF: Harbour Master and Pilot Station on Channel 16.

BERTHING: Berth at Degrad-des-Cannes on the Mahury River, length of concrete wharf is 300 m., max. LOA 160 m. Roll-on/Roll-off facilities available. Discharge of general cargo and containers by ship's gear.

TANKERS: *Degrad-des-Cannes:* Steel wharf with dolphins. Min. LOA 80 m. Max. LOA 130 m.
Le Larivot: Concrete wharf. Max. LOA 100 m. Depth 4.9 m.

FRESH WATER: Available.

FUEL: By road tanker.

REPAIRS: Limited facilities available.

REPATRIATION: Rochambeau Airport. Connecting flights to France, Suriname and Brazil.

TIME: GMT minus 3 hours.

POLICE/AMBULANCE/FIRE: Contact Harbour Office at Degrad-des-Cannes.

GENERAL: Customs and Frontier Police at Degrad-des-Cannes.

DEVELOPMENTS: New berth under construction at Degrad-des-Cannes (length 130 m.).

SHIPMASTER'S REPORT: October 1990.

Arrival: Vessel arrived at Degrad Des Cannes Fairway Buoy at 2130 hrs., and anchored to Pilot's advice.

Pilot starts one hour before H.W., in order to be between Buoys No. 10 – 18 at H.W. The shallowest part of the channel is between Buoys No. 1 – 27.

Our deepest draft was 5.03 m.

A tug stands by in case there are any difficulties when transiting the channel. The channel is 80 m. wide, and the buoys are spaced 160 m. apart. The current was to the West at 2.5 knots. Vessel has to keep close to the green buoy.

Departure: Vessel departed at 0330 hrs., and waited at the channel entrance to allow a vessel with draft 5.90 m. to enter.

Dredger: On our arrival, the dredger was under repair, but began work again after 10 days.

Current: According to the Pilot, the current is normally to the West, but changes twice a year and runs to the East for 8 days. In the dry season, the current still runs up 15 minutes after H.W. In the rainy season, the current runs down half an hour before H.W.

Berthing: On approaching the berth, the vessel turns on the starboard anchor, with 2 shackles in the water.

Vessels without bow thrusters must leave berth before H.W., as the current from H.W. onwards pushes the vessel on to the berth.

AUTHORITY: *Port Director:* M. le Directeur, Departemental de l'Equipement, 40 Avenue Leopold Heder, B.P. 338, 97305 – Cayenne, Cedex.

GENERAL

DOCUMENTARY REQUIREMENTS PRIOR TO ARRIVAL:

Advice of Arrival: The arrival of the vessel must be announced 48 hours in advance, and in writing, to the Port Captaincy and to the Port Authority, with indication of the vessel's characteristics, the cargo which will be discharged and loaded, and requirements concerning supply of water, etc.

Information Concerning Cargo Intended for the Port: The Agency must receive in good time by air mail 6 copies of the Cargo Manifest and 2 copies of the Bills of Lading. In the event that it is not possible to supply these documents by mail, the information must be provided by telex to the Agency so that the latter may draw them up.

The Cargo Manifests are distributed to the Port Authority, the Haiti Terminal (private concern handling cargo consolidation), to the Ministry of Commerce, the Ministry of Finances and to the Agency.

REQUIREMENTS RELATING TO THE RECEIPT OF THE VESSEL:

Reception Commission: The vessel is received by representatives of the Port Health, Immigration, Customs, International Police, National Port Authority and the Agency.

Documentation Required: On the arrival of the vessel, the following documents are required, OEA/ALALC, IMO and certain other documents being acceptable.

	No of Copies and Distribution					
Type of Document	*Health*	*Immigration*	*Customs*	*Police*	*NPA*	*Agency (a)*
General Declaration	–	–	1	–	1	1
Cargo Manifest (b)	–	–	–	–	1	–
Crew List	1	1	3	1	–	1
List of Passengers	–	1	2	–	–	–
List of Stores	–	–	2	–	–	–
Declaration of Crew Effects	–	–	2	–	–	–
Maritime Health Declaration	1	–	–	–	–	–
Mail List	–	–	–	–	–	1
Arms and Ammunition Manifest	–	–	1	1	–	1

(a) The Agency requires additional copies of the Crew List, the Passenger List, the Stores List, the Arms and Ammunition Manifest, etc., dependent upon the destination of the vessel, in accordance with the requirements of Consular Clearance.

(b) Required in the event that the manifest has been received, or information regarding the cargo, in advance of the arrival of the vessel; if not, the agency requires 4 or 6 copies for distribution amongst the different authorities.

REQUIREMENTS CONCERNING DOCUMENTATION ON SAILING:

Documentation on Sailing: At the request of the Agency, the Customs issue a clearance with which permission to sail is applied for from the Port Captaincy. The latter's permit is used for requesting the services of the Pilot from the National Port Administration.

An Outgoing Manifest is presented to Customs which also contains a sworn statement (sworn statement of the Master of a vessel with cargo, or sworn statement of the Master of a vessel in ballast), and the List of Passengers. If the vessel is sailing with cargo, it is presented in 6 copies; if in ballast, in 4 copies.

CONSULAR INTERVENTION:

Consular Documentation: In accordance with the 1963 Customs Code, Article 119, the Master of a vessel loading cargo for Haiti, or his representative, must sign before the Consul a Declaration sworn as to the truthfulness of the manifest. This article is transcribed as follows:

Quote:

Article 119, *Oath.* Masters of vessels or their representative, at the time of having their manifests visaed, shall give the following oath which shall be transcribed by the Consul at the bottom of the manifest: I swear that this manifest contains exactly the packages shipped on board my vessel, that the quantities are in agreement with those shown on the Bills of Lading. I declare that I will accept all penalties which I may incur for offence against the Customs Law. I give my hand hereto.

Unquote.

In general, Consular Clearance has to be obtained at each port from the first at which cargo is loaded for Haiti. For this purpose, the Consul requires 6 copies of each of the following documents:

General Declaration.
Cargo Manifests or In Ballast.
Crew List.
List of Passengers or Negative.
Stores List.

The Consul returns 3 copies of the documents, which must go with the vessel, and 6 envelopes, i.e. 1 for each of the following Authorities:

General Customs Administration.
Director of Customs.
Department of Commerce.
Fiscal Department.
Finance Department.
Customs Collector.

The 6 envelopes are not always received, and at times only 2 copies of the visaed documents are given back. The Authorities apply a certain tolerance when it is established that the Consular Fees have been paid at the Consulate or at destination.

CAP HAITIEN: 19.46 N. 72.12 W. **(See Plan)**

GENERAL: For all general information refer to "Port-au-Prince".
APPROACHES: The current is about 3 knots in the entrance to the port when the river is in flood.
ANCHORAGE: Vessels which are unable to moor alongside because of deeper draft are anchored off the wharf.
BERTHING: The wharf at Cap Haitien was constructed by the Compania Industrial Maritima. The construction is in reinforced concrete. It extends for a length of 900 ft. in an Easterly direction and comprises 3 sections. The most important section is 600 ft. long and has berths for deep sea vessels on the South side in depths of 30 ft. The Western section, nearest the shore, is 300 ft. long with variable depths of 7 ft. to 9 ft. alongside, with berths for motor vessels of small tonnage and sailing ships. The central section accommodates the Customs offices. 2 metal warehouses border the East and West ends of the wharf. Between the warehouses is 1 fixed crane of 30 tons capacity.
FRESH WATER: Fresh water is available at Cap Haitien.
FUEL: Available, only in drums.
DEVELOPMENTS: Ro/Ro Berth length 100 m., under construction. Main pier length 250 m., under construction. Cruise ship pier length 170 m., to be constructed.

REPORT: December 1984.
Documents: See "Port-au-Prince".
Approaches: New lighthouse on Pte. Pinolet seen at 30 miles.
Pilotage: Pilots boarded in Lat. 19° 48.8′ N., Long. 72° 10.9′ W. Pilots board from small launch, approx. 5 m. long, with grey hull and yellow decking. The words "Pilote No. 1" painted in black on either side of white housing.

2 Pilots boarded – Senior Pilot/Port Captain: Eugene Magloire.

Restrictions: Channel very well marked – new beacons in positions as shown on "Plan". Least depth encountered in channel 10 m.
Radio: ETA telex sent via satellite to Agents. No radio station available.
VHF: Called pilot station on VHF Channel 16, 2 hours and 1 hour prior to arrival, but received no reply. Shortly before arrival at pilot boarding point, pilot station advised, on Channel 16, that pilot boat was coming out to our vessel.
Tugs: None. Small mooring boat takes heaving lines only ashore.
Berthing: Our vessel, 200 m. long, berthed at the Passenger Berth after swinging to starboard in the basin off the berth (depth 11 m.).

The berth is well fendered (Kleber fenders). Apart from main access to berth, there is also a footbridge for passengers.

Port has recently been reconstructed with modern berthing facilities, adequate mooring points, lighting, warehousing, open storage, etc.

Cargo Handling Equipment: Observed 1 conveyor, no cranes in evidence.
Regulations: Not permitted to take fruit ashore.
Authority: Autorite Portuaire National.

MIRAGOANE: 18.25 N. 73.04 W. **(See Plan)**

GENERAL: For all general information refer to "Port-au-Prince".
BERTHING: The facilities at Miragoane are 1 small jetty for loading and discharging general cargo with a max. depth alongside of 18 ft.

There is a wharf for loading bauxite, belonging to the Reynolds Company, with a depth alongside of 34 ft. Total annual export about 350,000 tons.

PORT-AU-PRINCE: 18.33 N. 72.21 W. **(See Plan)**

Also see "General" before first port.

DOCUMENTS:

Shipmasters Report: October 1982.

Clearance from Last Port.
6 Crew Lists.
3 Nil Passenger Lists.
3 Provisions/Stores Lists.
3 Crew Personnel Effects Lists.
2 Ports of Call Lists.
1 Vaccination/Inoculation List.

PILOTAGE: Pilotage is compulsory for all movements of ships in the port. The Pilot boards to the West of the Fairway Buoy and is accompanied by port officials, i.e. Port Doctor and Representatives of Immigration, Police and Customs. These officials insist on using the accommodation ladder to board the vessel. Masters must arrange with their respective Agents the time which they will require a Pilot to leave the port. If they are ready to depart before the hour arranged they may call the Pilot by 3 blasts of the ship's whistle.

Berthing from 0530 hrs. – 2100 hrs. except Sundays and holidays.

APPROACHES: The Port of Port-au-Prince is situated at the extreme S.E. of the bay. It can be approached from the North and from the South by 2 channels.

One may approach from the N.E. by the Saint-Marc channel or from the West by the Gonave channel, between Trou-Forban Point and the village of Ca-Ira. The bay extends between Trou-Forban Point in the North and the village of Ca-Ira about 20 miles to the South. The position of Ca-Ira is 18° 32′ N., 72° 39′ W. From Ca-Ira the South coast of the bay extends about 2 miles N.E. and about 12 miles East to Pointe Lamentin.

ANCHORAGE: Vessels must anchor to the West of the large red Buoy No. 29 or at the quarantine buoy, situated about 1.5 mile N.N.W. of Buoy No. 29. A bottom of sand over coral is to be found all over this region in depths of 10 to 18 fathoms.

Vessels may anchor or depart at any hour of the day or night.

In order to facilitate the rapid movement of vessels, these are normally anchored in order of arrival.

WEATHER: The Bay of Port-au-Prince is nearly always calm except at certain times of the year; for example, during the months from May to November, occasional strong winds may interrupt normal loading and discharging movements.

A light breeze from the East or N.E. blows after dawn, but in the afternoon a breeze 3 times stronger blows in the opposite direction.

The height of the tide is only 1.5 ft. Currents in the port are almost negligible, except that, when mooring or unmooring a vessel, one should pay attention to a Northerly current of about a quarter of a knot.

RADIO: All deep-sea vessels which enter the territorial waters of Haiti are obliged to advise the Port Radio Station.

The radio station is situated at the Bureau de Port. It is in operation 24 hours a day.

Visual light signalling may also be carried out as far as it is possible to do this.

The following apparatus is used at the radio station:

1. VHF Radio – Channels 6, 12, 16 and 18.
2. Medium frequency, SSB compatible frequencies 2182 kHz, 2738 kHz. Power 150 watts, range about 250 miles.

In addition to the VHF Channels, the Pilots may use radio-telephone on the following frequencies: 2182 and 2738 kHz.

The general call and distress frequency 2182 kHz is monitored continuously.

All messages addressed to the Port Authorities and messages concerning pilotage must be handled at this radio station.

Masters are particularly required to give the radio station, as soon as they arrive, the following information:

Vessel's draft and net tonnage, amount of cargo for discharge by hatch, number of gangs required.

The telephone number of the radio station is 2 – 3235.

48 hour ETA message to APN also to include details of the vessel, expected time of departure, quantity and nature of cargo to be handled.

TUGS: The port has at present a tug of 2,000 h.p. available at all times. The tug is compulsory for ships from 1,000 tons gross and upwards. At all times 2 aluminium launches, each 30 ft. long, are available for Pilot's use.

BERTHING: The New Port facilities are presently in service, located 600 ft. North of and parallel to the existing pier.

Prime features of new facilities are:

Length of berthing space: 1,400 ft.
Width of apron 93 ft.
Container crane on rails on the apron with 30 tons capacity equipped to handle 20 ft., 35 ft. and 40 ft. containers.
Ro/Ro platform.
Depth alongside 32 ft. MLW.

Finger Pier: Length 1,250 ft., width 60 ft. Ro/Ro platform on North side. On the South side there is 1,250 ft. of berthing space, depth 25 ft. – 30 ft. On the North side there is 540 ft. of berthing space, depth 32 ft.

At the outer end of the finger pier there is a dolphin berth for passenger vessel. Length 888 ft., depth alongside 32 ft. Vessels may berth on both sides.

There is an angular portion of 100 ft. between Quays No. 1 and 2 which may not be used for mooring, but which the bow of the ship may overhang. Vessels must be secured by at least 2 mooring cables at the bow and at the stern.

The Port Authorities require for vessels manoeuvring in the port a minimum of 2 ft. of water under the keel. This regulation may be modified by special authorisation of the Chef de Port.

In addition to the public pier, there are 5 jetties belonging to private companies used for handling products in bulk. These jetties belong to the following companies:

A. La Hasco, sugar refinery established at Port-au-Prince.
B. La Minoterie, flour mill situated at Laffiteau.
C. Le Ciment d'Haiti SA, cement factory situated at Fonds Mombin.
D. Jean Ackmed, fuel installation situated at Simonette.
The above jetties are established on the North side of the bay.
E. Installations of Shell Company and Tropigas on the South side of the bay, equipped with their own mooring buoys for tankers.

CARGO HANDLING: For vessels loading and discharging at the public pier, cargo is transported on railway trucks of 25 tons max. capacity.

One quay is equipped for container ships. One quay is equipped to handle Roll-on/Roll-off traffic.

STEVEDORES: Loading and discharging of ships is carried out by gangs of private workers who are engaged by the ship's Agents under the supervision of a chief stevedore. The working gangs use the ship's own equipment for loading and discharge.

Handling rates are normally about 15 t.p.h. for general cargo, or about 25 t.p.h. for heavy articles, such as drums, planks, bundles of steel rods, etc.

Normal working hours in the port are from 0700 hrs. to 1900 hrs. from Monday through Saturday. Overtime is payable for work required at other than these hours and also for work required on Sundays and holidays.

MEDICAL: There are adequate medical facilities, pharmacies and hospitals.

FRESH WATER: Drinking water is available alongside; however, the ship must provide its own connections. Rate of loading varies from 4 t.p.h. to 10 t.p.h.

FUEL: Fuel oil may be supplied by tanker truck.

REPAIRS: There are no proper facilities for ship's repairs although minor repairs may be effected by small private workshops ashore.

AIRPORT: An international airport for jet planes connects Haiti with principle U.S. and Caribbean points. A local air service connects Port-au-Prince with principal towns of the Republic.

FIRE-FIGHTING EQUIPMENT: The Port Authority has a fire fig squad equipped for early assistance. There is a town fire se organised by the Army and working in close cooperation with the

HOLIDAYS: *Legal Holidays:*

Independence Day (1st and 2nd January); Labour Day (1st May); Day (18th May); Ascension Day; Assumption (15th August); All S (1st November); Commemoration Day (13th November); Discove Haiti (5th December).

Authorised Holidays:

Lundi-Gras (half-day); Mardi-Gras; Good Thursday; Good Fr Pan-American Day (14th April); President's Day (22nd J Dessaline's Anniversary (17th October); United Nations Day October); Fete des Morts (2nd November).

SERVICES: Fresh provisions are obtainable locally.

There are no facilities for refuse collection, but nevertheless forbidden to throw refuse, cinders or any other polluting ma overboard.

Launches used for the transport of tourists are available at Por Prince and these are operated by private companies. The Port Auth does not take an active part in the traffic of tourist passengers. T who disembark on the wharf from cargo vessels or cruising liners make their way on foot to the taxi station to take part in excursion However, the majority of tourists coming on passenger liners anch in the roads disembark by launches belonging to the Departme Tourism. They disembark at the Quai Colomb, which is unde authority of the Department of Tourism.

SHIPMASTER'S REPORT: 1975.

Documents:

Clearance from last port.
4 Crew Lists.
4 Passenger Lists.
2 Cargo Manifests.
18 Cargo Check lists.
International Declaration of Health.
Vaccination/Inoculation List (1) with valid dates.
International Vaccination Cards, these may be examined by Health.

Pilotage: Compulsory, 24 hour service arriving/departing. Require to Agent 24 hours in advance. Pilot Station may be contacted on radio 2182 kHz, 2738 kHz and VHF Channels 16 and 12. Pilots at quarantine anchorage buoy. Pilot boat has yellow hull superstructure, 2 ft. freeboard. "Pilot" clearly painted on hull.

Anchorages: The harbour affords good anchorage in depths of 5 fathoms, clear of the entrance ranges southward. The Quara Anchorage is located about 2.5 miles East-northeastward of Lamintin.

Restrictions: See Sailing Directions for Prohibited Anchorages.

Max. Size: This ship is 495 ft. in length, with 69 ft. beam, we accommodated easily. Passengers ships of 620 ft. in length are re callers at the port. Maximum depths at the pier is 30 ft. Mean High Interval at the port is 8 hours 23 minutes. Spring tides rise 1.5 ft. Cu in the approach set East in the Canal de la Gonave, and Northw the Canal de Saint Marc. All buoys, lights, and navigation aid unreliable.

Health: Pratique is now granted at the dock. Ship displays "Q" flag cleared.

Radio: ETAs to Agents/receivers are best sent through WNU (Tr Radio) at New Orleans, Louisiana or ITT station at Lantana, Fl these stations then telex direct. Port Pilots will relay messages to A on voice radio 2738 kHz. Short range reception on voice radio has experienced.

Berthing: Main pier, has 1,700 ft. of berthing space on its Souther with depths of 18 ft. to 29.5 ft. Ship's always berth port side to, the starboard anchor to assist in docking and undocking. A T-hea with a pipe-line is located 2 miles Westward of the city. Mooring lie off the end of this pier. It has been reported, (unverified) that thi accommodated a tanker 560 ft. long, with a draft of 31.5 ft. in 19

Stevedores: Advise Agent tons per hatch at least 24 hours prior to a Maximum amount of labour is available. Rate of discharging/load approximately 18 to 30 tons per gang hour on sacks, bales, general cargo. Work after midnight is overtime with charges quite

Medical: Give Agent prior notice for any required medical atte 3 hospitals available. Minor dental work can be accompli International Certificates with Cholera are required.

Density: 1025 as per this ship's test.

Fresh Water: None available at this time.

Fuel: None available at this time.

Developments: A 25 million dollar port expansion and constru project commenced October 1975. This new area is located 800 ft. of the general cargo pier. From the shore in a Westerly directio new pier shall extend 1,685 ft. in length, 469 ft. in width, with a w apron on the South side 81 ft. from the end of the ship's side. Th will contain 2 warehouses; one 207 ft. by 1,101 ft., and the other by 447 ft. The Eastern end shall have 2 separate Roll-on/R sections. A container crane on rails shall traverse the entire South working apron, capable of loads not to exceed 30 long tons. Dre and filling has commenced and they are working towards a maximum depth at completion.

Gangway/Deck Watchmen: Cost unknown, supplied by A Gangway watchman is recommended. If transit cargo is pilfe I recommend using crew members for cargo hold security.

Hatches: (Automatic hatches) opening/closing normally carried stevedores with crew member supervision.

Customs Allowances: Bonded stores were not sealed, store lists not required. Ship allowed each crew member 200 cigarettes. Customs Officials make no special requirements.

Cargo Gear: All loading/discharging by ship's gear. Fork lifts are available. There is a shortage of pallets and railroad flat cars which are used to accept cargo direct from the ship's gear on the dock. Warehouse space is limited.

Identification Cards: Shore passes not required, none issued by local authorities.

Consuls: United States of America; Panama; Lebanon; Taiwan; France.

Repairs: No facilities available.

Dry Docks: None available.

Repatriation: Possible.

Airport: 1 major airport. Located 40 minutes from the port area. Daily flights to North America. (Miami and New York)

Time: GMT plus 5 hours. No alterations to clocks during the year.

Holidays: December 5th (Columbus Exploration Day), Christmas, New Year's Eve, New Year's Day. Cargo work can be arranged on most holidays at overtime rates.

Police/Ambulance/Fire: Utilise Agent for emergencies of this type, or have watchman make use of telephone from dock. "Fire" There are no international hose fittings on the dock, and limited means of handling shipboard fires from ashore.

Telephones: None available for placement on board the ship.

Services: Special services non-existent.

Shore Leave: Crew members are allowed ashore. No curfews, no passes required.

Port Regulations: Nothing unusual or out of the ordinary.

Delays: Possible berthing delays exist due to ship congestion. Delays in discharging may occur due to lack of warehouse space, pallets, or rail cars.

Agents: Agents and most officials including watchmen and stevedore supervisors speak English. All official documents and ship's clearance papers are written in French. The language spoken is predominately French (patois) with inflections that are easy on the ears, but difficult to utilise operationally.

SHIPMASTER'S REPORT: June 1990.

Position: 18° 33.5′ N., 72° 21′ W.

Chart: B.A. Chart No. 466.

Documents:

6 Crew Lists.
1 Vaccination List.
3 Stores Lists.
3 Crew Effects Lists.

Six persons board on arrival alongside, and vessel was cleared within 15 minutes. Bonded store is not sealed; Radio Pratique not available; Only Derat Certificate is sighted.

Pilotage: 24 hour watch kept by Port Pilot Station and on Channel 16/12.

Pilot boarded at the Quarantine Anchorage at daybreak.

Pilot disembarks upon unberthing, just after vessel clears berth.

This vessel used 2 tugs, with ship's lines. Vessel berthed port side alongside at a good berth.

Anchorage: Good anchorage about 2.5 nautical miles W.N.W. of jetty.

Approaches: Only one starboard hand buoy exists.

Berth: Up to 36 ft. depth alongside. Berth can accommodate vessels up to 250 m. LOA.

Time: GMT minus 4 hours.

Flag: Blue horizontal stripe over red stripe ("Echo" can be used).

General: No passport or other documents required. I was informed by Agent that it is dangerous to be ashore after 2200 hrs. due to muggings.

No facility exists for any spares, repairs or provisions. Fuel oil available after ample notice through Agent; fresh fruit such as bananas and mangoes are available; fresh water not available. Medical services are poor.

This vessel discharged edible oil (about 3,000 tonnes) directly into tank trucks. The operation took about 48 hours, into a total of 115 trucks.

In the S.W. part of the Bay there is a Shell berth for small tankers and gas ships. Pilot advised us to use a minimum of lines for safe mooring, due to the possibility of lines being cut or stolen at night; our gangway was kept up except when in use, as a deterrent to unauthorised visitors.

AUTHORITY: Autorite Portuaire Nationale, Port de Port-au-Prince, B.P. 616, Port-au-Prince, Haiti.

NOTES

Please also advise Shipping Guides Ltd.

Honduras

GENERAL

DOCUMENTS:

Consular Documents:

Masters shall submit for certification to the Honduran Consul or Consular Agent residing in the port of loading 4 copies of the general manifest of goods carried for the Honduran port to which it is bound. 3 copies are to be left with the Consul or Agent, and 1 copy, with the certification and receipt to be provided by the Honduran official, is to be retained. The Consul will retain 1 copy in his files, the other 2 shall be sent by the earliest mail to the Secretariat of the Treasury and the Customs Administrator.

Prior to arrival:

Arrival notice:

The Chief of Operations of the National Port Authority (ENP) must be notified in writing no more than 24 hours and no less than 8 hours in advance, of the time and date of the vessel's arrival. This notice is received on working days up to 1600 hrs., but for holidays, the request must be submitted the day before up to 1100 hrs.

The Captain of the Port, Customs, Migration and Maritime Health must be notified of the arrival within the same period indicated above.

Information on cargo for the port:

If available, the following documents must be submitted: 4 copies of the cargo manifest, a set of bills of lading, 3 copies of the cargo list, 3 copies of the container contents list, and information on the cargo to be loaded. In addition, the following copies of the cargo index must be provided, according to the type of goods: 4 to 6 for Customs, 14 to 18 for the National Port Authority; 1 for each depot of the agency to take part, and 1 for general control.

The ENP also allows this information to be submitted after the official visit (boarding party).

Port services request:

The arrival notice submitted to the ENP also serves as a request for pilotage, docking and port services.

On arrival:

a. Submitted to the shipping Agent.
b. With Consular visa.

Prior to departure:

Clearance must be requested from the Captain of the Port, on a special form at least 2 hours before the vessel's estimated time of departure. The form must be cleared by the Customs Chief of Exports and the Customs Administrator, therefore copies of the export cargo manifest must be submitted to Customs.

In the case of the terminals of Puerto Cortes, 30 copies of all documents are prepared, of which the vessel carries (aside from the original Sailing Permit and the Maritime Health Declaration) an original and 24 copies of the Cargo Manifest (or Ballast Manifest), the Crew List, Passenger List, the Mail and Firearms List, the Ship's Stores List, and 2 sets of the Bills of Lading.

In addition, when the ship sets sail, 3 Freighted Cargo Manifests, 2 sets of the Bills of Lading, a Crew List, a Passenger List, a Mail and Firearms List, and a Ship's Stores List must be submitted to the Chief of Docks. A copy of each of the following documents must be submitted to the Maritime Guard: Sailing Permit, Cargo Manifest, Crew List, Mail and Firearms List, and Ship's Stores List.

When the ship leaves for Guatemala, it should have 34 copies of all documents, because 4 copies are submitted to the Consul.

For ships leaving for the United States, the clearance document is in Spanish, with 6 copies to be distributed locally, plus 18 copies of the Cargo Manifest, in English, of which 16 are carried on board ship, 1 copy is sent to San Pedro Sula and the other remains in possession of the shipping agency.

Request for pilotage:

Requests for pilotage and unberthing of the vessel are submitted to the National Port Authority at least 2 hours before clearance.

Report: 1990.

Vessels are now expected to deliver 2 copies of their Register to the Port Captain at the time of Clearance Inwards at all Honduran ports.

Owners are recommended to ensure that Masters have same prepared at previous ports, to ensure that no delay is caused in Clearance Inwards.

AMAPALA: 13.18 N. 87.39 W.

PORT NO LONGER IN OPERATION.
COMMERCIAL OPERATIONS AT THIS PORT HAVE BE
TRANSFERRED TO THE NEW PORT OF SAN LORENZO

LA CEIBA: 15.46 N. 86.50 W.

SHIPMASTER'S REPORT: 1979.

10 copies of Crew List
6 copies of Store List
6 copies of Bonded Stores List
4 copies of Vaccination List
Mail Report
Passenger Report
1 Copy of Derat Certificate.
Zarpe/Clearance from previous port.
14 Copies Cargo Manifest/Ballast Manifest.
3 Copies Bills of Lading.

All the original documents must be legalised by Honduran Consul the port before calling at Honduras, and should be in Spanish languag If no Consul available, documents should be legalised by Consul friendly nation or by Chamber of Commerce, stating the facts.

PILOTAGE: Compulsory. Pilot boards 0.5 miles from the pier. 2 hou notice required.

ANCHORAGE: Good anchorage 5 cables, 129° from pier, depth of wa 40 ft.

RESTRICTIONS: Vessels able to berth and unberth at any stage of tide day or night. Limiting factors are length and forward draft of vess

MAX. SIZE: Max. LOA 600 ft. However, the after end of the vessel wo overhang end of berth (This vessel loaded to 23 ft. draft).

HEALTH: Quarantine Officials operate between 0600 hrs. and 1800 h 2 hours notice of arrival required.

RADIO: HRW – Standard Fruit operate from their own radio stati They handle vessel's traffic on 6350.5, 8560 and 12750 kHz. They a listen on 500 kHz and 8 MHz.

Hours of Operation: (GMT) 1355 – 1410, 1455 – 1510, 1555 – 16 1955 – 2010, 2055 – 2110 and 2355 – 0010.

VHF: The Agent is on Channel 16.

TUGS: Not available. Vessel is able to dock and undock with assistance of tugs.

BERTHING: Berth available both sides of finger type pier, South s berth for side-door loading; North side for unrestricted operations. Natu of the bottom of the berth is sand.

Mooring gang (6 men) come aboard with the Pilot to ass The bananas are loaded direct from the rail cars using spiral elevato It is usual to load all decks at the same time.

There are no facilities for handling bulk cargoes or Ro/Ro vesse There are no shore cranes or floating cranes. There is no storage spa for breakbulk cargo or palletised cargo.

Fendering: Pier fendered with the usual Standard Fruit type fender vertical uprights on a horizontal "V" bellows on horizontal girders.

CHARTS: B.A. Chart No. 513 (Isla Roatan to Puerto Cortes) and U.S. 5393 (positions on this chart are 2.5 miles W.S.W. of B.A. chart).

CONSULS: None, however, American Consulate and those of oth nations in Tegucigalpa, about 250 miles by road.

SURVEYORS: Lloyd's Agency in Puerto Cortes.

AIRPORT: International Airport "Goloson" with service daily New Orleans and Miami, served by regular airlines.

SERVICES: Fresh water, fresh provisions, airport, telex, doctor, hosp groceries and meats all available.

Labour: Shore labour is available for contract work such as scave cleaning, hull painting, etc. The work carried out during our stay w satisfactory and the rate for the foreman was U.S. $1.50 per hour a workmen U.S. $1.00 per hour.

AUTHORITY: Empresa Nacional Portuaria, Apartado Postal No. 2 La Ceiba, Honduras, Central America. *Tel:* 42-2712 (Superintenden 42-0297, 42-0394, 42-0397, 42-2044. *Telex:* 8007 Enaporto H *Cables:* Enportuaria. *Contact:* Roberto Dip H., Port Superintendent.

PUERTO CORTES: 15.50 N. 87.55 W. (See Plan)

DOCUMENTS:

Health Declaration, 2 copies.
Zarpe or Clearance Permit from the Last Port.
General Cargo Manifest (in ballast if that is the case) of all the cargo to be discharged in Puerto Cortes, 14 copies.
Crew List, 10 copies.
Passengers in transit, or no passenger declaration, 10 copies.
Derat Certificate, only if first on board call.
Stores List, 8 copies.
Mail Sacks Declaration (negative or positive).
Bills of Lading, 3 complete sets.
Hatch List, 5 copies.
Tally Books, 15 copies.

All the original documents must be signed and stamped by the Honduran Consul at the port before calling Honduras and should be made out in Spanish. Documents for cargo destined to any Honduras Free Zones need not be signed by Honduras Consul.

If no consul of Honduras available, documents to be legalised by consul of a friendly nation or by the Chamber of Commerce, stating the facts.

Certificates: On first call, Registered Tonnage Certificate; thereafter not required unless gross/net tonnage be changed.

PILOTAGE: Compulsory for vessels over 300 g.r.t. ETA to the Agent, 72, 48 and 24 hours ahead of arrival required. Pilot on VHF Channels 16 and 6.

ANCHORAGES: Once the ship enters the bay, *if no berth space has been notified to the Master,* she should anchor at a distance beyond 0.5 miles from the nearest pier, and wait for the boarding of the official party in order to be granted Free Pratique.

APPROACHES: *Shipowner's Report:* 1983.

Tankers should make their arrival at a position near Lat. 15° 55′ N. and Long. 87° 58′ W., 4 miles North of Punta Caballos and well offshore of the shoal patches near the point. From this position true course 180° takes the ship into the bay in a minimum depth of 10.6 m. (35 ft.) West of the tanker dock and between 2 shallow patches of 8.1 m. (27 ft.) 700 yards and 450 yards W.S.W. of the tanker dock. There are 2 sets of daymarks and 2 buoys marking this approach.

Vessels may also enter the bay about 2 miles off the coast of Punta Omoa. Steer E.N.E. in the natural channel which has a minimum depth of 10.9 m. (36 ft.). 3 buoys mark this channel.

Caution: The above mentioned navigational aids are not all indicated on the charts, and are not reliable. No attempt should be made to enter the bay without a Pilot.

Work is in progress; buoyage and the shape of the coast may have changed. The West entrance will become the main deep water channel when dredging is complete and when leading lights, buoys, and beacons have been installed. An extensive reclaimed land area extends to the North from the mouth of the Rio Medina. The city wharves are being extended West.

The distance from the sea buoy to the Texaco dock is about 4.5 miles. The city wharves are 0.5 miles further to the East. The Texaco refinery tanks, the water tank near Pier 4, the railroad shop, and the Coast Guard Pier are conspicuous in daytime.

The molasses berth of wooden construction throughout, is made of a trestle walkway/pipe run ending in a small hose handling platform. 2 breasting dolphins, spaced about 250 ft. are fendered with truck tyres. Mooring ropes are sent to pipe bollards on the beach and to a mooring dolphin adjacent to the Texaco berth. The spring lines go to the breasting dolphins. 1 tug is normally used for berthing.

RESTRICTIONS: Vessels may enter the port day or night but are not visited by Port Authorities between 2000 hrs. to 0600 hrs., except in special cases.

MAX. SIZE: Dry cargo vessels up to 30 ft. draft. Tankers up to 30 ft. draft.

HEALTH: Pratique granted after Port Authorities (including doctor) board vessel, between 0600 hrs. – 2000 hrs. Pratique granted if no contagious illnesses aboard, otherwise quarantine restrictions imposed. No automatic Free Pratique when arriving from another port in Honduras.

All crew members to be vaccinated against yellow fever. Vaccinations not available in Honduras.

RADIO: Port Authority operates a station HQSU, monitoring 2738 kHz, but by arrangement can reply on other frequencies. Telegrams to be routed via Hondutel, Lantana WOE, New Orleans WNU, Limon TIM, Balbao NBA and Miami WAX.

Ship's radio not to be used in port except for communication with the port authority. Vessel is fined if there is a violation. Also see "VHF".

VHF: Puerto Cortes Radio: Call sign "Cortes Radio". Channel 16.

Hours: Weekdays 0600–2200; Saturdays 0800–1200 and Sundays 0600 – 1200, 1300, 1700, 1800, 2200, every week except January 1st, Good Friday, May 1st and December 25th.

BERTHING: The Agent to supply information as to berth, and time of docking. Pilot will board the vessel and berth it, assisted by a launch to pass ropes. Departure should be effected when the despatch documents are on board and operations finished.

Pier No. 1 (Texaco Pier), for tankers or ships loading diesel or lub-oil; max. draft 30 ft.

Pier 1-A (molasses and bulk liquids), max. depth 32 ft. at rebuilt wooden T-Pier, in front of white and red painted tanks, between Texaco Pier and Banana Pier.

Pier No. 2 (Banana Pier) length 810 ft., depth 24 ft.

Pier No. 3 (General Cargo and Ro/Ro Pier) Length 630 ft., depth 30 ft.

Pier No. 4 (General Cargo and Ro/Ro Pier) Length 1,112 ft., depth 30 ft.

Pier No. 5 (Container Terminal, it also handles dry bulk cargo) length 1,127 ft., depth 33 ft.

CRANES: One P & H 125 ton capacity crane, one Paceco Container Crane 45 ton capacity at No. 5 pier and eight cranes of varying capacities.

BULK CARGO FACILITIES: Pier No. 5 (Container Terminal) is used as a multi-function pier, it is used to handle grain, ores, fertilisers and bulk sugar. It is large enough to be able to handle both operations simultaneously.

STEVEDORES: Vessels must give accurate ETA at least 24 hours in advance to enable Agents order necessary gangs. Gangs ordered 0700 and 2100 hrs. working 12 hours (daytime) and 9 hours (night-time) excluding the meal hours (0600–0700; 1200–1300; 1700–1800 and 2300–2330). No work on Holy Friday, May 1st (Labour Day), on other holidays work is possible with double payment.

MEDICAL: No advance notice necessary for medical attention, except in very urgent cases. At San Pedro Sula (35 miles by road) very good medical service can be obtained but several medical clinics are serving this Port. No inoculations required but Master should possess International Health Cards for each member of crew.

TANKERS: *Terminal:* The Texaco Oil Refinery dock is in the S.E. corner of the peninsula. A pipe trestle/roadway of about 100 yards leads S.S.W. to the hose platform and breasting dolphins. The mooring dolphins are about 100 ft. inshore of the hose platform. The tidal range is 0.5 ft. The current in the manoeuvring area is unpredictable. Most of the time it runs parallel to the berth (110° and 290°). The breasting dolphins have been damaged several times, reportedly due to sudden changes in current.

Berthing: Tankers are moored and unmoored during the daylight hours only. The ship may be turned anywhere South of the refinery berth, then it proceeds to the dock heading either W.N.W. when mooring starboard side to, or E.S.E. when mooring port side to. The ship is stopped, stemming the current, about 100 ft. off the dock for a parallel mooring. A launch runs the head and stern ropes to the mooring dolphins. The spring ropes are either taken to the breasting dolphins by the launch or later by hand. Anchors should be ready. When mooring starboard side to, an anchor may be used to hold the ship against an inshore set. The 1,100 h.p. tug works forward alongside on his own rope. It shifts to amidships, if needed, to push the ship in or to hold her off. Sometimes the tug works the ship's rope on the hook. Pilot and tug use VHF radio (Channels 16 and 6).

Only 5 pile bollards are available for the ship's moorings, of which 3 are for the spring lines. The breast lines may have too much angle. It is recommended that segregated ballast tanks be used to keep the tanker low in the water. It is advisable not to remain alongside during strong Northers.

Facilities: There are no set emergency shutdown procedures. Each breasting dolphin is fendered by steel beams with wooden protection and 4 rubber shock absorbers. 2×8 in. hoses are used for crude oil discharge into an 18 in. pipe-line about 1,500 ft. long to the 360,000 barrels storage tanks. The transfer rate is about 7,000 bbls.p.h. 1×8 in. hose is used for loading fuel oil via a 10 in. pipe-line at a rate of about 3,000 bbls.p.h. Ballast and slop facilities are not available. 1 floating oil spill containment boom is kept in storage at the refinery.

Security: The port area and the Texaco Pier are fenced in and guarded; crewmen must have identification cards.

Services: No. 6 fuel is available at 3,000 bbls.p.h. and light diesel oil at 1,000 bbls.p.h. Fresh water is available at 10 t.p.h. Local machine shops can perform very minor repairs. Divers are available. Hospital, medical, and dental services are available at Puerto Cortes, or at San Pedro Sula.

Crew changes can be made. Small quantities of provisions are available.

Departure: Tankers leave the Texaco Refinery berth during daylight hours. Tug assistance is seldom necessary. Usually the tanker is unberthed either holding the spring ropes forward or aft to ease the vessel off the dolphins.

The Master should consult with the Pilot as to the sailing draft.

Also see "Shipmaster's Reports" – June 1981 and April 1989.

DENSITY: 1028/1030.

FRESH WATER: Water available at wharf face at 100 ft. intervals. Rate approximately 8 t.p.h. – 10 t.p.h.

FUEL: Only Diesel fuel and bunker "C" available, 24 hours' notice required for good service.

CONSULS: None in the port. American Consulate and others at Tegucigalpa, 200 miles by road.

REPAIRS: Local marine repair companies can undertake limited repairs of general nature; pre-advice recommended.

GANGWAY/DECK WATCHMEN: Shore watchmen not usually required and this service left to discretion of the Master.

OPENING/CLOSING HATCHES: On liners normally by crew with assistance of stevedores, otherwise according Charter Party.

CUSTOMS ALLOWANCES: No restrictions, free use on board. Customs officials check no sales ashore.

SURVEYORS: Lloyd's Agency available locally.

REPATRIATION: All facilities available for effecting crew changes and repatriation by sea or air.

AIRPORT: International Airport Ramon Villeda Morales at San Pedro Sula served by regular airlines. 35 miles by road.

TIME: GMT minus 6 hours, no changes during year.

HOLIDAYS: January 1st; April 14th; May 1st; Thursday, Friday and Saturday in Easter week; August 15th; September 15th; October 3rd, 12th and 21st; and December 25th. Cargo work can be arranged on those days, except on Good Friday, and May 1st (Labour Day).

TELEPHONES: Connections to all countries of the world from the Empresa Hondurena de Comunicaciones, located just outside main port gate, cable services also available.

SHORE LEAVE: Permitted without restrictions.

IDENTIFICATION CARDS: Identification card must be shown to gate watchman when crew members come back aboard.

GENERAL: It appears that many of the stowaways discovered recently, are seafarers with a good knowledge of where to conceal themselves.

Local authorities are taking steps to restrict access to vessels by unauthorised persons, but Masters should take special precautions in this respect.

SHIPMASTER'S REPORT: September 1978.

Pilotage: Pilotage compulsory. Pilot boards 2–4 cables off the berth, advance notice of 72, 48, and 24 hours required.

Restrictions: Vessels can enter and leave at any stage of the tide day and night. Vessels are able to leave the berth in an emergency without use of Pilot if a tug available. Least depth of water in channel from sea to berth about 35 ft.

Max. Size: LOA 600 ft. Depth of water at banana berth is 33 ft. forward and 38 ft. aft. Max. draft 30 ft. There is a shoal patch about 150 ft. ahead of the berth.

Health: Authorities require 72, 48 and 24 hours notice of arrival.

Radio: Radio stations used when approaching the port were "WNU" and "TIM".

VHF: Port Authority, Pilot and Agent on Channel 16. Channel 14 also available.

Tugs: There are 2 tugs available, each 1,250 h.p. Vessels are able dock and undock without the use of tugs.

Berthing: Banana Pier – Position 15° 50.05′ N., 87° 57.35′ W. Distanc from berth to entrance 2 miles. The nature of bottom at the berth coral, mud and sand. Prior to arrival it is an advantage to have all derric up as various equipment has to be brought on board.

Always starboard side alongside, starboard side banana lids can b opened on all decks prior to arrival.

The banana elevators are extremely close to the quay side and usua moved to the East end of the berth for docking purposes, but as vess is making fast they are moved into position. Leave starboard gangwa turned in until alongside and elevators moved. It is a good idea to tu in overside light fittings and on no account have a starboard list. Th bollards are situated on the edge of the quay. The quay is concrete wi wooden face, only about 1.5 ft. above the water.

Fresh water was limited due to recent hurricane and repairs to th water line, however 100 tons was obtained.

Four elevators used for loading. Work carried out around the clo best hatch rate 48 t.p.h.

Ro-Ro facilities available, vessel moors with 2 anchors and stern the quay. There are facilities for handling containers. Presently th container area is being expanded.

Currency: Lempiras. Two to the U.S. Dollar. If cable sent in advanc U.S. Dollars can be obtained.

Diversion: Agents request, if diverted to a Honduran port, a diversio cable must be sent to the Agents of that port giving time/date/nationali port of departure/and ETA. (This helps Agents with the documentatio

Medical: Doctor and hospital available.

Tankers: The Texaco Pier accepts tankers with a draft of 30 ft.

Fresh Water: Available.

Fuel: Bunker fuel, diesel oil and lubrication oils available.

Density: 1025.

Repairs: Facilities available for small repairs.

Surveyors: Available.

Services: Fresh provisions, groceries, meats and laundry servic available. Contract work such as deck and engine room cleaning an painting can be undertaken, however, prices of contractors should b compared.

SHIPMASTER'S REPORT: June 1981.

Berth: Texaco Refinery.

Arrival Draft: Forward 33 ft. 01 in., Aft 33 ft. 01 in.

Density: 1025.

Hoses: 1×6 in. and 2×8 in. clean products; 3×8 in. dirty products.

Pumping Distance: 4,000 ft.

No. of Berths: One.

Tidal Restrictions: None.

Bunker: Bunker "C" and diesel oil.

Bunkering Rate: 2,000 b.p.h.

Depths at LW: Bow, 33 ft.; stern, 40 ft. (by sounding).

Max. Size: LOA 700 ft., beam 90 ft., draft 33 ft.

Products Handled: Crude oil, fuel oil, diesel, kerosene.

Loading/Discharging Rate: 18,000 b.p.h.

Fresh Water: Limited supplies.

Ballast Facilities: None.

Distance from Sea to Berth: 2 miles.

Channel: Width 2,000 ft., minimum depth 35 ft.

Current: Variable/strong.

Docking/Undocking: Any time.

Tug: One required docking and undocking.

Depth Alongside: Minimum 37 ft.

Silting: Rapid.

Bottom: Sand.

Total Length of Dock: 250 ft. Condition: Good/moderate.

Chart: DMA 28000, 28160, 28162, 28163 or HON. 002 – 003.

SHIPMASTER'S REPORT: August 1981.

Entrance recommended via buoyed channel close to Punta Cabbal light which is normally unlit and has NO radio beacon. Pilot will boa one mile North of channel if requested via VHF Channel 16. Lar vessels are instructed by Port Authorities to anchor at least 0.75 mi from piers. One tug only is available – 900 h.p. approx.

Fresh water at banana pier strictly limited to 50 tons per vess Launch service available to vessels at anchor.

SHIPMASTER'S REPORT: April 1989.

Berth: Texaco Refinery.

Arrival Draft: Forward: 26 ft. 00 in. Aft: 30 ft. 00 in. (after taking Pil advice and discharging part of the ballast).

Density: 1025.

Cargo: Recon Crude Oil, discharge through 2 × 8 in. hos Max. discharge rate 15,000 bbls./hr. Distance to tank 500 m.

No. of Berths: One.

Tidal Restrictions: None.

Docking: Starboard side alongside. 3 head lines/stern lines, 2 spri fore and aft. 1 small tug assists docking/undocking any time (24 hou Berth of wooden construction and in moderate condition.

Vessel Particulars: LOA: 684 ft. 08 in. Breadth: 105 ft. 08 Displacement: 63,578 tonnes.

Approach: Pilot boards 1.5 miles North of Punta Caballos, if reques to do so. Call Port Control on Channel 16, 2 hours prior to arrival. P boards from tug. Pilot recommends that deep draft vessels visiting first time do not enter bay without a pilot. N.E. Channel marker miss and Punta Caballos light destroyed.

Silting: Silting at Texaco Dock is serious. Vessel grounded du berthing. It appears that seaward end of dock has less than 25 f water. Dredging carried out almost continuously so water depth varia On this visit seaward end of dock was 25 ft., middle 29 ft. and aft 33 bottom is sand.

Stores: Some fresh fruit, vegetables and fish available, also bon stores.

AUTHORITY: Empresa Nacional Portuaria, P.O.Box 18, Puerto Cortes, Honduras C.A. *Tel:* 55-0326. *Telex:* 8007 Enaporto Ho. *Cables:* Enportuaria. *Contact:* Enrique Vitanza F., General Manager.

AGENT: Intermodal, S.A., 2a Calle, 1a. y 2a. Avenida, Puerto Cortes, Honduras. Tel: 55-03-90, 55-03-96. Telex: 8006 Inmodal Ho. Cables: Intermodal, Pto. Cortes.

Mailing address: P.O.Box 1535, San Pedro Sula, Honduras.

SAN LORENZO: 13.25 N. 87.27 W. (See Plan)

LOCATION: On the mainland of the Pacific Coast of Honduras near to the city of San Lorenzo, Valle.

PORT LIMITS: *Port Jurisdiction:* Lat. 13° 21′ 51″ N., Long. 87° 26′ 15″ W. Lat. 13° 24′ 51″ N., Long. 87° 25′ 13″ W.

Laytime: In the opinion of the Agent laytime will commence when vessel received by Port Authorities and Pratique granted. Vessel will be received when docked or at anchorage in the port (but not at pilot station).

DOCUMENTS: List of documents requested on arrival of vessels at the Port of San Lorenzo (all documents must be written in Spanish and without these documents serious delay of starting operations on board vessel are foreseen).

	Port Doctor	Port Captain	Port Authorities	Customs	Food Inspector	Immigration	Agency	Agency by Mail

Documents 1/2/3/4 – only from last port.

Documents 5/6/7/8/9/10/11/12/13/14 – from all ports where cargo has been loaded.

If the vessel will arrive without cargo for the port of Amapala/San Lorenzo documents as stated Ballast and Manifest (Manifiesto on Lastre) from the last port only before arrival are requested.

Leg.*=Legalised by Honduras Consul – or by consul of a friendly nation.

If there is no consul of any friendly nation, by Port Captain, BUT in this case one copy of each manifest should be sent to: Secretaria de Economia y Hacienda, Tegucigalpa, D.C. Honduras CA and to Administracion de Aduanas, Amapala, Honduras C.A. by airmail and certified.

PILOTAGE: Compulsory. Distance from sea buoy to berth – 16 nautical miles.

Pilot station for San Lorenzo is at last buoys painted black/white in position: Lat. 13° 12′ 03″ N., Long. 87° 35′ 15″ W. Pilot will board the vessel about 1.0 miles – 1.5 miles South of the Sea Buoy, after coming down the Bay from San Lorenzo for about 2 hours' cruise by pilot boat.

Pilot recommends the best arrival time at Sea Buoy to be 3 hours prior to HW.

Two hours before arrival pilot station vessel must call Agent's office at San Lorenzo via VHF Channel 10 in order to send Pilot.

Pilot boat has white and green upper works, black hull with the word "San Lorenzo" on poop. Pilot boat on VHF Channel 16.

ANCHORAGE: Buoy in position: Lat. 13° 12′ 03″ N., Long. 87° 35′ 15″ W.

RESTRICTIONS: All incoming vessels must wait at the Sea Buoy located at the entrance of the access channel, where vessels will be boarded by the Pilot.

The access channel to the Port of San Lorenzo is being provided with light buoys however, vessels may only berth/unberth during daylight hours. This is due to the tide variation and the prevailing fog in the channel at night. The seaward buoy is the pilot station. Depth of access channel at LW is 30 ft., width 122 m., and length 30 km.

MAX. SIZE: Depth alongside 32 ft. at LW. Vessels with draft 23 ft. may enter/sail at any time and vessels with draft 30 ft. – 31 ft. at HW.

HEALTH: If no disease on board reported by Master, no special procedure necessary.

The local authorities require all Crew members of vessels visiting Honduras to have valid vaccination certificates against yellow fever and cholera. Such vaccinations are not available in Honduras and Crew members should be vaccinated at a convenient port prior to calling at Honduras.

RADIO: No radio station at San Lorenzo.

VHF: A continuous watch is maintained in office hours on Channel 16, after hours and on holidays, the watch is intermittent.

All calling should be on Channel 16. Tug works on Channel 12. Intership working is on Channel 6. Agents on Channel 10.

TUGS: One tug available. Tug normally join the ship about half mile from the berth. Use of tug compulsory.

BERTHING: "T" shaped pier with 4 berthing places.

Berth No. 1: 157 m. long. Depth alongside 10.67 m.
Berth No. 2: 139 m. long. Depth alongside 10.67 m.
Berth No. 3: 116.43 m. long. Depth alongside 6.70 m. (Inner).
Berth No. 4: 134 m. long. Depth alongside 6.70 m. (Inner).

Equipment: 2 cranes capacity 30 tons and 25 tons. One additional 140 tonnes crane is planned. 10 fork lifts, 6 × 6,000 lbs.; 4 × 15,000 lbs. 4 yard trucks.

Facilities: General Cargo Warehouse: 2,408 sq.m.; Lumber Shed: 1,204 sq.m.; Piling Sugar Warehouse: 3,072 sq.m. (10 tons capacity); Open Side Warehouse, for cotton: 1,806 sq.m.; 2 molasses tanks, capacity 1 million gallons; open storage 32,913 sq.m.

STEVEDORES: Arranged by Agents, working around the clock with breaks for meals.

Shifts: 0700 – 1200, 1300 – 1700, 1800 – 2300 and 2400 – 0600 hrs.

Cargo Handling Rates:

Resin:	15 tonnes per gang/hour.
Coffee:	30 tonnes per gang/hour.
Lumber:	20 tonnes per gang/hour.
Timber:	25 tonnes per gang/hour.
Cotton:	15/20 tonnes per gang/hour (100 bales).
Molasses:	145 tonnes per hour.
Sugar:	50 tonnes per gang/hour (2 gangs).
Meat:	10 tonnes per gang/hour.
Cars:	15/20 per hour.
General cargo:	8/10 tonnes per gang/hour.
Cement:	30 tonnes per gang/hour (in bags).
Wire/iron bars:	40 tonnes per gang/hour.

MEDICAL: Nearest hospital in Choluteca City, 30 minutes by car. Minor cases can be attended by doctor at San Lorenzo.

TANKERS: No facilities.

FRESH WATER: Good quality potable water available in unlimited quantities.

FUEL: Only if required, and if sufficient notice given to the Ship's Agency.

CONSULS: Consulates exist for the following countries:

Nicaragua, El Salvador in Choluteca City, 30 minutes by car from San Lorenzo.

Consulates for other countries in Tegucigalpa, the capital, (90 km.) 2 hours by car from San Lorenzo.

REPAIRS: Not available.

DRY DOCKS: None available.

SURVEYORS: Not locally available but can be called through Agency. Lloyd's Sub-Agency San Lorenzo, c/o Servicios Portuarios SA, San Lorenzo, Honduras, C.A.

GANGWAY/DECK WATCHMEN: Not recommended and not necessary.

HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Tobacco/Wine; spirits are not allowed to be held out of bond.

REPATRIATION: Immigration Offices in town and in Tegucigalpa. Flights leave daily from Tegucigalpa. (90 km. from San Lorenzo).

AIRPORT: In Tegucigalpa, 90 km., 2 hours by car. Connections to Miami/New Orleans/Houston/Panama/Mexico and all Central American countries.

HOLIDAYS: January 1st, April 14th, May 1st, August 10th, September 15th, October 3rd, 12th and 21st, December 25th and Thursday, Friday and Saturday of the Easter week.

Work can be arranged excepting May 1st, September 15th and Holy Friday during Easter week.

SHORE LEAVE: Allowed. Restrictions placed on crew from some countries. Crew members to shore passes.

TIME: GMT minus 6 hours, no alteration during year.

EMERGENCY CO-ORDINATION CENTRE: Firstly Port Superintendent must be called using VHF Channel 16. Also Honduran Coast Guard can be called on the same Channel.

TELEPHONES: None.

BANKS: At Tegucigalpa: Bank of America, Bank of London & Montreal, Banco Atlantida and Banco Ahorro Hondureno.

STORING: See "Prelims".

1. Vessels are stored by truck.
2. Trucks can proceed alongside the berth.

3/4. Fork lift trucks can be used on the jetty to handle stores. Truck must be hired.

5. There is no Custom Regulation in force regarding storing.
6. Local riggers can be employed to assist with storing.

GENERAL:

Chart: Honduras Chart No. 004.

Tidal Variation: 2.5 m. – 4.0 m.

Prevailing Winds: From South and East.

Flags: Flags required:

1. The country's flag where the ship is registered.
2. The Honduran flag.
3. The yellow (Quarantine) flag (if necessary).
4. The red flag (if necessary).

AUTHORITY: Empresa Nacional Portuaria (E.N.P.), San Lorenzo, Valle, Honduras. *Tel:* 92. *Telex:* To be installed. *Contact:* A. Andres Casco, Port Superintendent.

AGENT: Servicios Portuarios, S.A. (SEPOSA) POB 35 Tegucigalpa, D.C., Honduras. Telex 1183 Uhler Ht or 4003 Seposa Ho. Tel: 22-8000, 22-5409.

TELA: 15.47 N. 87.30 W. (See Plan)

DOCUMENTS:
1 original Clearance.
1 original Health Certificate.
1 original 12 copies Manifest.
1 original 11 copies Cargo Book.
1 original 8 copies Store List.
1 original 8 copies Crew List.
1 original 8 copies Passenger List.
1 original Baggage.
1 original Voyage Memorandum.

All documents must be in Spanish; Cargo Book should be in alphabetical order.

Certificates: Health and Derat certificates needed.

PILOTAGE: Permanent Pilot not available but can be supplied upon request. There is a small boat that assists docking by handling mooring lines from vessel to wharf. 48 hours advance notice of ETA required.

ANCHORAGES: 1 mile out from wharf, 100 ft. or more; no boundaries.

MAX. SIZE: Max. permissible length 485 ft., breadth no restrictions, draft 30 ft.

Shipmaster's Report: August 1981.

Max. length possible 569 ft. on draft of 25 ft. 6 in.

HEALTH: Agents arrange Pratique; in case of disease or fever aboard, the vessel will be placed in quarantine for a minimum of 5 days.

Valid Vaccination Certificates against yellow fever and cholera required. These vaccinations are not available in Honduras.

RADIO: WNU New Orleans and TIM Puerto Limon via Tropical Radio.

VHF: Base Station call sign "Telarailco Tela". A continuous watch is maintained from 2 hours prior to vessel's arrival. All calling should be on Channel 16.

TUGS: No tug available.

BERTHING: Time for berthing is from 0600 hrs. to 2000 hrs.

General Cargo Berth: East side of pier, starboard side alongside.

Banana Berth: West side of pier, port or starboard side alongside, depending on which side elevator space is required (See "Shipmaster's Report" – 1979). 4 elevators available, type camel back. Rate per elevator 3,500 boxes per hour.

Depths: West side has 35 ft. depth at the Northern Point, 32 ft. in the middle and 27 ft. 6 in. at its Southern end, while the East side has 35 ft. depth at its Northern point, 33 ft. at the middle and 30 ft. at its Southern end.

STEVEDORES: ETA advice should be given 48 hours prior to arrival in order to arrange gangs. Labour rates are subject to surcharge of 25%, 50%, 75% and 100% to cover overtime, depending on hour or day worked.

Gangs: For bananas: 180 men, 3 gangs. General cargo: No restrictions.

MEDICAL: Hospital facilities available.

TANKERS: Discharging lines only, crude 12 in., diesel 6 in., spray oil 6 in. Berth available for 1 tanker, max. permitted draft 30 ft.

DENSITY: Average density in port is 1029.

FRESH WATER: Delivered by hoses at rate of 100 gallons per minute.

FUEL: Available, rate 250 t.p.h.

FIRE PRECAUTIONS: Extinguishers and water hoses available.

CONSULS: None.

REPAIRS: Only minor repairs.

GANGWAY/DECK WATCHMEN: Watchmen can be obtained at day-time rates plus 25%, 50%, 75% and 100% to cover overtime, depending on the hour or day worked.

OPENING/CLOSING HATCHES: Work done by stevedores.

CUSTOMS ALLOWANCES: 1 carton cigarettes and 1 bottle wine or spirits for each man.

CARGO GEAR: Must have current valid certificate for ship's gear.

REPATRIATION: Repatriation can be made on request by Master.

AIRPORT: Distance from wharf to airport is about 80 km. served by regular airlines; 4 flights per day which connect with Pan Am every day.

TIME: GMT minus 6 hours.

HOLIDAYS: January 1st, work possible; April 14th, work possible; May 1st, not possible; September 15th, work possible; October 3rd, work possible; October 12th, work possible; October 21st, work possible; December 25th, work possible. Thursday, Friday and Saturday of Holy Week – work possible except Friday.

POLICE/AMBULANCE/FIRE: Contact telephone operator.

TELEPHONES: No facilities for placing telephones on board.

SERVICES: Ship chandler and launch service available.

IDENTIFICATION CARDS: Required.

GENERAL: Ships must have Honduran flag on board.

SHORE LEAVE: Crew members allowed ashore, providing they do not have any diseases.

DELAYS: Delays can be expected any time there are 2 ships docked.

SHIPMASTER'S REPORT: February 1979.

Contrary to the previous information on this Port, "Vessel" berthed starboard side alongside.

Pilots: None available at present.

Berthing: Used port anchor, head out. The mooring boat meets vessel at the end of the jetty. It is a white painted boat with a small cabin. Very helpful in assisting with the lines, going from forward to aft as required. It is of great advantage to have a mooring rope on the fore deck starboard side, ready to lead forward as due to the Northerly wind and swell, vessel soon drops astern.

The beach shelves fairly fast, and with a ship of this length (575 ft.) a good guide is not to let the bow pass the end of the jetty. A depth of 24 ft. was recorded when sounding round when alongside, only 30 ft. astern of the ship.

The jetty itself has a sprung centre of about 350 ft. long with rubber tyres along same, unfortunately secured by chains which ruins the overside paintwork when the ship surges in the swell.

Additional moorings: The Tela Rail Co. is at present renewing the c springs on the berth. The shore labour assisted at all times with t moorings as the ship was loaded, also when shifting ship at midnig

Cargo Gear: The shore side derricks have to be "Doubled up". T existing runners doubled back and shackled to the preventer lug and snatch block used. It is one straight lift and pulled on board by the sing runner on the off-side derrick. The "Hallen" was used at No. 4 ha but the preference was to use "Double Gear" at No. 3. The "Lift aboa elevators are 3.7 tonnes, but at the jetty end they run on a steel rol which is placed on a large steel plate.

Loading: Vessel loaded all hatches, No. 5 being through the side doo and later when No. 1 had finished vessel shifted ahead to give mo depth of water aft. Due to a labour shortage we only loaded any thr hatches at one time.

Cargo is brought onto the pier by train with several small shunts shift, very little time lost during shunts.

Fresh Water: Available at slightly differing pressures, rate varies betwe 5 and 7 tonnes per hour.

Labour: All key personnel speak very good English and are extreme helpful. It is not necessary to keep crew on "Captive Time" for shifti ship during the night, Foreman and labour are only too pleased to ass

SHIPMASTER'S REPORT: August 1981.

Engines should be kept at immediate notice while alongsid especially from December till May as swell may increase with lit warning.

Shore labour for deck/engine room cleaning and painting are read available.

Two mooring buoys shown on U.S. and B.A. charts to West of pie DO NOT EXIST.

AUTHORITY: Tela Railroad Company, Exportation Department, Te Honduras. *Tel:* (504) 48-2108. *Telex:* 448706 TrrexPth Ho.

Contact: F. A. Betancourt, Port Superintendent.

Head Office: Apartado Postal No. 30, San Pedro Sula, Cort Honduras, C.A. *Telex:* 5532 Trailco Ht.

NOTES

Please also advise Shipping Guides Ltd.

Hong Kong

HONG KONG: 22.18 N. 114.10 E. (See Plan)

HARBOUR LIMITS: (Approximately): Western Entrance – the N.S. line between S.E. extremity of Tsing Yi Island and the flashing light at S.W. corner of Green Island. Eastern Entrance – the N.E./S.W. line between the on-shore Fl. W. and the Fl. R. lights either side of the Lei Yue Mun Pass.

DOCUMENTS:

Marine Department (Arrival):

Marine Department Shipping Report (Form MO. 618).
Certificate of Registry and/or Tonnage Certificate.
Certificate of Fitness (all vessels carrying chemicals in bulk if applicable).
Passenger ship: Safety Certificate.
Passenger or cargo ship: Load Line Certificate.
Cargo ship: Radio Certificate.
Cargo ship: Safety Equipment Certificate.
Cargo ship: Safety Construction Certificate.
Ship's Articles of Agreement with the crew (if the ship is British, or is a foreign ship belonging to a nation not represented by a Consul in Hong Kong).
1 copy Safety Manning Declaration.
Derat Certificate or Derat Exemption Certificate.
1 copy of the ship's Passenger List (if specifically requested).
Clearance Certificate from the Last Port.
1 copy of the Import Cargo Manifest (if specifically requested).
2 copies of the Dangerous Goods Manifest (if applicable).
4 copies of the Radioactive Substance Manifest (if applicable).
Compulsory Insurance Certificate (if carrying more than 2,000 tons of persistent oil in bulk as cargo).

Note: The ship's Articles of Agreement to be submitted to the Mercantile Marine Office, all others must be submitted to the Port Formalities Office of Marine Department within 24 hours of a ship's arrival with the exception of the Dangerous Goods Manifests (2) which should be submitted at least 48 hours prior to the vessel's arrival.

In addition to the above, certain types of vessels are required to give notification to the Director of Marine prior to arrival as follows:

(i) The Master of every vessel over 300 g.r.t., address to 'MARDEP' using:
  (a) W/T communications via Hong Kong Radio (VPS); or
  (b) Telex: 63607 Mdvts HX; or
  (c) VHF R/T on Channel 12 (156.6 MHz).
  An initial notification of not less than 12 hours before the vessel is expected to enter the waters of Hong Kong, also a confirmatory notification of not less than 4 hours before the vessel is expected to enter the waters of Hong Kong.

(ii) The Master, Owner or Agents of every oil tanker (if carrying more than 2,000 tons of persistent oil bulk), gas tanker and chemical tanker, address to 'MARDEP' by Telex: 63607 Mdvts HX, not less than 48 hours before the vessel is expected to enter the waters of Hong Kong, a tanker arrival notice.

Marine Department (Departure):

Application for Port Clearance (MO 618), 2 copies of Ship's Export Dangerous Goods Manifest.
1 copy of Ship's Export Cargo Manifest (if specifically requested), all relevant documents and trading certificates are same required for the Report of Arrival.

Port Health Officer (Arrival Only):

Maritime Declaration of Health.
1 copy of the ship's Passenger List.
1 copy of the Crew List.
Derat Certificate or Derat Exemption Certificate (whichever is applicable).

Note: The above documents/forms must be produced for the inspection of the Port Health Officer on boarding at the Quarantine Anchorage.

Department of Trade, Industry and Customs (Arrival and Departure):

2 copies of the ship's Import/Export Cargo Manifest. 1 copy for Manifest Check Section, Trade Licensing Branch, 14th Floor, Ocean Centre and the other 1 copy for Manifest Section, Industry and Economic Division, Census and Statistics Department, 20th Floor, Kai Tak Commercial Building.
1 copy of Import/Export Statement in respect of dutiable goods (Forms TIC 309 and TIC 309A).
2 copies of the declaration in respect of dutiable stores required during a vessel's stay in port (Form TIC 303).

Immigration Officer (Arrival):

2 Transit-Passenger Lists.
2 Landing-Passenger Lists.
3 Crew Lists.

Note: The above forms must be produced for the inspection of the Immigration Officer on boarding after the ship has been 'cleared' by the Port Health Officer.

Immigration Officer (Departure):

2 Lists Passengers boarding.
2 Lists Transit Passengers.
2 Crew Lists.

Post Office (Arrival Only):

1 copy of the Ship's Mail Manifest.

Hong Kong Police:

1 copy of The List of Arms and Ammunition on board (Nil return required) to be handed in at the Entry and Clearance Office with Marine Department papers.

Shipmaster's Report: October 1988.
To be sent from last port of call before Hong Kong:
1 Hong Kong Official Crew List.
1 List of Ports of Call.
Copies of: Ship's Register
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Load Line Certificate.
Safety Radio Certificate.
Derat Exemption Certificate.
Agent: All Certificates.
1 Safety Manning Certificate.
Clearance from Last Port.
1 copy ordinary Crew List.
1 copy Stores List.
Quarantine: 1 Maritime Declaration of Health.
1 ordinary Crew List.
Immigration: On arrival: 1 set of Hong Kong Crew Lists.
5 copies ordinary Crew Lists.
On departure: 2 copies ordinary Crew Lists.
Police: 1 copy Arms and Ammunition List.
Customs: 2 copies Stores List.

ARRIVAL ADVICE: It is mandatory for Shipmasters to cable MARDEP Hong Kong 12 hours (see "Notices" – No. 89/1985) before arrival requesting permission to enter Hong Kong waters and advising ship's name, nationality, type of vessel, total number of persons on board, ETA abeam of Waglan Island and reason for call. It is not permitted to enter Hong Kong waters until permission has been granted. It is mandatory for all vessels over 300 tons gross to carry VHF radiotelephone capable of operating on Hague Plan frequencies and to make contact with the Vessel Traffic Centre on Channel 12 before entering Hong Kong waters and thereafter at specified calling points. They should report their position, ETA at pilot station, final berth, and intended route inwards, East or West. If entering from the East then the vessels mast height above the water should also be reported. (This is needed for information to the airport where the runway extends close North of the Hung Hom Fairway). Shipmasters are also asked to report any other relevant information such as dangerous (including radioactive) goods on board. If the vessel is taking a Pilot, reference should be made to the 'Sailing Directions' in the China Sea Pilot Vol. I, with regard to the positions of the pilot stations, and Pilots should only be embarked or disembarked at these points. Additional radio reports to MARDEP during the vessels inward or outward passage aid in the safe movement of all vessels in the port and approaches. The Marine Department is introducing a new radar-assisted Vessel Traffic Service upon completion of its Vessel Traffic System installation. The system consists of high technology radar surveillance, tracking and data processing equipment.

APPROACHES: (A) (Dry-cargo and container vessels): The approaches are reasonably free from hazards and are well marked by day and night. Vessels working at buoys with drafts up to 11.2 m. are requested to enter port via the Western Entrance. Other vessels with drafts up to 10.9 m. may enter via Lei Yue Mun entrance.

(B) (Tankers): Tankers without a gas-free certificate are prohibited from transit through Victoria Harbour. Tankers which berth at Tsing Yi Island, Lamma Island, Ap Lei Chau, Tsuen Wan and Tap Shek Kok are requested to use the Western approaches and tankers with drafts up to 10.6 m. for Kwun Tong are requested to use the Eastern approaches. A channel has been dredged at Hongkong Electric Company Wharf at West Lamma Island for the purpose of accommodating vessels at 13.8 m. draft.

(C) Buoyage. The system of buoyage used in Hong Kong has been changed from the Uniform to the IALA System.

Compulsory traffic separation lanes are in force for both the East and West approaches. Up-to-date Admiralty charts should be consulted for details.

PILOTAGE: Pilotage is compulsory in the port for certain categories of ships, as described in the Pilotage (Amendment) Ordinance 1987, which came into effect on 1st August, 1987. Pilots are licensed by the Pilotage Authority (Cables: Pilot Hong Kong. Telex: 62062) and are available to board ships at the 4 pilot boarding stations described in the Second Schedule of the above mentioned Ordinance.

The Hong Kong Pilots Association provides pilotage services. Pilots generally board inbound ships using the Eastern Entrance in the vicinity of the Lei Yue Mun 'TCS4' Buoy (Lat. 22° 16′ 00″ N., Long. 114° 15′ 40″ E.) and disembark at the same point from outward-bound ships. At the Western entrance, Pilots embark and disembark to the S.W. of Green Island (Lat. 22° 16′ 00″ N., Long. 114° 06′ 36″ E.). It is a contravention of Regulation 21(1) of the Shipping and Port Control Regulations, 1978, for any vessel to pick up or discharge a Pilot within a distance of 1 nautical mile from the centre of either the Lei Yue Mun Pass or the Sulphur Channel. Maximum speed inside Harbour is 8 knots.

Also see "Notices" – No. 53/1985 and No. 121/1987.

ANCHORAGES: Examination anchorages (quarantine and immigration) for clearance inwards are situated within the harbour limits to cover the entry of shipping from East and West. The principal dangerous goods anchorages are situated at the Western end of the harbour and at Pun Shan Sek (tankers), whilst there are others at Junk Bay, Tsuen Wan and Rocky Harbour.

An anchorage for the discharge of logs has been designated. This was necessary because logs, which were being discharged and stored within harbour limits were endangering small craft, waterside installations and navigation.

The Western examination anchorage works 24 hours a day whereas the Eastern examination anchorage works from 0800 – 1800 hrs. Only on request. Ships requiring service in the Eastern Quarantine Anchorage should advise MARDEP on VHF radio Channel 12 when establishing contact prior to arrival.

MAX. SIZE: Largest vessels calling regularly have been, dry-cargo container vessels, length over 292 m., with drafts up to 11.6 m.; tankers length over 274 m., draft 14.6 m. Maximum size governed by draft of vessel. No limit as to length and beam. Draft in harbour: "A" class mooring buoys 6.7 m. to 11.2 m. "B" class mooring buoys 5.3 m. to 8.8 m.

PRATIQUE: *Conditions under which a Vessel may be Granted Radio Pratique:*

(a) The vessel must not have called at a plague infected port within 6 days prior to arrival at Hong Kong.

(b) If the vessel has called at a cholera infected port within 5 days prior to arrival at Hong Kong, the Chief Port Health Officer or his delegated officer has full discretion in the granting of Radio Pratique.

(c) There are not more than 24 passengers on board at the time of arrival.

(d) A vessel carrying more than 24 passengers may be granted Radio Pratique if there is a ship's surgeon on board.

(e) The Master must furnish, through his shipping company or Agent, the following cabled information to the Port Health Office not more than 30 hours and not less than 8 hours before his expected time of arrival at Hong Kong:

(i) Ports of call with dates of departures during the 14 days prior to arrival.
(ii) Numbers of passengers and crew members on board.
(iii) A statement that all persons on board are healthy.
(iv) A statement indicating whether any case of infectious disease has occurred on board during the voyage.
(v) Whether any person on board is sick.
(vi) The date of issue of the Derat or Derat Exemption Certificate.
(vii) Type of vessel.
(viii) Whether foodstuffs are carried as cargo on board ship, and if so, type of foodstuff and country of origin.

Notes:

1. Applications for Radio Pratique must be made by shipping companies or Agents. Application forms should be sent to Port Health Office, Centre Point, 3/F, 181-185 Gloucester Road, Wanchai, during normal office hours (0900 – 1700 hrs. on Mondays to Fridays and 0900 – 1300 hrs. on Saturdays).

2. For urgent cases outside normal office hours, shipping companies or Agents may apply for Radio Pratique by telephone to the Port Health Office, Hong Kong Airport (Tel: 7696284) during the following hours:

Mondays to Fridays	1700 to 2400 hrs.
Saturdays	1300 to 2400 hrs.
Sundays and Public Holidays	0900 to 2400 hrs.

All necessary information together with supporting documents must be submitted in writing to Port Health Office, Centre Point on the next working day.

3. No Radio Pratique will be granted between 0000 and 0900 hrs.

4. When Radio Pratique is granted, shipping companies or Agents will be responsible for notifying the Master concerned.

5. The granted Radio Pratique will automatically expire 24 hours after the stated expected time of arrival at Hong Kong.

6. The granted Radio Pratique will no longer be valid if there is any change in the health status on board the vessel concerned during the period from the submission of the application to the actual time of arrival of the vessel at Hong Kong. This means that the Master of the vessel concerned will have either to re-apply through his shipping company or Agent, giving the additional information, or to display the appropriate signal when approaching the Quarantine Anchorages:

Day: International Code flag "Q".
Night: A red light over a white light in a vertical line, 2.0 m. apart.

7. Ships granted Radio Pratique will be required to display the following signal when entering Hong Kong waters:

Day: International Code flag "TO."
Night: 3 white lights in a vertical line, 2.0 m. apart.

8. Maritime Declaration of Health and Passengers and Crew List will have to be collected by the shipping companies or Agents and delivered during office hours to the Port Health Office, Centre Point within 24 hours of the ship's arrival.

Also see "Notices".

IMMIGRATION: Immigration formalities take place at the Eastern or Western Examination Anchorages after clearance by the Port Health Authorities. Immigration launches are on duty 24 hours a day in the Western Anchorage and from 0630 hrs. to 1800 hrs. in the Eastern Anchorage throughout the year.

RADIO: Cable Agent via Radio Hong Kong call sign "VPS".

The Marine Department Vessel Traffic Centre (VTC) is manned 24 hours a day throughout the year. It can be contacted by telex, by cable, by facsimile and by VHF radio-telephone on Channel 12. The VTC is the control centre of the newly installed Vessel Traffic System which consists of high technology radar-based surveillance, tracking and data processing equipment. The VTC can be contacted by Telex number 63607, Answerback MDVTS HX. Facsimile number 8586646.

Wireless Telegraphy: Radio communication apparatus on board a merchant vessel is not permitted to be used while the vessel is within Hong Kong territorial waters except in the following circumstances:

When a vessel is proceeding through Hong Kong territorial waters such apparatus may be used to communicate on minimum power with the nearest coast station or, if communication with the nearest coast station is impracticable and the safe navigation of the vessel so requires, with a more distant coast station or another vessel;

For the purpose of summoning assistance on an occasion of danger to the life of any person or to the vessel;

For the purpose of carrying out experimental tests for which permission in writing must first be obtained.

During the period when tropical cyclone signals 8, 9 or 10 are in force, radio and television stations will extend their hours of operation around the clock, and will undertake broadcasting of tropical cyclone warnings in English and Chinese, at two minutes to the hour and half past the hour. Should the expected local conditions so warrant, warnings will be broadcast at quarter to and quarter past the hour. Warnings in Engl will be broadcast by individual announcers at each station. Rad Television Hong Kong and Commercial Radio will provide a Chine announcer to broadcast warnings in Chinese from the broadcastin studio at the Royal Observatory.

If conditions are expected to worsen, tropical cyclone warnings ma continue after the normal close down time of the stations, or commenc before the usual starting time in the morning even though only the N 1 signal is in force at that time. After consulting the Director, Roy Observatory, the Director of Broadcasting will decide whether or not adopt either of these courses. He will inform Commercial Radio, H TVB, ATV of his intentions as early as possible.

Frequencies: Radio Television Hong Kong – Radio 1 (Chinese) 64 kHz: Radio 2 (Chinese) 94 MHz, 103.5 MHz, 103.1 MHz; Radio (English) 545 kHz; Radio 4 (English) 91 MHz, 100.5 MHz, 100.9 MH Radio 5 (English) 96 MHz, 105.5 MHz. Commercial Radio – Englis Service 1050 kHz; Chinese Services Channel 1, 850 kHz, Channel 610 kHz.

All ships bound for Hong Kong must obtain permission from MARDE before entering the waters of Hong Kong. A contravention of th direction will render offending Masters liable to a fine of twenty thousan dollars and to imprisonment of 1 year. When applying for permission enter the waters of Hong Kong Masters must provide the informatio required as contained in Marine Department Notices to Mariners No. 3 of 1983 and No. 89 of 1985 (see "Notices"). You are required to answ all signals including those passed from Royal Navy vessels patrollin the approaches to H.K. when approaching Hong Kong – Mardep Hon Kong.

VHF: Vessel Traffic Centre, Marine Department Hong Kong Port Rad call sign "MARDEP" Channel 12, 24 hours listening watch. Range u to 35 miles. Navigational warnings are routinely broadcast on VH Channel 20 every hour.

Maritime VHF Radio-telephone Service (Hague Plan): This servic operates in Hong Kong on 3 international channels, Nos. 16, 26 an 27. Channel 16 (156.8 MHz) is the simplex distress and calling frequenc on which contact is made between shore and ship before changing ov to either of the public correspondence channels, No. 26 or 27. The latte are duplex channels and Hong Kong transmits on 161.9 MHz an receives from ships on 157.3 MHz for Channel 26; transmi 161.95 MHz, receives 157.35 MHz for Channel No. 27.

Local connection to the service is *via* the Hong Kong Telephon Company and is made in the same way as for overseas radio-telephon calls by dialling "011". The local operator should then be informed th a telephone call is required on "the Maritime VHF Hague Plan Service The operator will ask for details of the call, such as the name of the sh and the person required, and will then connect the call *via* Cable an Wireless. Calls can also be sent from ship to shore. The range is abo 50 miles and the service is available at all times of the day and nigh

Harbour telephones: Service is provided by any one of 3 companie – Hutchinson Tel. Co., Tel: 5-66113, Ext. 120 – China Telecom Syste Tel: 0-242666, Ext. 109 – Communication Services Ltd., Tel: 5-828822 Calls may be made between any two ships so equipped and betwe a ship and any telephone number on the Hong Kong Telephon Company network.

Ship to Shore service: Hong Kong Telephone Company will al provide ship to shore telephone service by means of land lines selected wharf locations. For service at the Container Port call 0-20880

Also see "Notices".

BERTHING: Berthing of dry cargo vessels alongside wharf can performed any time during day and night. Berthing at tanker wharf permissible after sunset, depending on size of vessel or other spec circumstances. Ships carrying explosives must obtain permission fro the Marine Department before berthing is allotted.

Boatmen: Labour to handle ships' mooring lines when berthing a unberthing at any of the wharves in Hong Kong waters is supplied the owners of the wharf concerned, the cost being included in t berthing fee. For berthing at a Marine Department mooring buoy i usual for the ship's Agent to arrange for boatmen to handle the shi slip wire and anchor cable, unless the ship's crew undertake this tas The services of boatmen are generally obtained through the Hong Ko Pilots Association.

Mooring Buoys: See "Max. Size" All ships are required to secure Marine Department mooring buoys by their chain cable (vessel to sup shackle). The maximum length of a ship permitted to berth at an class mooring is 183 m., the swing circle encompassing each bu having a radius of 213 m. The maximum length of a ship permitted berth at a "B" class mooring is 137 m., the radius of swing circle arou such buoys being 167 m. It is therefore within the limits of safety fo vessel, when secured to a Marine Department mooring, to slack ou "1 shackle on the windlass" and still clear ships berthed at adjac buoys, except in exceptional circumstances. As all Marine Departme moorings are of the 1-legged type, it is permissible, sho circumstances make it necessary, for a ship, when attempting to sec to a mooring, to drop an anchor at not less than 15 m. from the bu without fouling the mooring chain. It should be noted, however, t 3 moorings sited within the Naval Mooring Area are either of the 2 o legged type, and it is therefore not permissible to use an anchor wh berthing.

48 "A" class mooring buoys and 27 "B" class mooring buoys for oce going vessels. One "B" class mooring buoy is available at Yam O B Lantan Island, for vessels with cargoes of logs.

CONTAINER CRANES: Modern Terminals Ltd. – 7 cranes.

Hong Kong International Terminals – 16 container gantry cra Sealand – 3 container gantry cranes

CRANES: Available up to 700 tons.

TUGS: Available for berthing and unberthing. Advance booking is required.

Company	Vessel	Type	B.H.P.	Notes
H.K. & Kowloon Wharf & Godown Co. Ltd.	*Snipe*	motor tug	140	All the tugs listed here are suitable for towing lighters in the harbour.
	Heron		205	

Tug Requirements at Tanker Terminals:

Company	Location	Berthing	Unberthing
Esso	Tsing Yi Island	4 (including 2 escort)	3
CRC	Ngar Ying Chau/ Tsing Yi Island	3 (including 2 escort)	3
Mobil Oil Wharf	Tsing Yi Island	3 (including 1 escort)	2, 3 if draft more than 10.0 m.
Power Station	Tsing Yi Island	3	1
Caltex	Tsing Yi Island	3 (including 1 escort)	2
Mobil LPG Wharf	–	1	1
Shell Wharf	Kwun Tong	3 (including 3 escort)	2

These tug requirements are to be used during normal working conditions, with the proviso that it should have a flexibility on a case by case basis, and should conditions deteriorate during inclement weather, such as in the typhoon season, then additional tug requirements may be necessary.

Vessels with bow and/or stern thrusters of over 1,000 h.p. each will be able to allow for one tug less per thruster over the 1,000 h.p. mentioned, at separate ends of the vessels, subject to Agent or Master giving requisite confirmation that the thruster is capable of this horsepower, or in excess of, and that they are in good working condition, and depending on the thruster being submerged at the relevant draft.

Providing that duckpeller tugs are ordered, subject to availability, a compromise may be reached allowing for the number of tugs to be reduced.

It is strongly recommended that these guidelines be strictly followed, due to the volatile and dangerous cargoes that these vessels transport to and from oil terminals.

WHARVES: *China Merchants S.N. Co. Limited:* Berths suitable for coastal shipping:

		Length (ft.)	Depth (ft.)
West Point	Berth No. (1) E.	320	35
	Berth No. (2) W.	320	35
Kowloon Wharf Terminal & Warehouse Ltd.			
	Ocean Terminal	1,250	35
Kwai Chung Container Terminal			
7 Terminals	(Sealand – 1 Terminal, Modern Terminals – 3 Terminals, HIT – 4 Terminals)	14,000	40

Also see "Developments".

BULK HANDLING FACILITIES: *China Light & Power:*

Location: Castle Peak.

Berth: Length 545 m. Depth 20 m. Max. draft 12.9 m. (limited by channel depth 13.7 m.). Max. Beam 42 m. LOA no restrictions.

Cargo: Discharge rate for coal 15,000 tons per day.

Hong Kong Electric Co. Ltd.:

Location: Lamma Island.

Berth: Depth 15.8 m. Max. draft 13.8 m. Max. LOA 270 m. Max. beam 40 m.

Cargo: 2 unloaders for coal, rate 15,000 tons per day.

STEVEDORES: The following table shows the average handling rates per gang hour:

Cargo	Place	Load tons per gang hour	Discharge tons per gang hour
General	Wharf	12	15
General	Stream	10	12
Bale or bag	Wharf	20	25
Bale or bag	Stream	15	20

Stevedores work 24 hours per day except Mid-Autumn Festival and Chinese New Year Holidays.

TANKERS: Any leaking of oil to water will be subjected to heavy fines. If not gas-freed, not allowed through harbour.

Also see Table A – Oil Installations.

Esso: The Esso Tsing Yi Terminal is situated on the Southern part of Tsing Yi Island in position Lat. 22° 19.7′ N., Long. 114° 06′ E. The facilities are owned by Exxon Storage & Wharfage Company Ltd., and used by Esso Standard Oil Hong Kong Ltd., and are used for discharging dirty and clean products, chemicals and LPG.

Pilots: At the Western entrance, Pilots generally embark and disembark to the West of Green Island (Tsing Chau). By pre-arrangement Pilots can be picked up off Ngan Chau and all tankers are recommended to make use of this service and request the Agent to notify the Pilot Association accordingly.

The Pilots maintain a listening watch on VHF Channel 11. Senior Pilots will usually be assigned to larger tankers.

Pilot launches display the international signals by day and by night and during poor visibility sound the international signals. In addition they may sound an identity signal of 4 short blasts.

Esso Tsing Yi Terminal: The berth consists of a T-head pier having 3 separated areas for handling barges and tankers ranging from 500 – 120,000 d.w.t.

The main loading area is designated Berth No. 1 and consists of a fendered loading platform, 2 fendered breasting dolphins, 4 mooring dolphins and associated equipment such as capstans, quick release mooring hooks for 120,000 d.w.t. tanker, etc. Berth No. 2 is provided by fendering the onshore face of one of Berth No. 1 Eastern mooring dolphins and adding an adjacent breasting dolphin suitable for vessels up to 2,500 d.w.t. Berth No. 3 is a small berth for vessels up to 500 d.w.t. and is located adjacent to the Eastern side of the trestle/access way. In addition there is a small jetty from the shore, inside of the Western side of the T-head, used at the present time by small tankers up to 2,000 d.w.t. and barges loading/discharging FO, ADO and LPG.

Berthing Procedure: At the present time the berthing of tankers exceeding 570 ft. LOA and up to 42 ft. draft is carried out during daylight hours and on flood tide only. Above 42 ft. draft, berthing is carried out at HW slack only and during daylight hours only and on a trial basis, HW neap during daylight hours when no HW slack exist for that day. Tankers not exceeding 570 ft. LOA, draft under 36 ft. can be berthed day and night, but on flood tide. Currents near the berth, up to a distance of approximately 400 ft. off, run parallel to the berthing face. Further out, the ebb tide sets out and the flood tide in towards the North. Vessels always berth port side to. (Maximum tidal current is generally below 1 knot). In addition to the 2 escort tugs used for larger vessels for the passage through the channel from Green Island, usually 2 more tugs are in attendance for berthing larger vessels. Tugs are normally employed in the alongside manner and use their own wire. Pilots bring vessel parallel to the berth, and about 200 ft. off, and then ease her alongside with the aid of attending tugs and mooring lines.

Nearby, approximately 500 ft. Eastward is a new berth owned and operated by China Resources Oil Company. This berth projects further offshore than the Esso Pier. *Caution has to be exercised not to overshoot the Esso Berth.*

Two mooring launches strong enough to handle 120,000 d.w.t. vessel's wire ropes are in attendance. All 4 mooring dolphins are fitted with triple quick release hooks and capstan. The 2 breasting dolphins and 2 corners of the loading platform are fitted with double quick release hooks and capstan. The terminal requires that larger vessels use a minimum of 2 headlines, 2 forward breastlines, 2 forward backsprings, 2 aft backsprings, 2 aft breastlines and 2 sternlines.

Products	*No. and Size of Loading Arm*	*Shoreline (in.)*	*Maximum Pressure (p.s.i.)*	*Average Discharging Rate (bbls.p.h)*
Dark Product	4×10 in.	12/20/24	100	11,000 per load arm
DPK	1× 8 in.	10	100	8,000
DPK and other clean products/ lubes	2× 6 in.	6 and 8	100	2,500/4,000
LPG	Liquid 6 in.	6	350	800
	Vapour 4 in.	4		
Chemical	1× 6 in.	6	100	2,500

Tolo Harbour Terminal:

Shipmaster's Report: July 1987.

The vessel called at Tolo Harbour to discharge a parcel of Light Virgin Naphtha.

On account of the terminal having only been opened recently, the following information should be of some use to vessels having to call at Tolo Harbour in the future.

Position:	Lat. 22° 26.8′ N., Long. 114° 14.5′ E.
Operators:	China and Hong Kong Gas Co. Ltd.
Products handled:	Light Virgin Naphtha.
Cargo connections:	2 × 10 in.
Shore Tanks:	6 km. away. Submarine pipeline 24 in.
Pilotage:	Daylight movements only.
Tugs & mooring launches:	Come around from Hong Kong harbour.
Vessel:	LOA 174 m. Beam 32 m. Draft 10.92 m.

See "Plan".

Also see "Notices" – No. 52 of 1986.

DENSITY: 1017.

FRESH WATER: Available but the supply is sometimes limited, depending on the storage levels in Hong Kong's reservoirs. The supply to ships is made at commercial wharves and from water boats.

Water Boats:

Company	*Vessel*	*Capacity*	*Delivery (Approx.)*
Leung Tai Kee Waterboat Co. Ltd.	Taikee No. 1	150 long tons	150-180 t.p.h.
	Taikee No. 2	120 long tons	150-180 t.p.h.
	Taikee No. 3	320 long tons	150-180 t.p.h.
	Taikee No. 5	250 long tons	150-180 t.p.h.
	Taikee No. 6	320 long tons	150-180 t.p.h.
	Taikee No. 7	130 long tons	150-180 t.p.h.
Union Waterboat Co. Ltd.	Tai Yat No. 1	270 tons	150 t.p.h.
	Tai Yee No. 2	290 tons	150 t.p.h.
	Tai Sam No. 3	300 tons	150 t.p.h.
	New No. 4	340 tons	170 t.p.h.
	Tai Ng No. 5	295 tons	150 t.p.h.
	Pier services to ocean terminal		1,500 tons/day

FUEL: Excellent facilities exist for bunkering vessels with fuel oil and coal. Fuel oil can be obtained either at the wharves adjacent to the oil installation, or from harbour oilers owned and operated by the oil companies. Fuel oil from these vessels can be pumped on board without impeding cargo operations. Adequate stocks of good quality bunker coal suitable for coal-fired marine boilers are maintained in the port. Fuel oil available with viscosity up to 1,000 sec. Redwood. 24 hours' notice for supply is required. Also gas oil and marine diesel available.

Also see Table B – "Port Oilers".

CONSULS: The following countries maintain consular offices in Hong Kong:

Australia
Austria

REPAIRS: In addition to ship and engine maintenance and repair work, the dockyards have facilities for many miscellaneous services such as are provided by modern dockyards. These include physical tests on materials such as anchors and cables, for which test certificates can be supplied, chemical analysis, drawing office requirements, chemical cleaning of engines and boilers, shot and sand blasting, zinc spraying to name but a few.

DRY DOCKS:

Hong Kong United Dockyards: Three floating docks, two located off Tsing Yi and one at North Lantau. The largest has a lifting capacity of 24,000 tonnes, length 230 m., depth 8.0 m. over blocks and width 38.0 m.

Yau Lian Dockyards: Three floating docks, one located off Tsing Yi and two at North Lantau. The largest has a lifting capacity of 45,000 tonnes and can accommodate ships up to 150,000 d.w.t.

FIRE PRECAUTIONS: The Fire Services Department operates six fire boats, the largest being the 350 ton "Alexander Grantham". It has an output capacity of 45,000 litres of water and 32,850 litres of foam a minute through a battery of monitors. This vessel is equipped to deal with any type of fire on any size vessel, and is designed to operate both in port and at sea.

GANGWAY/DECK WATCHMEN: Not compulsory but recommended.
OPENING/CLOSING HATCHES: Usually performed by ship's crew.
CERTIFICATES: See "Documents".

CARGO GEAR: Normal routine gear, wire and rope slings, nets, grabs and floating cranes up to 100 tons available.

Vessel's cargo gear must be used for working cargo at all alongside berths.

IDENTIFICATION CARDS: No identification card is required for crew or passengers going ashore. When the vessel has exceeded a stay of 14 days in port, al! crew members must deliver to the Harbour Control Office, Immigration Department through the agents a signed copy of the "Immigration Arrival Card".

SEAMEN: All formalities connected with engagement and discharge on board British ships, and on foreign ships whose flag is not represented by a Consular Officer resident in Hong Kong, are required by law to be conducted at the Mercantile Marine Office of the Crews Branch, Marine Department. Hong Kong continues to be one of the main recruitment centres of Asian seamen and a Seamen's Registry Office, which is an adjunct to the Seaman's Recruiting Office, under the same branch maintains records of all Hong Kong seamen. The Hong Kong Government Seaman's Service Record Book (Seaman's Discharge Book) is issued by the Seamen's Recruiting Office and is a record of employment.The Seamen's Recruiting Office regulates the recruitment selection and supply of Hong Kong Registered seamen to ships requiring them, and is situated at the Harbour Building, 3/F, 38 Pier Road, Hong Kong.

Seamen's Travel Documents: The Hong Kong Government Seaman's Identity Book is issued by the Immigration Department and enables the holder to join ships abroad, and return to Hong Kong without a visa during the validity of the book (initially 5 years, with 5 year renewals) and also within 12 months after the expiry of the validity of the book.

A Seaman's Certificate of Nationality and Identity is issued at the Immigration Department only to seamen of British nationality, whereas the Seaman's Discharge Book and the Seaman's Identity Book may also be issued to seamen resident in Hong Kong and no visa is required for return to Hong Kong.

All Crew members signing-off for repatriation must first obtain permission from the Director of Immigration. All crew arriving to join a vessel must produce a guarantee letter through the Agents responsible for all maintenances and other eventual expenses.

AIRPORT: Regular International flights. Airstrip is capable of handling any size of jet planes. Transportation from port to airport terminal about 40 minutes bus drive.

Shipmaster's Report: July 1987.

Personnel joining vessels at Hong Kong: The vessel's Agent must give a letter to the Airport Immigration advising them of incoming air passengers who are joining vessels at Hong Kong. Personnel will be detained by Kai Tak Airport Immigration pending the letter's arrival.

TIME: Standard time kept in the colony is 8 hours in advance of GMT.
HOLIDAYS: Public holidays in Hong Kong occur mainly on festivals whose date is governed by the lunar calendar.
Every Sunday; First week-day in January; Chinese New Year's Day; Second day of Chinese New Year; Third day of Chinese New Year; General holiday in lieu of that for the Ching Ming Festival; Good Friday; Day following Good Friday (Ching Ming Festival); Easter Monday; Birthday of Her Majesty the Queen; Tuen Ng Festival; First week-day in July; First Monday in August; Last Monday in August, which shall be Liberation Day; Day following Chinese Mid-Autumn Festival Day; Day following Chung Yeung Festival: Christmas Day; First week-day after Christmas Day.

POLICE/AMBULANCE/FIRE: When the services of the fire brigade, immigration, port health or police are required, appropriate signals should be made in accordance with the list of "Hong Kong Port Signals". The Marine Division of the Police is responsible for internal port security. Its fleet of launches maintain constant patrols in Hong Kong's territorial waters.

TELEPHONES: Available at all alongside berths for connection on board ship.

SERVICES: Services available including tank cleaning, painting, washing, compass adjusting, calibration of direction finder, radar repairs, 24 hours' service laundry, supply of stores and provisions, motor-boat service between ship and shore.

Table A. OIL INSTALLATIONS

Company	Location	Length of berth	Depth alongside (Chart Datum)	Grade of oil	Capacity (water tons)	Delivery rate	Hose connection

WEATHER: 1st May to 31st October usually considered as typhoon season. No operation of cargo when typhoon signal No. 3 or upward is hoisted. Also see "Radio".

GENERAL: No waste to be thrown into harbour. A free refuse disposal service is available for domestic refuse. Ship's agents can arrange this through Marine Department. Chain required for mooring to buoy. Unnecessary use of ship's sirens prohibited.

NOTICES: Marine Department Notice No. 42 of 1985 (Dated 4th March 1985).

Quarantine Inspection – Eastern Quarantine Anchorage:

1. Masters, Owners and Agents of ships are advised that with effect from 1st April, 1985, a Quarantine Service will be available in the Eastern Quarantine Anchorage between the hours of 0800 and 1800 daily upon request. Ships requiring this service should make a request to the Vessel Traffic Centre when establishing contact on VHF Radio Channel 12 prior to arrival.

2. The existing continuous Quarantine Service in the Western Quarantine Anchorage remains unchanged.

3. Marine Department Notice No. 186 of 1984, concerning arrangements for obtaining the services of the Port Health Doctor at the Eastern Quarantine Anchorage will be superseded with effect from that date.

4. Copies of the Notice may be obtained free of charge from the Port Formalities Office, Marine Department, 3/F, Harbour Building, 38 Pier Road, Hong Kong.

Signed: Director of Marine.

Marine Department Notice No. 152 of 1984 (Dated 8th August 1984)

Notice to Owners, Agents and Masters of vessels of over 300 gross registered tons calling at Hong Kong:

Owners, Agents and Shipmasters are reminded that Vessels of more than 300 gross registered tons are required to have on board, whilst in the waters of Hong Kong, very high frequency (VHF) radiotelephone equipment. Such vessels are required to make contact with the Vessel Traffic Centre on Channel 12 or 14 of the VHF radiotelephone before they enter the waters of Hong Kong and thereafter to make reports as specified in the Shipping and Port Control Regulations. In addition, a continuous listening watch must be maintained on the radiotelephone, on the specified channels. Failure to comply with these requirements renders the Master liable to prosecution.

Accordingly, Owners and Agents are requested to advise the Masters of vessels enroute to Hong Kong of the foregoing requirements.

The booklet, Hong Kong Shipping and Port Control Laws giving further details is available from the Marine Department Headquarters, Harbour Building, 38 Pier Road, Hong Kong, price $5. You should obtain a copy of this booklet if you are in any doubt as to the laws applicable in Hong Kong.

You are also advised to obtain the publication "Hong Kong Vessel Traffic Services User's Guide for Group 1 Users", promulgated with the intention of facilitating users' familiarisation with the Vessel Traffic Service, which is being introduced with a view to its ultimate compulsory participation.

Please note that the requirement to comply with these VHF reporting procedures does not apply to any vessel to which Part IV of the Shipping and Port Control Ordinance applies.

Signed: Director of Marine.

Notice to Mariners No. 39 of 1983: *Hong Kong Waters, Approaches t Hong Kong – Permission to Enter Hong Kong Waters:*

1. Agents and Masters are reminded that it is mandatory for ships t obtain permission to enter Hong Kong waters from the Director o Marine. It is in their best interests to give as much prior notice as possibl before arrival. Permission to enter is conditional upon the followin information being supplied to the Director:

(a) Name and nationality of vessel.
(b) Number of persons on board.
(c) Type of vessel.
(d) Reason for call at Hong Kong.
(e) ETA off Waglan Island.

2. The Director of Marine can be contacted through the Vessel Traffi Centre ("MARDEP") in any of the following ways:

(a) By W/T or R/T (HF) via Hong Kong Radio (VPS).
(b) By R/T on VHF Channel 12 (156.60 MHz).
(c) By Telex: 63607 Mdpcc Hx.

Signed: Director of Marine.

Notice to Mariners No. 52 of 1986

Hong Kong Waters – Approaches to Tolo Harbour – Establishment o Pilot Boarding Station

Date: With effect from 1st September 1986.
Position: Latitude 22° 29′ 36″ N., Longitude 114° 19′ 42″ E.
Area: Tolo Channel.
Details: A pilot boarding station has been established in the above position.
Remarks: Providing its Master has reported to the Authority in accordance with Section 10E of the Pilotage (Amendment) Ordinance 1985, a ship required to be under Compulsory Pilotage may navigate in the pilotage area without a licensed pilot, if it is on its inward voyage from the time it enters the pilotage area to the time it arrives at a pilot boarding station, so long as it is directly proceeding to a pilot boarding station and if it is on its outward voyage under the pilotage of a licensed pilot, from the time the licensed pilot disembarks to the time i leaves the pilotage area, so long as it is directly leaving the pilotage area.

Charts Affected: BA 939, 3386.

Signed: Director of Marine.

Notice to Mariners No. 89 of 1985

Hong Kong Waters, Approaches to Hong Kong – Notification to b made to the Director of Marine by Ships Intending to Enter the Water of Hong Kong:

1. With effect from 1st January, 1986, and with the intention o simplifying communication procedures, the Master of every vessel ove 300 g.r.t. who intends to enter the waters of Hong Kong is required t make the following notification to the Director of Marine.

1.1 Not less than 12 hours before the vessel is expected to enter th waters of Hong Kong, an initial notification providing the informatio specified in *Annex 1* hereto.

1.2 Not less than 4 hours before the vessel is expected to enter th water of Hong Kong, a confirmatory notification providing the informatio specified in *Annex 2* hereto.

2. The notification specified should be addressed to "MARDEP" an transmitted directly to "MARDEP", using:

2.1 W/T Communication via Hong Kong Radio (VPS); or
2.2 Telex: 63607 Mdpcc Hx; or
2.3 VHF R/T on Channel 12 (156.60 MHz), calling channel (4 hou notice only).

3. Compliance with the foregoing requirement by Masters of vesse over 300 g.r.t. will be considered by the Director of Marine as satisfyin all his requirements for routine communication in advance of a vesse entry into Hong Kong waters in accordance with:

3.1 The Shipping and Port Control Regulations, Regulation (Shipping and Port Control Ordinance, Cap. 313).
3.2 The Pilotage Ordinance (Cap. 84), section 10E(1).
3.3 Notice to Mariners No. 39 of 1983, permission to enter Hong Ko waters, dated 6th July, 1983.

4. Agents and Masters of ships of 300 g.r.t. or under are reminde that they should continue to apply for permission to enter Hong Ko waters in accordance with Notice to Mariners No. 39 of 1983.

5. This notice updates and supersedes Notice to Mariners No. 60 1985 which is hereby cancelled.

Annex 1:

No.	*Required Notification*	*Sample Message*
1.	Name of vessel and call sign	Hardship/GABC
2.	Flag	British
3.	Type (Bulk/Tanker/General Cargo/ Container)	Bulker

Marine Department Notice No. 121 of 1987

Compulsory Pilotage:

1. Notice is hereby given that the Pilotage (Amendment of First Schedule) Order 1987 will come into effect on 1st August, 1987. The Order will extend the requirement for compulsory pilotage generally to ships of 5,000 gross registered tonnage, or over, as specified in the First Schedule. The amended First Schedule will specify the following vessels:

(1) A ship of 5,000 gross registered tonnage or over.

(2) A ship of 1,000 gross registered tonnage or over, but under 5,000 gross registered tonnage, proceeding to or from any wharf specified in Part I of the First Schedule, and any container terminal specified in the Third Schedule, to the Dangerous Goods (Shipping) Regulations.

(3) A ship of 1,000 gross registered tonnage or over carrying dangerous goods specified in Categories 1, 2 and 5 in the Schedule to the Dangerous Goods (Classification) Regulations.

(4) A ship of 1,000 gross registered tonnage or over, but under 5,000 gross registered tonnage, proceeding to or from a Government mooring buoy.

(5) A ship of 300 gross registered tonnage or over which –
  (a) is for any reason, unable to proceed under its own power, manoeuvre with its own steering gear, or work with its own anchors;
  (b) has any part of the hull structure removed, or under repair, which may affect the watertight integrity of the ship; or
  (c) is at risk of causing injury to persons or damage to property, any other ship or the environment by virtue of the condition of the ship or the nature or condition of its cargo.

2. Copies of the Pilotage (Amendment of First Schedule) Order 1987 (Gazette Legal Notice No. 163 of 1987) may be obtained from the Government Publications Sales Centre, Ground Floor, General Post Office Building, Connaught Place, Central, Hong Kong.

Signed: Director of Marine.

DEVELOPMENTS: From June 1990 to early 1991, a submarine gas pipeline is to be laid across the Eastern Harbour. Diversions of the Eastern Fairway are announced by Notice to Mariners and radio navigational warning on VHF Channel 20.

Yau Ma Tei Anchorage will be dredged to −8 m. Kellett Bank will be dredged to −11 m. to accommodate 10 harbour mooring buoys displaced by various reclamation projects within the harbour.

Terminal 7 will be completed by the end of 1990. On completion, Kwai Chung Container Port will provide a total of 4,375 m. quays, over 160 hectares of cargo handling area and 38 quay cranes.

Terminal 8 will be located on the reclamation to be formed on the North-West of Stonecutters' Island.

SHIPMASTER'S REPORT: October 1984.

Immigration: Notice to Master – Immigration Clearance on Arrival in Hong Kong (Form 1D 245A)

1. (Text) Being the Master of a vessel, you are required, on arrival of the vessel in Hong Kong, to anchor or moor the vessel at an approved Immigration Anchorage (as illustrated on the back page) for as long as may be necessary for Immigration examination, and hoist the Immigration Examination Signal until an Immigration Officer permits you to lower it. The Immigration Examination signal should be, by day, the letters H. N. N. shown by means of signal flags and, by night, 3 lights coloured WHITE in a vertical line one over the other, equally spaced at a distance of not less than 1 m. and visible from any direction at a distance of at least 1 nautical mile. Failure to comply with this requirement is an offence under the Immigration Ordinance, Cap. 115, Laws of Hong Kong and is punishable with a maximum fine of $20,000.

2. This opportunity is also taken to remind you that it is your duty to ensure that no persons leaves or boards your vessel (except a Port Health Officer or a Pilot in the course of his duty) and nothing shall be removed from or taken or placed on board your vessel before Immigration Examination.

Master's Remark: Approaching the Western Quarantine Anchorage without a Pilot was difficult, because of an enormous quantity of Chinese and local junks occupying the very narrow roads, waiting for their turn to be cleared. Vessel dropped anchor at 0900 hrs. local time and first persons to board were 2 Customs Officers who came on board by means of lowered accommodation ladder. They were followed half an hour later by the doctor and thereafter by the ship's Agent and shipchandler. As soon as the yellow flag was lowered bumboat people rushed to the ship displaying their merchandise on the aft part of the ship's deck. When Immigration Officers boarded almost 3 hours later they seemed to be very upset and asked me immediately to remove all persons not belonging to the ship's crew and furthermore to write a letter to their office explaining why I let anybody board before Immigration had cleared the ship. Fortunately I had hoisted the signal H. N. N. as per Agent's advice. With few words, they cleared the vessel at 1400 hrs. and I did not have to pay a penalty. They warned me again and told me on my request, after giving me their Circular 1D 245A that nobody including Customs Officers shall board the vessel except Pilot or doctor before them and whenever the Customs Officers want to board before (which is the usual case) the Master is to contact MARDEP on Channel 12 VHF, asking to contact Immigration Office to get Immigration's confirmation for the Customs to board the vessel before Immigration have cleared her. They told me furthermore not to lower the accommodation ladder and to repulse any person who tries to board.

No vessel can obtain Pre-arrival Clearance if they have one person among the crew coming from a Communist country. Sailing without a Pilot was also not very easy and I strongly recommend Masters to take Pilots whenever entering or leaving the port of Hong Kong due to the great amount of traffic in this port.

MARDEP – Reporting Points: Vessels entering Hong Kong must report their passing to MARDEP on Channel 12 VHF at the following points:

Through East Lamma Channel	*Through West Lamma Channel*
Wang Lan Island	Wang Lan Island
Potoi Island	Potoi Island
LCS 1 Lamma Channel Buoy	
Lamma Patch Channel Buoy	Cheung Chau Island
LCS 2 Lamma Channel Buoy	
Green Island	Green Island

Through Tathong Channel
Wan Lan Island
Tathong Point
Hak Kok Tau (Cape Collinson)
Lei Yue Mun

RADIO OFFICER'S REPORT: September 1990.

Pre-arrival Clearance not possible with crew originating from communist countries.

Radio Free Pratique possible.

Advance Port Clearance possible.

To obtain entry permission, MARDEP should be informed of the following information at least 12 hours before arrival:

1. Name/Call Sign.
2. Flag.
3. Type.
4. G.r.t.
5. LOA.
6. Number of Persons on board.
7. Reason for Call.
8. Arrival Draft.
9. Any Defects.
10. IMO Class 1, 2 and 3.
11. Agent.
12. Pilot Yes/No.
13. ETA Pilot Station.
14. Last Port.

At least 4 hours before arrival:

1. Name/Call Sign.
2. ETA Pilot Station.
3. Any Change to First Message.

Radio Pratique:
"Name" "Type"
"ETA HK", called "Last Ports in 14 days with dates of departure", Crew "Number", all healthy, possess valid travel documents and vaccination certificates, no infections, disease occured/sick person on board, valid Derat Exemption Certificate issued "Date" at "Port" apply for Radio Pratique Master.

Advance Port Clearance (staying one day only):
Name/Call Sign.
ETA Hong Kong.
Nationality.
G.r.t.
N.r.t.
Certificate of Registry, Issue Date, Expiry Date, Annual Date, Authority.
Load Line.
Safety Construction.
Safety Equipment.
Safety Radio.
Derat Exemption.
Request Advance Port Clearance.
Signed Master.

Send if coming from Australia:
Hong Kong Official Crew List.
List of Ports of Call.
Copies of: Ship's Registry, Safety Equipment, Safety Construction, Load Line, Safety Radio, Derat Exemption.

Agent:
All Certificates.
Safety Manning Certificate, 1 copy.
Last Port Clearance.
Ordinary Crew List, 3 copies.
Stores List, 2 copies.
Customs and Excise Service Form, 2 copies.
Tonnage Form, 1 copy.

Quarantine:
Maritime Declaration of Health, 1 copy.
Crew List, 1 copy.

Immigration:
Officers will not board when Pre-arrival Clearance granted.
If they do board – Arrival: 1 set of Hong Kong Crew List.
5 ordinary Crew Lists.
– Departure: 2 ordinary Crew Lists.

Police:
Arms and Ammunition List, 1 copy (will not always attend).

Customs:
Stores List, 2 copies (will not always attend).

Associated with Jardine Shipping Agencies.

Iceland

AKUREYRI: 65.41 N. 18.03 W. (See Plan)

DOCUMENTS: See "Reykjavik".
PILOTAGE: Not compulsory but available by arrangement with Harbour Master.
APPROACHES: Natural well protected harbour formed by Oddeyri peninsula and the end of the fjord. Entrance to harbour (Pollurinn) has a width of 800 m. and depth of 47 m.
TUGS: One tug available (Damen "Push-Cat 42", 242 h.p.)
BERTHING:

Berth	Berth Length (m.)	Depth at LW (m.)	Remarks
Krossanes	50	6.0	Oil, fish-oil, meat, cement
Drattarbraut			Slipway
Slippkantur	240	6.0	Ship repairs, asphalt tank
Togarabryggja 1	110	6.5	General cargo
Togarabryggja 2	67	6.5	General cargo
Londunarkantur 1	75	6.0	Fish landing
Londunarkantur 2	65	5.5	Fish landing
KEA-bryggja			Oil
Tangabryggja	65	5.5	Cattle feed
Oddeyrarbryggja	140	7.5	General cargo
Torfunefsbryggja	100	5.5	Passenger
Austurbakki	170	7.0	Fish landing

STEVEDORES: Working hours: 0800 – 1600.
MEDICAL: Full hospital facilities available without prior notice.
TANKERS: At Oddeyri (KEA-bryggja) and Krossanes, there are oil berths with depths alongside of 5.0 m. – 6.0 m.
FUEL: Coal and fuel by arrangement.
REPAIRS/DRY DOCKS: Two patent slips, one for vessels up to 200 g.r.t and the other for vessels up to 2,000 g.r.t. Ordinary repairs can be effected. Shipyard has a quay of 275 m. length with a depth of 7.0 m. Divers available.
AIRPORT: At Akureyri, 2 km. from the port.
AUTHORITY: Akureyrarhofn, Oseyri 16, P.O.Box 407, 602 Akureyri, Iceland. *Tel:* (9) 6-26699. *Contact:* Baldwin Thorsteinsson, Harbour Master (After hours, Tel: (9) 6-23664). Guomundur Sigurbjornsson, Harbour Director (After hours, Tel: (9) 6-22346).

HAFNARFJORDUR: 64.04 N. 21.58 W. (See Plan)

PORT LIMITS: The seaward boundary is drawn as follows:
Line 1: 020°, from Lat. 64° 02.4′ N., Long. 22° 08.0′ W. ("Hraunsnes").
Line 2: 272°, from Lat. 64° 04.7′ N., Long. 21° 59.2′ W. ("Balaklettur").
These lines cross at Lat. 64° 04.9′ N., Long. 22° 05.9′ W.
DOCUMENTS: Documents required for Customs clearance:
3 copies of Cargo Manifest
2 copies of Crew List and Passenger List
1 copy of Crew Declaration to the Customs
1 copy of Stores List
Customs Clearance from Last Port.
PILOTAGE: Pilotage is compulsory for all foreign vessels. The Pilot usually boards the vessel 0.5 miles S.E. of the Outer Buoy (Valhusagrunn, red). Smaller vessels and Masters familiar with the port are invited to proceed to the Inner Buoy (Helgasker, green). The Buoyage is IALA "System A". VHF communication with the Pilot on Channel 14.
APPROACHES: Vessels, with a draft of 7.0 m. or greater, are warned that shoals exist at Lat. 64° 04.7′ N., Long. 22° 08.8′ W. (1.5 miles×260° from Valhusagrunn Buoy).
ANCHORAGES: For vessels awaiting the Pilot, a good anchorage is to be found 1 mile S.S.E. of the Outer Buoy (Lat. 64° 04′ N., Long. 22° 04′ W.). Smaller vessels may anchor 0.4 miles North of Hvaleyrarhofdi (Lat. 64° 03.9′ N., Long. 21° 59.9′ W.).
VHF: Pilot on Channel 14.
TUGS: Hafnarfjordur Pilot and tugboat 360 h.p. is available. Further tugs can be ordered from Reykjavik.
BERTHING: The inner harbour is enclosed by 2 breakwaters. The Northern one is 200 m. long and the Southern one 450 m. Entrance channel is 150 m. wide, 9.0 m. deep, bottom soft clay.
North Quay: 255 m. long, depth 5.5 m. to 6.5 m., bottom soft clay. For general cargo and unloading fish.
Oseyrar Pier: 130 m. long and 25 m. wide, depth 2.5 m. to 4.0 m. at Southern side and 5.5 m. to 6.0 m. at Northern, bottom clay. Mainly used for fishing vessels.
South Quay: 240 m. long, depth 6.0 m. to 7.5 m. bottom clay. For bulk and general cargo vessels.
Finger Pier: 70 m. long, 10 m. wide, depth 5.5 m. to 6.5 m., bottom clay.
CRANES: Mobile cranes of various capacities are available.
STEVEDORES: Working hours are 0800 – 1700, Monday to Friday. Overtime can be arranged.
TANKERS: *Oil Pier:* Inside the head of the Southern Breakwater is a berth for oil tankers. Depth 8.0 m., bottom soft clay. Max. draft for arriving tankers is 9.5 m.
Berthing and Mooring: Vessels approach the harbour entrance at slow speed heading 098° in the line of 2 red lights. When off the harbour entrance, the vessel is swung assisted by tug, the port anchor is let go and the vessel comes astern inside the breakwater and is moored port side alongside.
Tidal Variation: Up to 4.5 m. Spring tide average 3.9 m. and Neap tide 1.5 m.
DENSITY: 1025.
TIDAL VARIATION: Up to 4.5 m.
FRESH WATER: Available at all quays.
FUEL: Available at all quays.
CONSULS: Available at Reykjavik (10 km.).
REPAIRS: Minor repairs can be undertaken.
DRY DOCKS: None. Slipway for vessels up to 300 tons.
SURVEYORS: Lloyd's Agents and representatives for othe Classification Societies are available in Reykjavik and Hafnarfjordur.
Cargo Surveyors: Konnun hf., Ingolfsstraeti 3, 101 Reykjavik. Tel: 91 28422.
CUSTOMS ALLOWANCES: 1 bottle of spirits (0.75 litres) 200 cigarettes or equivalent; 24 bottles of beer or 1 bottle of wine.
AIRPORT: Domestic airport at Reykjavik 10 km. International airport a Keflavik 35 km.
TIME: GMT throughout year.
DEVELOPMENTS: New Quays: South Quay, length 180 m., dept 8.0 m. and Oseyrar Quay, length 140 m. depth – 7.0 m. To b constructed from 1991 to 1994.
AUTHORITY: Captain of the Port, Strandgata 4, 220 Hafnarfjordur *Tel:* 91-50492, 91-652300. *Contact:* S. Hallgrimsson, Captain of the Port.
Board of Direction, Hafnarstjorn Hafnarfjardar, Strandgotu 6 220 Hafnarfjordur, Iceland.

ISAFJORD: 66.05 N. 23.06 W.

DOCUMENTS: As for "Reykjavik".
Certificates: All relevant certificates required.
PILOTAGE: TFZ Isafjord Radio 2182 kHz. To call Pilot use VH Channels 16 and 12 or morse lamps or whistle "G".
ANCHORAGE: In Fjord, depth of 6 fathoms.
MAX. SIZE: Dry cargo vesseis up to 4,000 g.r.t. Tankers up to 30 f draft.
HEALTH: Inform Agent.
RADIO: TFZ 2182 kHz and VHF Channel 16.
TUGS: Not required.
MEDICAL: Inform Agent 1 hour in advance. Hospital available.
FRESH WATER: Always available through hose-pipes.
FUEL: All grades available advance notice required is 2 hours.
CONSULS: British, German F.R., Norwegian, Swedish, Danish.
REPAIRS: All types of repairs possible.
DRY DOCKS: 1 small dry dock available.
GANGWAY/DECK WATCHMEN: Necessary. Carried out by crew.
OPENING/CLOSING HATCHES: Performed by crew.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes each cre member, 400 for Master.
Wine/Spirits: 1 bottle for each crew member, 2 bottles for Master.
Beer: 24 bottles for each crew member. 48 bottles for Master.
REPATRIATION: No facilities exist.
AIRPORT: Distance from port 2 miles, regular flights.
TIME: GMT. No change.
HOLIDAYS: Work carried out every day.
POLICE/AMBULANCE/FIRE: Police: 3258 and 4222. Fire/Ambulanc 3300 and 3333.
TELEPHONES: None available.
SERVICES: Compass adjusting, radar, echomaster, specialists.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Isafjardarhofn, Box 183, Isafjordur, Iceland. *Tel:* 94-329

KEFLAVIK-NJAROVIK: 64.00 N. 22.33 W.

DOCUMENTS: As for "Reykjavik".
PILOTAGE: Pilotage is compulsory for vessels over 100 tons net. Pi is available for all vessels 24 hours per day and is reached via Reykjav Radio. Pilot boards vessel 1 mile outside Vatnsnes.
ANCHORAGE: Outside the harbour in depths of 27 m. with good hold ground.
TUGS: Use of tug is not necessary.
BERTHING: Port has concrete pier which will be extended for a leng of 110 m., and a wooden quay 45 m. in length. Depth of water in harbo and alongside wharves is 20 ft. to 45 ft. Entrance is easy for access
STEVEDORES: Working hours: 8 hours per day 0800 to 1700 hrs.
FRESH WATER: Available through hose connection on the quay.
FUEL: Available.
REPAIRS: 2 shipyards available.
AIRPORT: Keflavik International Airport is only 4 km. away.
TIME: GMT. No change.
POLICE/AMBULANCE/FIRE: All Tel: 2222.
TELEPHONES: None available on board.
SHORE LEAVE: Allowed.
AUTHORITY: Harbour Master.

NESKAUPSTADUR, Nordfjordur: 65.09 N. 13.41 W.

DOCUMENTS:
Crew List.
Passenger List.
Customs Documents.
Provision List.
Manifests and Ship's Papers.
Certificates: Ship's Register.

PILOTAGE: No Pilots. Road clear, keep in middle of fjord.
ANCHORAGES: Depending wind. With North or N.W. winds anchor towards South coast and well in the fjord. When N.E. off town towards North coast, but keep clear of small boat moorings.
MAX. SIZE: Length/breadth no restriction. Main quay is 70 m. long and it is built right out to the steep bank at the coast. Depth close to jetty 7 m. but increases quickly.
HEALTH: Free Pratique automatic from Customs Officer. Radio for doctor if illness on board.
RADIO: Neskaupstadur Radio 2182 kHz (TFM) 24 hour watch. VHF, Channels 16 and 26. Range approximately 40 miles.
TUGS: No tugs but large motor-boats are normally obtainable if necessary.
BERTHING: No specific requirements unless over 7 m. draft, when tendering required.
STEVEDORES: If possible 24 hours ETA. Preferably before 1600 hrs. for commencing next morning. Load or discharge rates according to goods.
MEDICAL: Always send advance notice of required medical attention. Hospital available, also 3 doctors and dentist.
TANKERS: Diameters of lines 4 in. and 6 in. Oil companies B.P. and Shell have their own small quays. The third company Esso uses B.P. jetty.
DENSITY: Normal.
FRESH WATER: Shore line on jetty. No barge.
FUEL: Diesel oil only.
CONSULS: Denmark Tel: 71299, 71430. France Tel: 71119, 71114.
REPAIRS: Limited repairs to engines, hull and deck. Good repairs to radars, sounders, tiller pilots, etc.
DRY DOCKS: None. 1 slipway, 450 tons.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: 200 cigarettes a week while in Iceland. Only 1 allowance of spirit, i.e. on arrival 1 to 3 bottles according to occupation.
REPATRIATION: Winter flights twice a week or more. Summer every day.
AIRPORT: Distance 3 km.
TIME: GMT, no alterations.
HOLIDAYS: Last Thursday April; 17th June; 1st May; 25th and 26th December; New Year, etc. If work is carried out 31st December, 24th December, Saturday before Easter and Whitsun double pay is claimed.
POLICE/AMBULANCE/FIRE: Telephone office at shore end jetty.
TELEPHONES: No arrangement to place telephones on board.
SERVICES: No tank-cleaning equipment. No discharge of tank-washings. Compass adjusting available.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
DELAYS: None except if berth not available.
DEVELOPMENTS: No expected draft increases. New berths are under construction but will take unforeseen time.
AUTHORITY: Hafnarstjorinn, c/o Asgeir Magnusson, Naustahvammi, 740 Neskaupstad. *Tel:* 97-71333. *Contact:* Gisli S. Gislason.

PATREKSFJORDUR: 65.35 N. 23.59 W.

DOCUMENTS: 8 Crew Lists, Passenger Lists, Custom Documents, Health Documents, Manifests, Bills of Lading, Ship's Papers.
PILOTAGE: Pilotage not compulsory, but if needed then contact Radio Patreksfjordur on 2182 M/F.
ANCHORAGE: Anchorage is sheltered by the peninsula.
MAX. SIZE: See "Berthing".
RADIO: Radio Patreksfjordur on 2182 M/F.
TUGS: Available.
BERTHING: The entrance has a depth of 4.7 m. to 4.9 m. (15.5 ft. to 16 ft.) at LLWST. The harbour has a depth of 6.4 m. (21 ft.) at LW, and 10 m. (33 ft.) at HW. 320 m. of quayage with depths from 5.5 m. to 5.8 m. (18 ft. to 19 ft.) alongside. The harbour can be entered by day and night.
STEVEDORES: Working hours 0800 hrs. to 1900 hrs.
MEDICAL: Hospital available, contact through radio.
FRESH WATER: Available. No notice required.
FUEL: Available. No advance notice required.
REPAIRS: Machine-shop. General repairs can be effected. Diver obtainable.
AIRPORT: About 26 km. distance from harbour. Regular service, by airlines.
TIME: GMT. No change.
SHORE LEAVE: Allowed.
AUTHORITY: Patrekshofn, Patreksfiroi.

REYKJAVIK: 64.09 N. 21.56 W. (See Plan)

DOCUMENTS:
For the Immigration Office
1 Crew List.
1 Passenger List.
For Customs Authority
Master's Report on vessel's arrival from abroad.
Master's Certificate with Manifests of all goods.
Master's Certificate with Manifests of goods to each port of discharge.
Health Declaration.
List of Provisions and other Stores in ship.
Ordinary procedure at least 5 copies of each manifest (3 for Customs).
Certificates:

1. Certificate of Nationality.
2. International Tonnage Certificate.
3. Certificate of Seaworthiness.
4. Cargo Ship Safety Construction Certificate.
5. Cargo Ship Safety Equipment Certificate.
6. Cargo Ship Safety Radiotelegraphy Certificate or Cargo Ship Safety Radiotelephony Certificate.
7. International Load Line Certificate.

Passenger ships must have certificates No. 1, 2, 3, 7 and in addition Passenger Ship Safety Certificate.
PILOTAGE: Pilotage compulsory. Telegraphic address: Harbour Master, Harbour Office, Reykjavik. Desirable advance notice of ETA 24 hours and again notice 3 hours before expected time of arrival. VHF working Channels 12 and 14 at pilot station and pilot boats. 24 hour watch maintained.

Pilot boat: Grey hull with red and white deckhouse. International signals used if necessary. Pilot boat leaves harbour on request and meets vessel up to 1 nautical mile off Grotta (East of Buoy No. 6). Most frequent boarding place is Buoy 7 Kollafjordur.
ANCHORAGES: Good anchorage at Kollafjordur in 30 to 35 m. water 1.5 miles North of Engey Lighthouse. Anchorage prohibited in neighbourhood of harbour entrance.
RESTRICTIONS: All day service. Draft in old harbour restricted at MLWST to 18 ft. In Sundahofn to 26 ft. No other restriction.
MAX. SIZE: Longest straight quay 315 m. Breadth unrestricted. Depth 26 ft. at MLWST (29 ft. at MLWNT). At present 2 installations for oil carriers to discharge through submerged pipe-lines. Moorings for up to 25,000 d.w.t. ships.
HEALTH: Pratique obtained through Customs Authorities. In case of suspected disease notify port office or Agent in advance.
RADIO: Reykjavik Radio TFA.
RADAR/VHF: No harbour radar. Pilot office can be contacted by VHF Channel 16. Working Channels 12 and 14.
TUGS: Tugs meet vessels on roadstead. Ship's lines used. Two ocean-going tugs of 800 h.p. and 1 smaller tug available.
BERTHING: Larger vessels preferably handled at high water.
Old Harbour: The Old Harbour is protected by 2 moles leaving a 100 m. wide entrance. It is divided into the West Harbour and East Harbour. The Old Harbour is a fishing harbour where coastal and passenger traffic is also served. In the Old Harbour there are several areas for ship maintenance, the main slipways and a great number of firms specialised in services for the fleet. Quayage is about 2,900 m., of which there are 600 m. only for smaller fishing craft. Draft at the entrance is 7.0 m. (23 ft.) at MLWST, and depth at quays 5.5 m. to 6.5 m. (18 ft. to 21 ft.), bottom is sand and mud.
Sunda Harbour – Vatnagardar: This area is the largest for general and containerised cargo, with a special quay for grain and a container terminal with a 1 × 32 ton Paceco Portainer with an outreach of 31 m. Ro-Ro ramp available. The entrance to the area is not restricted and water depth is more than 8.0 m. (26 ft.) at MLWST. Length of quays is 780 m., with a water depth of 8.0 m. (26 ft.) at MLWST. Bottom is sand and mud.
Sunda Harbour – Kleppsvik: Another harbour area for general cargo is in Kleppsvik. The entrance is a 50 m. wide channel dredged to 7.0 m. (23 ft.) at MLWST. The water depth at the quay is also 7.0 m. (23 ft.). Length of quay 250 m.
Sunda Harbour – Grafarvogur: This area is used for discharging and storing of cement, gravel and asphalt for industries in the vicinity. An approach channel has been dredged to 4.0 m. (13 ft.) at MLWST and water depth at the quay is 4.5 m. (14 ft.)
Eiosvik: In Eiosvik there is a quay for the State Fertiliser Plant. The entrance is unrestricted with deep water to the quay. Eiosvik offers the best natural site for large ships in the Port of Reykjavik.
STEVEDORES: Stevedoring must be arranged in advance preferably by Agent. Working Hours: 0800 – 1700 hrs. With labour unions permission, work may be carried out until 2200 hrs. and on Saturdays.
MEDICAL: Medical attention available without notice. For hospital stay or surgical operation advance notice desirable, either through Agent or port office.
TANKERS: Submarine pipe-lines diameter for discharging are 8 in. 2 terminals handling vessels of 15,000 – 25,000 g.r.t. Vessels moor to buoys.
DENSITY: Salinity varies from 33.6% to 35.0% giving sea water density about 1027 in average.
FRESH WATER: Water delivered from taps at quay at rate of 20 t.p.h.–30 t.p.h.
FUEL: Grade of fuel oil 200 – 400 sec. Supplied by barge or lorry.
FIRE PRECAUTIONS: Ordinary precautions for handling of dangerous goods applied.
SURVEYORS: Lloyd's Register, Norske Veritas, Germanischer Lloyd and Bureau Veritas.
GANGWAY/DECK WATCHMEN: Ship's gangway to be used. Watchmen services from ashore not necessary but can be arranged if asked for.
OPENING/CLOSING HATCHES: Carried out by stevedores.

REPAIRS: All kinds of ship repair possible.
DRY DOCKS: Only slipways available up to 2,000 metric tons weight. Dimensions: Length 85 m., breadth 13.6 m.
CUSTOMS ALLOWANCES: 200 cigarettes or equivalent. 0.75 litre beverage, 24 bottles beer.
REPATRIATION: Can be arranged.
AIRPORTS: Reykjavik Airport within 10 minutes drive. Mostly for local routes. Keflavik Airport 50 km. distance, served regularly by airlines both to Europe and America.
TIME: Icelandic Summertime used all year round and is same as GMT.
HOLIDAYS: January 1st (New Year's Day); Maundy Thursday; Good Friday; Easter Monday; May 1st; Ascension Day; Whit Monday; June 17th (National Day); First Monday in August (Bank Holiday); Christmas Day and Second Christmas Day. On Christmas Eve and New Year's Eve work stops at noon. Dock work goes on on Bank Holiday and by Labour Union permission work may be carried out on Saturday against overtime payment and exceptionally at night until 2200 hrs.
POLICE/AMBULANCE/FIRE: Police (Main station) 11166; Police (Harbour Station) 10145; Ambulance 11100; Fire 11100.
TELEPHONES: Telephone connection can be arranged at some berths in the old harbour and in Sundahofn telephone connections will be at the quay.
SERVICES: Compass adjusting carried out by private firm as well as tank cleaning.
SHORE LEAVE: Crew members are allowed ashore.
IDENTIFICATION CARDS: Identification card must be carried.
DELAYS: Normally no delay is to be expected beyond that caused by normal customs clearance.
GENERAL: Engines may not be run while ship is berthed.
DEVELOPMENTS: Extension of terminal facilities at Sundahofn under preparation.
AUTHORITY: Port of Reykjavik, Box 382, 121 Reykjavik, Iceland. *Tel:* 354-1-28211. *FAX:* 354-1-28990. *Contact:* Hannes Valdimarsson, Port Director.

SIGLUFJORD: 66.10 N. 18.50 W. (See Plan)

DOCUMENTS: As for "Reykjavik".
PILOTAGE: Compulsory. Pilot meets vessel about 400 m. from harbour entrance.
ANCHORAGE: East of harbour in depths according to draft. Depth 25 m. to 30 m., good holding ground. Gales from North set heavy sea, vessels then seek anchorage in small bay S.W. of Siglunes.
RADIO: Siglufjordur Radio TFX 2182 kHz.
VHF: Channels 16, 24, 26 and 27.
TUGS: None available.
BERTHING: There are several piers and wharves inside the North Mole, 4 quays used by larger vessels have depths up to 23 ft. at LW. The quays have lengths from 50 m. to 125 m.
STEVEDORES: Available. Working hours 0700 to 1200 and 1300 to 1700. Overtime can be arranged.
MEDICAL: All facilities available.
FRESH WATER: Available.
FUEL: Available in general grades only.
CONSULS: Denmark Tel. 71672 Sweden Tel. 71440
REPAIRS: Repairs to moderate size vessels can be obtained. Diver available.
GANGWAY/DECK WATCHMEN: Necessary.
OPENING/CLOSING HATCHES: Stevedores normally perform this work.
CARGO GEAR: Ship's own gear (no cranes).
TIME: GMT. No change.
POLICE/AMBULANCE/FIRE: All tel. 71170.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Siglufjardarkaupstadur, Granugotu 28, 580 Siglufjordur, Iceland. *Tel:* 71237, 71433. *Contact:* K. Rognvaldsson, Captain of the Port.

SKAGASTROND: 65.50 N. 20.20 W.

DOCUMENTS: As for "Reykjavik".
PILOTAGE: Pilots are available. When approaching port, order Pilo through Agent if required.
MAX. SIZE: Max. draft 19 ft.
MEDICAL: Doctor available but located in Blonduos 20 km. away, docto visits Skagastrond 3 days a week.
FRESH WATER: Available.
FUEL: Available.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Normally carried out by stevedores.
REPAIRS: Small repairs available.
AIRPORT: Nearest 20 km. away in Blonduos.
TIME: GMT. No change.
POLICE/AMBULANCE/FIRE: Police Station and Firemen in the port.
TELEPHONES: Available.
SHORE LEAVE: Allowed.
AUTHORITY: Arnason Berger, Straumnes, 545 Skagastrond, Iceland *Tel:* 95-4614.

STRAUMSVIK: 64.03 N. 22.03 W. (See Plan)

PORT LIMITS See "Hafnarfjordur".
DOCUMENTS: Documents required for Immigration and Customs:
Cargo Manifest.
Crew and Passenger List.
Crew Declaration to the Customs.
Stores List.
Customs Clearance from Last Port.
PILOTAGE: See "Hafnarfjordur".
APPROACHES: See "Hafnarfjordur".
ANCHORAGE: For vessels awaiting the Pilots, a good anchorage is t be found 1 mile S.S.E. of the Outer Buoy (Valhusagrunn, red). Lat. 64 04′ N., Long. 22° 04′ W.
TUGS: See "Hafnarfjordur".
BERTHING: This harbour is operated by Hafnarfjordur. Inside the breakwater is a berth, 220 m. long and depth 12.0 m. The entranc channel is 160 m. wide with a depth of 10.0 m.
CRANES: Two 8 ton harbour cranes for handling general cargo.
BULK CARGO FACILITIES: There is a suction unloader for dischargin alumina.
DENSITY: Mixed salt and fresh water.
TIDAL VARIATION: Up to 4.5 m.
FRESH WATER: Available.
FUEL: Available.
CONSULS: Available at Reykjavik (10 km.).
REPAIRS: See "Hafnarfjordur".
DRY DOCKS: See "Hafnarfjordur".
SURVEYORS: See "Hafnarfjordur".
Cargo Surveyors: Konnun hf., Ingolfsstraeti 3, 101 Reykjavik. Tel: 91 28422.
CUSTOMS ALLOWANCES: 1 bottle of spirits (0.75 litres); 20 cigarettes or equivalent; 24 bottles of beer or 1 bottle of wine.
AIRPORT: Domestic airport at Reykjavik 10 km. International airport a Keflavik 35 km.
TIME: GMT throughout year.

SHIPMASTER'S REPORT: June 1985.
Pilotage: This is a satellite port under the jurisdiction of Hafnarfjordu Harbour Authority, who supply Pilots. Prior notice via Agents. Confirm by VHF to "Hafnarfjordur Pilots", but will also answer to "Straumsvi Pilots". Pilot boards 1 – 1.5 miles outside harbour.
Restrictions: Large ships berthed and unberthed in daylight only.
Max. Size: Normal max. length 210 m. O.A. Beam unlimited. Dept 12 m., and max. draft guaranteed by charterers 37 ft. (11.28 m.).
Berthing: This port is very small, with one berth only on the inner sid of the breakwater. Ships handled comprise about 4 vessels a year up to 60,000 d.w.t. importing Alumina from Australia for the Iceland Aluminium Company smelter. Also about 65 vessels a year, of less tha 3,000 tons load Aluminium ingots for export.
Tugs: On berthing a tug with bollard pull of 10 to 12 tons, which trave from Reyjavik, is used forward, and the pilot boat, with bollard pull 3 tons is used aft. In the case of large vessels ships berth hea in/port side to.
Cargo Operations: One suction unloader discharges Alumina at abo 250-300 t.p.h. For 38,000 tons allow 6 days in port. No public holida are observed while discharging Alumina. Two travelling cranes als available for loading ingots (8 tons at 20.8 m. radius).
Density: Salt water.
Fuel: Not available.
Fresh Water: Available at about 16 t.p.h.
Provisions: Available at high cost from Hafnarfjordur or Reykjavik.
Other Facilities: None. All minor repairs, medical, Agents, etc., will tra from Reykjavik. There is no permanent population at Straumsvik.
Directions: A group of three conspicuous silos, painted red and whi and about 35 m. in height, are located close to the root of the breakwa and are visible from many miles away.

AUTHORITY: Captain of the Port, Strandgata 4, 220 Hafnarfjordur. T 91-50492, 91-53444. *Contact:* S. Hallgrimsson, Captain of the Port Board of Direction, Hafnarstjorn Hafnarfjardar, Strandgotu 6, 2 Hafnarfjordur, Iceland.

VESTMANNAEYJAR: 63.30 N. 20.14 W. (See Plan)

DOCUMENTS:
Health Certificate.
Crew List.
Passenger List.
Manifest.
Ship's Register.

PILOTAGE: Pilotage compulsory, day and night service. Ship to advise over Vestmannaeyjar Radio ETA. Pilot always available but 1 hour's advance ETA is required.

ANCHORAGE: There are anchorages with depths from 24 m. to 34 m., good holding ground about 0.5 miles North of harbour and on North side of peninsula in depths of 28 m. to 34 m.; this anchorage is exposed to winds between West and North.

RESTRICTIONS: No restrictions except for largest vessels. They must enter at high tide.

MAX. SIZE: 5,000 g.r.t.

RADIO: Vestmannaeyjar Radio. VHF available.

TUGS: Normally join in-coming vessels at anchorage. The use of tug is optional. 1 Tug, 500 h.p.

STEVEDORES: Available. Ordered by Agent. Working hours: 0800-1700 hrs., Monday-Friday.

CRANES: 2 mobile cranes, capacity up to 15 tons.

MEDICAL: Not necessary to receive advance notice. Hospital facilities and doctors available.

TANKERS: Discharge lines, 7 in. No deballasting facilities available.

FRESH WATER: Shore installations on every berth.

FUEL: All grades available.

CONSULS: Denmark, Germany F.R., Norway, Sweden and United Kingdom. To be called through Vestmannaeyjar Radio.

REPAIRS: All repairs possible.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Stevedores.

CUSTOMS ALLOWANCES: For each crew member; 100 cigarettes or 20 cigars or 100 grm. tobacco, and 1 bottle spirits.

AIRPORT: Local airport. Daily connection to Reykjavik.

TIME: Local time GMT.

HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Labour Day (1 May); Ascension Day; Whit Monday; National Festival Day (17 June); Prayer Day; Christmas Day (25 December). No work on New Year's Day, Good Friday, Easter Sunday, Whit Sunday, 17 June, Christmas Day.

POLICE/AMBULANCE/FIRE: All tel. 1666.

SERVICES: Radio, radar services etc. Divers available.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS: Depth of entrance to harbour to be increased to 6.5 m. New Quays on North Side of harbour to be built in the near future.

SHIPMASTER'S REPORT: August. 1985.

Vessel: Research vessel, length 55 m.

Approaches and Pilotage: Heimaey is the harbour on the largest island in the Vestmannaeyjar Group; off the S.W. corner of Iceland. It is principally a Fishing Port, and is one of the few places providing shelter on the South Coast of Iceland.

ETAs are sent to Vestmannaeyjar Radio.

The Pilot normally boards from a white and red tug, between Heimaey and Bjarnarey Islands, but in S.E. gales a vessel should go to the North side of Heimaey.

A narrow, tortuous channel, with high cliffs on the North side, and a recent (1973) lava flow on the South, leads into an old Volcano crater where a port has been built.

Berths: The quays are modern, and well fendered. We found the harbour full of Fishing Boats, but space is kept for visiting vessels. Turning room is restricted, and high winds could make it difficult. The Pilot Tug assists as required.

Officials/Documents: Icelandic Officials can be very strict.

I prepared: 2 Crew Lists, 2 Ship Store Declarations (British Form C14 was accepted, as this was similar to the Icelandic Form). 2 Lists of Items in Bond – including Beer. 2 Personnel Declarations. 2 Ship's Bar Declarations (Including Beer).

Services: A courteous and efficient service was provided.

Water Supplied ex-quay at 10 t.p.h.

Fuel Delivered by Road Wagon, 5 tons at a time. Both IFO 30 and Gas Oil were available. We were able to alter the stem without any bother.

Provisions: Small quantities available through the Agent on Wednesdays.

Repairs: There are several Slips for fishing vessels.

Cranes: Mobile cranes are easily available.

Communications: Flights are frequent to Reykjavik, and there is a ferry to the Mainland.

Recreational Facilities: The main Tourist Attraction is the Volcano, still smoking from the 1973 eruption.

Good views of the spectacular Harbour and Entrance can be had by climbing up into the surrounding hills. The commercial area, near the Docks, is mainly taken up by the Fishing Industry. There are a few shops, a Bank and a Post Office. Prices are reported to be high.

There are some Snack Type Bars. Beer is Banned! Spirits are available – at a price.

AUTHORITY: Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

India

GENERAL (See Plan)

SHIP REPORTING SYSTEMS:

Description:

The Indian Ship Position and Information Reporting System (INSPIRES) is mandatory for all Indian merchant vessels including coastal and fishing vessels of more than 300 g.r.t. Other vessels within the reporting area are invited to participate in the system. The purpose of the system is to provide date for SAR operations, vessel traffic management, weather forecasting and the prevention and containment of marine pollution. Vessels participating in the system send regular reports through selected radio stations (see "Transmission of Messages").

Reporting Area:

The sea area within the limits defined by the following:
(a) The India-Pakistan border at the coast.
(b) 12° N., 63° E.
(c) African coast from 12° N. to 30° S.
(d) 30° S., 95° E. and Northwards to the coast.

Requirement for Messages:

There are four types of messages, each containing a selection of the items listed in the *Form of Message* below:

1) The *Sailing Plan (SP)* should be sent just prior to sailing or as soon as possible after sailing from a port within the reporting area, or when the vessel enters the area.

2) A *Position Report (PR)* should be sent every day according to the schedule below:

(a) West of 80° E.

Latitude of vessel	0°–10° N.	0400–0455 GMT.
	10° N.–20° N.	0500–0555 GMT.
	20° N.–30° N.	0700–0755 GMT.
	0°–30° S.	0400–0455 GMT.

(b) East of 80° E.

Latitude of vessel	0°–10° N.	0300–0355 GMT.
	10° N.–20° N.	0500–0555 GMT.
	North of 20° N.	0600–0655 GMT.
	0°–30° S.	0400–0455 GMT.

3) A *Deviation Report (DR)* should be sent when the ship's position varies significantly from the position that would have been predicted from previous reports, when changing the reported route or as decided by the Master.

4) A *Final Report (FR)* should be sent on arrival at destination or when leaving the INSPIRES area.

Brief reports on cyclones, deep depressions, defect and damage to the participating vessel and marine pollution may be sent at the discretion of the Master.

Form of Messages:

The first line of every message is always INSPIRES/message type (SP, PR, DR, FR or title in full for other reports). Subsequent lines start with the line identifier; the line identifier and other data items on a line should be separated by /. Lines are terminated by //.

Key to line identifiers:

A / Vessel name / Call Sign //
B / Time (GMT) // – (date and time of report 6 digits, day of month (2), hour and minutes (4)).
C / Latitude / Longitude // – (latitude 4 digit group in degrees and minutes with N. or S.; longitude 4 digit group in degrees and minutes E.
D / Position // (True bearing (3 digits) and distance in n. miles (2 digits) from clearly identified landmark (state landmark)).
E / Course // – (true heading, 3 digit group).
F / Speed // – (in knots and tenths of knots e.g. 155=15.5).
G / Port of departure // (name of last port of call).
H / Time / position / of entry into the system // – (Time as B, Position as C or D).
I / Destination / ETA // – (name of port and ETA as B).
J / Pilot carried // – (state whether deep sea or local pilot is on board).
K / Time / point of exit from the system – (time as B, position as C or D).
L / Route // – (Position of each turn point should be given as in C, together with type of intended track between e.g. RL–Rhumb line, GC–Great circle or Coast (in this case ETA of passing significant points expressed as in B should be given)).
M / Radio communications // – (state full name of stations and frequencies guarded).
N / Time of next report // – (as for B).
O / Draft // – (in metres and centimetres – 4 digits).
P / Cargo // – (brief details of any dangerous cargoes).
Q / Defects or damage // –(Brief details of any defects, damage or other limitations.)
R / Pollution // – (brief details of type of pollution and position as C or D).
S / Weather // – (brief details of cyclonic conditions only).
T / Ship's Agent // –(name and particulars).
U / Ship's size/type // –(length, breadth in metres, gross tonnage and type).
Y / Medical personnel // –(doctor, physician's assistant, nurse or no medic).
W / Number of persons on board//
X / Remarks // –(any other information – brief details).

Sailing Plan (SP)	consists of items A, B, E, F, G, I, L, M, N, O, P, V, W; items C or D and H should be added on entering the area.
Position Report (PR)	consists of items A, B, C or D, E, F, N.
Deviation Report (DR)	consists of items A, B, C or D, E, F, L, N and Q if appropriate.
Final Report (FR)	consists of items A, B, C or D; items E, F, K and L should be added when leaving the area.

The International Code of Signals should be used to send signals where language problems exist. Items T and U must be included by all Indian vessels; other vessels can include these items in the Sailing Plan (SP) at their discretion.

Transmission of Messages:

INSPIRES messages will be accepted free of charge by Indian Naval Communications Centres (COMCEN) Bombay (VTF) and Vizag (Vishakhapatnam) (VTO). Reports sent through Bombay Radio (VWB) and Madras Radio (VWM) are chargeable at present but likely to be made free in the near future. Ships are advised to use telex through their agent for the SP report. Vessels fitted with WT are requested to assist vessels fitted with RT only to relay Position Reports (PR).

COURTESY FLAG: Correct flag to be flown by foreign ships visiting Indian ports is Indian Merchant Navy Ensign (a red flag with a length of one and one half times the width and with National Flag of India superimposed in top quarter next to staff) and not Indian National flag.

SHIP'S OFFICER'S REPORT: Apart from the various forms and Crew Lists, etc., the Customs Boarding Officer also requires a List of Private Property in possession of the Master, officers and crew on Form No. I in duplicate and the local Agents need 2 more copies of the same for clearing the vessel inward. This procedure is followed when a vessel arrives from abroad or even when she is arriving from an Indian Port. It is common in both the cases.

ALLEPPEY: 09.29 N. 76.23 E.

PORT LIMITS: On the North by a line drawn from the North boundary pillar (white masonry structure) to 7 fathoms of water. On the South by a line drawn from the South boundary pillar, S.W. to 5 fathoms of water and thereon West to 7 fathoms of water. On the West by a line running North to South joining the Northern and Southern boundary lines. On the East by the beach road from the North boundary pillar to a stone on the beach road 220 ft. East of South boundary pillar.

DOCUMENTS:

(a) For Port Office:

Last Port Clearance (original for verification and return). Ships Registry (original for verification and return). Load Line Certificate (for perusal and return). Safety Radio Telegraphy Certificate (for perusal and return). Safety Equipment Certificate (for perusal and return). Passenger List (1). Crew List (1). Deck Cargo Certificate (1).

(b) For Customs:

Application for Entry Inwards. Last Port Clearance. Port Office Entry Certificate. Arrival Report. Particulars required by Customs in approved form. Favour Parcel Certificate. Gift Parcel Certificate. Health Report. Opium Certificate. Arms and Ammunition Certificate. Import Manifest. Passengers List. Stores List, Crew List, and Private Property Declaration. Ship's Currency Declaration. ILH Receipt.

PILOTAGE: None. Open roadstead port.

ANCHORAGES: Approach to port free from navigational dangers. The anchorage, 3 miles offshore, provides good holding ground.

MAX. SIZE: Being open roadstead, vessels of any size can anchor according to draft.

HEALTH: Port Health Officer may be contacted by telegram address "Cyclone Alleppey" for issue of Pratique certificate. Procedure to be followed in Indian Port Health Rules.

RADIO: Morse system of signalling by light and signalling by International Code flags alone are available. Vessels code can be used as call sign.

VHF: Port Office on Channel 16.

TUGS: 2 tugs owned by Port Department render services per requisitions from Agents. Tugs usually approach vessels after anchoring.

BERTHING: No Berths. Electric cranes on the pier.

MEDICAL: Government hospitals available.

DENSITY: 1025.

FRESH WATER: Only available in very small quantities.

FUEL: Not available.

CONSULS: Nil.

REPAIRS/DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: By stevedores.

REPATRIATION: Crew changes are effected subject undertaking by Owners through Agents.

AIRPORT: Cochin, 62 km. North of Alleppey. Internal flights only.

TIME: GMT plus 5.5 hours.

HOLIDAYS: For work on approved closed port holidays and national holidays labourers have to be paid extra in addition to wages.

POLICE/AMBULANCE/FIRE: Emergency (Fire and Police) 10 Alleppey Exchange.

SHORE LEAVE: Crew allowed to land. Foreigners required obtain p permission of Police authority through Agents.

IDENTIFICATION CARDS: Necessary only when crew land ashore.

AUTHORITY: Port Officer. *Tel:* 2213, home 3594.

BEDI BUNDER: 22.31 N. 70.02 E.

DOCUMENTS:
1 Maritime Declaration of Health.
1 Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
4 Stores Lists.
4 Private Property List of crew and officers.
4 Certificates of Currency, Arms and Ammunition and Deck Cargo.
1 Same Bottom cargo list.
1 Hazardous Cargo List with categories.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Exemption Certificate.
Cargo Gear Certificate.

PILOTAGE: Vessels anchor at roads as pilotage not compulsory; however, if requested in advance by Master to "Portal Bedi", ship may be piloted from Pirotan Lighthouse to Rozi Anchorage about 7 miles from port by local Pilot Guide. Pilot boards vessel off Pirotan Island Light (Lat. 22° 36′ N., Long. 69° 57′ E.).

ANCHORAGE: Lighterage port. Vessels anchor at Rozi Anchorage about 7 miles from port, where good anchorage up to 7 fathoms at LW.

HEALTH: Pratique granted on delivering Maritime Declaration of Health to Customs Officer on boarding. Vessels having touched yellow fever area prior to arrival granted Free Pratique by Mosquito Party to be deputed from Kandla, which can only be arranged by prior notice failing which vessel has to proceed either Kandla or Bombay for Free Pratique.

RADIO: Call sign VUK5. Working hours:
0930 – 1130 hrs.   1730 – 1930 hrs.
1330 – 1530 hrs.   2130 – 2330 hrs.
Frequency 600 m. or 500 kHz, working at 429 m. and calling at 500 m.

TUGS: Port tug available for use at anchorage.

BERTHING: No berths.

STEVEDORES: Agents and stevedores require advance ETA of 24 hours for preparing labour gangs. Daily loading is 400/500 tons for bagged cargo.

MEDICAL: 24 hours notice required for medical service. Government hospital at Jamnagar where vaccination/fever injection services available.

DENSITY: 1025.

FRESH WATER: Supplies by barge capacity 50 tons. Possible supply about 50 tons every alternate tide subject adequate supply of water in port area.

FUEL: None.

GANGWAY/DECK WATCHMEN: The services of watchmen are recommended.

OPENING/CLOSING HATCHES: By ship's crew.

CONSULS: None.

REPAIRS: No facilities for repairs to ships.

DRY DOCKS: None.

AIRPORT: Jamnagar – 7 miles from city. Daily flight Jamnagar-Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Non-working days and work not permitted even on payment of overtime charges: Indian Republic Day; Bakri-Id; Holi; Muharram; Gokulastami; Dasehra; Diwali; Ramzan-Id.

POLICE/AMBULANCE/FIRE: District Superintendent of Police 100 and 3795; Ambulance/Casualty Department 4444; Fire 101.

SHORE LEAVE: Crew members allowed ashore in emergency or for medical treatment. Necessary police permits take 48 hours.

REGULATIONS: No launch services available for crew. Only 5 ships allowed to work at time at anchorage. Further arrivals wait turn.

DELAYS: Delay expected for loading and discharging in monsoon due to limited number of barges available.

GENERAL: Tidal port and barges loaded and sent out to ship during tide time only. Loading of barges carried out manually.

DEVELOPMENTS: The scheme of creating additional facilities, road connection, transit godowns, electrification and water supply and cranes, etc. near mouth of creek. This newly developed area is completed and connected by good all weather road with City of Jamnagar.

AUTHORITY: Port Officer.

BELEKERI: 14.43 N. 74.15 E. (See Plan)

PORT LIMITS: *North:* A line drawn due West from Kawada Guda Peak into the sea up to 7 fathoms of water starting from a point 50 yards above high-water mark of the shore.

East: Seashore of Belekeri Bay 50 yards above high-water mark from North Boundary Mark to rocky promontory in Lat. 14° 40′ N. including the Belekeri Creek and all branches thereof, as far as navigable and the shores and banks within 50 yards of high-water mark Spring tides including Islands. All patta lands and other private sites excluded.

South: A line drawn due West from a point 50 yards above high-water mark of rocky promontory in Lat. 14° 40′ N. into the sea up to 7 fathoms of water.

West: A line joining the two 7 fathom points in the sea.

ANCHORAGE: The anchorage for shallow draft vessels in open roadstead is with Kukra Island bearing 080°(T) distance about 1.5 miles in depth of 27 ft. to 29 ft. Anchorage for deep drafted vessels is with Kukra Island bearing 080°(T) distance about 2.5 miles in depth 34 ft. to 37 ft.

DOCUMENTS:
8 Crew Lists.
2 Manifests of Stores.
2 Private Property Declarations.
2 Currency Lists.
1 Maritime Declaration of Health.
3 Passenger Lists.
4 Import Manifests.
Last Port Clearance.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Vaccination and Inoculation Certificates.

PILOTAGE: Not necessary. Vessels anchor in stream and in open sea. Ships can be manoeuvred under guidance of Port Officer.

HEALTH: Medical Officer, Ankola acts as Port Health Officer. Free Pratique to incoming vessels granted by radio. All vessels calling from foreign destination must send radio message addressed "Medical Officer, Ankola", at least 48 hours before entering, giving last port of call, number of crew, health conditions, ETA and requesting Pratique; same message must be repeated to Agents also, on which Pratique granted on shore. Anchoring time is Pratique time. For vessels from Indian ports Pratique not required. Vessels which have taken on board passengers or crew from yellow fever areas within 30 days of departure from such ports will be under quarantine. Free Pratique will not be granted until Mosquito Search Party, from nearest major port (i.e. Cochin, Goa or Bombay) has inspected, disinfected and certified that ship fit for granting Pratique. Master to inform Agent well in advance if arriving from yellow fever area to enable arrange Mosquito Search Party for quick Pratique.

RADIO: Recommended to give ETA or Pratique messages via Goa or Bombay Radio.

BERTHING: No berths.

STEVEDORES: ETA required at least 48 hours prior arrival order Agents advise Shippers and stevedores.

MEDICAL: No hospital but good medical aid given at Karwar, 20 miles distant. In case of inoculations and vaccination at least 2 days advance notice to be given for vaccines to be brought from Hubli or Bombay, distance 100 and 150 miles respectively.

DENSITY: 1025.

FRESH WATER: Can be supplied from Karwar by water barge.

FUEL: None.

CONSULS/REPAIRS/DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Generally done by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes allowed per crew member. Wine and/or Spirit: 1 bottle of light spirit and 1 bottle of hard spirit per crew member.

CARGO GEAR: Valid International Cargo Gear Certificate not more than 12 months old. Validity shall cover whole period of loading and discharging.

REPATRIATION: Arranged from Goa or Bombay.

AIRPORT: Nearest airports Goa or Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Observed as declared by Port Authorities. Non-working days when work not permitted even on payment of overtime: Republic Day (26th January) and Gandhi Jayanti (2nd October).

POLICE: Tel: 49.

SHORE LEAVE: Permission may be obtained (Chinese personnel not allowed to land on shore).

IDENTIFICATION CARDS: Not required.

AUTHORITY: Port Conservator, Belekeri, Ankola, Uttar Kannada District, Karnataka State, India. *Tel:* Belekeri 22.

BHAVNAGAR: 21.47 N. 72.08 E.

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Last Port Certificate.
Manifest on prescribed form (3 copies).
Declaration of private and personal property.
2 Copies of Crew List.
Customs circulation copy issued by Boarding Officer of last Indian Port of call.
Place and date of Derat Certificate.
Certificates: Registration; Safety Equipment; Safety Radio and Telegraphy; International Load Line.

PILOTAGE: Pilotage should be arranged in advance through ship's local Agent who may be contacted via the port radio, call-sign VUJ-9. An ETA should be sent at least 48 hours in advance in order to arrange Pilot. Pilotage is compulsory. Pilot boat is normally a tug boat which can be contacted by VHF. Pilot station is 4.5 miles N.N.E. of Piram Island Lighthouse and pilot boat will only be on station when the vessel is scheduled to arrive. Vessels should arrive at pilot station about 2 hours prior to time of HW and are advised not to anchor awaiting a Pilot but to make a reciprocal course until arrival of the pilot boat.

ANCHORAGE: Vessels up to 35 ft. draft are anchored about 3 miles Eastward of Perigee Light Vessel (increased from 31 ft. on a trial basis). All vessels at anchorage are loaded and discharged by means of lighters.

Precautionary guidance to the Master of the Ship arriving at Bhavnagar Anchorage:

1. Proper anchorage watch to be kept throughout the period at the anchorage.
2. Engine should be kept on stand-by so as to be made available within 20 minutes in case of an emergency when Spring tides are running.
3. To prevent yawing during Spring tides a second anchor is to be used with about 2 shackles and must be heaved up and dropped well in advance of every turn of the tide, (about 1.5 hours before and after tide change) so as not to foul the anchor.

Suggested routine is as follows:

(a) Heave up the riding anchor to one shackle.
(b) Steer well clear, about 35° to 40° from the leading anchor.
(c) Let go second anchor.
(d) Walk back to get good lead on second anchor.
(e) Let go second anchor 1.5 hours after HW.
(f) Heave up second anchor 1.5 hours before LW.
(g) Let go second anchor 1.5 hours after LW.
(h) Heave up second anchor 1.5 hours before HW.
(i) Never clear the fouled anchors during the middle of the tide, it should be done at slack water, i.e. about 1.5 hours before relevant end of the tide.
(j) In case of violent shearing the steering may be used. Auto-pilot can be made use of to steer a course in between yaw.

MAX. SIZE: Up to 500 ft. length, and up to 65 ft. breadth may berth alongside.

Permissible draft for a particular tide is arrived at by subtracting 17 ft. from predicted height of HW for that particular tide.

HEALTH: Healthy ships are granted Pratique by the Pilot. If the Vessel is coming from a Yellow Fever area or a jigger infected port within the last 30 days then Pratique is granted by the Port Health Officer at Kandla.

RADIO: Bhavnagar Port Radio, call sign VUJ-9 should be used for routing ETA messages, and is also used by Agents in cables to shipping.

Time of operation: 0200 – 0700 hrs.
0800 – 1300 hrs.
1400 – 1800 hrs.
Range: 250 miles.
Calling Frequency: 500 kHz and VHF Channel 16.
Working Frequency: 418 kHz and VHF.

VHF: Port Control available 1100 hrs. to 1800 hrs. on Monday to Friday and 1st and 3rd Saturday of each month.

TUGS: Tug assistance is available for berthing and unberthing vessels in inner harbour. Position where tugs join the vessel is dependent upon prevailing weather conditions. Usually ship's lines are used in connections to tug.

BERTHING: Berthings are as per tides and according to permissible drafts. Port equipped with 3 berths having 6 cranes with 3 tonnes capacity. Cranes available for loading or discharging ship cargo. 3 mobile cranes with capacity up to 18 tons and 1 fork lift also available.

Storage: Concrete Jetty: 16 transit sheds with floor area of 21,205 sq.m.

Steel Jetty: 3 transit sheds with floor area of 4,753 sq.m.

Godowns: Steel Jetty: 51 godowns with 50 partitions. Total floor area of 59,710 sq.m.

In City: 3 godowns with floor area of 2,230 sq.m.

Ample open storage space is available.

Notice for the attention of all Masters and Officers:

A lock gate has been installed at the port. You are perhaps, not aware that, this is not the conventional type of lock gate provided in the vicinity of artificial dock basins.

The Bhavnagar lock gate is a single tension gate, which is lifted vertically above the dock platforms and then slewed to 90° on the dock platforms. In this way the dock entrance is cleared for ship movements. With this arrangement the function of the gate is limited to water impounding and to an extent silt reducing.

The tidal conditions at the port are such that HW heights on successive flood tides vary by as much as 6 ft. 6 in. during Springs. Therefore, at the time of opening the gate water, level on both sides will not be equal. Due to this there is a necessity to slightly lift the gate and flush the channel to equalise the water levels before the gate is finally lifted up. During this period, vessels lying alongside the jetty will have a tendency to surge. Instances have come to the notice of this office where vessels have broken their moorings. Such surgings are by no means violent and with a little care breaking of moorings can be avoided.

All Shipmasters are, therefore, requested to bring this to the notice of their duty Officers. As the flushing may take place any time between 2.5 hours to half an hour before HW. Care should be taken within this period to tend the moorings and to maintain a gangway watch. There is, however, no necessity to remove the gangway. Permissible draft may vary due to siltation.

STEVEDORES: The stevedoring gangs are arranged directly by Agents through approved stevedores.

Working Hours: Day: 0800 hrs. to 1200 hrs. and 1300 hrs. to 1700 hrs.

Overtime: 1800 hrs. to 2200 hrs. and 2300 hrs. to 0300 hrs.

Recess: 0300 hrs. to 0800 hrs. and 1200 hrs. to 1300 hrs. 1700 hrs. to 1800 hrs. and 2200 hrs. to 2300 hrs.

MEDICAL: Medical facilities can be arranged by Master through Agent. Hospital facilities available in city of Bhavnagar which is 13 km. from port.

FRESH WATER: Fresh water supplied alongside jetty as well as at anchorage.

Shipmaster's Report: Water is often in short supply, and ships may be unable to obtain any at all at the anchorage. Ships should not rely upon an evaporator to make water at the anchorage, due to the high mud content of the sea water.

FUEL: Oil bunkering available in limited quantity.

FIRE PRECAUTIONS: Alongside jetty fire-fighting facilities availab At anchorage fire-fighting facility is provided by the tug.

Usual fire precautions applicable.

CONSULS: No consulates at port. Nearest consulates are at Bomba

REPAIRS: No repair facilities exist for the ship except repairs of mino nature which could be undertaken by private repair firms.

DRY DOCKS: Small dry dock available for repairs of vessel of up t 200 ft. length.

GANGWAY/DECK WATCHMAN: Gangway and deck watchman a recommended.

OPENING/CLOSING HATCHES: As arranged between the Master an stevedores.

CUSTOMS ALLOWANCES: As per Customs regulations in force fro time to time at Indian ports.

CARGO GEAR: Ships should possess valid Cargo Gear Certificate.

SURVEYORS: Surveyors should be arranged in advance with Agen Surveyors come from Bombay.

REPATRIATION: Possible.

AIRPORT: Bhavnagar City is served by an airport situated about 7 km from the Port. Regular flights to Bombay are available daily and to Sura on Monday, Wednesday and Friday.

TIME: GMT plus 5.5 hours.

HOLIDAYS: 8 holidays a year declared by Port Authorities on whic working of the ship can be attended at the option of the port.

POLICE/AMBULANCE/FIRE: Police force and ambulance and fir facility available from Bhavnagar City. Limited fire-fighting facili available at port.

TELEPHONES: No facility is available for providing telephones on boar the ships.

SHORE LEAVE: Citizens of The People's Republic of China an Pakistan not allowed ashore. All other nationals are allowed to go t Bhavnagar City which is 13 km. from port for which shore passes ar issued by Customs Dept.

CREW IDENTIFICATION CARD: Valid international passport o identification card necessary.

REGULATIONS: Photography in port prohibited. No crew membe allowed to take liquor ashore.

DELAYS: Delays in berthing depend upon number of ships working o berth and awaiting if any. At anchorage generally not more than 2 ship are worked at a time.

DEVELOPMENTS: Intensified dredging operations are proposed to b undertaken for increase in drafts of the vessels berthing.

SHIPMASTER'S REPORT: April 1981.

Bhavnagar discharging anchorage is a dangerous anchorage due t strong currents and an abnormal bottom.

All Shipmasters must make contact by cable 24 hours before arriva and await appointment from Port Authorities and pilot station. VHF no available and radio station working only during daytime.

All ships must arrive at pilot station, maximum 2 hours before H and only during daytime and in good visibility, otherwise Pilot canno board.

For many years anchorage was used for discharging, but now close as about 300 anchor-chains remaining on bottom. In 1981, anothe anchorage opened, near to the port, and up till April, 4 ships lost ancho due to strong currents and irregular bottom. Contact with shore is ve difficult and at night time impossible.

Our vessel was there for discharging and from 0300 hrs. when po anchor broke with 7 shackles of chain, up till 0700 hrs. we were waitin for tugboat from shore to pick up 100 stevedores, but was impossibl At 0700 hrs. we took ship out of dangerous area without Pilot and withou any assistance, with 100 stevedores onboard.

To enter Bhavnagar Port, draft no more than 17 ft. and breadth n more than 65 ft., to pass the locks.

AUTHORITY: Port Officer, Gujarat Maritime Board, New Po Bhavnagar, Bhavnagar (Gujarat), India. Pin Code No. 36400 *Tel:* 24302 (office), 26985 (residence). *Telex:* 0162-224 GMB I *Cables:* Portal Bhavnagar. *Contact:* Captain S.K. Singh.

BOMBAY: 18.56 N. 72.49 E. (See Pla

PORT LIMITS: Vessel is considered to have "arrived" when Pilot embarked and/or when vessel is required to anchor outside pilota area awaiting a suitable tide, as in the case of large tankers.

PILOTAGE: Motor Pilot Vessel "Venu", Call Sign "ATDZ", is statione in area marked on chart as "Pilot Vessel cruising ground" (18° 51' N 72° 49.5′ E.). It is a white coloured vessel with a buff colour funne "Pilot" painted in capitals and exhibits international signals by day an by night.

Minimum 24 hours advance notice to Agents and Harbour Maste Bombay, through Bombay Radio (VWB).

Bombay Port Trust operates a VHF service with the following c signs on Channels 16, 14 and 12 on a 24 hours basis:

(1) "Bombay Pilots" for calling Pilot Vessel "Venu".
(2) "Bombay Port Signals" for Harbour Control and Port Sig Station.
(3) "Jawahar Island Dock" for Marine Oil Terminal.

Inbound vessels are required to contact Bombay Pilots (Pilot Ves "Venu") on Channels 16, 14 and 12 or "Bombay Port Signals" Channel 12 to report ETA and receive instructions. Vessels must proceed beyond Bombay Floating Light without being instructed to so.

It is compulsory for all power driven merchant vessels of over 200 tonnes to have a Pilot on board to proceed North of Pilot Cruising grounds. Such vessels may not enter, leave or shift berths in this area without a Pilot or Harbour Official on board.

Pilot will be provided from the Pilot Vessel "Venu" or when not on station by means of a launch usually painted white with the legend 'Pilot' on the side. During the S.W. monsoon season a long swell prevails at the port entrance and it is imperative that vessels should give a proper lee, as the pilot launch may experience difficulties in coming alongside. During such times, Masters will be advised which side to make a lee by the Pilot vessel. During the early part of the S.W. monsoon, when the wind is South of S.W., the sea runs from the South and Masters are advised to keep their ships heading East when making a lee for the Pilot.

DOCUMENTS:

Ship's Register.
International Load Line Certificate.
International Safety Radio Certificate (Telegraphy).
International Safety Radio Telephony Certificate.
Derat Certificate.
International Safety Equipment Certificate.
Port Clearance from last Port.
Indian Coast Light Dues Receipt (if any).
4 copies of Crew List.
4 copies of Passenger List.
1 copy of Through Cargo Manifest.
4 copies of Stores List.
1 copy of Cargo Manifest with Bill of Lading for the same.
4 copies of Opium and Dangerous Drugs Certificate.
Cargo Plan.
Cargo on Deck Declaration.
4 copies of Certificate of Foreign Currency.
4 copies of Certificate of Arms and Ammunition.
Letter to Assistant Collector of Customs regarding Local Agency.
Letter to Assistant Collector of Customs regarding Duty on Ship Stores.
Application to Inspector of Police for Shore Passes.
3 copies of Arrival Report.
4 copies of Personal Property Declaration.

Note: The above list of documents is likely to undergo a change in order to bring the documentation and procedures in line with IMO convention on Facilitation (subject to special needs of Public Authorities in India).

ANCHORAGES: The designated anchorages 'A' and 'B' are located West of the West Port Limit, which is a line drawn from Malabar Point through Bombay Floating Light to Khanderi Island. Vessels required to anchor outside the pilotage area must anchor in either of these two areas only.

Anchorage Area 'A':
(1) 19° 08.0′ N. 72° 29.6′ E.
(2) 19° 08.0′ N. 72° 33.2′ E.
(3) 19° 02.0′ N. 72° 34.8′ E.
(4) 19° 02.0′ N. 72° 31.1′ E.

Anchorage Area 'B':
(1) 18° 53.0′ N. 72° 31.7′ E.
(2) 18° 45.8′ N. 72° 23.2′ E.
(3) 18° 35.2′ N. 72° 33.5′ E.
(4) 18° 42.2′ N. 72° 41.7′ E.

Outer Anchorage: When not berthing on arrival, deep-drafted vessels should anchor in Area 'A' or Area 'B', which are clear of submarine gas pipelines and submarine cables. The mud and shingle bottom is reported to be good holding ground. Pilots do not assist in outer anchorage. It is entirely up to the Master to find a suitable anchorage in areas indicated.

A long swell is present during the S.W. monsoon in the Outer Anchorage and at the entrance to the harbour.

Visibility is often reduced by heavy rains during S.W. monsoons and by smoke haze which frequently prevails in the area from November to March.

Where for any reason such as adverse weather, a vessel does not anchor on arrival the Master should ensure that the Port Signal Station/Pilot Vessel/Harbour Master are advised of his arrival as vessels are handled on a first come first served basis.

In all cases, vessels anchoring at Outer Roads are to report their anchoring time and all particulars requested by the Bombay Pilot Vessel/Port Signal Station.

Inner Anchorages: Inner anchorages are allotted to vessels by the Harbour Master upon application by the Agents and taking into account the draft. There are more than 60 anchorage berths with radius 1,000 ft. having depths from 38 ft. to 14 ft., of these, 2 × 38 ft., 30 × 30 ft. – 35 ft., 22 × 20 ft. – 30 ft. and the remainder below 20 ft. All anchorages are safe. The permissible draft at the anchorages varies from 15 ft. to 32 ft. Depending upon the room available, vessels may be provided with a Pilot to take an incoming vessel directly to the assigned anchorage. The usual inner anchorage for merchant vessels is on the West Side of the harbour, abreast of the City of Bombay. An area North of Sunk Rock is reserved for naval vessels.

A vessel subject to quarantine will be instructed to anchor as convenient for boarding by the Port Health Officer.

RESTRICTIONS: According to state of tide and draft.

PRATIQUE: The Master of every vessel calling Bombay from a foreign port must send the following particulars by cable to "Quarantine Bombay" 12 hours to 24 hours prior to arrival at Bombay.

1. Name of vessel and Call Sign.
2. ETA (Local Time).
3. Ports called and date of departure within last 30 days.
4. Maritime Declaration of Health has Negative Answers to the 6 Health Questions (Note: Code Signal "ZT" should be used).
5. No monkeys on board.
6. No person embarked aboard from any Yellow Fever Endemic ports.
7. Date and Port of Issue of International Derat Exemption Certificate.
8. Name of Local Shipping Agent.
9. Code Signal "ZU" should be used if Maritime Declaration of Health has positive answers to any of the 6 Health Questions.

Radio "Quarantine Bombay" 24 hours before arrival using standard Quarantine Messages from International Code of Signals, if vessel has called at a Yellow Fever area port within the last 30 days, whether all on board have valid Yellow Fever Vaccinational Certificates or if any contagious disease is suspected.

Radio Pratique is permitted and the information required under "Pratique" should be cabled to "Quarantine Bombay" maximum 24 hours and minimum 12 hours, prior to arrival.

The boarding Pilot also hands over a form for the Master to complete and this is forwarded by the Pilot to the Port Health Officer for their records.

MAX. SIZE: Drafts at Indira Dock, Prince's and Victoria Docks and Jawahar Island and Pir Pau are subject to dredging, soundings and rise of the tide. These drafts are declared by the Deputy Conservator of the Bombay Port every month in the Daily Shipping List.

Commercial Docks:
(1) Indira Docks, including Ballard Pier and Ballard Pier Extension.
(2) Prince's Dock and Victoria Docks.

Name of Dock		*Max. Normal Dimensions* (ft.)	*Max. Oversize Dimensions* (ft.)	*Remarks*
Indira Dock Basin Berths	LOA	625		
	Beam	85		
	Draft	29 to 30		
Ballard Pier Extension Passenger Terminal	LOA	750		Passenger vessels including 'Queen Elizabeth II'
	Beam	95

	Draft	17		
Prince's Dock Harbour Wall New Ferry Wharf Berths	LOA	250		
	Beam	45		
	Draft	15		

Also see "Tankers".

RADIO: Bombay Coastal Station, call sign VWB.

Information regarding weather will be broadcast at 0630 hrs. and 1030 hrs. local time on 2,000 metres.

Special Information required from Tankers: Radio Agents 96 hours before arrival giving Master's name, ETA, draft, ports visited last 30 days, vessel's gross and net tonnage, present loaded displacement, distance manifold from amidships, cargo quantities on board gradewise, and, if Bombay last discharge port, "Load-on-top" data, vaccinations required, men for doctor and dentist, supplies and cash requirements. *Failure to comply with foregoing could incur berthing delays.* Confirm ETA 48 hours before arrival. Any subsequent changes to be notified to Agents.

Note: Agents Offices are closed from Friday 1730 hrs. IST to Monday 0930 hrs. IST. Week-end messages to be in by Friday afternoon.

Agents can be contacted by Bombay Radio VHF Channel 26, and thence public telephone system.

A Naval Signal Station is situated on the extreme South end of Bombay Island at Colaba Pt. and ships entering or leaving port are liable to be called up by signal lamp. Masters are required to answer such signals by lamp should their ship be called up.

RADAR: The Port has no Radar/VTMS service.

VHF: See "Pilotage".

TUGS: 9 tugs, 900 h.p. – 3,000 h.p. Tugs join vessel when close dock entrance and assist undocking. Ship's lines are used.

BERTHING: *Indira Dock:* 21 berths, able to handle cargo vessels up to 20,000 d.w.t. Average length of berth 150 m. Most berths are equipped with 1×6 ton crane and 4×3 ton cranes.

Victoria Dock: 15 berths, able to handle vessels up to 5,000 d.w.t. Average length of berth 110 m. Most berths are equipped with 1.75 ton and 1.5 ton cranes. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Prince's Dock: Length 1,560 m. of which 1,200 m. is available for handling cargo. There are 8 berths able to handle vessels up to 5,000 d.w.t. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Ballard Pier: Container berth: Length 244 m., width 110 m., has a large back-up area for stacking containers. 2 gantry cranes and 2 transtainers on rubber tyres have been provided.

The extension at Ballard Pier is the passenger terminal and receives passenger vessels up to 30,000 g.r.t. at any stage of the tide, commensurate with draft. The berth is a continuous solid concrete pier fitted with rubber fenders.

Berthing/Unberthing is allowed during day and night, depending on the draft for the safe transit of the access channel. When entering the dock basin, the Harbour Pilot brings the vessel up to the Lock Gate (Outside Indira Docks), then Berthing Master takes the vessel to the berth in the dock.

India

GENERAL (See Plan)

SHIP REPORTING SYSTEMS:
Description:
The Indian Ship Position and Information Reporting System (INSPIRES) is mandatory for all Indian merchant vessels including coastal and fishing vessels of more than 300 g.r.t. Other vessels within the reporting area are invited to participate in the system. The purpose of the system is to provide date for SAR operations, vessel traffic management, weather forecasting and the prevention and containment of marine pollution. Vessels participating in the system send regular reports through selected radio stations (see "Transmission of Messages").

Reporting Area:
The sea area within the limits defined by the following:
(a) The India-Pakistan border at the coast.
(b) 12° N., 63° E.
(c) African coast from 12° N. to 30° S.
(d) 30° S., 95° E. and Northwards to the coast.

Requirement for Messages:
There are four types of messages, each containing a selection of the items listed in the *Form of Message* below:

1) The *Sailing Plan (SP)* should be sent just prior to sailing or as soon as possible after sailing from a port within the reporting area, or when the vessel enters the area.
2) A *Position Report (PR)* should be sent every day according to the schedule below:

(a) West of 80° E.

Latitude of vessel	0°–10° N.	0400–0455 GMT.
	10° N.–20° N.	0500–0555 GMT.
	20° N.–30° N.	0700–0755 GMT.
	0°–30° S.	0400–0455 GMT.

(b) East of 80° E.

Latitude of vessel	0°–10° N.	0300–0355 GMT.
	10° N.–20° N.	0500–0555 GMT.
	North of 20° N.	0600–0655 GMT.
	0°–30° S.	0400–0455 GMT.

3) A *Deviation Report (DR)* should be sent when the ship's position varies significantly from the position that would have been predicted from previous reports, when changing the reported route or as decided by the Master.
4) A *Final Report (FR)* should be sent on arrival at destination or when leaving the INSPIRES area.
Brief reports on cyclones, deep depressions, defect and damage to the participating vessel and marine pollution may be sent at the discretion of the Master.

Form of Messages:
The first line of every message is always INSPIRES/message type (SP, PR, DR, FR or title in full for other reports). Subsequent lines start with the line identifier; the line identifier and other data items on a line should be separated by /. Lines are terminated by //.
Key to line identifiers:
A / Vessel name / Call Sign //
B / Time (GMT) // – (date and time of report 6 digits, day of month (2), hour and minutes (4)).
C / Latitude / Longitude // – (latitude 4 digit group in degrees and minutes with N. or S.; longitude 4 digit group in degrees and minutes E.
D / Position // (True bearing (3 digits) and distance in n. miles (2 digits) from clearly identified landmark (state landmark)).
E / Course // – (true heading, 3 digit group).
F / Speed // – (in knots and tenths of knots e.g. 155=15.5).
G / Port of departure // (name of last port of call).
H / Time / position / of entry into the system // – (Time as B, Position as C or D).
I / Destination / ETA // – (name of port and ETA as B).
J / Pilot carried // – (state whether deep sea or local pilot is on board).
K / Time / point of exit from the system – (time as B, position as C or D).
L / Route // – (Position of each turn point should be given as in C, together with type of intended track between e.g. RL–Rhumb line, GC–Great circle or Coast (in this case ETA of passing significant points expressed as in B should be given)).
M / Radio communications // – (state full name of stations and frequencies guarded).
N / Time of next report // – (as for B).
O / Draft // – (in metres and centimetres – 4 digits).
P / Cargo // – (brief details of any dangerous cargoes).
Q / Defects or damage // –(Brief details of any defects, damage or other limitations.)
R / Pollution // – (brief details of type of pollution and position as C or D).
S / Weather // – (brief details of cyclonic conditions only).
T / Ship's Agent // –(name and particulars).
U / Ship's size/type // –(length, breadth in metres, gross tonnage and type).
Y / Medical personnel // –(doctor, physician's assistant, nurse or no medic).
W / Number of persons on board//
X / Remarks // –(any other information – brief details).

Sailing Plan (SP)	consists of items A, B, E, F, G, I, L, M, N, O, P V, W; items C or D and H should be added o entering the area.
Position Report (PR)	consists of items A, B, C or D, E, F, N.
Deviation Report (DR)	consists of items A, B, C or D, E, F, L, N and if appropriate.
Final Report (FR)	consists of items A, B, C or D; items E, F, K an L should be added when leaving the area.

The International Code of Signals should be used to send signa where language problems exist. Items T and U must be included by a Indian vessels; other vessels can include these items in the Sailing Pla (SP) at their discretion.
Transmission of Messages:
INSPIRES messages will be accepted free of charge by Indian Nava Communications Centres (COMCEN) Bombay (VTF) and Viza (Vishakhapatnam) (VTO). Reports sent through Bombay Radio (VWB and Madras Radio (VWM) are chargeable at present but likely to b made free in the near future. Ships are advised to use telex throug their agent for the SP report. Vessels fitted with WT are requested t assist vessels fitted with RT only to relay Position Reports (PR).
COURTESY FLAG: Correct flag to be flown by foreign ships visitin Indian ports is Indian Merchant Navy Ensign (a red flag with a length o one and one half times the width and with National Flag of Indi superimposed in top quarter next to staff) and not Indian National fla
SHIP'S OFFICER'S REPORT: Apart from the various forms and Cre Lists, etc., the Customs Boarding Officer also requires a List of Privat Property in possession of the Master, officers and crew on Form No. I in duplicate and the local Agents need 2 more copies of the same fo clearing the vessel inward. This procedure is followed when a vesse arrives from abroad or even when she is arriving from an Indian Por It is common in both the cases.

ALLEPPEY: 09.29 N. 76.23 E.

PORT LIMITS: On the North by a line drawn from the North boundar pillar (white masonry structure) to 7 fathoms of water. On the South b a line drawn from the South boundary pillar, S.W. to 5 fathoms of wate and thereon West to 7 fathoms of water. On the West by a line runnin North to South joining the Northern and Southern boundary lines. O the East by the beach road from the North boundary pillar to a ston on the beach road 220 ft. East of South boundary pillar.
DOCUMENTS:
(a) For Port Office:
Last Port Clearance (original for verification and return). Ship Registry (original for verification and return). Load Line Certificate (fo perusal and return). Safety Radio Telegraphy Certificate (for perusa and return). Safety Equipment Certificate (for perusal and retur Passenger List (1). Crew List (1). Deck Cargo Certificate (1).
(b) For Customs:
Application for Entry Inwards. Last Port Clearance. Port Office Entr Certificate. Arrival Report. Particulars required by Customs i approved form. Favour Parcel Certificate. Gift Parcel Certificat Health Report. Opium Certificate. Arms and Ammunition Certificat Import Manifest. Passengers List. Stores List, Crew List, and Privat Property Declaration. Ship's Currency Declaration. ILH Receipt.
PILOTAGE: None. Open roadstead port.
ANCHORAGES: Approach to port free from navigational dangers. Th anchorage, 3 miles offshore, provides good holding ground.
MAX. SIZE: Being open roadstead, vessels of any size can ancho according to draft.
HEALTH: Port Health Officer may be contacted by telegram addresse "Cyclone Alleppey" for issue of Pratique certificate. Procedure to b followed in Indian Port Health Rules.
RADIO: Morse system of signalling by light and signalling b International Code flags alone are available. Vessels code can be use as call sign.
VHF: Port Office on Channel 16.
TUGS: 2 tugs owned by Port Department render services pe requisitions from Agents. Tugs usually approach vessels after anchorin
BERTHING: No Berths. Electric cranes on the pier.
MEDICAL: Government hospitals available.
DENSITY: 1025.
FRESH WATER: Only available in very small quantities.
FUEL: Not available.
CONSULS: Nil.
REPAIRS/DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: By stevedores.
REPATRIATION: Crew changes are effected subject undertaking b Owners through Agents.
AIRPORT: Cochin, 62 km. North of Alleppey. Internal flights only.
TIME: GMT plus 5.5 hours.
HOLIDAYS: For work on approved closed port holidays and natio holidays labourers have to be paid extra in addition to wages.
POLICE/AMBULANCE/FIRE: Emergency (Fire and Police) 10 Alleppey Exchange.
SHORE LEAVE: Crew allowed to land. Foreigners required obtain pr permission of Police authority through Agents.
IDENTIFICATION CARDS: Necessary only when crew land ashore.
AUTHORITY: Port Officer. *Tel:* 2213, home 3594.

BEDI BUNDER: 22.31 N. 70.02 E.

DOCUMENTS:
1 Maritime Declaration of Health.
1 Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
4 Stores Lists.
4 Private Property List of crew and officers.
4 Certificates of Currency, Arms and Ammunition and Deck Cargo.
1 Same Bottom cargo list.
1 Hazardous Cargo List with categories.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Exemption Certificate.
Cargo Gear Certificate.

PILOTAGE: Vessels anchor at roads as pilotage not compulsory; however, if requested in advance by Master to "Portal Bedi", ship may be piloted from Pirotan Lighthouse to Rozi Anchorage about 7 miles from port by local Pilot Guide. Pilot boards vessel off Pirotan Island Light (Lat. 22° 36′ N., Long. 69° 57′ E.).

ANCHORAGE: Lighterage port. Vessels anchor at Rozi Anchorage about 7 miles from port, where good anchorage up to 7 fathoms at LW.

HEALTH: Pratique granted on delivering Maritime Declaration of Health to Customs Officer on boarding. Vessels having touched yellow fever area prior to arrival granted Free Pratique by Mosquito Party to be deputed from Kandla, which can only be arranged by prior notice failing which vessel has to proceed either Kandla or Bombay for Free Pratique.

RADIO: Call sign VUK5. Working hours:

0930 – 1130 hrs.	1730 – 1930 hrs.
1330 – 1530 hrs.	2130 – 2330 hrs.

Frequency 600 m. or 500 kHz, working at 429 m. and calling at 500 m.

TUGS: Port tug available for use at anchorage.

BERTHING: No berths.

STEVEDORES: Agents and stevedores require advance ETA of 24 hours for preparing labour gangs. Daily loading is 400/500 tons for bagged cargo.

MEDICAL: 24 hours notice required for medical service. Government hospital at Jamnagar where vaccination/fever injection services available.

DENSITY: 1025.

FRESH WATER: Supplies by barge capacity 50 tons. Possible supply about 50 tons every alternate tide subject adequate supply of water in port area.

FUEL: None.

GANGWAY/DECK WATCHMEN: The services of watchmen are recommended.

OPENING/CLOSING HATCHES: By ship's crew.

CONSULS: None.

REPAIRS: No facilities for repairs to ships.

DRY DOCKS: None.

AIRPORT: Jamnagar – 7 miles from city. Daily flight Jamnagar-Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Non-working days and work not permitted even on payment of overtime charges: Indian Republic Day; Bakri-Id; Holi; Muharram; Gokulastami; Dasehra; Diwali; Ramzan-Id.

POLICE/AMBULANCE/FIRE: District Superintendent of Police 100 and 3795; Ambulance/Casualty Department 4444; Fire 101.

SHORE LEAVE: Crew members allowed ashore in emergency or for medical treatment. Necessary police permits take 48 hours.

REGULATIONS: No launch services available for crew. Only 5 ships allowed to work at time at anchorage. Further arrivals wait turn.

DELAYS: Delay expected for loading and discharging in monsoon due to limited number of barges available.

GENERAL: Tidal port and barges loaded and sent out to ship during tide time only. Loading of barges carried out manually.

DEVELOPMENTS: The scheme of creating additional facilities, road connection, transit godowns, electrification and water supply and cranes, etc. near mouth of creek. This newly developed area is completed and connected by good all weather road with City of Jamnagar.

AUTHORITY: Port Officer.

BELEKERI: 14.43 N. 74.15 E. (See Plan)

PORT LIMITS: *North:* A line drawn due West from Kawada Guda Peak into the sea up to 7 fathoms of water starting from a point 50 yards above high-water mark of the shore.
East: Seashore of Belekeri Bay 50 yards above high-water mark from North Boundary Mark to rocky promontory in Lat. 14° 40′ N. including the Belekeri Creek and all branches thereof, as far as navigable and the shores and banks within 50 yards of high-water mark Spring tides including Islands. All patta lands and other private sites excluded.
South: A line drawn due West from a point 50 yards above high-water mark of rocky promontory in Lat. 14° 40′ N. into the sea up to 7 fathoms of water.
West: A line joining the two 7 fathom points in the sea.

ANCHORAGE: The anchorage for shallow draft vessels in open roadstead is with Kukra Island bearing 080°(T) distance about 1.5 miles in depth of 27 ft. to 29 ft. Anchorage for deep drafted vessels is with Kukra Island bearing 080°(T) distance about 2.5 miles in depth 34 ft. to 37 ft.

DOCUMENTS:
8 Crew Lists.
2 Manifests of Stores.
2 Private Property Declarations.
2 Currency Lists.
1 Maritime Declaration of Health.
3 Passenger Lists.
4 Import Manifests.
Last Port Clearance.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Vaccination and Inoculation Certificates.

PILOTAGE: Not necessary. Vessels anchor in stream and in open sea. Ships can be manoeuvred under guidance of Port Officer.

HEALTH: Medical Officer, Ankola acts as Port Health Officer. Free Pratique to incoming vessels granted by radio. All vessels calling from foreign destination must send radio message addressed "Medical Officer, Ankola", at least 48 hours before entering, giving last port of call, number of crew, health conditions, ETA and requesting Pratique; same message must be repeated to Agents also, on which Pratique granted on shore. Anchoring time is Pratique time. For vessels from Indian ports Pratique not required. Vessels which have taken on board passengers or crew from yellow fever areas within 30 days of departure from such ports will be under quarantine. Free Pratique will not be granted until Mosquito Search Party, from nearest major port (i.e. Cochin, Goa or Bombay) has inspected, disinfected and certified that ship fit for granting Pratique. Master to inform Agent well in advance if arriving from yellow fever area to enable arrange Mosquito Search Party for quick Pratique.

RADIO: Recommended to give ETA or Pratique messages via Goa or Bombay Radio.

BERTHING: No berths.

STEVEDORES: ETA required at least 48 hours prior arrival order Agents advise Shippers and stevedores.

MEDICAL: No hospital but good medical aid given at Karwar, 20 miles distant. In case of inoculations and vaccination at least 2 days advance notice to be given for vaccines to be brought from Hubli or Bombay, distance 100 and 150 miles respectively.

DENSITY: 1025.

FRESH WATER: Can be supplied from Karwar by water barge.

FUEL: None.

CONSULS/REPAIRS/DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Generally done by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes allowed per crew member. Wine and/or Spirit: 1 bottle of light spirit and 1 bottle of hard spirit per crew member.

CARGO GEAR: Valid International Cargo Gear Certificate not more than 12 months old. Validity shall cover whole period of loading and discharging.

REPATRIATION: Arranged from Goa or Bombay.

AIRPORT: Nearest airports Goa or Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Observed as declared by Port Authorities. Non-working days when work not permitted even on payment of overtime: Republic Day (26th January) and Gandhi Jayanti (2nd October).

POLICE: Tel: 49.

SHORE LEAVE: Permission may be obtained (Chinese personnel not allowed to land on shore).

IDENTIFICATION CARDS: Not required.

AUTHORITY: Port Conservator, Belekeri, Ankola, Uttar Kannada District, Karnataka State, India. *Tel:* Belekeri 22.

BHAVNAGAR: 21.47 N. 72.08 E.

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Last Port Certificate.
Manifest on prescribed form (3 copies).
Declaration of private and personal property.
2 Copies of Crew List.
Customs circulation copy issued by Boarding Officer of last Indian Port of call.
Place and date of Derat Certificate.
Certificates: Registration; Safety Equipment; Safety Radio and Telegraphy; International Load Line.

PILOTAGE: Pilotage should be arranged in advance through ship's local Agent who may be contacted via the port radio, call-sign VUJ-9. An ETA should be sent at least 48 hours in advance in order to arrange Pilot. Pilotage is compulsory. Pilot boat is normally a tug boat which can be contacted by VHF. Pilot station is 4.5 miles N.N.E. of Piram Island Lighthouse and pilot boat will only be on station when the vessel is scheduled to arrive. Vessels should arrive at pilot station about 2 hours prior to time of HW and are advised not to anchor awaiting a Pilot but to make a reciprocal course until arrival of the pilot boat.

ANCHORAGE: Vessels up to 35 ft. draft are anchored about 3 miles Eastward of Perigee Light Vessel (increased from 31 ft. on a trial basis). All vessels at anchorage are loaded and discharged by means of lighters.

Precautionary guidance to the Master of the Ship arriving at Bhavnagar Anchorage:

1. Proper anchorage watch to be kept throughout the period at the anchorage.
2. Engine should be kept on stand-by so as to be made available within 20 minutes in case of an emergency when Spring tides are running.
3. To prevent yawing during Spring tides a second anchor is to be used with about 2 shackles and must be heaved up and dropped well in advance of every turn of the tide, (about 1.5 hours before and after tide change) so as not to foul the anchor.

Suggested routine is as follows:

(a) Heave up the riding anchor to one shackle.
(b) Steer well clear, about 35° to 40° from the leading anchor.
(c) Let go second anchor.
(d) Walk back to get good lead on second anchor.
(e) Let go second anchor 1.5 hours after HW.
(f) Heave up second anchor 1.5 hours before LW.
(g) Let go second anchor 1.5 hours after LW.
(h) Heave up second anchor 1.5 hours before HW.
(i) Never clear the fouled anchors during the middle of the tide, it should be done at slack water, i.e. about 1.5 hours before relevant end of the tide.
(j) In case of violent shearing the steering may be used. Auto-pilot can be made use of to steer a course in between yaw.

MAX. SIZE: Up to 500 ft. length, and up to 65 ft. breadth may berth alongside.

Permissible draft for a particular tide is arrived at by subtracting 17 ft. from predicted height of HW for that particular tide.

HEALTH: Healthy ships are granted Pratique by the Pilot. If the Vessel is coming from a Yellow Fever area or a jigger infected port within the last 30 days then Pratique is granted by the Port Health Officer at Kandla.

RADIO: Bhavnagar Port Radio, call sign VUJ-9 should be used for routing ETA messages, and is also used by Agents in cables to shipping.

Time of operation: 0200 – 0700 hrs.
0800 – 1300 hrs.
1400 – 1800 hrs.
Range: 250 miles.
Calling Frequency: 500 kHz and VHF Channel 16.
Working Frequency: 418 kHz and VHF.

VHF: Port Control available 1100 hrs. to 1800 hrs. on Monday to Friday and 1st and 3rd Saturday of each month.

TUGS: Tug assistance is available for berthing and unberthing vessels in inner harbour. Position where tugs join the vessel is dependent upon prevailing weather conditions. Usually ship's lines are used in connections to tug.

BERTHING: Berthings are as per tides and according to permissible drafts. Port equipped with 3 berths having 6 cranes with 3 tonnes capacity. Cranes available for loading or discharging ship cargo. 3 mobile cranes with capacity up to 18 tons and 1 fork lift also available.

Storage: Concrete Jetty: 16 transit sheds with floor area of 21,205 sq.m.

Steel Jetty: 3 transit sheds with floor area of 4,753 sq.m.

Godowns: Steel Jetty: 51 godowns with 50 partitions. Total floor area of 59,710 sq.m.

In City: 3 godowns with floor area of 2,230 sq.m.

Ample open storage space is available.

Notice for the attention of all Masters and Officers:

A lock gate has been installed at the port. You are perhaps, not aware that, this is not the conventional type of lock gate provided in the vicinity of artificial dock basins.

The Bhavnagar lock gate is a single tension gate, which is lifted vertically above the dock platforms and then slewed to 90° on the dock platforms. In this way the dock entrance is cleared for ship movements. With this arrangement the function of the gate is limited to water impounding and to an extent silt reducing.

The tidal conditions at the port are such that HW heights on successive flood tides vary by as much as 6 ft. 6 in. during Springs. Therefore, at the time of opening the gate water, level on both sides will not be equal. Due to this there is a necessity to slightly lift the gate and flush the channel to equalise the water levels before the gate is finally lifted up. During this period, vessels lying alongside the jetty will have a tendency to surge. Instances have come to the notice of this office where vessels have broken their moorings. Such surgings are by no means violent and with a little care breaking of moorings can be avoided.

All Shipmasters are, therefore, requested to bring this to the notice of their duty Officers. As the flushing may take place any time between 2.5 hours to half an hour before HW. Care should be taken within this period to tend the moorings and to maintain a gangway watch. There is, however, no necessity to remove the gangway. Permissible draft may vary due to siltation.

STEVEDORES: The stevedoring gangs are arranged directly by Agents through approved stevedores.

Working Hours: Day: 0800 hrs. to 1200 hrs. and 1300 hrs. to 1700 hrs.

Overtime: 1800 hrs. to 2200 hrs. and 2300 hrs. to 0300 hrs.

Recess: 0300 hrs. to 0800 hrs. and 1200 hrs. to 1300 hrs. 1700 hrs. to 1800 hrs. and 2200 hrs. to 2300 hrs.

MEDICAL: Medical facilities can be arranged by Master through Agent. Hospital facilities available in city of Bhavnagar which is 13 km. from port.

FRESH WATER: Fresh water supplied alongside jetty as well as at anchorage.

Shipmaster's Report: Water is often in short supply, and ships may be unable to obtain any at all at the anchorage. Ships should not rely upon an evaporator to make water at the anchorage, due to the high mud content of the sea water.

FUEL: Oil bunkering available in limited quantity.

FIRE PRECAUTIONS: Alongside jetty fire-fighting facilities availab At anchorage fire-fighting facility is provided by the tug.

Usual fire precautions applicable.

CONSULS: No consulates at port. Nearest consulates are at Bomba

REPAIRS: No repair facilities exist for the ship except repairs of min nature which could be undertaken by private repair firms.

DRY DOCKS: Small dry dock available for repairs of vessel of up t 200 ft. length.

GANGWAY/DECK WATCHMAN: Gangway and deck watchman a recommended.

OPENING/CLOSING HATCHES: As arranged between the Master a stevedores.

CUSTOMS ALLOWANCES: As per Customs regulations in force fro time to time at Indian ports.

CARGO GEAR: Ships should possess valid Cargo Gear Certificate.

SURVEYORS: Surveyors should be arranged in advance with Agen Surveyors come from Bombay.

REPATRIATION: Possible.

AIRPORT: Bhavnagar City is served by an airport situated about 7 km from the Port. Regular flights to Bombay are available daily and to Sura on Monday, Wednesday and Friday.

TIME: GMT plus 5.5 hours.

HOLIDAYS: 8 holidays a year declared by Port Authorities on whic working of the ship can be attended at the option of the port.

POLICE/AMBULANCE/FIRE: Police force and ambulance and fir facility available from Bhavnagar City. Limited fire-fighting facili available at port.

TELEPHONES: No facility is available for providing telephones on boar the ships.

SHORE LEAVE: Citizens of The People's Republic of China an Pakistan not allowed ashore. All other nationals are allowed to go t Bhavnagar City which is 13 km. from port for which shore passes ar issued by Customs Dept.

CREW IDENTIFICATION CARD: Valid international passport o identification card necessary.

REGULATIONS: Photography in port prohibited. No crew membe allowed to take liquor ashore.

DELAYS: Delays in berthing depend upon number of ships working o berth and awaiting if any. At anchorage generally not more than 2 ship are worked at a time.

DEVELOPMENTS: Intensified dredging operations are proposed to b undertaken for increase in drafts of the vessels berthing.

SHIPMASTER'S REPORT: April 1981.

Bhavnagar discharging anchorage is a dangerous anchorage due t strong currents and an abnormal bottom.

All Shipmasters must make contact by cable 24 hours before arriva and await appointment from Port Authorities and pilot station. VHF no available and radio station working only during daytime.

All ships must arrive at pilot station, maximum 2 hours before H and only during daytime and in good visibility, otherwise Pilot canno board.

For many years anchorage was used for discharging, but now close as about 300 anchor-chains remaining on bottom. In 1981, anothe anchorage opened, near to the port, and up till April, 4 ships lost ancho due to strong currents and irregular bottom. Contact with shore is ver difficult and at night time impossible.

Our vessel was there for discharging and from 0300 hrs. when po anchor broke with 7 shackles of chain, up till 0700 hrs. we were waitin for tugboat from shore to pick up 100 stevedores, but was impossibl At 0700 hrs. we took ship out of dangerous area without Pilot and withou any assistance, with 100 stevedores onboard.

To enter Bhavnagar Port, draft no more than 17 ft. and breadth n more than 65 ft., to pass the locks.

AUTHORITY: Port Officer, Gujarat Maritime Board, New Po Bhavnagar, Bhavnagar (Gujarat), India. Pin Code No. 36400 *Tel:* 24302 (office), 26985 (residence). *Telex:* 0162-224 GMB I *Cables:* Portal Bhavnagar. *Contact:* Captain S.K. Singh.

BOMBAY: 18.56 N. 72.49 E. (See Plan

PORT LIMITS: Vessel is considered to have "arrived" when Pilot i embarked and/or when vessel is required to anchor outside pilotag area awaiting a suitable tide, as in the case of large tankers.

PILOTAGE: Motor Pilot Vessel "Venu", Call Sign "ATDZ", is statione in area marked on chart as "Pilot Vessel cruising ground" (18° 51′ N 72° 49.5′ E.). It is a white coloured vessel with a buff colour funne "Pilot" painted in capitals and exhibits international signals by day an by night.

Minimum 24 hours advance notice to Agents and Harbour Maste Bombay, through Bombay Radio (VWB).

Bombay Port Trust operates a VHF service with the following ca signs on Channels 16, 14 and 12 on a 24 hours basis:

(1) "Bombay Pilots" for calling Pilot Vessel "Venu".
(2) "Bombay Port Signals" for Harbour Control and Port Sign Station.
(3) "Jawahar Island Dock" for Marine Oil Terminal.

Inbound vessels are required to contact Bombay Pilots (Pilot Vess "Venu") on Channels 16, 14 and 12 or "Bombay Port Signals" o Channel 12 to report ETA and receive instructions. Vessels must n proceed beyond Bombay Floating Light without being instructed to d so.

It is compulsory for all power driven merchant vessels of over 200 tonnes to have a Pilot on board to proceed North of Pilot Cruising grounds. Such vessels may not enter, leave or shift berths in this area without a Pilot or Harbour Official on board.

Pilot will be provided from the Pilot Vessel "Venu" or when not on station by means of a launch usually painted white with the legend 'Pilot' on the side. During the S.W. monsoon season a long swell prevails at the port entrance and it is imperative that vessels should give a proper lee, as the pilot launch may experience difficulties in coming alongside. During such times, Masters will be advised which side to make a lee by the Pilot vessel. During the early part of the S.W. monsoon, when the wind is South of S.W., the sea runs from the South and Masters are advised to keep their ships heading East when making a lee for the Pilot.

DOCUMENTS:
Ship's Register.
International Load Line Certificate.
International Safety Radio Certificate (Telegraphy).
International Safety Radio Telephony Certificate.
Derat Certificate.
International Safety Equipment Certificate.
Port Clearance from last Port.
Indian Coast Light Dues Receipt (if any).
4 copies of Crew List.
4 copies of Passenger List.
1 copy of Through Cargo Manifest.
4 copies of Stores List.
1 copy of Cargo Manifest with Bill of Lading for the same.
4 copies of Opium and Dangerous Drugs Certificate.
Cargo Plan.
Cargo on Deck Declaration.
4 copies of Certificate of Foreign Currency.
4 copies of Certificate of Arms and Ammunition.
Letter to Assistant Collector of Customs regarding Local Agency.
Letter to Assistant Collector of Customs regarding Duty on Ship Stores.
Application to Inspector of Police for Shore Passes.
3 copies of Arrival Report.
4 copies of Personal Property Declaration.

Note: The above list of documents is likely to undergo a change in order to bring the documentation and procedures in line with IMO convention on Facilitation (subject to special needs of Public Authorities in India).

ANCHORAGES: The designated anchorages 'A' and 'B' are located West of the West Port Limit, which is a line drawn from Malabar Point through Bombay Floating Light to Khanderi Island. Vessels required to anchor outside the pilotage area must anchor in either of these two areas only.

Anchorage Area 'A':

(1)	19° 08.0′ N.	72° 29.6′ E.
(2)	19° 08.0′ N.	72° 33.2′ E.
(3)	19° 02.0′ N.	72° 34.8′ E.
(4)	19° 02.0′ N.	72° 31.1′ E.

Anchorage Area 'B':

(1)	18° 53.0′ N.	72° 31.7′ E.
(2)	18° 45.8′ N.	72° 23.2′ E.
(3)	18° 35.2′ N.	72° 33.5′ E.
(4)	18° 42.2′ N.	72° 41.7′ E.

Outer Anchorage: When not berthing on arrival, deep-drafted vessels should anchor in Area 'A' or Area 'B', which are clear of submarine gas pipelines and submarine cables. The mud and shingle bottom is reported to be good holding ground. Pilots do not assist in outer anchorage. It is entirely up to the Master to find a suitable anchorage in areas indicated.

A long swell is present during the S.W. monsoon in the Outer Anchorage and at the entrance to the harbour.

Visibility is often reduced by heavy rains during S.W. monsoons and by smoke haze which frequently prevails in the area from November to March.

Where for any reason such as adverse weather, a vessel does not anchor on arrival the Master should ensure that the Port Signal Station/Pilot Vessel/Harbour Master are advised of his arrival as vessels are handled on a first come first served basis.

In all cases, vessels anchoring at Outer Roads are to report their anchoring time and all particulars requested by the Bombay Pilot Vessel/Port Signal Station.

Inner Anchorages: Inner anchorages are allotted to vessels by the Harbour Master upon application by the Agents and taking into account the draft. There are more than 60 anchorage berths with radius 1,000 ft. having depths from 38 ft. to 14 ft., of these, 2 × 38 ft., 30 × 30 ft. – 35 ft., 22 × 20 ft. – 30 ft. and the remainder below 20 ft. All anchorages are safe. The permissible draft at the anchorages varies from 15 ft. to 32 ft. Depending upon the room available, vessels may be provided with a Pilot to take an incoming vessel directly to the assigned anchorage. The usual inner anchorage for merchant vessels is on the West Side of the harbour, abreast of the City of Bombay. An area North of Sunk Rock is reserved for naval vessels.

A vessel subject to quarantine will be instructed to anchor as convenient for boarding by the Port Health Officer.

RESTRICTIONS: According to state of tide and draft.

PRATIQUE: The Master of every vessel calling Bombay from a foreign port must send the following particulars by cable to "Quarantine Bombay" 12 hours to 24 hours prior to arrival at Bombay.

1. Name of vessel and Call Sign.
2. ETA (Local Time).
3. Ports called and date of departure within last 30 days.
4. Maritime Declaration of Health has Negative Answers to the 6 Health Questions (Note: Code Signal "ZT" should be used).
5. No monkeys on board.
6. No person embarked aboard from any Yellow Fever Endemic ports.
7. Date and Port of Issue of International Derat Exemption Certificate.
8. Name of Local Shipping Agent.
9. Code Signal "ZU" should be used if Maritime Declaration of Health has positive answers to any of the 6 Health Questions.

Radio "Quarantine Bombay" 24 hours before arrival using standard Quarantine Messages from International Code of Signals, if vessel has called at a Yellow Fever area port within the last 30 days, whether all on board have valid Yellow Fever Vaccinational Certificates or if any contagious disease is suspected.

Radio Pratique is permitted and the information required under "Pratique" should be cabled to "Quarantine Bombay" maximum 24 hours and minimum 12 hours, prior to arrival.

The boarding Pilot also hands over a form for the Master to complete and this is forwarded by the Pilot to the Port Health Officer for their records.

MAX. SIZE: Drafts at Indira Dock, Prince's and Victoria Docks and Jawahar Island and Pir Pau are subject to dredging, soundings and rise of the tide. These drafts are declared by the Deputy Conservator of the Bombay Port every month in the Daily Shipping List.

Commercial Docks:
(1) Indira Docks, including Ballard Pier and Ballard Pier Extension.
(2) Prince's Dock and Victoria Docks.

Name of Dock		*Max. Normal Dimensions* (ft.)	*Max. Oversize Dimensions* (ft.)	*Remarks*
Indira Dock Basin Berths	LOA	625		
	Beam	85		
	Draft	29 to 30

Also see "Tankers".

RADIO: Bombay Coastal Station, call sign VWB.

Information regarding weather will be broadcast at 0630 hrs. and 1030 hrs. local time on 2,000 metres.

Special Information required from Tankers: Radio Agents 96 hours before arrival giving Master's name, ETA, draft, ports visited last 30 days, vessel's gross and net tonnage, present loaded displacement, distance manifold from amidships, cargo quantities on board gradewise, and, if Bombay last discharge port, "Load-on-top" data, vaccinations required, men for doctor and dentist, supplies and cash requirements. *Failure to comply with foregoing could incur berthing delays.* Confirm ETA 48 hours before arrival. Any subsequent changes to be notified to Agents.

Note: Agents Offices are closed from Friday 1730 hrs. IST to Monday 0930 hrs. IST. Week-end messages to be in by Friday afternoon.

Agents can be contacted by Bombay Radio VHF Channel 26, and thence public telephone system.

A Naval Signal Station is situated on the extreme South end of Bombay Island at Colaba Pt. and ships entering or leaving port are liable to be called up by signal lamp. Masters are required to answer such signals by lamp should their ship be called up.

RADAR: The Port has no Radar/VTMS service.

VHF: See "Pilotage".

TUGS: 9 tugs, 900 h.p. – 3,000 h.p. Tugs join vessel when close dock entrance and assist undocking. Ship's lines are used.

BERTHING: *Indira Dock:* 21 berths, able to handle cargo vessels up to 20,000 d.w.t. Average length of berth 150 m. Most berths are equipped with 1×6 ton crane and 4×3 ton cranes.

Victoria Dock: 15 berths, able to handle vessels up to 5,000 d.w.t. Average length of berth 110 m. Most berths are equipped with 1.75 ton and 1.5 ton cranes. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Prince's Dock: Length 1,560 m. of which 1,200 m. is available for handling cargo. There are 8 berths able to handle vessels up to 5,000 d.w.t. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Ballard Pier: Container berth: Length 244 m., width 110 m., has a large back-up area for stacking containers. 2 gantry cranes and 2 transtainers on rubber tyres have been provided.

The extension at Ballard Pier is the passenger terminal and receives passenger vessels up to 30,000 g.r.t. at any stage of the tide, commensurate with draft. The berth is a continuous solid concrete pier fitted with rubber fenders.

Berthing/Unberthing is allowed during day and night, depending on the draft for the safe transit of the access channel. When entering the dock basin, the Harbour Pilot brings the vessel up to the Lock Gate (Outside Indira Docks), then Berthing Master takes the vessel to the berth in the dock.

Allotment of Berths: Type of cargo carried is divided into 6 groups for allotment of berths to vessels:

Group I	Finished Fertiliser and Food grains.
Group II	Fertiliser raw materials.
Group III	Edible Oil in bulk.
Group IV	One commodity comprising more than 80% of the cargo, e.g. Scrap Metal, Iron and Steel cargo.
Group V	Containers.
Group VI	Break Bulk and General Cargo.

Under the pre-booking of berth facilities introduced from 1st February 1990, one berth for each of the above groups will be set aside for the owner/agent of a vessel who would like to occupy the berth on a priority basis, instead of waiting in the general queue. For this the owner/agent has to apply latest 72 hours before the arrival of the vessel and only 4 hours grace period will be allowed for any delay in arrival of the vessel. To avail of this facility the owner/agent has to pay a specified sum as a service charge. If however the vessel fails to arrive by declared time plus 4 hours grace period, with the allotment will stand cancelled, the booking fee will be forfeited and the vessel will have to join the general queue.

CARGO HANDLING EQUIPMENT: Compliance with B.P.T. Port Rules and Dock Bye Laws is essential.

Hydraulic Cranes (Quay) Electric and Heavy Lift Cranes, Floating Mobile and Crawler Cranes available.

2 gantry cranes (35 tonnes each) are fitted at Ballard Pier (Mole Station).

2 Transtrainers on rubber tyres (35 tonnes) are provided in the Ballard Pier back-up yard for stacking containers.

1 Transtrainer on rubber tyres (35 tonnes) is provided at the Stacking Yard at No. 1, Indira Docks.

56 Mobile Cranes with capacity up to 30 tonnes available.

Heavy Lift Electric Crane of 60 tonnes at Jetty End Indira Docks.

2 Floating Cranes available of 60 tonnes and 125 tonnes capacity.

Fork Lifts – 10×2 tons, 35×3 tons and 1×8 tons.

STEVEDORES: Supplied by Dock Labour Board. Bombay Port Trust supplies shore labour for handling cargo, including stacking in sheds.

Working hours:
1st Shift (0800 hrs. – 1700 hrs.)
2nd Shift (1700 hrs. – 2300 hrs.)
3rd Shift (2300 hrs. – 0500 hrs.) - restricted.

Advance information and notice will aid agents in arranging for any specialised services that may be required.

Good facilities for LASH System of cargo.

MEDICAL: Excellent medical facilities and hospitals in the city. Notice in sufficient time, depending on seriousness of case, to arrange for transport, hospitalisation, etc.

TANKERS: The oil terminal facilities are located on the Eastern side of Jawahar Island (Butcher Island) and consist of a concrete jetty about 1,700 ft. long, having 3 pier heads, with dolphins at either end of the pier head. The jetty carries a roadway and pipelines and has berths for 3 vessels of various sizes. The berths are numbered from North to South as No. 1, 2 and 3 respectively. Each berth is provided with breasting dolphins and mooring dolphins. A fourth oil berth South of Jawahar Island has been added for loading/discharging of crude oil.

The oil terminal is administered by a Senior Dock Master, who works 24 hours on – 24 hours off. There is also a safety officer, who is a senior pilot and ensures that safety precautions are complied with at all times.

Approach to the Berth: From the Pilot Cruising Ground the vessel proceeds towards Jawahar Island at slow speed, under the direction of the Port Pilot, to avoid squat and so as to arrive off the berth on top of high water, in the case of loaded tankers. During the approach to the oil terminal, the vessel has to pass through the inner harbour, where other vessels are anchored. Before arrival at the berth, engines should be stopped and tested astern. This trial is compulsory before berthing at the oil jetty.

The tanker anchorages, 9 cables and 13 cables S.W. of Butcher Beacon, are available for light tankers awaiting berth or suitable tide. An emergency anchorage exists 4.5 cables N.E. of Butcher Beacon.

The tidal stream directions are not in line with the jetty. The ebb stream runs at an angle of 15° onto Berths No. 2 and No. 3 and 20° to Berth No. 1. Berth No. 1 and No. 2 are partially protected from the flood stream effects by the surrounding shore. Berth No. 3 is protected by an artificial reef from the shore towards Butcher Beacon. But there are reports that the flood stream tends to push the vessel off the berth. Although Berth No. 4 lies in the direction of tidal stream, which runs about N.E. – S.W. it does experience some strong tidal stream, pushing the vessel away from the berth and has resulted in moorings breaking if not properly tended.

Deep draft laden tankers dock on top of high water/beginning of the ebb, always port side alongside.

Berth Limitations and Facilities at Jawahar Island Marine Oil Terminal and Pir Pau:

Jawahar Island:

Berth	*Max. Displacement* (tons)	*LOA* (ft.)	*Max. Oversize LOA* (ft.)	*Beam* (ft.)	*Beam Oversize* (ft.)
No.1	70,000	740	780 (Daytime only)	95	130
No.2	48,000	600	-	95	NA
No.3	70,000	740	780 (Daytime only)	95	130
No.4	125,000	984	NA	130	NA

Pir Pau Berth:

LOA: 560 ft. (day light), Beam: 85 ft. Maximum Oversize: Length 585 ft. and Beam 95 ft.

Vessel to be equipped with a functioning bow thruster and be able to pump over tide.

Draft:

	LOA up to 600 ft.	LOA over 600 ft.
No.1	33 ft. 09 in.	29 ft. 06 in.
No.2	30 ft. 06 in.	30 ft. 06 in.
No.3	33 ft. 06 in.	31 ft. 10 in.
No.4	42 ft. 00 in.	42 ft. 00 in.

Pir Pau:
LOA up to 525 ft. – 19 ft. 00 in.
LOA up to 560 ft. – 18 ft. 04 in.

Note: Drafts indicated above are at chart datum and correct at time o going to print. These are subject to change due to dredging/siltatio Drafts for these berths are declared by the Deputy Conservator of th Bombay Port Trust every month.

Mooring and Unmooring Operations: At Berths No. 1, 2 and 3 the usua mooring arrangement consists of 3 head, 3 stern, 2 breast and doub back springs fore and aft. An offshore anchor is sometimes use underfoot. 2 mooring launches assist in running the lines ashore. It i recommended, to facilitate in quick positioning of the vessels, that th back springs fore and aft are paid out and stored along the vessel sheer strake so that they can be quickly hove in and made fast onc placed ashore. Mooring and unmooring times and conditions a decided by the Jawahar Island Dock Master. No long delays a experienced. Usually 2 tugs of sufficient power assist with mooring an unmooring. When berthing, tugs come alongside abeam of Butche Beacon.

When berthing at Berth No. 4 the mooring arrangements are 3 hea stern, 3 breast lines fore and aft and 2 springs fore and aft are use When berthing, the tugs come alongside between North Karanja an West Uran Buoys. During monsoons additional lines may be require and will be indicated by the Dock Master. Strong ebb stream i experienced at Jawahar Island. Prior to start of the ebb it must b ensured that both back springs and breast lines are taut. Moorings mus be tended regularly in view of strong currents and unsettled weathe and fairly large range during Spring tides.

Gangway: No shore gangways are provided so vessel's gangway shou be used. Pilot will indicate which side the vessel will berth and th gangway should be ready on deck about 20 ft. forward or aft of th manifold, ready to be put ashore as soon as the vessel has made fas Hose gangs come aboard via the gangway, therefore, it is important t have the gangway placed promptly.

Safety Check: The Safety Officer boards the vessel and carries out ship/shore safety check with the aid of a Check List as advised in th ISGOTT Manual.

Pumping Over the Tide: Berth siltation takes place rapidly, and therefor depths at the berths vary from time to time. These should be checke from the monthly bulletins issued by the Deputy Conservator of the Por The tidal ranges above the chart datum are from zero to 16 ft. durin Spring tides and from 6 ft. to 10 ft. during Neap tides.

Pumping over the tide is a routine practice by the local oil industrie Vessels are required to reduce their draft before the first low water afte berthing, hence vessel should be in all respects ready to commenc discharge once mooring and connecting up are completed. Discharg over the first four hours should be planned to reduce the vessel's dra to the draft which will be indicated by the Dock Master. At least 1 f under keel clearance should be kept at all times.

Cargo Operations: Crude Oil Vessels: Vessels of 740 ft. LOA a routinely accepted. Spot approvals for vessels up to 780 ft. LOA dockin at Berths No. 1 and 3 may be granted provided that Berth No. 2 is vaca or the vessel there is small enough to accommodate the extra lengt

3×10 in. ASA hoses are used on crude vessels. Vessels are allowe to arrive with the blanks off and reducers in place, on the manifol A shore crane is available, but it is also advisable to have the vesse derrick ready. Connecting of hoses is carried out by an experienc gang. At Berth No. 4, 5 Ckicksan type loading arms are fitted with e flange size 12 in. 150 lb. class. The shore will accept ship's ullage figur (arrival) taken without their representative present if this is necessary order to avoid delay in commencing discharge.

Product Vessels: Products are loaded and discharged through 8 i diameter hoses with ASA flanges. These vessels dock at Berths No. 2 and 3 only. Loading of product tankers involves considerable li clearing. Usually, 2 hoses are connected, although 3 lines are availab Vessels arriving alongside for loading, should have clean ballast on with all tanks washed and ready to load any product. Since changes the cargo pattern occur very frequently, it is essential that vesse observe this requirement. Tank cleaning including Crude Oil Wash carried out only with the specific permission of the Dock Master/Safe Officer.

For clean products, 3 lines are available at Berths No. 1, 2 and 1×16 in. for HSD, 1×16 in. for Kerosene and 1×12 in. for other clea products such as M.S., ATF, JP 1, etc. This line is always being ke full of water. Products are separated in this line by interface, if qua so permits, or by water plugs.

In the process of flushing, a small amount of water may be loaded board the vessel. This amount of water has to be checked, calcula and included in deadfreight calculations.

The shore representatives inspect the tanks, prior to loading, and se the sea chests. He remains on board throughout the stay of the vess maintains communication and co-ordinates the activities with the sho He should be provided with a cabin.

Early Departure Procedure is practised and Bill of Lading quanti are communicated to the vessel after sailing. Discrepancies, if a between ship and shore figures are to be protested by cable.

Discharge of Dirty Ballast and Slops: There is a slop tank availab Clean ballast may be discharged over board. Slops and dirty ballast m be pumped ashore via a 12 in. line to a Slop Tank. Sufficient notice a information of quantities of slops/washings should be given. Maxim quantities acceptable 4,500 tonnes, rate 1,000 t.p.h.

Pollution and Safety: No facilities or equipment are available within the port for combating an oil spill.

The Port has a fire station at the Marine Oil Terminal. Several firemen are in attendance at the berth at all times. Each jetty has 2 towers fitted with fire monitors. There are also trailer pump generators at each jetty equipped with foam compound.

Fire wires must be hanging over the side on the outboard side, bow and quarter, while alongside to enable tugs to connect readily in an emergency situation. The towing eyes should be maintained at water level and sufficient slack should be flaked out on deck.

Strict security is maintained at Jawahar Island. Access to the oil jetty is from a small pier close Northward of the Island. No boats are allowed alongside. All crew members are provided with a pass and these are to be returned before sailing.

Fuel and Bunker Facilities: Fuel oil and light diesel oil are available ex-wharf. Lubricants also available in drums. The loading rate of fuel oil is about 500 t.p.h.

Fresh Water: Drinking and boiler water available ex-wharf (30 t.p.h. – 35 t.p.h.), from the Port Trust water boat (250 tons) at 25 t.p.h. and private water boats (about 150 tons each) at 25 t.p.h.

Pir Pau: Pir Pau Pier is situated at the Northern end of Bombay Harbour in a locality called Trombay. Here the refineries of Bharat Petroleum Corporation and Hindustan Petroleum Corporation are situated.

The approach to Pir Pau Pier is made through the channel between Jawahar Island and Elephanta Island, thence through the Pir Pau Dredged Channel which is marked by buoys. Only daytime berthing/unberthing during the flood tide is allowed.

A number of bollards are laid throughout the length of the Pier and provide a suitable mooring layout for any size vessel up to 560 ft. length overall. The fendering system consists of vertical rubber fenders on the pier for its entire length. It it advisable to keep portable fenders readily available.

Pipeline size varies from 6 in. to 12 in. A loading/discharging rate of 150 t.p.h. for all products is maintained. Cargo discharged at this pier is mainly L.P.G., ammonia, lube oils and chemicals.

Refrigerated cargoes acceptable, but due to design limitations of pipeline/tank volume, cargo to be heated to – 10° C. to 23° C. Pipeline length 5 km. (8 in. ASA 300.). No vapour return line available. Maximum discharge rate 120 tonnes per hour at back pressure 14.5 kg./cm. Vessels to carry suitable hoses of 75 ft. length for discharge.

No bunkering facilities available at Pir Pau. Fresh water available ex-wharf at 5 t.p.h. or by water boat.

Lube Terminals at Commercial Docks:

Certain Lubes, Vegetable Oils and fats are discharged both at Indira Dock and at Prince's and Victoria Docks at berths nominated by the Port. These are discharged either through a pipeline or into tank trucks. The average rate of discharge into tank trucks is 40 t.p.h. From the docks the pipeline (10 in.) extends to a tank farm about 10 km. away. For docking in the commercial docks a valid Gas Free Certificate will be required.

Ship Operator's Report: January 1987 (Updated 1990).

Location: The Port of Bombay is situated almost mid-way on the Western coast of India and is a natural deep water harbour protected by the mainland on its East and the island of Bombay on its West. It is the largest Indian port for dry cargoes in bulk and container trade. The Marine Oil Terminals are located at Jawahar Island (Butcher Island) and Pir Pau at Trombay, where also refineries of Bharat Petroleum, Hindustan Petroleum and Indian Oil are located.

Lube Oils and certain non-flammable liquid cargoes are also handled at some wharves of the Indira Dock and Victoria Dock.

Communications: All vessels bound for Bombay should listen to Bombay Radio (Call Sign — VWB) which is located at Lat. 18° 36′ N., Long. 72° 50′ E. and send their initial ETA as soon as possible.

Tankers arriving in ballast should notify: ETA, amount of slop and dirty ballast to be discharged ashore, deballasting time, proposed loading sequence and quantity of each grade, displacement on completion of loading and alll requirements/services needed.

The initial ETA should be subsequently confirmed or revised, 72, 48 and 24 hours prior to arrival.

Approaches: The approaches outside the 10 fathom contour are free of dangers. The vessel may approach Bombay from North to South through West, but attention must be paid to areas in which fishing stakes may be encountered as indicated on the chart. Dangerous wrecks and fouled ground exist within the area bounded by parallels Lat. 18° 48.5′ N. – Lat. 18° 50′ N. and meridians Long. 72° 42.5′ E. — Long. 72° 44.5′ E. Masts of sunken ships are sometimes visible during the periods of the LLW tides. Under no circumstances should vessels of any draft, attempt to cross this area.

The harbour entrance is lined by light buoys moored North of Thal Shoal, S.E. of Prongs Reef and S.W. of Prongs Reef.

Decca Chain 7 BV is operational and reportedly gives satisfactory performance, especially during daylight up tp 200 miles offshore between Latitudes 16° N. and 24° N.

Racons are fitted onto Khanderi Light House and Prongs Light House, which transmit the morse signal "K" and "P" respectively.

Permissible Draft: There are no night restrictions, except at Oil and Chemical Jetty at Pir Pau. The minimum depth in the entrance channel to the harbour is 34 ft. 6 in. below chart datum. The shallowest bar extends from a beam of the buoys at the entrance to abeam of Middle Ground Island.

Deep draft vessels, including laden tankers, should be at Pilot Cruising Ground from 1 hour 30 minutes before high water to on top of high water, depending on the instructions received from Bombay Pilot Vessel or Port Signal Station. When Pilot Vessel is on station, all instructions are given by Harbour Control/Port Signal Station.

It is advisable to start heaving anchor in good time, about 2 hours before time required at Pilot Cruising Ground; and to make approach to the port entrance, passing about 1 mile North of Bombay Floating Light Vessel. Then vessel should head towards the middle of the 2 entry buoys (Prongs Reef Buoy and South Entrance Buoy), passing about 8 cables South of S.W. Prongs Reef Buoy.

DENSITY: The Port of Bombay is essentially a salt water port and major fluctuations in the density occur on account of tide. Density varies mostly in monsoon period June to September. Sea water temperature 18° C. to 23° C. throughout the year.

FRESH WATER: Available at all berths ex-wharf at following delivery rates:

Jawahar Island	30 t.p.h. – 35 t.p.h.
Pir Pau	5 t.p.h.
Indira Dock	12 t.p.h. – 15 t.p.h.
Prince's and Victoria Docks	12 t.p.h. – 15 t.p.h.

Fresh water also available by water boats.

Port Trust water boat (250 tons)	25 t.p.h.
Privately owned water boats (150 tons)	25 t.p.h.

Ship Officer's Report: Vessel berthed at Ballard Pier, East side. Fresh water availability on pier dependent on capacity of storage tank at the time of call. The water was not available continuously and we had to wait for the tank to be refilled.

FUEL: Diesel oil and fuel oil are available ex-wharf at the four Jawahar Island berths. No bunkers are available at Pir Pau. At the commercial docks only diesel oil is available and is supplied by tank trucks.

Bunker barges for fuel oil are available, however some delay can be expected. Bunker requirements should always be included in the first ETA message to minimise delays.

FIRE PRECAUTIONS: All regulations of Petroleum Rules (chapter 1/50 of BPT Port Rules). Port maintains fire stations, 24 hours per day, both at docks and at Butcher Island Oil Terminal. Special precautions taken for tankers at Marine Oil Terminal at Butcher Island.

CONSULS: Most countries of the world have consulates/representative offices in the city.

REPAIRS/DRY DOCKS: Major repairs may be carried out afloat and in dry docks. Excellent facilities exist and all repairs possible. There are several private and public ship repairers to do this work.

There are 2 dry docks belonging to the Bombay Port Trust. Hughes Dry Dock is 1,000 ft. long and 100 ft. wide and the entrance to the dry dock is from Indira Dock Basin. Merewether Dry Dock is 525 ft. long and 65 ft. 6 in. wide and the entrance to the dock is from Prince's Dock Basin.

SURVEYORS: Nautical surveyors (Mercantile Marine Department) and all Classification Societies (Marine) and General Surveyors available.

GANGWAY/DECK WATCHMEN: Private watchmen, regulated by the Port, are posted on deck as and when required by the Agents/Owners.

OPENING/CLOSING HATCHES: All mechanically operated hatches are opened and closed by ship's crew. Rigging gangs may also be employed for this work.

CUSTOMS ALLOWANCES: Weekly allowance is 200 cigarettes and 1 bottle of spirits (1,000 ml.).

REPATRIATION: Can be arranged, also crew changes.

AIRPORT: International Airport at Sahar, 25 km. from Bombay Harbour.

TIME: Indian Standard Time ahead of GMT by 5 hours and 30 minutes. No alterations to clocks are made any time.

HOLIDAYS: Republic Day (January), Holi (2nd Day) (March), Ambedkar Jayanti (April), Shivaji Jayanti (April), Ramzan Id (April), Maharashtra Day (May), Bakri Id (July), Mohurram (August), Independence Day (August), Ganesh Chaturthi (August), Dasera (September), Diwali (October) and Christmas (December).

POLICE/AMBULANCE/FIRE: Police 100; Ambulance 102; Fire 101.

TELEPHONES: Arrangements for placing a telephone on board ship exist at all transit sheds in the Commercial Docks.

IDENTIFICATION CARDS: Shore passes issued. Necessary for Police/Custom Authorities and are to be returned prior to vessel's departure.

GENERAL: *Hazardous Cargo:* All items of Dangerous Goods are published by the International Maritime Organisation and are treated as hazardous cargo. They are divided into four broad categories for the purpose of handling in Port area. These categories are graded according to risk involved in handling:

Category "A":	Low Flash Point (below 50° F. or 10° C.) or other goods which are too dangerous to be handled through the dock. Cargo of this category is discharged into lighters in the stream for direct delivery from the Port Hazardous depot at Haji Bunder. Vessels carrying commodities belonging to this category are not admitted into the docks.
Category "B":	Intermediate Flash Point (above 50° F. to 76° F. or 10° C. to 24.4° C.) or other goods which present moderate degree of hazard. Cargo of this category is discharged into lighters in the stream for transportation to Haji Bunder for storage. Containers carrying this category of cargo may be landed from container vessels on shore in the docks and the containers are removed immediately to Haji Bunder for storage.
Category "C":	High Flash Point (above 76° F. to 141° F. or 24.4° C. to 60.6° C.) or other goods which present lesser degree of hazard. Cargo of this category is permitted to be discharged in docks for immediate delivery only. If direct delivery is not possible these commodities will have to be discharged overside into barges in the docks for delivery from Haji Bunder.
Category "D":	Flash Point above 141° F. or 60.6° C. or other goods, specially some poisons and some corrosives, which also have hazardous properties. These are permitted to be stored and handled in the port area subject to special handling and storage instructions.

In every case Masters of vessels carrying such cargoes are advised to inform their local agents well in advance of all hazardous cargo on board so that necessary arrangements can be made for off-loading such cargo as required.

India

GENERAL (See Plan)

SHIP REPORTING SYSTEMS:

Description:

The Indian Ship Position and Information Reporting System (INSPIRES) is mandatory for all Indian merchant vessels including coastal and fishing vessels of more than 300 g.r.t. Other vessels within the reporting area are invited to participate in the system. The purpose of the system is to provide date for SAR operations, vessel traffic management, weather forecasting and the prevention and containment of marine pollution. Vessels participating in the system send regular reports through selected radio stations (see "Transmission of Messages").

Reporting Area:

The sea area within the limits defined by the following:

(a) The India-Pakistan border at the coast.
(b) 12° N., 63° E.
(c) African coast from 12° N. to 30° S.
(d) 30° S., 95° E. and Northwards to the coast.

Requirement for Messages:

There are four types of messages, each containing a selection of the items listed in the *Form of Message* below:

1) The *Sailing Plan (SP)* should be sent just prior to sailing or as soon as possible after sailing from a port within the reporting area, or when the vessel enters the area.
2) A *Position Report (PR)* should be sent every day according to the schedule below:

(a) West of 80° E.

Latitude of vessel	0°–10° N.	0400–0455 GMT.
	10° N.–20° N.	0500–0555 GMT.
	20° N.–30° N.	0700–0755 GMT.
	0°–30° S.	0400–0455 GMT.

(b) East of 80° E.

Latitude of vessel	0°–10° N.	0300–0355 GMT.
	10° N.–20° N.	0500–0555 GMT.
	North of 20° N.	0600–0655 GMT.
	0°–30° S.	0400–0455 GMT.

3) A *Deviation Report (DR)* should be sent when the ship's position varies significantly from the position that would have been predicted from previous reports, when changing the reported route or as decided by the Master.
4) A *Final Report (FR)* should be sent on arrival at destination or when leaving the INSPIRES area.

Brief reports on cyclones, deep depressions, defect and damage to the participating vessel and marine pollution may be sent at the discretion of the Master.

Form of Messages:

The first line of every message is always INSPIRES/message type (SP, PR, DR, FR or title in full for other reports). Subsequent lines start with the line identifier; the line identifier and other data items on a line should be separated by /. Lines are terminated by //.

Key to line identifiers:

A / Vessel name / Call Sign //
B / Time (GMT) // – (date and time of report 6 digits, day of month (2), hour and minutes (4)).
C / Latitude / Longitude // – (latitude 4 digit group in degrees and minutes with N. or S.; longitude 4 digit group in degrees and minutes E.
D / Position // (True bearing (3 digits) and distance in n. miles (2 digits) from clearly identified landmark (state landmark)).
E / Course // – (true heading, 3 digit group).
F / Speed // – (in knots and tenths of knots e.g. 155=15.5).
G / Port of departure // (name of last port of call).
H / Time / position / of entry into the system // – (Time as B, Position as C or D).
I / Destination / ETA // – (name of port and ETA as B).
J / Pilot carried // – (state whether deep sea or local pilot is on board).
K / Time / point of exit from the system – (time as B, position as C or D).
L / Route // – (Position of each turn point should be given as in C, together with type of intended track between e.g. RL–Rhumb line, GC–Great circle or Coast (in this case ETA of passing significant points expressed as in B should be given)).
M / Radio communications // – (state full name of stations and frequencies guarded).
N / Time of next report // – (as for B).
O / Draft // – (in metres and centimetres – 4 digits).
P / Cargo // – (brief details of any dangerous cargoes).
Q / Defects or damage // –(Brief details of any defects, damage or other limitations.)
R / Pollution // – (brief details of type of pollution and position as C or D).
S / Weather // – (brief details of cyclonic conditions only).
T / Ship's Agent // –(name and particulars).
U / Ship's size/type // –(length, breadth in metres, gross tonnage and type).
Y / Medical personnel // –(doctor, physician's assistant, nurse or no medic).
W / Number of persons on board//
X / Remarks // –(any other information – brief details).

Sailing Plan (SP) consists of items A, B, E, F, G, I, L, M, N, O, V, W; items C or D and H should be added o entering the area.
Position Report (PR) consists of items A, B, C or D, E, F, N.
Deviation Report (DR) consists of items A, B, C or D, E, F, L, N and if appropriate.
Final Report (FR) consists of items A, B, C or D; items E, F, K an L should be added when leaving the area.

The International Code of Signals should be used to send signa where language problems exist. Items T and U must be included by a Indian vessels; other vessels can include these items in the Sailing Pla (SP) at their discretion.

Transmission of Messages:

INSPIRES messages will be accepted free of charge by Indian Nava Communications Centres (COMCEN) Bombay (VTF) and Viza (Vishakhapatnam) (VTO). Reports sent through Bombay Radio (VWB and Madras Radio (VWM) are chargeable at present but likely to b made free in the near future. Ships are advised to use telex throug their agent for the SP report. Vessels fitted with WT are requested t assist vessels fitted with RT only to relay Position Reports (PR).

COURTESY FLAG: Correct flag to be flown by foreign ships visitin Indian ports is Indian Merchant Navy Ensign (a red flag with a length o one and one half times the width and with National Flag of Indi superimposed in top quarter next to staff) and not Indian National flag

SHIP'S OFFICER'S REPORT: Apart from the various forms and Cre Lists, etc., the Customs Boarding Officer also requires a List of Privat Property in possession of the Master, officers and crew on Form No. I in duplicate and the local Agents need 2 more copies of the same fo clearing the vessel inward. This procedure is followed when a vesse arrives from abroad or even when she is arriving from an Indian Por It is common in both the cases.

ALLEPPEY: 09.29 N. 76.23 E.

PORT LIMITS: On the North by a line drawn from the North boundar pillar (white masonry structure) to 7 fathoms of water. On the South b a line drawn from the South boundary pillar, S.W. to 5 fathoms of wate and thereon West to 7 fathoms of water. On the West by a line runnin North to South joining the Northern and Southern boundary lines. O the East by the beach road from the North boundary pillar to a ston on the beach road 220 ft. East of South boundary pillar.

DOCUMENTS:

(a) For Port Office:

Last Port Clearance (original for verification and return). Ship Registry (original for verification and return). Load Line Certificate (fo perusal and return). Safety Radio Telegraphy Certificate (for perus and return). Safety Equipment Certificate (for perusal and return Passenger List (1). Crew List (1). Deck Cargo Certificate (1).

(b) For Customs:

Application for Entry Inwards. Last Port Clearance. Port Office Ent Certificate. Arrival Report. Particulars required by Customs i approved form. Favour Parcel Certificate. Gift Parcel Certificat Health Report. Opium Certificate. Arms and Ammunition Certificat Import Manifest. Passengers List. Stores List, Crew List, and Privat Property Declaration. Ship's Currency Declaration. ILH Receipt.

PILOTAGE: None. Open roadstead port.

ANCHORAGES: Approach to port free from navigational dangers. Th anchorage, 3 miles offshore, provides good holding ground.

MAX. SIZE: Being open roadstead, vessels of any size can ancho according to draft.

HEALTH: Port Health Officer may be contacted by telegram addresse "Cyclone Alleppey" for issue of Pratique certificate. Procedure to b followed in Indian Port Health Rules.

RADIO: Morse system of signalling by light and signalling b International Code flags alone are available. Vessels code can be use as call sign.

VHF: Port Office on Channel 16.

TUGS: 2 tugs owned by Port Department render services p requisitions from Agents. Tugs usually approach vessels after anchorin

BERTHING: No Berths. Electric cranes on the pier.

MEDICAL: Government hospitals available.

DENSITY: 1025.

FRESH WATER: Only available in very small quantities.

FUEL: Not available.

CONSULS: Nil.

REPAIRS/DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: By stevedores.

REPATRIATION: Crew changes are effected subject undertaking b Owners through Agents.

AIRPORT: Cochin, 62 km. North of Alleppey. Internal flights only.

TIME: GMT plus 5.5 hours.

HOLIDAYS: For work on approved closed port holidays and nation holidays labourers have to be paid extra in addition to wages.

POLICE/AMBULANCE/FIRE: Emergency (Fire and Police) 10 Alleppey Exchange.

SHORE LEAVE: Crew allowed to land. Foreigners required obtain pri permission of Police authority through Agents.

IDENTIFICATION CARDS: Necessary only when crew land ashore.

AUTHORITY: Port Officer. *Tel:* 2213, home 3594.

BEDI BUNDER: 22.31 N. 70.02 E.

DOCUMENTS:
1 Maritime Declaration of Health.
1 Last Port Clearance.
6 Crew Lists.
6 Passenger Lists.
4 Stores Lists.
4 Private Property List of crew and officers.
4 Certificates of Currency, Arms and Ammunition and Deck Cargo.
1 Same Bottom cargo list.
1 Hazardous Cargo List with categories.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Exemption Certificate.
Cargo Gear Certificate.

PILOTAGE: Vessels anchor at roads as pilotage not compulsory; however, if requested in advance by Master to "Portal Bedi", ship may be piloted from Pirotan Lighthouse to Rozi Anchorage about 7 miles from port by local Pilot Guide. Pilot boards vessel off Pirotan Island Light (Lat. 22° 36′ N., Long. 69° 57′ E.).

ANCHORAGE: Lighterage port. Vessels anchor at Rozi Anchorage about 7 miles from port, where good anchorage up to 7 fathoms at LW.

HEALTH: Pratique granted on delivering Maritime Declaration of Health to Customs Officer on boarding. Vessels having touched yellow fever area prior to arrival granted Free Pratique by Mosquito Party to be deputed from Kandla, which can only be arranged by prior notice failing which vessel has to proceed either Kandla or Bombay for Free Pratique.

RADIO: Call sign VUK5. Working hours:
0930 – 1130 hrs. 1730 – 1930 hrs.
1330 – 1530 hrs. 2130 – 2330 hrs.
Frequency 600 m. or 500 kHz, working at 429 m. and calling at 500 m.

TUGS: Port tug available for use at anchorage.

BERTHING: No berths.

STEVEDORES: Agents and stevedores require advance ETA of 24 hours for preparing labour gangs. Daily loading is 400/500 tons for bagged cargo.

MEDICAL: 24 hours notice required for medical service. Government hospital at Jamnagar where vaccination/fever injection services available.

DENSITY: 1025.

FRESH WATER: Supplies by barge capacity 50 tons. Possible supply about 50 tons every alternate tide subject adequate supply of water in port area.

FUEL: None.

GANGWAY/DECK WATCHMEN: The services of watchmen are recommended.

OPENING/CLOSING HATCHES: By ship's crew.

CONSULS: None.

REPAIRS: No facilities for repairs to ships.

DRY DOCKS: None.

AIRPORT: Jamnagar – 7 miles from city. Daily flight Jamnagar-Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Non-working days and work not permitted even on payment of overtime charges: Indian Republic Day; Bakri-Id; Holi; Muharram; Gokulastami; Dasehra; Diwali; Ramzan-Id.

POLICE/AMBULANCE/FIRE: District Superintendent of Police 100 and 3795; Ambulance/Casualty Department 4444; Fire 101.

SHORE LEAVE: Crew members allowed ashore in emergency or for medical treatment. Necessary police permits take 48 hours.

REGULATIONS: No launch services available for crew. Only 5 ships allowed to work at time at anchorage. Further arrivals wait turn.

DELAYS: Delay expected for loading and discharging in monsoon due to limited number of barges available.

GENERAL: Tidal port and barges loaded and sent out to ship during tide time only. Loading of barges carried out manually.

DEVELOPMENTS: The scheme of creating additional facilities, road connection, transit godowns, electrification and water supply and cranes, etc. near mouth of creek. This newly developed area is completed and connected by good all weather road with City of Jamnagar.

AUTHORITY: Port Officer.

BELEKERI: 14.43 N. 74.15 E. (See Plan)

PORT LIMITS: *North:* A line drawn due West from Kawada Guda Peak into the sea up to 7 fathoms of water starting from a point 50 yards above high-water mark of the shore.
East: Seashore of Belekeri Bay 50 yards above high-water mark from North Boundary Mark to rocky promontory in Lat. 14° 40′ N. including the Belekeri Creek and all branches thereof, as far as navigable and the shores and banks within 50 yards of high-water mark Spring tides including Islands. All patta lands and other private sites excluded.
South: A line drawn due West from a point 50 yards above high-water mark of rocky promontory in Lat. 14° 40′ N. into the sea up to 7 fathoms of water.
West: A line joining the two 7 fathom points in the sea.

ANCHORAGE: The anchorage for shallow draft vessels in open roadstead is with Kukra Island bearing 080°(T) distance about 1.5 miles in depth of 27 ft. to 29 ft. Anchorage for deep drafted vessels is with Kukra Island bearing 080°(T) distance about 2.5 miles in depth 34 ft. to 37 ft.

DOCUMENTS:
8 Crew Lists.
2 Manifests of Stores.
2 Private Property Declarations.
2 Currency Lists.
1 Maritime Declaration of Health.
3 Passenger Lists.
4 Import Manifests.
Last Port Clearance.
Certificates:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Vaccination and Inoculation Certificates.

PILOTAGE: Not necessary. Vessels anchor in stream and in open sea. Ships can be manoeuvred under guidance of Port Officer.

HEALTH: Medical Officer, Ankola acts as Port Health Officer. Free Pratique to incoming vessels granted by radio. All vessels calling from foreign destination must send radio message addressed "Medical Officer, Ankola", at least 48 hours before entering, giving last port of call, number of crew, health conditions, ETA and requesting Pratique; same message must be repeated to Agents also, on which Pratique granted on shore. Anchoring time is Pratique time. For vessels from Indian ports Pratique not required. Vessels which have taken on board passengers or crew from yellow fever areas within 30 days of departure from such ports will be under quarantine. Free Pratique will not be granted until Mosquito Search Party, from nearest major port (i.e. Cochin, Goa or Bombay) has inspected, disinfected and certified that ship fit for granting Pratique. Master to inform Agent well in advance if arriving from yellow fever area to enable arrange Mosquito Search Party for quick Pratique.

RADIO: Recommended to give ETA or Pratique messages via Goa or Bombay Radio.

BERTHING: No berths.

STEVEDORES: ETA required at least 48 hours prior arrival order Agents advise Shippers and stevedores.

MEDICAL: No hospital but good medical aid given at Karwar, 20 miles distant. In case of inoculations and vaccination at least 2 days advance notice to be given for vaccines to be brought from Hubli or Bombay, distance 100 and 150 miles respectively.

DENSITY: 1025.

FRESH WATER: Can be supplied from Karwar by water barge.

FUEL: None.

CONSULS/REPAIRS/DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Generally done by ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes allowed per crew member. Wine and/or Spirit: 1 bottle of light spirit and 1 bottle of hard spirit per crew member.

CARGO GEAR: Valid International Cargo Gear Certificate not more than 12 months old. Validity shall cover whole period of loading and discharging.

REPATRIATION: Arranged from Goa or Bombay.

AIRPORT: Nearest airports Goa or Bombay.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Observed as declared by Port Authorities. Non-working days when work not permitted even on payment of overtime: Republic Day (26th January) and Gandhi Jayanti (2nd October).

POLICE: Tel: 49.

SHORE LEAVE: Permission may be obtained (Chinese personnel not allowed to land on shore).

IDENTIFICATION CARDS: Not required.

AUTHORITY: Port Conservator, Belekeri, Ankola, Uttar Kannada District, Karnataka State, India. *Tel:* Belekeri 22.

BHAVNAGAR: 21.47 N. 72.08 E.

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Last Port Certificate.
Manifest on prescribed form (3 copies).
Declaration of private and personal property.
2 Copies of Crew List.
Customs circulation copy issued by Boarding Officer of last Indian Port of call.
Place and date of Derat Certificate.
Certificates: Registration; Safety Equipment; Safety Radio and Telegraphy; International Load Line.

PILOTAGE: Pilotage should be arranged in advance through ship's local Agent who may be contacted via the port radio, call-sign VUJ-9. An ETA should be sent at least 48 hours in advance in order to arrange Pilot. Pilotage is compulsory. Pilot boat is normally a tug boat which can be contacted by VHF. Pilot station is 4.5 miles N.N.E. of Piram Island Lighthouse and pilot boat will only be on station when the vessel is scheduled to arrive. Vessels should arrive at pilot station about 2 hours prior to time of HW and are advised not to anchor awaiting a Pilot but to make a reciprocal course until arrival of the pilot boat.

ANCHORAGE: Vessels up to 35 ft. draft are anchored about 3 miles Eastward of Perigee Light Vessel (increased from 31 ft. on a trial basis). All vessels at anchorage are loaded and discharged by means of lighters.

Precautionary guidance to the Master of the Ship arriving at Bhavnagar Anchorage:

1. Proper anchorage watch to be kept throughout the period at the anchorage.
2. Engine should be kept on stand-by so as to be made available within 20 minutes in case of an emergency when Spring tides are running.
3. To prevent yawing during Spring tides a second anchor is to be used with about 2 shackles and must be heaved up and dropped well in advance of every turn of the tide, (about 1.5 hours before and after tide change) so as not to foul the anchor.

Suggested routine is as follows:

(a) Heave up the riding anchor to one shackle.
(b) Steer well clear, about 35° to 40° from the leading anchor.
(c) Let go second anchor.
(d) Walk back to get good lead on second anchor.
(e) Let go second anchor 1.5 hours after HW.
(f) Heave up second anchor 1.5 hours before LW.
(g) Let go second anchor 1.5 hours after LW.
(h) Heave up second anchor 1.5 hours before HW.
(i) Never clear the fouled anchors during the middle of the tide, it should be done at slack water, i.e. about 1.5 hours before relevant end of the tide.
(j) In case of violent shearing the steering may be used. Auto-pilot can be made use of to steer a course in between yaw.

MAX. SIZE: Up to 500 ft. length, and up to 65 ft. breadth may berth alongside.

Permissible draft for a particular tide is arrived at by subtracting 17 ft. from predicted height of HW for that particular tide.

HEALTH: Healthy ships are granted Pratique by the Pilot. If the Vessel is coming from a Yellow Fever area or a jigger infected port within the last 30 days then Pratique is granted by the Port Health Officer at Kandla.

RADIO: Bhavnagar Port Radio, call sign VUJ-9 should be used for routing ETA messages, and is also used by Agents in cables to shipping.

Time of operation: 0200 – 0700 hrs.
0800 – 1300 hrs.
1400 – 1800 hrs.
Range: 250 miles.
Calling Frequency: 500 kHz and VHF Channel 16.
Working Frequency: 418 kHz and VHF.

VHF: Port Control available 1100 hrs. to 1800 hrs. on Monday to Friday and 1st and 3rd Saturday of each month.

TUGS: Tug assistance is available for berthing and unberthing vessels in inner harbour. Position where tugs join the vessel is dependent upon prevailing weather conditions. Usually ship's lines are used in connections to tug.

BERTHING: Berthings are as per tides and according to permissible drafts. Port equipped with 3 berths having 6 cranes with 3 tonnes capacity. Cranes available for loading or discharging ship cargo. 3 mobile cranes with capacity up to 18 tons and 1 fork lift also available.

Storage: Concrete Jetty: 16 transit sheds with floor area of 21,205 sq.m.

Steel Jetty: 3 transit sheds with floor area of 4,753 sq.m.

Godowns: Steel Jetty: 51 godowns with 50 partitions. Total floor area of 59,710 sq.m.

In City: 3 godowns with floor area of 2,230 sq.m.

Ample open storage space is available.

Notice for the attention of all Masters and Officers:

A lock gate has been installed at the port. You are perhaps, not aware that, this is not the conventional type of lock gate provided in the vicinity of artificial dock basins.

The Bhavnagar lock gate is a single tension gate, which is lifted vertically above the dock platforms and then slewed to 90° on the dock platforms. In this way the dock entrance is cleared for ship movements. With this arrangement the function of the gate is limited to water impounding and to an extent silt reducing.

The tidal conditions at the port are such that HW heights on successive flood tides vary by as much as 6 ft. 6 in. during Springs. Therefore, at the time of opening the gate water, level on both sides will not be equal. Due to this there is a necessity to slightly lift the gate and flush the channel to equalise the water levels before the gate is finally lifted up. During this period, vessels lying alongside the jetty will have a tendency to surge. Instances have come to the notice of this office where vessels have broken their moorings. Such surgings are by no means violent and with a little care breaking of moorings can be avoided.

All Shipmasters are, therefore, requested to bring this to the notice of their duty Officers. As the flushing may take place any time between 2.5 hours to half an hour before HW. Care should be taken within this period to tend the moorings and to maintain a gangway watch. There is, however, no necessity to remove the gangway. Permissible draft may vary due to siltation.

STEVEDORES: The stevedoring gangs are arranged directly by Agents through approved stevedores.

Working Hours: Day: 0800 hrs. to 1200 hrs. and 1300 hrs. to 1700 hrs.

Overtime: 1800 hrs. to 2200 hrs. and 2300 hrs. to 0300 hrs.

Recess: 0300 hrs. to 0800 hrs. and 1200 hrs. to 1300 hrs. 1700 hrs. to 1800 hrs. and 2200 hrs. to 2300 hrs.

MEDICAL: Medical facilities can be arranged by Master through Agent. Hospital facilities available in city of Bhavnagar which is 13 km. from port.

FRESH WATER: Fresh water supplied alongside jetty as well as at anchorage.

Shipmaster's Report: Water is often in short supply, and ships may be unable to obtain any at all at the anchorage. Ships should not rely upon an evaporator to make water at the anchorage, due to the high mud content of the sea water.

FUEL: Oil bunkering available in limited quantity.

FIRE PRECAUTIONS: Alongside jetty fire-fighting facilities availab At anchorage fire-fighting facility is provided by the tug.

Usual fire precautions applicable.

CONSULS: No consulates at port. Nearest consulates are at Bomba

REPAIRS: No repair facilities exist for the ship except repairs of min nature which could be undertaken by private repair firms.

DRY DOCKS: Small dry dock available for repairs of vessel of up t 200 ft. length.

GANGWAY/DECK WATCHMAN: Gangway and deck watchman a recommended.

OPENING/CLOSING HATCHES: As arranged between the Master a stevedores.

CUSTOMS ALLOWANCES: As per Customs regulations in force fro time to time at Indian ports.

CARGO GEAR: Ships should possess valid Cargo Gear Certificate.

SURVEYORS: Surveyors should be arranged in advance with Agen Surveyors come from Bombay.

REPATRIATION: Possible.

AIRPORT: Bhavnagar City is served by an airport situated about 7 k from the Port. Regular flights to Bombay are available daily and to Sura on Monday, Wednesday and Friday.

TIME: GMT plus 5.5 hours.

HOLIDAYS: 8 holidays a year declared by Port Authorities on whic working of the ship can be attended at the option of the port.

POLICE/AMBULANCE/FIRE: Police force and ambulance and fi facility available from Bhavnagar City. Limited fire-fighting facili available at port.

TELEPHONES: No facility is available for providing telephones on boar the ships.

SHORE LEAVE: Citizens of The People's Republic of China a Pakistan not allowed ashore. All other nationals are allowed to go t Bhavnagar City which is 13 km. from port for which shore passes a issued by Customs Dept.

CREW IDENTIFICATION CARD: Valid international passport o identification card necessary.

REGULATIONS: Photography in port prohibited. No crew membe allowed to take liquor ashore.

DELAYS: Delays in berthing depend upon number of ships working o berth and awaiting if any. At anchorage generally not more than 2 ship are worked at a time.

DEVELOPMENTS: Intensified dredging operations are proposed to b undertaken for increase in drafts of the vessels berthing.

SHIPMASTER'S REPORT: April 1981.

Bhavnagar discharging anchorage is a dangerous anchorage due t strong currents and an abnormal bottom.

All Shipmasters must make contact by cable 24 hours before arriv and await appointment from Port Authorities and pilot station. VHF n available and radio station working only during daytime.

All ships must arrive at pilot station, maximum 2 hours before HW and only during daytime and in good visibility, otherwise Pilot cann board.

For many years anchorage was used for discharging, but now close as about 300 anchor-chains remaining on bottom. In 1981, anothe anchorage opened, near to the port, and up till April, 4 ships lost ancho due to strong currents and irregular bottom. Contact with shore is ve difficult and at night time impossible.

Our vessel was there for discharging and from 0300 hrs. when po anchor broke with 7 shackles of chain, up till 0700 hrs. we were waitin for tugboat from shore to pick up 100 stevedores, but was impossibl At 0700 hrs. we took ship out of dangerous area without Pilot and witho any assistance, with 100 stevedores onboard.

To enter Bhavnagar Port, draft no more than 17 ft. and breadth n more than 65 ft., to pass the locks.

AUTHORITY: Port Officer, Gujarat Maritime Board, New Po Bhavnagar, Bhavnagar (Gujarat), India. Pin Code No. 36400 *Tel:* 24302 (office), 26985 (residence). *Telex:* 0162-224 GMB *Cables:* Portal Bhavnagar. *Contact:* Captain S.K. Singh.

BOMBAY: 18.56 N. 72.49 E. (See Pla

PORT LIMITS: Vessel is considered to have "arrived" when Pilot embarked and/or when vessel is required to anchor outside pilota area awaiting a suitable tide, as in the case of large tankers.

PILOTAGE: Motor Pilot Vessel "Venu", Call Sign "ATDZ", is station in area marked on chart as "Pilot Vessel cruising ground" (18° 51′ N 72° 49.5′ E.). It is a white coloured vessel with a buff colour funn "Pilot" painted in capitals and exhibits international signals by day a by night.

Minimum 24 hours advance notice to Agents and Harbour Mas Bombay, through Bombay Radio (VWB).

Bombay Port Trust operates a VHF service with the following c signs on Channels 16, 14 and 12 on a 24 hours basis:

(1) "Bombay Pilots" for calling Pilot Vessel "Venu".
(2) "Bombay Port Signals" for Harbour Control and Port Sig Station.
(3) "Jawahar Island Dock" for Marine Oil Terminal.

Inbound vessels are required to contact Bombay Pilots (Pilot Ves "Venu") on Channels 16, 14 and 12 or "Bombay Port Signals" Channel 12 to report ETA and receive instructions. Vessels must n proceed beyond Bombay Floating Light without being instructed to so.

It is compulsory for all power driven merchant vessels of over 200 tonnes to have a Pilot on board to proceed North of Pilot Cruising grounds. Such vessels may not enter, leave or shift berths in this area without a Pilot or Harbour Official on board.

Pilot will be provided from the Pilot Vessel "Venu" or when not on station by means of a launch usually painted white with the legend 'Pilot' on the side. During the S.W. monsoon season a long swell prevails at the port entrance and it is imperative that vessels should give a proper lee, as the pilot launch may experience difficulties in coming alongside. During such times, Masters will be advised which side to make a lee by the Pilot vessel. During the early part of the S.W. monsoon, when the wind is South of S.W., the sea runs from the South and Masters are advised to keep their ships heading East when making a lee for the Pilot.

DOCUMENTS:

Ship's Register.
International Load Line Certificate.
International Safety Radio Certificate (Telegraphy).
International Safety Radio Telephony Certificate.
Derat Certificate.
International Safety Equipment Certificate.
Port Clearance from last Port.
Indian Coast Light Dues Receipt (if any).
4 copies of Crew List.
4 copies of Passenger List.
1 copy of Through Cargo Manifest.
4 copies of Stores List.
1 copy of Cargo Manifest with Bill of Lading for the same.
4 copies of Opium and Dangerous Drugs Certificate.
Cargo Plan.
Cargo on Deck Declaration.
4 copies of Certificate of Foreign Currency.
4 copies of Certificate of Arms and Ammunition.
Letter to Assistant Collector of Customs regarding Local Agency.
Letter to Assistant Collector of Customs regarding Duty on Ship Stores.
Application to Inspector of Police for Shore Passes.
3 copies of Arrival Report.
4 copies of Personal Property Declaration.

Note: The above list of documents is likely to undergo a change in order to bring the documentation and procedures in line with IMO convention on Facilitation (subject to special needs of Public Authorities in India).

ANCHORAGES: The designated anchorages 'A' and 'B' are located West of the West Port Limit, which is a line drawn from Malabar Point through Bombay Floating Light to Khanderi Island. Vessels required to anchor outside the pilotage area must anchor in either of these two areas only.

Anchorage Area 'A':

(1) 19° 08.0′ N. 72° 29.6′ E.
(2) 19° 08.0′ N. 72° 33.2′ E.
(3) 19° 02.0′ N. 72° 34.8′ E.
(4) 19° 02.0′ N. 72° 31.1′ E.

Anchorage Area 'B':

(1) 18° 53.0′ N. 72° 31.7′ E.
(2) 18° 45.8′ N. 72° 23.2′ E.
(3) 18° 35.2′ N. 72° 33.5′ E.
(4) 18° 42.2′ N. 72° 41.7′ E.

Outer Anchorage: When not berthing on arrival, deep-drafted vessels should anchor in Area 'A' or Area 'B', which are clear of submarine gas pipelines and submarine cables. The mud and shingle bottom is reported to be good holding ground. Pilots do not assist in outer anchorage. It is entirely up to the Master to find a suitable anchorage in areas indicated.

A long swell is present during the S.W. monsoon in the Outer Anchorage and at the entrance to the harbour.

Visibility is often reduced by heavy rains during S.W. monsoons and by smoke haze which frequently prevails in the area from November to March.

Where for any reason such as adverse weather, a vessel does not anchor on arrival the Master should ensure that the Port Signal Station/Pilot Vessel/Harbour Master are advised of his arrival as vessels are handled on a first come first served basis.

In all cases, vessels anchoring at Outer Roads are to report their anchoring time and all particulars requested by the Bombay Pilot Vessel/Port Signal Station.

Inner Anchorages: Inner anchorages are allotted to vessels by the Harbour Master upon application by the Agents and taking into account the draft. There are more than 60 anchorage berths with radius 1,000 ft. having depths from 38 ft. to 14 ft., of these, 2 × 38 ft., 30 × 30 ft. – 35 ft., 22 × 20 ft. – 30 ft. and the remainder below 20 ft. All anchorages are safe. The permissible draft at the anchorages varies from 15 ft. to 32 ft. Depending upon the room available, vessels may be provided with a Pilot to take an incoming vessel directly to the assigned anchorage. The usual inner anchorage for merchant vessels is on the West Side of the harbour, abreast of the City of Bombay. An area North of Sunk Rock is reserved for naval vessels.

A vessel subject to quarantine will be instructed to anchor as convenient for boarding by the Port Health Officer.

RESTRICTIONS: According to state of tide and draft.

PRATIQUE: The Master of every vessel calling Bombay from a foreign port must send the following particulars by cable to "Quarantine Bombay" 12 hours to 24 hours prior to arrival at Bombay.

1. Name of vessel and Call Sign.
2. ETA (Local Time).
3. Ports called and date of departure within last 30 days.
4. Maritime Declaration of Health has Negative Answers to the 6 Health Questions (Note: Code Signal "ZT" should be used).
5. No monkeys on board.
6. No person embarked aboard from any Yellow Fever Endemic ports.
7. Date and Port of Issue of International Derat Exemption Certificate.
8. Name of Local Shipping Agent.
9. Code Signal "ZU" should be used if Maritime Declaration of Health has positive answers to any of the 6 Health Questions.

Radio "Quarantine Bombay" 24 hours before arrival using standard Quarantine Messages from International Code of Signals, if vessel has called at a Yellow Fever area port within the last 30 days, whether all on board have valid Yellow Fever Vaccinational Certificates or if any contagious disease is suspected.

Radio Pratique is permitted and the information required under "Pratique" should be cabled to "Quarantine Bombay" maximum 24 hours and minimum 12 hours, prior to arrival.

The boarding Pilot also hands over a form for the Master to complete and this is forwarded by the Pilot to the Port Health Officer for their records.

MAX. SIZE: Drafts at Indira Dock, Prince's and Victoria Docks and Jawahar Island and Pir Pau are subject to dredging, soundings and rise of the tide. These drafts are declared by the Deputy Conservator of the Bombay Port every month in the Daily Shipping List.

Commercial Docks:

(1) Indira Docks, including Ballard Pier and Ballard Pier Extension.
(2) Prince's Dock and Victoria Docks.

Name of Dock		*Max. Normal Dimensions (ft.)*	*Max. Oversize Dimensions (ft.)*	*Remarks*
Indira Dock Basin Berths	LOA	625		
	Beam	85		
	Draft	29 to 30		
Ballard Pier Extension Passenger Terminal	LOA	750		Passenger vessels including 'Queen Elizabeth II'
	Beam	95

Also see "Tankers".

RADIO: Bombay Coastal Station, call sign VWB.

Information regarding weather will be broadcast at 0630 hrs. and 1030 hrs. local time on 2,000 metres.

Special Information required from Tankers: Radio Agents 96 hours before arrival giving Master's name, ETA, draft, ports visited last 30 days, vessel's gross and net tonnage, present loaded displacement, distance manifold from amidships, cargo quantities on board gradewise, and, if Bombay last discharge port, "Load-on-top" data, vaccinations required, men for doctor and dentist, supplies and cash requirements. *Failure to comply with foregoing could incur berthing delays.* Confirm ETA 48 hours before arrival. Any subsequent changes to be notified to Agents.

Note: Agents Offices are closed from Friday 1730 hrs. IST to Monday 0930 hrs. IST. Week-end messages to be in by Friday afternoon.

Agents can be contacted by Bombay Radio VHF Channel 26, and thence public telephone system.

A Naval Signal Station is situated on the extreme South end of Bombay Island at Colaba Pt. and ships entering or leaving port are liable to be called up by signal lamp. Masters are required to answer such signals by lamp should their ship be called up.

RADAR: The Port has no Radar/VTMS service.

VHF: See "Pilotage".

TUGS: 9 tugs, 900 h.p. – 3,000 h.p. Tugs join vessel when close dock entrance and assist undocking. Ship's lines are used.

BERTHING: *Indira Dock:* 21 berths, able to handle cargo vessels up to 20,000 d.w.t. Average length of berth 150 m. Most berths are equipped with 1×6 ton crane and 4×3 ton cranes.

Victoria Dock: 15 berths, able to handle vessels up to 5,000 d.w.t. Average length of berth 110 m. Most berths are equipped with 1.75 ton and 1.5 ton cranes. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Prince's Dock: Length 1,560 m. of which 1,200 m. is available for handling cargo. There are 8 berths able to handle vessels up to 5,000 d.w.t. Vessels dock and undock from about 3 hours before high water to half an hour before high water.

Ballard Pier: Container berth: Length 244 m., width 110 m., has a large back-up area for stacking containers. 2 gantry cranes and 2 transtainers on rubber tyres have been provided.

The extension at Ballard Pier is the passenger terminal and receives passenger vessels up to 30,000 g.r.t. at any stage of the tide, commensurate with draft. The berth is a continuous solid concrete pier fitted with rubber fenders.

Berthing/Unberthing is allowed during day and night, depending on the draft for the safe transit of the access channel. When entering the dock basin, the Harbour Pilot brings the vessel up to the Lock Gate (Outside Indira Docks), then Berthing Master takes the vessel to the berth in the dock.

Allotment of Berths: Type of cargo is divided into 6 groups for allotment of berths to vessels:

Group I	Finished Fertiliser and Food grains.
Group II	Fertiliser raw materials.
Group III	Edible Oil in bulk.
Group IV	One commodity comprising more than 80% of the cargo, e.g. Scrap Metal, Iron and Steel cargo.
Group V	Containers.
Group VI	Break Bulk and General Cargo.

Under the pre-booking of berth facilities introduced from 1st February 1990, one berth for each of the above groups will be set aside for the owner/agent of a vessel who would like to occupy the berth on a priority basis, instead of waiting in the general queue. For this the owner/agent has to apply latest 72 hours before the arrival of the vessel and only 4 hours grace period will be allowed for any delay in arrival of the vessel. To avail of this facility the owner/agent has to pay a specified sum as a service charge. If however the vessel fails to arrive by declared time plus 4 hours grace period, with the allotment will stand cancelled, the booking fee will be forfeited and the vessel will have to join the general queue.

CARGO HANDLING EQUIPMENT: Compliance with B.P.T. Port Rules and Dock Bye Laws is essential.

Hydraulic Cranes (Quay) Electric and Heavy Lift Cranes, Floating Mobile and Crawler Cranes available.

2 gantry cranes (35 tonnes each) are fitted at Ballard Pier (Mole Station).

2 Transtrainers on rubber tyres (35 tonnes) are provided in the Ballard Pier back-up yard for stacking containers.

1 Transtrainer on rubber tyres (35 tonnes) is provided at the Stacking Yard at No. 1, Indira Docks.

56 Mobile Cranes with capacity up to 30 tonnes available.

Heavy Lift Electric Crane of 60 tonnes at Jetty End Indira Docks.

2 Floating Cranes available of 60 tonnes and 125 tonnes capacity.

Fork Lifts – 10×2 tons, 35×3 tons and 1×8 tons.

STEVEDORES: Supplied by Dock Labour Board. Bombay Port Trust supplies shore labour for handling cargo, including stacking in sheds. Working hours:

1st Shift (0800 hrs. – 1700 hrs.)
2nd Shift (1700 hrs. – 2300 hrs.)
3rd Shift (2300 hrs. – 0500 hrs.) - restricted.

Advance information and notice will aid agents in arranging for any specialised services that may be required.

Good facilities for LASH System of cargo.

MEDICAL: Excellent medical facilities and hospitals in the city. Notice in sufficient time, depending on seriousness of case, to arrange for transport, hospitalisation, etc.

TANKERS: The oil terminal facilities are located on the Eastern side of Jawahar Island (Butcher Island) and consist of a concrete jetty about 1,700 ft. long, having 3 pier heads, with dolphins at either end of the pier head. The jetty carries a roadway and pipelines and has berths for 3 vessels of various sizes. The berths are numbered from North to South as No. 1, 2 and 3 respectively. Each berth is provided with breasting dolphins and mooring dolphins. A fourth oil berth South of Jawahar Island has been added for loading/discharging of crude oil.

The oil terminal is administered by a Senior Dock Master, who works 24 hours on – 24 hours off. There is also a safety officer, who is a senior pilot and ensures that safety precautions are complied with at all times.

Approach to the Berth: From the Pilot Cruising Ground the vessel proceeds towards Jawahar Island at slow speed, under the direction of the Port Pilot, to avoid squat and so as to arrive off the berth on top of high water, in the case of loaded tankers. During the approach to the oil terminal, the vessel has to pass through the inner harbour, where other vessels are anchored. Before arrival at the berth, engines should be stopped and tested astern. This trial is compulsory before berthing at the oil jetty.

The tanker anchorages, 9 cables and 13 cables S.W. of Butcher Beacon, are available for light tankers awaiting berth or suitable tide. An emergency anchorage exists 4.5 cables N.E. of Butcher Beacon.

The tidal stream directions are not in line with the jetty. The ebb stream runs at an angle of 15° onto Berths No. 2 and No. 3 and 20° to Berth No. 1. Berth No. 1 and No. 2 are partially protected from the flood stream effects by the surrounding shore. Berth No. 3 is protected by an artificial reef from the shore towards Butcher Beacon. But there are reports that the flood stream tends to push the vessel off the berth. Although Berth No. 4 lies in the direction of tidal stream, which runs about N.E. – S.W. it does experience some strong tidal stream, pushing the vessel away from the berth and has resulted in moorings breaking if not properly tended.

Deep draft laden tankers dock on top of high water/beginning of the ebb, always port side alongside.

Berth Limitations and Facilities at Jawahar Island Marine Oil Terminal and Pir Pau:

Jawahar Island:

Berth	*Max. Displacement* (tons)	*LOA* (ft.)	*Max. Oversize LOA* (ft.)	*Beam* (ft.)	*Beam Oversize* (ft.)
No.1	70,000	740	780 (Daytime only)	95	130
No.2	48,000	600	-	95	NA
No.3	70,000	740	780 (Daytime only)	95	130
No.4	125,000	984	NA	130	NA

Pir Pau Berth:
LOA: 560 ft. (day light), Beam: 85 ft. Maximum Oversize: Length 585 ft. and Beam 95 ft.

Vessel to be equipped with a functioning bow thruster and be able to pump over tide.

Draft:

	LOA up to 600 ft.	LOA over 600 ft.
No.1	33 ft. 09 in.	29 ft. 06 in.
No.2	30 ft. 06 in.	30 ft. 06 in.
No.3	33 ft. 06 in.	31 ft. 10 in.
No.4	42 ft. 00 in.	42 ft. 00 in.

Pir Pau:
LOA up to 525 ft. – 19 ft. 00 in.
LOA up to 560 ft. – 18 ft. 04 in.

Note: Drafts indicated above are at chart datum and correct at time going to print. These are subject to change due to dredging/siltatio Drafts for these berths are declared by the Deputy Conservator of th Bombay Port Trust every month.

Mooring and Unmooring Operations: At Berths No. 1, 2 and 3 the usu mooring arrangement consists of 3 head, 3 stern, 2 breast and doub back springs fore and aft. An offshore anchor is sometimes use underfoot. 2 mooring launches assist in running the lines ashore. It recommended, to facilitate in quick positioning of the vessels, that th back springs fore and aft are paid out and stored along the vessel sheer strake so that they can be quickly hove in and made fast onc placed ashore. Mooring and unmooring times and conditions a decided by the Jawahar Island Dock Master. No long delays a experienced. Usually 2 tugs of sufficient power assist with mooring an unmooring. When berthing, tugs come alongside abeam of Butche Beacon.

When berthing at Berth No. 4 the mooring arrangements are 3 hea stern, 3 breast lines fore and aft and 2 springs fore and aft are use When berthing, the tugs come alongside between North Karanja an West Uran Buoys. During monsoons additional lines may be require and will be indicated by the Dock Master. Strong ebb stream experienced at Jawahar Island. Prior to start of the ebb it must b ensured that both back springs and breast lines are taut. Moorings mu be tended regularly in view of strong currents and unsettled weathe and fairly large range during Spring tides.

Gangway: No shore gangways are provided so vessel's gangway shou be used. Pilot will indicate which side the vessel will berth and th gangway should be ready on deck about 20 ft. forward or aft of th manifold, ready to be put ashore as soon as the vessel has made fas Hose gangs come aboard via the gangway, therefore, it is important have the gangway placed promptly.

Safety Check: The Safety Officer boards the vessel and carries out ship/shore safety check with the aid of a Check List as advised in th ISGOTT Manual.

Pumping Over the Tide: Berth siltation takes place rapidly, and therefo depths at the berths vary from time to time. These should be checke from the monthly bulletins issued by the Deputy Conservator of the Po The tidal ranges above the chart datum are from zero to 16 ft. durin Spring tides and from 6 ft. to 10 ft. during Neap tides.

Pumping over the tide is a routine practice by the local oil industrie Vessels are required to reduce their draft before the first low water aft berthing, hence vessel should be in all respects ready to commen discharge once mooring and connecting up are completed. Discharg over the first four hours should be planned to reduce the vessel's dra to the draft which will be indicated by the Dock Master. At least 1 under keel clearance should be kept at all times.

Cargo Operations: Crude Oil Vessels: Vessels of 740 ft. LOA a routinely accepted. Spot approvals for vessels up to 780 ft. LOA dockin at Berths No. 1 and 3 may be granted provided that Berth No. 2 is vaca or the vessel there is small enough to accommodate the extra lengt

3×10 in. ASA hoses are used on crude vessels. Vessels are allowe to arrive with the blanks off and reducers in place, on the manifo A shore crane is available, but it is also advisable to have the vesse derrick ready. Connecting of hoses is carried out by an experienc gang. At Berth No. 4, 5 Ckicksan type loading arms are fitted with e flange size 12 in. 150 lb. class. The shore will accept ship's ullage figur (arrival) taken without their representative present if this is necessary order to avoid delay in commencing discharge.

Product Vessels: Products are loaded and discharged through 8 diameter hoses with ASA flanges. These vessels dock at Berths No. 2 and 3 only. Loading of product tankers involves considerable li clearing. Usually, 2 hoses are connected, although 3 lines are availab Vessels arriving alongside for loading, should have clean ballast on with all tanks washed and ready to load any product. Since changes the cargo pattern occur very frequently, it is essential that vesse observe this requirement. Tank cleaning including Crude Oil Wash carried out only with the specific permission of the Dock Master/Safe Officer.

For clean products, 3 lines are available at Berths No. 1, 2 and 1×16 in. for HSD, 1×16 in. for Kerosene and 1×12 in. for other cle products such as M.S., ATF, JP 1, etc. This line is always being ke full of water. Products are separated in this line by interface, if qua so permits, or by water plugs.

In the process of flushing, a small amount of water may be loaded board the vessel. This amount of water has to be checked, calcula and included in deadfreight calculations.

The shore representatives inspect the tanks, prior to loading, and se the sea chests. He remains on board throughout the stay of the vess maintains communication and co-ordinates the activities with the sho He should be provided with a cabin.

Early Departure Procedure is practised and Bill of Lading quanti are communicated to the vessel after sailing. Discrepancies, if a between ship and shore figures are to be protested by cable.

Discharge of Dirty Ballast and Slops: There is a slop tank availab Clean ballast may be discharged over board. Slops and dirty ballast m be pumped ashore via a 12 in. line to a Slop Tank. Sufficient notice a information of quantities of slops/washings should be given. Maxim quantities acceptable 4,500 tonnes, rate 1,000 t.p.h.

Pollution and Safety: No facilities or equipment are available within the port for combating an oil spill.

The Port has a fire station at the Marine Oil Terminal. Several firemen are in attendance at the berth at all times. Each jetty has 2 towers fitted with fire monitors. There are also trailer pump generators at each jetty equipped with foam compound.

Fire wires must be hanging over the side on the outboard side, bow and quarter, while alongside to enable tugs to connect readily in an emergency situation. The towing eyes should be maintained at water level and sufficient slack should be flaked out on deck.

Strict security is maintained at Jawahar Island. Access to the oil jetty is from a small pier close Northward of the Island. No boats are allowed alongside. All crew members are provided with a pass and these are to be returned before sailing.

Fuel and Bunker Facilities: Fuel oil and light diesel oil are available ex-wharf. Lubricants also available in drums. The loading rate of fuel oil is about 500 t.p.h.

Fresh Water: Drinking and boiler water available ex-wharf (30 t.p.h. – 35 t.p.h.), from the Port Trust water boat (250 tons) at 25 t.p.h. and private water boats (about 150 tons each) at 25 t.p.h.

Pir Pau: Pir Pau Pier is situated at the Northern end of Bombay Harbour in a locality called Trombay. Here the refineries of Bharat Petroleum Corporation and Hindustan Petroleum Corporation are situated.

The approach to Pir Pau Pier is made through the channel between Jawahar Island and Elephanta Island, thence through the Pir Pau Dredged Channel which is marked by buoys. Only daytime berthing/unberthing during the flood tide is allowed.

A number of bollards are laid throughout the length of the Pier and provide a suitable mooring layout for any size vessel up to 560 ft. length overall. The fendering system consists of vertical rubber fenders on the pier for its entire length. It it advisable to keep portable fenders readily available.

Pipeline size varies from 6 in. to 12 in. A loading/discharging rate of 150 t.p.h. for all products is maintained. Cargo discharged at this pier is mainly L.P.G., ammonia, lube oils and chemicals.

Refrigerated cargoes acceptable, but due to design limitations of pipeline/tank volume, cargo to be heated to − 10° C. to 23° C. Pipeline length 5 km. (8 in. ASA 300.). No vapour return line available. Maximum discharge rate 120 tonnes per hour at back pressure 14.5 kg./cm. Vessels to carry suitable hoses of 75 ft. length for discharge.

No bunkering facilities available at Pir Pau. Fresh water available ex-wharf at 5 t.p.h. or by water boat.

Lube Terminals at Commercial Docks:

Certain Lubes, Vegetable Oils and fats are discharged both at Indira Dock and at Prince's and Victoria Docks at berths nominated by the Port. These are discharged either through a pipeline or into tank trucks. The average rate of discharge into tank trucks is 40 t.p.h. From the docks the pipeline (10 in.) extends to a tank farm about 10 km. away. For docking in the commercial docks a valid Gas Free Certificate will be required.

Ship Operator's Report: January 1987 (Updated 1990).

Location: The Port of Bombay is situated almost mid-way on the Western coast of India and is a natural deep water harbour protected by the mainland on its East and the island of Bombay on its West. It is the largest Indian port for dry cargoes in bulk and container trade. The Marine Oil Terminals are located at Jawahar Island (Butcher Island) and Pir Pau at Trombay, where also refineries of Bharat Petroleum, Hindustan Petroleum and Indian Oil are located.

Lube Oils and certain non-flammable liquid cargoes are also handled at some wharves of the Indira Dock and Victoria Dock.

Communications: All vessels bound for Bombay should listen to Bombay Radio (Call Sign — VWB) which is located at Lat. 18° 36′ N., Long. 72° 50′ E. and send their initial ETA as soon as possible.

Tankers arriving in ballast should notify: ETA, amount of slop and dirty ballast to be discharged ashore, deballasting time, proposed loading sequence and quantity of each grade, displacement on completion of loading and alll requirements/services needed.

The initial ETA should be subsequently confirmed or revised, 72, 48 and 24 hours prior to arrival.

Approaches: The approaches outside the 10 fathom contour are free of dangers. The vessel may approach Bombay from North to South through West, but attention must be paid to areas in which fishing stakes may be encountered as indicated on the chart. Dangerous wrecks and fouled ground exist within the area bounded by parallels Lat. 18° 48.5′ N. — Lat. 18° 50′ N. and meridians Long. 72° 42.5′ E. — Long. 72° 44.5′ E. Masts of sunken ships are sometimes visible during the periods of the LLW tides. Under no circumstances should vessels of any draft, attempt to cross this area.

The harbour entrance is lined by light buoys moored North of Thal Shoal, S.E. of Prongs Reef and S.W. of Prongs Reef.

Decca Chain 7 BV is operational and reportedly gives satisfactory performance, especially during daylight up tp 200 miles offshore between Latitudes 16° N. and 24° N.

Racons are fitted onto Khanderi Light House and Prongs Light House, which transmit the morse signal "K" and "P" respectively.

Permissible Draft: There are no night restrictions, except at Oil and Chemical Jetty at Pir Pau. The minimum depth in the entrance channel to the harbour is 34 ft. 6 in. below chart datum. The shallowest bar extends from a beam of the buoys at the entrance to abeam of Middle Ground Island.

Deep draft vessels, including laden tankers, should be at Pilot Cruising Ground from 1 hour 30 minutes before high water to on top of high water, depending on the instructions received from Bombay Pilot Vessel or Port Signal Station. When Pilot Vessel is on station, all instructions are given by Harbour Control/Port Signal Station.

It is advisable to start heaving anchor in good time, about 2 hours before time required at Pilot Cruising Ground; and to make approach to the port entrance, passing about 1 mile North of Bombay Floating Light Vessel. Then vessel should head towards the middle of the 2 entry buoys (Prongs Reef Buoy and South Entrance Buoy), passing about 8 cables South of S.W. Prongs Reef Buoy.

DENSITY: The Port of Bombay is essentially a salt water port and major fluctuations in the density occur on account of tide. Density varies mostly in monsoon period June to September. Sea water temperature 18° C. to 23° C. throughout the year.

FRESH WATER: Available at all berths ex-wharf at following delivery rates:

Jawahar Island	30 t.p.h. – 35 t.p.h.
Pir Pau	5 t.p.h.
Indira Dock	12 t.p.h. – 15 t.p.h.
Prince's and Victoria Docks	12 t.p.h. – 15 t.p.h.

Fresh water also available by water boats.

Port Trust water boat (250 tons)	25 t.p.h.
Privately owned water boats (150 tons)	25 t.p.h.

Ship Officer's Report: Vessel berthed at Ballard Pier, East side. Fresh water availability on pier dependent on capacity of storage tank at the time of call. The water was not available continuously and we had to wait for the tank to be refilled.

FUEL: Diesel oil and fuel oil are available ex-wharf at the four Jawahar Island berths. No bunkers are available at Pir Pau. At the commercial docks only diesel oil is available and is supplied by tank trucks.

Bunker barges for fuel oil are available, however some delay can be expected. Bunker requirements should always be included in the first ETA message to minimise delays.

FIRE PRECAUTIONS: All regulations of Petroleum Rules (chapter 1/50 of BPT Port Rules). Port maintains fire stations, 24 hours per day, both at docks and at Butcher Island Oil Terminal. Special precautions taken for tankers at Marine Oil Terminal at Butcher Island.

CONSULS: Most countries of the world have consulates/representative offices in the city.

REPAIRS/DRY DOCKS: Major repairs may be carried out afloat and in dry docks. Excellent facilities exist and all repairs possible. There are several private and public ship repairers to do this work.

There are 2 dry docks belonging to the Bombay Port Trust. Hughes Dry Dock is 1,000 ft. long and 100 ft. wide and the entrance to the dry dock is from Indira Dock Basin. Merewether Dry Dock is 525 ft. long and 65 ft. 6 in. wide and the entrance to the dock is from Prince's Dock Basin.

SURVEYORS: Nautical surveyors (Mercantile Marine Department) and all Classification Societies (Marine) and General Surveyors available.

GANGWAY/DECK WATCHMEN: Private watchmen, regulated by the Port, are posted on deck as and when required by the Agents/Owners.

OPENING/CLOSING HATCHES: All mechanically operated hatches are opened and closed by ship's crew. Rigging gangs may also be employed for this work.

CUSTOMS ALLOWANCES: Weekly allowance is 200 cigarettes and 1 bottle of spirits (1,000 ml.).

REPATRIATION: Can be arranged, also crew changes.

AIRPORT: International Airport at Sahar, 25 km. from Bombay Harbour.

TIME: Indian Standard Time ahead of GMT by 5 hours and 30 minutes. No alterations to clocks are made any time.

HOLIDAYS: Republic Day (January), Holi (2nd Day) (March), Ambedkar Jayanti (April), Shivaji Jayanti (April), Ramzan Id (April), Maharashtra Day (May), Bakri Id (July), Mohurram (August), Independence Day (August), Ganesh Chaturthi (August), Dasera (September), Diwali (October) and Christmas (December).

POLICE/AMBULANCE/FIRE: Police 100; Ambulance 102; Fire 101.

TELEPHONES: Arrangements for placing a telephone on board ship exist at all transit sheds in the Commercial Docks.

IDENTIFICATION CARDS: Shore passes issued. Necessary for Police/Custom Authorities and are to be returned prior to vessel's departure.

GENERAL: *Hazardous Cargo:* All items of Dangerous Goods are published by the International Maritime Organisation and are treated as hazardous cargo. They are divided into four broad categories for the purpose of handling in Port area. These categories are graded according to risk involved in handling:

Category "A":	Low Flash Point (below 50° F. or 10° C.) or other goods which are too dangerous to be handled through the dock. Cargo of this category is discharged into lighters in the stream for direct delivery from the Port Hazardous depot at Haji Bunder. Vessels carrying commodities belonging to this category are not admitted into the docks.
Category "B":	Intermediate Flash Point (above 50° F. to 76° F. or 10° C. to 24.4° C.) or other goods which present moderate degree of hazard. Cargo of this category is discharged into lighters in the stream for transportation to Haji Bunder for storage. Containers carrying this category of cargo may be landed from container vessels on shore in the docks and the containers are removed immediately to Haji Bunder for storage.
Category "C":	High Flash Point (above 76° F. to 141° F. or 24.4° C. to 60.6° C.) or other goods which present lesser degree of hazard. Cargo of this category is permitted to be discharged in docks for immediate delivery only. If direct delivery is not possible these commodities will have to be discharged overside into barges in the docks for delivery from Haji Bunder.
Category "D":	Flash Point above 141° F. or 60.6° C. or other goods, specially some poisons and some corrosives, which also have hazardous properties. These are permitted to be stored and handled in the port area subject to special handling and storage instructions.

In every case Masters of vessels carrying such cargoes are advised to inform their local agents well in advance of all hazardous cargo on board so that necessary arrangements can be made for off-loading such cargo as required.

REGULATIONS: Stringent Port Rules and Docks By-laws detailed in "Bombay Port Rules".

DEVELOPMENTS: Satellite port in Nhava-Sheva area has been developed and named as Jawaharlal Nehru Port. It was opened on 26th May 1989. 2 container berths, 2 bulk berths and one service berth are in operation. Port keeps watch on VHF Channels 16 and 13.

SHIPMASTER'S REPORT: September, 1979. (Updated 1986).

Anchorage: If inner anchorage berths occupied then pilot station will inform of same and vessels to anchor in Anchorage "A" or "B" West of Prongs Reef Lighthouse (see "Anchorage" in main text). The prohibited anchorage area between the zones is due to pipes and cables of the Bombay High Oilfield. Patrol vessels "Sagarika I" and "Sagarika II" inform vessels if they are beyond anchorage limits and vessels should adhere to their instructions.

Radio: Call sign "VWB". 24 hours watch. HF & MF. Vessels with good transmitter can contact Bombay directly from Port Said or Cape Town or Singapore.

Radar/VHF: VHF Channel 16 for contact with Pilots and listening watch. Call Bombay Pilots or Bombay Harbour Control. Channel 12 is port frequency for berthing or shifting.

Hatches: Opening and closing of hatches, beams, hatch covers by Stevedores. All mechanically operated hatches opened and closed by ship's crew. Rigging gangs at Owners expense may be employed for these jobs.

Stevedores: 1st shift (0800 – 1700 hrs.), 2nd shift (1700 – 2300 hrs.), 3rd shift (2300 – 0500 hrs.).

Consuls: U.S.A., Australia, Belgium, A.R.E., France, Greece, Germany F.R., Japan, Liberia, Norway, Sweden, U.K., U.S.S.R. and others.

Medical: Excellent medical facilities and hospitals.

Customs: Weekly allowance of 1 bottle spirit (700 ml.) and 200 cigarettes.

Specialised Cargo Handling Facilities: Ballard Pier Berth specially reserved for container and Ro/Ro vessels. Another container berth and container yard being formed at Berth No. 23 I.D. As Bombay Port not full geared for mechanical handling of cargo, advance information and notice will aid Agents in arranging for specialised services and fork-lifts. Good facilities for LASH system of cargo.

Surveyors: All surveyors available. Standard marine and general surveyors.

REPORT: Pir Pau Jetty (LPG), June 1984.

Pir Pau Jetty: Datum draft 19 ft. 4 in. for Max. LOA 525 ft. Pir Pau Channel datum 13 ft. 1 in. Max. rise of tide approximately 15 ft. No berthing/unberthing between sunset and sunrise.

Pipeline/discharging facilities:

1. Refrigerated cargoes acceptable, but due design limitation of pipe-line/tank volume cargo to be heated to −10°C. before discharge. Sea water temperature at Bombay during year 18° minimum to 23° maximum.
2. Pipe-line length 5 km. diameter 8 in. ASA 300 psi, no vapour return line available.
3. Max. discharge rate 120 tonnes/p.h. at back pressure 14.5 kg/cm. (abs).
4. Vessel to carry suitable hoses making length of 75 ft. for discharge keeping in view items (2) and (3) above and to be equipped with derrick.

SHIPS OFFICER'S REPORT: May 1989.

Documents:

Maritime Declaration of Health.
Arrival Report.
Cargo on Deck/Transit with Port of Loading/Discharging.
Customs Arrival Report.
Vessel's Arrival Report.
2 copies No Arms/Ammunition Form.
2 copies Agent's Report.
6 copies Deck Cargo Declaration.
4 copies Store List.
6 copies Personal Effects List.
Other Local Forms. If visiting Bombay for the first time, the vessel may use its own forms.
10 copies Crew Lists.
3 copies Narcotics List.
1 copy Vaccination List.

Note: The Agent will provide a booklet which contains all the forms needed.

Customs: Customs Officers will board the ship to check the bonded store. Ship hands over the forms prepared by the Agent.

Quarantine: Hand over the forms prepared by the Agent.

Immigration: Hand over the forms prepared by the Agent.
Shore passes are obligatory.

CALCUTTA: 22.32 N. 88.22 E. (See Pla

DOCUMENTS:

Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Port Clearance from Last Port.
Indian Coast Light Dues Receipt (if any).
4 copies of Crew List.
4 copies of Passenger List.
1 copy of Through Cargo Manifest.
4 copies of Stores List.
1 copy of Cargo Manifest with B/Lading for the same.
4 copies of Opium and Dangerous Drugs Certificate.
Cargo Plan.
Cargo on Deck Declaration.
4 copies of Certificate of Foreign Currency.
4 copies of Certificate of Arms and Ammunition.
Letter to Assistant Collector of Customs regarding Local Agency.
Letter to Assistant Collector of Customs regarding duty on sh stores.
Application to the Inspector of Police.
3 copies of Arrival Report.
4 copies of Watches and Clock List possessed by each member the crew.
6 copies Hazardous Cargo, if any.

PILOTAGE: Telegraphic address of Pilot station: VWST "Pil Sandheads". Radio message should be sent 48 hours prior arrival giv (a) ETA Eastern Channel Lt. Vs.; (b) from . . . to . . . (either Haldia, Bud Budge, or Calcutta); (c) deepest *fresh* water draft; (d) length over (e) d.w.t.; (f) whether VHF is or is not on board.

Pilot boards vessel at Sandheads from pilot vessel fitted with W DF, VHF, radar, echo sounder and other navigational equipme maintains continuous watch on 500 kHz and receives ETA messag of incoming vessels.

As an aid to navigation, navigable channel in river is marked wi lights and channel buoys. There is a lighthouse at Sagar a downstream from this point, 2 unattended Light Vessels are statione at Upper Gasper and Lower Gasper and 2 attended Light Vessels Intermediate and Eastern Channel Stations. Navigable channel leadi to Haldia Port from sea is 63 nautical miles and to Calcutta about 12 nautical miles. There are 15 bars in different reaches of the river, 4 these are downstream of Haldia and the remaining 11 between Hald and Calcutta. Since these bars are subject to fluctuations, the river regularly surveyed and dredged as required. Owing to sharp bend narrow channel and difficult tidal conditions the navigation of shi between ports and sea requires service of trained Pilots employed The Port Trust. River Pilots take charge of vessels at Sandhead navigate to Haldia/Garden Reach as the case may be and then ha over to Harbour Pilots who manoeuvre vessels to Haldia Dock riverside jetties, moorings, or dock entrance lock at Calcutta. Moveme of ships inside docks is guided by Berthing Master.

Shipmaster's Report: December 1983.

Procedure for sending ETA Sandheads Calcutta: Vessels calling Calcutta should, along with their ETA messages to the Commander Pi Vessel, Sandheads, also indicate the Owner's/Agent's name and o then will Master's ETA message be recorded, otherwise vessel will n be treated by Calcutta Port Trust on arrival at Sandheads for furth coming up river to the port.

ANCHORAGES: Anchorage in River Hooghly at Saugor Roads, Hald Kalpi, Diamond Harbour, Royapur, Ulubaria and Garden Reach of whi Royapur, Ulubaria and Garden Reach utilised only by ships on passa to and from the port in emergency. Depths of anchorages vary on d to day basis according to River Draft Forecast but on average 30 deep.

RESTRICTIONS: Navigation on River Hooghly is carried out only w Pilot on board and according to tide. Speed of vessel important fac and must be declared to Pilot on board, preferably telegraphed 48 hou in advance to Pilot vessel.

MAX. SIZE: Maximum LOA 565 ft. with beam of 80 ft. for Netaji Subh Docks and 515 ft. LOA with beam of 70 ft. for Kidderpore Docks. A vess of 535 ft. and over can sail out as "Tide Time Sailing" only and th restricts her draft from Calcutta.

Maximum LOA of tankers for tanker terminal at Budge Budge is 620 Restriction of beam for vessels berthed at Budge Budge is 85 ft. Deepe draft alongside dock berths in Netaji Subhas and Kidderpore Doc 8.70 m. At Budge Budge deepest draft at any berth 9.00 m. Berthing vessels, depends on prevailing draft of day published in Draft Foreca for month.

PRATIQUE: Procedure for obtaining Pratique: To obtain Radio Pratiq incoming vessels communicate by wireless to Port Health Offic Calcutta, Cable address: "Quarantine Calcutta":

(a) No sickness or death from sickness on board within last 15 da
(b) No sand, earth, pigs, poultry, crew or passenger taken abo from E. Coast of Africa between Port Sudan and Durban, bo ports included.
(c) Ship not touched within last 30 days any port in E. Africa betwe Northernmost point of Eritrea and Southernmost point Tanzania, including Island of Zanzibar or any other yellow fe infected area.
(d) No abnormal mortality of rats or mice on board.
(e) No monkey on board.

(Item *(a)* to be sent in code under usual standard quarantine messa required by ships; rest in plain language through local wireless stati

In case of any suspected disease or fever on board, local Agents m be contacted by cable who arrange for doctor to be sent or for remo of a patient if necessary. Vessels calling at another port in same cou are exempted from obtaining Pratique.

RADIO: Calcutta Radio, call sign VWC. R/T. and VHF.

Information regarding weather distributed at 1030 and 0630 hrs. local time on 2000 metres.

Also see "Pilotage".

TUGS: 15 tugs, 550 hp. – 2,200 hp. Tugs used for vessels after passing lock entrances at Netaji Subhas and Kidderpore Docks. Tugs used for vessels to turn. Vessels own lines. At Garden Reach sailing on ebb tide for "Tide Time Sailings".

BERTHING: Vessels brought in for berthing according to tide. Movements from one berth to another inside dock not dependent on tide, but according to convenience of port. Vessels berthed at riverside jetties or river moorings required to have starboard anchor unshackled in order that starboard chain could be tied to buoy on arrival. After first chain is shackled on, port anchor is unshackled and 2 pieces of chain, each 30 fathoms long are removed from port cable and sent aft by boat and made fast to buoys, etc., and tied to stern of ship. The remaining port cable is tied up to another buoy forward. Vessels at river jetties and river moorings if left during Bore Tide are to comply with following:

Half an hour before low water:

(a) Gangway to be hoisted up, if ashore.
(b) Pipe-lines disconnected and triced up (for vessels at Budge Budge Jetty).
(c) Heave tight on forward chains to keep vessel about 6 ft. off jetty or pontoon. Make sure weight is on bore springs and not on chains aft.
(d) Tighten all buoy ropes.
(e) When bores expected, all vessels in stream shall have steam on main engines, windlasses and winches and a sufficient number of officers and crew on board to tend vessel in case of emergency.

After bore made, and vessel stopped ranging, slack forward chains to old mark. Bore springs can be had through Agents from local suppliers.

Budge Budge (oil terminal) on banks of River Hooghly has river jetties, hence above instructions also apply to vessels berthed at Budge Budge Jetties.

At Budge Budge two lengths of chain provided by Port Trust for stern moorings.

Kidderpore Dock: Lock entrance: 580 ft.×80 ft. 19 general cargo berths. 2 coal berths, of which one is fully mechanised. Peak loading rate 400 m.t.p.h.

Netaji Subhas Dock: Lock entrance: 700 ft.×90 ft. 8 general cargo berths, No. 1 Berth equipped with 200 ton heavy lift crane. One oil berth, Berth "C", used for unloading petroleum products. 6 additional berths available.

Garden Reach Jetties: 2 alongside berths for overside cargo work only.

Budge Budge: Also see "Tankers". 5 jetties which can accommodate vessels up to 625 ft. (190.50 m.) LOA.

Jetties were previously used mainly for petroleum products for which large storage tanks are available. With the commissioning of the Indian Oil Refinery at Haldia, movement of products by large tankers has been transferred.

These jetties are presently available for handling bulk liquids like edible oil, vegetable oil, soya bean oil, etc., for which separate storage of 59,000 tonnes capacity is under control of the State Trading Corporation.

BRIDGES: 2 bridges; 1 collapsible, 1 swing, situated inside Kidderpore Dock are open for navigation to suit convenience of port.

STEVEDORES: 48 hours notice of arrival at pilot station required by Agent.

MEDICAL: Masters in need of medical services required cable Agents. Hospital facilities. Ships leaving for foreign port or minor Indian port (where no Port Health Officer) required to ensure officers and crew have valid health certificates (for cholera and yellow fever if proceeding to a yellow fever area).

TANKERS: Not permitted discharge residue into dock (at C berth Netaji Subhas Dock).

S.G.	A.P.I. of local types of oil
0.91 and 0.94	0.9430 varying to 0.9550.

Tanker terminal at Budge Budge 13 nautical miles from Calcutta by river.

BB Jetty No. 1 for accommodating vessels of LOA 620 ft.
BB Jetty No. 2 for accommodating vessels of LOA 430 ft.
BB Jetty No. 3 for accommodating vessels of LOA 230 ft.
BB Jetty No. 5 for accommodating vessels of LOA 620 ft.
BB Jetty No. 6 out of commission.
BB Jetty No. 7 out of commission.
BB Jetty No. 8 for accommodating vessels of LOA 620 ft.

Deepest draft alongside jetty berths 9.0 m., but vessels brought up according to prevailing draft as per forecast.

Berthing: Vessel is moored starboard side to at Budge Budge as follows: Port Anchor to about 6 shackles on the Port bow with the ship's starboard cable shackled to the shore cable on the starboard bow. 2 shore cables made fast round the bitts are used aft. These cables are crossed. An experienced shore mooring gang boards vessels to assist in berthing, and these men require very little help from the Ship's Crew. The operation generally takes about 1.5 to 2 hours.

The sequence is as follows: The Port anchor is dropped well off and up-stream of, the Pontoon, on the first of the Ebb tide. The vessel's bow is then swung into the forward in-shore mooring buoy by a mooring rope. This buoy is then brought close under the bow whilst the starboard ship's cable is made fast to the shore cable. For this purpose, the Shore mooring gang, will, on first boarding, hang off the starboard anchor, through the hawse pipe, leaving the first 15 fathoms of cable flaked on deck. Ship's wire rope (100 mm.), should be available for hanging off, together with 75 mm. rope, quantities will be advised by the Berthing Master for lashing the cable.

When the forward cable is fast, the stern is swung, again using mooring and are made fast round the two bitts. 75 mm. (3 in.) rope lashings will also be used here. On completion of making fast the after cables, the vessel is hove into position by the windlass. The mooring ropes are made fast to the two quarter and two bow mooring buoys and are again used when the shore Gang board to break moorings prior departure. To avoid any chance of delay in mooring, the vessel should ensure that the first shackle of her Starboard cable is free prior to arrival, and should have three joining shackles ready for use in case these are required. One ship's wire will be required forward, for hanging off the anchor, and two aft, for heaving on board the ends of the shore cables. Although the shore mooring gang have their own shackles, etc., at Budge Budge, it is necessary for the ship to provide a drift punch and heavy hammer for breaking the cable.

It should be noted that at Calcutta itself there are not enough shore chains to provide moorings to all vessels using the port, and in these cases vessel's Port anchor cable will be broken to provide the after moorings. All the Budge Budge Berths, however, are supplied with sufficient cables. These latter cables are anchored to swamped moorings at each berth.

During the period of Bore Tides, the above moorings may have to be supplemented by coir ropes supplied by Burmah-Shell. In such cases, and in the event of the cable moorings requiring attention during the vessel's stay at Budge Budge, the local Harbour Master, or his assistants will advise the vessel.

Shore Lines: All products handled through 150 mm. (6 in.) or 200 mm. (8 in.) hoses.

Restrictions: Handling of packed cargo not permitted during the discharge of Low Flash bulk cargo.

Fuel: Fuel oil, diesel oil and gas oil available ex-wharf at Budge Budge and by lighter. Lubricants available.

Fresh Water: Not available.

Tank Cleaning/Dirty Ballast Facilities: Line 100 mm. – 250 mm. (4 in. – 10 in.). Max. quantity acceptable 130 – 170 tonnes. Rate 60 – 100 t.p.h. Limited facilities for various grades. Clean ballast may be pumped overboard.

General: A continuous and strict watch, especially during the hours of darkness, should be kept on the vessel, both when anchored or in the berth, in order to prevent unauthorised persons boarding the vessel.

DENSITY: Average density in port is about 1000.

FRESH WATER: Fresh water on application from Masters or Agents and preferable if at least 48 hours' notice given. Supplies through barges and direct from quay line.

FUEL: Redwood 600 – 700 sec. supplied at Calcutta and require at least week's notice for supplying vessels lying inside dock. Fuel also supplied at Budge Budge Terminal, 3 days notice to suppliers and Port Authorities.

FIRE PRECAUTIONS: Usual non-smoking precautions and Master, Owners, Charterers or their Agents of vessels carrying import cargo or intending to load export cargo of hazardous or inflammable nature, furnish 6 copies of list of cargo involved to Traffic Manager in prescribed form, at least 10 days before vessels intend to land or ship cargo. Traffic Manager on receipt of list, categorise items enumerated in list and landing delivery and storage of such cargo be done strictly in accordance with instructions.

REPAIRS: All types of deck and engine repairs undertaken.

DRY DOCKS: 5 dry docks owned by Port Trust available. 3 in Kidderpore Docks and 2 in Netaji Subhas Docks, dimensions as follows:

Dry Dock (Kidderpore) (1) 547 ft.×69 ft.×25 ft. (2) 497 ft.×69 ft.×27 ft. (3) 350 ft.×60 ft.×23 ft. (max. length/beam of vessel allowed. No. 1: 515 ft.×64 ft. No. 2: 500 ft.×64 ft. No. 3: 335 ft.×48 ft.)

Dry Dock (Netaji Subhas) (1) 581 ft.×80 ft.×22 ft. (2) 596 ft.×80 ft. ×22 ft. (max. length/beam of vessel allowed. No. 1: 565 ft.×75 ft. No. 2: 565 ft.×75 ft.)

Netaji Subhas Dry Docks arranged in tandem and used as one dock. Power supply, compressed air and fresh and unfiltered water supply, hydraulic capstans for propeller work and cranage service including heavy-lift available all dry docks. Each dock provided with automatic telephones for use on board ships.

GANGWAY/DECK WATCHMEN: Necessary and recommended by Agents at rate of 3 watchmen per shift of 8 hours.

OPENING/CLOSING HATCHES: Normally undertaken by stevedores, unless specifically mentioned that same will be attended to by crew.

CUSTOMS ALLOWANCES: 0.25 lb. tobacco and 200 cigarettes. Wine and/or Spirit: 1 bottle of wine or spirit per head for consumption on board.

CARGO GEAR: Proof of cargo gear tested by a competent authority required.

REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriation.

AIRPORT: 12 miles; served by regular international airlines with minimum 1 flight per day.

TIME: GMT plus 5.5 hours.

POLICE/AMBULANCE/FIRE: Police (port) Tel: 45-1701 and ask Port Police or dial 100; Ambulance dial 102 or 45–4163; Fire dial 101 or 45-1701 and ask Fire Fighting Service.

CONTRABAND: Regulations provide that a vessel shall be liable to confiscation which is or has been in Indian Customs' waters where constructed, adapted, altered or fitted in any manner for the purpose of concealing goods.

The act also provides for a fine in lieu of confiscation which could in theory be up to the value of the vessel.

Indian Customs Authorities regard vessels as subject to the regulations if they have any alterations to the normal structure of the vessel or its fittings which is not of operational value, e.g. holes cut in panelling (over bulkheads) which are frequently found concealed from view behind cabin furniture such as settees, bunks, desks, wardrobes, etc. Customs invariably impose fines for such cavities even though empty of about Rs. 5,000/- for 1 or 2 cavities and increasing if more cavities are found. Fines would be substantially higher if cavities in fact contained contraband.

To minimise fines it is essential that Shipowners should instruct their Masters to organise periodic anti-smuggling searches of all accommodation and other places in the vessel by ship's officers with a view to locating any cavities or contraband and such searches, and results thereof, should be logged. Furthermore, the Customs Authorities invariably obtain a statement from the occupant of the cabin whether instructions had been issued by the Owners or Master for each officer crew member to search his own cabin for cavities or hiding places or other unusual or irregular tampering with the normal structure of the cabin and to report to the Master any such cavities, hiding-places or such other unusual tampering found at any time whilst serving on the vessel.

If no such instructions have been issued, the Customs generally regard the Owners/Master as failing to take proper anti-smuggling precautions and the risk of increased Customs fines arises.

It is suggested that appropriate instructions should accordingly be issued without delay by all Masters to their officers and crews and that each officer or crew member should acknowledge receipt in writing of such instructions. It is also emphasised that such instructions should also be notified to any officer or crew member who joins the vessel after first issue of the instructions to the existing officers and crew.

HOLIDAYS: Closed Holidays (when no work is permissible): Independence Day, Republic Day, Gandhi's Birthday, Vijaya Dashami and Kali Puja.

Holidays when double wages payable: Saraswathi Puja, Netaji's Birthday; Idul Fitr, Dholjatra, Muharram, Bengali New Year, May Day, Fateh Duaz Dahan, Durgapuja, Guru Nanak's Birthday, Id and Christmas Day.

TELEPHONES: No arrangements for installing telephones on board, but use of telephones from Port Trust's/Superintendent's Office on each dock.

SERVICES: Tank-cleaning equipment with minimum notice of at least 7 days. Discharge of tank-washings not permitted while vessels lying in dock. Compass and radar technicians available.

SHORE LEAVE: Seamen permitted to go ashore after cleared by Immigration Officer boarding vessel on arrival. In case of Chinese, special permission to be obtained from Immigration Authorities, through vessel's Agents.

IDENTIFICATION CARDS: Not necessary if holding Seamen's Books or passport.

REGULATIONS: Booklet "Dock and Jetty Handbook" supplied free by Port Trust to incoming vessels.

GENERAL: *Important:* Masters of vessels in port should ensure that vessel's engines are not immobilised without prior permission of the Harbour Master.

DELAYS: Delays occur during monsoon.

DEVELOPMENTS:

1. Construction of container terminal (Netaji Subhas Dock) with related facilities has commenced and will take about 3 years to complete. Annual capacity will be 100,000 TEU's as compared with the present 45,000 TEU's.
2. 11 new cranes and 16 fork lifts have been purchased.
3. Dredging (maintainance – deepening) of river to allow deeper draft vessels into Calcutta and Haldia.

SHIPMASTER'S REPORT: September, 1979. (Updated 1986).
Approaches: When approaching Calcutta from South Sri Lanka it would be advisable to pick up False Point Light and then proceed to Eastern Channel Light Float at Sandheads for Pilot. During the S.W. monsoon vessels encounter long spells of overcast skies and rain hence vessels should pick up Dolphin Nose Light at Vishakhapatnam then coast up to False Point Light before branching off to Eastern Channel Light Vessel.
Pilotage: Pilots board at the Sandheads. For picking up Pilots from the pilot vessel, vessels will have to approach close to the pilot vessel's stern with M.M.D. approved type pilot ladder rigged over side. Separate accommodation has to be provided for Pilot.
Restrictions: None for vessels below 22 ft. draft. Those between 22 ft. and 24 ft. 6 in. may have to wait for Spring tide for entrance and departure. However, Hooghly River Authority publishes a booklet every month stating the draft restrictions for entry into Calcutta.
Berthing: Whilst entering locks, passing through cuttings and berthing, vessels should have good fenders rigged 2 ft. above the water to prevent dents and scrapes to the hull. The Port is not equipped with fenders. The coal berths at Kidderpore Docks are old. Masters should exercise caution when coming alongside these berths for waiting or loading. For tying up to riverside moorings both anchors have to be unshackled. Starboard cable lead to port buoy and port cable to starboard buoy in a cross fashion. At the stern vessels with stern cables will have to follow the same as forward. Over and above, ropes and tackles will have to be rigged for taking the initial stress of the bores before strain comes on the cable.

Tying up the vessel to the buoys at the riverside moorings can be aided by experienced shore mooring gangs at Owner's expense.
Radar/VHF: No Radar. VHF Channel 16 for contact with pilot boat or by W/T.
Customs: Very stringent about cargo particulars.
Cranes: One heavy lift quay side crane of 200 tonnes. Berths No. 2 4 and A at NS Dock fitted with 2 tonne cranes. Berth B and D of Dock are fitted with 3 tonne electric cranes. Berths No. 27, 28 and at K-P Docks are fitted with new 3 tonne electric cranes.
Hatches: Wooden hatch boards and beams by stevedores. Mechanic operated or other hatches by ship's crew. Rigging gangs may employed at Owners' expense.
Stevedores: 1st shift (0630 – 1530 hrs.). 2nd shift (1530 – 2230 hr 3rd shift (2230 – 0530 hrs.).
Medical: Very good hospitals and nursing homes.
Specialised Cargo Handling Facilities: Containers can be loaded a stuffed aboard. No Roll-on/Roll-off facility.
Surveyors: A.B.S., I.R.S., L.R.S., G.L., N.V. and others. Stand marine, cargo surveyors and general surveyors also available.
General: Vessels navigating the Hooghly River should be very care about river thieves who will board the vessel whether stopped or anchor or making way at full speed.

SHIPMASTER'S REPORT: November 1984.
Pilotage: Accommodation is sometimes required for up to 3 Pi transferring from Sandheads to Haldia/Calcutta or vice versa.

Radio Officer is required on standby during pilotage to send W messages as required by the Pilot.

Silting problems at Auckland Bar required a 0.4 m. reduction published drafts November 1984. Situation not expected to impro
Radio: Information on weather on 2000 m. not heard.

SHIP OPERATOR'S REPORT: January 1987
Location: The port is located on the left bank of the River Hugli ab 129 km. above the river entrance off Sagar Island in the Bay of Beng
Pilotage: Pilotage is compulsory for all vessels over 100 gross to River pilotage which extends from Sandheads, 72 km. below Sag Island, covers a total distance of 201 km. The River Pilot boards vessel at Sandheads (Lat. 20° 59′ N., Long. 88° 14′ E.) and a Harbo Pilot boards the vessel at Garden Reach (Lat. 22° 33.5′ N., Lo 88° 17.5′ E.) for mooring vessels in the river or berthing in the doc The movement of ships inside the docks is controlled by the Berth Master.
Approach Channel: The Approach Channel to the main port requi considerable navigation skill. There are several sand bars and crossin of which Balary Bar is the most treacherous, as well as sharp bends the river which the ships have to negotiate. These bars are subjec seasonal and, at times, sudden fluctuations both in depth and alignme of the channel, necessitating dredging on the shallow reaches. T channel is well marked with numerous navigational aids which cons of lighthouses, lightvessels and channel buoys, automatic tide gaug and signals and river marks; thus facilitating navigation both by day a night. Surveying and charting of the river is continuous and depths o the river bars are forecast daily. Besides navigation aids, a fleet dredgers, barges, a river survey vessel and hydraulic research ves are employed to provide safe navigation to shipping.
Permissible Draft: Drafts are subject to fluctuations according to the r of tide and the condition of controlling bars. The port of Calc publishes a monthly draft forecast about 6 weeks in advance, copies which are available from the Harbour Master's Office (River) in Calcut The River Hugli can generally be navigated as far as Calcutta dur the period:

(a) June to October
At HW Springs by vessels drawing 8.7 m.
At HW Neaps by vessels drawing 8 m.
(b) October to June
By vessels drawing between 6.7 m. to 8.2 m.

However, there are times during the above period, when t permissible draft could decrease to as low as 5.5 m. before increas again. Therefore it is strongly recommended that Masters of vess loading for Calcutta should consult the monthly fresh water draft forec of River Hugli, issued by Calcutta Port, and should load accordingl order to avoid unplanned delays outside the river at Sandheads.
Communication:

Radio: There are W/T stations at Ram Nagar, Hugli Point and Hal Long range and short range W/T service for navigational message available for ships at sea within the range of 850 km. and 24 respectively.

VHF: There is a VHF network in operation in the port as an esse means of communication. Apart from Ram Nagar, Hugli Point a Haldia, VHF communication facilities are also available on the p vessel, survey vessel, dredgers and other vessels of the port.

The port has 2 pilot vessels fitted with W/T and VHF. These vess maintain a continuous watch on 500 kHz and receive ETA messa from incoming vessels. At Sandheads, vessels in the vicinity m communicate with the pilot vessels on VHF Channel 12.

Calcutta Port issues time of embarking Pilot at Sandheads to m required fresh water drafts for a particular day. Therefore Masters of incoming vessels should take note of time for embarking Pilot and sho radio their ETA Sandheads with names of local Agents, destinat deepest FW draft, LOA and speed of the vessel to the local Agents to Sandheads (Call sign: "VWST") as soon as possible. There is sl reductions in FW draft of vessels, whose speed is below 12 knots.
Traffic Control: It is established and co-ordinated by the Harbour Mas Traffic information and navigational warnings are given on 500 kHz. T general rules governing traffic in the river are as follows:

All vessels going with the tide will have the right of way. Naviga in the river is carried out exclusively on Pilot's advice at times and t conditions established by the Port Authority. Night navigatio permitted. Since the depths at numerous locations change continuou the River Pilots are notified of depth changes and traffic movem through a system of visual signals and via ship's radio on 500 kHz

Special Feature: Calcutta being a river port is subjected to a "Bore Tide" condition. Vessels at river moorings or jetties are subjected to sudden surges on their moorings during flood tide. The "Bore" takes place only during certain periods, which are predicted a year in advance and last for 1 day to 5 days.

During the "Bore", no vessel over 152 m. in length in Calcutta and over 160 m. in length in Buj Buj will remain in the moorings/jetties. The max. draft of vessels in the river moorings/jetties will also be restricted to 5.5 m. at Calcutta and 6.1 m. at Buj Buj. Vessels which cannot remain in the river moorings/jetties are taken inside the docks where ships are not influenced by "Bore" tidal conditions. Those vessels which remain in the river are provided with extra shore mooring ropes and tackles.

Bunkers/Fresh Water: Adequate facilities exist in the port for the supply of drinking water to ships in the river moorings and at Buj Buj jetties but not at "C" Berth in N.S. Docks.

Oil bunkers can be supplied by pipe-line or barge at Buj Buj and N.S. Docks. Only 1 grade of intermediate fuel oil and diesel oil are available.

Repairs: The existing facilities comprise 5 dry docks for all major surveys and underwater repairs. Of the 5 dry docks, there are 3 docks up to max. 515 ft. × 64 ft. in Kidderpore Docks and the remaining docks of max. 516 ft. and 75 ft. are in N.S. Dock. The entry into docks is from the impounded dock basins and not directly from the river.

N.S. Dock Oil Terminal (previously known as Paharpur): The terminal is located at "C" Berth in N.S. Docks; which is in line with "B" Berth used for general cargo. Therefore the max. length of a vessel which can berth at "C" Berth depends upon the size of the vessel at "B" Berth up to a max. of 172 m. The shore facilities are owned by the government and used by various oil companies for lube products only.

The access to cargo manifold platform is by steel walkway fitted with wooden covering, some of which is missing or in poor condition. The berth structure consists of the cargo manifold area and 2 mooring dolphins, 1 at each end of the manifold area, which are made of concrete and filled with wooden beams to avoid metal to concrete contact. The manifold size is 8 in. and 1 length of 60 ft. hose sufficient for ship/shore connection is provided.

There are a few fire hydrants located near by but no oil spill control equipment is available at the berth.

Buj Buj Oil Terminal (also known as Budge Budge): The terminal is located about 28 km. downstream from N.S. Docks. There are now 5 out of 8 oil berths in operation. This is the major oil terminal for the port of Calcutta and handles all grades of petroleum products, except crude and LPG.

The oil berths are located in the river and have floating pontoons. The moorings consist of 4 mooring buoys of old construction. 8 ship's lines are sent to 2 buoys and 2 shore mooring chains to the remaining 2 buoys. The buoys are provided with a ring on top, through which the ship's lines are passed and secured. The mooring chains are made fast under the buoy to the buoy pendants and divers carry out these operations. 1 or 2 floating pontoons are provided at each berth. The pipe-line is carried on a steel walkway fitted with wooden steps which also acts as an access to the pontoon. The pipe-lines end on the pontoon where the manifold is located. The shore manifold is connected to the ship's manifold by hoses of 6 in., 8 in. and 12 in.

It is essential that vessels ensure prior to arrival that the detachable link of the first shackle can be easily opened. Inability to send the cable to the buoy may cause serious delays.

Berth Limitation and Facilities:

Berth	*Length* Min. – Max. (ft.)	*Beam* Max. (ft.)	*Product Handled*
1	455 – 620	85	Fuel oil, diesel, lube
2	280 – 380	85	Lube
3	350 – 460	85	Bunkers
5	435 – 620	85	Clean products only
8	425 – 620	85	Clean products, solvents and petro-chemicals

Facilities Available:

Slops: No facilities available at the terminals.

Pollution: No oil spill control equipment available at the terminals. In case of oil pollution, private contractors are engaged to clean up the area with the assistance of the fire brigade.

Security: Terminals and berths are considered restricted areas. The whole area is fenced and the gates are guarded. Watchmen are available and are considered essential by local Agents.

Safety: Fire fighting truck/boats are available. There is no safety check list provided. Safety is left entirely to the ship's personnel.

AUTHORITY: Calcutta Port Trust, 15 Strand Road, Calcutta – 700001, India. *Tel:* 223451 (16 lines). *Telex:* 21-7336 Calp In. 21-7423 Port In. *Cables:* Calpotrust. *Contact:* Director, Marine Department.

CALICUT: 11.15 N. 75.46 E.

PORT LIMITS: The seaward (Westward) limit of the port is the 9 fathom line.

DOCUMENTS:

Register.

Articles of agreement in the case of foreign-going vessels staying in port for more than 48 hours.

Nominal list of crew and passengers and the A & B Certificates.

Bill of Health in the case of a vessel arriving from an infected port.

Clearance from last port.

Port and Light dues receipts.

Vessel's manifest and any other document, which may be necessary.

Certificates:

Registry.

Radio Telegraphy.

Safety Equipment.

Load Line Certificate.

Certificates of Competency of Master and other officers.

PILOTAGE: No pilotage available.

ANCHORAGE: Anchorage is about 3 miles offshore. Mud – good holding ground.

HEALTH: In the case of all infected vessels Health Officer proceeds aboard, and in the case of all other vessels Health Officer may proceed on board and examine vessel. Master shall give every facility for examination of passengers, crew, personal effects, cargo, provisions, water-supply and any part of vessel Health Officer considers necessary to examine. Health Officer may require written declaration from Medical Officer (if any) of vessel or from Master (or from both) stating whether any death or sickness from an unknown or suspicious cause or any case of any disease occurred on board either during voyage or before departure, and whether any unusual mortality has been observed among rats on vessel. If Health Officer satisfied that such deaths or cases of sickness as may have occurred were not due to any of diseases specified he shall permit vessel to proceed to usual place of anchorage or berth in harbour and to discharge passengers and cargo without further restriction. Inspection by Health Officer not between sunset and sunrise except in unusual circumstances.

RADIO: Messages through Cochin Radio or Mangalore Radio.

SIGNALLING: The signal station is situated close North of the lighthouse. The station is manned 24 hours a day.

TUGS: 4 motor tugs for towing lighters.

BERTHING: No berths.

CRANES: Fixed wharf cranes with capacity of 3 tons – 10 tons on the piers.

STEVEDORES: Arranged through Agents and stevedore contractors.

MEDICAL: General Hospital and Medical College Hospital situated about 1 mile and 5 miles away respectively.

DENSITY: Sea water – 1025.

FRESH WATER: Can be supplied by port tug, max. 15 tons per day.

FUEL: Available. Small quantity of 30 tons can be provided, 48 hours notice required.

CONSULS: Nil.

REPAIRS: No facilities.

DRY DOCKS: Small slipway at Beypore.

SURVEYORS: The Port Officer at Calicut undertakes private surveys.

AIRPORT: Construction of airport at Calicut is under consideration by the Government. Nearest airport at Cochin, 150 km. South of the port.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Holidays declared by the State Government are holidays for the port. Cargo work can be arranged on holidays.

FIRE/AMBULANCE/POLICE: Police 100; Ambulance 100; Fire 100.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Necessary.

GENERAL: Ship-to-shore signalling is normally by morse light.

DEVELOPMENTS: Dredging commenced at Beypore and expected to be completed within a year or two and then ships of 18 ft. draft can be berthed alongside. Breakwater under construction and additional wharf under consideration at Beypore.

AUTHORITY: Port Officer, Calicut.

COCHIN: 09.58 N. 76.15 E.

PORT LIMITS: *Seaward Limits:* 9 nautical miles Westwards between the following 2 positions:

(a) Lat. 10° 02′ N., Long. 76° 03′ 27″ E.

(b) Lat. 9° 55′ N., Long. 76° 06′ 00″ E.

DOCUMENTS:

7 Crew Lists.

7 Passenger Lists.

1 Last Port Clearance.

4 Store Lists, including List of arms and ammunition.

5 Passengers' and Crew Personal Effects Declarations.

4 Cargo Manifests.

3 Cargo Certificates.

3 Deck Cargo Certificates.

3 Opium Certificates.

3 Currency Declarations.

PILOTAGE: Berthing arrangements, booking of Pilot, etc., normally done by Agent. Advisable send ETA messages at least 48 hours in advance to Agent. Amendments to ETA messages must be sent at least 12 hours in advance. ETA messages may also be sent to Harbour Master, Cochin Port Trust. Messages should contain time and date of arrival at Outer Roads in IST and also draft fore and aft (in salt water). 30 minutes before arrival at Fairway Buoy the Port Control to be contacted on VHF for instructions.

No Pilot vessel on station in Outer Roads. A pilot boat with red hull and white superstructure exhibiting the normal International Pilot Signal comes out to Outer Roads for embarking and disembarking Pilots. No special light or sound signal need be made for Pilots. All ships awaiting Pilot in Outer Roads must have engines ready at all times to enter harbour (unless instructed otherwise). Masters should ensure that a good pilot ladder with 2 manropes is lowered about 2 ft. above water for embarking Pilots. Also while embarking Pilot, lifebuoy must be kept handy, and a good lee given. Pilots must be escorted from and to the bridge, to the embarkation deck. Also see "Restrictions".

ANCHORAGE: Cochin Roads is open anchorage with good holding ground of oily mud. Masters are required to anchor vessels in Westerly area from North to South of Fairway Buoy within radius of 0.5 miles. Deep-drafted vessels may anchor in a Westerly direction from Fairway Buoy within a distance of 0.5 to 1 mile. To facilitate entry and departure of deep-drafted ships, Masters not to anchor in line with direction of main channel, Westward of Fairway Buoy.

RESTRICTIONS: Unless otherwise specifically instructed, vessels not to enter main channel at any time without Pilot on board. Pilotage compulsory for all vessels over 100 tons gross. No night entry for crude oil tankers.

Draft Restrictions for Tankers in Ballast: The Cochin Port Trust has recently issued the following notice regarding draft restrictions for tankers.

Tankers less than 500 ft. in length:
Minimum F. 14 ft. ± 2 ft. (and trimmed by stern).
A. 16 ft.
Tankers between 500 ft. and 700 ft. in length:
Minimum F. 16 ft. ± 2 ft.
A. 20 ft.

Tankers over 700 ft. in length: Draft should not be less than 16 ft. forward and 20 ft. aft (as for ships between 500 ft. and 700 ft.), but not more than 28 ft. draft.

MAX. SIZE: Maximum size of general cargo ships presently handled is 700 ft. LOA with max. draft 30 ft. *salt water.* Such ships taken in only during slack ebb. Tidal Conditions: In Cochin Port ebb and flood begins to run 2 to 2.5 hours after HW and LW. During monsoons, freshets are encountered and there may not be any flood for several days.

New Tanker Berth: Max. size 115,000 d.w.t. with part cargo. Max. draft 35 ft.

PRATIQUE: When a ship arrives at an Indian port, the Pilot who boards to bring vessel into harbour is authorised to give Free Pratique to healthy ships. The only exception to this procedure is if a vessel is arriving in India within 30 days of calling at 'Yellow Fever port' the vessel is put in quarantine and she is granted Free Pratique *only* after the Port Health Officer has boarded and satisfied himself that all persons on board are in possession of valid certificates against Yellow Fever and after conducting Mosquito Survey.

Once a ship has been granted Free Pratique at an Indian port, it is not necessary to apply for Pratique at any subsequent Indian port she may proceed to which is automatic Pratique.

Part I. The complete message comprises two parts. The first part embodying the code group on page 126 (Radio Quarantine Reports) from ships at sea e.g. ZS, ZT, ZU, ZV, etc.

Part II. The second part is in plain language and the following information must be given:

A. (i) Expected time and date of arrival in the port.

(ii) List of ports of call with dates of departure within 30 days period prior to arrival at the Indian port.

OR

'Called at' 'not called at' any port in West Coast of Africa from Senegal to Angola and Ethiopia, Somalia, Kenya or Tanzania, Brazil, Peru and any other countries North of these in South America including Trinidad, Tobago, Venezuela, Panama, Surinam, Guyane, Guatemala, Bolivia, Belize, Colombia, Costa Rica, Ecuador, Guinea, Nicaragua, etc. within 30 days.

(iii) Whether any monkeys on board.

(iv) Whether any person/crew taken aboard at Djibouti or Aden (if the ship has touched either of these ports).

(v) Number of crew and vaccination status.

(vi) Maritime Declaration of Health Questions. Whether negative 'ZT' or positive (indicated by compliments – 'ZU') as the case may be.

(vii) The message must finally embody the phrase 'Request Radio Pratique'.

B. Additional information: Name of Agent. Request for 'Radio Pratique' must also include the name of the ship's Agent in the quarantine message. The message should be sent when the vessel is not more than 12 hours and not less than 4 hours from the Indian port. If the expression 'Request Radio Pratique' is not used but the complete message outlined above has been sent in that specific form Free Pratique will be granted by the Pilot provided that 'all is well' aboard. The message should be complete, timely and specific otherwise Radio Pratique cannot be granted.

In addition to the quarantine message the Maritime Declaration of Health must always be completed and presented to the Pilot, Port Health Officer or other authorised person immediately on arrival. On verification of Maritime Declaration of Health if it is found that quarantine message sent by the Master of ship is defective then Port Health Officer has the right to cancel the Radio Pratique granted earlier.

Port Health Officer usually inspects all incoming ships coming from foreign ports to Indian ports and also carries out health and sanitary inspection and if satisfied gives Free Pratique on board the ship and certificate of clearance to sail out from Cochin port.

Note: Masters are requested to check this information with the Agents in individual Indian ports and advise us without delay, if these instructions are at variance with local requirements.

Special Reservations for India:

1. Ships having other infectious diseases besides diseases subject to the regulations, e.g., Chickenpox, Measles, Mumps (Epidemic Pariotitis), Cerebrospinal Meningitis, Whooping Cough, Malaria, Paralytic Poliomyelitis, Influenzal Pneumonia or any crew/passenger having temperature of 100°F or more for more than 2 days which is accompanied by rash, jaundice, glandular swelling or diarrhoea severe enough to interfere with normal activities should inform 'Quarantine' Cochin by message and to be brought in under QQ flag in day time and red and white light at night. Port Health Officer will board such ships and grant Free Pratique after observing health formalities.

2. Ships having passenger/crew originating from or embarking at ports of Djibouti, Massawa, Aden or Yemen and arriving within 14 days of departure from the said ports should inform 'Quarantine' Cochin and the ship to be brought in under QQ flag. Port Health Officer will board such ships and grant Free Pratique after observing all health formalities.

3. Healthy ships touching Aden or Djibouti and coming to Indian ports within 6 days without any passenger or crew embarking at Aden or Djibouti, should hoist 'Q' flag on approaching the port limit. The boarding Pilot in such cases shall grant Free Pratique to the ship.

If passengers or crew embarked on a ship either at Aden or Djibouti and the ship arrives at Indian ports within 6 days, such ship is required to hoist 'QQ' flag and Port Health Officer is to board the ship to eliminate the risk of Yellow Fever and grant the ship Free Pratique.

Master of such ships should send quarantine message to the Port Health Officer before arrival at the port. This message should be sent not more than 12 hours and less than 4 hours before arrival.

4. Ships carrying monkeys from Yellow Fever area and coming to Indian ports within 31 days to be brought in under 'QQ' flag and Master should send quarantine message positively. Port Health Officer will board such ships and grant Pratique after observing health formalities.

5. Any ship carrying dead body, Master should send cable. Port Health Officer will board the ship to investigate the cause of death whether due to any diseases subject to the Regulations.

RADIO: Cochin Radio operates 24 hours daily, call sign VWN, however its range is limited to about 300 miles only. ETA messages may be routed through Bombay or Madras Radio which stations are directly linked with Cochin telegraphically.

VHF: VHF sets are installed in all port pilot launches, tugs, dredgers and at the Port Control Station in Harbourmaster's Office. Channel 16 is used for calling and Channels 14, 13, 12, 10 and 6 are available for communication. Ships awaiting berthing should maintain listening watch on Channel 16 at all times. Information regarding berthing would be generally available from Port Control at 0600 hrs., 1330 hrs. and 1800 hrs. daily. Cochin Radio maintains a VHF service which can be linked to shore telephones anywhere in India. This facility is available only between 0200 and 1400 hrs. GMT. Contact made on Channel 16 and then Channel 26 for conversation.

TUGS: Presently 3 tugs; one of 1,500 h.p., one of 1,400 h.p. and one of 1,000 h.p. An additional high powered tug, 30 tonnes bollard pull is also available. Tug's wire or ship's rope may be used at the discretion of the Pilot.

BERTHING: If particular ship required arrive at certain time, Agent informed in advance.

CARGO HANDLING: Modern systems of cargo handling such as preslinging, palletisation and containerisation are commonly used. The port has at present 24 wharf cranes with capacity varying from 3 tonnes to 10 tonnes, 12 mobile cranes of 10 to 40 tonnes capacity, 49 forklift trucks of 2 to 2.7 tonnes capacity and 1 floating crane of 120 tonnes capacity, 3 high powered tractors each of 180 h.p., 19 semi-trailer chassis, (10 with payload of 40 tons, 9 with payload of 20 tons), 2 heavy duty fork lift trucks with side lift attachment for handling empty containers and 5 ordinary tractors and 11 trailers for cargo handling operations.

There are 8 general cargo wharf berths, 2 coal berths, 1 boat train pier jetty, 3 tanker berths, 1 open berth and 2 low wharves and 11 stream moorings. Interim facilities are also provided for handling fertiliser raw materials pending construction of a mechanised berth. Ro-Ro ships and container ships are also handled. Quay 9 open berth is being converted into a full-fledged container berth with sufficient back up area, power plug points for reefer containers, freight station etc. At present container ships use their own derricks.

STEVEDORES: Booking of gangs undertaken by Agent on receipt of ETA message.

MEDICAL: Medical attention easily available in Cochin. If medical attention required immediately on arrival, Agent to be informed when sending ETA. Valid inoculation and vaccination certificates against Cholera and Yellow Fever are essential.

Medical advices if required on high seas to be communicated to 'Quarantine' Cochin. Harbour Master/Deputy Conservator/Agents of shipping company usually arrange evacuation of serious cases for hospitalisation from anchorage.

TANKERS: LOA limited to 700 ft. at North tanker berth and 560 ft. LOA at South tanker berth. Max. draft 30 ft.

The new oil terminal can accommodate tankers up to 115,000 d.w.t. with part cargo. Max. draft 35 ft. Products Handled: 1×750 mm. line for crude. 2×400 mm. lines for furnace oil and white oils; 4×300 mm. discharge arms. Discharge rate 4,000 tonnes/p.h.

Deep draft tankers berth only on ebb tide and during daylight hours. Ballasted or loaded tankers can sail any time.

All tankers must have fire wire fast and ready fore and aft on side facing channel.

DENSITY: Varies from 1000 to 1020 depending on tidal and weather conditions.

FRESH WATER: Supplied by shore hydrants at Rs. 15/Mt. and Rs. 24/Mt. respectively for coasting and foreign vessels. Rates for supplying through barges range between Rs. 45/Mt. to Rs. 130/Mt. and Rs. 20/Mt. to Rs. 210/Mt. respectively to coasting and foreign vessels according to the position of the vessel and the time of supply.

FUEL: All grades fuel oils normally available. Essential give advance notice to Agent to make necessary arrangements.

CONSULS: United Kingdom, Norway, Italy and France have consuls at Cochin.

GANGWAY/DECK WATCHMEN: Watchmen available at nominal cost. Recommended employ watchmen at gangway, on deck and in holds.

REPAIRS: The Cochin Shipyard now undertakes all types of deck and engine repairs.

In addition there are various other workshops who undertake engine and deck repairs. Exclusive surveyors to Lloyd's and non-exclusive surveyors to other classification societies are also available for hull engine surveys. Repairs to radio, radar and other electronic equipment can also be arranged.

DRY DOCKS: Port dry dock can handle ships of up to 217 ft. LOA. However, not normally available for foreign craft.

The Cochin Shipyard dry dock can accommodate ships of up to 100,000 d.w.t. with max. size of ship up to 257 m. length and 38.5 m. beam. The dry dock entry draft permitted is 6.5 m.

OPENING/CLOSING HATCHES: Opening hatches normally done by stevedores. Topping derricks and removing locking arrangements on hatches must be done by ship's personnel.

CARGO GEAR: All cargo gear must have valid test certificates and all other factory act requirements must be complied with.

REPATRIATION: Crew changes are carried out in this port. The Agents execute a bond before the Shipping Master before disembarkation. Repatriation undertaken by the Agents as mentioned in the said bond as well as general bond executed by them in Port Registration Office. Permission to enter India, travelling within India to the International airport through which they are leaving India and permission to leave India through Cochin port are being given by the Port Registration Office.

AIRPORT: Airport about 2 miles from harbour area. Cochin Airport handles internal flights only.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Closed holidays: Republic Day (26th January); Independence Day (15th August); Gandhi Jayanti (2nd October); 1st May and 25th December.

FIRE/AMBULANCE/POLICE: Willingdon Island Fire Station 6555; Willingdon Island Police 6005.

TELEPHONES: Arrangements can be made for telephone connections on board ships on wharf berths only.

SHIP SUPPLY SERVICE: "Ship Supply Service" is functioning at Cochin port. The Agents of the vessel arrange ship-to-shore transport of personnel and/or essential stores and/or sick crew members, etc., whenever such services are required. Usually, vessel's Agent gets this work after securing necessary clearance from the concerned Authorities and these are arranged through their ship chandlers or other contractors as the case may be. In cases of such emergencies, helicopter services are arranged by the local Agents with the Naval Authorities in Cochin with the assistance of the Port Health Officer stationed in the area.

SHORE LEAVE: Temporary landing permits are issued to foreign crew, subject to restrictions as per Government orders, if any.

IDENTIFICATION CARDS: Shore passes (temporary landing permits) are being issued. Seaman's Books cannot be used by foreigners unless with Immigration stamp.

GENERAL: Floating crane 120 tons, fire float.

DEVELOPMENTS: One of the existing berths (Q-9, length 414 m.) is being converted into a fully fledged container berth. Necessary infrastructure facilities like hard-surfaced area, lighting, power plug points, container freight station, etc. have been provided. Tractor-chassis, trailers, heavy duty fork lift trucks, etc. to handle 40 ft. and 20 ft. containers have also been provided. Two transfer cranes have been installed in the stacking yard. Steps have already been taken to provide quayside gantry cranes at the wharf in order to provide fully fledged container terminal facilities for handling cellular container ships at the port in view of the rapid increase of container traffic. Completion of the terminal is expected in 1990.

Fertiliser berth to handle raw materials under construction for ships up to 230 m. in length drawing 35 ft. will be commission shortly.

SHIPMASTER'S REPORT: August 1979.

Hatches: Beams and hatchboards by stevedores and the remainder by ship's crew.

Stevedores: 1st shift 0800 – 1700 hrs., 2nd shift 1800 – 0300 hrs.

COONDAPUR (Kundapura): 13.37 N. 74.40 E.

DOCUMENTS:

Inward Report.
Valid Certificate of Safety.
Radio Telegraphy.
Safety Equipment.
Safety Construction.
Crew List.

PILOTAGE: Optional. Vessels call at this Port for carrying ore cargo and anchor at open roadstead at a distance of about 1.25 miles to 5 miles depending upon their draft in a holding ground of sand and mud. The Agent of the ship bound for this port reports the vessel's ETA in advance. In the ETA message the name of the vessel, date and time of arrival are included.

ANCHORAGES: Good anchorage in depth over 8 fathoms at a distance approximately 5 miles from the channel bar.

Tippu Sultan Gudda Light bearing 053.5°(T) and Kodi Light bearing 080.5°(T). The Northern approaches to the Port area is rocky and the safest approach to the anchorage is from the South. Tidal range is 5 ft. Depth at bar 7 ft. at LWOST. 8 ft. – 10.5 ft. during HW.

RESTRICTIONS: No restrictions except that vessels calling at the port anchor at open roadstead.

MAX. SIZE: Vessels of smaller draft can anchor in 9 fathoms of water.

HEALTH: The Assistant Surgeon, Government Hospital, Kundapura is the Port Health Officer at the port.

RADIO: There is no radio station at the port. The nearest wireless station is at Mangalore and its call sign is "VWL".

VHF: Not available.

TUGS: There are 2 tugs/launches for towage service of sailing vessels and for special trips.

BERTHING: No berthing facilities available for ships.

1 wharf of 300 ft. in length with small stocking area.

1 RCC sheet piled wharf of 700 ft. length with vast stocking area duly electrified and a stocking platform of 180 ft. length are the only shore facilities at this port.

CRANES: None.

BULK CARGO FACILITIES: None.

STEVEDORES: Advise well in advance of ETA to shippers in order to arrange shore loading. Main cargo – ore.

MEDICAL: No advance notice except in case of serious illness to be included in arrival message. Hospital facilities available at Kundapura.

TANKERS: No facilities.

FRESH WATER: No facilities for supplying water to vessels are available. Sailing vessels crew draw their requirements of fresh water from nearby wells.

FUEL: For ocean going vessels, there is no bunkering facility. There are oil depots at Ganguli, Kundapura from where High Speed Oil can be supplied to small vessels in drums.

CONSULS: None.

REPAIRS: Small workshops where repair work for fishing launches, barge, etc., are undertaken.

DRY DOCKS: None.

SURVEYORS: Ship surveyors of Mercantile Marine Department at Goa and Cochin are available. Private Surveyors are available at Mangalore and Goa.

OPENING/CLOSING HATCHES: Usually by ship's crew.

CARGO GEAR: No shore facilities. Ships anchor at open roadstead and load cargo by ship's gear.

REPATRIATION: No facilities.

AIRPORT: Nearest airport is at Bajpe which is situated 73 miles South of the port.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Holidays declared by the Collector of Customs, Bangalore are followed at the port.

POLICE/AMBULANCE/FIRE: Pilot station is located at nearby Kundapura Town, Tel: 338. Ambulance facilities available at Government Hospital and Private Hospitals at Kundapura. Fire station available at Udipi 37 miles South of this port. Tel: 8333.

TELEPHONES: No arrangements exist for placing telephones on board the ship.

SERVICES: No facilities for ocean going vessels.

BANKS: Syndicate Bank and Canara Bank, Ganguli, Kundapura Taluk, South Kanara Dt., S. India. No telex facilities.

SHORE LEAVE: Crew members are allowed ashore subject to Customs formalities.

IDENTIFICATION CARD: Seaman's Book is sufficient and shore passes are issued by Customs.

DELAYS: Delays in loading can normally be expected during bad weather.

GENERAL: The Port of Coondapur is a riverine port which is seasonal. Open for traffic from 15th September to 15th May every year. Port is situated at the confluence of the Hadi and Chakianadi rivers at Ganguli village. The Port is 60 miles North of Mangalore which is the nearest railway head.

Charts: B.A. Chart No. 745. Indian No. 2019.

AUTHORITY: Port Officer, Kundapura, Ganguli P.O. Pin Code 576216, Karnataka, India. *Tel:* 72 and 75 Ganguli. *Contact:* Captain H. Virendranath, Port Officer.

CUDDALORE: 11.43 N. 79.46 E.

DOCUMENTS:

8 Crew Lists.
8 Passengers Lists.
3 Forms of Import Manifest of Stores.
3 Lists of articles in slop chest.
3 Private Property Declaration of Crew.
3 Manifests.
3 Bills of Lading.

Certificates:

Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Radio Certificate.
Derat Certificate.
Last Port Bill of Health.
Last Port Clearance.

PILOTAGE: No pilotage. Open roadstead port.

ANCHORAGE: Vessels anchor in 5 to 7 fathoms with Cuddalore lighthouse bearing 265° to 295°, which is most convenient anchorage for communicating with shore at all seasons of year. Nature of bottom, sand.

New Lighthouse Position: Lat. 11° 42′ 21″ N., Long. 79° 46′ 36″ E.

RESTRICTIONS: No restrictions regarding entry of vessels during day or night.
MAX. SIZE: Any size of vessel handled.
HEALTH: On arrival, Master to signal Port Health Officer stating all crew well and requesting Free Pratique. In event of any crew member suffering from suspected infectious disease, Master to advise Agents sufficiently in advance to enable Port Health Officer to board vessel on arrrival. No Free Pratique necessary whenever vessels call from another Indian port.
RADIO: No radio station. Cables routed through Madras Radio (call sign VWM), 72 hours prior to arrival.
VHF: Cuddalore Port on Channels 16, 12 and 14 from 0600 hrs. – 1000 hrs. and 1500 hrs. – 1900 hrs., except on Saturdays, Sundays and Government Holidays.
TUGS: There is a tug available. It is utilised for towing the lighters between ship to shore and vice-versa.
BERTHING: No berths.

Lighters: About 170 lighters owned by private individuals are operating for transporting cargo between ship and shore and vice-versa and handle 2,200 tonnes in total for a round trip.

Barges: 1 steel barge of 50 tons capacity available for lighterage purposes.

Railway Sidings: Metre gauge railway line from Cuddalore Junction is extended upto the wharves at the port to facilitate easy movement of cargo from the port.

Cargo Shed: 3 covered cargo sheds with plinth area of 720 sq.m each are available.

Storage capacity 1,700 tonnes. 2 open transit cargo sheds with plinth area 293 sq.m each are available, storage capacity 500 tonnes.
STEVEDORES: ETA advice required 72 hours in advance to enable stevedores to make adequate arrangements for handling cargo.
MEDICAL: No advance notice required unless vessel arrives with crew member requiring immediate medical attention. Seamen can be treated at Municipal Dispensary at Old Town near port and also at Government headquarters hospital in charge of District Medical Officer at New Town about 6.5 km. from port.
DENSITY: Density of water 1024 – 1025. State of tide does not affect density.
FRESH WATER: 1 steel water barge of 50 tonnes capacity is available for supplying fresh water to vessels in the Roads.
FUEL: None.
CRANES: 1 'Coles' 10 ton capacity mobile crane has been purchased for handling cargo in this port. This is a diesel electric crane.
CONSULS: None.
REPAIRS: Minor repair facilities available.
GANGWAY/DECK WATCHMEN: Services of watchmen recommended in interest of ship to avoid pilferage. 3 watchmen night and day per shift of 8 hours.
OPENING/CLOSING HATCHES: By stevedores.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes permitted for each crew member to be held out of bond. Wine/Spirit, 1 open quart bottle per crew member permitted to be held out of bond.
CARGO GEAR: Register of cargo gear and machinery to be maintained up to date and to be attested by competent authority.
REPATRIATION: Facilities exist for effecting crew changes and arranging necessary repatriations.
AIRPORT: Nearest airport at Madras, distance 180 km.
TIME: GMT plus 5.5 hours.
HOLIDAYS: Cargo work arranged on all holidays except Republic Day, Gandhi's Birthday, Pongal, Karinal, Masimagam, Pennayar Festival, Independence Day and Deepavali, on payment of overtime.
POLICE/AMBULANCE/FIRE: Tel: Police 2024; Fire and Ambulance 99.
SERVICES: Cleaning of hatches after discharging cargo available.
SHORE LEAVE: Crew members permitted to go ashore within municipal limits.
IDENTIFICATION CARDS: Needed.
DELAYS: No delay of anchoring of vessels. Cargo work carried out during day. No night work.
GENERAL: Private launches arranged for purposes of crew going ashore. Such launches ply between 0600 hrs. and 1700 hrs. Laundry, provisions, etc., can be arranged.
AUTHORITY: Government of Tamil Nadu, Tamil Nadu Port Department, 56 Chamiers Road, P.O.Box No. 2179, Raja Annamalaipuram, Madras 600-028. *Contact:* Captain D. T. Ramachandran, State Port Officer. Tel: 457994 (office), 837228 (Home), 459588 (Personal).

DAHEJ: 20.43 N. 72.35 E.

SHIPMASTER'S REPORT: March 1987.

DOCUMENTS:

Clearance from Last Port.
2 copies Ship's Store List.
2 copies Crew Personal Effects List.
6 copies Crew Lists.
Cargo Manifest.

PILOTAGE: Optional. The Assistant Port Officer acts as Pilot. Masters are advised to approach/anchor during daylight hours.
ANCHORAGE: Vessel anchors with Luhara Point Lt. (21° 39.5′ N., 72° 33′ E.) bearing 137° T, 5.3 miles off. Anchorage marked on chart. Cable "APO DAHEJ" via Bombay Radio at least 24 hours prior arrival for pilotage if required. Vessels should approach the anchorage during slack water (20 minutes after Bhavanagar) and bring up the vessel on port anchor with about 6 shackles in water. Holding ground is good. Vessel may drop starboard anchor underfoot. Depth about 16 m. at chart datum. This is a tidal port and currents are up to 5 knots during Springs.
MAX. SIZE: No restrictions.
HEALTH: Cable "APO DAHEJ" and "PORTAL BHARUCH" via Bomba Radio for Free Pratique. Pratique normally granted on anchoring.
RADIO: Bombay Radio (VWB) or Bhavanagar Radio (VUJ9).
VHF: Vessels should contact Bhavanagar Port Control and Dahej Po on Channel 16 for anchoring instructions at least 2 hours prior to arriva Dahej Port maintains a listening watch on Channel 16 from 0930 hrs.– 1230 hrs. and 1530 hrs. – 1900 hrs. (local time).
BERTHING: *Discharging:* The port is solely used for unloading bu fertilisers. At present there are 3 self-propelled barges, each of abo 550 tonnes capacity. These barges come alongside during high wa and leave at the next high water.

Discharging done manually using ship's gear and a rate of abo 1,300 tonnes per day can be obtained on the basis of 4 working hou during Springs.

The Receivers of the cargo are Gujarat Narmada Valley Fertilis Corporation, Bharuch.
STEVEDORES: Only one stevedoring company available, M/s Ocea Shipping Services, Bharuch (Cable: "Oceanship Bharuch"). Only on vessel at a time permitted to work in this port. The port does not hand any discharging from April to September. The shore labour which board the vessel stays on board until completion.
MEDICAL: No facilities. Under exceptional circumstances, emergencie may be arranged from Bharuch through the Agent. Advisable to infor the Agent well in advance.
DENSITY: 1024 (approx.).
FRESH WATER: Extremely difficult to obtain. Small quantities (1 tonnes – 15 tonnes) may be obtained after arrangements made with th stevedores who are the owners of the self-propelled barges. Vessel are strongly advised to arrive with sufficient fresh water for their stay.
FUEL: Not available.
CONSULS: None locally.
REPAIRS: No facilities at present time.
SURVEYORS: None locally. May be arranged from Bombay.
GANGWAY/DECK WATCHMEN: Not required.
HATCHES: Opening/closing by ship's crew.
CUSTOMS ALLOWANCE: Standard allowance for Indian ports.
REPATRIATION: Not possible at present. Under consideration by th authorities.
AIRPORT: Nearest is Vadodara (formerly Baroda), which is abou 90 km. distant. Daily flights to Bombay.
TIME: Indian Standard Time (GMT plus 5.5 hours).
HOLIDAYS: In accordance with other Indian ports but work can b arranged during holidays.
SHORE LEAVE: Not permitted under normal circumstances, this als includes Indian nationals.
GENERAL: Provisions are expensive and difficult to obtain.
AUTHORITY: The Assistant Port Officer,Gujarat Maritime Board, Dahe Port.

HALDIA: 22.00 N. 88.05 E. (See Plan

Subsidiary deep water modern dock of Calcutta, situated on West ban of Hooghly River and 56 miles downstream of Calcutta.
DOCUMENTS, PRATIQUE: All general information; refer to "Calcutta"
RESTRICTIONS: The lock entrance lead-in jetty – 1,010 ft. (307.84 m.

Lock: 985.5 ft. (300.38 m.) long and 130 ft. (39.62 m.) wide. Ships u to lengths of 885 ft. (269.75 m.) can be safely accommodated at Haldi Dock.
MAX. SIZE: Capital dredging in shipping channel is in progress and th results being constantly reviewed. Currently actual drafts as per draft o the day. Draft forecasts are issued 6 weeks in advance.
TUGS: 5 tugs available.
BERTHING:

1. An Oil Jetty – to provide berthing accommodation for super-tanke with LOA of approximately 780 ft. and draft up to 35 ft.
See "Tankers".
2. A Finger Jetty – equipped with grab-bridge crane capable o transferring salt, rock phosphate and other bulk cargo from ship to barg or vice versa at an average rate 5,000 tons per day.
3. A Coal Berth length 270 m. with depth alongside of 45 ft. is capab of loading bulk carriers of the 60,000 d.w.t. class. Mechanical pla capable of loading conventional ships and bulk carriers at a designe rate of 2,000 tonnes/p.h. 2 wagon tipplers, capacity 1,500 tonnes/p.h. 1 conveyor belt; 2 stacker-cum-reclaimers – stacking capac 1,500 tonnes/p.h. Reclaiming capacity 1,000 tonnes; 2 Shiploaders capacity 1,500 tonnes/p.h. per loader.
4. An Ore Berth – rate of loading 5,000 t.p.h. and with provision fo increasing to 8,000 t.p.h. Accommodation for carriers up to 80,000 d.w. 2×1,500 ton wagon tipplers, 4 stacker-reclaimers with capac 1,500 tonnes/p.h.; 2 shiploaders, capacity 3,000 tonnes/p.h. This ber can also handle tankers.
5. A Fertiliser Berth – for ships up to 50,000 d.w.t. class.

Mechanical plant for rapid mechanical discharge of finished fertilise rock phosphate, sulphur, etc., from bulk carriers and conventional ship at a designed rate of 1,400 t.p.h.; 1 conveyor belt, capacity 1,300 tonne hr. Can be extended up to the Fertiliser Factory; 2 ship unloade capacity 700 tonnes/p.h.; covered storage for 30,000 tonnes (wi provision for increase to 60,000 tonnes in future) and open storage f 15,000 tonnes, (with provision for increase to 30,000 tonnes in futur

6. Two general Cargo Berths – each with a quay of 720 ft. and 120 f wide and back-up area of 18 acres. Both will have adequate cranag latest in cargo handling machinery and direct rail-road facilities.

Container Terminal: The first fully-fledged container terminal in India with portainer crane (30 ton Paceco) for handling containers into or from ships. Back-up area 180,000 sq.ft. (16,722 sq.m.) providing storage space for over 1,000 containers at a time. Equipped with one high-speed transtainer crane capable of serving both rail and road vehicles.

TANKERS: Haldia Oil Jetty extends 180 m. into the deep water channel. The maximum velocity of current during ebb tide is 6 knots. During period March to June, Northwesterly squalls frequently blow up on inshore side of tankers moored at Haldia Oil Jetty, with reported wind speeds of up to 90 km./hr.

Vessels are programmed to berth on HW (daylight only) and port anchor is used to swing vessel for starboard side berthing. The flood stream continues to run 1.5 hours after HW and this provides sufficient time for safe mooring operations. 1 tug is in attendance when mooring. Although there is a hose handling gantry, it is not used during discharge as the hoses are reported to kink when excessive ranging occurs.

In view of the jetty being located in an area where strong tides are experienced, vessels are required to have the following moorings:

Forward	– 5 head ropes	Aft	– 5 stern ropes
	– 3 breast ropes		– 3 breast ropes
	– 3 back springs		– 3 back springs

This gives a total of 22 moorings. Doubling up of mooring ropes is acceptable to provide the above requirement provided all ropes are in good condition and of sufficient length to reach the shore bollards. After the vessel has been securely moored, ropes are turned over and the opposite eye is sent ashore. Mooring wires may be used as back springs.

In the final mooring position, the drift (distance fairlead to shore bollards/hooks) for the various moorings is a as follows:

Head and Sternlines:	Approx. 240 ft. (73 m.)
Breastlines F & A:	Approx. 125 ft. (38 m.)
Springs F & A:	Less than breastlines.

Above drifts apply to a ship with LOA 560 ft. (170.7 m.)

Hose Connections: Midships.

Shore Line System: Handles white oils, fuel oil and crude oil. 30 in. crude line with 3×12 in. connections on jetty. White oil line: 200 mm. (8 in.) to 300 mm. (12 in.) Shore lines: 1.5 km. long. Max. back pressure 7 bar (105 p.s.i.) Average rate 600 tonnes/p.h. (product).

Shore Steam: No facilities.

Bunkers/Lubricants: Not available.

Fresh Water: Available from shore in small quantities.

Tank Cleaning/Dirty Ballast Facilities: No facilities. Clean ballast may be pumped overboard.

General: Continuous and strict watch to be kept on vessel when anchored or in the berth to prevent unauthorised persons boarding.

Due to the remoteness of Haldia it is extremely difficult to arrange the formalities associated with crew members joining or leaving the ship.

In view of current and wind conditions it is recommended that a continuous watch is maintained to ensure that moorings are well tended at all times.

DEVELOPMENTS: A second oil berth is to be built. 2 tugs to be purchased.

SHIPMASTER'S REPORT: November 1984.

Pilotage: Ensure a boat rope is rigged; of good length and well down to the water and Pilot comes out in a small open boat, requiring a good lee and about 4 knots headway.

Also see "Calcutta".

Radio: See "Calcutta".

Tugs: Berthing at Haldia is critical in windy conditions. Tugs are under powered and have high freeboards. New tugs have been ordered. Present set up requires clear understanding on Pilot's side of controllable pitch ships where engines run continuously. Tugs slip wires unexpectedly on occasions.

Tankers: Tankers are sometimes berthed on the Iron Ore Berth inside the locked – in dock (11 m. alongside). Good pumping rates, up to 1,600 cu.m.p.h. Hose size 10 in., up to 4 connections. No night movements. If dealing with the India Oil Corporation, be ready for draft survey, independent quantity surveyor and a "standard" letter or protest. Also keep to hand all bunker/water information for arrival at previous port through to departure from present port, for end of passage and full away on passage plus port consumption/liftings.

AUTHORITY: Calcutta Port Trust, Haldia Dock Complex, Chiranjibpur, Haldia, West Bengal.

HONAVAR: 14.16 N. 74.27 E.

DOCUMENTS:
Crew Lists.
Passenger Lists.
Customs Documents.
Health Documents.
Manifests.
Bills of Lading.
Ship's Papers.

Certificates: All ship's papers such as Certificate of Registry, W/T Certificate, Safety Equipment Load Line, etc., to be on board for verification.

PILOTAGE: Open roadstead port. No system of pilotage. Pilot is however available, on requisition by Master or Agent.

ANCHORAGE: Distance off 3 miles, depth of 5.5 fathoms.

MAX. SIZE: No restrictions on length and breadth. Generally up to 34 ft. draft vessels can anchor within 2 miles to 3 miles from entrance.

HEALTH: Port Health Officer grants Pratique as and when necessary, on requisition.

RADIO: Wireless station at Mangalore.

BERTHING: No berthing facilities. Ships anchor on open roadstead.

MEDICAL: Proper hospital facilities available only at Karwar about 60 miles North. At least 24 hours advance notice ETA to be communicated to Agents.

DENSITY: Varies 1020/1025.

FRESH WATER: Very small quantities available. No arrangements for delivery to ships.

FUEL: None.

CONSULS: Nil.

REPAIRS: Nearest workshops undertaking repairs available at New Mormugao. Minor repairs may be carried out at Karwar.

DRY DOCKS: None.

OPENING/CLOSING HATCHES: By crew.

CARGO GEAR: Cargo gear Test Certificates, etc., to be produced.

REPATRIATION: Facilities available.

AIRPORT: Belgaum, about 178 miles.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Charter Party Holidays observed. Cargo work can be arranged on holidays. Dates of holidays vary from year to year.

POLICE/AMBULANCE/FIRE: Police 48; Ambulance 32; Fire Kumta 20.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Needed, if going ashore.

DELAYS: Generally no delays are expected.

AUTHORITY: Port Officer – Honavar, Port Office, Honavar, India 581395. *Tel:* Honavar 43. *Contact:* The Port Officer.

JAKHAU: 23.15 N. 68.37 E.

LOCATION: In Gulf of Kutch, on Godia Creek about 5 miles inside Arabian Sea. Port is about 7 miles West of Jakhau. Small sub-port exporting salt utilised by foreign-going and coastal traffic. Vessels calling Jakhau anchor in open roadstead about 6 miles offshore. Highest tidal range 14 ft. Current parallel to coast running about 4 knots.

AUTHORITY: Assistant Conservator Jakhau-Kutch.

KAKINADA: 16.56 N. 82.15 E.

DOCUMENTS: *(a)* To be supplied by Master on arrival:
Ship's Register.
Safety Equipment Certificate.
International Load Line Certificate.
Derat Certificate.
Last Port Clearance.
ILH Dues Receipt, if coming from an Indian Port.
Crew List: 6 copies to Agents, 2 copies to Immigration Dept., 2 copies to Customs.
Customs Circulating Copy, if coming from another Indian Port.
Import Manifest of Stores (Store List).
Private Property Statement of crew and officers.

(b) Master to sign following certificates, in prescribed forms, presented by Agents, on arrival:
Port Entry.
Port Clearance.
Customs Entry.
Customs Clearance.
Departure.
Health.

PILOTAGE: No pilotage.

ANCHORAGE: *Allotment of Anchor Berths:*

Masters of vessels calling at the Port of Kakinada should cable the following information to the Port Officer directly, 24 hours before their arrival off the Port:—

- *(a)* ETA (Indian Standard Time)
- *(b)* Total cargo for loading/discharging at Kakinada and nature of cargo.
- *(c)* Hatchwise distribution.
- *(d)* Declaration of hazardous, inflammable and explosive cargo.
- *(e)* Declaration of vessels winches in good working condition.
- *(f)* Draft Fore and Aft.

A specimen cable covering the above is quoted below:

> "Port Officer Kakinada STOP Vessel XXX ETA Kakinada 22/10 0900 Local Time quantity loading 9,500 tonnes rice bran extractions hatch one 1,000 hatch two 2,000 hatch three 3,000 hatch four 3,000 hatch five 500 no hazardous inflammable explosives STOP All winches derricks good working condition draft fore 8 m. aft 9 m."

The above cable sent to the Port Officer (in addition to the cable sent to their Agents as per normal practice) will facilitate proper anchoring instructions from Port Authorities to the Master and avoid difficulties in Port operations.

Masters should also keep watch on VHF Channel 16 to receive instructions from Port Control and contact Port Control on arrival at the approaches to the Port.

Specific instructions will be given by the Port Officer on VHF through Port Control in respect of anchorage positions. When once anchored as above, Masters should not shift their position without specific reanchorage position given by the Port Officer, unless in case of emergency in regard to the safety of the vessel.

Masters of vessels calling at this port are advised to be in possession of the latest navigation chart corrected up to-date. The Indian edition available is 3009 "Approaches to Kakinada Port" with an inset of Kakinada Bay.

Main engines should not be immobilised without specific permission from Port Authorities.

The Godavari Point (sand spit) is extending Northwestwards at a rate of about 170 ft. per annum and a port hand buoy (flashing red) 5 secs. is installed at the tip of the spit.

The holding ground anywhere in the anchorage is considered excellent (soft mud and sand).

MAX. SIZE: No restriction. Vessels any size can enter the port.

HEALTH: Masters have to send standard quarantine message not more than 12 hours and not less than 4 hours before arrival. Pratique will be granted by Port Health Officer basing on the quarantine message, which will be instructed to the Agents. Health inspection of the vessel will be carried out by the Port Health Officer at the earliest convenience. Vessels that have touched ports in the yellow fever endemic area within the last 30 days, should send the quarantine message at least 48 hours before the expected time of arrival.

RADIO: Radio stations are Visakhapatnam and Madras.

VHF: VHF radio station is in the Port Office (Port Control) on International frequency, Channels 16 and 12, communication from ship/Port control and vice versa. If ship requires communication on Channel 12, it should be advised in advance to prepare machine accordingly.

The Port control VHF functions round the clock at the following specified times:–

0045 to 0100 hrs.
0345 to 0415 hrs.
0545 to 0615 hrs.
0745 to 0815 hrs.
1045 to 1115 hrs.
1245 to 1315 hrs.
1445 to 1515 hrs.
1745 to 1815 hrs.
1945 to 2015 hrs.
2245 to 2315 hrs.

All times Indian Standard Time.

TUGS: There are 5 small tugs and 6 Pablo Boats for towing cargo lighters.

BERTHING: 1 wharf, length 300 m. 1 floating crane, capacity 50 tons.

CARGO LIGHTERS: There are 110 cargo boats with total capacity of 9,600 d.w.t. In addition 5 self-propelled mechanised barges each of 250 d.w.t. owned by the Port Authorities.

There are also available 6 mechanised barges each 240 d.w.t. owned by Central Island Water Transport Corporation Ltd., Calcutta.

STEVEDORES: Gangs engaged by party doing stevedoring work. In case of liners, Agents attend. In case of chartered vessels, consignees/shippers attend. Master to give ETA with number of hatches to be worked on arrival. Revised ETA to be sent whenever there is change.

MEDICAL: Government general hospital available with specialists. Private nursing homes also available with efficient physicians and surgeons. Agents arrange medical aid on advance advice. Being roadstead port, launches have to be arranged, hence advance notice of 6 hours necessary through signal station while in port.

DENSITY: Ranging from 1010 to 1025.

FRESH WATER: Of the 5 mechanised barges owned by the Port Authorities, 1 mechanised barge is used for supply of fresh water up to 200 tons. Privately owned self-propelled barge is also available for supply up to 100 tons. Prior arrangements to be made through Agents of vessels 24 hours in advance.

FUEL: No fuel suppliers. In case of emergency small quantities of 10/15 tons, in 205 litre drums, can be arranged from Visakhapatnam, duty paid.

CONSULS: None.

REPAIRS: No facilities. Only minor repairs to winches, welding work, casting and repairing spare parts.

GANGWAY/DECK WATCHMEN: Arranged by stevedores.

OPENING/CLOSING HATCHES: By ship's crew only.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per head per week. Wine and Spirits: 16 oz. per head per week for those who are eligible for supply by ship.

REPATRIATION: Can be arranged.

AIRPORT: Visakhapatnam 105 miles, Madras 350 miles.

TIME: GMT plus 5.5 hours = IST.

HOLIDAYS: Charter Party holidays are observed. Work is done day and night. Port and Customs also work on holidays and out of office hours on payment of overtime. No work even on overtime payment on following days: Bhogi, Pongal, Kanumu. Optional holidays to labour on Chollangi Amavasya, in January.

POLICE/AMBULANCE/FIRE: Police 3052; Fire 101; Ambulance 3311.

SHORE LEAVE: Shore permits given by Port Registration Officer (Immigration).

IDENTIFICATION CARDS: Required.

SERVICES: Fresh and dry provisions available.

NOTARY: Available for noting protest.

DEVELOPMENTS: Development programmes include canal protection, transport facilities, navigational aids, power supply to loading/discharging points and stacking yards at shore and providing breakwater of 880 m. in length (sea wall) and mooring circle on the West side of the sand-spit known as Hope Island. The breakwater can be extended a further 3.2 km. Eastward for direct berthing of ships to serve long term needs of the port.

Deep water facilities to be built. 3 berths, 2 mobile cranes, 2 tugs, transit sheds and navigational aids will be available by 1995.

AUTHORITY: Port Officer.

KANDLA: 23.00 N. 70.12 E. (See Plan

DOCUMENTS: To be submitted by Masters on arrival:

Customs: Crew List (3 copies).
Crew Private Property List – this should indicate all items they possess (3 copies).
Ship's Stores List (3 copies).
All valid documents of ship in English for verification o Customs Boarding Officer.
Port Health: Maritime Declaration in duplicate.
Valid crew health cards and Derat Certificate.
Agents: Stowage Plan, Cargo Manifest and Bills of Lading.

Boarding Pilot collects following documents:
4 copies Arrival Report.
4 copies Pilotage Certificate.
2 copies Crew List.

PILOTAGE: Compulsory. Pilot station situated Lat. 22° 49.5′ N., Long 70° 07′ E. Loaded vessels can cross bar only during high water. Vesse to report at pilot station 2.5 hours before high water. Masters to keep Agents closely advised of ETA and anchoring time. 12 hours advance notice to be given by Agents for Pilot. No pilot ship or telegraphic address for pilot station (Outer Tuna buoy). Vessels can contact Kandla Tower through VHF Channel 16. Pilot station 16 miles away from port. During all weathers vessels have to anchor at above position and await Pilot

Chart: Indian No. 2059 and 203.

Shipmaster's Report: On calling at Kandla, the Pilot advised tha anchorage outside a 2 mile range from the Outer Tuna Buoy and the Pilot having to board there, increases the pilotage dues by 100 per cent

ANCHORAGE: Vessels can anchor 1 mile S.W. of above anchoring position. Inside harbour, anchorages allotted by Port Authorities, and Pilots anchor vessels at suitable positions.

Vessels can however anchor more than 2 miles from Fairway Buoy but must pick-up Pilot within 2 miles of Outer Tuna Buoy.

RESTRICTIONS: Being a tidal port, entering and leaving of loaded vessels depends on tide, and loaded vessels can cross bar at entrance of channel only during high water. Night navigation has been introduced and is restricted to vessels up to 189 m. LOA and up to 8.23 m. draft.

Tankers bound for oil jetties are only handled during daylight hours.

Ships having speed of less than 9 knots through the water will not be moved in and out of the port of Kandla during hours of darkness.

Berthing and unberthing of ships at the moorings will be restricted t daylight only. Daily draft forecast for crossing Kandla Bar published a intervals by the Kandla Port Trust.

REGISTRATION: Report: August 1985.

On account of congestion a registration system has been introduced

When vessel has arrived at the Outer Tuna Buoy and registered wit the signal station she will be allowed to proceed to other ports.

It will be up to the vessel to ensure that she is at the Outer Tuna Buoy when her turn comes up.

MAX. SIZE: Max. overall length 740 ft. No breadth restrictions.

For oil tankers max. permissible overall length is 700 ft.

Draft according to water on the bar varies from 30 ft. year round, t 31 ft. (frequently), to 32 ft. (occasionally) and 33 ft. – 34 ft. (ver occasionally).

Sogal Channel (Mid Channel) was commissioned in 1984 which ha given additional draft of 3 ft. i.e. 14 ft. at Chart Datum.

PRATIQUE: The Masters of all ships arriving at Kandla are required t send the Port Health Officer, Kandla (cable address "Sandgrodh") a wireless message embodying all applicable terms of information set ou in the Standard Quarantine message of the International Code o Signals. In addition to the International Code message, Masters are als required to give the following information in plain language:

- *(a)* Whether there is any abnormal mortality of rats or mice.
- *(b)* Whether there is any monkey on board.
- *(c)* Whether touched or embarked at Aden or Djibouti any person
- *(d)* Names of all ports touched en-route within preceding 30 days with dates of departure.
- *(e)* Request for Radio Pratique.

Upon anchoring at pilot station, cable again "Sandgrodh" stating tim anchored and requesting Radio Pratique.

In cases where the vessel has touched any yellow fever area with preceding 30 days it is necessary for Master to certify that all officer and crew/passengers on board possess valid yellow-fever certificates

Present practice for granting Pratique is by radio or by Port Heal Officer boarding vessels inside harbour.

If the Maritime Declaration is not in order, the Pilot refers the Mast to the Port Health Officer who then boards the vessel and grants Fre Pratique after his inspection of the vessel.

RADIO: Within a range of 800 km. off Kandla, vessels can conta Kandla Radio on call sign VVK. Before 800 km. off, Kandla can b contacted through Bombay Radio only.

BERTHING: The cargo jetty provides 6 alongside-berths with to quayage of 4,725 ft. which can accommodate ships drawing up to 32 loaded draft. The cargo jetty is served with 26 electric level luffing crane 20 of 3 tonnes, 5 of 6 tonnes and 1 of 10 tonnes capacity for handlin cargo from ships.

3 mooring berths are available near the cargo jetty for vessels up 600 ft. LOA and 25 ft. draft and vessels up to 500 ft. LOA and 24 26 ft. draft. In addition, there are separate moorings for *(a)* ships loadi salt, max. LOA 600 ft. and max. draft 30 ft.,((b) deep draft mooring ships up to 35 ft. draft and 740 ft. LOA.

The Bunder basin has 3 wharves, two wharves with transit shed The South wharf is served with 4 quay electric level-luffing cranes 3 tons to 10 tons capacity for handling cargo from lighters. The No Wharf is for country craft. The West wharf is provided with a 60 to capacity electric gantry crane.

Marine unloader with rated capacity of 350 tonnes per hour discharging bulk fertiliser and its raw materials has been commissione

There is a back-up storage area of 30,000 tonnes. Automatic bagg and stitching machines are also available.

TUGS: 5 tugs. Port tugs join ships inside harbour off berth. Ship's wires used.

CRANES: 3 mobile cranes with capacity 3 tons – 20 tons.

Also see "Berthing".

STEVEDORES: Minimum 24 hours notice required for arranging stevedoring labour and gangs. Bulk fertiliser – average 650 tonnes per berth/day by conventional method. Grain – 850 tons. General cargo 250 tons per hook, subject congestion prevailing in sheds, wharves, warehouses and clearance, and on number of vessels working at particular period.

Cargo Operations:

1. At this port the unloaded/loaded LASH barges are towed by tugs which are subsequently discharged/picked up by LASH ships (operation suspended at present).
2. Regulations concerning the handling of dry-cargo are applicable to handling of cargo in barges.
3. Trucks can proceed alongside the berth and can park within the reach of the shore cranes. Cargo is loaded/unloaded from trucks directly on the wharf for shipment per vessel.
4. Forklift trucks are used to transport the cargo from the place of unloading to the stacking area and vice-versa.
5. Cargo on board the vessel is handled by Kandla Dock Labour Board workers. Packaged cargo on shore is handled by labour engaged by respective importers/exporters which are drawn from local market. Bulk cargo viz. fertiliser and wheat is handled on shore by departmental labour of Food Corporation of India

MEDICAL: Private Doctors' services available for vessels at berth. For vessels at pilot station or inner anchorages minimum advance notice of 12 hours and 6 hours respectively required. Very limited facilities of private practitioners. No hospital facilities. Inoculation and vaccination carried out by Port Health Officer (a Government body) – minimum 48 hours' notice required.

TANKERS: (Also see "Port of Vadinar"). Tankers with max. overall length of 700 ft., 40,000 tons displacement and 34 ft. draft permitted to berth. 3 main pipe-lines connected to tanks situated about 10 km. from berth, 2 generally used for white oils and one for black oil. White-oil pipe-lines diameter 12 in. and black-oil pipe-line diameter of 16 in. In addition, one 8 in. diameter pipe-line for soyabean oil, one 3 in. diameter pipe-line for acetone and one 4 in. diameter pipe-line for formaldehyde and one 12 in. diameter pipe-line for Phosphoric Acid imported by Indian Farmers Fertiliser Co-operative Ltd.

Berthing of Ammonia Tankers at Tanker Berth No. 1 with loading/unloading arm but restriction depending on the position of manifold.

Shipmaster's Report: Tankers will sometimes be brought in to the port even though a berth may not be available at that time. Such vessel will then be moored to a mooring buoy close to the jetty, awaiting her berth at the tanker pier. Mooring to this buoy is effected by use of the vessel's starboard anchor chain, so that the anchor has to be disconnected from the chain before entering.

In securing alongside the oil-pier, tankers are required to utilise 1 insurance wire fore and aft (not supplied from shore). In addition vessel is required to use all her available ropes and wires owing to strong currents – 4 head-ropes, 2 breast-ropes, 2 springs.

DENSITY: Varies from 1020–1030.

FRESH WATER: Can be supplied through shore pipe alongside and by barges in the stream.

Shipmaster's Report: Water is very scarce and should be ordered at least 3 days prior arrival.

FUEL: Furnace oil (heavy oil) and light diesel oil can be supplied. Usually 12 hours advance notice required for bunkering. In event of oil tanker discharging at berth, bunker supply can only be commenced 18 hours after completion of discharge by tanker. Quantities up to 500 tons supplied by tank trucks, above 500 tons supplied through pipe-lines if berth vacant. However, any quantity can be supplied by tank trucks.

FIRE PRECAUTIONS: 3 sea water fire fighting pumps installed at oil jetty. These pumps are under charge of fire brigade officers and have adequate fire fighting equipment. A tug fully manned with fire fighting arrangements also available at short notice.

CONSULS: None.

REPAIRS: Minor repairs carried out. Chipping and painting work also carried out.

DRY DOCKS: A floating dry dock with lifting capacity of 2,700 d.w.t. to accommodate small craft up to 100 m. in length and 5.0 m. draft.

SURVEYORS:

G. P. Dave & Sons, Tel: 20288.
J. B. BodaMarine, & General Survey Agents Pvt. Ltd., Tel: 21693, 21946.
Metcalfe & Hodgkinson Pvt. Ltd., Tel: 21740, 20940.
Navark & Mareng, Mohan Bhuvan, Tel: 21123.
Seascan Services Pvt. Ltd., Tel: 20288.
S.G.S. Ltd., Tel: 21857.

GANGWAY/DECK WATCHMEN: All ships engage 2 watchmen round the clock at gangway. To look after mooring lines, 8 mooring men (4 each at fore and aft) are engaged round the clock.

OPENING/CLOSING HATCHES: Unless specified in relative Charter Party to contrary, ship's crew to accomplish this work.

SHIP CERTIFICATES:

Registration.
Safety Equipment.
Safety Radio and Telegraphy.
International Load Line.

CUSTOMS ALLOWANCES: 200 cigarettes per week per person. Wine and/or Spirit: 2 pegs of spirit per person per day or 4 pints beer.

Shipmaster's Report: Very strict Customs supervision, particularly in regard to declaration of foreign currency.

CARGO GEAR: Ships should possess valid Cargo Gear Certificates.

REPATRIATION: Adequate facilities available.

AIRPORT: Kandla Airport 20 km. from the port and an additional airport about 70 km. from port.

TIME: GMT plus 5.5 hours.

HOLIDAYS:

	Approximate Date
Republic Day	January 26th
Holi (Second Day)	March 10th
Chetichand	March 26th
Good Friday	April 9th
May Day	May 1st
Id-Ul-Fitr	July 23rd
Janmashtami	August 12th
Independence Day	August 15th
id-Ul-Azha (Bakrid)	September 28th
Mahatma Gandhi's Birthday	October 2nd
Dussehra	October 27th
Muhurram	October 28th
Diwali	November 15th
Diwali (New Year Day)	November 16th
Guru Nanak's Birthday	November 30th
Christmas Day	December 25th

TELEPHONES: Available for tankers and cargo vessels.

SHORE LEAVE: Possible.

Regulations: Photography in port area prohibited. No crew members allowed to take with them liquor of any kind ashore and not permitted to drink liquor outside port limit.

IDENTIFICATION CARDS: Required. See "Shore Leave".

GENERAL: Port equipped with 21 electric level luffing shore cranes of 3 tons to 10 tons capacity used for discharging all ships alongside cargo jetty. For discharging tankers with bulk grain port's vacuvators belonging to Food Corporation of India used.

Kandla port is a prohibited area where entry and exit are restricted to those persons having bona fide work only. Masters are requested to exercise a strict check at the gangway in order to ensure that only those persons with bona fide business to transact are allowed aboard. In the event that any unauthorised person is found to be aboard the vessel, this should be reported to port officials and the police on duty.

Masters are requested to advise their crew in advance of arrival at Kandla that photography within the port area is strictly prohibited, and it is suggested that all cameras should be left in the safe custody of the Master in order that crew members may not violate this regulation inadvertently and become involved in legal proceedings.

SERVICES: Tank cleaning by shore labourers. Tank washings and residue not allowed to be discharged in port area.

DEVELOPMENTS: Berths and bar continuously under dredging.

An additional berth (343 m.) to be constructed. It will have a container freight station, storage yard and container handling facilities.

SHIPMASTER'S REPORT: May 1988.

1. Vessels can anchor any distance from the Outer Tuna Buoy but must rendezvous with the pilot vessel about 2 cables North of the buoy to take pilot.

   Arriving vessels picking up pilot must pass the Outer Tuna Buoy to starboard, then swing to port to give the pilot boat a good lee. (Pilot ladder rigged starboard side, 1 metre from the water.)
2. Communication through Kandla Tower for berthing instructions and pilot boat works on Channel 8. Kandla Tower calls on Channel 16, works on Channels 10 and 8.
3. No night berthing for loaded tankers.
4. Vessel anchored 2.7 miles from Outer Tuna Buoy with 5 shackles in water, good holding ground in sand/mud in very strong tides.
5. Vessel berthed at Oil Jetty No. 3, pilot reported that there is 32 ft. of water at low water.
6. Pilot reported that it was very rare for a tanker to be moored at a buoy in the river using anchor cable to buoy, but common for cargo ships awaiting berth or cargo.
7. Vessel used port anchor in river just after passing berth to swing (1 shackle in water) then, when turned, anchor is weighed to clear of the water.

   On approaching berth, port anchor is again used to control movement towards jetty. One tug assists, usually just pushing.
8. Normal moorings only required at this berth, 3 head/stern lines, 2 breast lines and 2 springs, one mooring boat employed.

   Special wires from either the ship or the shore not required.
9. At Oil Jetty No. 3 we used 2×8 in. flexible cargo hoses, max. pressure of 10.5 Bar, which gave a rate of 1,200 – 1,300 cu.m.p.h.

   Fresh water available ex-jetty, we gave Agent 3 days' notice and 100 tonnes was no problem, but we were told that this was the maximum at this time of year.
10. Tank washing for clean ballast possible alongside, but best to get written permission from the Harbour Master via the agent.
11. Officials required 5 copies of all usual documents.
12. Shore passes must be issued to all persons wishing to go ashore. No other identification required. Those going ashore must return to the vessel by 2230 hrs.

    Customs suggest all cameras locked away by Master as a precaution against possible illegal use.

    Town is 16 km. away, taxis and a bus (every 30 minutes) available at head of jetty.

    Foreign currency can be changed ashore at official places but a receipt must be obtained.

    Agent recommended that no watchmen be employed on board.
13. Unberthing at night costs more than normal daylight rate, also on the tanker berths a loaded tanker is unable to berth at night, so better to unberth during daylight.
14. One tug used unberthing, it does not make fast, normal unmooring using engine and heaving on anchor cable.
15. All Kandla buoyage in position, but lights not checked due to daylight movements only by this vessel.

    Pilot left vessel 1-1.5 miles North of the Outer Tuna Buoy, swinging to starboard to give lee for pilot ladder on the starboard side.

16. On leaving Kandla this vessel had to stop at sea (120 miles off) to clean lub oil coolers as they had become blocked quite badly due to sand and mud picked up in the Kandla River/creek.

Other details of vessel/cargo: Vessel in port 5 days. Cargo discharged: 24,431 tonnes diesel oil. Arrival draft 9.55 m. LOA 171.45 m.

AUTHORITY: Kandla Port Trust, Administrative Building, P.O.Box 50, Gandhidham-Kutch, India. *Tel:* (02836) 20001, 20021, 87201. *Telex:* 105-208. *Cables:* Port Trust Kandla. *Contact:* Harbour Master or Deputy Port Conservator.

KARWAR: 14.48 N. 74.06 E. (See Plan)

PORT LIMITS: *North:* A line drawn from Dayamada Point to Parker Rock.

East: Seashore of Karwar Bay from Dayamada Point to Badchidar Point 50 yards above high-water mark including Baithkol Cove, Kalinady and all branches thereof as far as navigable and the shores and banks within 50 yards of high-water mark Spring tides including all islands and thence to Mogera Guda Island (including Mogera Guda Island). All patta lands and other private sites excluded.

South West: A line drawn from Mogera Guda Island through Gudsav Sunv, Westernmost point of Mandal Island to Parker Rock.

DOCUMENTS:

8 Crew Lists.
2 Manifests of Stores.
Private Property Declarations.
2 Currency Lists.
1 Maritime Declaration of Health.
3 Passenger Lists (if any).
4 Import Manifests.
Last Port Clearance.

PILOTAGE: The approach from Northward is between Oyster Rock Lighthouse and 2 front and rear leading lights on Simshigudda and Kurmagad Islands, respectively, in positions Lat. 14° 50′ 11″ N., Long. 74° 05′ 43″ E. and Lat. 14° 50′ 33″ N., Long. 74° 05′ 59″ E. Vessels approaching from Southward may enter between Oyster Rock Light and Karwar Head. Currents in bay are negligible. Ocean-going vessels are piloted by Departmental Port Officer who is a licensed Pilot. No pilotage charges at present.

ANCHORAGE: Anchorage for shallow draft vessels is with the Port Signal Station, bearing 120° (T), distance 1 to 2 miles, or Oyster Rock Lighthouse, bearing 278° (T), distance 2.5 miles in about 24 ft. to 28 ft. of water. Anchorage for deep drafted vessels is with the signal station, bearing 099° (T), distance 3 to 3.5 miles in depths of 38 ft. to 42 ft.

RESTRICTIONS: No entry restrictions. Karwar Bay may be entered on either side of Sunghiri Island, according to draft and anchorage taken as required. A vessel can enter Karwar either by day or night after having made lighthouse on Devghad Island.

MAX. SIZE: Any size of vessel can be worked as loading and unloading operation done in open sea. Depth at Outer Roads over 7 fathoms increasing accordance distance from land.

HEALTH: District Civil Surgeon acts as Port Health Officer. Free Pratique to incoming vessels from foreign ports granted by radio. All vessels calling from foreign destination must give radio message addressed "Civil Surgeon Karwar" at least 48 hours prior entering port giving last port of call, number of crew, health conditions, approximate time of arrival and requesting Pratique, same message must be repeated to Agents who obtain Pratique on shore. Anchoring time is Pratique time. For vessels calling from an Indian port, Pratique not required.

Vessels which have taken on board passengers or crew from yellow fever areas, within 30 days of departure from such ports will be under quarantine. Free Pratique will not be granted until such time as a mosquito search party, from nearest major port (e.g. Cochin, Goa or Bombay) has inspected, disinfected and certified that ship is fit for granting Pratique.

Necessary for Owners or Masters to inform Agents well in advance in case of vessel arriving from yellow fever area to enable arranging of mosquito search party and quick Pratique.

RADIO: ETA and Pratique messages should be sent via Goa or Bombay Radio as Karwar Radio has been shut down.

TUGS: No tugs necessary as vessels work in stream.

BERTHING: No berth, vessels work in open sea. Baithkol Cove is safe berthing place for lighters. Alongside wharves 10 to 12 smaller vessels can obtain safe berth with depth of 6 ft. to 8 ft.

Also see "Developments".

STEVEDORES: 48 hours notice ETA required order enable Agents advise shippers and stevedores to keep cargo and labourers ready. Main commodity export of ore. Mechanised barge loading operations in port. Ore loading rate up to 4,000 tons per day. General cargo 1,000/1,300 tons per day.

MEDICAL: Good hospital facilities exist. 2 hospitals about 1.5 miles from port. In case of inoculations and vaccination at least 2 days advance notice to be given enabling bring vaccine from nearby town (Hubli or Belgaum) distance 100 miles and 150 miles respectively.

TANKERS: No facilities for tankers.

DENSITY: 1025.

FRESH WATER: Dumb water barge for supply to vessels anchored in open Roadstead.

FUEL: No bunkering facilities for ocean-going vessels. Diesel and petrol storage depots within port for supply to small vessels.

OPENING/CLOSING HATCHES: Generally carried out by ship's crew.

CERTIFICATES:

Ship's Register.
Cargo Gear Certificates.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Derat Certificate.
Vaccination and Inoculation Certificates.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle spirits.

CARGO GEAR: Before commencement of loading, Master to present shippers or their Agents with valid International Cargo Gear Certificate which shall not be more than 12 months old. Validity of said certificate to cover whole period for loading and discharging. Fourth five-year plan includes proposals for mechanical front-end loaders, tipping trucks, mobile cranes and forklift trucks.

A 10 ton mobile crane is available.

CONSULS: None.

REPAIRS: Moderate-sized workshop in town able carry out minor deck and engine repairs.

REPATRIATION: Shipping Master arranges crew changes and necessary repatriation. Crew signing off repatriated via Goa or Bombay.

AIRPORT: No airport, or rail connections. Nearest airports Goa or Belgaum, 60 miles and 150 miles distant respectively. 2 flights per day to Bombay from Goa.

TIME: GMT plus 5.5 hours. Permanent.

HOLIDAYS: Charter party holidays declared and published every year by Honorary Secretary of the Karnataka Chamber of Commerce and Industry, Jaya Chamaraj Nagar, Hubli-20.

Non-working days when work not permitted even on payment of overtime: Republic Day (26th January) and Gandhi Jayanti (2nd October).

POLICE/AMBULANCE/FIRE: Circle Police Inspector 116; City Police Station 33; District Superintendent of Police 7; Reserve Police Headquarters 18; Ambulance 19.

SHORE LEAVE: Crew members are allowed ashore provided not of Chinese nationality.

DEVELOPMENTS: Proposed to develop Port of Karwar into all-weather intermediate port, with 2 berths (the jetty 375 m. long) and 1 mechanical berth (ore berth, for vessels 40,000 d.w.t.), an approach channel and turning basin. Intended arrangements include ability accommodate up to 60,000 d.w.t. ore carriers, loading up to 8 million tons ore and 1.25 million tons other cargo per year. Also intended develop fishing harbour with facilities accommodate large-scale deep-sea fishing industry for 1 million tons fish per year. Also see "Cargo Gear".

Provision of Channel Marks:

1 Fairway Buoy.
10 channel marking buoys.
Provision of a mooring boat with equipment for maintenance of buoys.
Experimental dredging.
Dredging approach channel and turning basin.
Land acquisition for future expansion.
Diversion of present main road alongside port wharf.
Improvement of Binga/Karwar Road.
Provision of 2 berths and 1 mechanical berth for ocean-going vessels.
Main berth length 172 m., depth 9.75 m. and secondary berth length 122 m., depth 7.5 m.

AUTHORITY: Port Officer – Karwar, Port Office, Karwar, Uttar Kannada District, Karnataka State, India. *Tel:* Karwar 342: *Contact:* Port Officer, Karwar.

MADRAS: 13.06 N. 80.18 E. (See Plan)

PORT LIMITS: The seaward boundaries of the Port are lines joining the following points:

A. 13° 07′ 58.8″ N., 80° 17′ 57.9″ E.
B. 13° 09′ N., 80° 20′ E.
C. 13° 09′ N., 80° 22′ E.
D. 13° 03′ N., 80° 22′ E.
E. 13° 03′ N., 80° 20′ E.
F. 13° 13′ 54″ N., 80° 17′ 15″ E.

DOCUMENTS:

3 Private Property Lists.
3 Stores Lists (Bonded Stores).
3 Crew Lists.
Last Port Clearance.
1 Valid Derat Exemption Certificate.
1 Bill of Health (only if vessel has touched yellow fever areas).
3 Slop Chest Declarations.
3 Currency Declaration.
Passenger List (if applicable).

Ship's Papers:

Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
Ship's articles (if vessel is Indian or Commonwealth flag).
Ship's papers to be handed over to Agent's Representative for final entry of vessel in Customs House. Same returned to Master.

PILOTAGE: Pilotage compulsory, both inward and outward, also for purpose of shifting inside harbour. Master required to advise ETA at least 24 hours before arrival, when local Agents contact Port Authorities for arranging berthing. If any berthing delay, vessel has to anchor at Outer Anchorage. Vessels requiring Pilot fly "G" flag by day and 1 white light exhibited on a conspicuous point on ship by night. For departure from berth, vessel must call for Pilot 30 minutes before readiness to sail

ANCHORAGE: Vessels should anchor South of Latitude 13° 06′ N.

Also see "Notice" – "Instructions to Ship Masters".

Wreck: M.V. "Decan Pioneer" sank on 11th November 1985 in position 13° 05′ 52″ N., 80° 19′ 11″ E. (Masts are visible).

RESTRICTIONS: No restrictions of entry, both day and night. In Bharathi Dock berthing of tankers more than 50,000 d.w.t. while in a loaded condition is undertaken only during daylight hours, unberthing of ships of all sizes whether loaded or light is undertaken at all times.

Also see "Notice".

RADIO: Coast Station Madras Radio, call sign VWM. VWM operates throughout 24 hrs. Vessels with powerful transmitters can contact VWM on HF from Singapore, Mauritius or Aden. Information regarding weather distributed twice daily. VHF communication with pilot station available around the clock to transmit and receive berthing and other operational messages. Calling frequency Channel 16 and operating frequencies Channels 14, 12 and 10. Channel 12 is the port's working channel.

Weather Radar is installed on top of the new Madras Port Trust Administrative Office Buildings.

Also see "Notice" – "Instructions to Ship Masters".

RADAR/VHF: VHF communication available, see "Radio".

MAX. SIZE: *Maximum Permissable LOA:*

North Quay – 540 ft. (164.6 m.)
West Quays – No restriction.
South Quay 1 – 710 ft. (216.4 m.)
South Quay 2 – 500 ft. (152 m.)
South Quay 3 – 518 ft. (158 m.)
South Quay 4 – 500 ft. (152 m.)
South Quay 5 – 450 ft. (137 m.)
East Quay – 540 ft. (164.6 m.)
Moorings 1 and 2 – 700 ft. (214 m.)
Mooring 3 – 560 ft. (170.7 m.)

Outer Petroleum Berth: – 900 ft. (274.31 m.)

Jawahar Dock: Total available length 2,150 ft. (654 m.) on the East and West sides respectively with drafts up to 11 m. Breadth of Jawahar Dock entrance is 110 ft. (33.49 m.). It can accommodate vessel up to LOA 750 ft. (228.59 m.) and breadth 105 ft. (32.0 m.).

Bharathi Dock: Max. length 900 ft. (274.31 m.) and draft of 48 ft. (14.60 m.) for oil tankers using Bharathi Dock is in force. A second oil berth in the above dock is functioning since March 1986. Ore berth accepts vessels with draft up to 53 ft. (16.20 m.)

Container Berth: Max. LOA 900 ft. Max. draft 42 ft.

Moorings: No. 1 – max. draft 30 ft.
No. 2 – max. draft 30 ft.
No. 3 – max. draft 35 ft.

Max. draft in the enclosed harbour varies from 26 ft. (7.92 m.) to 35 ft. (10.67 m.).

Details may be obtained from the Deputy Port Conservator, Madras Port Trust, Madras – 600 001.

HEALTH: All vessels arriving from foreign ports have to apply for Pratique through their radio – not earlier than 12 hours and not later than 4 hours before arrival. Pratique message to be addressed "Quarantine Madras" and worded as required by Port Health Authorities.

The Pilot boarding the vessel grants Free Pratique if the vessel is healthy in all respects – answer to all health questions being negative.

In all other cases or if vessel is coming from yellow fever infected area within 30 days of departure or in case of any infectious disease on board, Port Health Officer boards vessel and after due inspection grants Pratique.

Telegrams should take the following form: Name of vessel; ETA, in hours and date. No monkeys on board; answer to all health questions, (ports touched in last 30 days with departure dates). Request Radio Pratique.

Port Health require to sight Derat and Vaccination Certificates when vessel due to leave before issuing clearance for Pilot and Customs who then issue Port Clearance.

TUGS: Join vessel just inside breakwater. Vessels usually use own lines. Tugs' lines are also used if required by Pilot.

BERTHING: Vessels berth at all times.

There are in all 18 general cargo/bulk cargo berths and 3 moorings. Drafts of these berths/moorings vary from 26 ft. (7.92 m.) to 35 ft. (10.67 m.).

BULK HANDLING FACILITIES: There are 4 berths, 3 in the Jawahar Dock and 1 in South Quay. Handling of iron ore has been discontinued in Jawahar Dock due to the operation of mechanised iron ore plant at the Bharathi Dock. Instead bulk cargo like barytes is handled.

An iron ore berth with modern mechanical loading facilities is in operation at Bharathi Dock with an air draft of 17 m. and rated capacity of 8,000 t.p.h. The berth can accommodate vessels of 130,000 d.w.t. with a max. draft of 53 ft.

The Bharathi Dock has the potential for accommodating 2 more berths one of which can be converted into a container berth.

A breakwater has been constructed extending Northwards from the North end of the old breakwater to ensure tranquil sea conditions in turning circle of Bharathi Dock.

CONTAINER HANDLING FACILITIES: There are 2 container berths with a quay length of 380 m. and max. draft of 12.8 m. Two heavy duty gantry cranes of 35.5 tons capacity under spreader have been provided.

The container parking yard has a capacity for stacking 5,200 containers and is served by 4 rubber-tyred transfer cranes of 35.5 tons capacity under spreader.

5 top lift trucks for 20 ft. and 40 ft. containers.

The container freight station with an area of 6,300 sq. m. has been provided for stuffing and unstuffing operations.

40 reefer plug points for refrigerated containers are available with a standby generator for giving continuous power supply to reefer containers.

STEVEDORES: A copy of Manifest for stevedores' required on board.

Working hours: 1st shift, 0600 – 1400 hrs. (Recess 1100 – 1130 hrs); 2nd shift, 1400 – 2200 hrs. (Recess 1900 – 1930 hrs.); 3rd shift, 2200 – 0600 hrs. (Recess 0200 – 0230 hrs.).

Rate of Discharge/Loading:

Grains, by hooks/derricks:
- Bulk: 300 tons per day per hook.
- Bagged: 300 tons per day per hook.
- By Vacs: 250 tons per Vac. per day.

Fertiliser: By hooks/derricks.
- Bulk: 200 tons per day per hook.
- Bagged: 300 tons per day per hook.

General Cargo: 150 tons per day per hook.
Liquid Cargo: About 150 t.p.h.

CRANES:

North Quay: 1×3 tons and 1×5 tons.
West Quay: 3×3 tons, 3×10 tons and 2×5 tons.
South Quay 1: 1×50 tons and 1×10 tons.
South Quay 2: 1×3 tons, 1×5 tons and 1×10 tons.
South Quay 3: 2×8 tons and 1×10 tons.
South Quay 4: 1×5 tons, 1×8 tons and 1×10 tons.
Jawahar Dock West: 7×3 tons, 1×5 tons and 4×10 tons.
Jawahar Dock East: 3×10 tons and 7×13 tons.
Jawahar Dock South wall: 3×3 tons.
One heavy duty floating crane of 120 tons available.

BRIDGES: There are 2 bridges for pedestrian traffic only. 1 swing bridge at the entrance of Jawahar Dock and another Bascule bridge at the entrance of boat basin.

MEDICAL: Advance notice for medical aid useful if vessel anchored/anchoring outside and not coming alongside, as it takes time to arrange for launch, etc. Medical assistance arranged easily if vessel alongside. Various hospitals and private nursing homes with modern equipment available. All crew members to be in possession of valid health cards in respect of inoculations/vaccinations against cholera, etc. Facilities for renewal available.

TANKERS: *Bharathi Dock – I:* B.D.I is equipped for handling crude, products and furnace oil. There are 5 marine loading arms of 12 in. diameter each. The rated discharge of each arm is 1,500 tonnes per hour. Three of these arms are earmarked for handling crude oil and all the three arms are connected to a 30 in. diameter pipeline. Two of the crude arms are also connected to the furnace oil pipeline having a diameter of 14 in.

The two product arms could be connected to either 14 in. diameter pipeline or to 20 in. diameter pipeline.

The present maximum permissible draft at the berth is 48 ft.

The berth is provided with fire fighting facilities consisting of remote control tower monitors, water curtains and fire hydrants, etc.

Bharathi Dock – III: There are 5 marine loading arms, out of which 3 are of 16 in. diameter and 2 of 12 in. diameter. The rated capacity of 16 in. is 2,500 tonnes per hour and that of 12 in. is 1,500 tonnes per hour. The distribution of the arms for handling crude, product and furnace oil are same as in B.D.I. These marine loading arms are fitted with hydraulic remote control quick connect and disconnect (QCDC) couplings.

The berth is provided with fire fighting facilities consisting of remote control tower monitors, water curtains and fire hydrants, etc.

B.D.III is equipped with quick release mooring hooks to facilitate casting off the mooring ropes by remote control.

The present maximum permissible draft at the berth is 48 ft.

Both berths are equipped with efficient communication system with main harbour.

Also see "Ship Operator's Report".

DENSITY: Varies from 1019 to 1025 according to season. No variation due to state of tide.

FRESH WATER: Available and can be supplied to vessels either through shore connections or by water barges (rate 40 t.p.h.). During Summer months due to scarcity of water, full requirements of vessel may not be possible.

FUEL: Heavy Oil, Marine Diesel Oil, High Flash High Speed Diesel Oil, conforming to the following specification limits are available from the Indian Oil Corporation Limited with 48 hours notice.

1)	Furnace Oil (Heavy Oil)	Viscosity 100° F	1500 seconds Redwood I
		or	180 C.St. at 50°C.
		Sulphur % by Wt.	4.5 maximum
		Flash point	66°C minimum
2)	Light Diesel Oil (Marine Diesel Oil)	Viscosity 100° F	2.5 to 17.0 C. St. (typical at 15°C. St.)
		Flash point	66°C minimum
		Sulphur % by Wt.	1.8
3)	High Flash High Speed Diesel Oil	Kinematic Viscosity	2 to 7.5 C.St.
		Flash point	66° C
		Sulphur % by Wt.	1

Lubricants – All the grades are available.

Note: Mode of Delivery – Heavy Oil by pipelines
Marine Diesel Oil/High Flash High Speed Diesel Oil by trucks.
No barge supplies.

CONSULS:

Sri Lanka	Tel. 476751	United Kingdom	Tel. 473136
France	Tel. 472131	U.S.A.	Tel. 473040/478912
Germany F.R.	Tel. 473593/471747	U.S.S.R.	Tel. 71112
Japan	Tel. 665594		

REPAIRS: All types of deck/engine repairs possible. Experienced and established marine workshops available.

DRY DOCKS: 1×40,000 d.w.t. and 1×5,000 d.w.t. Lifting capacities of 14,000 tonnes and 2,500 tonnes respectively.

SURVEYORS: Lloyd's Register, Indian Register and ABS. Standard cargo and marine survey services available.

GANGWAY/DECK WATCHMEN: Services of watchmen are compulsory and they can be engaged from Dock Labour Board.
OPENING/CLOSING HATCHES: Work of opening/closing of hatches usually depends on what Charter Party says and also type of hatches of vessel. Liner Term Vessels:- "MacGregor Type" – These types of hatches are opened/closed by the crew; but, if Owners/Master desires, rigging gangs may be hired for this work at Owner's expense. Ordinary – beams & hatch boards or pontoon type-opening/closing of this type of hatches is done by stevedores.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes and half-ounce tobacco per week can be held by each crew member. Wine/Spirit: 1 open bottle of spirit or wine per week can be held by each crew member.
CARGO GEAR: Vessel should be in possession of valid cargo gear certificate issued by competent authority. Port Dock Safety Inspector may inspect cargo gear before or during loading/discharging in spite of vessel being in possession of a valid certificate.
REPATRIATION: All facilities for effecting crew changes and arranging repatriation exist.
AIRPORT: The Madras Airport (Meenambakkam) about 15 miles from harbour and served by regular airlines.
TIME: GMT plus 5.5 hours.
HOLIDAYS: Declared by authorities are observed, but work completely closed on: Pongul, Republic Day, May Day, Independence Day, Mahatma Gandhi's Birthday and Deepavali.
POLICE/AMBULANCE/FIRE: Police 100; Ambulance 102; Fire 101.
TELEPHONES: Can be placed on board, but only on vessels at certain berths. All berths on West Quay, i.e. WQ 1, WQ 2, Centre Berth, WQ 3 and WQ 4, North Quay berth and berths on Jawahar docks (West) only, i.e. JD 1, JD 3 and JD 5.
SERVICES: All services available.
SHORE LEAVE: Crew members allowed ashore after securing shore passes issued by Port Security Officer. However, they must restrict themselves to city limits.
IDENTIFICATION CARDS: All crew members should be in possession of their respective CDC's/Z. Cards/Passports.
PORT REGULATIONS: Normal Port Regulations. No photography allowed in harbour except with Chairman of Port Trust's permission.
DELAYS: When there is heavy arrival of bulk grain and fertiliser, vessels may expect a delay of about a week or so.
SHIP SUPPLY SERVICE: Madras Port does not operate off-shore ship supply services either by the Port Authority or by private parties. However, certain private firms and individuals have been granted permits to ply their launches within the Port limits for the purpose of transporting ship's personnel, supply of provisions and stores for ships waiting at Outer Anchorage or for transporting sick crew members of ships.
DEVELOPMENTS: The Madras Port Trust have definite plans for the following schemes:
a) Extension of the present container berth Northwards by another 220 m., making a total container berth length of 600 m. Additionally, 2 shore gantry cranes and 4 tyre mounted transfer cranes will be provided. The capacity of gantry cranes and transfer cranes will be 40 tonnes under the spreader. This extension is likely to be completed by the end of 1990.
b) Madras Port is planning a satellite port at Ennore, about 12 km. North of the present Port, mainly for import of about 8 million tonnes of coal per annum for the North Madras Thermal Power Station. This satellite port is likely to be completed by 1994.

NOTICE:

Instructions to Ship Masters:

(1) No ship is allowed to enter the following area without a Pilot on board. This area is bounded by the following points:

a)	Lat. 13° 06.4′ N.	Long. 80° 18.7′ E.
b)	Lat. 13° 07.0′ N.	Long. 80° 19.7′ E.
c)	Lat. 13° 07.4′ N.	Long. 80° 21.7′ E.
d)	Lat. 13° 08.2′ N.	Long. 80° 21.7′ E.
e)	Lat. 13° 07.5′ N.	Long. 80° 18.5′ E.

(2) Pilot Boarding Area No. 1 for ships less than 230 m. in length is marked by the following points:

k)	Lat. 13° 06.5′ N.	Long. 80° 19.6′ E.
l)	Lat. 13° 06.3′ N.	Long. 80° 19.6′ E.
m)	Lat. 13° 06.3′ N.	Long. 80° 19.9′ E.
n)	Lat. 13° 06.5′ N.	Long. 80° 19.9′ E.

(3) Pilot Boarding Area No. 2 for ships of 230 m. in length or more is marked by the following points:

p)	Lat. 13° 07.2′ N.	Long. 80° 21.6′ E.
q)	Lat. 13° 06.8′ N.	Long. 80° 21.6′ E.
r)	Lat. 13° 06.8′ N.	Long. 80° 22.0′ E.
s)	Lat. 13° 07.2 N.	Long. 80° 22.0′ E.

(4) No ship is allowed to anchor within the Pilot Boarding Areas No. 1 and No. 2 without express permission from Port Control.
(5) Ships that are not berthing on arrival, should anchor South of Latitude 13° 06′ N.

Instructions to Ships Approaching Madras Harbour:
(6) Ships entering the harbour should have enough stern power to chec their headway within their own length.
(7) Ships embarking Pilot outside the harbour should have the pil ladder rigged on the land side, irrespective of the direction of the win
(8) All ships entering, leaving or shifting in the harbour are required t have the following minimum ballasted draft:

LOA (ft.)	*Draft Forward* (ft.)	*Draft Aft* (ft.)
500	10	15
600	15	20
700	20	25
800	25	30
900	30	35

(9) Ships bound for Madras should contact Port's Signal Station on VH Channel 16 as soon as possible and give the following particulars:
(a) Ship's name
(b) Nationality
(c) Name of Master
(d) Last Port
(e) Local Agents
(f) LOA
(g) Draft, Forward and Aft
(h) Summer Deadweight
(i) GRT
(j) NRT
(k) Nature of Cargo

(10) *Instructions to Masters during bad weather at Madras Port:* Whenever a depression/cyclone is formed in the Bay of Bengal, th Meteorological Office sends out weather bulletins and the Madras Por Trust hoists storm signals at her Signal Station in accordance with these weather bulletins. During such conditions, Masters of ships inside th harbour are advised to contact the Port Signal Station on VHF Channe 16 for receiving the latest weather bulletins and any further guidance i this regard. They are also advised to immediately put out extra moorin lines. In addition to this, if they experience any ranging of their ships a their respective berths, they should contact the Port Signal Statio immediately and have the ship's main engine ready. If the prevailin weather conditions so demand, the ships that are affected due to rangin at the berths would be taken out of the harbour.

Information regarding functioning of Madras Radio:
(11) (i) Calling/Watch keeping: VHF 24 hours on Channel 1 (156.8 MHz)
(ii) Passing messages by Madras Radio Ch. 26
Transmission: 161.9 MHz
Reception: 157.3 MHz
(iii) On W/T Watch keeping: 500 kHz.
Transmission on 485 kHz.
Reception as per Ship's working channel.

SHIP OPERATOR'S REPORT: January 1987.
General: Madras is an artificial harbour on the coast of Tamilnadu State Protected from sea and swell by 2 breakwaters, but is vulnerable t cyclonic weather. The oil berth is located in Bharathi Dock. The Madra Refinery receives crude from Bharathi Dock Oil Terminal.

Lube and non-flammable liquid cargo are also handled at West Qua No. 1/North Quay – which is also a general cargo berth.

All terminals and berths within the port limits are owned and operate by Madras Port Trust.
Communications: All traffic by W/T via Madras Radio (call sign: "VWN") When within VHF range, communication with Madras Pilot can b established on VHF (Channels 16 and 14), which is located at the Por Signal Station.

Laden tankers should include in their initial ETA message: Deepes draft, actual displacement, cargo quantities, Shipper(s), Consignee(s and name of local Agent.

The above information should be copied to:
1. Agent Madras.
2. Indian Oil Madras. Telex: 041-7168 for SR S & D Manager.
3. Indlub, Madras. Telex: 041-6345.
4. Indian Oil Bombay. Telex: 011-71656 for SR Shipping Manager.

ETA should be subsequently confirmed (or revised) 3 days, 2 day and 1 day prior to arrival.

Radio Pratique is permitted and the following information should b cabled to "Quarantine Madras", maximum 12 hours and minimu 4 hours prior arrival:

AAA	Name of vessel and call sign.
BBB	ETA Madras – local time.
CCC	Maritime Declaration of Health has negative answers to a questions.
DDD	No monkeys on board.
EEE	Names and dates of ports visited within last 30 days.
FFF	Ship healthy – request Free Pratique.

Approaches: When within VHF range, call "Madras Pilot" on Chann 16 stating ship's name, ETA and deepest draft. There are 2 waitin areas for Pilot which are clearly marked on the chart. The first waitin area is for ships over 11 m. draft and the second is for ships under 11 m draft. If it becomes necessary to anchor, Madras Pilot will advise th anchorage position. The anchorage has good holding ground but i exposed to sea and swell.

Prior to the Pilot boarding, the pilot office will advise the vessel b VHF, at short notice, to proceed to the waiting area where the Pilot wi board the vessel. Pilotage is compulsory. The pilot boarding area i about 1 km. to 1.5 km. seaward of Fairway Buoy.

The depth of water in the Approach Channels is as follows:
Outer Channel = 19.5 m.
Inner Channel = 18.9 m.
Turning Channel = 18.3 m.
Approach to Berth in Bharathi Dock = 17.7 m.

Permissible Draft and Length of Vessels: Oil tankers carrying crude and/or refined petroleum products normally berth at Bharathi Docks Berths I, II and North Groyne Mooring, while tankers carrying lube oil berth at West Quay I.

Oil tankers may berth at Bharathi Dock II, which is meant for loading of iron ore, if there is no vessel loading ore. Similarly, vacant container terminal berths can be used by tankers, but only for transhipment from another vessel to daughter vessel and shore discharge for all products with flashpoint above 40°C.

The berth parameters and products handled are as follows:

Name of Berth	*Maximum size of vessel that can safely berth*			*Products handled*
	Length (m.)	*Beam* (m.)	*Draft* (m.)	
Bharathi Docks I (Exclusive Oil Jetty)	345	No restriction	14.6	Crude, fuel oil, MDO, naphtha, motor
Bharathi Docks II (Iron Ore Jetty) Oil tankers are handled at this berth when there is no iron ore vessel	345	No restriction	15.0	Regular and premium gasoline, kerosene Aviation turbine fuel, high speed diesel
Mooring (North Groyne)	210	No restriction	9.1	Fuel oil, MDO, premium gasoline, kerosene, aviation turbine fuel, high speed diesel
West Quay I/ North Quay	152.4	No restriction	7.9	Lube oil
Container Terminal Berth	330	No restriction	13.4	Lube oil

Bharathi Dock Oil Terminal: Bharathi Dock is an extension of old Madras Harbour, built mainly for the export of iron ore and import of crude oil. Berth I is located along the inside of breakwater in the form of "T" head jetty with 2 mooring dolphins each side of the berth. There are 2 berths - Bharathi I – exclusively for oil tankers and Bharathi II – designed for ore vessels but can be used by oil tankers, when the berth is vacant.

There is also a mooring berth for oil tankers inside the main harbour where vessels are secured with 2 anchors, and stern to the harbour wall/North Quay Breakwater.

Bharathi Dock I is also used for ship-to-ship transfer as well as for ship-to-shore transfer. Both operations are performed while alongside the dock.

General Cargo Berth Tanker Handling: The West Quay I/North Quay share a common facility which is connected to tanker with a 6 in. hose to receive lube.

AUTHORITY: Madras Port Trust, Rajaji Salai, Madras – 600 001. *Tel:* 560161 and 562201 (24 hours). *Telex:* 041-331. *Cables:* Porttrust, Madras. *Contact:* Deputy Port Conservator.

AGENT: G.A.C. Shipping (India) Pvt. Ltd., P.O.Box 1804, Madras 600001, India. Tel: 522423, 521588. Telex: 418732 ("GAC IN"). Cables: "Gacshipmas", Madras.

MALPE: 13.21 N. 74.42 E.

ANCHORAGE: The port is an open roadstead. Anchorage can be obtained at a distance of 0.81 km. N.W. of Daria Bahadur Ghur Island. Depth at Anchorage – 4.5 fathoms.

BERTHING: With the construction of two breakwaters, the channel in between is maintained at about 4.50 m. at LWOST. The maximum tidal range is 1.52m.

Length of Jetties: 1st 33.53 m. 2nd 5.79 m.

FRESH WATER: Not available.

FUEL: There are oil storage depots in the Port area where HSD oil can be supplied to small vessels. For ocean going vessels there is no bunkering facility.

AIRPORT: Nearest at Bajpe (Mangalore).

TIME: GMT plus 5.5 hours.

HOLIDAYS: Holidays declared by the Collector of Customs, Bangalore.

POLICE/AMBULANCE/FIRE: Malpe Police Station Tel: 21999 Udipi. Fire: Tel: 20333 Udipi.

BANKS: Syndicate Bank and Corporation Bank, Malpe P.O., Via Udipi, South Kanara Dt., South India.

GENERAL: There is a small shed for storage of cargo. Storm warning signals are hoisted on the flagstaff.

AUTHORITY: Port Office, Malpe, South Kanara Dt., South India. *Contact:* Mr. M. Devawas Shetty, Deputy Port Conservator, *Tel:* 20592 (Udipi)

MANDVI: 22.49 N. 69.21 E.

DOCUMENTS: Arrival: Arrival Report with ship's details, Voyage Memorandum, Crew Lists, Stores Lists.

Departure: Departure Report with ship's details, Export General Manifest, Certificate of Cargo Tonnage Loaded.

PILOTAGE: None. All vessels anchor in stream.

RESTRICTIONS: Vessels anchor in open roadstead in 3 – 5 fathoms, 2 – 2.5 miles from shore. Vessels of 9 ft. draft can reach wharves at HW and vessels drawing 12 ft. can reach Albert Edward Breakwater. Vessels having 750 tons cargo only can enter port during high tide. Highest tidal range 14 ft., average range 10 ft. Current 2 knots during fair season.

HEALTH: Government Medical Officer attends as Health Officer.

RADIO: No radio. All messages delivered through Kandla. Ship to shore radio messages delivered through VHF at stipulated times.

TUGS: Services optional. 3 tugs and 1 launch. Charges based on time and horse power.

STEVEDORING: Arranged by Agent with Port Authority.

MEDICAL: 24 hours notice required of any medical requirements.

FIRE PRECAUTIONS: Fire extinguishers are available at the port. Fire fighter is available at the Port workshops. Smoking strictly prohibited in port area.

WATCHMEN: Arranged through Agents.

HATCHES: Opened and closed by crew.

CERTIFICATES: Non-carriage of dangerous cargo, Cargo Gear Certificates, Statement that no passengers carried.

CUSTOMS ALLOWANCES: No restrictions for crew of coastal vessels. Stocks of tobacco, wine and spirits to be declared to Customs. Wines and spirits prohibited in Gujarat States but Master permitted daily quota by Customs Authorities.

REPATRIATION: No facilities.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Usually possible to arrange work on holidays.

POLICE/AMBULANCE/FIRE: Police 8; Ambulance 32; Fire 10.

SHORE LEAVE: Crew of coastal vessels only allowed ashore subject prior permission from Captain of the Port.

DELAYS: Delays to be expected in supply of cargo at times of lowest water.

GENERAL: Gulf of Kutch Ports, viz. Mandvi, Mundra, Jakhau and Koteswar administered by Chief Executive Officer and Vice-Chairman, Gujarat Maritime Board, Ahmedabad. Mandvi located on Southern coast Gulf of Kutch at mouth of River Bukmavati, seasonable, tidal and intermediate ports.

AUTHORITY: Office of the Deputy Executive Engineer (Civil) and Port Office, Mandvi-Kutch, Gujarat Maritime Board, Mandvi-Kutch, India 320455. *Tel:* 33 (Office), 40 (Residence). *Cables:* Portal Mandvi-Kutch. *Contact:* Port Officer, Mandvi-Kutch.

MANGALORE (Minor Port): 12.55 N. 74.52 E.

PORT LIMITS:

North:	A line drawn due West from the Northern boundary pillar on the seashore about 740 yards from Sultan's Battery to 9 fathoms of water.
South:	The line drawn due West from the Southern boundary pillar to the seashore, about 1,000 yards below the marine yard to 9 fathoms of water.
West:	The 9 fathom line between its intersections with the lines above defined as the Northern and Southern limits.

DOCUMENTS:

Crew Lists (6 copies).
Crew's Declarations for Customs (4 copies).
Stores Lists (4 copies).
Currency Declaration (2 copies).
Import Manifest inclusive of Deck Cargo and bottom cargo (3 copies).
Bill of Lading (1 copy).
Ship's particulars inclusive of service stand (2 copies).
Declaration of opium, dangerous drugs, gold, arms, ammunitions and explosives, monkeys on board, last and next port of call (2 copies).
Valid Safety Equipment Certificate.
Valid Construction Certificate.
Valid Radio Certificates.
Valid Certificate of Registry.
Derat Certificate.
Vaccination Certificates.
Declaration of Health.
Arrival report and Port and Light dues receipts (2 copies).

PILOTAGE: Compulsory. ETA must be informed at least 48 hours ahead of arrival. In the message of ETA the following information must be included:

(a) Name.
(b) Nationality.
(c) Call sign of the vessel.
(c) LOA (draft, forward and aft), g.r.t. and n.r.t. of the vessel.

ANCHORAGES: Open roadstead. Vessels anchor in 7.32 m. to 10.98 m. due West of entrance and are loaded and discharged by lighters. Bar situated due West of entrance. Depth of bar 2.13 m. LWST.

RESTRICTIONS: No night pilotage.

HEALTH: Vessel arriving from foreign country sends radio message in code or otherwise to respective Agents who contact Port Health Officer accordingly. If vessel from yellow fever area Master should give prior notice to Agent to arrange for Mosquito Party from Cochin to come to Mangalore and board ship on arrival. If suspected or infected, vessel should anchor not less than 0.5 miles from all other vessels and notify Port Authorities of situation either by radio or through signal station.

RADIO: Call sign VWL on 500 kHz and 438 kHz working frequency. Tel: 24300.

TUGS: 1 Port Trust tug (210 h.p.) and 1 launch and 2 private tugs capable of towing over 600 tons each are available.

CRANES: 1×1 ton and 1×5 tons.

STEVEDORES: Stevedores available. Average loading/discharging rates per day:

(a) Iron ore 400 tons per hook (weather permitting).
(b) Fertiliser or wheat bags 200 tons per hook (weather permitting).
(c) General cargo bagged 200 tons per hook (weather permitting).

MEDICAL: 24 hours notice necessary to arrange for a doctor on board. Government Hospital and Nursing Homes available.

DENSITY: Density of 1022/3 throughout year except in September (immediately after Monsoon at beginning of shipping season) when density about 1016.

FRESH WATER: Supplied by water barge at rate of 110 tons per trip with 48 hours prior notice. Cost of supply inclusive of all charges except crew overtime on holidays. Minimum order 35 tons.

FUEL: Not available.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Stevedores or ship's crew, whichever to ship's advantage.
CARGO GEAR: Derricks and boat devices to be hoisted in when not required to prevent contact with masts and sailyards of lighters alongside. Advisable that lifeboats be lowered only on non-working side.
CERTIFICATES:

- Ship's Registry.
- Derat Certificate.
- Articles of Agreement.
- Dock Safety Register (cargo gear).
- Radio Telegraphy Certificate.
- Load Line Certificate.
- Port Clearance from last port.
- Bill of Health.
- Safety Equipment Certificate.

CONSULS: None.
REPAIRS: Minor repairs to engines and gear carried out by auto-workshops.
DRY DOCKS: Small dry dock, maximum capacity 450 d.w.t. Dimensions, 110 ft.×30 ft. Depth on sill 8 ft. at MHWS. For minor repairs only.
SURVEYORS: Qualified Cargo Survey Agencies are available.
Surveyors available for Lloyd's Register, American Bureau, Bureau Veritas, etc.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 50 grams tobacco per week. Wine and spirits: 950 ml. per week.
REPATRIATION: Can be arranged by ship's agents or at shipping office for Indian crew.
AIRPORT: Bajpe – 20 km. away. Daily air service available to Bombay to connect with international flights.
TIME: GMT plus 5.5 hours.
HOLIDAYS: 26th January, Republic Day; 15th August, Independence Day; 2nd October, Gandhi Jayanthi; and other local holidays declared by Kanara Chamber of Commerce and Industry.
POLICE/AMBULANCE/FIRE: Tel: 100/102/101.
TELEPHONE: No arrangement for placing telephone on board.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Shore passes are issued.
DELAYS: Adverse bar conditions necessitate stopping work for bad weather.
EMERGENCY CO-ORDINATION CENTRE: Relay information to Port's Signal Station through New Mangalore Port.
BANKS: State Bank of India, Main Branch, Mangalore 575 001.
GENERAL: *Weather:* During monsoon, mid-May to mid-September no communication with shore and port is officially closed. There is an All Weather Major Port at Panambur (New Mangalore Port) 9 km. North of roadstead.
Tides: Range of tide 1.22 m. to 1.52 m.
Lighters: Approximately 25 lighters are available with average capacity of 45 tons each and 3 motor launches. Depth at quay 2.44 m. LW.
AUTHORITY: Captain A. J. Lobo, Port Officer, Old Mangalore Port, Mangalore 575 001. *Tel:* 26174 (personal), 25031 (residence).
Shri K. S. Shetty, Port Engineer, Old Mangalore Port, Mangalore 575 001. *Tel:* 24814 (personal), 24815 (residence).

MORMUGAO: 15.25 N. 73.47 E. (See Plan)

PORT LIMITS: Roughly up to 10 fathom line running North and South from Cabo to Grand Island. Vessel is considered "arrived vessel" when she comes under direction of Signal Station.
DOCUMENTS:

- 10 Crew Lists.
- 10 Passenger Lists, if any.
- 3 Copies of Manifest.
- Last Port Clearance.
- 1 Bill of Lading in case of imports.
- 3 Stores Lists.
- 3 Personal Property Lists.
- 1 Letter of Authority to Agents addressed to Asst. Collector of Customs (prepared on arrival).
- 1 Arrival Report to Immigration Officer.
- 1 Customs Declaration.
- 1 Inward Clearance Certificate.
- 1 List of Particulars.
- 1 Deck Cargo Certificate.
- 1 Arrival Report.

Last 7 items to be signed by Master in port after arrival.
Ship's papers: Documents placed at disposal of port:

- Ship's Registry.
- Derat Certificate.
- Safety Equipment.
- Load Line.
- Radio Telegraphy.
- Indian Light Dues.
- Annual Cargo Gear Certificate.
- Safety Construction Certificate.

PILOTAGE: Compulsory. ETA required at least 48 hours before arrival to order Pilot. Call Pilot by international code signals on arrival at signal station or contact by VHF Channel 16.
Pilot launch shows the Pilot flag. In fair weather Pilots board West of Entrance Buoys. In bad weather, Pilots guide vessel from launch until boarding possible. Pilot launch leaves from Inner Harbour with Pilot and is not stationed at any particular position. International Regulations for Pilots' ladders applicable. Vessels awaiting Pilot may anchor 2 miles West of Channel Buoy No. 6.

RESTRICTIONS/MAX. SIZE: Pilotage around the clock during the fa weather season (October – May). Draft restricted. Deep-laden vesse await high tide. Max. draft permissible 13.0 m. (with tide).
Draft particulars for incoming ships to berths as detailed below.

Berth No.	*Max. Draft* (m.)	*Max. Length* (m.)
4	8.23	168
5	8.23	
6	8.23	220
8	12.00	248
9	13.00	305
10	10.00	203

Vessels loading West of breakwater in fair weather: No restriction o size or draft.

HEALTH: International Regulations apply. Pratique automatic whe calling from another Indian port. Pratique granted by Port Health Office by radio. Telegraphic Pratique can also be obtained from Port Heal Officer cable address "Quarantine Mormugao".
Master should send quarantine message not less than 4 hours an not more than 12 hours prior to arrival indicating:

1. Name of ship.
2. Expected date and time of arrival.
3. My Maritime Declaration of Health has negative answers to all Health Questions or ZT or My Maritime Declaration of Health ha a positive answer to question (indicated by complements) or Z (indicated by complements 1 – 6).
4. List of ports of call with dates of departure during last 30 days
5. Have or have not monkey on board.
6. Have or have not any person on board embarking at Ade Djibouti or Yemen.

Request Radio Pratique.

RADIO: Goa Radio, call sign VWG. Operating continuously on 500 kH 417 kHz, and 2182 kHz. Communication range 100 miles.
VHF radio telephone station at headland signal station, call sign Go Port, calling Channel 16, working Channels 12, 10 and 14 (24 hours).
Ships desiring to contact port on VHF should establish contact b means of *(a)* light signals, *(b)* hoisting "Z" flag, *(c)* blowing "Z" on whistl or siren.
Port VHF station attracts attention of desired ship by hoisting "Z" fla with call letters of ship or by light signalling.
VHF service restricted for port operation, ship's emergencies an movements. All messages to be addressed to Harbour Master. Thi party communication not allowed.
TUGS: 4 tugs available with 30 ton bollard pull. Tugs usually used insid breakwater. Normally push, but when towing, use ship's lines.
BERTHING: Deep loaded incoming vessels berthed 2 hours before HW Vessels also use anchor and quarter line to mooring buoy to keep o berth.
Berth No. 10: New multi-purpose general cargo berth. Length 250 m Depth alongside 11.0 m.
BULK HANDLING FACILITIES: *Ore Berth (Berth No. 9):* Provided wi a mechanical loading plant of a rated capacity of 8,000 tonnes/p.h. Th facility, presently capable of fully loading 60,000 d.w.t. vessels i designed to cater for 100,000 d.w.t. vessels after further dredging o entrance channel, turning circle and berth. The channel is presentl dredged to −13.7 m. and berthing basin to −13.1 m. Synthetic rope only to be used for mooring.
Berth No. 6: Equipped for mechanical handling of iron ore. Loading rat about 750 t.p.h. At present vessels of 30,000 d.w.t. with a draft of 8.23 m can be accommodated.
Ore Transfer in Stream: Carried out between October and May (fa weather). Vessels are loaded or topped-off to a draft of 20 m. Fou floating storage vessels available, capacity 150,000 tons – 200,000 tons rates 950 t.p.h. – 3,000 t.p.h.
STEVEDORES: Original ETA of 48 hours and a definite ETA of 24 hou required and Master should indicate stowage and gangs required befor arrival, also how derrick booms must be arranged so as to enab stevedores to arrange same on arrival.
MEDICAL: Hospital facilities for any serious sickness and po ambulance is available around the clock.
TANKERS: Discharge line 35 cm. No loading facilities. Permissible dra in fair weather 12.0 m. at Oil Berth No. 8. Max. LOA 248 m. Dischar facilities at Berths No. 4 and No. 5 for MEG and caustic soda lye an loading facilities for molasses. Depth 8.5 m.
DENSITY: Salt water 1025 – slightly fresh during monsoon season.
FRESH WATER: Available alongside berths also from 200 tons capac barge. Pumped by hose at 20 t.p.h. at berth, and 30 t.p.h. from barg Sometimes restricted to 50 tons maximum if supply is limited.
FUEL:

Grades	*Viscosities*
High speed diesel oil	Less than 45 Redwood
Light diesel oil	41 ,,
Furnace oil (also known as light fuel oil)	of 623 ,,

48 hours advance notice required.
FIRE PRECAUTIONS: During discharge of oil tanker, great care tak that no naked lights are visible nearby. Movements of unauthoris persons at point of discharge strictly restricted. Ships alongside or a to a distance of 100 ft. are advised not to emit smoke through funn Round the clock standby duty carried out by Fire Service, around tank till completion of cargo discharge.
REPAIRS: No major repairs. Minor repairs only and no underwa welding facilities.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Necessary to have watchmen in cas of loading general cargo to protect goods. In case of loading iron or no watchman required.

OPENING/CLOSING HATCHES: Usually by crew, unless contrary to Charter Party.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per crew member per week. Wine and/or Spirit: 4/5ths of bottle per week for each member of European crew. 2/5ths of bottle per week for each member of Asian crew as per practice.

REPATRIATION: Facilities exist for changing and repatriating crew.

AIRPORT: Approx. 7 km. from harbour. One local flight daily to Bombay. No international flights from Goa and all outgoing foreign passengers have to be repatriated via Bombay.

CARGO GEAR: Certificates to be valid.

TIME: GMT plus 5.5 hours.

HOLIDAYS: New Year's Day, Republic Day, Gudi Padva, Good Friday, May Day, Id-Ul-Fitr, Independence Day, Ganesh Chaturthi, Mahatma Gandhi's Birthday, Idu's Zuha, Diwali, Muharram, Feast of St. Francis Xavier, Goa Liberation Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Police 2234 through Postal Exchange; Ambulance (Health Centre) 2454 through Postal Exchange; Fire 222 or 223 through Port Exchange and 2300 through Postal Exchange.

TELEPHONES: No arrangements for installation of telephones on board.

SHORE LEAVE: Crew members allowed to go on shore with Police landing pass.

IDENTIFICATION CARDS: Not essential but according to Immigration Rule temporary Police landing pass issued to each crew member going on shore, valid for municipal area of Vasco town; if valid passport is possessed.

AUTHORITY: Mormugao Port Trust, Mormugao Harbour, Goa, (India) 403803. *Tel:* 2725-2499. *Telex:* 0191-219. *Cables:* Harbadmin Mormugao. *Contact:* Captain V. S. Gopinath, Deputy Conservator. Captain L. Rodrigues, Harbour Master.

MUNDRA: 22.54 N. 69.42 E.

LOCATION: In Gulf of Kutch near Navimal Lighthouse, about 2 miles inside Bocha Creek. Port is about 6 miles West of Mundra town. Salt exporting port open for deep sea and coastal traffic. Vessels calling Mundra anchor in open roadstead 2 miles from shore. Vessels of 8 ft. draft can berth alongside jetty. Highest tidal range 17 ft. Current parallel to coastline running about 3 knots.

AUTHORITY: Assistant Conservator.

NAGAPATTINAM: 10.45 N. 79.50 E. (See Plan)

DOCUMENTS: To be completed by Masters of vessels on arrival:

8 Crew Lists.
8 Passenger Lists.
3 Form of Import Manifests of Stores.
3 Lists of articles in slop chest.
3 Private Property Declaration of the Crew.
3 Manifests.
3 Bills of Lading.

To be handed to Agents:

Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Radio Certificate.
Last Port Bill of Health.
Last Port Clearance.

PILOTAGE: No pilot station, being open roadstead port. Vessels not piloted to anchorage.

ANCHORAGE: Vessels anchor according draft and prevailing weather conditions. In fine weather, good anchorage in depths of 3.75 to 6 fathoms with lighthouse bearing 281° to 255°. Holding ground, sand and mud, good. Agents, in consultation with Port Authorities, signal Master on arrival of vessel, anchorage position for guidance.

MAX. SIZE: No restrictions. Vessels choose anchorage according to draft.

HEALTH: On arrival Master to signal local signal station, addressed Port Health Officer stating vessel arrived and no sick person on board. Agents then obtain Free Pratique from Port Health Authorities. In event any person having chicken-pox on board, advisable that Master informs Agents sufficiently in advance to enable them make necessary arrangements for Port Health Officer to board vessel on arrival and obtain Free Pratique after Port Health Officer is satisfied that isolation arrangement on board adequate.

RADIO: Madras Radio or Colombo Radio. Send ETA to local Agent 48 hours before arrival.

VHF: Port Radio Station on Channels 16, 12 and 14.

TUGS: 1 tug of 45 h.p. and 1 motor launch of 30 h.p. belonging to the Port Department are available, for towing lighters. Launches owned by private owners are also available for towing lighters.

BERTHING: Open roadstead port. No berths. A mobile crane of 4 tons capacity is available in the port for handling heavy cargoes.

STEVEDORES: Port usually handles fertiliser imported on Government of India account and rate of discharge per day about 750 to 1,200 tons. Advisable that ETA of vessel is passed to Agents at least 2 days in advance to enable them to advise receivers to arrange necessary gangs.

MEDICAL: No advance notice required unless sickness of serious nature when Medical Officer boards vessel on arrival. In case of sickness to officers or crew, Medical Officer boards vessel or if in condition to go ashore, necessary arrangements made to take sick crew to Doctor. District Headquarters Hospital with all medical facilities available. Special wards available for sick members of crew. Vaccination, inoculation against yellow fever, cholera, plague, etc., can be arranged.

DENSITY: 1025.

FRESH WATER: Available in limited quantities and dependent upon port getting continuous supply from municipality. 2 tanks of 14.5 tons capacity placed in lighter are sent alongside vessel and a petrol-driven pump is used to pump up water from tanks into vessel.

FUEL: Diesel oil available in a limited quantity.

CONSULS: None.

REPAIRS: Minor repairs in engine room and on deck can be effected. Chipping and painting can also be arranged.

DRY DOCKS: None.

SURVEYORS:

1. Cargo inspectors not available.
2. Lloyd's Register and American Bureau are in Madras. Salvage Association not available.

GANGWAY/DECK WATCHMEN: In the interest of vessel, 2 gangway and deck watchmen daytime and at night to be employed to avoid pilferage.

OPENING/CLOSING HATCHES: Opening and closing of hatches on arrival of vessel before commencement of discharge and on completion carried out by stevedores. Time used for opening and closing of hatches not counted.

CUSTOMS ALLOWANCES: Tobacco, 1 carton per week per crew member. Wine and Spirit, Whisky or brandy 1 quart each member for a week. No restriction for beer as the issue is based on weather, etc.

REPATRIATION: Facilities available for effecting crew changes and arrangements can be made for repatriation.

AIRPORT: Nearest airport Madras, served by regular airlines.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Observed as declared by Authorities. Vessels work on Charter Party and Government holidays but time not counted. No closed holidays but overtime charged for any work done on Government holidays and on Sundays.

POLICE/AMBULANCE/FIRE: Police 2267; Ambulance 2299; Fire 2299. The Police and Customs Departments maintain their own W/T stations which can be contacted or utilised at times of emergency.

EMERGENCY CO-ORDINATION CENTRE: The information should be passed on in case of a vessel in distress to the Maritime Operations Room/Sector Search and Rescue Co-ordination Centre as "Life-Saving Call" to Madras Radio for this area.

Call Sign:	VWM MADRAS RADIO
Frequency:	500 kHz 2182 kHz
Time:	Continuous.

SERVICES: Hatch cleaning after discharge of cargo can be carried out.

BANKS: American and European banks are not available at Nagapattinam town, but are available in Madras.

STORING: See "Prelims".

1. Ship's stores to be sent to vessels are loaded into lighters from port wharves, as Nagapattinam is an open roadstead port, having no berths for mooring vessels.
2. Stores can be taken from lighters both during loading and discharging.
3. Trucks can proceed only up to the wharves of the port. The approximate distance from wharves to the ship depends upon the place of anchoring of the vessel. It will be about 2 to 3 nautical miles.
4. Fork-lifts are not available.
5. Necessary shipping bills are to be filed with the Port and Customs Offices before taking in stores from the shore to the vessel.
6. Local riggers may be employed.

SHORE LEAVE: Officers and members of crew allowed to go ashore and necessary passes obtained by Agents.

IDENTIFICATION CARDS: Needed.

DELAYS: Usually no delay in anchoring vessels and generally all formalities including survey carried out on vessel's arrival. If vessel arrives between 0600 and 1400 hrs., she commences discharge same day.

GENERAL: No regular launch service between ship and shore. Agents hire out private launch and obtain permission from port office to ply launch between ship and shore, to facilitate officers and crew to go ashore and for Doctor, Agent and Port Health Officer. Port Authorities do not permit plying of launch after 1800 hrs. 3 trips arranged for launch to go to vessel and back from 0600 to 1800 hrs. every day weather permitting.

AUTHORITY: Port Officer and Harbour Master, Port Office, P.O. Box No. 6, Nagapattinam, PIN 611001, Tamil Nadu State, India. *Tel:* 2255 (office), 2363 (personal), 2285 (residence). *Cables:* Port Officer, Nagapattinam. *Contact:* Port Office and Harbour Master.

NAVLAKHI: 22.57 N. 70.27 E.

DOCUMENTS:

Arrival:

- Last Port Clearance.
- Bill of Health/Maritime Declaration of Health.
- Customs Arrival Report.
- Port Arrival Report.
- Agent's Arrival Report.
- List of Same Bottom Cargo.
- Crew List (6 copies).
- Import General Manifest.
- Light Dues Receipts (in case the last port of call being Indian port).
- Stores List & Private Property List (8 copies each).
- Misc. Declaration.

Departure:

- Port Clearance (handed over by Customs).
- Bill of Health.
- Port Departure Report.
- Agent's Departure Report.
- Income Tax Clearance Certificate (in case of export cargo).

PILOTAGE: Not compulsory. If required an experienced local guide provided by Port Authorities. In such cases Pilot meets vessel at Tuna Buoy station about 19.5 miles from port.

ANCHORAGE: Open roadstead port. Vessels work in stream. 2 vessels can be brought to inner anchorage and work conveniently in good weather. In case a third vessel arrives, it has to anchor at Buoy No. 5 until one of the vessels sails from inner anchorage. During non-monsoon times vessels can be moored at Buoy (Navlakhi) No. 5. Chart of the approaches is No. 2017.

RESTRICTIONS: Night navigation not provided. Generally vessels' movements during daytime high water period. Vessels should arrive Tuna Buoy 3 hours before high water in daytime.

HEALTH: Port Health Officer available at Mahendrasinghji Hospital, Morbi.

RADIO: Radio messages intended for this port should be addressed either through Kandla or Bombay Radio Stations.

VHF: To be installed in the near future.

TUGS: Four tugs available, 150 h.p., 370 h.p., 350 h.p., and 240 h.p.

CARGO HANDLING: Ships lie at anchor in the stream about 2.0 km. from shore and cargo is shipped/landed through lighters. There are 17 barges of 100 tons capacity each. There are 17 godowns of 17,000 sq. m. floor area to store the cargo passing through ports. There are four 3 tonnes capacity cranes two of 5 tonnes capacity, and one of 12.5 tonnes capacity.

STEVEDORES: At least 24 hours notice to arrange gangs. Rate of loading and discharging for grains and fertilisers about 1,600 tonnes a day if 1 ship working; in case 2 vessels working simultaneously, combined average of about 1,600 tons can be maintained in fair weather days.

MEDICAL: Small dispensary exists under control of Medical Officer. Qualified extensive medical facilities available at Morbi which is 44 km. away or Rajkot about 109 km. Health Officer comes from Morbi to attend vessels, if required.

DENSITY: 1025.

FRESH WATER: Supplied only in small quantities. 1 barge with carrying capacity of about 49 tons a trip. Due to very low pressure in pipe-lines, minimum 12 hours to fill barge.

FUEL: Not available. Can be arranged by Agents.

CONSULS: None.

REPAIRS: Workshop for repairs to port equipment and urgent repairs of minor nature can be carried out.

DRY DOCKS: Dry dock for repairs to port service units is under construction.

GANGWAY/DECK WATCHMEN: Necessary to appoint watchmen on board to avoid possible thefts.

OPENING/CLOSING HATCHES: Depends upon terms of working. Local stevedores generally attend to this operation but charge to vessel (Owners) in case these operations are vessel's account.

CERTIFICATES:

- Load Line Certificate.
- Safety Equipment Certificate.
- Safety Radio Certificate.
- Ship's Register.
- Derat Certificate.

REPATRIATION: Crew being repatriated from this port would be sent to Jamnagar or Rajkot (after Customs examination) where facilities are available.

AIRPORT: Navlakhi not connected by air. In case of emergency, Jamnagar or Rajkot nearest airports.

TIME: GMT plus 5.5 hours.

HOLIDAYS: The port holidays are taken as office holidays and non-working days as Charter Party Holidays. Except for non-working days, overtime work will be carried out on payment of overtime.

POLICE/AMBULANCE/FIRE: Checkpost Police Station without telephone.

TELEPHONES: Few important offices are connected with telephones, and no telephone service can be provided on board vessel.

SHORE LEAVE: The crew members are allowed ashore on showing Identification Cards to Customs and Ports.

IDENTIFICATION CARDS: Customs examine and issue pass to land. But if crew go to suburbs (beyond Morbi which is 30 miles away), identity cards should be carried.

DEVELOPMENTS: A new lighter-wharf measuring 102 m. × 8 m. with three approaches in Sue-Side Creek is under construction so as to work lighters all round the clock.

AUTHORITY: Port Officer, Port Officer's Office, Navlakhi Port.

NEENDAKARA: 08.56 N. 76.33 E.

SHIPMASTER'S REPORT: July 1985.

Neendakara is a seasonal port and operates only from mid-Novembe to mid-April. About 5 to 6 deep sea vessels load per year. Only expo cargo of mineral sands is loaded i.e. (Silliminite, Illuminite and Zircon The shippers are Indian Rare Earths Limited, which is a Government o India undertaking.

PORT LIMITS: There is no defined port limit as such. For the purpos of Charter Party a vessel is considered as an "arrived ship" from th time of dropping anchor.

DOCUMENTS: See "Cochin".

PILOTAGE: Neendakara is an anchorage port hence no Pilots availab

ANCHORAGE: There is no defined anchorage. We anchored 2.5 mile due West of the breakwater in a depth of 15 m. Holding ground is good Care should be taken to anchor the vessel in such a position so as t have at least 5 m. under the keel on expected maximum departure dra as sometimes heavy swell can be experienced. Agents, Customs an Port Officer usually board vessel during daylight hours for clearin vessel. Port Officer usually does the draft survey and also ho inspection prior to loading.

RESTRICTIONS: There are no restrictions on arrival/sailing at nigh tide or draft.

MAX. SIZE: No limit.

HEALTH: Radio Pratique not possible. A doctor from local Governme hospital is empowered to grant Pratique. The doctor does not come o board vessel. Completed Health Declaration and Vaccination List taken by the Agents to obtain Pratique. Pratique is automatic if comin from another Indian port.

RADIO: It is best to send ETA messages via Bombay Radio or Madra Radio and Agents kept well informed.

VHF: VHF is installed in the Port Office and watch is usually kept fro 0800 hrs. to 2200 hrs. when a ship is loading at anchorage. Also on of 6 harbour tugs is equipped with a VHF set. Port Office keeps watc on Channel 16.

RADAR: No Port Radar.

TUGS: Port has 6 small tugs for towing barges during loading operatio of deep sea vessels at anchorage. The tugs are old and some of the are under repair at any one time.

BERTHING: No berths available.

BULK CARGO FACILITIES: Cargo is loaded in bulk and/or bags. It brought to the ship in bags by barges. The bags are brought on boar and emptied into ship's holds. The bags are mostly torn and a lot cargo is lost overboard or left behind in barges. On completion of loadin vessel will usually receive about 6% to 8% less than the shore figures Hence Master must ask for more cargo.

STEVEDORES: About 100 labourers boarded the vessel and stayed o board throughout the loading except from 2000 hrs. on Saturday t 0800 hrs. on Monday. No work on Sundays. Average rate of loadin was about 800 – 1000 tonnes per day. First barge comes alongside th ship at about 0900 hrs. and last barge leaves shore at about 1700 hr Loading stops around 2200 hrs. after cargo from last barge has bee loaded. Strict watch should be kept on number of bags per sling as th labour tends to overload the slings. Repeated warnings by Ship Officers made no impact so it became necessary to switch off dec power for about half an hour and only then did they reduce the load pe sling.

Vessel must arrive with maximum fresh water and maintain stri rationing during stay at anchorage. Usually overtime work is not possib but to finish the ship they may speed up the loading. While we we loading, there was possibility of strike from a certain date and henc need to complete loading before that date, more labour was placed o board and loading rate went up to about 1,300 tonnes to 1,400 tonne per day.

MEDICAL: All cases of illness are referred to Benziger Hospital i Quilon. It is preferable to give advance notice to Agents. Dental faciliti also available. Cholera inoculations can be arranged.

DENSITY: Salt water.

FRESH WATER: Advance notice to be given to Agents. It is expens to take fresh water as it is supplied by tugs at the rate of 15 tonnes p trip. There is no water barge available. Approximate cost Rs.100 p tonne.

FUEL: Not available. Nearest port for bunkers is Cochin.

CONSULS: None available.

REPAIRS: No repairs possible.

DRY DOCKS: None.

SURVEYORS: Have to be called from Cochin.

GANGWAY/DECK WATCHMEN: Ship's crew must keep a constant vi on deck. Keep all stores, accommodation entrances and cabins locke Try to keep lifeboat gear and fire equipment under lock and key.

OPENING/CLOSING HATCHES: By ship's crew.

CUSTOMS ALLOWANCES: 1 bottle spirits and 200 cigarettes per cr member per week.

CARGO GEAR: Loading by ship's gear only. Ensure that a few gin wires and cargo blocks kept ready as same may require changing d to rough handling of cargo gear.

REPATRIATION: Possible. Advance notice should be given to Agen

AIRPORT: Nearest airports are Trivandrum and Cochin from whe domestic flights will connect to Bombay/Madras for international flig

TIME: Always GMT plus 5 hours 30 minutes.

HOLIDAYS: Same as "Cochin".

BANKS: Branches of most Indian Banks in Quilon.

STORING: Should be avoided as labour charge too much to trans stores from truck into tug and then from tug to vessel at anchora Labour does not permit stores to be handled by ship's crew when th are working cargo even if one hook idle or even if vessel has spe stores derrick. Thus, it is best to get stores alongside at night wh labour has completed loading for the day.

No forklift truck available ashore, but truck can go up to about 75 ft. from the barge. At times the tug allocated for stores may not be able to come alongside jetty but may tie up alongside a barge in which case it is extremely difficult to handle heavy packages as there is no crane available and every item must be carried by hand. Even tug's crew and Port Office personnel expect "complementaries" from the vessel and Agents for allowing use of tug for stores. On shore stores are handled by labour only. No attempt should be made to employ cheap labour from outside by any other means as it will lead to stoppage of cargo loading both on vessel as well as ashore. Provisions are supplied to vessel by Ship chandler from Quilon. He has his own launch and will bring provisions onboard after midnight.

SHORE LEAVE: No restriction on shore leave.

IDENTIFICATION CARDS: Not issued. However, every crew member landing ashore must sign a register in the Port Office, giving his particulars and time landed. On returning from shore he must also sign and put down time of return.

DELAYS: No delays. Usually only one deep sea vessel is loaded per month.

NEW MANGALORE: 12.57 N. 74.48 E. (See Plan)

LOCATION: New Mangalore port is situated at 9 km. North of the existing minor port of Mangalore.

PORT LIMITS: *Westward Points:*

(a) Latitude: 12° 53.6′ N. Longitude: 74° 44.4′ E.
(b) Latitude: 13° 00.2′ N. Longitude: 73° 43.1′ E.

DOCUMENTS: *Quarantine:*

Declaration of Health.
Derat Certificate.
Vaccination Certificate.

Customs:

General Particulars of the vessel.
Declaration of Deck Cargo and same bottom cargo.
*Crew List – (8 copies).
Arrival Report – (2 copies).
Departure Report (2 copies).
General Declaration in Form No. 1 – (3 copies).
Maritime Declaration of Health – (5 copies).
*Cargo Declaration in Form No. H – i.e. Cargo for Discharge – (3 copies).
*Vessel's Stores List in Form No. III – (5 copies).
List of Private Property (Property in possession of Master, Officers and crew of vessel) in Form No. IV – (5 copies).

*These items should be prepared in advance before arrival of the vessel. The other documents can be filled in after arrival.

Port Requirements:

General Particulars of the vessel.
Declaration of Deck Cargo and same bottom cargo.
Arrival and Departure Report on Port's Form – (in duplicate).
Declaration to comply with the Regulations of the Port for granting Certificate.

Immigration:

Crew List – (2 copies).
Passports for scrutinisation.

PILOTAGE: Compulsory. ETA must be informed at least 48 hours ahead of arrival. In the message of ETA the following information must be included:

(a) Name.
(b) Nationality.
(c) Call sign of the vessel.
(d) LOA, (Draft fore and aft), g.r.t. and n.r.t. of the vessel.

Telegraphic Address of the Pilot Station: New Mangalore Port Control. Tel: 7341/7428.

Pilot Boarding Station:
Latitude: 12° 54′ 55″ N. Longitude: 74° 45′ 24″ E.

VHF Channel or frequency to be used: Channel 16.

Channel or frequency to be used to contact Pilot Boat: Channel 12.

Description of Pilot Boat: Coloured in red hull and white superstructure.

Berthing and Unberthing:

(a) Berths arranged by the Committee of the Port Trust in advance.
(b) Two tugs available for berthing and unberthing.
(c) Linesmen and boatmen are arranged through Port Trust.
(d) ETD requires minimum 2 hours advance notice to Port Control/Harbour Master's Office.

ANCHORAGE: Vessels are advised to anchor North of the Fairway Buoy and distances depending on draft of the vessel. Entry into the channel with Pilot is made with 2 transit towers with lights.

NAVIGATION AIDS: The outer approach channel is marked by a Fairway Buoy and 4 sets of channel marker buoys which are lighted, and in addition there is a set of front and rear transit towers with lights to mark the center-line of the channel.

APPROACHES: The port has been created by carving out of the mainland a 200-acre lagoon 13.0 m. deep. The lagoon is connected to the sea by an approach channel, 5,400 m. long, 245 m. wide, 13.5 m. deep and protected by 2 breakwaters each 570 m. long, constructed one on either side of the channel and extends to the 5 m. contour.

RESTRICTIONS: No restrictions. Night pilotage available.

MAX. SIZE: No restrictions on length and beam. Also see "Berthing".

HEALTH: The following radio advice is required:

(a) Name of the vessel and ETA with date.
(b) Request for Radio Pratique.
(c) International Code (ZT).
(d) International Code (ZU).
(e) List of Ports of Call with dates in last 30 days.
(f) Have/Have no monkeys on board.
(g) Have/Have no persons embarked at Aden/Djibouti.
(h) Condition of health of all on board with details of any sickness and whether all vaccinated.

RADIO: Mangalore Radio: Call sign VWL on 500 kHz., 438 kHz. Tel: 24300.

VHF: Communication facilities with Port Control on Channel 16. For Port Operations Channel 12 can be used. On arrival of the vessel general information will be given.

RADAR: No Port Radar Service.

TUGS: 2 × 30 ton bollard pull tugs and 1 × 22.5 ton bollard pull (V.S.P.) tug available for berthing and unberthing of ships. Normally the tugs meet the vessel that is entering at the base line, which is at the entrance to the lagoon.

BERTHING: New Mangalore Port provides alongside berths to cater to (1) raw materials import for fertiliser factory, (2) chrome ore and manganese ores, (3) general cargo, (4) one shallow draft berth for smaller vessels, (5) an oil jetty for handling of naphtha and other petroleum products, (6) mechanised iron-ore berth to load concentrates and pellets and handle 60,000 d.w.t. ships, (7) additional general cargo berth.

(a) 1 straight wharf on the Eastern side of the dock arm which is 594 m. in length and consists of 3 berths having a draft of 33 ft., 31 ft. and 31 ft., respectively (South to North).
(b) 1 straight wharf on the Western side of the dock arm which is 594 m. in length and consists of 3 berths having a draft of 30 ft., 20 ft. and 26 ft. respectively (South to North).
(c) 1 shallow draft berth of 22 ft. draft and 127 m. in length.
(d) 1 iron ore berth of length 290 m., draft 41 ft. (12.5 m.).
(e) Tanker Berth: See "Tankers".

CRANES: The following electric level luffing wharf cranes are positioned at the Straight Wharf: 1×6 ton, 3×3 ton and 4×10 ton.

One iron ore loader situated at the Ore Berth for loading iron ore, cement, etc., directly to vessels through chutes.

No cranes available in other berths.

Ship has to use her own gear in those berths.

Three tyre-mounted mobile cranes available for shore operations with capacity up to 30 tons. Similar cranes of lesser (5 ton) capacity available from private parties.

BULK CARGO FACILITIES: The Straight Wharf Berths (No. 1 Berth) is reserved for Bulk Cargo Handling. Normally grains, fertilisers, cement, etc., are handled at this berth.

SPECIALISED CARGO HANDLING FACILITIES: This port is not specially equipped for handling containers. But containers are handled by ship's gear and with the limited mobile equipment of the Port. Agents are allowed to use private handling equipment inside port.

At Oil Jetty liquid chemicals/oils/molasses, etc., can be handled. No facility at the moment for LPG carriers.

STEVEDORES: Advise before 0500 hrs. for commencing 0800 hrs. gangs and 1500 hrs. for commencing 1800 hrs. gangs.

Main commodities loaded:

Coffee – average load rate per gang per shift – 120 tonnes.

Granite stones – average load rate per gang per shift 250 tonnes.

Fruit products and cashew kernels – average load rate per gang per shift – 3,500/4,000 cartons.

Reefer Cargo – average load rate per gang per shift – 3,500/4,000 cases.

Heavy Machinery – average load rate per gang per shift – 120 tonnes.

Iron ore concentrate and pellets through mechanised ship loader – 3,000/4,000 tonnes/hr.

Main Commodities Discharged:

Fertilisers – average discharge rate per gang per shift – 120 tonnes.

Tanker Oil – 400/500 tonnes/hr.

MEDICAL: No advance notice except in cases of serious illness to be included in arrival cable. Ample hospital facilities for treatment are available.

TANKERS: The oil jetty is located in the S.W. portion of the lagoon very near to the approach channel. The draft available at the oil jetty is 33 ft., which affords berthing facilities for 30,000 d.w.t. (length 600 ft.) product carriers, molasses and edible oil tankers.

DENSITY: 1025. During S.W. Monsoon density varies, may fall to 1010.

FRESH WATER: Available at all berths. Direct delivery from shore to vessel.

Cost: Rs.24/– per ton subject to a minimum of Rs.510/– in respect of vessels other than coasting.

FUEL: Oil delivered by Indian Oil Corporation (a Government of India undertaking) by tank trucks in all berths. Major grades bunker fuel/diesel/marine lubricants can be obtained from them. Pipeline supply of fuel oil at Iron Ore Berth and Oil Jetty.

FIRE PRECAUTIONS: Only normal precautions against fire at berths.

CONSULS: No countries have Consuls at the port.

REPAIRS: Most deck and engine repairs are carried out.

DRY DOCKS: No dry docking facilities at the port.

SURVEYORS:

(a) Qualified Cargo Surveying Agencies are available.
(b) Surveyors available for Lloyd's Register, American Bureau, B.V., etc.

GANGWAY/DECK WATCHMEN: Services are available at port and compulsory. Charges are at Rs.35/– per shift per watchman.

OPENING/CLOSING HATCHES: Stevedores or ship's crew, whichever to ship's advantage.

CUSTOMS ALLOWANCES: 50 grams of tobacco or 200 cigarettes and 950 ml. wine/spirits per person per week.

CARGO GEAR: Cargo can be handled either by ship's gear or shore cranes. Shore cranes are available up to 10 tonnes capacity.

REPATRIATION: Crew changes and repatriation can be carried out.
AIRPORT: 15 km. from the harbour and 21 km. away from Mangalore City. Daily air services available to Bombay to connect with international flights.
TIME: Local time is 5 hours 30 minutes ahead of GMT.
HOLIDAYS: 26th January – Republic Day; 15th August – Independence Day; 2nd October – Gandhi Jayanthi.
No work on these days.
POLICE/AMBULANCE/FIRE: Tel: 100/102/101 respectively.
EMERGENCY CO-ORDINATION CENTRE: Relay information to Port Signal Station.
TELEPHONES: No facilities on berths but available in sheds.
SERVICES: Services available for tank cleaning, compass adjusting, radio/radar repairs, etc., with prior arrangements.
BANKS: Branches of all nationalised banks.
STORING: See "Prelims".

(1) By truck.
(2) Barges are normally not used for storing.
(3) Trucks can proceed alongside berth.
(4) Forklifts also used on the jetty while handling palletised or heavy stores.
(5) Customs documentation and regulations are in force.
(6) Private labour is to be engaged for loading stores.

SHORE LEAVE: No restrictions – crew members are allowed to go ashore.
IDENTIFICATION CARDS: Shore passes are issued.
REGULATIONS: No regulations.
DELAYS: Priority berthing for 24 hours port stay are generally allowable for export and import general cargo ships. Otherwise berths are offered according to priority of arrival for long-duration ships.
DEVELOPMENTS: Proposals are on for establishing a 3 million ton oil refinery for which port facilities for handling tankers of about 150,000 d.w.t. are to be created. Likewise the size of ships for loading iron ore are also to be increased, and there is also a possiblity of handling ships transporting thermal coal for a 2 × 210 megawatt power generation station to be established in the neighbouring area.

SHIPMASTER'S REPORT: Updated 1987.
Documents: Same as other major Indian ports.
Pilotage: Pilot boards in vicinity of Fairway Buoy. Pilot boat has pilot flag atop its mast.
Restrictions: Regular night pilotage is provided.
Anchorage: North of Fairway Buoy as South of buoy being used as dumping ground for dredgers.
VHF: Channel 16 for calling and listening. Pilots operate on 12 and 16.
Radar: None.
Hospital: Hospital facilities good.
Hatches: Opening/closing by ship's crew.
Drydocks: None.

AUTHORITY: New Mangalore Port Trust, Panambur, Mangalore 575010, South India. *Tel:* 7300, 7341 PABX. *Telex:* 0842-220 Ponm In. *Cables:* Portrust. *Contact:* The Chairman.

OKHA: 22.28 N. 69.05 E.

DOCUMENTS: 5 copies each of Import Manifest, Crew List. Passenger List, Ship's Stores Manifest, Crew Property List.
PILOTAGE: Compulsory. Pilot station Lat. 22° 30.5′ N., Long. 69° 04.6′ E.; 1.35 miles N.W. of Samiani Light Tower.
ANCHORAGE: Roadstead anchorage near pilot station.
MAX. SIZE: 525 ft. LOA during N.E. monsoon and 540 ft. LOA during S.W. monsoon. Max. draft variable, 22 ft. – 27 ft. depending on daily tide.
PRATIQUE: The Master should cable the Port Health Officer (Quarantine Okha) in International Health Code, requesting Free Pratique. If Radio Pratique is not effected, then Masters should present Maritime Declaration to the Customs Boarding Officer who is authorised to grant Free Pratique. If the vessel is arriving from yellow-fever area, the mosquito control team is arranged from Kandla, where the cable address of the Port Health Officer is "Sangrodh Kandla".
RADIO: Post and Telegraph Department Wireless station call sign VWO can be contacted from 0800 to 2000 hrs. I.S.T. for communication to and from Local Agents.
TUGS: Port-owned tugs join vessel while entering port channel and/or vacating it at time of berthing and/or unberthing.
BERTHING: Only daylight hours. Vessels should be ready in all respects to move berth 1.5 hours before high water at pilot station.
Sayaji Pier – East side 27 ft. draft; West side 20 ft. draft.
Dry cargo berth – 25 ft. draft.
CRANES: Vessels use own derricks for heavy lifts. There are 2 electric cranes at the Dry cargo berth each 1.5 – 2.0 tons capacity.
BRIDGES: None.
STEVEDORES: Firm ETA including requirements order avoid delay.
(a) Exports: Mainly cement, bauxite and chemicals and general merchandise, rate 100/125 tons per shift per hook.
(b) Imports: Mineral oils average rate about 300 to 500 t.p.h. according to ship's pumping capacity; general cargo same rate as export.
MEDICAL: Port Health Officer always available. Well-equipped hospital at Mithapur under Tata Chemicals at a distance of about 7 miles from port. Medical aid available throughout day and night.
TANKERS: All dry cargo vessels regulations apply for tankers, particularly size, etc. 1 berth, draft 27 ft. No slop facilities.
DENSITY: 1025.
FRESH WATER: Limited. Port supplying water by barge and sho pipeline. In normal cases 25 tons water supplied per day. In cases emergency 40 tons water can be supplied per day.
FUEL: Available but arrangement should be made through Indian Corporation; head offices at Bombay.
FIRE PRECAUTIONS: Port Department maintains a small fire statio
CONSULS: None.
REPAIRS: Only minor repairs.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Vessel to provide own gangwa watchmen. Shore-watchman available for employment on shift bas (8 hour shifts).
OPENING/CLOSING HATCHES: To be attended to by ship's crew, not contracted with stevedores which may cost extra.
CERTIFICATES: Ship's Register, Load Line Certificate, Safe Equipment, Safety Gear, Radio.
CUSTOMS ALLOWANCES: At Customs Preventive Squad's discretio
CARGO GEAR: Normal gear supplied by stevedores for hire.
REPATRIATION: Necessary formalities to be completed at Distr Headquarters situated at Jamnagar, a distance of about 110 miles: suc as Police, Health (whereas Customs formality can be completed locally
AIRPORT: Nearest airport Jamnagar about 110 miles connected wi Okha by rail and road. Only local service to Bombay daily operated.
TIME: GMT plus 5.5 hours. (I.S.T.)
HOLIDAYS: As declared by Port Authorities, cargo work can b arranged by paying usual scheduled overtime but labour's observe holidays (about 8 days in a year) completely closed.
TELEPHONES: Only for tankers by respective oil installation.
SERVICE: Tank cleaning by manual labour.
SHORE LEAVE: Crew allowed ashore after vessel cleared b immigration officer who boards vessel on arrival.
IDENTIFICATION CARDS: Necessary.
DELAYS: Delay only encountered if berth or moorings are occupied.
SHIP SUPPLY SERVICE: Off-shore ship supply service operated b J. M. Baxi and Co., Bombay.
GENERAL: Port governed by Gujarat State and all rules and regulatio laid down by them in addition to Central Government rules applicab to this port. Port connected with hinterland by rail, motor transpor 300 miles by sea from Bombay, 2 tides in 24 hours, mean high wat spring rise about 11.5 ft. and mean low water neap rise 9.5 ft.; curren in neap tide is 2 to 3.5 knots. Wind force/direction during April/Septemb S.W. 3/5 and in October/March N.W. to N.E. from 2/4.
AUTHORITY: Port Officer – Okha Port and Superintendent of Custom Okha (Ahmedabad Collectorate).

PARADIP: 20.14 N. 86.42 E. (See Plan

PORT LIMITS: When vessel arrives in the Roads, 1 mile S.E. of Fairwa Buoy.
DOCUMENTS:

8 copies Crew List.
3 copies Ship's Stores List (Form No. III).
Crew Private Property List (Form. IV) including Foreign Currenc Declaration.
3 copies Currency Declaration.
3 copies Passenger List, if any.
3 copies Cargo Manifest.
3 copies Survey Bottom Cargo Manifest, if any.
3 copies Deck Cargo Certificate.
3 copies Hazardous Cargo Certificate.
3 copies "No Opium" Certificate.
3 copies Arrival Pets Abroad.
3 copies Declaration for "No Monkeys on Board".
3 copies Any other Declaration.

The Master of the vessel should deposit the following documents wi the Port Authorities through their Agents.

Ship Registration.
International Load Line Certificate.
Safety Radio Certificate.
Light Dues Certificate.
Safety Equipment Certificate.
Last Port Clearance.
International Health Certificate.
Derat Certificate.
Last 3 Ports Certificate.
Cavities Certificate.
Ballast Certificate.
Vaccination/Inoculation Certificate.
Arms and Ammunitions Certificate.

The Agents will return the documents to the Master before sailing the vessel along with the Port Clearance.
PILOTAGE: Notice of ETA must be intimated to the Harbour Master Master or Ship's Agent not less than 24 hours before arrival of vess in the Roads. Telegraphic Address: Harbourmaster, Portrust, Parad Telex: 0674-211. Channel 16 VHF is continuously watched. The pi boat is white and flies Pilot's flag on the mast whenever Pilot is on boar Pilot boards the vessel S.E. of the Fairway Buoy. Vessels required hoist call letters for identification. A vessel requiring a Pilot for sai out is required to give minimum 2 hours' notice to Port Control on VH Channel 16 and hoist "G" Flag one hour in advance.
ANCHORAGE: Vessels can anchor, depending on draft, 2 miles S of Southern Breakwater in the recommended anchorage.
RESTRICTIONS: Pilotage is carried out from 0500 hrs. to 2100 h 24 hours pilotage is under consideration.

MAX. SIZE: Maximum permitted LOA 260 m. and max. draft 11.9 m. Vessels loading iron ore are permitted to sail with 12.8 m. draft in fair weather period. LASH vessels are also entertained as a special case.

HEALTH: Send quarantine message to "Quarantine Paradipport" 24 hours before arrival for Radio Pratique. Pilot gives Free Pratique on boarding vessel subject to no sick person on board. In case of suspected disease or fever on board, Port Medical Officer visits ship at anchorage/berth and cases of contagious disease are isolated and sent to nursing home.

RADIO/VHF: Continuous VHF watch is maintained on Channel 16 at Port Signal Station. Working period 24 hours. Working Channels are 12, 9 and 6.

Vessels are requested to establish contact with the Port Signal Station when within VHF range (approx. 40 to 60 miles) and before entering, moving in or sailing from the port.

When within VHF range, ships are requested to give the following information:

(1) Name of ship.
(2) Last port of call.
(3) ETA.
(4) Vessels gross tonnage, LOA, breadth, draft, d.w.t. and speed.
(5) Number of cases of dangerous and contagious diseases on board.
(6) Type and quantity of cargo.
(7) Name of Agents and requirements.

TUGS: Two tugs of 18 tons bollard pull and 2 tugs of 30 tons bollard pull are available. Tugs join vessel inside breakwater. Ship's lines only used.

BERTHING: Vessels must have maximum ballast for berthing and unberthing.

Iron Ore Berth:	Length from dolphin to dolphin 320 m. Capable of berthing ships of 260 m. LOA with 12.8 m. draft, beam limited to 40 m. for Ore Handling Plant.
General Cargo Berth:	Designed depth 11.5 m. Total quay length 686.65 m. Shore cranes available for loading and unloading.
South Quay:	Total quay length 215 m. Designed depth 11.5 m. No shore cranes available. Vessel to work with her own gear.
Mooring Berth:	Length 260 m. Designed depth 12.5 m.
Fertiliser Berth:	(Captive berth for Paradip Phosphates Limited) Quay length 252 m. Designed depth 12.5 m.
North Quay:	Length 118 m. Designed depth 6 m.

CRANES:

Type of Crane	*No.*	*Capacity*
Wharf Cranes	4	13 ton
Mobile Cranes	5	12.5 ton
Mobile Cranes	1	31.75 ton
Cargo Handling Equipment:		
Forklift Trucks	14	3 ton
Front End Loaders	4	2.3 cu.m. to 4 cu.m.
Tractor Trailer	1	5 ton
Shovels	2	3.5 cu.yd.
Bulldozer	1	180 h.p.
Track Shovel	1	1.3 cu.m.

BULK HANDLING FACILITIES: 1 iron ore berth with mechanical loading plants of rated capacity 2,500 t.p.h. Average loading rate 20,000 - 25,000 tons per day.

SPECIALISED CARGO HANDLING FACILITIES: Semi-mechanised handling facilities for coal, chrome and other bulk cargoes are available.

At the Fertiliser Berth facilities exist for fully mechanised unloading of bulk rock phosphate, phospheric acid and ammonia.

Warehouses and Transit Sheds: 4 warehouses are available, having capacity of storage of 22,515 tonnes and Transit Sheds having a space for storage of 48,450 tonnes. There are also a number of private warehouses belonging to Central Warehousing Corporation with a total storage capacity of 20,000 tonnes. At present, 220,300 sq.m. of open stacking area is available inside the Port area for storage of more than 3 million tonnes of different cargoes. These stockyards are connected with rail and road.

Port Railway: Port has its own railway system.

STEVEDORES: Stevedores required for loading/unloading of cargoes at General Cargo Berth and Mooring Berth. A number of stevedoring companies are available in the Port. The Port Trust also undertakes stevedoring. Average loading rates achieved for different cargoes as follows:

Cargo	*Tonnes per day*
Chrome-ore	3,000
Coal	5,000
Iron & Steel	3,000
Foodgrains	1,000
Fertilisers	1,000
Other General Cargo	800
Phospheric Acid	15,000
Ammonia (Liquid)	8,000

TANKERS: Tankers will be handled in the near future.

MEDICAL: A 50 bed port hospital is available at the port. The crew can also be treated at the Government hospitals at Cuttack and Bhubaneswar which are 98/120 km. respectively from Paradip.

DENSITY: Varies from 1018 to 1024 with average of 1021. Density as low as 1009 is also reported during Winter months.

FRESH WATER: Water supply is available alongside berths and through water barges at the moorings. Water supply is possible in the Roads in fine weather.

FUEL: HSD and furnace oil can only be procured from Cuttack on duty paid oils only. Arrangements will have to be made well in advance. Oil is transported by small road tankers of capacity 11 tons to 12 tons. Port provides berthing facilities for taking bunkers.

CONSULS: Nearest consuls located at Calcutta.

FIRE PRECAUTIONS: There is a fire station situated inside the Port area equipped with one water tender, 4,500 litres capacity and 2 trailer pumps (capacity: 1,000 and 600 litres). One foam tender is being procured during 1988. All tugs are equipped with external fire fighting equipment which is available for use in the event of fire.

REPAIRS: Minor repairs can be undertaken.

DRY DOCKS: A 500-ton slipway available for repairs to port craft. No dry dock available.

GANGWAY/DECK WATCHMEN: Necessary.

OPENING/CLOSING HATCHES: Undertaken by crew only.

CERTIFICATES:

Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Last Port of Clearance.
Derat Certificate.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per head per week. Wine and/or Spirit: 1 bottle of 24 ounces per head per week.

CARGO GEAR: Valid cargo gear certificate required. Dock Safety Inspector inspects the cargo gear.

REPATRIATION: Repatriation of foreign personnel is permitted.

AIRPORT: Nearest airport at Bhubaneswar 120 km. Direct flights available to Delhi, Calcutta, Bombay and Hyderabad.

TIME: Local time GMT plus 5.5 hours.

HOLIDAYS: Charter Party holidays. Normally work carried out on all days.

POLICE/AMBULANCE/FIRE: Police 2027; Ambulance 2041; Fire Station 2385. Also contact Port Signal Station on VHF Channel 16.

TELEPHONE: No facilities for telephones on board.

SERVICES: Available.

SHORE LEAVE: Immigration Authority issue shore passes to all foreign nationals and with shore passes crew allowed ashore.

IDENTIFICATION CARDS: Authorities issue landing pass.

DELAYS: Generally no delays. Vessels are allotted berths on "first come first served" basis. Iron ore vessels are given priority.

DEVELOPMENTS: Handlings of 170,000 d.w.t. ore carriers and 100,000 d.w.t. oil tankers are under active consideration.

AUTHORITY: Paradip Port Trust, Paradip Port, District Cuttack, Orissa, India. *Tel:* Paradip 2046, 2127. *Telex:* 0674-211. *Cables:* Portrust, Paradip. *Contact:* Private Secretary to Chairman, Paradip Port Trust.

PONDICHERRY: 11.56 N. 79.50 E.

DOCUMENTS:

Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Last Port Bill of Health.
Last Port Clearance.
Store List with Private Property Declaration in Triplicate.
Crew List (8 copies).
Light Dues Receipt.
Manifest (Import or Export).
Bill of Lading.

PILOTAGE: Not necessary as open roadstead anchorage.

ANCHORAGES: Proper anchorage in line with New Pier. 2 chimneys in line (276°) will provide good transit in day time and at night green/red light in transit with red pier light can be taken.

MAX. SIZE: Anchorage is 7 fathoms within 1 mile from New Pier.

HEALTH: Free Pratique obtained on arrival and Master expected to address message to Port Health Officer, advising that all are well on board. Free Pratique automatic for vessels calling from any Indian ports.

RADIO: Cables routed through Madras Radio (call sign VWM).

TUGS: Tug kept ready at New Pier for towing barges.

BERTHING: Berthing facilities for vessels up to 500 d.w.t.

STEVEDORES: 48 hours notice prior to arrival. Rate of discharge of bagged cargo 800 to 1,000 tons per day.

MEDICAL: No advance notice necessary. General Hospital and Jipmer Hospital available.

TANKERS: Transfer operations are carried out at anchorage 1.5 miles – 2.5 miles offshore.

DENSITY: 1025.

FRESH WATER: Available. Rate 50-60 tonnes per day.

FUEL: Not available.

CONSULS: Only French Consulate General. Tel. 4058.

REPAIRS: Deck and Engine repairs not attended. Special arrangements can be made from Madras. Minor repairs carried out privately.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Services not compulsory, but recommended to avoid pilferage. 3 watchmen day/night.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes permitted for each Crew member to be held out of bond. Wine and/or Spirit, 1 open quart bottle per Crew member permitted to be held out of bond.

REPATRIATION: Facilities exist for effecting crew changes and arranging necessary repatriation.

AIRPORT: Nearest airport is Meenambakam Airport, Madras, (160 km.).

TIME: GMT plus 5.5 hours.

HOLIDAYS: Observed as declared by Authorities but cargo work arranged on all holidays on payment of overtime, except on Republic Day, Gandhi's Birthday, May Day and Independence Day.

POLICE/AMBULANCE/FIRE: Police 100; Fire 101; Ambulance arranged through hospital doctor on duty, Tel: 6008.
TELEPHONES: No facilities to place on board.
SERVICES: Ship chandling and supply of stores available.
SHORE LEAVE: Crew members permitted ashore but have to remain within town limit.
IDENTIFICATION CARDS: Not needed if furnished with Crew List.
DELAYS: Delays occur only under unavoidable circumstances such as Surf Declaration, Cyclone, etc. Vessels arriving at night, commence discharge operations next morning.
GENERAL: For purposes of crew going ashore, launches arranged between 0600 hrs. and 1800 hrs. weather permitting, hired from private parties. Laundry facilities, supply of fresh vegetables and provisions arranged.
AUTHORITY: Government of Pondicherry, Port Department, Pondicherry. *Contact:* Captain N. Selvaraje, Port Director.

PORBANDAR: 21.38 N. 69.36 E.

DOCUMENTS:
Crew Lists (6 copies).
Passenger Lists (6 copies).
Customs Documents to be prepared by Agents and signed by Master (4 copies).
Arms and Ammunition Certificate 4 copies duly signed by Master.
Health Documents: All yellow fever and cholera books should be valid on arrival as well as on departure, if they are not valid on departure Port Health Officer should visit ship and give required injection to persons for completing health books before obtaining Bill of Health.
Port Clearance: Port Clearance of last port to be submitted to Boarding Officer of Customs.
Private Property List (6 copies duly signed by Master).
Stores List (4 copies duly prepared by ship's officer).
Currency Declaration (4 copies).
Bills of Lading: Bills of Lading for export cargo generally to be prepared and signed by Agents.
PILOTAGE: Compulsory for inward/outward movements for all vessels and for shifting to and from berths.
ANCHORAGE: Anchor in stream about 1.5 miles off shore. 6 fathoms at low water, with good holding ground.

Outer anchorage is with Rajah's Old Palace, about 1.5 miles South-eastward of lighthouse, bearing 085° and lighthouse bearing 026°, 4.5 fathoms to 5 fathoms sand and rock (or further out as required).
MAX. SIZE: Any size vessel at anchorage. Alongside berth – Max. LOA of vessels up to 177 m. Max. permissible draft 9.00 m. No beam restrictions.

1 mooring buoy – max. draft 7.0 m.

For roadstead, no restrictions on length or breadth.
HEALTH: If arriving from yellow fever area within 30 days a grant of Free Pratique is necessary. Mosquito Party to be deputed from Kandla, which can only be arranged by prior intimation, failing which vessel would have to proceed to either Kandla or Bombay for Free Pratique.
RADIO: Porbandar call sign VWY, working frequency 462 kHz and watch keeping on 500 kHz.
TUGS: Will join ships for assisting berthing/unberthing.
BERTHING: 1 alongside berth and 1 mooring buoy.
STEVEDORES: 24 hours notice required for Agents to arrange gangs.

Average rate of working – 380 to 400 tons per gang per day for general cargo.

For vessels loading bulk ores 3,000 to 4,000 tons per day with ship's gear.

Export Commodities: G.N. Extraction in bags, bulk ground nut HPS, cotton bales, frozen fish, lime and lime stone, lime powder, abrasive powder, bauxite, white clay, fruits, onion, etc.
MEDICAL: Government hospital available. There are also private hospitals.
TANKERS: Presently no facility for discharging oil.
FRESH WATER: Vessels alongside can be supplied by pipe-line and water tanker. Vessels at anchorage supplied by water barge.
FUEL: Fuel can be supplied by road tankers at berth through Indian Oil Corporation at Okha and Rajkot.
CONSULS: None.
REPAIRS/DRY DOCKS: A dry dock of 150 ft.×55 ft. for repairs to port crafts. Also port workshop for repairs to shore and marine equipment.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Charter Party terms.
CERTIFICATES: *(a)* Load Line Certificate. *(b)* Safety Equipment Certificate. *(c)* Safety Radio Certificate, all certificates must be valid before departure of vessel
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes permitted for use of each crew member from bonded stores of ship.

Wine and/or Spirit: Customs Officer remains on board from arrival till departure and issues required quantity of wine and spirit from bonded stores. Quota is issued every week.
CARGO GEAR: Tested cargo gear should be used for loading and discharging operations.
AIRPORT: 3 miles from town, daily flight to Bombay.
TIME: GMT plus 5.5 hours.
HOLIDAYS: Observed as declared by Government of Gujarat and can be worked on payment of overtime charges, but work on non-working days like Indian Republic Day, Independence Day, Holi (2nd Day), Ramnavami, Muhurram, Gokul Ashthami, Dessera, Diwali (New Year) and Ramzan-Id not possible.
POLICE/AMBULANCE/FIRE: Police Station 114; Ambulance/Fire Brigade 244.
SHORE LEAVE: Police, port and Customs permission required befo landing.
IDENTIFICATION CARDS: Necessary.
GENERAL: The port is an "all weather port".
AUTHORITY: Office of the Chief Executive Officer and Vice Chairma Gujarat Maritime Board, New Mental Hospital Building, Block No. 0/2 Ahmedabad - 380 016. *Tel:* 66610, 45116, 66270. *Cables:* Princpo *Contact:* The Chief Executive Officer and Vice Chairman, Gujar Maritime Board, Ahmedabad-16.

The Port Officer, Gujarat Maritime Board, Porbandar – 360 57 Gujarut State, India.

PORT REDI: 15.44 N. 73.39 E.

DOCUMENTS:
Arrival:
Maritime Declaration of Health Form (in duplicate).
Port Clearance from last port of call.
Ship's Stores List (in triplicate).
Crew Private Property List (in triplicate), containing full details of ever article such as: cameras, radios/transistors, record players, record watches, all types of currency, other valuable articles, souvenir spirits, etc.
Crew Lists (6 copies).
Ship's Currency List (in triplicate).
Arms and Ammunition Declaration.
Passenger List – if any.
Through Cargo Manifests.
Departure:
Medical Inspection or Examination Certificate (Bill of Health).
Port Clearance.
Consumed stores list in duplicate (a list of stores consumed durin the stay of the vessel at port).
PILOTAGE: Compulsory. Port Officer acts as Pilot. Cable via Bomba Radio to Port Officer, Redi, Cable Address: Port Officer Vengurla, ET of vessel 48 hours prior arrival (cable should reach Port Officer befor 24 hours prior arrival). Anchor off Rairi Point – West of Rairi Point-about 1 to 1.5 miles where Port Officer boards ship to pilot to prope loading anchorage. Pilotage restricted to daylight hours only. Shiftin without Pilot not permitted.

On arrival keep gangway or complete pilot ladder with manropes an step-down, ready for Pilot.

No fixed anchorage marked at Pilot station; however, vessel shou not proceed beyond 1 mile from Rairi Point (for safety of vessel). Kee engine ready till Pilot boards. If vessel arrives during night hours b ready for shifting next morning.
ANCHORAGE: Anchorage Rairi Point or Redi Point (Lat. 15° 44′ N Long. 73° 39′ E.) is a flat rocky projection, Western extremity of whic is 50 ft. (15.2 m.) high. Foul ground and shoal water extend abo 0.75 miles S.S.W. and about 0.5 miles Westward of this point; Southern side of foul area is Rairi (Redi) Rock which is 36 ft. (11 m high and steep. Vessel should not proceed into depths of less than fathoms or within 1 mile Westward in vicinity of this point without Pilo

Loading anchorages are on both sides of Rairi Point (known as Jet One anchorage and Jetty Two anchorage).
MAX. SIZE: No restrictions on size. This is a minor port exporting on iron ore, and vessels up to 34 ft. draft load at safe anchorage.
HEALTH: On arrival, Customs Authorities board and grant Free Pratiqu to ships arriving under normal conditions and on completion of Maritim Declaration of Health Form. Medical Officer, Candy Dispensar Vengurla, acts as Port Health Officer (Quarantine Officer) for this po and boards vessel at his convenience before sailing to conduct Medic Examination and grants Medical Examination Certificate (Bill of Healt on day of sailing. Certificate to be collected from Vengurla Offic No facilities for Radio Pratique.

If coming from yellow fever or jigger infected regions within 30 da Port Health Officer grants Pratique after boarding vessel with Mosqu Party deputed from Bombay at Owners' cost. Mosquito Party can on be arranged on advance information failing which, vessel would hav to proceed either Bombay and/or Mormugao for Free Pratique. Mas and/or Owners to give Agents prior notice to avoid delay in arrangin Pratique. Vessels transiting through above infected areas for bunke or water only do not require Mosquito Party for obtaining Pratique.

Advisable inform Agents prior to arrival of last port of call, crew, a nationality, and if arriving from yellow fever and/or jigger infected regio whether called only for bunkers or water, or purpose of call and vesse health condition.
RADIO: Bombay Radio.
BERTHING: No berths. Open roadstead port.
LOADING: Port only exporting iron ore in bulk and suppliers. T Minerals & Metals Trading Corporation of India Ltd., make o arrangements to load cargo on FOB terms. Rate between 3,000 to 4,5 tons per day per vessel if 3 vessels are working and 4,000 to 6,000 to per day if 1 vessel is working. This rate is being achieved due increased fleet and improvement of shore loading facilities.
MEDICAL: Preliminary medical aid available at Port Redi/Shiroda. We equipped hospitals situated at Savantwadi and Vengurla about 25 a 45 miles away respectively by road. Cholera inoculations done throu Port Health Officer and if required this information may be passed to Agents for arranging with Port Health Officer.
DENSITY: Average 1025.
FRESH WATER/FUEL: Not available.
CONSULS: None.
REPAIRS/DRY DOCKS: None.
GANGWAY/DECK WATCHMAN: Not necessary.

OPENING/CLOSING HATCHES: As per Charter Party. However, opening done by stevedores to save their time and commence loading earliest during free time.
CERTIFICATES: All certificates, particularly Cargo Gear Certificate to be in order and valid.
CUSTOMS ALLOWANCES: 200 cigarettes per week of 7 day per crew. Wine and/or Spirit, 1 bottle each per crew of spirit or beer as required.
REPATRIATION: Facilities for crew changes. 4 days advance notice required with full particulars of crew.
AIRPORT: Belgaum and/or Vascodagama 90 miles distant.
TIME: Indian Standard Time GMT plus 5.5 hours.
HOLIDAYS: Cargo work can be arranged on overtime on all holidays except 26th January, Republic Day; 2nd October, Mahatma Gandhi Birthday; 15th August, Independence Day. On these holidays work not permitted even on overtime.
SHORE LEAVE: Crew of Chinese and Pakistani nationality not allowed land on shore. Other crew permitted land only after obtaining requisite permission from Police Authorities from Ratnagiri, distant about 160 miles and thereafter from Customs Authorities. On arrival, Crew List and guarantee duly signed by Master, are furnished to Police Authorities at port and telegram sent to Ratnagiri requesting landing permission from District Superintendent of Police.

Obtaining landing permission takes 3 days; and therefore, Masters requested not to allow crew members to land on shore unless written landing permission sent on board. Crew members not allowed beyond Port Redi limits, without permission obtained from Police Authorities, Ratnagiri.
IDENTIFICATION CARDS: Necessary.
REGULATIONS: Port Officer conducts Final Draft Survey on completion of loading in consultation with Master. Master's refusal to allow shifting creates complications. Master should not shift vessel without Pilot on board or permission from Port Officer; this does not apply in case of emergency.
DELAYS: Only 3 vessels (i.e. 1 at each jetty) can work at a time on a first come first served basis. Overlapping vessels have to wait turn. Waiting time about 4/5 days.
GENERAL: Regular Post and Telegraph Office about 2.5 miles from jetty.

Vessels on arrival and at departure thoroughly examined by Customs, and Masters therefore requested to ensure that crew private property list is correctly presented to Customs Authorities and its accuracy maintained throughout stay of vessel.

Ship's wireless station not to be used for despatching cables during the vessel's stay.

Discharge of bilge water and/or dirty waste oil or cargo prohibited.

Fresh vegetables, etc., supplied in limited quantity from 90 miles distance.
AUTHORITY: Port Officer.

SIKKA: 22.34 N. 69.42 E.

SHIPMASTER'S REPORT: June 1982.

DOCUMENTS: 8 Crew Lists, 6 each Personal Effects and Stores Lists, 4 Vaccination Lists, 5 Currency Lists, (Customs do like all paperwork properly prepared).

On departure 3 Crew Lists if any changes and 3 Personal Effects Lists for those who remained on board.

For personnel leaving, Customs require Currency Form (Foreign Exchange Act 1947) in duplicate (Indian Form) and International Crew Baggage Declaration (Local Form) in duplicate.

Clearance from Last Port, Register, Load Line, Derat, Safcon, Safequip and Safradio all sighted by Agent but not taken from vessel.

All personal belongings to be recorded with makes, models and numbers.
PILOTAGE: Pilot boards vessel at anchor from tug boat using ship's derrick and tug's basket if weather is rough.
ANCHORAGE: Plenty of room for anchoring with good holding ground. Contact Mother Tanker for anchor position. We, berthing on flood tide, were requested to anchor 2 miles – 069° True from Mother Tanker.

Locally the storage vessel is referred to as the Mother Tanker (MT) and own ship (OS).
RESTRICTIONS: Apparently none, plenty of water. Larger vessels (this vessel 149,000 d.w.t.) are loaded from daughter tankers which go alongside OS.
HEALTH: Free Pratique is granted by Customs Officer.
RADIO: To local Agent at Jamnagar via Bedi Radio VUK5. The MT (which was m.t. "Koyali") keeps an R/T watch. Would suggest contacting the MT for any advance information as nobody else would give any.
VHF: Call MT on Channel 16. While anchored/approaching Channel 11 is used after initial contact. While double banked Channel 13 is used between MT and OS. Cargo operations are conducted on UHF using MT walkie-talkies. Contact Shipindia Channel 13, who pass messages to and from Agent.
TUGS: One tug available but not used. Tug used by Pilot and runs lines from OS to MT.
BERTHING: Position off Sikka for cargo operations approximately Lat. 22° 34′ N., Long. 69° 42′ E. Apparently 140,000 d.w.t tankers are the ideal size. They berth alongside MT and can take up to a full cargo without the MT having to top up from a daughter tanker. Operations off Sikka are temporary and from 1st May to end of monsoon. Consult with Pilot about berthing and obtain all details. Vessels berth alongside when tide is running in daylight hours. Usual Yokohama fenders used, 4 for vessels less than 750 ft. LOA and 6 for vessels over 750 ft. LOA. Fenders are made fast on MT. First 2 floatable headlines from OS to MT at least 220 m. long and may require longer. They do not like using '1st ropes ashore' off reels. In our opinion '1st ropes ashore' would be quite adequate and fast enough. Then 2 floatable stern lines from OS to MT. Final moorings were from OS to MT 3 and 2 each end with no breastlines. From MT to OS 2 headlines leading aft, 2 stern lines leading forward, forward 2 springs leading from forward to aft and 2 springs aft leading from aft to forward.
TANKERS: Loading by 2×10 in. ID hoses of ASA 150 standard, 23 m. long.Their discharge rate is quoted as 12,000 t.p.h and OS receives a letter to this effect with a request for OS loading rate. However, hoses restrict rate to about 2,700 t.p.h. overall. Hoses provided by MT, reducers supplied by OS. Only ropes or wires with rope tails used for mooring. Entire operation is guided by the ICS, OCIMF, ISGOTT. Tankers being loaded by daughter tankers should anchor with port anchor and daughter tanker berths starboard side. OS port side derrick and manifolds used alongside MT. Ballast is pumped overside. Ballast draft on arrival to be such that distance from manifold to water line does not exceed 15 m. Ballast trim not to exceed 3 per cent of LOA at any time. Distance of manifold to water line must never exceed 15 m. EDP is used. Samples are taken to Bombay for analysis before B/L figures are given together with cargo quality details. API, loading temperature and pourpoint are given prior to loading. Our API was 39.48 at 60°F and loading temperature will normally be around the same as sea temperature of about 86°F (as during 1st week in June). Cargo was Indian High crude, very thin and apparently quite clean. A Loading Master boards to assist with berthing but does not live aboard. Accommodation and victuals required for Pilot, 2 Cargo Surveyors and 1 Indian Oil Representative. MT normally has 9.5 shackles of cable out. MT does COW but not usual with OS of 140,000 d.w.t. tanker.
WATCHMEN: Not necessary. The only boats allowed alongside were official boats and no other small boats were observed in the vicinity. There is no gangway between MT and OS.
CUSTOMS ALLOWANCES: 200 cigarettes. The State of Gujarat is 'dry' and no alcohol allowed ashore, except foreigners being repatriated may take one bottle.
REPATRIATION: Possible. Airport at Jamnagar. The boat journey ashore is about 2 hours but boat can only get to or leave jetty about 2 hours either side of high water. Foreigners require a visa otherwise they may travel in India but are not allowed to stay at hotels. This applies to departing and arriving personnel. Indian crew are not allowed Rupee notes of greater denomination than 20 Rupees.
AIRPORT: About 1.5 hours drive by car.
SHORE LEAVE: Possible, but due to length of journey and tidal restrictions it is not recommended.
GENERAL: In June 1982 "VQ" Buoy Kachchh was missing, shore authorities were advised. A night approach is better than a daytime approach as the buoys are not easy to sight against the discoloured water (on flood tide) although the buoys and Racons show very well on radar.
DEVELOPMENTS: After the end of the SW Monsoon (1982) work will resume on the oil and gas lines to Bombay from the offshore oil-field. An SPM will probably be positioned off Bombay and this will be used during the SW Monsoon when vessels cannot load at the oil-field.
OPERATOR: Shipping Corporation of India Limited, NBCL Building, 2nd Floor, 250 Sudam Kalo Ahire Marg, Bombay 400 025, India.

TUTICORIN: 08.45 N. 78.13 E.

PORT LIMITS: *On the North:* A line drawn due East from the boundary pillar erected to the North at Arasadi along the parallel of Lat. 08° 50′ N., to a position in Lat. 08° 50′ N., Long. 78° 22′ E.
On the East: A line joining a position in Lat. 08° 50′ N., Long. 78° 22′ E. to a position in Lat. 08° 41′ 40″ N., Long. 78° 20′ 20″ E.
On the South: A line due West from a position in Lat. 08° 41′ 40″ N., Long. 78° 20′ 20″ E. to where it meets the point 45.72 m. from the HW mark on the shore.
DOCUMENTS: Required on arrival:
4 Manifests.
2 Bills of Lading.
5 Crew Lists.
5 Passenger Lists.
4 Crew Personal Property Declaration.
4 Crew Currency Declaration.
4 Import Manifest of Stores List.
2 Health Report Form.

All statutory certificates in respect of vessels in Marine, Traffic, Customs and Immigration.
PILOTAGE: Compulsory within the pilotage zone. At present pilotage is restricted from 0600 hrs. to 1800 hrs. There is no night pilotage. To avoid a delay in obtaining a Pilot, the Owner, Master or Agent of a ship bound for Tuticorin must report ETA via their Agents at least 72 hours in advance, and again 24 hours in advance of arrival. The ETA must be confirmed or amended not less that 6 hours prior to arrival. Time can be either in GMT or IST. The vessels must contact Port Signal Station on VHF Channels 16/12. In message of ETA, the following information must be included:

1. Name/call sign of the vessel.
2. Nationality.
3. Length, draft and g.r.t.
4. Last port and cargo.

Pilot Boarding Station: Vessels are required to approach the Fairway Buoy and the Pilot will board the vessel about 0.5 nautical miles East of Fairway Buoy while underway. The position is approximately 2.5 km. to 3.0 km. away from the entrance to the port basin.

ANCHORAGE: *Zone A:* There is an Explosives anchorage in position Lat. 8° 44′ 48″ N., Long. 78° 14′ 22″ E, in a sector with the Fairway Buoy as centre circumscribed over an arc of 171° from 009° (T) to 180° (T) at a distance of 0.5 miles to 1.0 miles.

Zone B: There is an open roadstead available at Zone 'B'. Vessels of any size and draft can be handled at the open roadstead. The loading and unloading operations are carried out by lighters at the open roadstead throughout the year.

MAX. SIZE: See "Berthing".

HEALTH: Free Pratique is issued in normal cases by the Municipal Health Officer, Tuticorin, but in the case of vessels coming from yellow fever area and jigger infection ports with 30 days it is to be issued by the Port Health Officer, Mandapam Camp.

RADIO: When vessel within 24 hours' distance Tuticorin Radio could be used call sign VWT. Otherwise according to route followed, vessels use Madras or Bombay Radio.

VHF: Signal station stands-by throughout 24 hours on Channels 12 and 16.

TUGS: Three tugs (bollard pull 30 tons) available for berthing and unberthing inside the harbour. However, if services are required for any special service, arrangements have to be made. Ships usually anchor in open roads and enter and sail without tug assistance.

BERTHING: In Zone 'A' there are at present 6 alongside berths available to handle break-bulk and dry-bulk cargoes. Berths No. 1, 2, 5 and 6 are designed for ships of 168 m. length and 9.14 m. draft and Berths No. 3 and 4 for ships of 192 m. length and 10.67 m. draft. One coal jetty is available at North Breakwater which has been designed for ships of 235 m. length and 10.67 m. draft. Pending completion of dredging in the approach channel, ships with 8.23 m. draft can enter the port at all times. Draft of 9.14 m. will be available on completion of the first phase of dredging work, which is in progress.

The berths are connected with metre gauge railway tracks and roads which are in turn connected with road and railway system to hinterland.

Floating Craft: Sufficient number of tugs and other floating craft are available for pilotage and other operations.

Cargo Handling Facilities:

3×3 ton wharf cranes.
2×6 ton wharf cranes.
4×10/4 ton grab wharf cranes.
1×10 ton hook wharf crane.
7 mobile cranes of 10 tons to 75 tons.
1×36 ton port tower crane.
18×3 ton diesel forklift trucks.
2×2.3 cu.m. capacity bucket front end loaders.
2×500 ton and 2×1,500 ton diesel locomotives.
1×40.0 TR-35.0 CH top lift truck.
2×600 t.p.h. marine unloading arms.

Storage:

2 Transit sheds 150 m.×36 m. each.
3 Warehouses 150 m×36 m. each.
1 Dangerous cargo shed 36.23 m.×20.23 m.
1 Fumigatorium 40.50 m.×18.24 m.

15 Covered transit sheds including combustible cargo shed and dutiable cargo shed with a storage capacity of 25,370 tonnes. (In Zone 'B'.)

One open platform for storage of cargo with a capacity of 61,500 tonnes. (In Zone 'B'.)

Reefer Cargo Handling Facilities: 12 plugs (6×220 volts and 6×440 volts) points. Standby generators provided.

STEVEDORES: Agents require 24 hours notice of ETA for arranging gangs, and receivers for lighters. General cargo, average rate load or discharge about 1,000/1,200 tons per weather working day.

Working hours:

(i) In respect of working of vessels in the Port, period between 0600 hours to 1400 hours on working day is treated as free time, for levy of night and holiday charges. For periods outside these hours, night and holiday charges are leviable.

(ii) In respect of delivery of import cargo and admission of cargo for shipment, period between 1000 hours to 1800 hours is treated as free time for levy of night and holiday charges. For periods outside these hours on working days, night and holiday charges are levied.

(iii) On holidays no free time is permissible either for working of vessels or for delivery/admission of cargo for purpose of levy of night and holiday charges.

MEDICAL: For doctor's visit on board early advice helps to arrange for tug or launch to take doctor from shore. In cases of emergency, medical attention can be arranged but there may be some delay. Hospital facilities available. Personnel should have valid inoculation and vaccination certificates. If certificates expired, arrangements made for re-vaccination/re-inoculation and renewal of certificates.

TANKERS: One permanent oil jetty to accommodate vessels of lengths from 150 m. to 228 m. and 9.14 m. draft is available for handling petroleum products.

Pipe-lines of 457 mm. diameter for furnace oil and 356 mm. diameter for naphtha.

Pending completion of the dredging of the approach channel, only tankers with 8.24 m. draft can enter port.

FRESH WATER: Available from hydrants alongside and by barges at the anchorage when no scarcity of water.

FUEL: Supplied by road tanker.

CONSUL: None.

REPAIRS: Minor repairs possible.

DRY DOCKS: A small dry dock with workshop facilities has been constructed at the Port for docking and attending to repairs of port's own small vessels.

GANGWAY/DECK WATCHMEN: Engaging watchmen always done at the discretion of Masters. In case required could be engaged.

OPENING/CLOSING HATCHES: By ship's crew. If done by stevedores charges extra.

CERTIFICATES:

Ship's Register.
Safety Construction Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Safety Radio & Telegraphy Certificate.
Derat Certificate.
Cargo-gear Stability Certificate.

REPATRIATION: Could be arranged via Madras.

AIRPORT: Nearest airport is Madurai, distance 100 miles, which cou connect Madras.

TIME: GMT plus 5.5 hours.

HOLIDAYS: New Year's Day, Pongal, Mattu Pongal, Republic Da Tamil New Year's Day, Good Friday, May Day, Ramzan, Bakr Independence Day, Gandhi Jayanthi, Dussehra (2 days), Moharru Deepavali, Christmas.

SHORE LEAVE: Crew allowed shore leave but movements limited municipal limits. Must obtain shore permits from police.

IDENTIFICATION CARDS: Identification cards or Seaman's Boo required to be presented to Police and Immigration authorities whi coming on shore.

REGULATIONS: Usual regulations. All crew members coming on shore and returning to ship must report to Customs and Port Police o every trip.

SERVICES: Fish, meat and all kinds of provisions and stores a generally available.

AUTHORITY: Tuticorin Port Trust, Administrative Office, Tuticorin 62 004, India. *Tel:* 85-2290 and 85-2299. *Telex:* 0434-243. *Cables:* Portrus *Contact:* The Chairman.

VADINAR: 22.31 N. 69.42 E.

LOCATION: Vadinar is in the Gulf of Kachchh about 40 miles S.W. Kandla Port. The port has 1 Single Buoy Mooring (SBM) for crude tankers.

Position of SBM: Lat. 22° 30′ 34.48″ N., Long. 69° 42′ 4.07″ E.

The deep water channel from Dwarka to SBM is marked by 9 dee sea lighted marker buoys (refer Chart No. 203).

PILOTAGE: Pilotage is compulsory and the Pilots board the tankers anchorage (Lat. 22° 33′ N., Long. 69° 38′ E.). Tanker shou communicate ETA Vadinar to Harbour Master Kandla Port and loca Agents, Jamnagar 72, 24 and 12 hours in advance.

VHF: Vadinar Control Tower can be contacted on VHF Channel 1 and 16.

TUGS: Port tugs and the launch join ships at the approach to SBM.

RESTRICTIONS/MAX. SIZE: VLCC's of max. 300,000 d.w.t. can b moored at the SBM. At present berthing of tankers is only in daylig hours but night berthing may start soon. Unberthing can be done durin hours of darkness.

FRESH WATER: Fresh water can be supplied only by water barge.

DEVELOPMENTS: Deep water berth planned.

AUTHORITY: The Chairman, Kandla Port Trust, A.O. Building, P.O.Bo No. 50, Gandhidham (Kachchh), India. *Tel:* 2001. *Telex:* 001-105-20 *Cables:* Portrust. *Contact:* Harbour Master.

VERAVAL: 20.55 N. 70.22 E.

LOCATION: Veraval is an important intermediate lighterage fair weathe town port, situated at Lat. 20° 54′ 40″ N., Long. 70° 22′ 12″ E., on th South West Coast of Saurashtra Peninsula, facing the Arabian Sea, an nearly 62 miles South of Porbandar and 192 miles North of Bombay.

DOCUMENTS:

Last Port Clearance.
Ship's Stores Manifest (3 copies).
Crew List (5 copies).
Private Property List of Crew (3 copies).
Same Bottom Cargo (3 copies).
Ship and Crew Currency List (3 copies).
Indian Coast Light Dues Receipt (if vessel arriving from Indian po
Maritime Declaration of Health.
Customs Arrival Report.
Customs Declaration for arms, ammunition, etc.
Port Arrival Report.

PILOTAGE: Not required. Vessels anchor midstream.

NAVIGATION AIDS: *Veraval Lighthouse:* The lighthouse, in posi Lat. 20° 54.6′ N., Long. 70° 21.15′ E., is a square masonary tower wi semi-circular frontage towards the sea side, and rectangular towa land side, painted in alternate black and white bands. Height of tow 33.5 m. Height of light (centre of lantern) about 33.5 m. above NHW Range of visibility 26 km. Character of light – occulting white ev 15 seconds, i.e. flash 10 seconds and eclipse 5 seconds. A signal ho is also sounded from the lighthouse structure as and when required *Bhidia Beacon:* Located in position Lat. 20° 53.8′ N., Long. 70° 22.9 The beacon is a square masonary structure, painted with red and wh bands. The height of the structure is 20 ft. The range of visibility 4 mi Character of the light is flash red every 10 seconds.

Both lights are maintained by the Lighthouse Department of t Government of India. In addition there are lights for guiding lo movements at (1) Old Lighthouse, (2) Breakwater, and (3) Ch entrance. These local lights are maintained by the Port Departme the State Government.

ANCHORAGES: The port is well protected by a breakwater extending 1,600 ft. into the open sea with fairly deep water of about 8 to 9 fathoms. Deep draft vessels can anchor at a distance about 1.5 km. away from the shore. The holding ground is good, so deep draft vessels can anchor quite close to the port without any specific restrictions. Two anchorage positions are marked on Indian Chart No. 2050. The ships are supposed to wait there for their turn, as only 3 ships are worked at a time. A refer ship is worked at night as a 4th vessel. However, a maximum of 2 import ships only can work at a time.

Port working zones have been prescribed as A, B, C, D and E, and five points A B C D E are marked as under. From Arrival Anchorage Zone, ships have to move to the working zone and select any of the points A B C D or E, as convenient to them. Otherwise ship's work would not commence.

Anchorage	*Point*	*Position Lat./Long.*	*Depth approx.*	*Suggested for a vessel having draft up to*
1	A	20° 53′ 27″ N. 70° 22′ 40″ E.	11.50 m.	8.75 m. (28 ft. 00 in.)
2	B	20° 53′ 20″ N. 70° 22′ 20″ E.	12.00 m.	9.25 m. (30 ft. 00 in.)
3	C	20° 53′ 03″ N. 70° 22′ 33″ E.	12.80 m.	10.00 m. (32 ft. 00 in.)
4	D	20° 53′ 14″ N. 70° 22′ 48″ E.	11.00 m	8.25 m. (26 ft. 00 in.)
5	E	20° 53′ 16″ N. 70° 22′ 33″ E.	13.00 m.	10.25 m. (33 ft. 00 in.)

Point	*Veraval Lighthouse*	*Bhiria Beacon*	*Somnath Temple*
A	311°	030.5°	101°
B	321°	048°	094.5°
C	321.5°	027°	083.5°
D	312.5°	015.5°	088°
E	317.5°	034.5°	092°

The movement of lighters is constant as the harbour has water at all times, enabling constant cargo working.

Approaches to the port are also directly from the open sea with no tidal difficulties, or cross currents. Tidal rise is quite normal and negligible, from 5 ft. to 8 ft.

RESTRICTIONS: None, day or night anchorage possible.

MAX. SIZE: No restriction.

HEALTH: (a) Bill of Health is being granted by the Resident Medical Officer of the local Hospital.

(b) Free Pratique is granted by the Customs Boarding Officer, on presentation to him of "International Maritime Declaration of Health" by Master.

RADIO: Messages via Bombay Radio or Kandla Radio.

TUGS: 4 tugs, 1×191 h.p., 1×270 h.p., 1×255 h.p. and 1×360 h.p.

VHF: Channels 16, 11, 12 and 14.

BERTHING: No berths for ocean-going vessels.

There are 4 lighter wharves for vessels working which can provide loading/unloading points, of which 4 have cranage facilities.

Barges: There are 27 barges with 100 tonnes capacity each and one water/cargo barge with capacity 100 tonnes.

Storage Facilities:

4 transit godowns – 1,600 tons capacity.
4 platforms – 4,000 tons capacity.
53 storage godowns – 50,000 tons capacity.

CRANES:

1 × 0.5 tonnes capacity at Wharf A.
1 × 0.5 tonnes capacity at Wharf B.
4 × 12.5 tonnes capacity mobile cranes.
1 × 5.0 tons capacity mobile crane.
1 × 75.0 tonnes capacity diesel crane.
1 × 80.0 tonnes capacity mobile diesel crane.

STEVEDORING: Particulars of ETA and labour gangs required well in advance. Average loading/discharging:

Loading bagged cargo oilcake, etc.	225/250 tons per hook per day
Loading GN oil in drums	150/175 tons per hook per day
Discharging fertiliser (bagged)	150/200 tons per hook per day
General cargo loading/discharging	150/200 tons per hook per day

Working Hours: Port working hours: 0800 – 1200 hrs. and 1300 – 1700 hrs.

Vessel working hours: Throughout 24 hours. Vessels are allowed to work during recess hours and during nights which are 1200 – 1300 hrs. (recess), 1700 – 1800 hrs. (recess), 1800 – 2200 hrs. (night – 1st half), 2300 – 0300 hrs. (night – 2nd half) and 0300 – 0800 hrs. (recess).

MEDICAL: Qualified doctors and hospital facilities.

TANKERS: No tanker berths.

FRESH WATER: Water is required to be obtained from port premises and is transported by port tank truck and being supplied by water barge or by tug to vessel on payment of transportation charges from port premises to shore and from shore to anchorage excluding cost of water.

FUEL: Not available.

CONSULS: None.

REPAIRS: Port is equipped with workshop and dry dock for minor repairs to tugs and barges. Minor repairs are carried out in town.

GANGWAY/DECK WATCHMEN: Not necessary unless required. Can be arranged through Agents.

OPENING/CLOSING HATCHES: Carried out by stevedores. Ships' derricks worked by crew.

CERTIFICATES:

Safety Equipment Certificate.
Load Line Certificate.
Safety Radio-Telegraphy Certificate.
Derat Certificate.
Ship's Registration Certificate.

REPATRIATION: Can be arranged.

AIRPORT: Nearest airport Keshod, 30 miles from Veraval, but motor transport not easily available and advance arrangements have to be made.

TIME: Local Time GMT plus 5.5 hours.

HOLIDAYS: On which work not allowed for loading/discharging: Indian Republic Day, Holi (Second Day), Ramnavami, Mohurram (Ashura or 10th day), Gokulashtami, Dussera Diwali (New Year's Day), Ramzan-Id (Id-ul-Fitr).

POLICE/AMBULANCE/FIRE: Police 3; Ambulance 5; Fire 5.

TELEPHONES: No arrangements for placing telephones on board the ship, but calls via VHF are possible.

SHORE LEAVE: Crews permitted ashore with permission from Customs and Port Authorities. While coming ashore and returning to ship crew should pass through Customs.

DELAYS: 3 ships can work and fourth vessel if for lifting frozen fish can work during night hours only. Fourth vessel other than frozen fish cargo wait in turn.

GENERAL: Closed for traffic between 15th May to 15th September every year due to monsoon season.

Charts: Plans of Kathinwar – Gulf of Kutch to Vijaydurg 2736. Plans of Veraval Port Roads No. 1321 and 2054.

DEVELOPMENTS: Veraval is being developed as an all weather fishery harbour working under the World Bank Project. There will be extensive facilities available at the Port. The existing breakwater is being extended by about 334 m. and another would be erected in opposite direction for about 3,200 ft. A minimum depth of water in the inner breakwater would be 17 ft. 6 in.

AUTHORITY: Office of the Port Officer – Veraval, Gujarat Maritime Board, Junagadh District, Pin. 362265. *Tel:* 20001 (office), 20956 (residence). *Telex:* 163-209 GMBV IN. *Contact:* Port Officer.

VISAKHAPATNAM: 17.41 N. 83.18 E. (See Plan)

PORT LIMITS: 3 nautical miles East of and parallel to 10 fathoms line of soundings may be taken as the seaward boundary of the port within which a vessel is considered to be an "arrived vessel".

DOCUMENTS:

12 copies of Crew List.
3 copies of Stores List.
3 copies of Private Property List.
3 copies of Currency Declaration.
3 copies of watch lists, giving details of make and value, etc.

The vessel must possess following valid certificates:

Ship's Register.
Load Line Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Safety Radio Telegraphy and Telephony Certificates.
Cargo Gear Test Certificate.
Safety and Survey Certificate.
Derat Certificate.
Last Port Clearance.

Also see "Shipmaster's Report" – June 1988.

PILOTAGE: Vessels generally anchor at roadstead where Pilots board. Signal station contacts all vessels arriving and advises all information about Pilot's arrival, etc. A minimum notice of 48 hours of vessel's ETA required. Pilot ladder to be rigged on the Starboard side.

ANCHORAGE: Anchorage position to be marked with Dolphin's Nose Lighthouse bearing 270° (T) at a distance of 1.5 nautical miles.

RESTRICTIONS: *Inner Harbour:* The Inner Harbour is open to ships of 193.55 m. LOA, 9.14 m. draft and 30.48 m. beam at all stages of tide and ships of 193.55 m. LOA with a max. draft of 10.05 m. on a minimum rising tide of 0.91 m. for arrival and draft of 10.21 m. for sailing. Vessels of LOA 175.26 m. and above with draft of 9.14 m. and above can enter during daylight hours only. There are no restrictions on account of night navigation for sailing of vessels from Inner Harbour.

Outer Harbour: Vessels with 270 m. LOA, 42 m. beam, 15.3 m. draft, can sail from the Outer Harbour "OB–1" and "OB–2" berths at all times. The draft for ships entering the Outer Harbour in loaded condition is 14.3 m. No tidal restrictions. The max. permissible draft at oil mooring is 14.3 m., and LOA 260 m.

Vessels of 60,000 d.w.t. and above can enter during daylight hours only. There are no restrictions on account of night navigation for sailing of vessels from ore berths No.'s I and II.

Mooring and unmooring of vessels at Oil Mooring is restricted to daylight hours only.

MAX. SIZE:

Inner Harbour:	
Max. permissible LOA	193.55 m.
Max. permissible breadth	30.48 m.
Max. permissible draft	10.21 m.
Outer Harbour:	
Max. permissible LOA	270 m.
Max. permissible breadth	42 m.
Max. permissible draft	15.3 m.

PRATIQUE: A separate radio Free Pratique message addressed "Quarantine Visakhapatnam" must be transmitted by all vessels arriving from foreign port not less than 4 hours and not more than 12 hours prior ETA.

On information furnished therein Port Health Officer grants Free Pratique. Pilot boarding the ship for bringing her into the harbour has superseding power to cancel radio Free Pratique already granted. However based on information contained in Maritime Declaration Pilot also grants Free Pratique. In case of doubt or in case of inspection, if necessary, Quarantine Officer boards ship for granting clearance. No necessity for vessel to obtain Free Pratique when the vessel arrives directly from another Indian Port.

RADIO: Radio station call sign VWV. Working round clock. Range about 600 miles during daytime and 1,000 miles during night. Better to use Madras Radio Station for all communications in respect of vessels arriving from Madras side. Vessels arriving from Calcutta side, use Calcutta Radio Station. Generally Visakhapatnam Radio station is used for vessels anchored at roadstead. VHF Channel 16.
TUGS: Tugs are available. For ships entering the port, the tugs wait in the lee of the breakwater. Ship's lines and/or tug's lines are used, depending upon the mode of making fast.
BERTHING: The Inner Harbour has 15 berths of which 11 are quay berths, 3 jetty berths and 1 mooring berth, while in the Outer Harbour, there are 2 ore berths and an oil mooring berth. No specific requirements of arrival times for berthing.
CONTAINER HANDLING FACILITIES: Container handling facilities are provided at Visakhapatnam Port.
These facilities include:
Priority berthing;
An earmarked regular quay berth with a draft of 10.06 m. and LOA 168 m.;
50,000 sq. m. open storage space;
3,000 sq. m. of covered storage area;
A 150 tonne floating crane with two 150 tonne flat top pontoons for overside operations;
A 50 tonne gantry crane in the container park;
Two 50 tonne crawler mounted mobile cranes;
Four 25 ton mobile cranes;
Fleet of forklift trucks with extended forks up to a capacity of 8 tons and Truck-trailer units.
CRANES: The Port has 6×10 tonne cranes, 6×6 tonne and 18×3 tonne quay cranes, one 30 tonne stationary electric crane and 1×150 tonne self-propelled floating crane in addition to various mobile equipment such as mobile cranes, forklifts, tractors and trailers and front end loaders.
BULK CARGO FACILITIES: Iron ore is loaded through a mechanical ore handling plant having a rated capacity of 8,000 tonnes per hour into ore carriers of 100,000 d.w.t., at the finger type ore jetty (OB-1, OB-2) in the Outer Harbour.

Fertiliser raw materials (i.e.) rock phosphate and sulphur on account of Coromandal Fertilisers are handled at the fertiliser berth in the bulk form by means of grabs and conveyors into a silo.

Grabs are also used for unloading fertilisers and other bulk cargoes at the Port.
SPECIALISED CARGO HANDLING FACILITIES:
Inner Harbour: *Fertiliser berth:* For the import of fertiliser raw materials vis. sulphur and rock phosphate by grab unloading on to a conveyor belt.
OR-1 and OR-2 Berths: For the handling of P.O.L.
EQ-1 and EQ-2 Berths: For the export of Manganese ore and other ores by semi-mechanical means. Portable flat belt conveyor system for handling bag cargoes.

Use of grabs for unloading bulk cargoes. Poclain Hydraulic excavator and front end loaders for handling bulk cargoes.
Outer Harbour: *OB-1 and OB-2 Berths:* For loading iron ore through a mechanical ore handling plant at a rated capacity of 8,000 tonnes per hour.
STEVEDORES: Agents must give proper notice of vessel's arrival to the stevedores not less than 48 hours to make necessary arrangements for working vessel and also to order sufficient gangs, etc.
MEDICAL: All crew and officers must possess individual international vaccination certificates against cholera before leaving this port for any foreign port. Cholera inoculation facilities available with 24 hours notice. Well-equipped hospital facilities available round the clock.
TANKERS: There are 2 berths in the Inner Harbour for discharging and loading oil. The max. permissible draft at these berths is 10.06 m. at HW. In the Outer Harbour, an oil mooring berth is available to accommodate tankers of up to 100,000 d.w.t. with a draft of not exceeding 14.3 m.
DENSITY: Fluctuates from day to day between 1020 and 1023.
FRESH WATER: Normal quantities available and delivery made by Port Trust both from shore and barges.
FUEL: Indian Oil Corporation and Hindustan Petroleum Corporation supply on request either through pipe-line in some cases or by barges in other cases.
FIRE PRECAUTIONS: Fire precautions are to be observed in the port area. The Port has fire fighting equipment consisting of a fire float capable of combating fires afloat as well as ashore and 3 shore fire fighting units.
CONSULS: None.
REPAIRS: All types of deck and engine repairs possible.
DRY DOCKS: The Port has a dry dock which is 137.2 m. long and 18.4 m. wide for port craft and small ships. It has a depth of 5.6 m. below the low water.

Hindustan Shipyard Limited's services available generally for major ship repairs. It has a dry dock which is 244 m. long and 38 m. wide. It can take in ships of 70,000 d.w.t.
GANGWAY/DECK WATCHMEN: Necessary according to demands of local labour unions.
OPENING/CLOSING HATCHES: Stevedores.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per head per week. Wine and/or spirit: Asian Crew 2/5 units per 3 days. Non-Asian crew 4/5 units per 3 days. Bottle of liquor equals unit.
CARGO GEAR: Valid cargo gear test certificate must be on board all vessels using ships' gear for loading or discharging.
REPATRIATION: Facilities exist to foreign countries via Madras, Calcutta or Bombay. About 3 days delay to obtain travel permit.
AIRPORT: Distance 14 km. Regular daily flights to Calcutta and Hyderabad by Indian Airlines Corporation.
SURVEYORS: Available.
TIME: Indian Standard Time GMT plus 5.5 hours.
HOLIDAYS: Port's closed holidays are: Pongal, Kanumu, Republic Day, Kotha-Amavasya, Vijayadasimi, Independence Day, Gandhi's Birthday and Nagulachaviti, when work not possible even on payment of overtime.
POLICE/AMBULANCE/FIRE: Police Station 62140; Fire Station 6484 – Ext 239; Ambulance 64841 – Ext 213 (Port Hospital), Ext 2 (Ambulance).
TELEPHONES: Arrangements exist for placing telephone on board.
SERVICES: Tank cleaning facilities available.
SHORE LEAVE: Crew members allowed ashore after receivin immigration permits.
IDENTIFICATION CARDS: Not needed if have valid Seaman's Book
DEVELOPMENTS: A Fishing Harbour was constructed in a 24 hecta area as a by-product of the Outer Harbour. The first stage of the Fishin Harbour provides accommodation to 15 trawlers and 150 mechanise boats. The second stage of the Fishing Harbour can accommoda 56 trawlers and 300 mechanised boats.

A slipway facilitating 6 trawlers or 12 boats at a time for repairs is als constructed at the Fishing Harbour.

Construction of an oil berth to accommodate tankers of 150,000 d.w. in the Outer Harbour, provision of facilities for handling of import of coa provision of facilities for export of Alumina and import of caustic soda construction of a general/bulk cargo berth in the Outer Harbour t accommodate 60,000 d.w.t. vessels, construction of 2 warehouses of total capacity of 30,000 tonnes, provision of third wagon tippler for th iron ore handling complex, addition of tugs and other floating craft an cranes and other cargo handling equipment are some of the princip developments.

SHIPMASTER'S REPORT: September 1983.
Documents: On boarding, Pilot hands Master Arrival Report (i duplicate) with 24 questions to be completed and handed back to Pil before passing Dutch Battery. The questions relate to the vesse certificates, cargo and voyage just undertaken and it is quite a length document. Recommend copy should be obtained at previous port t have all completed for arrival.

For security reasons, all cameras must be collected prior to arriva and kept in the safe custody of the Master. Pilot gives Master a Declaration to sign that no photographs will be taken of the Port Area on arrival, whilst berthed, or on departure.

The Indian Authorities are presently having meetings to come up wit a single Arrival Form for vessels, to end the present duplication o information between Port Authorities, Customs, Immigration, etc.
Pilotage: On departure, Agents make tentative booking of Pilot with Por Trust, vessel then to hoist International Code Flag 'G' 1 hour befor departure.
Radio: Visakhapatnam Radio/VWV workable about 1 day out.
Health: Send Free Pratique message stating no persons embarked a Aden or Djibouti and that there are no monkeys on board. Pilot initial grants Pratique with stamp in Deck Log Book.
Tugs: Four tugs of 32 ton bollard pull available; for deeply laden larg vessels passing into Inner Harbour, 2 are required, 1 made fast rig ahead, the other made fast starboard shoulder. They are necessary t vessels to negotiate the bends in the Cutting. Tugs join in the Oute Harbour and there is little time to make them fast. Therefore, Pilot ask for Aft Mooring Gang to make one of these tugs fast, as they are n required aft until vessel is in the Turning Basin.
Medical: It is recommended that personnel have Cholera and Typho inoculations before arrival. Stocks of these vaccinations are not usual held locally unless there is an outbreak of the disease.
Density: Varies from 1018 to 1023 depending on season and rece rainfall.
Fresh Water: Delivered by barge, hoist International Code Flags 'Y' ov 'J' 2 days before required.
Repairs: Below average standard of metal work/welding. Very lit assistance and spares available in electronic area.
Opening/Closing Hatches: Automatic/hydraulic type are operated b ship's crew.
Surveyors: Lloyd's (exclusive), ABS, GL, NKK, Korean Regist Int. Cargo Gear Bureau NY (non-exclusive), also Nautical Inspector t Governments of Liberia, The Bahamas and Republic of Panama.
Telephones: No shore telephone was placed on board.
Services: Very few services available.
Shore Leave: Immigration permits/shore passes to be carried at a times, issued for limited period initially.

Indian currency in notes of greater value than Rs 10/- (about U.S.$ not permitted inside Dock Area.
Security: Local Watchmen not particularly effective and pilfering is ri Make the accommodation block secure with only one controlled ent exit. Keep a strict watch over any items which cannot be remove secured.

SHIPMASTER'S REPORT: November 1984.

We presented Crew List (See Note 1), Passenger List, Stores Li (Form 3), a Bonded Stores List (See Note 4), Drugs List (Morphin etc.), Arms and Ammunitions List, comprehensive Customs List For IV (See Notes 2, 3, and 5 below), Hidden Cavities Declaration List an Vaccination List.

Note 1: The Crew Lists must show passport or discharge bo numbers. Not interested in dates of birth. The Immigration Officials iss passes for all on board who wish to go ashore (or just a few blanks only 4 or 5 people want to go ashore). These must be returned to Age before sailing.

Note 2: Endeavour to obtain correct forms prior departing for fi Indian port. A complete set of 4 is required for all subsequent Indi ports visited. Ensure that *all* paper money is declared, whatever th amount. (Undeclared currency, cigarettes, gifts, etc. confiscate Rummage squads are thorough. Also ensure that the term "Dr materials and personal effects" is entered in Column 12 with other lis items.

Note 3: Currency – it is a fine-carrying offence to take h denomination notes ie. Rupees 20, 50, 100 and above, out of t country. Agents usually supply cash in 10 Rupee notes** or less.

Note 4: It is advisable to carry minimum sufficient bonded and slop chest items.

Note 5: Ensure that vessel sails with "travelling copy" handed to Master prior sailing first port for second port and so on for multi-Indian-port calls.

" Where foreign currency is changed ashore, a proper 'encashment certificate' with serial number must be obtained and details of passport given at time of exchange. The jetty duty Customs Official must be informed on return to ship and a supplementary currency declaration form C.B.R. CUS419 filled out showing amount exchanged and new balance of foreign currency in your possession. Both forms must be retained by exchanging person.

Also on arrival, the Health Officials carry out a "Marpol" inspection. There are many arrival and departure forms to be completed, including comprehensive pilot information forms. Have some detailed prior arrival to complete same as they are time consuming. Obtain blank sets if trading regularly.

Regulations: The taking of photographs in the harbour is not permitted. The placing of all cameras in the bond is advised, or a written notice posted.

SHIPMASTER'S REPORT: June 1988.

The Dock Safety Authorities inspect the certificates of each wire rope belonging to the ship's gear, regardless of the validity of the four yearly and one yearly Cargo Gear Inspection Certificates.

The above demand is valid at all Indian ports and if the certificates are not available on board, severe delays may arise with loading and discharging operations.

We also experienced very strict customs regulations. Using US Customs Form 1301 for Ship's Stores Declaration, we had declared all listed items and ship's radios, tape recorders, T.V. video and adding machines.

We did not declare the ship's 4 washing machines and one of them was seized as it was still in its original packing and had not yet been installed in place of the damaged machine. After three days, we managed to obtain release of the machine.

In the past, sextants, binoculars, stop watches, etc., have been seized when they have not been declared.

GENERAL – TANKERS

INTRODUCTION:

Situation:

The Republic of Indonesia comprises the islands of:

Sumatra : including Riau, Bangka, Belitung, Nias, Mentawai, etc.
Java and Madura
Kalimantan (Borneo) : including Tarakan, Bunyu, Laut, etc.
Sulawesi : including Kabaena, Muna, Buton, Peleng, Banggai, etc.
Maluku : consisting of Halmahera, Bacan, etc.
Bali
West Nusatenggara : consisting of Lombok, Sumbawa, Tanimbar, Buru, Seram, Kai, Aru, Babar, Wetar, etc.
East Nusatenggara : consisting of Sumba, Flores, Solor, Alor, Timor, etc.
Timor Timur
Irian Jaya : including Waigeo, Misool, Salawati, Biak, etc.

Laws:

The Laws of Republic of Indonesia are in force and all personnel, for their own protection, are urged to abide by them.

Languages:

The main language is Indonesian and the second language is English.

Territorial Waters:

The breadth of the sea claimed as territorial waters is 12 miles. Indonesia also claims sovereignty over all waters within the archipelago. Fishing jurisdiction is claimed to extend 200 miles from the base line.

Authority:

All harbours in Indonesia are under supervision of responsibility of the Government, i.e. Directorate General of Sea Communication, and to a great extent established as commercial harbours. Pertamina operate the dedicated oil and gas harbours/terminals on behalf of the Directorate General of Sea Communication under the Mutual Agreement Letter between the Director General of Sea Communication and the President Director of Pertamina.

Currency:

The monetary unit is the Rupiah (Rp) which is divided into 100 sens. Notes are issued in denominations from Rp.100.- to Rp.10,000.- and there are coins of 5, 10, 25, 50 and 100 Rupiahs.

Sailing Directions:

Refer to the "Eastern Archipelago Pilot Book".

Tidal Streams and Current:

The tidal streams and current can be found in "Tidal Stream Tables". These are published annually by the Indonesian Naval Hydro-Oceanographic Office (Jawatan Hidro-oceanografi Angkatan Laut Indonesia), Jl. Gunung Sahari No. 87, Jakarta, Indonesia.

Port Charges:

Company charges and Government charges such as service charges, light and harbour dues, agency fees, also berthing fees, pilotage fees, towage fees, etc., on application and are standard throughout Indonesian harbours.

Advance Payment:

The tanker Owner or Charterer must comply with the "Procedure for Appointing Agent". Pertamina Directorate for Shipping and Telecommunication will acknowledge receipt of cable appointment, and will request an advance deposit, depending on the size of vessel, to cover the Port Charges, not including Corporate Tax. In addition a sum of U.S.$5,000 to U.S.$10,000 is to be paid as advance payment for freight tax.

Advance payment should be made payable to:

"Pertamina Agency",
Account No. 11.51.006.000.0005,
Bank Negara Indonesia 1946, Cabang Gambir,
Jl. Kebon Sirih No. 77A,
Jakarta, Indonesia.

To facilitate handling preparation, Owners/Charterers are required to telex "Pertamina Directorate for Shipping and Telecommunication" advising Telegram Transfer (T.T.) Number, the name of vessel and the port(s) of call.

In those instances where payment exceeds the actual port charges, the balance will be credited to the Owners/Charterers account or remitted by the Agent.

Neither the Agent nor the Company will be responsible for demurrage or other charges resulting from failure to pre-arrange obligations in this manner. All cash advances required by crew and vessel at arriving port(s) such as ready cash for Master, expenses for repairs, provisions and repatriation will be covered by advance deposit of Owners/Charterers. These advance deposits are the pre-requisite for handling a vessel and should be forwarded to "Pertamina Agency" Account No. 31174, Bank Exim, Jl. Enggano No. 100, Tanjung Priok, Jakarta, Indonesia.

Safety and Fire Regulations:

Safety and Fire Regulations will be strictly adhered to. The Notice "Instructions in Case of Fire" and the Notice "Safety and Fire Regulations" must be posted in prominent positions onboard the vessel by the Master, or by his designated alternate.

Safety Check List:

The purpose of Safety Check List is to emphasise the safety requirements necessary to protect both ship and shore and the personnel involved in cargo operations during the time when the vessel is alongside the waterfront.

To assist all personnel in understanding the total requirement for each item in the Check List, extracts have been taken from the ISGOTT (International Safety Guide for Oil Tankers and Terminals) and the "Safety Guide for Terminal Handling Ships Carrying Liquefied Gases in Bulk" issued by OCIMF. It should be understood that before carg operations commence, this Safety Check List is jointly checked by sh and shore/terminal personnel. It will nevertheless be necessary to car out "follow-up inspections" during the vessel's stay alongside. Th action is essential to ensure that acceptable safety standards are bein maintained.

Prevention of Pollution of the Sea:

Owners, Masters, Agents and the operators of harbours/terminals ar responsible to observe International Convention Laws of Indonesia Government Regulations concerning pollution of sea waters.

It is not permitted to pump dirty ballast into the water.

No oil or mixture containing oil shall be discharged into Indonesia waters from any vessel.

No refuse, garbage, waste matter, carcasses, substance of dangerou or obnoxious nature or trade effluent is to be discharged from any vess into Indonesian waters.

Any fines imposed by governmental authority for pollution shall be fo the vessel's account.

Removal of Wrecks:

Should any vessel or craft sink, or become an obstruction in any par of the Port, or approaches or the area of the submarine pipeline theret the Company shall be empowered and shall have the right to take step it may deem necessary to remove the obstruction, without notice to th owners. All expenses of such removal shall be borne by the Owners o the vessel or craft, causing the obstruction, and the Company shall b entitled to reimbursement by them for any such expenses which may incur.

General Holidays:

New Year's Day
Nyepi Saka Day
Good Friday
Ascension Day of Prophet Muhammad S.A.W.
Buddhist New Year (Waisak)
Ascension Day of Jesus Christ
Idul Fitri
Idul Adha
Independence Day (August 17th)
Islamic New Year (1 Muharram)
Birthday of the Prophet Muhammad S.A.W. (Isra'Mi'raj)
Christmas Day

APPOINTMENT OF AGENT:

General Agent:

Pertamina Direktorat Perkapalan dan Telekomunikasi
(Pertamina Directorate for Shipping and Telecommunication),
Jalan Yos Sudarso 32-34, Tanjung Priok,
Jakarta Utara, Indonesia.

Attention : Biro Operasi Tanker – Sub Dit. PKP,
Jl. Merdeka Timur No. 1A,
Pertamina Building, 19th Floor,
Jakarta Pusat, Indonesia.
Mailing address : P.O. Box 327.
Cable address : Pertaminaship – Jakarta.
Telex number : 44450 – 45348.
Telephone number : 343806 – 343781.
Facsimile : 343781.

Procedure for Appointing Agent:

Owners should appoint "Pertaminaship – Jakarta" as General Agen by cable or telex 2 weeks prior to attending the vessel at the oil harbou terminal, (hereinafter referred to as "Shipping Company").

The Agent/Shipping Company will notify the Port Authorities one wee prior to vessel's arrival.

Details of Cable/Telex:

The following information should also be given in the cable or tele to obtain Agency Permit for Flag Dispensation from the Directora General of Sea Communication.

- Name and address of owners.
- Name of vessel and radio call sign.
- Flag.
- Port of Registry.
- DWT, GRT, NRT, LOA of vessel.
- Name of Master.
- Number of Crew.
- Last Port of Call and ETD.
- Quantity and grade to be loaded/discharged.
- Consignee.
- Estimated Time of Arrival (ETA in local standard time).
- Destination(s) after loading/discharging.
- Indonesian Ports of Call.

ARRIVAL PROCEDURE:

Flag Dispensation/Agency Permit:

Each foreign vessel entering Indonesian Ports must have requeste and been granted Flag Dispensation/Security Clearance prior to t arrival.

General Agency Certificate:

The General Agency Certificate (Surat Keagenan Umum/S.K.U.) is document issued by the Directorate General of Sea Communicatio stating that a certain authorised company in Indonesia has bee appointed as the Ship's Agent (as a guarantor) and therefore th document is essential.

Health and Medical:

Vessels destined for an Indonesian port must send application Provisional Free Pratique to the Quarantine Section, Department Health, Jakarta, well in advance.

Vessels arriving at an Indonesian port without prior advice must fi call at a first class Port of Entry for obtaining Free Pratique. The fi class ports are: Belawan (Medan), Tanjung Priok (Jakarta), Tanju Perak (Surabaya) and Ujung Pandang (Makasar).

Port Health Clearance is issued after vessel's arrival and is also va for Departure Clearance. If Provisional Pratique is not granted a P Health Officer will be provided.

Flags and Signals:

In accordance with practice in Indonesian Ports, by day, the Indonesian and the vessel's national flags must be flown as long as the vessel stays in port.

Display of Quarantine, Pilot, Immigration, Call Sign flags and other signals according to the International Code Signal Agreement on approach to the port must be maintained until Pratique is granted.

These signals are as follows:

Quarantine	: Flag "Q" (sunrise to sunset). Signal lights red over white (sunset to sunrise). It is to be substituted by flag "QL/QQ" when the Port Health Officer has declared infected or suspected with a quarantinable disease.
Pilot	: Flag "G". It is to be substituted by flag "H" when the Pilot/Mooring Master boards your vessel.
Immigration:	: Flag "N" should be flown until the Immigration Officer boards your vessel.
Call Sign	: To be flown until berthed and again when sailing.
During loading/ discharging	: During loading/discharging of oil, flag "B" must be displayed (at night, red signal light).

Notice of Readiness:

A tanker will be considered as "arrived" and Notice of Readiness will be accepted provided she is in all respects ready to commence loading/discharging.

Viz:

(a) from the time the Pilot/Mooring Master has boarded the vessel, or

(b) from the time of anchoring, when the vessel has anchored in the designated anchorage and has advised the oil harbour/terminal of the time of anchoring, or

(c) from the time a tanker within the anchorage area, awaiting the Pilot/Mooring Master's arrival, is required "not" to anchor.

Documentation:

Two days before arrival of vessel the ship's agent has to inform Port Authorities by completing appropriate forms. Copies of completed forms must also be submitted to the Port Administration, Harbour Master, Customs, Immigration and Port Health Service for preparation of services.

The Pilot/Mooring Master may berth the vessel on request of the ship's agent only after obtaining clearance from the above Port Officials.

Health Documents:

Maritime Declaration of Health Certificate.
Deratting or Exemption Certificate.
Vaccination Certificates (Cholera).
Health Book or Bill of Health.

Ship's Documents:

If arriving from a foreign port, the following documents may be required for granting Pratique. These documents are:

Certificate of Nationality.
Certificate of Measurement.
Certificate of Registry.
Certificate of Appliances (Cargo Gear Certificate).
Load Line Certificate.
Safety Equipment Certificate.
Ship's Construction Certificate.
Safety Radio/Telegraph Certificate.
Approved Letter of Compliance (International).
Oil Record Book and Certificate of Fitness (in case of gas and chemical carriers).

Harbour Master:

The ship's documents are then delivered to the Harbour Master with the following documents attached: Last Port Clearance, Crew List approved by the Immigration Officer and Light Dues Receipt if arriving from another Indonesian port. The Harbour Master submits a Harbour Report Form for the Master to complete.

The Harbour Master issues a Port Clearance at departure, provided clearance is also granted by the other governmental authorities. A Panamanian Port Clearance for Panamanian Flag vessels is not required at oil harbours/terminals.

Immigration:

The Immigration Officer requires copies of the Crew List and Passenger List (if any) and will check the Ship's Articles and the Passports of the crew.

Each crew member should be in possession of a Passport and Seaman's Book. Crew members having no Passport are required to carry a Seaman Identification Card (S.I.C.).

A re-entry permit from the country concerned is sufficient, if there is no Passport available.

Customs:

Vessels loading/discharging cargo have to get a Customs Permit. Copies of Bill of Lading, Cargo Manifest, Ship's Stores List, Personal Effects List and Crew List should be delivered to Customs and Port Administration.

It is most important that the lists concerning personal effects, stores and crew are completed with great care as the Port Authorities are liable to carry out a detailed check and any discrepancies can lead to heavy fines.

After the vessel is all secure, the Customs Officer will seal the stores. If arriving from a foreign Port, the Agent will prepare the General Cargo Declaration Form stating the cargo onboard the tanker and attaching appropriate Shipping Documents. If arriving from an Indonesian Port, the Form 5-B issued at the last Indonesian Port will be retained by the Customs and the Arrival Clearance is granted.

Ship's bonded stores will be sealed by the Customs Officials on arrival and will remain sealed until the vessel leaves Indonesian waters.

1. Ship's Stores:

Cigarettes, cigars, tobacco, matches, spirits, wine, beer, perfume, firearms, ammunition and possibly some other items have to be locked up under Customs Seal from time of arrival of vessel in Port until time of leaving territorial waters. Each person is allowed to bring in 200 cigarettes or the equivalent in grams of tobacco or cigars ashore without paying import duty. Special allowances are made for the Master under special circumstances.

2. Contraband:

The attention of Masters is called to the strict enforcement of Indonesian Regulations against smuggling and trading. Illegal possession of such items as narcotics, liquor, ammunition and similar weapons or other articles of contraband is subject to severe penalty and may result in prolonged delay of the vessel concerned if action is taken by the authorities. All precautions must be taken to prevent the violation of contraband laws. Masters are requested to inform the Ship's Officers and crews of the foregoing regulations pertaining to contraband, shore liberty, etc., and to be assured that all personnel completely understand.

COMMUNICATIONS:

Advice of Arrival:

It is important that all incoming tankers advise the oil harbour/terminal 72 hours and 48 hours before estimated time of arrival, giving the best estimate of ship's arrival at the oil harbour/terminal via cable and or telex. Changes in ETA must be notified thereafter.

Further ETA messages should be sent to the oil harbour/terminal when the tanker is 24 hours and 6 hours distant from the oil harbour/terminal and any other time, if any appreciable change occurs in the original ETA or those subsequent thereto.

Communication for Contacting Agent:

1. Tankers approaching the oil harbour/terminal should make initial contact on VHF Channel 16.

Masters are recommended to use this system on coming within radio range of Port Control, particularly when approaching the port, as if poor visibility exists the tanker's approach may not be observed. Attention to VHF communications may be the means of avoiding delay in berthing.

During berthing, the ship's radio will be under the sole control of the Master, and the terminal radios will be under the sole control of the Terminal Superintendent or his assistant.

Masters are reminded that if tankers are requested to anchor to await berthing, it is their responsibility to maintain constant listening watch on VHF Channel 16 to receive Terminal instructions. Any delay due to failure to maintain a constant listening watch on Channel 16 will be for the ship's account, and will not be included in Lay Time calculation.

For subsequent inter-ship communications within the oil harbour/terminal a "walkie-talkie" UHF Radio on Frequency 157.725 MHz will be used by the Pilot/Mooring Master. This frequency will not be used for general purposes, unless clearance is obtained by the oil harbour/terminal. This is required for safety reasons.

Should all radios on the tanker become inoperative, the emergency signal, i.e. continuous blasts on the ship's whistle will be sounded to notify the oil harbour/terminal of the radio failures. Upon hearing this signal from a tanker, the terminal will immediately stop loading/discharging until communications have again been re-established.

2. In the event incoming tankers are not able to contact the oil harbour/terminal on the foregoing VHF/FM Frequencies, or by HF/SSB, Pertamina maintains coastal radio stations located in Jakarta.

Pertamina Jakarta Radio, Call Sign PKI-2, may be contacted on HF/SSB on the following frequencies and during the following service hours:

Frequency (kHz)	*Hours* (GMT)	*Keep Watching* (kHz)
452	H24	500
8626	0200-0400/1000-1200 0500-0600/1400-1600 0700-0800/1700-2000	8363.2-8364.8 8372.8-8373.6
12980	0100-0200/1200-1400 0400-0500/1600-1700 0800-1000/2000-2200	12544.8-12547.2 12559.2-12560.4
4419.4 4425.6	0500-0600/0800-0900 1600-1800/2200-2400	4125.0 4131.2
6512.6	0000-0100/1200-1400 0300-0400/1800-2000 0600-0700	6206.2
8759.2	0100-0300/1100-1200 0400-0500/1500-1600 0700-0800	8235.3
VHF Channel 9, 16, 19	H24	Channel 16

Details of Cables:

The following information should be included in the cable:

Name of vessel and Radio Call Sign.
Cargo requirements.
Quantity of ballast loaded on passage/arrival.
Quantity of segregated/dirty ballast on arrival.
Draft on arrival (forward and aft).
Last Port of call.
Flange dimensions of vessel's manifold connection, if not to ASA series 150 or equivalent.
Maximum loading rate and approximate topping-off rate.
If there is any sickness aboard, give whatever information is available as to the possible type of sickness.
Confirm that vessel has clean Bill of Health.

Any hull, bulkhead, valve or pipeline leaks on vessel which could affect loading/discharging or cause pollution.

Special conditions, difficulties, defective equipment or gear which could present special hazards or difficulties when mooring/unmooring or during operations.

Distance in feet/metres from the bow to vessel's loading manifold.

The following information should be included in the cable by LPG tankers:

Total cargo capacity in cubic metres.

Have any cargoes other than LPG been carried during last 3 loaded voyages.

Gauge pressure, top, bottom and mean temperatures of each cargo tank.

Maximum allowable relief valve settings for all cargo tanks.

Maximum Oxygen content by volume per cent of each inerted cargo system.

If tank purging required specify whether:

(a) Parallel or in Series.

(b) Liquid from shore direct to cargo tanks.

(c) Liquid from shore to deck tank to vaporisers to cargo tanks. State capacity of ship's vaporisers in tons of LPG per hour throughput.

If cooling down tanks is required, specify maximum cooling rate in terms of temperature reduction per hour and maximum temperature differential permitted between any 2 points in cargo tanks.

Available total capacity of ship's reliquefaction plant for each nominated cargo product.

Grade and quantities of any part cargoes or cargo residues and where loaded.

Are part cargoes to be commingled with refinery loadings.

Quantity of purge product required in addition to cargo requirements.

Type of ship's reliquefaction system, i.e. direct, cascade or other.

Capacity of ship's gas blowers to shore vapour return line in volume per hour at reference temperature.

For further information contact Pertamina Direktorat Perkapalan dan Telekomunikasi, 32-34 Jalan Yos Sudarso, Tanjung Priok, Jakarta, Indonesia. Attention: Biro Pelabuhan Sub Dit. PMK. Telephone: (Hunting lines): 494309 Ext. 217, 362, 363, 365. (Direct lines): 495402, 490323.

AMBON: 03.41 S. 128.10 E.

DOCUMENTS:

14 Passenger Lists.

7 Crew Lists.

2 Customs Documents.

2 Health Documents.

7 Cargo Manifests.

7 Bills of Lading.

5 Ship's Papers.

Sailing Permit.

PILOTAGE: Compulsory. Apply for pilot boat by calling Ambon Coast Station (Ambon Radio) or fly "G" Flag. Pilot boat located at Ambon Bay. Entrance in all seasons and weathers. All parts of Ambon Bay suitable for anchorage to await Pilot.

ANCHORAGE: 03° 40′ 04″ S. 128° 10′ 02″ E. or 03° 40′ 56″ S. 128° 10′ 48″ E. Areas of anchorage can take all sizes of vessel.

RESTRICTIONS: Open 24 hours. Tides do not affect entry. But when entering at night ship must anchor and await orders.

MAX. SIZE: Max. draft 11.0 m.

HEALTH: Port Health Officer boards vessel together with Pilot.

RADIO: Ambon Coast Radio, call sign PKE. Operating 24 hours. Frequencies 500–470 kHz, 8473 and 8472-8799 kHz and 13101 kHz. VHF all Channels used.

TUGS: Normally tugs do not join vessel but when necessary to use tugs call PT "Dock Waijame".

BERTHING: Joos Soedarso Pier: length 187 m., breadth 35 m., depth 12 m. Wainitu Pier: length 100 m., breadth 20 m., depth 8 m. Halong Navy Pier: Length 153 m., depth 11.0 m.

CRANES: Mobile cranes, capacity 5 tons – 40 tons.

STEVEDORES: Agent arranges. 3 stevedore companies: PT. "Gotong Rojong", PT. "Mastra" and PN. "Varuna Tirta Prakarsa".

MEDICAL: Hospital facilities available. No advance notice required.

TANKERS: Berth at Wainitu Pier. Type of pipe, 6 in. and 8 in. Discharging capacity, 125 t.p.h.

FRESH WATER: Available only at Joos Soedarso Pier. Loaded by pipeline with 25 t.p.h. capacity.

FUEL: Only diesel and marine fuel.

CONSULS: No consuls available locally.

REPAIRS: Deck and engine repairs available. Floating dock, lifting capacity for 2,000 d.w.t.

GANGWAY/DECK WATCHMEN: Deck watchmen needed, particularly for tankers.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: Cannot be held out of bond.

REPATRIATION: Possible. Dealt with by Immigration through Jakarta.

AIRPORT: Distance from airport about 7 miles. Regular airline "Garuda Indonesian Airways" (GIA). 4 flights per week from Ambon to Jakarta.

TIME: Local time GMT plus 10 hours.

HOLIDAYS: Port open for 24 hours even in holidays.

POLICE/AMBULANCE/FIRE: Police and Port Health at Port. But when necessary to use fire brigade call by connecting to "Burgomaster".

SHORE LEAVE: All crew members allowed ashore with permission of Immigration.

IDENTIFICATION CARDS: Needed by Immigration (landing permit).

DEVELOPMENTS: Plans for future developments dependent on Government expenditure.

AUTHORITY: Ambon Port Administration.

ARDJUNA: 05.54 S. 107.44 E. (See Plan)

LOCATION: Ardjuna Marine Terminal is an open, unsheltered mooring in the Java Sea, about 18.5 miles from the nearest point on the North Coast of Java.

The Terminal is approximately North 72° East distant 59 nautical miles from Jakarta.

There are 5 standard type single buoy moorings and 1 rigid arm single buoy mooring situated as follows:

1. A chartered crude oil storage tanker SBM (Buoy No. 1).
   Lat. 5° 54′ 15″ S., Long. 107° 44′ 22″ E.
2. Crude oil export SBM for tankers loading from "Arco Ardjuna" or chartered crude oil storage tanker (Buoy No. 2).
   Lat. 5° 53′ 19″ S., Long. 107° 45′ 18″ E.
3. Crude oil Storage Barge "Cempaku Nusantara" SBM (Buoy No. 3).
   Lat. 5° 54′ 10.6″ S., Long. 107° 43′ 45″ E.
4. Crude oil export SBM for loading from "Arco Ardjuna" or chartered crude oil storage tanker (Buoy No. 4).
   Lat. 5° 53′ 29″ S., Long. 107° 43′ 20″ E.
5. Liquefied Petroleum Gas Storage Barge "Ardjuna Sakti" rigid-arm type SBM. (Buoy No. 5).
   Lat. 5° 53′ 10″ S., Long. 107° 44′ 13″ E.
6. Butane SBM for butane export tankers (Buoy No. 6).
   Lat. 5° 52′ 19″ S., Long. 107° 45′ 18″ E.

THE FOLLOWING ITEMS ARE OF PARTICULAR IMPORTANCE:

1. No dirty ballast.
   Tankers with dirty ballast will be rejected and will have to tender a new Notice of Readiness upon second arrival.
2. No shore leave.
3. No crew changes.
   If emergency conditions prevail, for humanitarian reasons, exceptions to the foregoing may be permitted. All expenses incurred will be for ship's account.
4. No stores available.
5. No clinic is available.
6. The laws of Indonesia govern this Terminal and all personnel are urged to abide by them.
7. During daylight hours the Indonesian flag must be flown throughout the vessel's stay in port.
8. Ardjuna time is GMT plus 7 hours throughout the year.
9. No bunkers are available.
10. Pertamina Directorate of Shipping and Telecommunications Jakarta, handles all Agency matters for tankers.
11. The Unit of Currency is the Indonesian Rupiah.
    The rate of exchange varies from time to time. The Master can obtain the current exchange rate from the Agent.
12. There are no Consulates available at Ardjuna Marine Terminal. However, there are many Embassies and Consulates represented in Jakarta 59 nautical miles S.W. of the Terminal.
13. Language of the port is English and Indonesian.
14. Only authorised personnel or visitors are permitted on the Storage Barges and/or Export Tanker.
15. No fresh water is available.
16. No slop tanks are available.
17. The Crude Oil testing laboratory is equipped to perform the following tests:
    API Gravity, B.S. & W., Pour Point and R.V.P.
    Any additional tests that may be required will be performed in Jakarta.
18. For convenience, mail for personnel on incoming tankers may be sent to the Jakarta Office of The Company for delivery to the tanker when it arrives at Ardjuna Marine Terminal. Except on an emergency basis, spare parts or other material will not be accepted for delivery to incoming tankers.

DOCUMENTS:

8 copies Crew List.

8 copies Passenger List.

3 copies Ships Stores List.

3 copies Crew Personal Effects List.

Last Port Clearance.

Health Declaration.

Ship's Certificates.

The Harbour Master submits a Harbour Report Form for the Master to complete.

The Agent prepares the ship's documents check list form to check the validity of each document. These documents are: Certificate of Registry, Ship's Construction Certificate, Load Line Certificate, Life Safety Equipment Certificate, Safety Radio/Telephone/Telegraph Certificate; Cargo Gear Certificate; Derat Certificate or Exemption Certificate. This list is then delivered to the Harbour Master with the following documents attached: Last Port Clearance, Crew List approved by the Immigration Officer and light dues receipt if arriving from another Indonesian port. The Harbour Master issues a port clearance at departure provided clearance is also granted by the other governmental authorities. A Panamanian port clearance for Panamanian flag vessels is not required at Ardjuna.

The Immigration Officer requires 2 copies of the Crew List and will check the Ship's Articles and the passports of the crew. When these documents are found to be in order, an arrival clearance will be marked on the Crew List.

If arriving from another Indonesian port the Agent will sign a guarantee if the vessel cannot prove that light dues have been paid.

Cargo Documentation: Documents such as Bills of Lading, Quality Certificate, Quantity Certificate, Dry Certificate, Ullage Certificate, Time Loading Report, Certificate of Origin, Cargo Manifest and Master's Receipt for Documents/Samples are prepared at Ardjuna Marine Terminal. When the tanker has been loaded, the documents shall be completed and be taken aboard the tanker for the Master's signature.

Signing of these Documents by the Master will take place at the same time final departure clearance formalities are being carried out.

Notes of Protest, if any, should be handed to the Mooring Master for further delivery to Atlantic Richfield Indonesia Inc., Jakarta. Please note that the Mooring Master will acknowledge receipt of the Note of Protest only and is not authorized to accept such letters.

Departure Procedure:

Prior to the vessel's departure, the Immigration Official requires 6 copies of the Crew List to be marked for *"Departure Immigration Clearance"*, and duly signed, it will be distributed as follows:

Master of the vessel	1 copy
Harbour Master	1 copy
Customs	1 copy
Pertamina Agent	1 copy
Immigration	2 copies
Total	6 copies

The Customs Official on duty will issue the Customs 5-B Form which serves as Customs Departure Clearance.

Upon presentation of the Crew List which is signed and marked for Departure Immigration Clearance and Customs Clearance, the Harbour Master will issue the *Port Clearance*.

Final Clearance formalities will be carried out aboard the tanker, either at the Export SBM or alongside the storage barge "Ardjuna Sakti" or in the Anchorage Area, as circumstances dictate.

Before leaving the Terminal Area, the Master should advise the Terminal, the vessel's ETA at destination through the Mooring Master.

PILOTAGE: Under normal conditions, if a tanker is scheduled to berth upon arrival, the Mooring Master will board such tanker in the vicinity of the mooring area.

Tankers waiting to load shall wait their turn in the recommended anchorage area, and shall maintain radio-telephone contact with the Terminal using the International Marine Calling & Safety Channel 16 for Terminal instructions.

The Mooring Master will act on behalf of the company to sign acknowledgement of tankers' Notice of Readiness. Such notice will not be accepted for a time earlier than:

(a) the Master has received the Mooring Master onboard or

(b) the tanker shall have dropped anchor within the recommended anchorage area, and has advised the Terminal the time of anchoring.

Exception to (a) and (b) will be if the tanker is within the anchorage area awaiting arrival of the Mooring Master and has been requested by the Terminal not to anchor.

In this case N.O.R. will be accepted from the time the Terminal requested the ship not to anchor.

The company reserves the right to decline to berth a specific tanker if its condition or facilities are unsafe for berthing or loading, even though the berth may be open to other tankers.

The decision of the Atlantic Richfield Indonesia Terminal Superintendent or his designated alternate to berth or not to berth a vessel shall be final.

ANCHORAGE: For tankers requested to anchor, the recommended anchorage area is an area Northwestward from the Single Buoy Moorings enclosed by a line drawn through the following positions.

"A"	Lat. 5° 52′ 36″ S.,	Long. 107° 41′ 36″ E.
"B"	Lat. 5° 50′ 57″ S.,	Long. 107° 40′ 57″ E.
"C"	Lat. 5° 50′ 06″ S.,	Long. 107° 42′ 40″ E.
"D"	Lat. 5° 51′ 24″ S.,	Long. 107° 43′ 19.5″ E.

Prior to their arrival Masters of tankers should contact the Terminal for instructions concerning anchorage positions.

Under no circumstances should the export tanker enter the Restricted Area around the structures without a Mooring Master aboard.

The attention of Masters is drawn to the existence of underwater pipelines in the Restricted Area (see "Plan").

NAVIGATION AIDS:

Approaches: Approach information can be obtained by radio from the Terminal. Under normal weather conditions, if a tanker is scheduled to berth upon arrival, the Mooring Master will board such tanker in the close vicinity of the mooring area.

In addition to the single buoy mooring points for export tankers and the storage barges, various oil wells and production structures are located in the immediate vicinity and the areas extending East, South and Westerly from the storage barges which constitute a hazard to navigation for mariners.

SBMs, storage barges and structures within Ardjuna Marine Terminal area display the following visual characteristics:

Export Single Buoy Moorings (Buoy No. 2, No. 4 and No. 6): A white light flashing every second, visibility 5 miles, mounted on the rotating deck of each SBM. Buoy No. 4 and No. 6 are fitted with radar reflectors.

Storage Barges "Cempaka Nusantara" and "Ardjuna Sakti" and Chartered Vessel: By day, the black ball as required by the Regulations for Preventing Collisions at Sea. The 2 storage barges at night display the lights for tankers at anchor as required by the Regulations for Preventing Collisions at Sea and are equipped with automatic fog signals at the bow and at the stern.

Each barge has a bell forward as required by the Collision Regulations and gong aft, under the same rules. When visibility is restricted the Fog Signals are continuously sounded. The SBM to which the "Cempaka Nusantara" is moored, is fitted with a radar reflector and a white light flashing every second visibility 5 miles. The chartered storage tanker SBM (SBM No. 1) shows a white light flashing every second visibility 5 miles.

The SBM to which "Ardjuna Sakti" is moored, shows a white light flashing alternately for a 3-second period and a 1-second period every 12 seconds, visibility 5 miles.

Crude Oil Production Platforms and Natural Gas Liquids Processing Facilities: There are 5 crude oil production platforms, 16 well platforms, 1 junction platform, 1 natural gas processing facility platform and 1 quarters platform for the natural gas facility within the Ardjuna Marine Terminal area.

"B" (Bravo) Flow Station, situated approximately 0.5 nautical miles South of the "Cempaka Nusantara" Barge. Indicated as BB.

"E" (Echo) Flow Station, situated 12 nautical miles Eastward of Bravo. Indicated as platform EA.

"K" (Kilo) Flow Station, located 8 nautical miles S.S.W. of Bravo. Indicated as platform KA.

"L" (Lima) Flow Station, situated 15 nautical miles West of Bravo. Indicated as platform LA.

"U" (Uniform) Flow Station, located 13 nautical miles S.S.E. of Bravo. Indicated as platform UB.

"M" (Mike) Flow Station, located 33 nautical miles West of Bravo. Indicated as platform MX.

"F" (Foxtrot) Flow Station, located 28 nautical miles E.S.E. of Bravo. Indicated as platform FC.

"NGL" The natural gas facility and quarters platforms are joined by a bridge. Their position is:

Lat. 5° 54′ 36″ S., Long. 107° 44′ 01″ E.

In addition to the above specified obstructions and navigational aids, all platforms display interrupted quick flashing white lights. The storage barges, flow stations, LNG facility and quarters platforms will brightly illuminate the areas around them at night through the use of lights for normal working purposes.

MAX. SIZE: SBMs No. 2 and No. 4 up to 100,000 d.w.t. and 200,000 d.w.t. respectively (for crude oil). Max. draft 30.20 m.

SBM No. 6 up to 50,000 d.w.t. (for butane liquids). Depth of water approximately 135 ft. below mean sea level.

RADIO: *Advice of Arrival by Cable or Telex:* It is important that incoming tankers advise Ardjuna Marine Terminal 72 hours and 48 hours before estimated time of arrival, giving the best estimate of ship's arrival at the Terminal, via:

Cable address: ARDJAK, Terminal Section, Jakarta
Telex number: 011 – 47390, Jakarta.

Time to be used for ETA is "GOLF" Time Zone of GMT plus 7 hours throughout the year.

The first message should also include the following information:

1. Name of tanker and Radio Call Sign.
2. Cargo requirements.
3. De-ballast time. (Note: If a separate/permanent ballast system is fitted on board, ability of ship to load crude oil and discharge ballast simultaneously must be stated.)
4. Maximum loading rate.
5. Arrival draft, forward and aft.
6. Last Port of Call.
7. Confirm that vessel has clean Bill of Health.
8. If there is any sickness aboard, give whatever information is available as to the possible type of sickness.
9. If cholera inoculation required. If so, number required.
10. Distance in feet from the bow to tanker's loading manifold.

Further ETA messages should be sent to Ardjuna Marine Terminal via above cable address and Telex Number when the tanker is 24 hours and 12 hours distant from the Terminal and any other time, if any appreciable change occurs in the original ETA or those subsequent thereto.

RADIO COMMUNICATIONS:

(1) VHF/FM Radio Telephone: (International Marine Calling & Safety Channel 16, Freq. 156.800 MHz).

Masters are recommended to use this system when they arrive within radio range of the Ardjuna Marine Terminal, particularly when approaching the port. If poor visibility exists the tanker's approach may not be observed. Attention to VHF communications may be the means of avoiding delay in berthing.

During berthing the ship's radio will be under the sole control of the Master, and the storage barge radios will be under the sole control of the Terminal Marine Superintendent or his assistant.

Masters are reminded that if tankers are requested to anchor to await berthing, it is their responsibility to maintain constant listening watch on VHF Channel 16 to receive Terminal instructions.

Any delay due to failure to maintain a constant listening watch on Channel 16 will be for the ship's account, and will not be included in Lay Time calculation.

The Ardjuna Marine Terminal is equipped with VHF/FM Radio Telephone Sets and continuous watch is maintained on Channel 16 (Freq. 156.800 MHz) and Frequency 157.725 MHz.

Tankers approaching the Terminal should make initial contact on Channel 16. For subsequent inter-ship communications within the Terminal a "Handie Talkie" UHF Radio Freq. 157.725 MHz will be used by the Mooring Master.

This frequency will not be used for general purpose, unless clearance is obtained by the Terminal. This is required for safety reasons.

Should all radios on the tanker become inoperative, the emergency signal i.e. continuous blasts on the ship's whistle will be sounded to notify the Terminal of the radio failures. Upon hearing this signal from a loading tanker the storage barges will immediately stop loading to the Export Tanker until communications have again been established.

(2) High Frequency Single Side Band Radio Telephone: A voice message from incoming tankers may be relayed by HF/SSB. Atlantic Richfield Indonesia Inc., located in Jakarta, Indonesia, is inter-connected to the Ardjuna Marine Terminal via local communications system and maintain a continuous watch on HF Frequency 7320 kHz (Upper Side Band A3J Mode, 100 Watts, Vertical Whip Antenna, Call Sign 8GJ9).

(3) Pertamina Control Radio Stations – HF/SSB: In the event incoming tankers are not able to contact the Ardjuna Marine Terminal on the foregoing VHF/FM Frequencies, or by HF/SSB, Pertamina maintains coastal radio stations located in Jakarta and Merak.

Pertamina Jakarta Radio, Call Sign PKI 2 may be contacted on HF/SSB per following frequencies and during the following service hours:

Frequency/kHz	*Hours/GMT*	*Keep Watch/kHz*
452	0000–2400	500
8626	0200–0400, 0500–0600, 0700–0800, 1000–1200, 1400–1500, 1700–2000,	8363.2–8364.8
12980	0000–0200, 0400–0500, 0800–1000, 1200–1400, 1600–1700, 2000–2200,	12544.8–12547.2 12559.2–12560.4
4419.4 4425.6	0100–0400, 0700–0900, 1000–1100, 1300–1500, 1800–2000	4125.0 & 4131.2
6512.6 6521.9	0000–0100, 0300–0400, 0600–0700, 1200–1400, 1800–2000	6215.5 & 6202.2
8759.2	0100–0300, 0400–0500, 0700–0800, 1100–1200, 1500–1600	
VHF Ch. 9/16/19	0000–2400	Channel 16

Pertamina Merak Radio, Call Sign PKQ may be contacted on HF/SSB per following frequencies and during the following service hours:

Frequency/kHz	*Hours/GMT*	*Keep Watch/kHz*
452/500	0000–1600	500
8626	0100–0200, 0900–1000, 1500–1600	8363.2–8364.8 8372.8–8373.6
4419.4, 4425.6	0000–0100, 1200–1400	4125.0, 4131.2
6512.6, 6521.9	0200–0300, 0400–0500, 0800–0900,	6206.2, 6215.5
VHF Ch. 9/16/19	0000–2400	Channel 16

Masters should request the Pertamina Coastal Radio Station to relay the necessary information to Atlantic Richfield Indonesia Inc., Jakarta attention "Terminal Section" by telephone number: 737474 (18 lines) or by Pertamina Internal Telex System number 18 which is the designated number of Atlantic Richfield Indonesia Inc., Jakarta.

Also see "General" before first port.

HEALTH/IMMIGRATION/CUSTOMS: In accordance with practice in Indonesian ports, quarantine, immigration, pilot and call sign flags must be displayed by all vessels approaching Ardjuna. These signals shall be displayed continuously until clearance is granted. The signals are as follows: Sunrise to sunset: quarantine flag "Q". Sunset to sunrise: signal lights (red over white).

The "N" flag should be flown until the Immigration Officer boards the ship. The "G" flag (request for Pilot) should be flown until the Mooring Master boards. The vessel should also fly its call sign. As soon as the Mooring Master boards, the "G" flag should be replaced by the "H" flag which signifies that the Pilot is aboard. The tanker may fly the "P" flag if it is going to sail within 24 hours.

Indonesian Immigration, Customs and Harbour Master Officials will board the vessel after arrival to grant clearance.

Each tanker entering the port of Ardjuna must have requested and been granted Flag Dispensation prior to its arrival. At the same time, application is made for Provisional Pratique through the Directorate of Quarantine and, if granted, a cable advice is sent to the Harbour Authorities.

Port Health Clearance is issued prior to the tanker's arrival and is also valid for departure clearance.

If Provisional Pratique is not granted a Port Health Officer will be provided. All of the foregoing is arranged through and by the Agent.

Each Crew member should be in possession of an International Vaccination Card.

After the tanker is all secured, the Customs Officer will seal the stores. If arriving from a foreign port, the Agent will prepare the General Cargo Declaration Form stating the cargo onboard the tanker and attaching appropriate shipping documents. If the tanker is arriving from an Indonesian port, the 5-B Form issued at the last Indonesian port will be retained by Customs and the arrival clearance at Ardjuna is granted.

TUGS: There is 1 tug available to assist mooring/unmooring. When berthing at an SBM 1 mooring launch will be used to pass the line to the tanker.

The following mooring Launches will be available for running lines as required, also for transporting Government Officials, Agents and other authorised personnel to and from the export tanker.

Name and description	*Length*	*Rated HP*
(1) *Arco Ardjuna III*	40 ft.	260
(2) *Arco Ardjuna IV*	40 ft.	260
(3) *Arco Ardjuna V*	40 ft.	275

TERMINAL FACILITIES: For Crude Oil Tankers:

Export SBMs No. 2 and No. 4 are designed, during reasonable weather conditions, to handle tankers up to 100,000 d.w.t. and 200,000 d.w.t. respectively; each SBM is equipped with dual 160 ft./15 in. circumference floating braidline mooring ropes with 22 ft. long anti-chafe chains fitted, so arranged as to avoid chafe to the mooring ropes while tankers are at the buoy.

The crude oil loading hoses are connected to the ship's manifold on the port side of the Export Tanker. Tankers arriving are requested to have the derrick on the port side raised and rigged, ready to lift aboard the Terminal equipment.

Crude oil tankers are loaded through 2 strings of 16 in. I.D. floating hoses extending from the Export SBMs No. 2 and No. 4, connected to the tanker's port side manifold at the ends by means of the rail hoses of 12 in. I.D. All crude oil tankers not having 12 in. hose connection should provide their own reducers in such a way as not to cause any delay in the hose connecting operation. On SBMs No. 2 and No. 4 the length of the hose strings is 795 ft.

For crude oil tankers intending to load in the Ardjuna Marine Terminal, the distance from the bow to the loading manifold should not exceed 450 ft.

The minimum loading rate at the Ardjuna Marine Terminal for crude oil tankers is 15,000 bbls./p.h.. Any tanker arriving unable to receive crude oil at the above rate may be rejected. Tankers loading crude oil at the SBMs No. 2 and No. 4 can accomplish a maximum loading rate of approximately 30,000 bbls./p.h. and 35,000 bbls/p.h. respectively.

In order to save time as well as to make the berth available for others it is requested that ships receive crude oil as fast as it can be delivered with due regard for safety.

Masters are reminded that for safety reasons, it is advisable to have the ship half loaded as quickly as possible. Rate can be reduced for topping off tanks. When requested by the ship to stop, cessation of crude oil flow is almost immediate.

Storage Barge "Cempaka Nusantara": The company marine administrative offices, storage and laboratory for testing crude oil stock are located on board storage barge "Cempaka Nusantara".

Overall length of the barge is 467 ft. 10 in. Total crude oil capacity is 1,022,000 gross barrels, for the "Cempaka Nusantara" plus approximately 2,000,000 gross barrels for the chartered crude oil storage tanker.

Loading of crude oil from the storage barge to the tankers will be through A.O. Smith Positive Displacement Meters, of which there are four, each having a maximum capacity of 12,500 bbls./p.h.. "Cempaka Nusantara" barge is moored on the SBM No. 3, Lat. 5° 54′ 10.6″ S., Long. 107° 43′ 45″ E.

Chartered Crude Oil Storage Tanker: The storage tanker is located at mooring SBM No. 1, the position of which is Lat. 5° 54′ 15″ S., Long. 107° 44′ 22″ E.

Ardjuna crude oil is available from the above storage tanker, by transfer through the "Cempaka Nusantara" metering system.

Ardjuna Crude Specifications:

API gravity at 60° F	37.0 – 35.0
Reid Vapour Pressure	6.0 – 10.0 p.s.i.g.
Sulphur, % Wt.	0.06 – 0.10
Kinematic, Viscosity at 100°F	1.20 – 4.00 cST
Pour Point, °F	75+
Carbon Residue, % Wt.	0.50 – 1.45
B.S. & W, % Vol.	0.05 – 0.15
Flash (TCC), °F	Below 50

For LPG Refrigerated Vessels:

Storage Barge "Ardjuna Sakti":

1. The LPG storage facility is a prestressed concrete barge, measuring 461 ft. in length, 136 ft. in width and having a depth of 56.4 ft. The barge carries 12 tanks each of which has a capacity of 31,528 barrels giving a total of 378,336 barrels. An average pumping rate of 3,180 cu.m.p.h. (loading) can be achieved. The following operating rules have been adopted which shall apply to the lifting of products from the "Ardjuna Sakti".
2. Refrigerated LPG vessels *will not be considered ready for loading* at Ardjuna Marine Terminal *unless and until all LPG tanks contain LPG vapours and are cooled down sufficiently* to permit loading of products nominated.
3. Vessels receiving fully refrigerated products will only be acceptable for loading provided they are capable of receiving the products at their boiling points at 0.5-2.5 p.s.i.g. Such vessels must have a refrigeration system capable of liquefying all vapours coming from vessels tanks resulting from loading at an average rate of 3,180 cu.m.p.h., and including those vapours formed as a result of heat gained by the vessel's tanks.
4. The "Ardjuna Sakti" is equipped with a vapour compressor and condensing facilities for liquefying vapours, however, no liability of any kind whatsoever, to provide the compressor and or condensing facilities for vessels use is accepted.
5. Provided a vessel has the capabilities described in paragraph (3), at the sole discretion of the Terminal Superintendent or his designated representative, in the event the vessel has difficulties with her refrigeration system, the facilities available on the "Ardjuna Sakti" may be made available to assist the vessel, provided they are operational. There is *no obligation* implied or accepted to continue to assist the vessel with chill down, even if assistance is commenced. In the event that assistance is requested and is provided all charges and expenses incurred shall be paid for by the consignee. Such charges shall include any amount payable in demurrage for all the time that chill down operations causes the vessel to exceed the allowed laytime. The conditions set out in this paragraph (5) for assisting in chill down operations shall apply to purging operations.
6. Ardjuna Marine Terminal has no facilities for inerting arriving LPG tankers. It is imperative that arriving vessels do not arrive with tanks designated to receive product "in air". Vessels arriving to load LPG will not be accepted for loading product if the oxygen in the tanks exceeds 8.0 mole per cent.
7. Loading lines and vapour return lines at the Ardjuna Marine Terminal are fitted with quick release Camlock flanges which are 12 in. ASA 150. Arriving vessels must be able to connect to these flanges. The terminal will have a limited number of spool pieces and reducers available but will accept no obligation or liability to provide them. It is the vessel's responsibility to provide a connection suitable to connect with the Camlock flanges described above. Failure of the loading vessel to present the required 12 in. ASA 150 flange for connection will result in rejection of the vessel for loading and cancellation of her Notice of Readiness. All costs, charges and expenses incurred due to rejection will be for vessel's account. Should it be necessary to assist a ship with the use of the terminal ship vapour compressor a charge of U.S.$250 will be made for each hour or part of an hour that the terminal ship vapour pressure is used by the ship.
8. Venting of product while the vessel is within the Ardjuna Marine Terminal is not allowed. Failure to comply with this requirement may result in delay or cessation of loading and all costs, expenses or losses due to loss of production caused by such failure to comply will be for the account of the buyer.

For **Butane Tankers:**

1. Vessels arriving in the Ardjuna Marine Terminal to load Butane Plus will be berthed at the SBM No. 6 which is designed, weather permitting, to handle tankers up to to 50,000 d.w.t.

2. Butane Plus tankers are loaded through a 722 ft. long string of 6 in. I.D. floating hose extending from the SBM and connected to the tanker's portside manifold. The floating hose is equipped with a 6 in. ANSI 150, quick release Camlock flange. Tankers not having a 6 in. manifold connection must provide their own reducer to permit the loading. Failure to carry out this obligation may result in rejection of the vessel for loading and nullification of her Notice of Readiness. All costs, charges and expenses incurred therefrom will be for the ship's account.

On arrival at the terminal area, butane tankers are required to have the port derrick ready to lift the equipment necessary for berthing and loading. The weight of the loading hose to be lifted is approximately 1,500 lbs.

3. The quantity of Butane Plus delivered will be determined by the metering system consisting of 2×3 in. A.O. Smith Positive Displacement Meters. These meters are located on the NGL Plant situated approximately 3 miles S.W. of the SBM No. 6.

4. An arriving Butane Plus tanker will not be accepted for loading product if:

a. Oxygen in the tanks exceeds 8.0 mole per cent.

b. Vessel is not adequately equipped with boil-off liquefaction unit capable of liquefying all vapours coming from vessels tanks resulting from loading at the maximum rate of 115 cu.m./hr.

There is no facility for inerting butane tankers on SBM No. 6, nor is here a ship's vapour return line facility.

Masters of vessels are strongly reminded to ensure that ship's vapour ompressors are in good running condition.

Failure to observe such requirement may result in cessation of the oading and any delay so caused will be for the ship's account.

5. Butane Plus tankers intending to load at SBM No. 6 will not be ccepted if the bow-to-manifold distance exceeds 400 ft.

6. During the extended loading period of the Butane Plus tanker at the BM No. 6 it is the responsibility of the vessel to ensure that all mooring nes and loading hoses are properly tended.

The Terminal Mooring Masters may at any time request the ship's ecuring lines to be tightened or slacked under the direction of a esponsible ship's officer. This may be necessary to avoid the ship verriding the buoy. Failure to comply with such a request may result n cessation of loading and all costs, expenses or losses due to loss of roduction caused by such failure to comply, will be for the account of he buyer. See also "Mooring/Unmooring".

7. Masters of butane tankers are advised that raising, lowering onnecting and disconnecting of butane loading hoses as well as other abours and duties on shipboard connected with the loading of cargo or aintaining mooring lines in a correct manner will be performed BY THE HIP'S CREW DIRECTED BY A RESPONSIBLE OFFICER as required y the Mooring Master. Loading of a butane tanker is through one string f 6 in. I.D. loading hose with 150 ASA flange rating. The weight of the ose is approximately 2.5 tons. All tankers loading butane at SBM No. 6 rdjuna Terminal must be able to connect their manifolds to the 6 in. ose. Masters are strongly reminded, that it is the ship's responsibility o provide reducers to make the connection, if the ship's manifold is ot 6 in.

8. Venting of product while the vessel is within the Ardjuna Marine erminal is not allowed. Failure to comply with this requirement may esult in delay or cessation of loading and all costs, expenses or losses ue to loss of production caused by such failure to comply will be for he account of the buyer.

OORING/LOADING/UNMOORING: The Ardjuna Marine Terminal will perate 24 hours a day, 7 days a week. Tankers will normally be berthed uring daylight hours, weather and other circumstances permitting. In pecial circumstances at the sole discretion of the Company Terminal uperintendent night berthing may be allowed if all conditions are avourable. Unmooring will be carried out at any hour.

Tankers to be moored or manoeuvred at the Ardjuna Marine Terminal ill be boarded by the Company Mooring Master within the anchorage rea.

Under normal weather conditions if a tanker is scheduled to berth on rrival, the Mooring Master will board such vessel in the close vicinity f the mooring area.

All such manoeuvring of ships shall be done only in accordance with he advice of the Mooring Master, subject to the understanding that in ll cases and circumstances the Master of the tanker being manoeuvred shall remain solely responsible on behalf of his vessel's owners for the safety and proper manoeuvring of his vessel.

The ship's Master, or one of his *designated and qualified deck officers, must* be on the navigating bridge at all times while the vessel s being manoeuvred.

The Mooring Master will report unsatisfactory conditions to the ompany Terminal Superintendent who may in turn, reject the tanker until corrections are fully made. All costs accruing therefrom will be for he vessel's account. The services of the Mooring Master are provided upon the express understanding and conditions that when any Mooring Master provided goes on board a vessel for the purpose of assisting such vessel, he becomes for such purpose the servant of the owners of the vessel and the company shall not be liable for any damage, or injury resulting from any advice, or assistance, or actions directed, or made, by such Mooring Master while on, or in the vicinity of the assisted vessel.

The tanker's cargo tanks are to be inspected by the Terminal Representative, and if suitable for loading crude oil, a signed notation to this effect will be made on the company Dry Certificate.

The Company Terminal Superintendent, or his designated alternate, shall be the sole authority to decide when the port is closed due to unsuitable weather conditions preventing normal working operations.

Various combinations of wind, sea, and tidal conditions also the size, length, ballasted trim, and handling qualities of a vessel can affect the decision to berth a vessel at Ardjuna Marine Terminal. All these factors have to be evaluated before a final berthing decision is made.

Delays to vessels using Ardjuna Marine Terminal due to the port being closed because of bad weather conditions shall not be computed as used lay time when compiling vessel's turn around time.

Request for the terminal to stop the flow of oil at a predetermined tonnage must be in writing. The request must include the statement by the ship's Master, that the company will not be held responsible for any error and that in case of the vessel being overloaded the excess cargo cannot be pumped back to the storage barge. The ship's Master will also be held responsible for any oil spills caused by this request.

The ship's Master is responsible to ensure that no communication by radio is allowed within the terminal area.

Unauthorised radio communications will be cause for cessation of all operations, except clearing of the berth, and the vessel's Notice of Readiness will be immediately nullified.

The Master of each tanker will be given a copy of the Conditions of Use of Port of Ardjuna Marine Terminal which he will be required to sign before the vessel proceeds to berth.

The vessel's personnel are responsible for the safety of the vessel and must take all necessary precautions, whether or not so advised by the Mooring Master, having in mind the hazards of the operation because of the products being handled, weather conditions and any other circumstances requiring special care or caution.

Ships are requested to have a pilot ladder safely and securely rigged, ready for immediate use, and long enough to reach the Mooring Master's launch.

A combination of pilot ladder and ship's accommodation ladder, so arranged that the personnel can first use the pilot ladder until part way up the vessel's side, and then transfer to the accommodation ladder is recommended, especially on very large tankers. A light line should be ready to take aboard the Mooring Master's equipment.

Tankers will provide a broad lee for the Mooring Master both when boarding and leaving the ship. Adequate explosion proof lighting at night must be provided near the pilot ladder, and manifold connection area. During loading overside lighting must be provided in the vicinity of sea valves and floating hoses.

During a tanker's stay at the Export SBM, emergency towing wires shall at all times be hung over the ship's stern on each quarter of the vessel. These wires shall be secured on the bollards inboard to enable the vessel to be towed away should the need arise. They must be tended throughout to keep the eye of the wire not more than 2 ft. above the water.

Before any crude is loaded all ship's scuppers on main decks must be plugged and cemented oil tight. Approved mechanical means of closing scuppers may be accepted.

It is absolutely essential that extremely careful supervision be exercised by officers of all tankers while loading operations are in progress. A responsible ship's officer is required to be on duty continuously while the tanker is being loaded. He will be assisted by an adequate number of ship's personnel in these operations.

It is the responsibility of the vessel to ensure that all mooring lines are properly tended on loading tankers. The Mooring Master at any time, may direct an additional ship's line to be secured to the buoy and this line to be hove up or slackened off under the supervision of a responsible ship's officer so as to prevent the vessel overriding the buoy. *At all times sufficient crew must be available* to carry out under the supervision of a responsible officer, instructions given by the Mooring Master.

Masters of loading tankers are advised that raising, lowering, connecting and disconnecting of oil loading hoses as well as other labours and duties on shipboard connected with the loading of cargo or maintaining mooring lines in a correct manner will be performed *by the ship's crew directed by a responsible officer* as required by the Mooring Master. Loading of crude oil tankers is through 2×12 in. I.D. hoses with 150 ASA flange rating. The weight of each hose is approximately 2.5 tons. All tankers loading crude oil at Ardjuna Marine Terminal must be able to connect their manifolds to the 12 in. hoses. Masters are strongly reminded, it is the ship's responsibility to provide reducers to make the connection, if the ship's manifold is not 12 in.

Preparations for mooring will be advised by the terminal through VHF communication prior to tanker's arrival or by the Mooring Master before the mooring operation commences.

Crude oil tankers are required to have ready:

1. On the portside: a derrick of at least 5 tons safe working load, rigged, and ready to pick up the mooring and hose connecting gear from the Mooring Master's launch.
   This derrick subsequently will be used for raising, connecting, disconnecting and lowering loading hoses and eventually to transfer the mooring and hose connecting gear back to the launch before the tanker sails.
2. On the forecastle: at least 6 good ship's mooring lines shall be required. Two of them will be used as messenger lines for bringing aboard both terminal mooring lines from the SBM.
   The 4 remaining ship's lines will be laid out 2 and 2 on either side of the foc'sle deck, eyes about 3.5 m distant from the fairleads as advised by the Mooring Master. When the terminal mooring lines have been hove up and anti-chafe chains have been hove about halfway inboard through the fairleads, the eyes of the ship's lines will be shackled onto the end links of the chain, so arranged that in the final position of mooring, the tanker is tied to the SBM using the terminal mooring lines/chains and made fast to the ship's bollards by means of the ship's own lines. This will be backed up by 2 lengths of wire strops each 30 ft. in length and 2 in. diameter. These wires will be provided by the terminal to be used as preventer wires. These 2 wire strops will not be used as the permanent mooring system.
   Their purpose is to hold the ship safely moored in the event one or more of the ship's lines part until the crew can replace such lines.
3. Tanker loading Butane Plus at SBM No. 6 will moor in the same manner as crude oil tankers referred to in para. 2 above.

Refrigerated LPG tankers will berth alongside the starboard side of the LPG storage barge "Ardjuna Sakti". The "Ardjuna Sakti" is secured to a rigid arm single buoy mooring system which allows the storage barge to rotate according to direction of wind and tide. There are 5 large Yokohama type rubber fenders aboard the storage barge 4 of which are supported on davits. The fenders are lowered to the water prior to the berthing operation. Each fender is 6.5 m. in length the diameter of the fenders is 3.3 m. Line running launches are available to pass the mooring lines between the barge and the ship.

When secured in position the moorings will be as follows:

5 lines on the forecastle.
4 lines on the poop.
2 springs on the maindeck forward leading aft.
2 springs on the maindeck aft leading forward.

Each LPG tanker loading at Ardjuna Marine Terminal will be required to provide the above ropes. Where tension winches are available they will only be used if they can be locked in a fixed position.

EQUIPMENT: A ship may be rejected if, upon inspection, it is not properly equipped, or if it is not suitably manned, or tanks unsuitable for the cargo, or if in the case of crude oil tankers the ballast is dirty.

A vessel is suitably manned if it has a full complement of qualified officers and a crew all of whom are in a sober condition, competent and willing to carry out their duties and orders.

A ship must be equipped with a good working propulsion unit as passed by the appropriate survey society. Inoperative ships or partly inoperative ships will be rejected. Should a ship become inoperative or partly inoperative while berthed alongside the storage barge "Ardjuna Sakti" or while secured to a crude oil export single buoy mooring, it will be removed at the ship's expense.

No repairs to main engines or other essential equipment or machinery while alongside the storage barge "Ardjuna Sakti" or while secured to an export SBM may be carried out, unless with the permission of the Terminal Superintendent or his designated alternate.

Crude oil and butane tankers must lift the export hoses from the water to connect with the ship's manifold by means of its *own derricks and using its own crew*.

A vessel must have both bow anchors in good working condition. Both bow anchors and anchor cable must be of a size and standard to meet either "Lloyds" or "A.B.S." requirements, even though they may in fact, be classified by other societies.

All vessels must have ready on deck suitable stoppers for manila, synthetic lines and wires used for mooring purposes.

All vessels must have suitable winches or capstans in good working order.

Such winches or capstans must have sufficient power to heave the ship to the position required by the Terminal Mooring Master. Tankers must have the capacity to heave on the 12 in. and 15 in. braid lines used to secure them to the export SBMs. Power supply to all deck machinery must be maintained throughout the period the ship is secured alongside the storage barge "Ardjuna Sakti" or to the export SBM. Failure to comply with this requirement will result in cessation of loading and delay, and expense so caused will be for the ship's account.

To assist in vessel's turn around, ships should have all necessary gear ready on arrival. Crude oil and butane tankers must have the cargo boom on the port side raised with the cargo gear rigged and ready before the ship is boarded by the Mooring Master.

Vessels which may consider the lifting capacity of their gear to be marginal should strengthen their gear accordingly. A common way to do so is to rig a second topping lift on the boom.

Masters of crude oil tankers are reminded that the hose connecting operation will normally be carried out while the ship is deballasting.

The cargo derrick required to raise the hose from the water, must have a sufficient length of strong lifting wire rope on the winch drum to enable the cargo hook to reach the water and still have adequate turns of wire left on the drum to ensure safety.

BALLAST: Owners and Masters are responsible for observance of International Convention Laws and Indonesia Government Regulations concerning pollution of the sea, having particular regard for this area of the Java Sea.

No facilities are available for disposal of dirty ballast. It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from his ship.

The categories of pollution include oily water from bilges, crude residual from previous voyages, or any other matter that may result in pollution of the sea. Any fines imposed shall be for ship's account.

As soon as practical after arrival, all tankers will be inspected by an Ardjuna Marine Terminal Official for dirty ballast. During discharge of ballast, similar inspections will continue.

If evidence of oil appears at any of these inspections, the ship will be rejected, and will not be accepted again until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If, during inspection, or during progress of loading, it is revealed that the ship's tanks are not tight, or that oil is leaking from the ship, the ship may be rejected or refused further loading.

If the ship's tanks are found to be leaking, it will not be accepted for loading unless satisfactory evidence of repair duly certified by Lloyd's or A.B.S. Surveyors, or other recognised Surveyors is submitted. It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from his ship. Drip pans, sand, dispersant etc. should be used at all times especially when disconnecting hoses in order to avoid any spillage of oil overboard.

Any tanker rejected because of dirty ballast or sea pollution will automatically nullify his Notice of Readiness and will lose any priority of position for loading.

A tanker must have sufficient ballast for safe handling having due regard to existing weather and sea conditions. Through a careful watch of the weather and sea conditions, frequent exchange of information between ship and terminal, and by a knowledge of the behaviour of his own ship, a ship's Master may come to the terminal with a minimum safe ballast and thus lessen any possibility of infringement of sea pollution regulations.

In addition to the lights usually displayed, vessels in the moorings discharging ballast or loading cargo during darkness will brilliantly illuminate the sea around the ship, so that any pollution will be noticeable.

Tankers equipped with a separate system of ballast tanks will be allowed to discharge ballast, and load oil simultaneously, providing approval is first obtained from the company Terminal Superintendent or his alternate.

Most responsible ship owners have adopted a system of tank cleaning using circulatory methods of transfer of tank washings on shipboard and treating these washings with chemicals.

The result is that no oil is discharged into the sea and the oil separated is collected in a slop tank. With the written permission of lifting companies, the terminal will load on top of such slops. This system is highly recommended to avoid pollution of the Java Sea.

Masters are required to certify in writing the quantity of slops remaining on board (if any). If they intend to load crude oil on top of the slops, it must be clearly stated. The Mooring Master will confirm the amount stated in writing by ullaging and calculating the slops to ensure the amount declared is correct.

Provided agreement is reached on the amount of slops the Mooring Master will confirm the amount of slops on the Dry Certificate.

Note: Separate "Slop Certificate" signed by Chief Officer and witnessed by the Mooring Master is required to substantiate calculation.

Masters are warned that inspection of ballast is strict.

If, at any time an overflow of crude oil occurs, loading will be suspended immediately and not be resumed until the oil is cleaned up and removed from the decks of the vessel and/or from the surface of the sea, and any damage is repaired and no further danger exists. It is stressed that during loading operations, the Ardjuna Cargo Controller will immediately slow down the loading rate on receipt of a request for same from the ship's deck officer – in charge of loading.

All spillages of oil must be reported immediately to the Ardjuna Terminal Superintendent, or his alternate, and subsequently a detailed report in writing submitted by the Master of the vessel concerned giving all relevant details.

MEDICAL: First aid is available.

FRESH WATER: No fresh water is available.

FUEL: No bunkers are available.

CONSULS: There are no consulates available at Ardjuna Terminal. However, there are many embassies and consulates represented in Jakarta about 59 miles S.W. of the Terminal.

CUSTOMS ALLOWANCES: Cigarettes, cigars, tobacco, matches, spirits, wines, beers, perfume, arms, ammunition and possibly other items have to be locked up under Customs' seal from time of arrival of ship in port until time of leaving territorial waters. Each person is allowed to bring in 200 cigarettes or the equivalent in grams of tobacco or cigars.

Special allowances are made for the Master under special circumstances.

REPATRIATION: No crew changes. If emergency conditions prevail, for humanitarian reasons exceptions to the foregoing may be permitted. All expenses incurred will be for ship's account.

AIRPORT: Nearest airport at Jakarta.

TIME: Ardjuna time is GMT plus 7 hours throughout the year.

SHORE LEAVE: Not allowed.

SAFETY/FIRE REGULATIONS: Safety and Fire Regulations will be strictly adhered to.

The notice "Instructions In Case Of Fire", and the notice "Safety And Fire Regulations" must be posted in prominent positions on board the export tanker by the Master, or by his designated alternate.

The Safety Check List must be jointly completed by a ship's officer designated by the Master, together with the Terminal Marine Supervisor Mooring Master. After completing and signing the Check List both the ship's officer and Marine Supervisor/Mooring Master will retain copies.

Terminal Safety and Fire Inspections: It is the duty of the Mooring Master to make periodical inspections on board vessels in respect of any breach of the Terminal Safety and Fire Regulations.

For this purpose he must be allowed free access to all parts of the vessel at all times and must be accompanied by a responsible ship's officer to assist him in carrying out such inspections. The Mooring Master will advise the ship's Master when he wishes to make a safety inspection. It is the responsibility of the ship's Master to ensure that the Mooring Master is given every assistance to carry out this duty.

AGENCY: See "General" before first port.

OPERATOR: Atlantic Richfield Indonesia Inc.

Principal Offices:

Pertamina Head Office: Jalan Medan Merdeka Timur No. 1A, Jakarta, Indonesia.

Atlantic Richfield Indonesia Inc.: Panin Bank Building, 7th Floor, Jalan Jenderal Soedirman, P.O.Box 63/JKT, Jakarta, Indonesia. Tel: 737474 Telex: 47390 Arco Ia, 44379 Arco Ia.

Warrior Minyak Inc.: 1776 Lincoln St., Suite 80, Denver, Colorado 80203, U.S.A.

Nominations: Tanker nominations for liftings of either Ardjuna Crude Oil or liquefied natural gas are co-ordinated through Atlantic Richfield Company, Los Angeles, California and Atlantic Richfield Indonesia Inc. Jakarta.

All crude oil and liquefied petroleum gas sales, also tanker chartering e arranged by the following parties in each of their respective locations. rtamina, Atlantic Richfield Company, Reading and Bates International etroleum Company, Natomas Company, Tide Water N.W. Java Inc. d Warrior Minyak Inc.

Tanker scheduling is co-ordinated for all of the partners through antic Richfield Company, Los Angeles, California and arranged ough Atlantic Richfield Indonesia Inc., Jakarta.

JTHORITY: Chief Harbour Master/Port Captain – Tanjong Priok, . 1. Jl. Syahbandar, Tanjong Priok. *Tel:* 021-494381. *Contact:* Captain o B. Siahaan, Harbour Master.

ALIKPAPAN: 01.16 S. 116.48 E.

OCUMENTS: Upon arrival vessels have to produce the following rtificates and Documents, which will remain in the Harbour Master's stody until cleared:

Nationality (Registry) Certificate.
Seaworthiness Certificate.
Measurement (Tonnage) Certificate.
Derat (Exemption) Certificate.
nternational Loading Line Certificate and SOLAS Classification (Hull and Machinery).
Safety Construction Certificate.
Safety Certificate (passengers ships).
Safety Equipment Certificate (cargo ships).
Safety Radio and Radiotelephony Certificate (cargo ships).
Certificate of Approval (ship's radio station).
Civil Liability Convention Certificate.
nternational Oil Pollution Prevention Certificate.
Health Book or Bill of Health.
ast Port Clearance.
0 Crew Lists and Passenger's Lists.
Stores Lists.

OTAGE: Compulsory pilotage. Application for Pilots can be made Balikpapan pilot station or Radio Station. Vessels arriving by night uld anchor off the Outer Buoy and give their call sign to the Pilot dio Station (VHF Channel 12). Pilot boards in position Lat. 21′ 20″ S., Long. 116° 55′ 00″ E. Vessels should order a Pilot at st 6 hours prior to arrival and when leaving 3 hours before departure f leaving between 0600 hrs. and 1200 hrs. Pilot should be ordered ore 2000 hrs. on the preceding day.

PROACH: The surrounding land is in general low with few spicuous hill rows as background. Only the high spit on which kpapan is built can be used as a landmark with the regular coneped hill Tokong.

STRICTIONS: Vessels with a draft over 11.5 m. only handled during time. Vessels with draft of less than 11.5 m. are handled at anytime, ather permitting.

Channel: Length (Buoy No. 1 to Buoy No. 12) 9 miles. Width 150 m. oth 13.0 m. at LW.

X. SIZE: *Tankers:* Shell normally permit max. LOA of 215 m., draft 0 m. and max. d.w.t. 35,000 tons. Drafts are restricted by the bar ere the depth below chart datum is 25 ft. 3 in. Minimum keel clearance uired is 1 ft. 3 in. Sailing drafts depending on rise of tide up to a max. 33 ft. salt water.

ALTH: Vessels arriving from abroad have to apply well in advance n the Department of Health (Quarantine Section) for provisional Free tique, as said Pratique has to be cabled to the port concerned. The visional Free Pratique is only valid for the port concerned, the next t of call must be a First Class Port as no further provisional Free tique will be issued, unless the vessel sails directly abroad.

DIO/VHF: Balikpapan Radio. Call sign "PKN-2" on 500, 448 and 37 kHz. and VHF Channel 16.

GS: 3 tugs. 870 h.p., 1,700 h.p. and 2,400 h.p.

RTHING:

ty No. 0: Length 269 m. Width 21 m. Depth alongside 9.0 m.
ty No. 6: Length 185 m. Width 12 m. Depth alongside 12.0 m.
ty No. 7: Length 235 m. Width 28 m. Depth alongside 12.0 m.
ty No. 7A: Length 175 m. Width 15 m. Depth alongside 10.0 m.

Also see "Tankers".

ANES: 4×15 tons-25 tons.

DICAL: Hospital facilities available.

BANJARMASIN: 03.18 S. 114.35 E.

PILOTAGE: Compulsory. Sea pilot boards the vessel in the anchorage area.
ANCHORAGE: Vessels anchor in position 03° 38.5′ S., 114° 30′ E.
RESTRICTIONS: The bar is silting excessively and continuous dredging is necessary to keep the shallowest part at 5.5 m. depth.
Vessels will proceed when the height of tide enables the vessel to pass through the channel. The channel is approximately 20 miles long and has a depth of 6.0 m. – 8.0 m.
RADIO: Banjarmasin Radio, call sign "PKG"
Frequencies: 456 kHz.
2,080 kHz.
8,457 kHz.
VHF: Banjarmasin Radio on VHF Channel 16.
TUGS: One mooring boat available to assist with berthing.
BERTHING: The inner harbour is located in position Lat. 03° 20′ S., Long. 114° 30′ E.
There is one quay with a length of 200 m. and the depth alongside is 8.0 m. at LWS.
Storage: There is a godown with an area of 7,500 sq.m. and open storage area of 11,500 sq.m.
CRANES: 1×25 ton mobile crane. 9 forklifts with capacity 2.5 tons – 7.5 tons.
MEDICAL: Medical and hospital facilities available.
STEVEDORES: Available from the labour pool (U.K.A.).
FRESH WATER: Fresh water is available alongside the quay.
FUEL: Not available.
REPAIRS: No repair facilities available.

BANYUWANGI: 08.13 S. 114.23 E.

OLD PORT NOW PRACTICALLY CLOSED FOR SHIPS.
(OPENED FOR BOATS AND FISHING BOATS ONLY).

DOCUMENTS: Customs and Harbour Master requires:
Crew List.
Passenger List.
Customs Documents.
Health Certificate.
Port Clearance.
Harbour Report.
Derat Certificate.
Radio Certificate.
Certificate of Registry.
PILOTAGE: Not necessary because anchorage open.
ANCHORAGE: Position: Lat. 8° 12′ S., Long. 114° 23′ 16″ E. Depth 25 m. – 30 m.
MAX. SIZE: No restrictions, vessels must be anchored outside harbour.
HEALTH: All vessels boarded by Harbour Quarantine on arrival.
RADIO: None, moved to Meneng Port.
TUGS: 2 tug boats belong to P.T. Jakarta Lloyd, Banyuwangi Branch.
BERTHING: Distance 500 m. to 750 m. from lighthouse. Anchorage berths only.
STEVEDORES: 6 gangs available. P.T. Jakarta Lloyd, Banyuwangi Branch. 1 gang consists of 13 labourers, 1 gang boss, 1 tallyman, 2 winch drivers and 1 commander.
MEDICAL: Arranged by Department of Health.
FRESH WATER: None available.
FUEL: None available.
CONSULS: No local representation.
REPAIRS: No facilities.
GANGWAY/DECK WATCHMEN: None available from shore.
OPENING/CLOSING HATCHES: Arranged by stevedores.
CUSTOMS ALLOWANCES: 50 cigarettes each crew member. Packs or tins of tobacco must be open before going ashore. Wine and/or spirits: Enough for own use, if more required must pay import duties.
CARGO GEAR: Ship's gear used. Cargo loading on board by lighter.
REPATRIATION: Not possible.
TIME: GMT plus 7 hours.
HOLIDAYS: On Sundays and holidays no work carried out, but if necessary, can be arranged. No work when raining.
POLICE/FIRE/AMBULANCE: Police and ambulance available. Fire brigades belong to District and Paper Mill. Phone Nos. 352, 653, 353 and 503.
TELEPHONES: No facilities for placing telephones on board.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required.
DELAYS: Possible during loading if it rains.
AUTHORITY: Kepala Pelabuhan (Port Administration).

BANYUWANGI (Port Meneng): 08.07 S. 114.23 E.

(See Pla

NEW PORT FOR LARGE VESSELS.

Perfection Certificate.
PILOTAGE: Compulsory pilotage for vessels over 80 g.r.t. Pilots must be ordered by respective Agent at least 48 hours in advance of the time their service is required.
ANCHORAGE: Lat. 8° 12′ 30″ S., Long. 114° 23′ 15″ E.
RESTRICTIONS: Mooring and unmooring is restricted to daylight hours only for cargo vessels and tankers.
MAX. SIZE: Draft alongside quay max. 40 ft. Present quay permits max LOA of 500 ft. Bar 200 m. East of quay, depth below chart datum is 27 ft.
HEALTH: All vessels boarded by Harbour Quarantine on arrival.
RADIO: Name: Meneng Coastal Radio Station. Call sign: 8 AD 22 with freq. 8110 kHz, receiver SSB 5316 kHz. (used by Department of Sea Communication).
VHF: Call sign: Meneng Radio, freq. Channel 16, 14, 13, 12, used shore to ship and can be contacted about 25 miles before arriving at Meneng Port.
TUGS: 1 tug × 1,400 h.p. owned by Perumpel III Meneng. 2 tugs x 850 h.p. owned by Pertamina.
BERTHING: Present berth length 260 m. Depth alongside 40 ft.
Pusri: New port located about 0.5 miles South of the Port of Meneng. Operated under Pertamina management for oil off-loading purposes. The open roadstead harbour has a 150 m. long wharf with a 10–12 m depth. Location of the port which is especially for domestic shipping is Lat.: 8° 08′ 09″ S., Long.: 144° 24′ 03″ E. New jetty owned by PT Pusri. Max. LOA 140 m.
Note:
Max. safe capacity for the jetty:
Cargo jetty No. I max. capacity 5 tons.
Cargo jetty No. II max. capacity 10 tons.
Cargo jetty No. III max. capacity 10 tons.
STEVEDORES: 12 gangs available.
One gang consists of 1 gang boss, 2 winch drivers, 1 Pilot and 13 labourers.
Working Hours: 0800–1600, 1600–2400 and 2400–0800.
Rest Time: 1200–1300, 1800–1900 and 0300–0400.
FACILITIES: *Godowns:* Two transit godowns (20 m.×50 m.) available owned by Perumpel III. Two godowns max. capacity 10,000 tons available, owned by PT Djakarta-Lloyd Banyuwangi Branch.
Equipment: 1 mobile crane of 15 tons capacity. 2 forklifts of 3 tons capacity. 3 forklifts of 2 tons capacity.
MEDICAL: Arranged by Department of Health.
TANKERS: One berth operated by Pertamina. Max. LOA 80 m. Max. draft 8.00 m. Max. d.w.t. 15,000.
FRESH WATER: Available. Handled by Harbour Board, with a loading capacity of about 300 tons per day (10 t.p.h.).
FUEL: Not available, but expected to be available in near future.
CONSULS: No local representation.
REPAIRS: No facilities.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Normally by stevedores.
CUSTOMS ALLOWANCES: 50 cigarettes each Crew member. Packs or tins of tobacco must be open before going ashore. Wines and/or spirits enough for own use. If more required must pay import duties.
CARGO GEAR: Ship's gear used.
REPATRIATION: Foreign crew members must go to Immigration Office at Jember City for clearance. Facilities will be available at Banyuwangi in near future.
TIME: GMT plus 7 hours.
AIRPORT: Ngurah Rai Airport 60 miles. Juanda Airport (Surabaya) 125 miles.
HOLIDAYS: On Sunday and holidays no workers available, but if necessary work can be arranged, except Independence Day (17th August) and 1st Sjawal (Idul Fitri/Moslem Holiday).
POLICE/FIRE/AMBULANCE: Police and Ambulance available. Fire Brigade owned by District and Paper Mills.
Police: 110 or 2110. Fire: 113. Ambulance: 118 or 2118.
TELEPHONES: No facilities for placing telephones on board.
SHORE LEAVE: Allowed, shore pass required from Perumpel III. Tel: (0333) 21638 – 41636.
IDENTIFICATION CARDS: Required.
DELAYS: Possible during loading if it rains.
AUTHORITY: Perusahaan Umum Pelabuhan III, Port Meneng Branch. Jl. Raya Situbondo-Banyuwangi, Banyuwangi, Indonesia. *Tel:* 41636 21638. *Contact:* Sidi Makmur, Port Manager.

BATU AMPAR: 01.10 N. 104.00 E.

ILOTAGE: No pilot available.
ESTRICTIONS: Entrance channel has a width of 80.0 m. and a depth 6.0 m. – 8.0 m.
ADIO: Sekupang Radio. Call sign PKJ 20. Frequencies 500/452 kHz.
HF: Sekupang Radio on VHF Channels 16, 9 and 19.
UGS: There are 5 tugs and 1 mooring boat available.
ERTHING: New concrete wharf, length 1,000 m., depth alongside 0 m. at LWS.
torage: There is a shed of 9,000 sq.m. and open storage area of 7,000 sq.m.
rk Lifts: There are 8 fork lifts with capacity 2 tons – 5 tons.
RANES: 6×10 tons – 25 tons mobile cranes and 1×150 tons capacity obile crane.
TEVEDORES: Local labour available.
RESH WATER: Available.
JEL: Not available.
ENERAL: *Barges:* 5 barges available, each with capacity 400 tons.

ELAWAN: 03.47 N. 98.41 E. (See Plan)

OCUMENTS: Upon arrival ships have to fill in the following Forms:
Harbour Report obtainable from the boarding Pilot, or from the Harbour Master.
Pilot's Certificate.
on arrival vessels have to produce the following Certificates and ocuments, which will remain in the Harbour Master's custody until eared:
Nationality (Registry) Certificate.
Seaworthiness Certificate.
Measurement (Tonnage) Certificate.
Derat (Exemption) Certificate.
International Load Line Certificate.
Safety Certificate (passenger ships).
Safety Equipment Certificate (cargo ships).
Safety Radio and Radiotelephony Certificate (cargo ships).
Certificate of Approval (ship's radio station).
Health Book or Bill of Health.
Last Port Clearance.
Subscription of Light and Harbour Dues and wharfage if any.
Crew Lists and Passenger's Lists.
Ship's Articles.
Other certificates and documents as required.
2 Stores Lists.

LOTAGE: Pilotage for vessels over 500 cu.m. gross is compulsory. cation of anchorage for vessels awaiting a Pilot is Lat. 03° 54′ 50″ N., ng. 98° 45′ 50″ E., near Light Buoy No. 0 (Lat. 03° 54′ 14″ N., ng. 98° 44′ 40″ E.).

The new lighthouse at Tg. Nipa Larangan (Lat. 03° 54′ 12″ N., Long. ° 40′ 20″ E.) with characteristic Gp. Fl (3) 20 sec. 17M 40m, will assist asters to approach the anchorage. Before arrival Masters have to ntact their Agents via Belawan Radio (PKB) and give Information out: ETA, cargo, LOA, draft etc.

To receive information, Masters may use the VHF radio on Channel calling "Belawan Pilot" or "Pilot Boat".

Pilot's service available 24 hours a day.

Pilot must be ordered by the Agent at least 6 hours in advance of the ne their service is required.

A Sea Pilot and Harbour Pilot embark at anchorage when berth has en allotted.

Vessels will proceed when the draft enables vessels to pass through e channel.

The channel is approximately 9 miles in length, 100 m. width and 5 m. depth at LWS with a tidal range about 2 m. and is provided with ight buoys and 5 light beacons.

Basin 1,350 m. length. 220 m. width.

Pilot boat is located in the harbour.

When the Pilot is on pilot vessel, "H" flag will be flown in daylight and ick flashing white light at night.

ESTRICTIONS: Bar is silting excessively and continuous dredging is ecessary to keep the shallowest part at 8 m. at LWS. Narrowest part channel is 50 m. wide. Also see "Developments".

Outer Roads about 600 m. square marked by light buoy. No pilot light ssel. This roadstead is approx. 600 m. wide, the centre of which is e range-line of the swept channel. This channel is provided with buoys d beacons.

AX.SIZE: LOA 200 m. Max. draft 10.0 m.
ADIO: Coastal Radio Station: Call sign PKT; Class A1, Frequency 714, A2, Frequency 8754.4.
UGS: 2×800 h.p., 2×1,700 h.p. and 2×2,400 h.p. Join the vessels at uoy No. 9 about 2 miles from harbour. Ship's line to be used for towing e.

ort Authority Regulation:
Vessels with LOA less than 70 m., tug assistance not required.
Vessels with LOA from 71 m. up to 100 m., assisted by minimum 1 tug with total power 600 h.p. up to 1,200 h.p.
Vessels with LOA over 101 m. up to 150 m., assisted by minimum 2 tugs with total power 1,700 h.p. up to 3,400 h.p.
Vessels with LOA 151 m. up to 200 m., assisted by minimum 2 tugs with total power 3,400 h.p. up to 5,000 h.p.
Vessels with LOA 201 m. up to 300 m., assisted by minimum 3 tugs with total power 5,000 h.p. up to 10,000 h.p.
Vessels 301 m. or more, assisted by minimum 4 tugs with total power not less than 10,000 h.p.

BERTHING:

Dock or Quay	*Berth No.*	*Nominal Depth below Chart Datum*		*Length of Quay*
		(m.)	(ft.)	(m.)
Gabion Container Quay	101	11.00	–	500
Conventional Wharf	102 103	10.00	–	350
Ocean going Ujung Baru	105	9	30	1,557
Citra Ujung Baru	201 202 203	7	23	625
Industri Kimia Dasar (IKD)	–	7	23	150
Pelabuhan Lama	001 002 003 006 007 008	6	20	567
Oil Jetty	Pertamina	9	30	60
Mooring Buoys	Pelb.Lama	6	20	

STEVEDORES: Working hours: Monday-Thursday 0800 – 1200 hrs., 1300 – 1600 hrs. Friday 0800 – 1100 hrs., 1300 – 1600 hrs. Saturday 0800 – 1200 hrs., 1300 – 1500 hrs. Overtime to be applied for from authorities concerned and is usually granted: on working-days during meal-hours, from 1600 – 2000 hrs. and occasionally till 2200 hrs.; on Sundays and holidays, except Independence Day, 1st Ramadhan, Christmas and 1st January.
CRANES: Mobile cranes, 2×15 ton capacity and 3×25 tons capacity. Floating crane 40 tons capacity. 5 shore cranes with 3 – 5 tons capacity. 4 transtainers, 4 straddle carriers and 5 front lifters.
MEDICAL: Hospital facilities available.
FRESH WATER: Handled by the Harbour Board. Artesian wells all along the Ocean Quay with a loading capacity of about 10 t.p.h. The water is regularly laboratory checked and declared drinkable but boiling before use remains recommended. Barge with 200 tons capacity also available.
FUEL: MFO and MDO available from Pertamina, advance notice required. Pumping capacity about 60 t.p.h. Barge with 200 tons capacity also available.
REPAIRS: Slipways available for small craft only. Machine-shops available for minor repairs. Radio repairs available, viz. the Post Telegraph and Telephone Office. Electronic repairs not available.
PORT SECURITY: Maintained by members of the Indonesian Armed Services, usually, Police, Navy or Marine and Army. Crew members should be in possession of a shore pass issued by the Port Authority, accompanied by an identification card when leaving or entering the guarded gates of the Port Area. Shore passes can be obtained via the Agencies.
CUSTOMS: It is strictly prohibited take undeclared foreign currency ashore. Local currency restrictions may apply to shore-going crew members. It is recommended that Masters consult the Agents for the local prevailing Customs Regulations with regard to currency, cigarettes, spirits, etc., to prevent unnecessary difficulties and eventually fines.
DEVELOPMENTS: New Quay, length 851 m. and width 25 m. has been completed (See "Berthing"). 2 container cranes with capacity of 40 tons, outreach 36 m. and backreach 15 m. available. The berths will handle vessels up to 35,000 d.w.t.

To be constructed: 1 wharf, 175 m. long and 11.5 m. depth. 1 wharf, 490 m. long and depth 8.0 m. 1 wharf, 500 m. long (extension) and depth 8.0 m. 1 Fuel Oil Terminal.

Dredging: The Belawan Harbour Master has issued the following guidelines in connection with dredging work being carried out:

Commencing as of September 24th, 1984, the sailing channel of the Belawan Harbour shall be dredged for the length of about 14,000 m. with a depth of 10 m. LWS. The dredger to be used is the mud sucker 'Irian Jaya'. The location of the mud to be deposited 03° 55′ 14″ N., 98° 44′ 48″ E.

All ships passing by the dredger are requested to observe all signals shown.

At the time of passing each other, the manoeuvre should be carefully conducted or it should be avoided passing each other in the middle of the channel.

Please be guided accordingly.

Also see "Shipmaster's Reports" dated October 1985 and December 1985.

SHIPMASTER'S REPORT: 1976: I would inform you that all vessels are now berthed or unberthed on a round-the-clock basis, within the draft limits imposed by the dredged channel, which at present is 8 m. LWS with a tidal range of about 2 m. The Chief Pilot stated that they would berth vessels up to 10 m. draft at HW.

The pilot station is now equipped with VHF and works on Channel 12: they pass berthing information on this Channel to vessels at anchor. They use Channel 12 as a calling-up and working Channel.

SHIPMASTER'S REPORT: October 1985 (Updated 1988).
During my recent visit to the port, I noticed the following:

Phase 1 construction of port extension at Gabion (3 km. from Ujung Baru):

351 m. of conventional berth with alongside depth of 10 m., wharf apron 22 m. width already completed. 2 transit sheds (total space 12,000 sq.m.) completed.

500 m. of multi-purpose/container berth (depth alongside 11 m.), wharf apron 25 m. already completed. 2 C.F.S. (total space 10,700 sq.m.),

administration buildings, roads and services have also been completed. 2 container quay cranes expected to be installed end 1988. Presently, self-sustained contained feeder vessels have been working at Ujung Baru.

Gabion berth in operation since 1987.

SHIPMASTER'S REPORT: December 1985 (Updated 1988).
Channel: Pilot advised controlling section now reduced to 40 m. wide and 8.0 m. depth at zero tide or chart datum. Constant silting taking place. Underkeel clearance 1.0 m. required.

One vessel per tide can pass at 7.0 m. plus the predicted height of tide. Imperative to obtain information from Pilot inward, as simply not available from Agents, Port Radio, etc.

Gabion Wharf: This new project has been completed. The Northern portion will be for containers, and the Southern end for general or direct delivery cargoes. However, this wharf appears to be already suffering from silting, and the S.W. berth was found to have a minimum of 7.1 m., increasing to 9.3 m. and 9.1 m. to the N.E. (Any ship visiting an Indonesian port must take soundings immediately on berthing to establish the safety of the berth, and not immobilise until this is done). This wharf extends S.W. from beacon (F.1364) Fl. Y. 3 secs.

Density: 1015 on flood tide, 1012 on ebb tide.

Entry Formalities: The vessel used:
7 Crew Lists, (checked in detail against I.D. Cards).
1 Manifest "nil" cargo.
5 Bonded Stores Lists.
5 Personal Effects Lists.
5 Deck, Engine, Bond, Provisions Stores Lists.
5 Animals Lists.
5 Parcel Lists.
5 Arms and Ammunition Lists.
5 Ports of Call Last Voyage.

Inspection Team: (1) 2 Immigration Officers, 1 Port Health Officer, 1 Harbour Master, (all conveyed by Agent's minibus).
(2) 5 Customs Officers arrived separately.

Departure inspection may be similar. Agent attends with both inspection teams.

Thefts: Forecastle store broken into twice while alongside, padlocks being no deterrent. 2 shore watchmen employed throughout. Shackles stolen from hatch operating gear.

Transport: Normal mode is to ride pillion on a small motorcycle! 4.5 km. to shopping street.

Postage: A letter from Medan post office to Hong Kong reported to take 3 weeks.

Telex: Communications are poor.

AUTHORITY: Departemen Perhubungan, Perusahaan Umum Pelabuhan 1, Jalan Pelabuhan II No. 1, P.O.Box 5, Belawan - 20413. *Tel:* (0619) 41876, 41753. *Telex:* 51992 PPI IA Mdn.

BENGKULU (Pulau Baai): 03.46 S. 102.16 E. (See Plan)

LOCATION: The Port of Pulau Baai is located approximately 20 km. South of Bengkulu.
PILOTAGE: Compulsory.
ANCHORAGE: Vessels anchor in position 03° 47.5′ S., 102° 11.5′ E.
RESTRICTIONS: The fairway is 800 m. in length and 400 m. wide. Depth of fairway 10.0 m. at LWS.
MAX. SIZE: 10,000 d.w.t. Max. draft 9.0 m.
RADIO: There is no coastal radio station.
VHF: The port is on Channels 16 and 12.
TUGS: 1×250 h.p. tug.
BERTHING: There is a concrete wharf for ocean going vessels. Length of wharf 165 m. Depth alongside 10.0 m. at LWS.

There is a domestic wharf for small vessels. Length of wharf 124 m. Depth alongside 4.0 m. at LWS.

Storage: There is a godown at the ocean going wharf of 2,450 sq.m. and a godown at the domestic wharf of 1,750 sq.m. There is also an open storage area of 5,413 sq.m.
CRANES: 2×4 – 25 tons mobile cranes. 5×3 tons fork lifts.
STEVEDORES: Available from the labour pool (YUCA).
FRESH WATER: Fresh water is available in limited quantities.
REPAIRS: No facilities for repairs.
GENERAL: There is a barge with capacity 150 tons.
AUTHORITY: Harbour Master. *Tel:* 31344/31409.

BENOA: 08.45 S. 115.13 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards at the anchorage and during daylight only.
ANCHORAGE: Vessels anchor in position 08° 46′ 20″ S., 115° 14′ 30″ E. Depth of water in the anchorage 12.0 m.
RADIO: Benoa Coastal Radio Station. Call sign PKD-5.
Frequencies: 6,945 kHz. and 500/487.5 kHz.
Class emission: A1 – 0.05 Kw.
TUGS: There are 2 tugs available but they are used for cargo operations only.
BERTHING: There is one pier with a length of 206 m. and a depth 6.0 m. at LWS. There is also a wooden pier with a length of 22.5 m. a depth of 6.0 m. at LWS.
Storage: There is a godown with an area of 1,128 sq.m.
Fork Lifts: 2×3 ton capacity fork lifts available.
STEVEDORES: Stevedores are available from the labour pool.
MEDICAL: Hospital facilities available.
TANKERS: Tankers for Pertamina berth at the wooden pier.
FRESH WATER: Available.
FUEL: High speed diesel available in limited quantities.
REPAIRS: There are no facilities available for repairs.
GENERAL: No barges available locally.

BIAK: 01.10 S. 136.05 E. (See Plan)

PILOTAGE: Compulsory. Pilot boards vessel at the anchorage.
ANCHORAGE: Vessels anchor in position 01° 12′ 12″ S., 136° 05′ E.
RADIO: Biak Coastal Radio Station. Call sign: PKY2.
Frequencies: 2,182 kHz and 6,215 kHz (J3E) and 8,366 kHz (A1).
TUGS: There are no tugs or mooring boats available.
BERTHING: There is a concrete wharf, length 142.0 m., breadth 15.0 m and depth alongside 12.0 m. at LWS. There are mooring buoys off the East end of the wharf.
Storage: There is a godown of 3,800 sq.m. and open storage area 2,625 sq.m.
Fork Lifts: 3 fork lifts with capacity 1.5 tons – 3.5 tons.
CRANES: 1×12 ton mobile crane.
STEVEDORES: Stevedores are available from labour pool U.K.A., this is arranged by Agent.
MEDICAL: Hospital facilities available.
FRESH WATER: Fresh water available alongside the wharf. Pumping rate 4 t.p.h.
FUEL: Limited supplies of high speed diesel available.
REPAIRS: There are no facilities for repairs.

BIMA: 08.25 S. 118.42 E. (See Plan)

DOCUMENTS:
6 Crew Lists.
6 Vaccination Lists.
6 Stores Lists.
6 Passenger Lists.

PILOTAGE: None available.
ANCHORAGE: 300 m. off the quay in depth of 16 m.
RESTRICTIONS: None, vessel may enter harbour day or night.
MAX. SIZE: Not limited at anchorage.
RADIO: Coastal Radio Station, cable address "Pelni Bima" by Pos Office.
TUGS: No tugs available.
BERTHING: Entering and sailing allowed after dark. No berthing facilities except for very small ships.
STEVEDORES: Ordered by Agent. No work allowed on Muslim holidays, New Year and 17th August.
MEDICAL: 1 government hospital available.
FRESH WATER: Not available.
FUEL: Not available.
GANGWAY/DECK WATCHMEN: None available, Police and Customs officers posted on board.
OPENING/CLOSING HATCHES: Carried out by stevedores.
AIRPORT: Flights from Bima to Sumbawa, Ampenan and Bali by AO Zamrud (Dakota) every Sunday, Tuesday, Thursday and Saturday.
TIME: GMT plus 8 hours.
HOLIDAYS: Muslim holidays, New Year, 17th August.
TELEPHONES: No phone connections between ship and shore available.
SHORE LEAVE: Crew members are allowed to go ashore and arranged by Agents.
GENERAL: 1 motor-boat, 4 lighters each of 15 tons and 1 lighter 25 tons. Loading general cargo, live buffaloes and fodder. For heavy cargo max. 7 tons each lift can be handled through lighters.

BIMA MARINE TERMINAL: 05.46 S. 107.04 E.
(See Plan)

OCATION: Bima Marine Terminal is an open, unsheltered mooring in he Java Sea, located approximately 020°×24 nautical miles from akarta.

There are 3 standard type Single Buoy Moorings situated as follows:

1. "Citra Ayu" SBM (Buoy No. 7, Storage Tanker Buoy).
   Lat. 05° 46′ 02″ S., Long. 107° 04′ 14″ E.
2. Storage/Export SBM (Buoy No. 8, as standby SBM).
   Lat. 05° 45′ 25″ S., Long. 107° 04′ 52″ E.

This SBM can be used either as a storage tanker buoy or as the xport tanker buoy whenever required.

3. Export SBM for tankers loading from "Citra Ayu" (Buoy No. 9).
   Lat. 05° 44′ 49″ S., Long. 107° 05′ 29″ E.

"Citra Ayu" is a chartered storage tanker used as the main floating orage and export facility at Bima Terminal.

HE FOLLOWING ITEMS ARE OF PARTICULAR IMPORTANCE:

1. No dirty ballast.
   Tankers with dirty ballast will be rejected and will have to tender a new Notice of Readiness upon second arrival.
2. No shore leave.
3. No crew changes. If emergency conditions prevail, for humanitarian reasons, exception to the foregoing may be permitted. All expenses incurred will be for ship's account.
4. No stores available.
5. No clinic available.
6. The laws of Indonesia govern this terminal and all personnel are urged to abide by them.
7. During daylight hours the Indonesian Flag must be flown throughout the vessel's stay in port.
8. Bima Terminal time is GMT plus 7 hours throughout the year.
9. *No bunkers are available.*
10. Pertamina Directorate of Shipping and Telecommunications Jakarta handles all Agency matters for tankers.
11. The unit of currency is the Indonesian Rupiah.
    The rate of exchange varies from time to time. The Master can obtain the current exchange rate from the Agent.
12. There are no Consulates available at Bima Marine Terminal. However, there are many Embassies and Consulates represented in Jakarata.
13. Language of the port is English and Indonesian.
14. Only authorised personnel or visitors are permitted on the storage barge and/or export tanker.
15. No fresh water is available.
16. No slop tanks are available.
17. The crude oil testing laboratory is equipped to perform the following tests: API Gravity, B.S. & W, Pour Point and RVP. Any additional tests that may be required will be performed in Jakarta.
18. For convenience, mail for personnel on incoming tankers may be sent to the Pertamina Agency Jakarta Office for delivery to the tanker when it arrives at the Bima Marine Terminal. Except on an emergency basis, spare parts or other material will not be accepted for delivery to incoming tankers.

OCUMENTS: The Agent prepares the Ship's Documents Check List rm to check the validity of each document.

These documents are: Certificate of Registry, Ship's Construction rtificate, Load Line Certificate, Safety Equipment Certificate, Safety adio/Telegraphy Certificate, Cargo Gear Certificate and Derat rtificate or Derat Exemption Certificate. This List is then delivered to e Harbour Master with the following documents attached: Last Port earance, Crew List approved by the Immigration Officer and Light ues Receipt if arriving from another Indonesian port.

The Harbour Master issues a Port Clearance at departure provided arance is also granted by the other governmental authorities.

Panamanian Port Clearance for Panamanian Flag vessels is not quired at Bima Terminal.

The Immigration Officer requires 2 copies of the Crew List and will eck the ship's articles and the passports of the crew. When these cuments are found to be in order, an Arrival Clearance will be marked the Crew List.

rgo Documentation: Documents such as Bills of Lading, Certificate Quality, Certificate of Quantity, Dry Certificate, Ullage Certificate, ading Time Report, Certificate of Origin, Cargo Manifest and Master's eceipt of Documents/Samples, etc., are prepared at the Terminal.

When the tanker has been loaded, the documents shall be completed d be taken aboard the tanker for the Master's signature.

Signing of these Documents by the Master will take place at the same e final departure clearance formalities are being carried out.

Notes of Protest, if any, should be handed to the Mooring Master for rther delivery to Atlantic Richfield Indonesia Inc., Jakarta.

Please note that the Mooring Master will *acknowledge receipt of the ote of Protest only and is not authorised to accept such letters.*

eparture Procedure: Prior to the vessel's departure, the Immigration fficials require 6 copies of the Crew List to be marked for "Departure mmigration Clearance", and duly signed, it will be distributed as follows:

Master of the vessel	1 copy
Harbour Master	1 copy
Customs	1 copy
Pertamina Agent	1 copy
Immigration	2 copies

Upon presentation of the Crew List which is signed and marked for eparture Immigration Clearance the Harbour Master will issue the Port earance.

Final clearance formalities will be carried out aboard the tanker after mpletion of loading.

Before leaving the terminal area the Master should advise the terminal e vessel's ETA at destination through the Mooring Master.

PILOTAGE: Tankers waiting to load shall wait their turn in the recommended anchorage area, and shall maintain radio-telephone contact with the terminal using the International Marine Calling and Safety Channel 16 (156.8 MHz) for terminal instructions.

The Mooring Master will act on behalf of the company to acknowledge receipt of tanker's Notice of Readiness.

Masters of tankers are reminded that due to operational reasons, ship's Notice of Readiness (N.O.R.) will not be accepted between the hours of 1630 and 0530 unless the company, in order to accelerate ship's turn-around time, is willing to accept same. In any case, N.O.R. will not be accepted for a time earlier than when;

(a) The Master has received the Mooring Master onboard.

or

(b) The tanker has anchored within the recommended anchorage area, and has advised the terminal the time of anchoring.

Exception to (a) and (b) above will be if the tanker is within the anchorage area awaiting arrival of the Mooring Master and has been requested by the terminal not to anchor. In this case N.O.R. will be accepted from the time the terminal requested the ship not to anchor.

In order to meet safe and efficient marine operations, tankers are recommended to arrive during daylight hours. However, if on ship's arrival the required Loading Clearance is not yet received at Bima Marine Terminal then, in this case, the acceptance of N.O.R. will be the time when such clearance is received on the storage tanker "Citra Ayu" or whenever the tanker is secured.

The Company reserves the right to decline to berth a specific tanker if its condition or facilities are unsafe for berthing or loading even though the berth may be open to other tankers.

The decision of Atlantic Richfield Indonesia Inc.'s Terminal Section Manager or his designated assistant to berth or not to berth a tanker shall be final.

ANCHORAGE: For tankers requested to anchor, the recommended anchorage area is an area Northeastward from the single point mooring buoys enclosed by a line drawn through the following positions:

A. Lat. 05° 43′ 00″ S., Long. 107° 06′ 00″ E.
B. Lat. 05° 41′ 30″ S., Long. 107° 07′ 10″ E.
C. Lat. 05° 42′ 50″ S., Long. 107° 08′ 37″ E.
D. Lat. 05° 44′ 20″ S., Long. 107° 07′ 28″ E.

Prior to arrival Masters of tankers should contact the terminal for instructions concerning anchorage positions.

Refer to "Radio" for further instructions.

Under no circumstances should an export tanker enter the Restricted Area without a company Mooring Master aboard.

The attention of Masters is drawn to the existence of underwater pipelines in the Restricted Area.

APPROACHES: Approach information can be obtained by radio from the terminal. Under normal weather conditions, if a tanker is scheduled to berth upon arrival, the Mooring Master will board such tanker in close vicinity of the mooring area.

In addition to the 3 single point mooring buoys for export tankers and the storage tanker, oil wells and production structures are located South from the storage barge which constitute a hazard to navigation for mariners.

SBMs, Storage Barge and Structures within Bima Marine Terminal area display the following characteristics:

(1) *Storage: "Citra Ayu" and SBM (Buoy No. 7):*
By day, the black ball as required by Rule 30, paragraph A of the Regulations for Preventing Collisions at Sea. Storage barge at night displays the lights for a tanker at anchor as required by the Regulations for Preventing Collisions at Sea and is equipped with automatic fog signals at the bow and at the stern.
The "Citra Ayu" SBM (Buoy No. 7) shows a white light flashing every second, visibility 5 miles.

(2) *Standby Storage/Export SBM and Export SBM (Buoys No. 8 and 9):*
(a) A white light flashing every second, visibility 5 miles, mounted on the rotating deck of each SBM. All Export SBMs are fitted with radar reflectors.
(b) 1 yellow coloured light buoy marked with yellow cross on top and yellow coloured light flashing period 2 seconds (0.5 second flash + 1.5 dark), 4 miles visibility equipped with radar reflector.
Position of the light buoy: Lat. 05° 41′ 10″ S., Long. 107° 07′ 20″ E.

(3) *Crude Oil Production Platforms Facilities:*
There are 5 crude oil production platforms, 32 wells, 1 processing platform and 1 quarters platform within the Bima Marine Terminal Area.

P.A. Lat. 05° 47′ 15.0″ S., Long. 107° 04′ 00.0″ E.
P.B. Lat. 05° 47′ 42.5″ S., Long. 107° 02′ 28.0″ E.
P.D. Lat. 05° 46′ 39.8″ S., Long. 107° 02′ 12.5″ E.
P.E. Lat. 05° 47′ 16.0″ S., Long. 107° 02′ 04.0″ E.
P.F. Lat. 05° 48′ 07.0″ S., Long. 107° 01′ 48.0″ E.
PCP (Process Platform)
Lat. 05° 47′ 17.0″ S., Long. 107° 03′ 02.0″ E.
PCS (Quarters Platform)
Lat. 05° 47′ 19.0″ S., Long. 107° 03′ 04.0″ E.

In addition to the above specified obstructions and navigational aids, all platforms display interrupted quick flashing white lights.

The storage barge, flow stations, and quarters platform will brightly illuminate the areas around them at night through the use of normal working lights.

RESTRICTIONS: Berthing during daylight hours only. Maximum distance bow to manifold is 500 ft.

MAX. SIZE: 250,000 d.w.t. Depth of water in approaches and at buoys is 110 ft.

HEALTH/IMMIGRATION/CUSTOMS: See "General" before first port.

RADIO: *Advice of Arrival by Cable or Telex:* It is important that all incoming tankers advise Bima Marine Terminal 72 hours and 48 hours before ETA, giving the best estimate of ship's arrival at the terminal, via:

Cable Address: Ardjak, Terminal Section, Jakarta
Telex: 011-47390 Jakarta.

Time to be used for ETA is "Golf" (local) Time Zone of GMT plus 7 hours throughout the year. The first message should also include the following information:

1. Name of tanker and Radio Call Sign.
2. Cargo requirements.
3. De-ballast time. (Note: if a separate/permanent ballast system is fitted, ability of ship to load crude oil and discharge ballast simultaneously must be stated.
4. Maximum loading rate.
5. Arrival draft, forward and aft.
6. Last Port of Call.
7. Confirm that vessel has clean Bill of Health.
8. If there is any sickness aboard, give whatever information is available as to the possible type of sickness.
9. If cholera inoculation required, advise number required.
10. Distance in feet from the bow to tanker's loading manifold.

Further ETA messages should be sent to Bima Marine Terminal via the above cable address or telex number when the tanker is 24 hours and 12 hours distant from the terminal and any other time, if any appreciable change occurs in the original ETA or subsequent ETA's.

RADIO COMMUNICATIONS:

(1) VHF/FM Radio Telephone: (International Marine Calling and Safety Channel 16. Frequency 156.8 MHz).

Masters are recommended to use this system when they arrive within radio range of Bima Marine Terminal, particularly when approaching the port, if poor visibility exists the tanker's approach may not be observed. Attention to VHF communications may be the only means of avoiding delay in berthing.

During berthing, the ship's radio will be under the sole control of the Master, and the storage barge radio will be under the sole control of the Terminal Superintendent or his assistant. Masters are reminded that if tankers are requested to anchor to await berthing, *it is their responsibility to maintain constant listening watch on VHF Channel 16* to receive terminal instructions.

Any delay due to failure to maintain a constant watch on Channel 16 will be for the ship's account, and will not be included in Calculation of Lay Time.

Bima Marine Terminal is equipped with VHF/FM Radio- telephone sets and continuous watch is maintained on Channel 16 (156.8 MHz) and frequency 157.725 MHz.

Tankers approaching the terminal should make initial contact on Channel 16. For subsequent inter-ship communication within the terminal a "Handie Talkie" VHF radio frequency 157.725 MHz will be used by the Mooring Master. This frequency will not be for general purpose use, unless clearance is obtained by the terminal. This is required for safety reasons.

Should all radios on the tanker become inoperative, the emergency signal i.e. continuous blasts on the ship's whistle will be sounded to notify the terminal of the radio failures. Upon hearing this signal from a loading tanker, the storage barge will immediately stop loading to the Export Tanker until communications have again been established.

(2) High Frequency Single Side Band Radio Telephone: A voice message from incoming tankers may be relayed by HF/SSB. Atlantic Richfield Indonesia Inc., located in Jakarta, Indonesia, is inter-connected to Bima Marine Terminal via local communications system and maintains a continuous watch on HF frequency 7320 kHz (upper side band A3J mode. 100 watts, vertical whip antenna, call sign "8GJ9").

(3) Pertamina Control Radio Stations – HF/SSB: In the event incoming tankers are not able to contact Bima Marine Terminal on the foregoing VHF/FM frequencies or by HF/SSB, Pertamina maintains coastal radio stations located in Jakarta and Merak.

Pertamina Jakarta Radio, call sign "PKI 2" may be contacted on HF/SSB using the following frequencies and during the following service hours:

Frequency (kHz)	*Hours (GMT)*	*Keep Watch (kHz)*
452	0000 – 2400	500
8626	0200 – 0400, 0500 – 0600, 0700 – 0800, 1000 – 1200, 1400 – 1500, 1700 – 2000	8363.2 – 8364.8
12980	0000 – 0200, 0400 – 0500, 0800 – 1000, 1200 – 1400, 1600 – 1700, 2000 – 2200	12544.8 – 12547.2 12559.2 – 12560.4
4419.4 4425.6	0100 – 0400, 0700 – 0900, 1000 – 1100, 1300 – 1500, 1800 – 2000	4125.0 and 4131.2
6512.6 6521.9	0000 – 0100, 0300 – 0400, 0600 – 0700, 1200 – 1400, 1800 – 2000	6215.5 and 6202.2
8759.2	0100 – 0300, 0400 – 0500, 0700 – 0800, 1100 – 1200, 1500 – 1600	
VHF Channels 9, 16, 19	0000 – 2400	Channel 16

Pertamina Merak Radio, call sign "PKQ" may be contacted on HF/SSB per the following frequencies and during the following service hours:

Frequency (kHz)	*Hours (GMT)*	*Keep Watch (kHz)*
452, 500	0000 – 1600	500
8626	0100 – 0200, 0900 – 1000, 1500 – 1600	8363.2 – 8364.8 8372.8 – 8373.6
4419.4, 4425.6	0000 – 0100, 1200 – 1400	4125.0, 4131.2
6512.6, 6521.9	0200 – 0300, 0400 – 0500, 0800 – 0900	6206.2, 6215.5
VHF Channels 9, 16, 19	0000 – 2400	Channel 16

Masters should request the Pertamina Coastal Radio Station to relay the necessary information to Atlantic Richfield Indonesia Inc., Jakarta c/o Terminal Section during office hours and radio operator after office hours, by Tel: 737474 (18 lines), or by Pertamina internal telex system number 18 which is the designated number for Atlantic Richfield Indonesia Inc.

Also see "General" before first port.

TUGS: *Mooring Launches:* For running lines as required, also for transporting Government Officials, Agents and other authorised personnel to and from the export tanker, 1 suitable mooring launch will be available.

There is also 1 tug available to assist mooring/unmooring and to transport Government Officials to and from the export tanker as required.

BERTHING FACILITIES: *Single Buoy Mooring for Export of Crude Oil:* SBM No. 8 is designed with double function capability i.e. as a storage SBM and an Export SBM. SBM No. 8 is designed, during reasonable weather conditions, to handle export tankers up to 250,000 d.w.t. Export SBM No. 9 is designed to handle tankers up to 250,000 d.w.t., weather permitting. Each of the above loading buoys is equipped with a dual 24 in. circumference floating braidline mooring rope together with anti-chafe chains (length 26 ft.), so arranged as to avoid chafe to the mooring ropes while tankers are at the buoy.

The crude oil loading hoses are to be connected to the ship's manifold on the port side of the export tanker. Tankers arriving are requested to have the derrick on the port side raised and rigged, ready to lift aboard the terminal equipment.

Crude oil tankers are loaded through 2 strings of 20 in. I.D. floating hoses extending from each Export SBM, connected to the tanker's manifolds by rail hoses of 16 in. I.D. All crude oil tankers not having 16 in. hose connections should provide their own reducers in such a way as not to cause any delay in the hose connecting operation. On Export SBM's No. 8 and No. 9 the length of the hose strings is 900 ft.

For crude oil tankers intending to load at Bima Marine Terminal, the distance from the bow to the loading manifold should not exceed 500 ft.

The minimum loading rate at Bima Marine Terminal for crude oil tankers is 15,000 bbls.p.h. Any tanker arriving unable to receive crude oil at the above rate may be rejected. The storage barge loading to tankers on SBM No. 8 or No. 9 can accomplish a maximum loading rate of approximately 35,000 bbls.p.h. through meters.

In order to save time as well as to make the berth available for others it is requested that ships receive crude oil as fast as it can be delivered with due regard for safety.

Masters are reminded that for safety reasons, it is advisable to have the ship half loaded as soon as possible. Rate can be reduced for topping off tanks. When requested by the ship to stop, cessation of crude oil flow is almost immediate.

Masters are also advised that the minimum quantity tankers can load at Bima Marine Terminal is 100,000 bbls. and the maximum is 1,200,000 bbls. At the sole discretion of the Terminal Manager or his designated assistants and based on written request from the Master/Offtakers tankers may be allowed to load up to 1,500,000 bbls. 45%. However, if the quantity to be loaded exceeds 1,200,000 bbls., Offtaker Shipowner(s) will be required to state that they waive any demurrage incurred due to waiting on cargo and/or berth for loading.

Storage Tanker "Citra Ayu": The Company's Main Offshore Terminal Administrative Office, Storage and Laboratory for testing crude oil stock at Bima Terminal is a 236,000 d.w.t. storage tanker named "Citra Ayu" of Bahamian registry.

Overall length of the barge is 1,067 ft., and total crude oil capacity 1,608,000 gross barrels.

Crude oil from the "Citra Ayu" is delivered to tankers through Positive Displacement Meters, of which there are 4, each having a maximum capacity of 12,500 bbls.p.h.

The "Citra Ayu" is moored to SBM No. 7 in position Lat. 05° 46′ 02″ S. Long. 107° 04′ 14″ E.

Export tanker loading crude oil from "Citra Ayu" will be moored to SBM No. 9 or SBM No. 8.

Position of SBM No. 9: Lat. 05° 44′ 49″ S., Long. 107° 05′ 29″ E.
Position of SBM No. 8: Lat: 05° 45′ 25″ S., Long. 107° 04′ 52″ E.

Zu-Bima Crude Specifications:

API Gravity at 60°F: 20.4 – 18.5
Reid Vapor Pressure: 0.7 – 0.9
Sulphur, % Wt.: 0.10 – 0.14
Kinematic, Viscosity at 100°F: 218.7 – 692.1
Pour Point: 30°F – 50°F
Carbon Residue, % Wt.: 4.75 – 8.29
B.S. & W, % Vol.: 0.10 – 0.60
Flash (TCC): 12.6°F – 144°F

MOORING/LOADING/UNMOORING: Bima Marine Terminal will operate 24 hours a day, 7 days a week. Tankers will normally be berthed during daylight hours, weather and other circumstances permitting. In special circumstances at the sole discretion of the Company Terminal Superintendent, night berthing may be allowed if all conditions are favourable.

Unmooring will be carried out at any hour.

Tankers to be moored or manoeuvred at Bima Marine Terminal will be boarded within the anchorage area by the Company Mooring Master. Under normal weather conditions if a tanker is scheduled to berth on arrival, the Mooring Master will board such vessel in close vicinity of the mooring area.

All such manoeuvring of ships shall be done only in accordance with the advice of the Mooring Master, subject to the understanding that in all cases and circumstances the Master of the tanker being manoeuvred shall remain solely responsible on behalf of his vessel's owners for the safe and proper manoeuvring of his vessel.

The ship's Master or one of his designated and qualified deck officers must be on the navigating bridge at all times while the vessel is being manoeuvred.

The Mooring Master will report unsatisfactory conditions to the Company Terminal Superintendent who may in turn, reject the tanker until corrections are fully made. All costs accruing therefrom will be for the vessel's account.

Before loading, the tanker's cargo tanks are to be inspected and if suitable for loading crude oil, a notation signed by both the Terminal Representative and Vessel's Master to this effect will be made on the Company Dry Certificate.

The Company Terminal Superintendent or his designated assistant, shall be the sole authority to decide when the port is closed due to unsuitable weather conditions.

Various combinations of wind, sea and tidal conditions also the size, length, ballasted trim and handling qualities of a vessel can affect the decision to berth a vessel at Bima Marine Terminal. All these factors have to be evaluated before a final berthing decision is made.

Delays to vessels using Bima Marine Terminal due to the port being closed because of bad weather conditions shall not be computed as used Lay Time when compiling vessel's turn around time.

Request for the terminal to stop the flow of cargo at a predetermined tonnage must be in writing. The request must include the statement by the ship's Master that the Company will not be held responsible for any error and that in case of the vessel being overloaded the excess cargo cannot be pumped back to the storage barge. The ship's Master will also be held responsible for any spills caused by this request.

The ship's Master is responsible to ensure that no communication by radio is allowed within the terminal area.

Unauthorised radio communications will cause cessation of all operations except clearing of the berth, and the vessel's Notice of Readiness will be immediately nullified.

The Master of each tanker will be given a copy of the *Conditions of Port Use of Bima Marine Terminal* which he will be required to sign before the vessel proceeds to berth.

The vessel's personnel are responsible for the safety of the vessel and must take all necessary precautions, whether or not so advised by the Mooring Master, having in mind the hazards of the operation because of the products being handled, weather conditions and any other circumstances requiring special care or caution.

Ships are requested to have a pilot ladder safely and securely rigged ready for immediate use and long enough to reach the Mooring Master's launch.

A combination of pilot ladder and ship's accommodation ladder, so arranged that personnel, boarding the vessel can first use the pilot ladder until part way up the vessel's side, and then transfer to the accommodation ladder is recommended, especially on very large tankers.

A light line should be ready to take aboard the Mooring Master's equipment.

Tanker will provide a broad lee for the Mooring Master both when boarding and leaving the ship. Adequate explosion proof lighting at night must be provided near the pilot ladder and manifold connection area. During loading, overside lighting must be provided in the vicinity of sea valves and floating hoses.

During a tanker's stay at the Export SBM, emergency towing wires shall at all times be hung over the ship's stern on each quarter of the vessel. These wires shall be secured on the inboard bitts to enable the vessel to be towed away should the need arise. They must be tended throughout to keep the eye of the wire not more than 2 ft. above the water.

Before any crude is loaded all ship's scuppers on main decks must be plugged and cemented oil tight. Approved mechanical means of closing scuppers may be accepted.

It is absolutely essential that extremely careful supervision be exercised by officers of all tankers while loading operations are in progress.

A responsible ship's officer is required to be on duty continuously while the tanker is being loaded. He will be assisted by an adequate number of ship's personnel in these operations.

It is the responsibility of the vessel to ensure that all mooring lines are properly tended on loading tankers. The Mooring Master at any time, may direct an additional ship's line to be secured to the buoy and this line to be hove up or slackened off under the supervision of a responsible ship's officer so as to prevent the vessel overriding the buoy. *At all times sufficient crew must be available* to carry out under the supervision of a responsible officer instructions given by the Mooring Master.

Masters of loading tankers are advised that raising, lowering, connecting and disconnecting of oil loading hoses as well as other labours and duties on board connected with the loading of cargo or maintaining mooring lines in a correct manner will be performed *by the ship's crew directed by a responsible officer* as required by the Mooring Master. Loading of crude oil tankers is through 2×20 in. I.D. hoses with 150 A.S.A. flange rating. The weight of each hose is approximately 4 tons.

All tankers loading crude oil at Bima Marine Terminal must be able to connect the 16 in. hoses to their manifolds. Masters are strongly reminded, that it is the ship's responsibility to provide reducers to make the connection, if the ship's manifold is not 16 in.

Preparations for mooring will be advised by the terminal through VHF communication prior to tanker's arrival or by the Mooring Master before the mooring operation commences.

Crude oil tankers are required to have ready:

1. On the port side: a derrick of a least 10 tons safe working load, rigged with a second topping lift ready to pick up the mooring and hose connecting gear from the Mooring Master's launch. This derrick will be subsequently used for raising, connecting, disconnecting and lowering loading hoses and eventually to transfer the mooring and hose connecting gear back to the launch before the tanker sails.
2. On the forecastle: at least 6 good ship's mooring lines shall be required. 2 of them will be used as messenger lines for bringing aboard both terminal mooring lines from the SBM. The 4 remaining ship's lines will be laid out 2 on either side of the foc'sle deck, eyes about 3.5 m. distant from the fairleads as advised by the Mooring Master. When the terminal mooring lines have been hove up and anti-chafe chains are about halfway through the fairleads, the eyes of the ship's lines will be shackled onto the end links of the chain so that in the final position of mooring, the tanker is tied to the SBM using the terminal mooring lines/chains made fast to the ship's bitts by means of the ship's own lines. This will be backed up by 2 wire strops each 30 ft. in length and 2 in. diameter.

These wires will be provided by the terminal to be used as preventer wires. These two wire strops will not be used as the permanent mooring system.

Their purpose is to hold the ship safely moored in the event one or more of the ship's lines parting until the crew can replace such lines.

EQUIPMENT: *Export Tanker Gear and Equipment:* A ship may be rejected, if upon inspection, it is not properly equipped, or if it is not suitably manned, or if its tanks are not suitable for the cargo, or if in the case of crude oil tankers the ballast is dirty.

A vessel is suitably manned if it has a full complement of qualified officers and crew all of whom are sober, competent and willing to carry out their duties and orders.

A ship must be equipped with a good working propulsion unit as passed by the appropriate survey society. Inoperative ships or partly inoperative ships will be rejected. Should a ship become inoperative or partly inoperative while secured to a single point mooring buoy, it will be removed at the ship's expense.

No repairs to main engines or other essential equipment or machinery while secured to an Export SBM may be carried out, unless with the permission of the Terminal Superintendent or his designated assistant.

Crude oil tankers must lift the export hoses from the water to connect with the ships manifold by means of their own derricks and using their own crew.

A vessel must have both bow anchors in good working condition. Both bow anchors and anchor cable must be of a size and standard to meet either "Lloyds" or "A.B.S." requirements, even though they may in fact, be classified by other societies.

All vessels must have ready on deck suitable stoppers for, manila, synthetic lines and wires used for mooring purposes.

All vessels must have suitable winches or capstans in good working order.

Such winches or capstans must have sufficient power to heave in the 18 in. terminal mooring lines as required by the Terminal Mooring Master. Tankers must have the capacity to heave up the 24 in. braid lines used to secure them to the Export SBM's. Power supply to all deck machinery must be maintained throughout the period the ship is secured to the Export SBM. Failure to comply with this requirement will result in cessation of loading and delay and expense so caused will be for the ship's account. To assist in vessel's turn around, ships should have all necessary gear ready on arrival. Crude oil tankers must have the cargo derrick on the port side raised with cargo gear rigged and ready before the ship is boarded by the Mooring Master.

Vessels which may consider the lifting capacity of their gear to be marginal should strengthen their gear accordingly. A common way to do so is to rig a second topping lift on the boom. Masters of crude oil tankers are reminded that the hose connecting operation will normally be carried out while the ship is deballasting.

The cargo derrick required to raise the hose from the water, must have sufficient length of strong lifting wire runner on the winch drum to enable the cargo hook to reach the water and still have adequate turns of wire left on the drum.

BALLAST: *Disposal of Ballast:* Owners and Masters are responsible to observe International Convention Laws and Indonesian Government Regulations concerning pollution of the sea, having particular regard for this area of the Java Sea.

No facilities are available for disposal of dirty ballast.

It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from his ship.

The categories of pollution include oily water from bilges, crude residue from previous voyages or any other matter that may result in pollution of the sea. Any fines imposed shall be for ship's account.

As soon as practical after arrival, all tankers will be inspected by a Bima Marine Terminal Official for dirty ballast. During discharge of ballast, similar inspections will continue.

If evidence of oil appears at any of these inspections, the ship will be rejected and will not be accepted again until satisfactory evidence is produced that such ballast was disposed of in a proper manner. If, during inspection or during loading it is found that the ship's tanks are not tight or that oil is leaking from the ship, the ship may be rejected or refused further loading.

If the ship's tanks are found to be leaking it will not be accepted for loading unless satisfactory evidence of repair, duly certified by Lloyd's or A.B.S. Surveyors or other recognised Surveyors, is submitted. It is the responsibility of the ship's Master to see that no oil of any kind is pumped or spilled overboard from ship. Drip pans, sawdust, dispersent, etc., should be ready for use at all times especially when disconnecting hoses in order to avoid any spillage of oil overboard.

Notice of Readiness will automatically be nullified for any tanker rejected because of dirty ballast or sea pollution and such tanker will lose priority of position for loading.

A tanker must have sufficient ballast for safe handling having due regard to existing weather and sea conditions. Through a careful watch of the weather and sea conditions, frequent exchange of information between ship and terminal and by a knowledge of the behaviour of his own ship, a Master may come to the terminal with minimum safe ballast and thus lessen any possibility of infringement of sea pollution regulations.

In addition to the lights usually displayed, vessels in the moorings discharging ballast or loading cargo during darkness will brilliantly illuminate the sea around the ship, so that any pollution will be noticeable.

Tankers equipped with a separate system of ballast tanks will be allowed to discharge ballast, and load oil simultaneously, providing approval is first obtained from the Company Terminal Superintendent or his assistant.

Most responsible ship owners have adopted a system of tank cleaning using circulatory methods of transfer of tank washings on board and treating these washings with chemicals.

The result is that no oil is discharged into the sea and the separated oil is collected in a slop tank. With the written permission of lifting companies, the terminal will load on top of such slops. This system is highly recommended to avoid pollution of the Java Sea. Masters are required to certify in writing the quantity of slops remaining on board (if any). If they intend to load crude oil on top of the slops, it must be clearly stated. The Mooring Master will confirm the amount stated in writing by ullaging and calculating the slops to ensure the amount declared is correct.

Provided agreement is reached on the amount of slops the Mooring Master will confirm the amount of slops on the Dry Certificate.

Note: Separate "Slop Certificate" signed by Chief Officer witnessed by the Mooring Master is required to substantiate calculation.

Masters are warned that inspection of ballast is strict.

If, at any time an overflow of crude oil occurs, loading will be immediately suspended and will not be resumed until the oil is cleaned up and removed from the decks of the vessels and/or from the surface of the sea and any damage is repaired and no further danger exists. It is stressed that during loading operations, the Bima Cargo Controller will immediately slow down the loading rate on receipt of a request for same from the ship's deck officer in charge of loading.

All spillages of oil must be reported immediately to the Bima Terminal Superintendent or his assistant and subsequently a detailed report in writing submitted by the Master of the vessel concerned giving all relevant details.

MEDICAL: No facilities available.
FRESH WATER: Not available.
FUEL: Not available.
TIME: GMT plus 7 hours.
REPATRIATION: Not possible.
SHORE LEAVE: Not Possible.
GENERAL: *Wind and Tides:* Refer to Eastern Archipelago Pilot Vol. II. Water depth approximately 110 ft. below mean sea level.

Charts: Admiralty Chart No. 1653A. Java – Western portion including Straat Sunda.

Sailing Directions: Eastern Archipelago Pilot Vol. II.

AGENCY: See "General" before first port.

Nominations: Tanker nominations for lifting of Bima Crude Oil are co-ordinated through Arco International Oil and Gas Company, Los Angeles, California and Atlantic Richfield Indonesia Inc., Jakarta.

All crude oil sales, also tanker chartering are arranged by the following parties in each of their respective locations:

Pertamina,
Arco International Oil and Gas Company,
Iiapco, Inc., c/o Natomas Trading Co.,
Inpex Java, Ltd.,
Tidewater N.W. Java Inc.,
Warrior Minyak Inc.,
Deminex Java Oel GmbH,
C. Itoh Energy Development Co. Ltd.

Tanker scheduling is co-ordinated for all of the partners through Arco International Oil and Gas Company, Los Angeles, California, and arranged through Atlantic Richfield Indonesia Inc., Jakarta.

BIRINGKASI: 04.49 S. 119.29 E.

LOCATION: The Port of Biringkasi is 28 miles from Ujung Pandang.
PILOTAGE: Pilotage is not compulsory. However, vessels that are not familiar with the port may request pilotage assistance from Ujung Pandang/Macassar.
ANCHORAGE: Depth of water in anchorage 10.0 m.
RADIO: All communications are via Ujung Pandang Coastal Radio Station.
TUGS: There is 1 tug of 500 h.p. and 1 mooring boat of 75 h.p.
BERTHING: Concrete Pier No. 1: Length 209 m., breadth 27 m. and depth alongside 7.0 m.

Concrete Pier No. 2: Length 20 m., breadth 40 m., depth alongside 2.4 m.

This port is a private port with a cement factory operated by P.T. Semen Tonasa. The port is equipped with a conveyor/shiploader for loading cement in bags.

Storage: Storage facilities available.

CRANES: 4×5 ton – 40 ton mobile cranes.
MEDICAL: Hospital facilities available.
STEVEDORES: Labour available from the cement factory.
FRESH WATER: Fresh water available in limited quantities.
FUEL: Not available.
REPAIRS: No facilities for undertaking repairs.
GENERAL: *Barges:* 4 barges available with capacity of 700 – 900 tons each.

Clearance: Biringkasi is an outport and therefore all vessels entering this port have to clear inward and outward at Ujung Pandang.

BITUNG: 01.26 N. 125.12 E. (See Plan)

DOCUMENTS:

4 Crew Lists.
4 Lists Passengers in Transit.
4 Lists Passengers Disembarking.
3 Cargo Lists.
3 Provisions Lists.
List of Articles new and Customs-barred in possession of each crew member – cameras, binoculars, radios, cigarettes, tobacco, etc.
Ship's Register.
International Vaccination Certificate for Crew and Passengers. (Especially for International Travellers.)
Health Book/Maritime Declaration of Health.
Derat Exemption Certificate.

PILOTAGE: Contact Coastal Radio Station Bitung (call sign PKM) telegram address: Bitung Port Administration; advance notice of ETA 24 hours. Pilot boats: 100 h.p. and 350 h.p. light grey. Requiring a Pilot flag, sound and Morse Signal: "G".

Anchorage for vessel awaiting a Pilot: the area between Southern part of the Lembeh Street at: Lat. 1° 25′ 00″ N., and Lat. 1° 30′ 35″ N. at the Northern part of the street.

Ships have to anchor outside the mentioned Latitude above.

ANCHORAGE: The area between coast of Lembeh Island and coast of Sulawesi: Lat. 01° 27′ N., Long. 125° 12.3′ E.; Lat. 01° 26.2′ N., Long 125° 13.5′ E. and Lat. 01° 26.3′ N., Long. 125° 10′ E.; Lat. 01° 25′ N., Long. 125° 10.8′ E. Depths: 42 ft. to 114 ft.
RESTRICTIONS: No restrictions on night entry.

Shipmaster's Report: Numerous fishing boats at the port entrance especially at night-time, also fishing sticks, and small fishermen's houses on bamboo sticks built at sea, without lights, dangerous to navigation. Approaching or sailing from port at night-time should not be attempted.

MAX. SIZE: Draft alongside pier, max. 32 ft. L.O.A. 760 ft. or 100,000 B.R.T. (60,000 d.w.t.).
HEALTH: Vessels coming direct from other countries or coming from infected port: "Q" flag to be flown. Pratique procedure and action necessary to obtain Pratique according to the International Sanitary Regulations.
RADIO: Bitung Radio (Call sign P.K.M.) for vessels to route ETA cables to Agents, Receivers, etc.

(MF–Working frequency 438 and 500 kHz, listening frequency 500 kHz, emission A.1., A.2.).

Time Schedule: 0000—0100 }
0400—0500 } G.M.T.
0800—0900 }

VHF: Bitung Radio on Channels 16 and 26.
TUGS: 1 tug, 1,160 h.p. also 2 motor launches of 115 h.p.
BERTHING: For ocean-going vessels: 16 ft. – 35 ft. at wharf of 909 m. length.

For inter-island vessels: 17 ft. at wharf of 455 m. length.

CRANES: 3×15-35 tons mobile cranes.
STEVEDORES: Arranged by handling Agent.

Handling Rates:

Bulk cargo: 13–18 tons/gang/hour.
Bagged Cargo: 20–35 tons/gang/hour.
General Cargo: 12–15 tons/gang/hour.

MEDICAL: Hospital facilities available. Masters to advise by radio prior to arrival if medical attendance required aboard. Vaccination/fever certificates required, 3 copies.
TANKERS: 1 oil jetty for domestic tankers (not general use). With 7 bunkering points alongside the 582 m. Ocean Going wharf, of which 3 are presently used. Bunker fuel is supplied directly by P.N. Pertamina (state oil company).
DENSITY: About 1030.
FRESH WATER: Available from hose connections on the pier, at a rate of 30 t.p.h., also 1 fresh water barge with the capacity of 200 tons.
FUEL: Not all grades fuel available. Diesel and marine lubricants can be supplied. 48 hours notice required. Rate 50–150 t.p.h.
REPAIRS: Some deck and minor engine repairs are possible at Bitung dockyard. Radar and electronic repair available, but not for big repairs.
CONSULS: Philippines only.
DOCKYARD: P.T. IKI and P.T. Dock Surya.
GANGWAY/DECK WATCHMEN: Not needed.
OPENING/CLOSING HATCHES: Normally by crew/stevedores otherwise according charter party.

SHIP'S CERTIFICATES: Registered Tonnage Certificate and all certificates normally required to be on board.
CUSTOMS ALLOWANCES: 100 cigarettes or 20 cigars or 100 gram. tobacco each crew member; 1 bottle wine or spirits for each crew member.
Passengers: Articles to the value of U.S.$25 per person or U.S.$100 per family.
CARGO GEAR: Loading and discharging by ship's own derricks. Shore crane capacity up to 15 tons.
REPATRIATION: Facilities available.
AIRPORT: About 50 km. from port of Bitung. Regular airlines: Garuda Indonesian Airways (G.I.A.), Bouraq, Merpati and Mandala. All have daily flights to Makassar and Jakarta.
TIME: GMT plus 9 hours, permanent.
HOLIDAYS: New Year's Day; Idul Adha, 1st Muharam; Ascension Day; Birthday of Prophet Mohammad S.A.W.; Good Friday; Proclamation Day (August 17th); Idul Fitri, Waisak and Christmas Day.
POLICE/AMBULANCE/FIRE: Dial 111, 27, 60, 106 and 108.
SHORE LEAVE: Crew members are allowed ashore with a shore pass issued by the Immigration Office.
IDENTIFICATION CARDS: Shore pass issued by the Immigration Office for crew members at Agent's request.

SHIPMASTER'S REPORT: February 1980.
There is a 300 m. concrete wharf in approx. position Lat. 01° 26.2′ N., Long. 125° 11.6′ E and a naval wharf in approximate position Lat. 01° 26.5′ N., Long. 125° 12.1′ E. Fuel by road tanker is available.

AUTHORITY: Port Administrator of Bitung, Jalan Makassar, Bitung, Indonesia. *Tel:* 60, 106, 27, 105, 108, 56 and 111. *Contact:* Iljas Sudikto, Port Administrator.

BONTANG (Loktuan): 00.11 N. 117.12 E.

PILOTAGE: Pilotage compulsory for all vessels entering the inner harbour at Loktuan. Pilot boards at Bontang LNG pilot station. Contact should be made prior to arrival with Bontang Radio on VHF Channel 16.
ANCHORAGE: Vessels anchor in position 00° 08′ 30″ N., 117° 34′ 50″ E. The holding ground in the anchorage is good. Depth of water 13.0 m.
RESTRICTIONS: Depth of water in channel is 13.0 m. – 20.0 m. The turning circle off the terminal has a diameter of 750 m. and depth of 14.0 m.
RADIO: Samarinda Coastal Radio Station – Call sign PKN 6.
TUGS: 1 tug available.
BERTHING: Concrete wharf with length 152 m., breadth 32 m. and depth 13.0 m. The berth can accept vessels up to 20,000 d.w.t.
Fork Lifts: Fork lifts with capacity 2.5 tons – 8 tons available.
CRANES: 2×150 tons mobile cranes.
STEVEDORES: Available from Samarinda labour pool and arranged by Agent.
TANKERS: LNG Facilities.
Operator: Pt. Badak NGL Co., Jl. M.H. Thamrin 59, Jakarta. Telex: 44261.
P.O.Box 216, Balikpapan. Telex: 37211.
Location: Lat. 00° 05′ 51″ N., Long. 117° 28′ 47″ E.
Max. Size: 125,000 cu.m. LOA 300 m.
Depths at L.W.: Alongside: 13.5 m. Outer bar: 49 m. Entrance: 25 m. Inner bar: 15.0 m.
Anchorage: Awaiting Pilot: Lat. 00° 02′ 05″ N., Long. 117° 34′ 00″ E. Awaiting berth: Lat. 00° 01′ 00″ N., Long. 117° 35′ 30″ E.
Radio: Bontang Radio – "PKN-7" or Balikpapan Radio "PKN-2".
Pilot: Compulsory. Request Pilot 6 hours prior to arrival and 3 hours prior to departure.
Documents: Health Declaration, Last Port Clearance, 10 copies Crew List, 10 copies Passenger List, 5 copies Cargo Manifest, 5 copies Ship's Stores List, 3 copies Crew Effects List.
Cargo: LNG loading rate: 10,000 cu.m.p.h.
Loading lines: 5 loading lines with 16 in. loading arms.
Vapour return: 1 line with 16 in. arm.
Storage capacity: 487,000 cu.m.
Liquid nitrogen facility: Max. quantity: 50 cu.m. Line size: 2 in. I.D.
Pressure at ship's rail: 112 p.s.i.
LNG characteristics:

Explosion limits:	5.3 – 14.0 % Vol.
Flammable:	Yes
Boiling Point:	−161°C.
Flash Point:	−175°C.
Critical Pressure:	45.6 kg./sq.cm.
Critical Temperature:	−82.5°C.
Reactive with:	Steel, Polythene.
Chemical compatibility:	Chlorine (dry).
Condensing ratio:	0.8023 dm³

FRESH WATER: Not available.
FUEL: Not available.
CONSULS: None.
REPAIRS: No repair facilities at the port.
AIRPORT: Samarinda Airport.
GENERAL: This port has been constructed to serve the fertiliser factory of P.T. Pupuk Kalimantan Timur.
Barges: There are 2 flat top barges. Each with a capacity of 1,000 tons.

DEVELOPMENTS: The LPG facility and the second loading terminal for LPG and LNG carriers in Pertamina's LNG complex at Bontang is due for completion. A gas carrier of 136,400 cu.m. is under construction. When completed it will carry gas to Hsin Ta in Taiwan.
Also see "Tankers".
AGENT: See "Jakarta".

BUATAN: 00.45 N. 101.50 E.

PILOTAGE: Compulsory. Pilot requires 6 hours notice of arrival and 3 hours notice of departure.
ANCHORAGE: The anchorage whilst awaiting sea pilot is in Morong Strait in position Lat. 01° 56′ 30″ N., Long. 101° 50′ 30″ E.
The anchorage whilst awaiting the harbour pilot is in Siak Sri Indrapura in position Lat. 01° 23′ 00″ N., Long. 102° 10′ 00″ E.
RESTRICTIONS: Berthing and unberthing during daylight hours only.
Approach Channels: Depths at LWS.

Outer bar	4.2 m.
Entrance	4.8 m.
Inner bar	13.0 m.
Harbour/Turning Basin	6.5 m.

MAX. SIZE: 5,000 d.w.t. Max. LOA 110 m.
VHF: Sungai Pakning Coastal Radio Station operated by Pertamina, call sign PKP-5.
BERTHING: The jetty is located in position Lat. 00° 44′ 50″ N., Long. 101° 49′ 35″ E. Depth at LWS 6.5 m.
Crude oil is loaded at a rate of 6,000 bbls.p.h. through 3×8 in. hoses.
Shore Storage Tanks:

Oil Products	Total Safe Capacity
Crude Oil	285,000 bbls.
Slop Oil	10,000 bbls.

Physical Characteristics of Crude Oil:

API Gravity at 60°F.	:	35
B.S. & W.	:	0.2 % vol.
Pour Point	:	110°F.

MEDICAL: Clinic available.
DENSITY: 1000-1010.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: None.
AIRPORT: Simpang Tiga Airport at Pekanbaru.
TIME: GMT plus 7 hours.
GENERAL: The water in the vicinity of the berth is shallow and the channels are liable to shift.
A good look-out should be kept for fish traps, nets, logs and floating debris.
Charts: Indonesian Charts No. 14, 14A and 24. British Admiralty Charts No. 3933 and 3947.
AGENCY: See "General" before first port.
AUTHORITY: *Operator:* Pertamina U.EP-II, Lirik.

BUNYU (Banyu): 03.28 N. 117.50 E.

PILOTAGE: Mooring Master boards at the anchorage.
ANCHORAGE: Vessels awaiting berth anchor in position Lat. 03° 25′ 30″ N., Long. 117° 51′ 45″ E.
RESTRICTIONS: Daylight berthing and unberthing only.
MAX. SIZE: *CBM:* 21,000 d.w.t. Max. LOA 175 m.
Platform: 30,000 d.w.t. Max. LOA 185 m.

CIGADING: 06.00 S. 105.57 E.

SHIPMASTER'S REPORT: January 1986.

LOCATION: The Port of Cigading is situated in position: Lat. 06° 00.3′ S., Long. 105° 57.5′ E. and about 45 nautical miles N.E. of the entrance to Sunda Strait. The port is under the control of Port Merak, which is approximately 15 km. – 18 km. N.E. of Port Cigading.

DOCUMENTS: Crew Personal Effects Declaration, Provisions List, Bonded Stores List, Crew List, Currency List, Seaman's Books, Passports.

PILOTAGE: Pilot station located at Merak. Pilot station on VHF Channel 12. Call sign "Kilo Bravo". Station also guards Channel 16, with working Channels 13 and 14. Pilot boat guards Channel 12.

Ports attended by Pilot at Banten area:

1. Brown & Root Terminal.
2. Port of Banten.
3. Cigading Terminal.
4. Unggul Indan Corp. Jetty.
5. Dover Chemical Jetty.
6. Prointal Chemical Jetty.
7. Depot Pertamina Terminal.
8. Merak/Ferry Terminal.
9. I.P.I/Tg. Serong Terminal.
10. Suralaya PLTU Coal/Oil Jetty.
11. Polychem Lindon Jetty.

Also see "Radio".

APPROACHES: Vessels can approach this port any time during day or night. But no berthing possible after sunset.

ANCHORAGES: Vessels awaiting berth can safely anchor 4 cables N.E. of the berth in a depth of 22 m. – 24 m. The currents are very strong in this area. The vessel experienced 3–4 knots of current from Northeasterly and Southwesterly directions, changing every 12 hours, depending upon the tide. Vessels are advised to pay out substantial amounts of cable in order to retain the anchor position.

HEALTH: The Health Authorities board the vessel for Pratique. All international health regulations are followed. The officer checks all the vaccination books for inoculations. Ships arriving from African or South American ports are required to have yellow fever certificates. Pratique is granted only after the officials check all the papers and complete formalities.

RADIO: Radio Jakarta 500 kHz. Call sign JKI.

Arrival Advice: 48 hours before arrival at Cigading, it is essential to cable the local Agents, the full details of the vessel and ETA, including the requirements of pilot service for berthing the vessel. The Pilot is stationed at Merak, as and when any vessel calls at Cigading, the Pilot is arranged from Merak. There is only one Pilot supplied from Jakarta for Merak, Cigading and other minor ports. Pilotage is maintained by the pilotage division of the port of Banten.

Chief Pilot/Harbour Pilot: Sukendear Hadi Utomo. Office: 105 Pulorida Street, Merak-West of Java, Indonesia. Tel: 367808/367594, ext. 194 via P&T. Residence: JI Raya Anyer No. 03, Komplek B.P.P., Tegal Ratu Cigading, West of Java, Indonesia.

24 hour service is available. Masters or Agents are requested to advise the Pilot whenever there is a change in an ETA.

TUGS: There are 4 small tugs, stationed at Cigading, each approximately 800 b.h.p. These tugs are generally used for towing barges and also utilised for ships berthing at Cigading. Vessels are unberthed at any time during day or night.

BERTHING: There is only 1 long berth extending well into the sea, running in a N.E./S.W. direction. The length of the berth is 550 m. and the breadth approximately 55 m. The outer portion of the berth is utilised for discharging iron ore and has 2 unloading arms. It is mobile and rail mounted. Maximum outreach of unloader from fender face is 24 m. The unloader has grabs, each with capacity of 10 tons. Minimum air-draft to be maintained at berth, 15.9 m. during maximum high tide in ballast condition. The S.W. portion of the berth is utilised for loading sponge iron, and has one loader. During our stay the loader was not operational. Ships were loaded by truck loads. 2 small vessels of 4,000–5,000 d.w.t. capacity can be berthed alongside simultaneously. The inner portion of the berth, particularly the Northeasterly portion, is utilised by general cargo ships of lesser draft and length. The depth of water at the inner berth is said to be 11 m. plus tide. The depth of water at the outer berth is about 14.5 m. plus rise of tide. The inner portion of the berth is angled in the mid-section. The closed conveyor belts and necessary installations running overhead, almost in a Southeasterly direction. A wide road runs below.

The iron ore discharge from the vessel is fed solely through the conveyor to the steel plant. The steel plant is directly connected by the said conveyor. The "Karakatu Steel Plant" or works, (government owned) is situated approximately 7 km. N.E. of the berth.

The discharging rate at the berth is 700 tonnes/h., allowing for the breakdown of the conveyor at times.

Our vessel: LOA 245 m. Beam 32 m. Max. arrival draft 13.70 m. D.wt.: 76,900 tonnes. Discharged 71,500 tonnes of iron ore pellets from Brazil in 6 days.

MEDICAL: Hospital, doctor and inoculations are available at Cilegon and Merak. Serious cases to be attended to at Jakarta.
DENSITY: 1022.
FRESH WATER: Not available.
FUEL: Not available.
CONSULS: None.
REPAIRS: No facilities available.
GANGWAY/DECK WATCHMEN: Not compulsory.

CUSTOMS ALLOWANCES: Allowances are as per Jakarta requirements. Personal declaration forms are essential. All electronic goods and currency must be declared on the personal property declaration. Beside this, Provisions List and Bond Statement is also essential (1 copy each), along with the Crew List (1 copy).

REPATRIATION: Possible. During repatriation crew baggage is thoroughly checked by the Customs. Any electronic goods in possession of crew are entered in the individual passports.

AIRPORT: Jakarta, 3 hours by road.

BANKS: Banking facilities available at Cilegon. Several Indonesian National Banks have branches at Cilegon. Travellers' cheques are honoured in the shopping complexes.

SHORE LEAVE: No restrictions.

Immigration authorities take away all Seamen's Books/Passports into their custody. Identity Cards are issued to each crew member. Seamen's Books/Passports are returned to the vessel prior departure.

Shore leave passes to be carried by the crew member when going ashore.

GENERAL:
Provisions: Available.
Currency: US$1.00=1135 Rs. (January 1986).
Agency: Karana Line are the recommended Agents at Cigading. They have an office situated at nearest town – Cilegon. Karana Line have long-term contracts with the Indonesian Government for supply of iron ore to the existing steel works near Cigading.
Head Office: Address. Jl. Kali Besar Timur 30 Jkt. Tel: 679103 (5 lines). Telex: (011) 42727, 42895. Cable Address: Karana Line. P.O.Box 81. Office: Jl. Raya Cilegon No. 31. Tel: 157-7.6378 (K S) Cilegon.
Karana Line have representation on board throughout the ship's stay. Hence communication was excellent and smooth. All other appointed Agents have to come from Jakarta, which is about 130 km. from Cigading. No other Agency has an office near the port.

SHIPMASTER'S REPORT: June 1988.

DOCUMENTS:
8 copies Crew List.
2 copies Stores List.
2 copies Crew Declaration.

The following documents are taken ashore and returned with the clearance outward:

Certificate of Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Derat Exemption Certificate.
Health Book.
Last Port Clearance.

PILOTAGE: Pilot boards from a launch which is equipped with VHF. I was advised that pilotage was only available during daylight hours.

ANCHORAGE: The anchorage is about 4 cables N.W. of the Northern end of the jetty, in position 6° 00.4′ N., 105° 57.2′ E. Depth of water is about 20 m.

RADIO: Communications were via Agent in Jakarta as the port is not equipped with facilities. The Agent should be given 10 days, 5 days 3 days, 2 days and 1 days Notice of Arrival.

TUGS: 2×3,000 h.p. tugs available.

BERTHING: There are 4 berths available with a depth alongside of 14.0 m. In addition, 2 cargo wharves and a timber terminal are being developed nearby.

The vessel loaded a cargo of steel products and the approximate loading rate is 6,000 tonnes per day, but this is subject to supply of trucks and reliability of fork lifts.

There is no shore gear for working general cargo. There are two unloaders for ore and coal imports and a bulk loader which is used for turnings and other mill waste.

STEVEDORES: Work throughout 24 hours.
MEDICAL: Facilities available.
FRESH WATER: Available at jetty.
CONSULS: At Jakarta.
REPAIRS: No facilities available.
SURVEYORS: Based in Jakarta.
REPATRIATION: Can be arranged via Jakarta.

GENERAL: *Stores:* Provisions and some stores can be obtained.
Communications: Communications are poor as Agent has no telephone or telex links. Krakatau Steel Company will allow use of their telephone and telex. Vessel was permitted to use her radio to send daily cargo reports.
Travel/Accommodation: Jakarta is about 110 km. by road. The Merak Beach Hotel is about 16 km. from the berth.
Shippers: P.T. Krakatau Steel and P.T. Cold Rolling Mill Indonesia Utama.
Agent: Vessel's Agent based at Cilegon.
Chart: B.A. Chart No. 918.

CILACAP (Tjilatjap): 07.44 S. 109.00 E. (See Plan)

(a) CILACAP PORT.
(b) CILACAP – IRON SAND PORT.

(a) CILACAP PORT.

DOCUMENTS: Upon arrival vessels have to produce the following Certificates and Documents, which will remain in the Harbour Master's custody until cleared:

Nationality (Registry) Certificate.
Seaworthiness Certificate.
Measurement (Tonnage) Certificate.
Derat (Exemption) Certificate.
International Load Line Certificate.
Safety Certificate (passenger ships).
Safety Equipment Certificate (cargo ships).
Safety Radio and Radiotelephony Certificate (cargo ships).
Certificate of Approval (ship's radio station).
Health Book or Bill of Health.
Last Port Clearance.
Subscription of Light and Harbour Dues and wharfage if any.
Crew Lists and Passenger's Lists.
Ship's Articles.
Other certificates and documents as required.
Ship's Stores List.

PILOTAGE: Compulsory. 8 Harbour Pilots available. 6 hours notice required for berthing and 3 hours notice required for unberthing. Pilot available 24 hours for vessels up to 150 m. LOA and daytime only up to 1800 hrs. for vessels over 150 m. LOA.

Pilot station on VHF Channels 12, 14 and 16.

Pilot station position: Lat. 07° 44′ 30″ S., Long. 108° 59′ 46″ E.

APPROACHES: Minimum breadth of new channel 198 m. from Outer Bar to CIB* Jetty. Inner Channel width is 80 m.

Depths: Outer Bar to CIB Jetty . . . 14.5 m. LWS.
CIB Jetty to Area 70 (including Iron Sand Jetty) . . . 12.1 m. LWS.
Area 70 to Cargo Wharf . . . 8.0 m. LWS.
Cargo Wharf to Area 60 . . . 5.7 m. LWS.

*Crude Island Berth.

ANCHORAGES:

Cargo Ships:	07° 45′ 25.0″ S. 109° 02′ 50.0″ E.	and	07° 46′ 26.8″ S. 109° 03′ 07.0″ E.
	To		
	07° 45′ 34.0″ S. 109° 03′ 12.2″ E.	and	07° 46′ 22.5″ S. 109° 03′ 37.0″ E.
Tankers:	07° 45′ 38.0″ S. 109° 03′ 12.2″ E.	and	07° 46′ 22.5″ S. 109° 04′ 28.5″ E.
	To		
	07° 45′ 38.0″ S. 109° 03′ 48.5″ E.	and	07° 46′ 10.0″ S. 109° 04′ 28.5″ E.

RESTRICTIONS: Least depths at the bar and in the channel are 70 dm. at LWS.

Current: Semi-diurnal. By the influence of the Donan River, especially during the rainy season, the duration of the outgoing current is longer than that of the ingoing. In the rainy season the outgoing current can reach 5 knots.

MAX. SIZE:
Cargo Vessels: Max. LOA 186 m. Max. draft at HW 9.5 m.
Tankers: Max. d.w.t. 85,000. Max. LOA 250 m. Max draft 12.0 m.
Also see "Tankers".

HEALTH: Vessels arriving from abroad direct have to apply well in advance to the Department of Health (Quarantine Section) for a Provisional Free Pratique, as said Pratique has to be cabled to the port concerned. The Provisional Free Pratique is only valid for the port concerned, the next port of call must be a First Class Port as no further Provisional Free Pratique will be issued, unless the vessel sails directly abroad.

RADIO: Cilacap Coastal Radio Station. Call sign PKR-3. Frequencies: 500, 474 and 8714 kHz. Station also on VHF Channel 16.

VHF: Pilot on Channels 16 and 20.

TUGS: 1×870 h.p., 1×1,700 h.p. (twin-screw).

Pertamina: 4 tugs. 2×3,200 h.p. ("Z" peller), 1×4,060 h.p. (twin-screw) and 1×1,740 h.p. (twin-screw).

BERTHING: Outer Roads while waiting for the Pilot during the West monsoon a safe anchorage in 12 m. water. During the S.E. monsoon not a safe anchorage. Inner Roads, under all circumstances a safe anchorage in 9 m. water in the vicinity of Nusa Kambangan opposite the quays for small crafts and East of Tg. Sodong. Vessels over 80 m. length have to moor due to limited swinging space, current and winds.

Authority: Pertamina P&T UP – IV, Jl. M.T. Haryono, Lomanis, Cilacap, Indonesia. Tel: (0282) 22276. Telex: 22380 PKKC.CP. FAX: (0282) 22853, 21710.

Also see "Shipmaster's Report".

PORT EQUIPMENT:
Cranes: 1 mobile crane with lifting capacity of 15 tons.
Forklifts: 1×10 ton, 1×7.5 ton, 2×5 ton, 2×3.5 ton, 4×3 ton and 3×2 ton.
DENSITY: 1012 – 1020.
FRESH WATER: Water is supplied through pipe-lines to the wharves, capacity 10 t.p.h. – 15 t.p.h.
FUEL: Bunkers (M.D.F., M.F.O., H.S.D.) available alongside by pipeline. Supplier is State Corporation Pertamina. Rate 60 t.p.h.
CONSULS: None.
AIRPORT: Tunggul Wulung Airport. Distance from port 14 km. Served by Merpati Nusantara Airline with daily flights to and from Jakarta.
TIME: GMT plus 7 hours.
PORT SECURITY: Maintained by members of the Indonesian Armed Services, usually, Police, Navy or Marine and Army. Crew members should be in possession of a shore pass issued by the Port Authority, accompanied by an identification card when leaving or entering the guarded gates of the Port Area. Shore passes can be obtained via the Agencies.
CUSTOMS: It is strictly prohibited to take undeclared foreign currency ashore. It is recommended that Masters consult the Agents about the local prevailing Customs Regulations with regard to currency, cigarettes, spirits, etc., to prevent unnecessary difficulties and eventually fines.

Ship's Inspection Team: Consisting of members of the Port Authority. This team will search the vessel, after the ship is cleared by the Port Medical Officer. Prior to mentioned search no Cargo handling is allowed. This Team will search the Store Rooms and Cargo hatches, and subsequently seals the Bonded Stores and Radio Transmitter. Careful attention should be given in making up the Store Lists, as any difference found in the items declared and discovered during the search may lead to difficulties.
SHORE LEAVE: When leaving and entering the Custom's Area the crew is checked on the basis of the Crew List and Identification Cards and searched.
DEVELOPMENTS: Dockyard for ship repairs under construction.

Pusri Jetty for fertiliser under construction.

SHIPMASTER'S REPORT: August 1985.

Vessel (31,000 d.w.t.) entered Cilacap to load a cargo of gas oil for discharge at Bukom (Singapore). Unfamiliarity together with no chart for the port onboard created some difficulties, but in fact, it is quite an open approach to the port. However, entry into the dredged channel should not be attempted without guidance if the Pilot cannot board the vessel due to strong Southeasterly winds and heavy swell.
Port Limits: Not clearly defined, but assumed to start in area of the Channel Entrance Buoy.
Documents: All officials board after berthing.

Customs were satisfied with 3 detailed copies of Personal Effects and Currency Declarations, plus 3 copies of Bonded and Ship's Provisions Stores.

Immigration require 3 Crew Lists, Agents 2 copies and Customs 2 copies. Port Health also require 2 copies. Immigration also require all Passports (or Discharge Books where Passport not available) to stamp entry and issue Shore Passes. Passports are re-stamped with exit stamp prior to departure and Shore Passes must be returned, before sailing.

2 Officials board from Port Health and require Master to complete and sign Health Declaration and they check Yellow Fever/Cholera Vaccination Certificates (all up to date). If onboard, they also require the Indonesian Health Book.

For the Harbour Master, the Agent will collect the following documents for sighting ashore on signed receipt: Last Port Clearance, Certificate of Registry, Load Line Certificate, Safety Construction Certificate, Safety Equipment Certificate, Radio Safety Certificate, Derat Certificate, Tonnage Certificate, Certificates of Class, Hull and Machinery (both new building and completion of Survey Cycle), I.O.P.P., TOVALOP and Safe Manning Certificate.

Agent also presents cargo manifests for signing for Customs. Bills of Lading for petroleum cargoes are issued on Pertamina Bills of Lading and others cannot be used or Pertamina's endorsed. Issue usual protests as per Charter Party instructions.
Radio/VHF: W/T as per Vol. 6. Station PKR6, very helpful, with good English will contact Agent for vessel – no charges for service. Closer to port, Pilots work Channel 12 and Agents (Pertamina Agency) works on Channel 19.
Pilotage: Refer Pilot Book 34 Vol. II, page 50, Chapter 3.25 – the details re. Tg. Cimiring Lighthouse not applicable to deep draft vessels as too far offshore to see any signals (6 – 8 miles). The lighthouse is also very difficult to spot during the day due to trees. Call on VHF Channels 19/12 as indicated above. Chart coverage of the area is very poor. Tg. Cimiring should not be approached closer than 5 – 6 miles and the headland rounded at this distance, unless local knowledge available. Good depths of water available if Pilot Book directions followed to Channel Entance Buoy shown on B.A. Chart 912. However, B.A. Chart 912 (issued March 1985) is full of inaccuracies. Namely:

1. The buoyed channel has a dredged depth of approximately 11 m. which is not indicated.
2. Some leading line beacon lights are in the incorrect position on the chart, or if correctly charted, do not show the present correct direction of approach.
3. Existing leading beacons bear no relationship to present channel.
4. Several buoys are not shown or position is doubtful. Characteristics, shape and topmarks also vary to those shown on B.A. Chart 912. However, the Approach Channel is reasonably well marked and vessels should experience no difficulties as channel buoys follow IALA system.

Comments in the Pilot Book Chapter 3.26 concerning a black No. 1 Buoy (1.60) and the light beacons (L36-50) should be disregarded. However, the caution re. tidal streams heeded. (L36-50). Our vessel experienced a strong Southeasterly set onto the Channel Entrance Buoy at half ebb despite Southeasterly winds Force 4 – 5. Considerable wallowing in the swell was experienced and a good underkeel clearanc should be maintained at all times.

Comments in the Pilot Book re. Pilots boarding in the S.E. monsoo season are correct (R23-28). During the Southeasterly monsoon, th combined wind and seas/swell make boarding in the Outer Road hazardous and transit via the dredged channel to more sheltered water between Buoy Nos. 5 and 7 (abeam of Kg. Rempak) is required However, Shipmasters with little or no local knowledge should reques the tug to meet them at the Entrance Buoy and then act as lead boa along the channel (imperative if no local chart onboard). Local Pilot and tugs very competent as Cilacap is quite a busy oil port. The Oute Buoy referred to in Chaper 3.28 on page 51 (lines L27-29) does no exist, but directions given are sound.
Anchorages: Covered in Appendix of 34, Volume II. Several tanker observed at anchor in S.E. Force 5 – 6 winds with swells of 2 m. – 3 m – no shelter afforded in Southeasterly monsoon weather, but reporte as secure anchorage. Mined areas still exist.
Restrictions: Max. permissible draft is 10.5 m. (SW). However, alway check. No written information re. depths was available to the Master o table of Tidal Predictions (appeared to have been produced locally offered, although latter printed. Shipmasters should insist on a cop being placed onboard. Caution is also required on receiving sailin times. We refused to sail on falling tide when instructed and chose t depart at 1 hour before HW. Echo sounder trace indicated a minimu depth average of 4 m. recorded throughout passage to channel, excep for one shoal patch abeam of the Ore Jetty, showing 0.3 – 0.6 m. UKC The predicted tidal range at the times in question was approximately 1.3 m. So on LW, likely UKC would have been 2.5 m. However, th Pilot indicated that the actual depths of water available on the West sid of the river are not really known and as vessel has to be swung prio to sailing, it seemed prudent to have as much water as possible. I berthed starboard side to at Cilacap Berths (East side of river), vesse turns bow to jetty on last of flood or bow out on ebb tide. Daylight sailin only if vessel requires to swing prior to sailing. Otherwise, vessel ca sail any time. Those vessels berthed on S.W. side of the river (on Nus Kambangan) appear to berth laden facing upstream and swing in th turning basin S.E. of the Ore Jetty in ballast.
Tugs: 3 vertical screw tugs of 3,500 h.p. plus a smaller unit. Tugs adop push/pull practice. Very efficient.
Berths: At Cilacap, 3 modern 'T' head jetties with Chicksan loading arms and a storing crane. Use ship's gangway. Terminal security is very goo with a Security Guard and shore jetty man in attendance at all times Entry to the terminal is by pass or written authorisation only. Jetties ar designed for vessels in 150 m. – 200 m. length range. There are 2 simila jetties in the S.W. corner of the river downstream in the first bend fo larger vessels. There was one vessel of 230 m. length alongside durin our visit. Again, modern 'T' head construction with dolphins.
Tankers: Shore present 4×10 in. Chicksan arms. High loading rate achieveable. 1,800 cu.m.p.h. until hastily slowed down as was vesse max. loading rate on one line. Cargo papers take about 4 – 5 hours Independent Surveyor appointed who was very efficient. No lab availab for final density, so it more than 2 shore tanks loaded, surveyor take mean of 4 – 5 samples drawn from ship's tanks to establish Bill of Ladin Relative Density. No final density given by shore.
Density: Lowest recorded was 1022 at half tide flood, but probably lowe in the rainy season.
Fire Precautions: Good check list procedures and detailed tan preparation/loading and discharge instructions given by Termina Representative.
Surveyors: See "Tankers".
Gangway/Watchmen: See "Berthing".
Customs Allowances: 200 cigarettes and 1 case of beer and 1 bottle o spirits. No rummaging took place.
Time: GMT plus 7 hours all year round.
Storing: (See "Prelims"). Several chandlers available, Pertamin vessels store locally. Believe locally supplied fresh vegetables and fruit of good value. All meats butchered locally.

1. Truck.
2. Not available.
3. Goods would have to be brought to vessel on handcart (near 0.5 miles on Jetty 3).
4. Would imagine shipchandler would provide labour.
